In order to refit the ships and take in water, the vessels anchored in a fine large bay, Kealakekua, on the western shore of the southernmost island, Hawaii. Here, immediately the vessels were surrounded by hundreds of canoes, with swarms of visitors begging to come aboard—a marked contrast to the earliest attitude of the islanders.

There was one state occasion when the old king, with a retinue of followers, among them Prince Kamehameha, later to be known as The Conqueror, went out to the ships bearing rich gifts, with royalty arrayed in picturesque feather helmet and in feather mantle that swept the ground. Gifts were exchanged: the white men gave to the natives seeds that were to add richly to the plant life of Hawaii, gave, too, goats, cloth, and weapons, whilst not alone the best that the land had to offer in the way of food was presented by the islanders to the white men on this visit of state, but upon the leaders in Cook's party were bestowed rich treasure of the art of the Hawaiians, rare samples of the precious featherwork for which the people are justly famed.

Alexander, born in Hawaii and historian of the land of his birth, writes thus of the honor shown Captain Cook by the Hawaiian ruler: "The king made a grand ceremonial visit to the ships, with three large canoes attended by chiefs wearing their feather cloaks and helmets, and armed with spears and daggers, and by priests bearing gigantic idols of wickerwork, covered with red feathers, with eyes made of mother-of-pearl and mouths set with double rows of sharks' teeth.

"After paddling around the ships, chanting prayers or hymns, they went toward the observatory where Captain Cook landed to receive them. On entering the tent the king placed his own magnificent feather cloak upon Captain Cook's shoulders and a feather helmet on his head, and laid five or six other beautiful cloaks at his feet."

Captain Cook, too, made a graceful gesture. On this occasion he presented to the king his own sword. And perhaps the linen shirt he gave him at the same time was to the recipient an object that, because of the rarity of the same on the islands, had high value in the eyes of ruler and subjects.

If the English exploring party had left at the height of their popularity all would have been well. But Cook's men stayed on and on, and in time the natives became weary of taking canoe-load after canoe-load of provisions out to the ships. In the end quarrels arose, consciously and unconsciously the sailors offended the natives, the natives the sailors. Then one day Cook's men, short of wood, cut down the palings about the sacred temple close to the shore of the bay, and this greatly angered the people, while from time to time the natives stole coveted objects from the anchored ships, and resented the stern punishments that followed these thefts. Mutterings against the visitors began to be heard on all sides. When one of the sailors died and was buried on shore, the islanders said to one another: "These are but men like ourselves!" Suspicion and bitter feeling increased, at last real fighting took place; in this warfare the natives making use of spear and the hurling of stones, while gun and cannon were employed by the white man.

Then came an hour of fighting when Captain Cook was ashore, and a moment when the captain turned toward the sea to signal to his men to cease firing. A native chief, who had in his possession one of Cook's own iron daggers, crept up and stabbed him in the back. Captain Cook fell, his face in the water, and when the natives raised the body it was lifeless.

Thus died one of the bravest of the brave sons sent out by England to the far corners of the earth. Fellow-countrymen of the great voyager have erected on the shore of Kealakekua bay a tall monument marking the spot near which the hero was slain. Hawaii's punishment for the slaying of Captain Cook has followed through the years, because of this tragedy the Hawaiians being accounted a bloodthirsty and inhospitable people, while on the whole they were friendly to strangers and welcomed them to their land.

Live Stock TB Being Conquered

Doctor Wight Presents Facts and Figures to Substantiate Statement.

(Prepared by the United States Department of Agriculture.)

The allied forces of eradication are gradually crushing the menace of tuberculosis of live stock in the United States. This was the encouraging announcement made by Dr. A. E. Wight, chief of the tuberculosis eradication division, United States Department of Agriculture, before the ninth annual Eastern States Tuberculosis conference, held at The Weirs, N. H.

In support of his optimistic views, Woctor Wight presented an array of facts and figures showing the current progress of the campaign.

Facts and Figures.

"During the last 12 months, federal, state, and county veterinarians, working under the uniform co-operative plan, tested more cattle than during any other 12-month period. During two of the months (October, 1927, and March, 1928), the number of cattle tested exceeded 1,000,000 head and the number has been nearly as high on several other occasions, as shown by monthly reports.

"Within the last year, 187 counties completed the testing of all cattle within their borders and were recognized by the United States Department of Agriculture as modified accredited counties. This term signifies that infection did not exceed one-half of one per cent and that in addition old reactors were removed.

"In 90 per cent of the area of the United States tuberculosis infection among cattle is not more than 3 per cent.

Controlled Diseases.

"Along with the aggressive campaign of eradication, the administrative officials have controlled the spread of the disease. About 45,000 cattle are moved monthly from one state to another for dairy and breeding purposes. Tuberculosis tests of this stock have resulted in the discovery and removal of reactors averaging somewhat over 250 a month. Except for this safeguard, the diseased cattle would probably carry the infection to new herds and areas. With the increasing numbers of counties that are being freed from tuberculosis, farmers should soon be able to obtain healthy, new stock locally, with benefit to home industry and a considerable saving in transportation charges.

"That the eradication of tuberculosis involves small loss to cattle owners, especially when the benefits of healthy herds are considered, is shown by appraisal, indemnity, and salvage figures.

"The average appraised value of cattle condemned because of tuberculosis was $109.61 during the 12-month period ending April 30, 1928. The combined value of federal and state indemnity and salvage was $85.48. This figure is within $25 of the appraised value and represents the amount that the owner received for the average diseased animal. The sum which the owner receives is commonly used toward the purchase of healthy stock, usually of better quality than those condemned."

Proper Development of Heifers of Importance

Dairy heifers which freshen too young, or which do not receive proper feed so they reach their proper size, are often less profitable than heifers which are properly developed. A case of this kind is reported by a county cow testing association. Two heifers which are full sisters and which were in the same herd, freshening at different ages. One heifer freshened at two years of age while the other was bred early and was only eighteen months old when she calved. As a result one heifer will grow into a 1,200-pound cow while the other is stunted.

The stunted heifer during the first six months of lactation produced 2,636 pounds of milk containing 108 pounds of fat. The larger heifer during the first six months produced 3,820 pounds of milk containing 167 pounds of fat. The larger heifer returned $54.89 above feed costs, while the stunted heifer only returned $16.16.

Agricultural Squibs

Do not milk cows completely dry for 48 hours after calving.

* * *

Watch the garden for the insect visitors. A bug in time saves nine, and it saves the garden, too.

* * *

Dipping is the only known practical method of eradicating sucking or biting lice from sheep and goats.

* * *

Hogs seem to have a special liking for wild morning glories, and if given a chance will destroy the vines by going after the succulent roots.

* * *

Crowding young chicks is false economy. Failure to give the chicks ample room is a serious mistake, for congested conditions usually lead to stunted growth and heavy mortality.

* * *

Dairy farmers are looking more and more toward leguminous hay crops for their roughage. Alfalfa is very profitable where the soil is suitable, and where liming, proper preparation of seedbed, hardy seed, and inoculation have been attended to.

GERANIUMS OF DIFFERENT COLOR

(© by D. J. Walsh.)

ARCHIE HILTON snapped on the lights in his dining room and hastily tore open the letter in his hand. One glance at contents and a wave of joy swept being. He was glad, in spite of good time he had been having, for letter was from his wife, to whom had been married but six months. was coming home the next day, m a three-weeks' visit at the seaore. The next day was Sunday He dropped into a chair and sank o a pleasant reverie, staring and lling into the dreamy distance. He loned his little, dark-haired wife, ghtly-gowned, eyes like black pan-s, glowing above her cheeks lovelier an early peaches, sitting beside him the breakfast table. He saw the etings at the end of the day, and evenings at the theater or opera. But, at length, a disturbing element ept into his dreams. It caused the ve of joy to recede and the reverie take wings. His eyes took on a wild, miniscent expression. The letter fell the floor, where the warm sumer breeze floating through the open ndow flopped it along unheeded.

"Whe—e—e," he whistled. "What s it she told me to do?" he muttred desperately. "If I didn't do it 'd know I didn't love her. What e deuce was it!"

He plunged his hands into his pockets, bent his broad shoulders and ond head and began to wander up d down the room.

Suddenly, with a startled gesture, raised his head. "My gosh," he sped, "it was water the geraniums—ery other day. If I didn't—Oh, my sh, its' lucky I remembered 'em w!"

He fled into the kitchen, filled a ll with water and entered, for the st time since his wife's absence, the tle living room.

The room was in semidarkness, a immer of light reflecting in from the ing room. When he tipped the pail the edge of the jardiniere at the st window his mouth dropped apart th astonished bewilderment. For ree weeks the plants had stood in a afternoon sun without fresh air d water; all that remained of them s a few yellow stems with a numr of rattling brown leaves adhering.

He slowly put the pail on the floor d sank into a big chair to consider e matter. And now to make the sitation more complicated, more detrimental to his future happiness, he membered that Corrine had bought e plants on the day they had gone usekeeping. Also, he recalled that e had soulfully remarked that she s sentimental about them and was ays going to keep them to remind of the eventful day.

This statement of his wife's echoed ck and forth in his mind until he ternately got feverish and cold. Reoachfully he gazed at the little yelw stubs. What would Corrine do? e had forgotten to water the geraums! She'd vow that he hadn't been inking of her, when, in truth, he had en counting the minutes until her urn.

In a short while, however, the cloudy recasting and the self-accusation he s inflicting upon himself ran their urse. The logical plan occurred to to run out and buy a couple of nts and put them in the jardinieres. he'll never know," he reasoned. 's the goods!"

Accordingly, he snatched his hat d hurried down the street toward e main thoroughfare, his destination ng a well-known florist's. Half a ck away his gait took on extra eed, for he saw the windows were illiantly illuminated and mountains variegated blossoms glittered in the re.

The evening, however, was further anced than Archie had conjectured. hen he placed his finger on the latch the door it refused to admit him. e store was closed for the night.

He rushed toward the store of a ser dealer on a side street. He met th the same fate; windows stacked th beauties and the barred door.

With a countenance eloquent of pery and anxiety, with a soul compsed into a single desire—geraniums—he journeyed up and down more e streets and alleys. He found many rist shops—all closed tight.

Now he walked aimlessly along. ce he checked his momentum to e longingly at a great pink curve geraniums gracing a lawn before an posing residence. After a moment's ought he considered going in and ering a week's salary for two plants, t then a man in evening clothes ened the front door with a menacclick. Archie moved on.

Some minutes later he felt a vague pression of stretching trees, terraced ns and perfumed atmosphere and nd that he was crunching the gravon a path of the city park.

He sat down on a bench to evolve ew line of action. After many plans d been considered and discarded he cided that he would throw out the s and tell Corinne somebody had len the geraniums because they had wn so fine. Monday he would buy of the finest geraniums on the rket.

He rose, relaxing with relief. As he ng into the path he caught a mpse of something through the foge of a weeping willow that fascind him, moored him to the spot. ering in the glow and the shadows of a row of white-globed electric lights were crammed wealth of geraniums in the shape of an immense bed of several colors.

His well-thought-out plan now seemed childish, foolish, revealing. A deep desire expressed itself in his eyes, superseded by a deep determination. There were a few scattered couples sitting or strolling in the aromatic night. No one was quite near him. But just as he made a suggestive movement in the aisle between the bench and the weeping willow a policeman hove around a massed bush. In spite of the balmy night Archie shivered, nonchalantly settled himself on the bench and lit a cigar.

The officer passed carelessly by, swinging his club. When his footsteps had crunched out of hearing, Archie once more scanned his vicinity. Now he darted beneath the willow. While its long strands tickled the back of his neck, he crawled on hands and knees close to the edge of the flower bed. Twice he surged forward. Each time, where the shadows lay darkest, he conscripted a plant.

In less than an hour the substitute plants were rearing their heads where formerly had gloomed the withered ones. Now, with enthusiastic enjoyment, he drowned them in water, got a towel and streaked the dust on the furniture and opened wide the windows.

Late the next morning his wife arrived home. Before retiring, she stood in the living room doorway a few moments to view the geraniums. They were fresh and green. Her eyes sparkled like morning dew on real pansies.

"What good care you've taken of them," she cried, snuggling her cheek against his shoulder. "How they have grown! Myra vowed you would never think of them. I knew you wouldn't forget!"

"I know—I forgot to feed sister Myra's bird once. But this is different. If anything, I'm afraid I watered 'em too much," he attested bombastically, patting her hair.

The following evening when he blithesomely breezed in from the office his wife met him with averted eyes and merely suffered him to kiss her cheek when he had expected a glad hug.

Archie was mystified. They sat down to a meal eaten almost in silence. He asked all the questions that occurred to him and always received a strained reply.

After an unusually long period of silence she broke into tears. Between sobs he made out, "You don't love me—I—I trusted you."

"Come," he murmured, "poor little girl—you've been trying to straighten up an—don't try." He drew her into the living room and to a restful couch.

"It's strange! It's strange!" She sobbed, her eyes evidently on the setting sun, painting a golden glow on the windows.

His eyes traveled along the line of vision where hers had been focused—and that was on the geraniums. His eyes dilated with horror and his heart jumped with apprehensive misgivings, for two buds were unfolding on the geraniums—buds as red as blood—and he remembered that the blossoms on the original plants had been as white as the driven snow.

German Lines to Use Powerful Fog Lights

German railroads are experimenting with fog lights, such as are already used on Belgian lines and supplied by a German producer of electrical apparatus. Belgium was forced to use fog signal lights due to the heavy fogs rolling in from the sea.

At certain times in the year and in low-lying districts German railroads have experienced long delays from fogs, so it is considered that trains will be kept on schedule and accidents avoided if fog signal lights are installed. The lights are high candle power electric lights, placed about 10 feet above the tracks. The reflectors are about the size of a saucer.

The electric beam is much stronger than the usual gas light or oil lamp, and pierces the fog. Two yellow lights mean stop and two green mean the line is free. An infra-red headlight is also being made the subject of experiments. If this proves practical the locomotive engineer will watch a photoelectric plate on which the objects caught by the infra-red rays will be reproduced. As the infra-red rays pierce darkness and fog the plate should show the track ahead.

"Levees" and "Dikes"

The army engineer corps says that the local use of the terms "levee" and "dike" as applied to the Mississippi river is as follows: "Levee" is the French word signifying mound of earth; hence, it designates an embankment on the side of a river used to protect land from high water. A "dike" is usually constructed from rock or timber to contract and regulate the channel. The Holland dikes are synonymous with our levees.

Literary Quacks

Literature has her quacks no less than medicine, and they are divided into two classes; those who have erudition without genius, and those who have volubility without depth: we shall get second-hand sense from the one, and original nonsense from the other.—Colton.

Yam Not Sweet Potato

Yams are a kind of sweet potato a variety of sweet potatoes, but all sweet potatoes are not yams. Tho real yam is deeper in color, sweeter and more watery than the ordinary sweet potato.

Pitching to Babe Ruth

By RING LARDNER

To the Editor:

This is just a few items of information about a ball player that maybe you have never heard of him so I will tell you his name in the first paragraph and his name is George Ruth, but they call him Babe on acct. of him bein. over 6 ft. tall and pretty near as wide and he is a great left hand pitcher that don't pitch.

Well, 1 day in May I had seen a whole lot of sporting events that bores you to death and the White Sox from old Chi was playing in New York City so I thought I needed a little more boreing, so I went to the Yankee's Stadium and went down to the bench and Mgr. Schalk was setting there and he says hello to me but I just made a face at him, but he asked me to set down a minute and a boy named Thomas was going to pitch and he was out there warming up and finely he got warmed and came into the bench and Mgr. Schalk said:

"Come here and sit down a minute, Tommy, as I want to talk to you."

So Tommy set down and Mgr. Schalk said to him:

"Say, listen Tommy. They's a man on this New York club named Ruth and he isn't Cobb and he isn't Speaker or Sisler or Jackson. He is a bird that if you ever throw a ball where he can reach it that ball won't be available for tomorrow's game and baseballs cost as much money as other commodities now days, so if you don't mind, why when this guy comes up there don't pitch him anything that he can lay his bat against it, but roll the ball up there on the ground and I'll take the consequences." So Tommy said: "Yes, sir."

Well, they started this game in the first inning and the White Sox didn't do nothing, and it come the New York's turn to get their innings and there was 1 out and Koenig got on 1st base and along came Ruth. The next thing I seen of that 2 dollar ball was when it was floating over the right field bleachers. So when Tommy came into the bench Mgr. Schalk says what did I tell you and Tommy says I didn't mean to pitch it where it went.

So the next time Babe come up all he got was a 3 base hit because they were pitching more carefully to him. Well, after a wile it become necessary to put in a pinch hitter for Tommy and Red Faber was sent in to finish the game. Mgr. Schalk didn't tell Red where to pitch to Babe because Red's what you might call an old timer, so Red pitched one at this bird's Adam's apple and he hit it into the right field stands for another homer, as I have nicknamed them.

Now this isn't no reflection on neither of these pitchers witch I hope is both friends of mine, but if I was managing a ball club in the American league, I would tell them how to pitch to this bird. I would stand on the mound and throw the first ball to first base and the second ball to second base and the third ball to third base and then I would heave the fourth one out in the right field, because he couldn't be in all those places at once and furthermore, they's a rule that makes a batter stand in the batter's box and if a person pitches in that direction with this guy up why all you can say about them is that they are a sucker.

For inst. the last time the White Sox was here a certain prominent Chicago baseball writer was setting next to Col. Ruppert that owns the Yanks, and this Geo. Ruth comes up and the brewery king says to him, how much will you bet that he don't crack one out of the park on this occasion. So the baseball writer says what's the proper odds? So Jake says, well I don't want to cheat you and I'll bet a pt. to a qt. that he murders one. So the sucker took it and the first ball was a foul that went into Mr. McCurdy's ft., and the next was a ball and then the old boy took one right over the middle for another strike and the next one hasn't yet been located, but when last seen it was soreing over a cigarette sign in right center.

Another way to make him stop hitting home runs off of you is to refuse to pitch when it's his turn.

The most useless thing in the world when this guy's up there to bat is the opposeing catcher, because if you can throw a ball past Mr. Ruth why it don't make no difference if it's catched or not, where as if you try and throw one over the plate it won't never get as far as the catcher.

Once a guy came here with the St. Louis Browns and struck the Babe out three times in one afternoon, and if he is smart he will let that go down into posterity, and the next time they tell him it's his turn to pitch vs. the N. Y. club he will say he has got a sore arm.

(© by the Bell Syndicate, Inc.)

Regular Crowd

Professor Pickering once let the late Richard Harding Davis look through a marvelous microscope to prove that there is always some organism down to the most minute atom of life.

When it came time to go the noted author said:

"Professor Pickering, when I came in I thought I was an individual; I leave, knowing myself to be a community."—Los Angeles Times.

ORCHARD GLEANINGS

GRAFTED GRAPES PROVE SUPERIOR

Greatly improved quality and increased yields of fruit are the chief advantages to be gained by grafting desirable varieties of grapes on hardy root stocks, says F. E. Gladwin, grape specialist of the Geneva (N. Y.) experiment station, who has been conducting experiments with grafted grapes for the past several years.

Such well-known varieties of American grapes as Delaware, Campbell, Niagara, Concord, Ionia, Catawba, etc., have certain defects which detract from their value as commercial possibilities, says Mr. Gladwin. Some of them set more fruit than they can mature; some are erratic in their bearing habits and are oversensitive to soil conditions; while some have the "off-year" habit to a marked extent or tend to "run-out" or deteriorate in yield and quality. Although grafting is not a cure-all, many of these defects have been overcome by grafting these varieties on hardy root stocks, says this authority.

Clinton, Riparia Glorie, and Rupestris St. George were used as root stocks in the station experiments, and several standard varieties were bench-grafted on them by the ship-and-tongue method. Records have now been obtained for a sufficiently long time to show that American grapes can be materially improved in quality, that yields can be increased, and that more vigorous vines can be obtained by bench-grafting desirable varieties on suitable root stocks.

The cost of grafting is still a serious handicap to the method coming into practical use until more economical processes can be perfected, it is said. Indications are, however, that cheaper methods will soon follow and in the meantime grape owners are urged to give the method a trial on a small scale. Certainly, in small vineyards for home use grafted vines are to be prefered to those propagated by cuttings.

Rye and Vetch Combined Favored as Cover Crop

Replying to the query as to what combination of rye and vetch would be good for a cover crop, the American Fruit Grower Magazine makes the following reply:

A combination of a bushel of rye to 20 pounds of vetch will make an excellent cover crop. The rye and vetch should be sown as soon as the hot weather of summer is past. This will usually be about August 15. At about that time the dry weather, if any, is usually broken by a rain, and cooler weather begins to come, particularly at night. It is advisable to get the vetch sown fairly early, for the plants are rather slow to become well established. However, the seed should not be sown while the ground is still dry and the weather hot. Be sure to use winter vetch.

If you use good seed, sow it at the right time, and are lucky enough to have good weather, you will easily get a good stand and obtain a good cover crop. The best distribution of seed is usually obtained with a seed drill. This method also gets all the seed into the ground and prevents the wastage that always follows broadcasting.

Summer Grape Pruning

The chief reason advanced by the advocates of summer grape pruning is that the fruit is thereby exposed to a greater degree to the sun, and hence better coloring results. A second reason usually given is that the continued elongation of shoot with the increased number of leaves is a drain on the vine, and in consequence the vine is weakened. As a matter of fact the larger part of the coloring matter of the fruit is manufactured in the leaf, and is later transferred to the berries. Hence any marked reduction in leaf area influences fruit color.

Notes of the Orchard

An apple orchard makes an ideal range for growing chickens.

* * *

One kind of sweet cherry planted alone seldom bears much fruit—sometimes none. The blossoms need to be fertilized by those of another sort.

* * *

A strawberry patch can be continued more than two years if it is kept clean, well cultivated and fertilized, and if the old plants are removed each year in favor of the strong young plants.

* * *

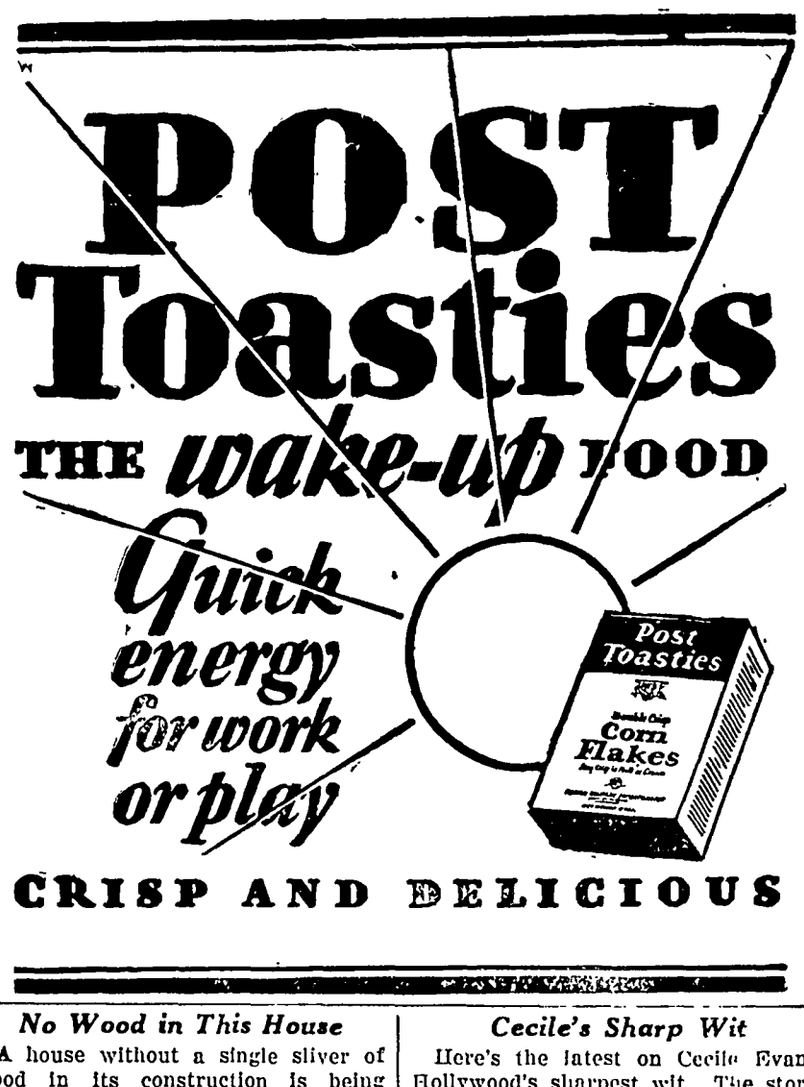
The cheapest medicines are expensive when used as substitutes for fresh fruits and vegetables.

* * *

The finest currants are produced at the base of one-year-old shoots and on one-year-old spurs arising from two-year-old wood and on spurs on three-year-old wood.

* * *

Unless the proper care is given to the newly growing grafts, as well as to the stock, the topworking may prove to be a dismal failure as far as developing a new top is concerned.



No Wood in This House

A house without a single sliver of wood in its construction is being built in Gary, Ind., for the president of a local steel company. The framework is made of angle-irons with a complete system of diagonal bracing Both bolting and electric welding is used to fasten the steel together. Concrete is used in the foundation and for the floors, while stairs, sills and interior trim are all steel.

Take American Apples

Denmark has taken to heart that maxim about an apple a day and is buying more American apples. Purchases have tripled in five years. Most barreled imports come from Virginia, but California and other states also ship the fruit. Smaller quantities are obtained from Australia, Italy and the Tyrol.

Fair Enough

"You are having the duke's title searched?" "Why not? He has investigated my fortune."

Cecile's Sharp Wit

Here's the latest on Cecile Evans, Hollywood's sharpest wit. The story, told by James R. Quirk in Photoplay Magazine, goes that she drove her roadster into the temporary garage of a four-thousand-dollar-a-week-man on the First National lot. Along came the Rolls-Royce.

What do you mean by stalling your contraption in my garage?" yelled the justly irate F. T. A. W. M.

"I'm sorry," apologized Cecile. "I saw one of your pictures last night and I thought you were through here."

In Love

"Why is Eloise on the roof with a telescope?" "Aw, she's lookin' for a letter by air mail."

Perhaps the moon is called silver because it comes in halves and quarters.

It's a bad policy not to have a good one.

PEXEL is the last word in jelly making

PEXEL always makes jelly jell. Absolutely colorless, tasteless, odorless. Unlike other products, Pexel is a pure-fruit product—100%. Doesn't change taste or color of most delicately flavored fruit.

Pexel saves time and fuel. More than repays 30c it costs. More jelly—fruit, sugar and flavor aren't boiled off because, with Pexel, the jelly is ready for glasses as soon as it comes to full boil. It jells by the time it is cool. Get Pexel at your grocer's. Recipe booklet in each package. 30c. The Pexel Company, Chicago, Ill.

PEXEL MAKES JELLY JELL

Work for Armenian Women

Armenian women who fled to Marseilles with their husbands during the Greco-Turkish war of 1922-23, have founded a rug-weaving industry. The men were able to find work in mines, factories and on farms, but the women were less fortunate. Local capital was interested in rug weaving and the women workers now produce more than 6,000 square meters of oriental rugs yearly in eight plants.

Not Today

Little Betsy was gazing out of the window one afternoon during a recent severe storm. She saw the sun become overshadowed by heavy clouds and the day grow almost dark.

"My, there won't be any daylight savin' today," she said sadly.

Forgotten Bliss

Dora—Can you remember the first boy you ever kissed?

Dorothy—Can't even remember the last one.—India Times.

Character is nearly all founded on moral courage.

If a grouch is witty in his grouchiness, one doesn't mind.

Sincerity recognizes sincerity.

Predatory Bird Shot

A great American osprey, habitant of the sea and sometimes called the "ocean fish hawk," was brought down near Lancaster, Ohio, recently. The big bird, the only one ever seen in Ohio and one of the very few in the United States, was shot by William Loving, who saw it in the act of carrying away a lamb. The bird measured 6 feet between wing tips.

Death to Cats of Rome

The mayor of Rome, Italy, has issued a decree which puts an absolute ban on all cats in the interest of public health. The excuse that they keep down the number of rats and mice is met with the statement that there are much more effective ways of doing this than by the use of cats.

As Usual

Poet—Did you like my last poem on the "Taxicab"?

Editor—No, there was something wrong with the meter.

Full of It

"Is she capable of affection?"

"Capable? She's positively contagious."

Don't insure your life and then proceed to work yourself to death.

Here's Speedy Relief From Bunion Pains and Soft Corns

Get a two-ounce bottle of Moone's Emerald Oil (full strength) today. Every well stocked drug store has this, with the distinct understanding that your money will be cheerfully returned if it does not reduce the inflammation, soreness, and pain much quicker than any remedy you ever used.

Two or three applications of Moone's Emerald Oil and in fifteen minutes the pain and soreness disappears. A few more applications at regular intervals and the inflammation is gone.

And as for Soft Corns a few applications each night at bed time and they just seem to shrivel right up and scale off.

No matter how discouraged you have been with pads, shields, or other applications, if you have not tried Emerald Oil then you have something to learn.

It's a wonderful formula—this combination of essential oils with camphor and other antiseptics so marvelous that thousands of bottles are sold annually for reducing varicose or swollen veins.

Every good druggist guarantees the first bottle of Moone's Emerald Oil to end your foot troubles or money back.

Possible to Control Coloring of Flowers

It is generally known that the colors of vegetation vary in intensity in direct ratio to the amount of sunlight, combined with coolness of temperature, within certain limits. Examples are the intense redness of apples grown in northern climates, and the deep colors of Alpine vegetation. But the soil and other influences also have an effect upon plant colors.

Experiments have been made within recent years with reference to the question of artificial control of the colors of plants through the introduction of such chemicals into the soil in which they grow. In very small quantities such chemicals are absorbed without apparent injury, but the effect upon the colors is slight. Yellow roses appear to become deeper in color under the influence of aluminum sulphate and potassium sulphate. With the use of these same chemicals the petals of the white carnation showed a tendency to develop red streaks, while when fed with ammonium sulphate, aluminum sulphate, iron citrate and citric acid scarlet carnations tended to form white streaks.

Sunday Games in Times of "Good Queen Bess"

In the Elizabethan age of English history not the mildest of games, entertainments or "shows" could be given on Sunday without a special permit—and from the queen in person. We read that on April 26, 1569, one "John Seconton, poulterer, having four small children, and fallen into decay," was given a permit by good Queen Bess "to have and use some plays and games, at or upon several Sundays, for his better relief, comfort and sustentation."

The games to be permitted under the direction of this Elizabethan promoter included "the shooting with the standard, the shooting with the broad-arrow, the shooting at the Turk, the leaping for men, the wrestling, the throwing of the sledge, and the pitching of the bar."

Queen Bess advised the authorities to attend the games with "four or five good, substantial men" to keep the peace and prevent disorder.

Singing Crickets

One of the most curious things to be seen in Japan, alike in the houses of rich and poor, is a small cage of bamboo fibers in which are housed singing crickets. The male only has the "voice," which can hardly be called a singing voice because the sounds emitted are much more metallic than those which ordinarily proceed from the throat of a bird. The westerner who hears these sounds for the first time starts up under the impression that he is hearing an electric call bell. In order to execute his song, the cricket goes through a very amusing performance. He raises himself on his front feet, grasps with the others a kind of "platform" arranged in the cage for his convenience, expands his wing-shells and rubs them against each other with great rapidity. The rhythm of the movement varies with individuals and this explains how the sound produced offers a certain variety in meter as well as in pitch.

Misunderstood

A foreign looking man, who only spoke a little English and that with the greatest of difficulty, was trying to find suitable apartments.

Eventually he managed to make one landlady understand his peculiar intonations.

"So you want three rooms and a bath, do you?" she repeated, when at last she understood him.

The foreigner blushed.

"I need the three rooms, certainly," he replied indignantly. "But a bath, that is not so much of your business, yes?"—London Answers.

Figure It Out

What should one really talk about? If you talk about yourself, you're conceited. If you talk about your business, you're a "shop talker." If you talk too much, you're a bore. If you haven't anything to talk about, you're uninteresting. If you talk about your baby or your club affiliations, you're a Babbitt. If you talk about people, you're a knocker. If you talk sweetly about a friend you're a log-roller. If you talk about art, you're a highbrow, and if you don't talk at all, you're a high-hat!—New York Graphic.

Mother Knew the Answer

Father entered the house in the evening in silence. He was seen to lay his golf clubs aside, to tread his way wearily about the house, and finally to slouch silently at the dinner table. He said not a word during the meal, nor after, until he was heard to mutter to his wife, "There's no place like home!"

"What's the matter?" asked mother, "something go wrong on the golf course?"

Knights of Malta

There are two Knights of Malta organizations, one Catholic and the other Protestant. The Catholic organization is variously known as Knights of Saint John of Jerusalem, the Hospitalers, Knights of the Hospital, Knights of Rhodes and Knights of Malta. Its origin dates back to the time of the First Crusade. One or more of the hospices were established in the Holy Land by Pope Gregory the Great.—Boston Transcript.

Girl of Century Ago and Today Compared

We look back with amazement and pity at the woman of 1828, it is said, but, says the London Daily News, we look with admiration also, for it is out of their dreaming and striving that our freedom has come. Poor Miss 1828 offers a striking contrast between the young women of that day and those of the present year.

Look at her standing there in her stuffy thick clothing, her hideous frilled "pelisse" with its puffed sleeves, her face hidden by an ungainly flapping bonnet "as large as an umbrella." She has been grounded in the principles of religion and morality Her head is stuffed with Mangnall's questions, her fingers are sore with working "samplers," her body is still with that strange cult known as "deportment."

She is just sixteen years old and ready to "come out" to a life of social and domestic inanition. When she dances, it is to pace soberly through the measures of a minuet or the quadrilles, for she has not yet been introduced to the "sprightly polka" or the glamorous waltz. Little wonder that she breaks the monotony of her days by occasional fits of hysteria or a graceful swoon.

She had her vanities, poor dear—her looks were one of her few interests. She was as frightened of corpulence as is her modern sister. Rosy fresh cheeks were considered common, and she deprived herself of adequate food for fear of growing fat and "material."

Greenland, Long Ago, Colonized by Danes

Greenland was originally colonized by Scandinavians, about the year 1000, but the colony dwindled and became extinct shortly before 1500, owing chiefly to the inroads of the Eskimo The existing Danish colony was established in 1721. The aborigines, says the Smithsonian institution, are all of Eskimo stock and number altogether about 11,000, including a very large proportion of mixed bloods, who, as a rule, adhere to Eskimo customs and language.

This number seems to be considerably higher than in 1721, but the difference is largely, if not entirely, to be accounted for by the increase of the mixed-blood stock from European intermarriage.

Theory of Arrhenius

Svante August Arrhenius, the noted Swedish chemist and physicist, believes that life is an interstellar element and may be transmitted from one planet to another. According to his conception, life is universally diffused and is constantly emitted from all habitable worlds in the form of spores. These spores traverse space for years, and possibly ages. The majority of them are ultimately destroyed by the heat of some blazing star, but some few, he thinks, find a resting place on bodies which have already reached the habitable stage. Life, according to Arrhenius, may also be transmitted from one heavenly body to another by means of meteors. —Pathfinder Magazine.

Historic Edifice

Kenilworth castle is in Warwickshire, England. It has figured prominently in the history of the country. In 1575 it was the scene of 19 days' entertainment of Queen Elizabeth by the earl of Leicester. The walls originally inclosed an area of 7 acres. The principal portions of the building remaining are the gatehouse, now used as a dwelling house; Caesar's tower, the only portion built by Geoffrey de Clinton now extant, with massive walls 16 feet thick; the Merwyn's tower of Scott's "Kenilworth"; the great hall, built by John of Gaunt, with windows of very beautiful design, and the Leicester buildings, which are in a very ruinous condition.

Purist Enters Objection

An indignant purist, says the St. Paul Pioneer Press, has publicly taken to task a prominent Oregon attorney for using the quotation, ascribed to William Congreve, a dramatist of the Eighteenth century: "Hell hath no fury like a woman scorned." He says that there is no such language in Congreve or anywhere else. The exact quotation is: "There is no rage like love to hatred turned, nor hath hell a fury like a woman scorned." This is one of such almost innumerable popular modifications of literature which, despite the rage of the purist, continue in use.

Silver in Olden Days

Whatever the difference in mechanical aspects, in many respects our modern life parallels closely the lives of the ancients. The noble and aristocratic Egyptians and Greeks had an exquisite appreciation of the niceties of life. One of their most cherished treasures was their sterling silver, which they had in abundance and from which they drank and feasted. It was their accredited tableware as it was of the nobles of the Roman empire. Cups and vessels of this precious metal have come down to us through the ages in a perfect state of preservation.

Two Greatest Virtues

Education is what enables some people to get along without intelligence. Intelligence is what enables some people to get along without education. A few men possess both virtues; these constitute our real leaders.—Grit.

Avery-Twin Lakes News

(Special Times Reporter)

Ada Sandrey assisted with work at the Les Hartbeck home Tuesday.

Edwin Josten was a Goodell caller Friday of last week.

Mrs. Frank Sandrey was a Goodell caller one day last week.

Mr. and Mrs. Edwin Josten were Goodell callers Saturday evening.

Emma Goll is spending a part of her vacation at the home of her sister, Mrs. Carl Wille and family

Mrs George Buseman spent one day last week at the home of her sister, Mrs. Henry Buseman.

Mr. and Mrs. Sylvan Johnson and family, Ventura.

All present had a joyous time, and wished Mrs Meinders many more happy birthdays.

Man Long Forgotten Gave Name to Mount

Obscurity and fame exist side by side on Mount Robson, 12,072 feet, highest peak in the Canadian Rockies. The mountain itself is widely known for its splendor, for the impression of towering height which it gives, as it stands at the head of the Grand Forks valley. But the origin of its name and the manner of its naming have rested long in the shadows.

The legend came down from a tribe of the Shuswap Indians, who in the early Nienteenth century had worked their way from the west coast into the mountains. They had a small encampment on the banks of the Fraser

Long ago, they say, when white men were seldom seen in the mountains, a party of these strangers came in over Yellowhead pass from the East and camped close to the river with the mountain high above them. Their horses were poor and thin. They had traveled far.

The newcomers sat long into the twilight, made silent by the closeness of this mighty column of ice and rock that reached into the skies. Never before, they declared, had they come upon anything to compare with it.

In the morning they gathered their horses and prepared to shoe those that needed it. A blacksmith was in the party. As he grasped a hind foot the horse reared and kicked. The blacksmith took the blow in his head and died. His name was Robson

Early records of the Hudson's Bay company state that there landed in Hudson bay, close to the end of the Eighteenth century, one "Joseph Robson, blacksmith."

Research Shows That Few Things Are "New"

More than 2,500 years ago the Greeks knew how to spin tops; they had pocket knives with bronze blades and exquisitely carved ivory handles, and clasp pins, much like the safety pin by which its modern inventor made a fortune, were common, says Popular Mechanics Magazine. A process for making clear yellow-white glass was announced as a new discovery not long ago, but excavations in Egypt show that the material was known there in the Second century B. C. A set of 150 pieces was recovered from the ruins of an ancient city A sewer system that would compare favorably with any constructed today was laid in Crete some 2,500 years B C., and you can turn the faucets of a system that was installed in ancient Pompeii.

The Baffled Climber

Owen D. Young, the noted lawyer and capitalist of New York, said on disembarking from the Olympic:

"While Vesuvius was in eruption I heard a story about an English cockney tourist who was doing Naples on a Polytechnic trip.

"Well, this chap climbed up Vesuvius with a guide, and when they got to the top he beamed all over and said:

"'Now then, what about that there drink we're goin' to have?'

"'Dreenk?' said the guide. 'But eet ees impossible to get dreenk up here, sare.'

"'Well, I'm blowed! said the tourist. 'Walt till I get 'old of that bloke as told me this place 'ad been overflowin' with lager for three days.'"

RUN AUTO BY RADIO

Des Moines, Special:

The latest marvel in radio and aviation science, the operation and control of an automobile by means of radio waves sent out from an aeroplane flying overhead, is to be demonstrated to the midwest for the first time as a feature of the aircraft exposition at the Iowa State Fair August 22 to 31.

The demonstration will be made each day of the fair in front of the new $350,000 State Fair Ampitheater. A plane flying over the race track will, by means of radio, start the motor in an automobile standing on the track and will guide the car in various movements around the track, including shifting gears, turning on the lights, sounding the horn, and stopping the car. No operator will be located in the car or near it, all of the control being exercised by radio from the aeroplane.

BIG RACES AT FAIR

Des Moines, Special:

Every day of the Iowa State Fair this year is to be headlined by at least one-half dozen big horse racing or auto racing features, according to the final ampitheater entertainment program which was issued here this week.

The opening Friday, August 24, will be auto race and motorcycle race day, with entries by some of the outstanding world champions of the dirt tracks. Saturday, August 25, will be Derby Day, with the entire program devoted to running races. From Monday, August 27, through Thursday, August 30, the programs will comprise both harness and running events, and the final Friday, August 31, will be a complete afternoon of auto races and motorcycle races, with eight different dirt track classics for large purses. Offerings in the horse racing classes at the State Fair this summer are in excess of $20,000.

FREE CAMP AT FAIR

Des Moines, Special:

The midwest's largest free camp ground, capable of accommodating 20,000 campers at one time, will be thrown open to the public again this summer on August 22 in connection with the 1928 Iowa State Fair and Exposition, fair officials here announced this week. The camp ground will be open free of charge to all persons attending this year's exposition. It provides practically all of the modern conveniences including city water service, electricity; modern sanitary facilities, grocery stores, meat market, and a government post office. The camp comprises 80 acres of rolling wooded land immediately adjoining the Iowa State Fair grounds. It is covered with rich bluegrass and is said to be one of the most popular summer vacation spots in the midwest.

TO REVIEW GUARD

Des Moines, Special:

For the first time since the World War the famous Governor's Review of the Iowa National Guard will be held this summer in connection with the Iowa State Fair and Exposition.

Governor John Hammill, attended by his official staff and accompanied by visiting dignitaries from the War Department, will review Iowa's entire military forces at the State Fair on Saturday afternoon, August 25. Troops in formal parade will pass before the Governor's box in front of the State Fair Amphitheater, with full equipment and attended by the numerous trains and special units which complete the state's military organization. Following the formal review a military field day will be held in front of the amphitheater with competing teams entered from all parts of the state. It is also expected that a fleet of fast pursuit planes from one of the military aviation fields will be sent to the fair on this day to participate in the maneuvers and assist in the military show which will be staged at the fair. The review will be held slightly earlier than usual in order to enable the full program of races and hippodrome features to be staged without interruption.

FAIR FOR WOMEN

Des Moines, Special:

An eight-day women's exposition covering all the major fields of women's activity in Iowa and the middle west, has been announced as one of the big features of the Iowa State Fair which opens on August 22 in Des Moines.

The exposition will occupy two of the largest buildings on the state fair grounds. It will be open to the general public and especially to women visitors throughout the entire eight days. In one building will be housed an elaborate series of displays pertaining to the home and its improvement, including such features as furnishings, interior decoration, kitchen conveniences and room arrangement. In another building will be continuous programs, lectures, and conferences of both an educational and entertaining nature. Among these will be daily style shows, cooking demonstrations, dressmaking exhibits, plays and pageants, lectures on health and recreation, art and music, conferences on citizenship, and parent-teacher activities. The State Federation of Women's Clubs, the women's department of the Iowa Farm Bureau, and other statewide organizations will cooperate in planning and staging this year's exposition.

NEWS REVIEW OF CURRENT EVENTS

America Assists but Japan Hampers the Nationalist Government in China.

By EDWARD W. PICKARD

JAPAN seems to be doing what it can to hamper the new Nationalist government of China, while the United States is proceeding toward recognition of that government and taking the lead in negotiations to free China from the unequal treaties that have restricted the nation. Only a few days ago the withdrawal was ordered of 1,350 American officers and marines from the "danger zones" in China, so there will be left in Shanghai and Tientsin only about 2,600 of our troops. Immediately following this, Secretary of State Kellogg dispatched a note to the Nationalist foreign minister offering to begin at once negotiations for a new treaty that will permit China to levy on imports such tariff duties as she sees fit. Under the old treaties with various powers China is not permitted to levy duties higher than 5 per cent ad valorem. Abolition of the privilege of extraterritoriality and the recognition of the Nationalist government will, it is believed, come along soon in due course.

The negotiation of a new tariff treaty will not subject American goods at once to higher duties. Under the stipulations made by Secretary Kellogg, Chinese tariff autonomy would not become effective until the unequal treaties with all other nations also are abrogated. This precludes discrimination against American exports should other nations fail to scrap the old treaties.

The Nationalists have already renounced their old treaty with Japan, but the Japanese government refuses to agree to this action, holding that, as revision of the pact was not accomplished within the stipulated period, it was automatically renewed for ten years. Premier Tanaka told the foreign diplomats in Tokyo that Japan was unable to accept the Nationalist demand in view of the provisions of the treaty itself and would be unable even to agree to a revision of the treaty until the Chinese government withdrew its notice of abrogation.

GOV. AL SMITH went down to a country club at Hampton Bay, Long Island, for a few days of vacation during which he expected to make much progress in the writing of his speech of acceptance which will be delivered on the evening of August 22 from the steps of the state capitol at Albany. Herbert Hoover, who has been resting at his home at Palo Alto, Calif., started on a fishing and automobile trip of about a thousand miles through northern California. His acceptance address is practically completed and it will be made in the great stadium of Stanford university the evening of August 11.

Probably 100,000 persons will be present to hear Mr. Hoover, and as many will gather in Albany to listen to the words of Governor Smith. But their real audiences will be perhaps a third of the population of the United States in each case, for arrangements have been made for a hookup of ninety radio stations for the broadcasting of the speeches.

ONE of the hopes of the Democrats —the winning of Wisconsin—was stimulated by the hot fight up there between the regular Republicans and the La Follette group. The young radical senator is up for renomination and is opposed by G. W. Mead, mayor of Wisconsin Rapids. The real battle is over the governorship, for which there are three candidates. Gov. Fred Zimmerman, who is a dry and has become rather a free lance, seeks reelection. Walter Kohler was nominated by the regular Republicans on a middle of the road program; and Joseph D. Beck is the La Follette candidate and for Volstead act revision. Democrats believe their cause would be aided by the nomination of Beck and La Follette. The primaries are to be held on September 4. The wet sentiment in Wisconsin is notoriously strong. On the other hand, the Republicans say that the Wisconsin swing toward Smith will be stopped effectually by the prospects of a good harvest and that they are confident of carrying the Badger state in November.

John J. Raskob, Democratic national chairman, has resigned as chairman of the finance committee of the General Motors corporation, because, it was said, some of the directors of the concern who are supporting Hoover thought Mr. Raskob's retention of the position would make it appear that the corporation was backing the Smith candidacy. In his letter of resignation Mr. Raskob recognized this possibility and also said his duties as national chairman would take all his time.

In one way it was a Hoover week. The Republican candidate and Senator Hiram Johnson of California ended their eight-year-old feud; Robert L. Owen, former United States senator from Oklahoma and a Democratic power, announced that he would support the Republican candidate, believing him "the best qualified man any party ever presented for President"; Senator F. M. Simmons of North Carolina, who opposed Smith's nomination, resigned as a member of the Democratic national committee without explaining his action; and officers of the Daughters of the Confederacy in California declared most of that state's members of the order, Democrats in the past, would vote for Hoover. William H. Woodin, president of the American Car and Foundry company and for years a member of the stanchly Republican Union League club of New York, came out for Smith.

ROY O. WEST of Chicago, former secretary of the Republican national committee and a Deneen adherent in Illinois politics, was appointed secretary of the interior to succeed Dr. Hubert Work, and assumed his duties in Washington. He faced several big matters that will require his official action. These include the Boulder dam investigation, big reclamation and irrigation projects, oil leases on public lands, and the Alaskan railroad. Doctor Work in introducing Mr. West expressed the hope that the latter might serve even longer than his own five-year term. In view of Doctor Work's close connection with Herbert Hoover his remarks were interpreted as implying that he expects Mr. West to remain in the cabinet in the event of the election of Mr. Hoover.

It was stated in Washington that President Coolidge had offered the vacant secretaryship of commerce to William M. Butler of Massachusetts, former Republican national chairman.

GENERAL NOBILE and the other survivors of the Italia disaster arrived at Oslo, Norway, on the Citta di Milano and were immediately put aboard a train for Italy. An armed seaman guarded the vessel's gangplank and no one was permitted to see or talk with the Italians. With them were three Swedes who took part in the sledge expedition to search for Captain Amundsen and his comrades.

The Russian ice breaker Krassin, which rescued the Nobile party, had another chance to save lives. It received wireless calls for help sent by the German motorship Monte Cervantes which, with 1,500 passengers aboard, had struck a rock at Bell island, Spitzbergen. The Krassin hurried to the rescue and sent divers down to examine the damage to the German boat's hull.

Bert Hassell and Parker Cramer hopped off from Rockford, Ill., in the plane Greater Rockford on their projected flight to Stockholm, Sweden, by way of Greenland and Iceland. But the plane was too heavily loaded and the aviators were forced to land on rough ground. Neither man was injured, but the machine was so badly smashed that the flight may be delayed for several weeks.

Paris, Marrot and Cadou, Frenchmen, flew to the Azores from Brest on their way to the United States, but one of their motors was crippled hopelessly and they were ordered home.

JOSE TORAL, slayer of General Obregon, confessed that he was persuaded to commit the crime by Manuel Trejo, an employee of the national arms factory in Mexico City, who purchased and gave to him the pistol he used. He said he thought he was aiding the cause of the Catholic church, but now realized he had been the tool of labor leaders. A priest induced him to make the confession by telling him he was doing great harm to the church by concealing the truth. Luis Morones, head of the Mexican laborites, who resigned as secretary of labor and went into hiding, and his associates are bitterly scored by the agrarian groups which were supporters of Obregon. The agrarians are demanding that "all labor influences" be removed from the national government, holding them morally responsible for the assassination. They do not even ask the death penalty for Toral. During the week the Obregonista leaders were trying to determine who should become President on December 1. It seemed probable that either President Calles would be asked to succeed himself as provisional President under certain constitutional arrangements which might be made or that Aaron Saenz, governor of Neuvo Leon, would be favored.

REV. RT. HON. RANDALL THOMAS DAVIDSON, archbishop of Canterbury and as such primate of the Church of England, has announced his resignation which will take effect on November 12. He has been in poor health for several years, but the real reason for his action was his recent failure to obtain adoption by the house of commons of the revised book of common prayer. Doctor Davidson was eighty years old and had been primate since 1903. He always has taken a keen interest in industrial and economic affairs. It was presumed he would be succeeded by the archbishop of York.

DURING a debate on unemployment, Prime Minister Baldwin of England told the house of commons that lower freight charges on all selected traffic, including agricultural produce, coal and basic industries, would go into effect next December, ten months earlier than had been planned, and would bring industrial relief estimated at $20,000,000 a year. The prime minister also announced that the export credits scheme, which is due to terminate in September of next year, is to be extended for another two years, while the government will assist with money grants the removal of unemployment labor from distressed areas to other districts.

Another scheme of the British government, announced by Chancellor of the Exchequer Churchill, is the sending of more than 16,500 persons to Canada from the mining districts at a cost of $3,000,000.

DAME ELLEN TERRY, Britain's best loved actress and almost as well known and well loved in America, died at her home in Kent in her eighty-first year. In deference to her own request there was "no funeral gloom" at the obsequies, held in the village of Small Hythe and St. Paul's church, London, and her ashes were deposited in the crypt of St. Paul's.

Others who died during the week included Dr. George Colvin, president of the University of Louisville, Kentucky, and Rear Admiral W. M. Folger, retired.

CIRCLING the world in 23 days and 15 hours, Capt. C. B. D. Collyer and John Henry Mears established a new record when they stepped from a boat at the Battery, New York city. The journey was made by steamships and airplanes and they traveled in all 19,725 miles at an average speed of 840 miles a day.

FIFTEEN nations are invited by France to send representatives to Paris for the signing, on August 27, of the Kellogg antiwar treaty. The ceremony will be held in the famous Halle d'Horloge of the ministry of foreign affairs and will be most elaborate.

GENE TUNNEY is to retire as the unbeaten heavyweight champion. In his last fight, with Tom Heeney of New Zealand, he scored a technical knockout in the eleventh round. The referee stopped the battle, Heeney having been knocked unconscious in the tenth and being at Gene's mercy. It was estimated that Tex Rickard, the promoter, lost $400,000 by the contest.

SHIPPING FRUIT AND VEGETABLES

In Certain Eastern Areas Smaller Markets Appear to Be Well Served.

(Prepared by the United States Department of Agriculture.)

The larger cities receive so great a proportion of the car load shipments of fruits and vegetables in the United States that the rest of the country might seem at first glance to be rather poorly supplied. In 1920, for example, 36 of our principal cities unloaded 58 per cent of the car lot shipments of 16 leading fruits and vegetables. Nevertheless, according to the Department of Agriculture, the distribution of fruits and vegetables throughout the country is more thorough than these figures would indicate. The explanation is largely the motor truck.

Enlarging the Demand.

As a matter of fact, in certain eastern areas for which information is available, the smaller markets appear to be well served with fruits and vegetables. An average of from 40 to 45 per cent of the car load receipts of box apples in 17 southern cities in 1926 were shipped out again to the surrounding territory by auto truck or in less than car load shipments.

In general, the machinery for the redistribution of shipped-in fruits and vegetables to the small cities and to the rural population is fairly efficient, and the auto truck is constantly improving it. Thus in Pennsylvania from 10 to 50 per cent of the southern peaches used in 1926 in a number of cities with population ranging from 20,000 to 50,000 were brought in by truck or in less than car lot shipments from Philadelphia or Baltimore.

Southern peaches are on sale in most of the small towns and villages of eastern Pennsylvania during the heavy shipping season. Many dealers in the small cities have their own trucks and make regular trips to the larger markets for supplies.

It has been contended, from the fact that car lot markets, go principally to the larger markets, that more car lot shipments might profitably go to the smaller markets, many of which have cold-storage plants. This may be rather difficult with the more perishable products and these subject to sharp price fluctuations. In small markets it may take a dealer several days to dispose of a car load. Meantime, falling prices in the larger markets may enable competitors to bring in supplies by truck or in less than carload lots at prices which the car lot receiver cannot meet without heavy loss. Lower transportation charges on car lot shipments to small markets may be offset by the greater risk. By using the auto truck, the dealer in the small city often feels he has a better choice of fresh produce, and can be assured of better value in buying it.

Auto Truck Used.

In short, much progress has been made in enlarging the demand for fruits and vegetables by effecting a wider and more thorough distribution among the consuming population. Dealers using their own or hired trucks, and hucksters and peddlers who handle locally grown as well as shipped-in produce, have widened the area and increased the intensiveness of distribution. Their task has been made easier by the general development of the fruit and vegetable industry, which has improved the quality of product offered, lessened waste, and made perishables available throughout a longer season.

Students Claim It Is Healthful Driving Cars

Automobile driving is a good exercise and is conducive to good health. That is the conclusion drawn from a series of tests made by the medical students of the University of Wisconsin.

In a bulletin issued following the investigations it is declared that driving gives a great deal of exercise to the arms and shoulder muscles, while the leg muscles get in an important amount of work in operating the brakes and clutch, especially in downtown traffic. The exercise thus gained is not strenuous, but it is regular and this is said to be an additional advantage, according to the bulletin.

It is also pointed out that the car driving of today requires less effort than ever before, but at the same time requires enough effort to provide good exercise.

Utopia for Pedestrians and Motorists Is Plan

A model community planned to meet the needs of this motor age is to be built within eighteen miles of New York city. The community, which is to be named Radburn, will be located between Paterson and Hackensack, N. J. This interesting project is being promoted by the City Housing corporation and its ultimate cost will be between $50,000,000 and $60,000,000. The first unit of the town will be ready in 1929 and will accommodate 600 families.

This settlement will be a self-contained community in which most of the residents will be employed locally or in the neighboring factories and business establishments. Through motor routes will be provided for fast traffic, but meetings of pedestrians with motor vehicles will be minimized by a series of parkways and garden paths by which children and their parents can walk to and from schools and shopping districts without crossing a street.

Unique Pedal-Mobile Is Made Quite Convenient

The photograph shows Luzlarte, the famous Spanish painter, in his unique pedal-mobile. Inside are a comfortable cushion seat, his painting tools,

Luzlarte and His Pedal-Mobile.

provisions and bedding. He will tour all over Europe to sketch. Luzlarte's little coupe is propelled like a bicycle —only it's much more comfortable.

First Endurance Run of Auto Was Held in 1901

The first endurance run of an automobile was held in 1901, when A. L. Riker, an early maker of automobiles, started a trip from New York to Buffalo, a distance of less than 500 miles, in his own gasoline model, according to Betty Shannon and Elsie Johns in Liberty Magazine.

"The car was built for 50 miles an hour, but once out of sight of brick and cobblestone it made headway with the greatest difficulty," the authors continue. "This difficulty may be imagined when it is stated that it took from Wednesday morning to Saturday noon to cover the distance from Albany to Herkimer, less than 100 miles. At Rochester the plan was abandoned because of the death of President McKinley."

AUTOMOBILE ITEMS

Columbus had his difficulties, but engine trouble was not one of them.

* * *

It was said that the next war would be fought with gas. Correct. The auto war is now on.

* * *

The city resident has his choice of being run into by a car or driven crazy by honkers.

* * *

The way that casings and tubes are being reduced in price, the auto owners are having a snap.

* * *

It is hardly fair to jump to the conclusion that the girl who is never home is always away on an automobile trip. She may have gone by airplane.

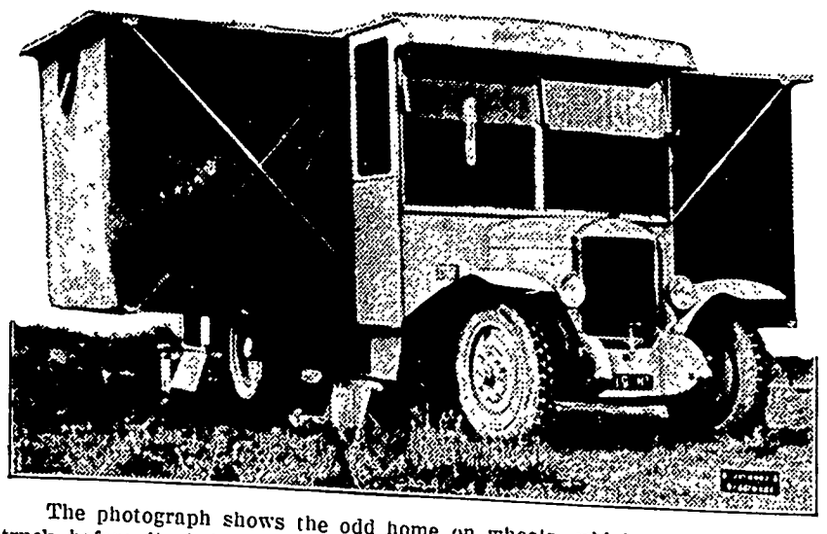
* * *

Probably no one else can look any hotter in July than a motorist manipulating a demountable-rim tool by the roadside, unless it is the iceman's new helper.

* * *

Pete De Paolo, Tony Gulotta and Harry Hartz are outstanding examples of former auto mechanics who have won places in the driver's seat of racing cars.

PRACTICAL HOME ON WHEELS IS BUILT



The photograph shows the odd home on wheels, which was an ordinary truck before it sheltered this family on their tour of the country. It's a wonder they haven't been haled to court for blocking traffic. However, it folds up when a stop is made in the street.

SHIP CAPTAIN, 98, HA TROD DECK 86 YEA

Went to Sea When He W Twelve Years Old.

St. Albans, Vt.—Capt. Ell B. R well, who observed his ninety-e birthday at the home of his daug Mrs. O. F. Carpenter, here last Fe ary 18, and is reputed to be the ol active steamboat captain in the wo has another season's work begun skipper of a steamboat on Lake Ch plain.

Captain Rockwell's ambition t round out 88 years of service a sailor on Lake Champlain. This will do, he vows, if he lives to be hundred.

"I do not spend too much tim reviewing the past," he said, "but forward to the future. Even with years behind me, I am planning the future. Do you know what plans are?" he inquired.

Receiving no for an answer, said: "Well, it is to spend at l two years more in the pilot house the Vermont" (the steamer he c mands).

Although the captain was ill tonsilitis last winter, he has f recovered and is out every day fo walk. In the winter he helps sh the snow from the walk in front his daughter's home. "I must k in trim," he says.

First Century Hardest.

He appears to be in splendid hea "If I continue to feel as spry a do today I will reach the first cent mark, which is the hardest," chuckled. "Then I plan to take a bit easy the next hundred year

He paid high tribute to Lindbe whom he considers the greatest n gator that ever sailed uncharted s

"The Presidential campaign in ests me deeply," he continued. "I no prophet and not politically ver enough to make any forecast. radio, which I enjoy many hour day, is something uncanny. I won if Babe Ruth will break his home-record another year."

"We should be a little more sp ually inclined," the captain belie "and show appreciation for the w derful opportunities offered us. should have more faith in the yo folks. They are living up to the sp of the times, but underneath all apparent nonchalance to our id they really have their own standa which are indeed as high and mig as their forefathers."

Captain Rockwell left his home North Hero, Vt., when twelve, shipped on a two-masted schoo that plied the waters of Lake Ch plain between St. Johns, Que., Whitehall, N. Y. One night durin severe storm, while he was aboard Cynthia, he was knocked overbo and nearly drowned before his br er, who was captain of the lum carrying boat, could come to his a

A Pilot for Seventy-One Years.

Seventy-one years ago Cap Rockwell took out his first pilot's cense. He was pilot of the stea Canada. At that time the pilot really master of the boat, as the c tain did only clerical work, Cap Rockwell recollects.

During his first year as pilot C tain Rockwell performed his first saving act. A man fell overbo while the boat was docked in St bans bay and he went over after and brought him safely aboard.

In 1868 the captain's quick thinki probably saved 125 lives. He was t pilot of the steamer Adirondack. O night a fire started in the boiler ro He rushed in and, realizing that small stream of water from the p would not have much effect on fire, turned the hose on the hot boi which created enough steam to ex guish the flames.

During his 85 years of active s ice on the lake, Captain Rockw record has been perfect, not one bl mark being checked against his n He has held the rank of captain m than forty years and has been cap of the Vermont III since it was b 27 years ago.

Justice Is Vengeance Even in Newer Chi

Shanghai, China. — The primi conception of criminal justice as geance, as an appeasement of criminal's victim, survives stro even in Nationalist China, with codes of modern pattern. There a very spectacular illustration of recently in Nanking, the Nationa capital.

A policeman was killed by a rob who was caught and sentenced death. A memorial service for dead policeman was staged. mayor of Nanking presided and fered sacrifices before the bier.

Hsueh Tu-pi, Nationalist minis of the interior, eulogized the d man's devotion to duty. The ser was concluded with the decapita of the condemned robber in sight the gathering.

If You're Shy 96 Cents Show This to the W

Washington.—Americans are cents poorer per capita this year t they were last year, but they $5.60 richer than they were in 191

Treasury records made public st that the per capita wealth of United States, based on an estima population of 118,364,000 on June the end of the 1928 fiscal year, $40.52, compared with $41.48 for 1 and $34.92 for 1914.

Pasture may be the determining fac- or in whether or not farmers make profit from their hogs this season Pasture is especially important for young pigs.

* * *

Allowing hogs to burrow into a straw stack and pile up there, to come out steaming hot into the cold, is in viting trouble. It causes pneumonia hog flu and other ills.

* * *

Lambs that are docked are much more attractive to buyers and com mand a higher price than do undocked lambs. The docking should be don when the lambs are seven to fifteen days old.

* * *

Most times a simple mineral mix ture is as good for hogs as one that reads like a couple of veterinary pre scriptions.

* * *

A well-built central hog house is a very desirable thing to have, but a cheaply constructed shed can be made to serve the purpose.

* * *

Many successful cattle feeders in crease the amount of cottonseed mea or cake or other similar product dur ing the last 30 to 60 days before cat tle are marketed.

High-Grade Hay in Good Demand

Producers of Alfalfa Could Make Money by Watching Markets.

(Prepared by the United States Department of Agriculture.)

A much larger quantity of high grade alfalfa could be profitably marketed in the United States if producers would study market demands and then make their production and loading practices conform to the market requirements, according to Edward C. Parker, hay marketing specialist of the United States Department of Agriculture.

Great numbers of dairymen who do not now utilize much alfalfa but depend largel, on mill feed, for protein, he says, would become buyers of alfalfa if supplies of high grade alfalfa were available at all times. Many farmers are intermittent sellers of low grade, surplus hay but comparatively few specialize in the production of high-grade, market alfalfa.

Purity, a high percentage of leaves, clinging foliage, green color, and pliable stems are the essential characters of high grade alfalfa. The experience of federal hay inspectors is that the most common causes of low grade alfalfa are meadows with thin stands, foreign material in the form of partly decayed rakings, weather damage, over-ripeness at time of cutting, overdrying, baling undercured hay, stacking distinctly undercured hay, and baling during very hot, dry, or windy weather.

Alfalfa for Market.

In most instances, Mr. Parker says, alfalfa intended for market should be cut when one-tenth to one-fourth in bloom, or when new growth starts from the crowns irrespective of the bloom. There will be little, if any, increase of tonnage gained by allowing the crop to stand longer. At this stage of maturity the leaves usually constitute anywhere from 45 per cent to 53 per cent of the total weight of the plants, and the stems have not become objectionably hard and woody. The grade of United States Number 1 alfalfa can be attained in practically all alfalfa districts of the United States when crops are cut at this stage of maturity, providing the hay is properly cured and baled and not subjected to much damage from the elements.

Essential points in preserving leafiness and color and preventing overdrying are (1) to facilitate rapid evaporation of a large part of the moisture in the newly mown hay by exposing it to the sun and wind in the swath where the rate of evaporation is faster than in the windrow, bunch or cock, and (2) to perform the operations of raking and windrowing while the hay is tough and the leaves are not easily shattered.

Use of Side Delivery Rake.

The side delivery rake, Mr. Parker says, is specially adapted to making windrows of wilted and tough alfalfa that will aerate and cure uniformly with the minimum loss of leaves and color. Average crops of alfalfa hay wilted in the swath will cure almost as quickly in side-delivery rake windrows as though fully cured in the swath and the grade of the hay is much superior. The side-delivery rake, he declares, is an essential machine in the production of high grade alfalfa.

A detailed account of hay making, curing and baling practices in the United States, together with recommendations as to the best methods of performing these operations has been published by the United States Department of Agriculture in a mimeograph pamphlet written by Mr. Parker, and entitled "High Grade Alfalfa, Methods of Production, Baling, and Loading for Market." Copies may be obtained by writing the bureau of agricultural economics, United States Department of Agriculture, Washington, D. C.

Danger of Leaf Burn In Applying Ordinary Spray

There is danger of leaf burn in applying ordinary commercial lead arsenate to stone fruits, and using lead in combination with lime-sulphur increases danger. Possibly the latter is inadvisable, but in most cases defoliation by the pest against which arsenate is applied would cause more damage than defoliation or burn resulting from the application, hence the grower must follow his best judgment. Natural or triplumbic lead causes less damage than the commercial kind, but it is almost impossible to obtain.

Self-boiled lime-sulphur has been reported by government workers to cause reduction of size in cherries, in some seasons, and this may prove true also of other lime-sulphur mixtures.

Searching for Potato Harvesting Machinery

The program of the German government committee for agricultural engineering includes an investigation into potato harvesting machinery with the object of finding a machine to lift and collect potatoes on a large scale. In introducing the subject the committee notes that in no country does the potato play such a large part as in Germany, which harvests about a third of the world's production of potatoes. In order to harvest these Germany has every year to obtain the assistance of some 160,000 foreign workers. Its own laborers are growing less and less inclined to undertake this kind of labor.

Complete Records by Live Stock Dealers

Law Enacted to Insure Fair Treatment by Dealers.

(Prepared by the United States Department of Agriculture.)

To insure fair treatment, and prevent opportunities for dishonesty in the marketing of live stock at public stockyards is a primary purpose of the Packers and Stockyards act, which is enforced by the packers and stockyards division of the bureau of animal industry of the Department of Agriculture. This imposes definite duties and obligations on dealers engaged in buying and selling live stock at posted public stockyards. It is no longer possible to do business "on the cuff," as was discovered to be the practice of one dealer who was cited to appear for a hearing. He was charged with and admitted failure to keep adequate records of his dealings.

The departmental order required that in future this dealer shall keep the following accounts, records and memoranda pertaining to his transactions:

1. Copies of scale tickets issued by stockyards covering purchases and sales by him.

2. Copies of bills for all purchases of live stock by him.

3. Book record or register of each purchase and sale of live stock showing date, number of head, weight, dockage if any, amount, and incidental expenses

4. A complete file of canceled checks issued.

5. A check stub corresponding to every check issued.

6. Copies of account sales rendered by market agencies in connection with sales for him.

If any shipper or producer of live stock has reason to believe that he has been treated unfairly at any stockyards, the existence of the required set of records enables the agents of the department to check over the account of the questioned transaction. It is the policy of the department to be lenient toward first offenders, and give them opportunity to mend their ways and comply with the provisions of the law. Subsequent offenses are regarded as more serious, and in such cases the department intends to make full use of the powers conferred by the Packers and Stockyards act.

Causes Responsible for Decline in Summer Milk

During the summer months the milk flow generally drops off badly. At this time the cows are tormented from morning to night by flies and the common idea is that the flies are responsible for this drop in milk.

The fly is not the only cause. The real trouble is that the cows do not graze enough and cannot keep up milk production because they do not eat enough. The reasons for not eating more are the hot weather, the flies, the unpalatable condition of the mature grass in seasons of good pasturage, or in most seasons, the shortness of the grass.

Using fly repellents does not increase the yield of milk enough to be noticeable, although by spraying the animals once a day it is possible to keep them reasonably free from flies. The most important thing to do is to make it easy for the cows to get all the feed that they need. They should be in the pasture early in the morning and during the night, as little grazing is done in the heat of the day.

Vicious Poultry Pests Difficult to Eradicate

Chicken mites are small grayish red mites about the size of a pinhead when filled with blood. They hide away during the day in cracks and crevices throughout the hen house, migrating to the roosting birds at night to suck blood.

Stick-tight fleas are small flat-sided, hard-bodied creatures that appear as dark areas about the eyes, comb and wattles. Fowl-ticks or blue-bugs are closely related to mites but are always larger, easily seen and have a thick, leathery skin. They are flat, egg-shaped and dark brown in color. Their habits are essentially the same as those of the chicken mite.

Notes of the Farm

Crop rotation is the surest method of weed control.

* * *

When you burn wheat straw or wheat stubble, you are destroying plant food.

* * *

Soy beans make a splendid supplement to a short timothy, or timothy and clover crop.

* * *

Blackhead in turkeys cannot be cured, but it can be prevented by keeping the birds off of ground on which chickens range.

* * *

Lambs that are docked are much more attractive to buyers and command a higher price than do undocked lambs. The docking should be done when the lambs are 7 to 15 days old.

* * *

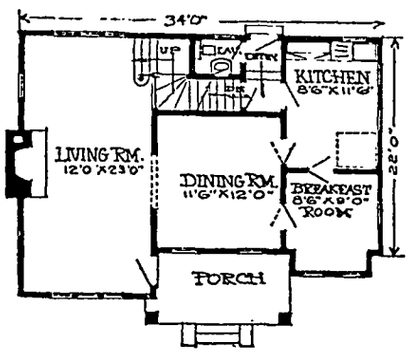
Pigs weighing around 70 pounds will consume about one pound daily of alfalfa hay if the grain ration is fed at about three and one-half pounds daily per hundredweight of pigs.

Neat Stucco Design Suitable for Setting of Trees and Shrubs

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Here is a design well carried out in stucco over a frame construction, a type of house which, when well built, offers wide possibilities for the designer and lasting satisfaction for the owner. But be sure that you get a first-class stucco job, for any other kind will be a sad disappointment. This design is one which can rightfully claim to be modern in every feature and the total effect will be

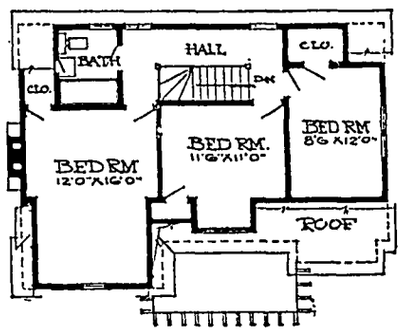


First Floor Plan.

found very pleasing, especially when placed in a setting of trees and shrubbery.

The exterior presents an artistic simplicity made more attractive by the brick work of the foundation, porch and small paned windows, snubbed gable and porch roof treatment. The effect of the surrounding shrubbery can be seen quite plainly. Without it much of the attractiveness and dignity of this cozy home would be lacking.

The plan, too, is one which will be found highly satisfactory just as it has been laid out. On the other hand, for those whose requirements indicate a somewhat different arrangement, it can easily be altered to suit. Few if any would want to change in any way the big living room with its many windows, big fireplace and the stairway leading from the far corner. Many families would find, however, that the space indicated as a breakfast room



Second Floor Plan.

could be made much more useful in some other way.

The space might be utilized as a maid's room, also it would serve admirably as a study, a sewing room or as a nursery where the children could make as much noise as they pleased without disturbing the family and still without being shut away at a great distance from their elders.

The first floor lavatory will be found a most convenient extra, one which will save tiresome trips up and down stairs. The regular bathroom is placed on the second floor, of course, convenient to the bedrooms, of which there are three. These bedrooms are all provided with good closets and all are rooms of sufficient size to make for ample living comforts.

Every One Has Own Idea for the "Dream" Home

To the average person ownership of a home is perhaps the dream of a lifetime—in many cases it is the great objective of all effort.

The dream may be of a modest city dwelling or it may vision a suburban cottage—New England, southern or Dutch colonial type, English half-timber, California bungalow or a pretentious mansion, according to one's prospects in life.

Ownership may come through purchase of a house already standing, or it may be the result of long planning and the personally supervised construction of a new house. In any case, the aim is for something more than merely a house. A real home is desired—one that will transform all the coziness of the "dream picture" into enduring substance.

It is one thing to dream of a home and its comforts and delights and quite another matter to assure them. Unless the prospective home owner gives careful attention to essential details of construction, the finished dwelling can be a sad disappointment instead of a perpetual source of pride and satisfaction.

Four walls, a roof and interior equipment do not by any means constitute a real home. The character of the materials entering into structural work is of vital importance in making your home all that a home should be.

The old saying "appearances are deceptive" applies nowhere more forcefully than in home building. Something more than good looks is necessary in the proper construction or alteration of a house.

To be certain that you are securing a home in keeping with your dream of cozy comfort and lasting service you should take counsel with those who know how to build. You should also use materials that are not only attractive, but also are durable and best suited to the uses they are intended to serve.

Many new houses soon become a source of trouble and expense to their owners because of false economy practiced in their construction. A little paint, some showy decoration, and to outward appearances your house can be a thing of beauty on the day you move in. The test will come when materials, selected for vital installations because in first cost, will begin to fail.

This means replacement at an expense much greater than the so-called saving effected by use of substitute materials at the beginning. And there is, in addition, the inconvenience and trouble occasioned by tearing up floors, opening the walls, repainting and papering incidental to the replacement of unservicable or worn-out installations.

Therefore, the first point to be remembered is that substantial, enduring materials increase the cost of your home but little at the start. Eventually they are the cheapest as well as the most satisfactory materials.

Whether you build a new house, remodel the old house or buy a ready-built house it will pay you to give close attention to the character of its construction. See to it that the materials used are of the kind to give you all of the service that is implied in the term "home."

Common Brick Makes Spurt in Home Building

That most common of building materials, common brick, has literally written its own varied history in the different bonds developed for its utilitarian and decorative uses in almost all the countries of the world over a period of many centuries.

American home owners are afforded a wide range of selection in common brick bonds, and many interesting contrasts may be secured by laying the brick of walls and chimneys in different patterns.

The bonds most commonly used for walls in this country are the Flemish cross bond and the garden wall bond. Chimneys, which offer a small expanse, usually require a different header, English and Flemish bonds probably are most popular.

Skintled brick, a roughly laid type, is now coming into popularity and is about the most economical type. Rolok walls, in which the bricks are laid on edge, also are inexpensive to build. Diapered and herringbone patterns are frequently used with heavy timber work in houses of Norman and English derivation.

Concrete Fence Posts Will Not Rot or Burn

Concrete fence posts will not rot or burn. They are uniform in size and shape and are easily set and lined up. They are a paying investment on the farm and an adornment on the home grounds.

The correct location of reinforcement in posts is very important. The rods are located near each corner, where the greatest tensile stresses occur, and from one-half to three-quarters of an inch from the surface to protect them against possible exposure. Reinforcement in the center of the post is useless. Quarter-inch round or square steel rods have proved most satisfactory for reinforcing line posts.

A false impression entertained by some is that almost any kind of scrap wire, even barbed fence wire, will serve for reinforcement. Such wire is often so rusty or dirty that concrete will not stick to it and it is therefore useless.

Telephone Users

Within 18 months there will be 35,000,000 telephones in use throughout the world, the chief statistician of the American Telephone and Telegraph company estimates.

POULTRY

SKIM MILK FOR HENS IS FAVORED

Skim milk is great pig feed, but the man who feeds the milk to his hens and takes his profit in the form of increased egg yields is the one who makes the most money from his milk, according to Iowa State college poultrymen.

Seven years of continuous experimentation at the college has proved that milk, when fed to poultry, will return from three to six times as much profit as when fed to pigs. It has also been found that, when eggs are selling for not less than 30 cents a dozen, skim milk is worth around $2 a hundredweight as feed for good pullets. There is practically no difference between the value of skim milk and buttermilk for poultry, repeated tests have revealed.

When hens fed tankage or meat meals as their main source of protein were compared with those that also had milk, it was found that the milk-fed birds outlayed the tankage-fed birds by 25 to 40 per cent during cold weather. Milk should always be fed sour because birds will consume more of it in this condition, it has a slightly laxative effect and the lactic acid combats many disease germs.

From October 1 to May 1 it is profitable to give the hens nothing but milk to drink and from May 1 to October 1 they may be allowed to choose between milk and water. When birds are given all of the milk they will drink, the amount of tankage or other packing house by-products may be reduced one-half, for milk furnishes one-half the protein necessary for laying hens. The Iowa poultry specialists advise the keeping of only as many birds as can be supplied with milk.

Laying Hens Need Moist Mash in Warm Weather

Summer feeding of farm poultry can be carried on economically and to good advantage, says Cora Cooke, extension poultry specialist at the university of Minnesota. The amount of feed required on the average farm is less than in winter, a higher production can be counted upon, and prices of eggs are usually ascending after the low period caused by the spring surplus. The specialist points out that the cost of the ration can be reduced by cutting down the meat scrap one-half and omitting it altogether if plenty of milk is available, and also by reducing the amount of corn and, in the case of dual purpose flocks, omitting it entirely. "The principal thing to look out for is that plenty of mash is used," he says. "As warm weather comes on a moist mash once a day will do wonders in keeping up egg production. Hens that molt early should be disposed of before poultry prices drop in the early fall." Reports of storage conditions presage a favorable season, says Miss Cooke. A recent report said that 13 per cent fewer eggs and 39 per cent less dressed poultry are in storage than a year ago.

Marking Broody Hens to Cull From Laying Flock

There is a wide variation in the amount of broodiness in hens in the same flock. Some lay a comparatively few eggs between spells of broodiness. Others go broody rarely if at all. An excellent practice is to mark through some method or other the number of times the hens become broody during the season.

A simple and yet effective method is to use celluloid rings to slip on their legs. A bunch of rings of one color can be used, thus leaving other colors for other marks if desired. Each time a hen is placed in the broody coop or set, if the chicks are hatched and raised with hens, a ring can be placed on her leg. Any hen that accumulates more than two before midsummer could be culled from the flock. Frequently a hen will go broody every two or three weeks, even when she is placed in the broody coop at the first sign of broodiness. Such should be sold or eaten at the third attack.

Proteins in Whey

Whey contains milk sugar, fat, minerals, and proteins of very high quality. It is therefore an excellent feed for poultry. However, it contains only about 0.6 per cent of dry matter, therefore it is difficult for a hen, with her limited capacity, to consume enough to supply her wants. Keep the usual feeds before the hen, so that she will be sure to get enough to eat. Since the whey contains so much water, it would be well to take away other sources of water.

Poultry Prospects

Says the Massachusetts Agricultural college: "The outlook for egg, broiler and poultry prices is slightly better than in 1927. Feed costs on the other hand are expected to continue high, at least during the first half of the year." We've covered nine sheets of paper trying to figure out whether that's intended as encouraging or discouraging, says the Farm Life. Our own opinion is that poultry looks better this year than last, and we're going right ahead for a better flock.

Mrs. R. W. Elder and Clarence were at Mason City Wednesday.

Dr. Zinn spent Monday afternoon at Camp Roosevelt.

Gilbert Schaefer returned Friday noon from South Dakota.

Tom Nelson, Jr., and family were at Mason City Wednesday, to take in the circus we presume

Fred and John Wessels were Sunday visitors at the parental home near Klemme.

Mr and Mrs. Wm. Wenz were visiting at the Leppo Wessels home near Ventura, Sunday.

C. J. Papousek of Belmond, was a business caller in Klemme Tuesday afternoon.

Rev. Calvin Grosshuesch and family returned Saturday from their vacation spent at Sheboyagan, Wis.

L. O Deal and family drove to Red Wing, Minn., Friday for an over Sunday visit with relatives.

The Klemme Scouts returned to Klemme Tuesday, after spending a week at Camp Roosevelt.

Mr. and Mrs. Levi Neese and Doris, of Ventura spent Sunday at the home of Mr and Mrs. Chas. Ax

A baby girl was born to Mr. and Mrs. George Johnson Monday morning

Miss Marie Blank returned yesterday from a two week's vacation spent at Rowan and Waterloo.

Mr and Mrs. Luke Wessels from Meservey were visiting at the Leppo Wessels home Sunday

Mr. and Mrs. Art Gimer and children, Thomas and Thelma, were Mason City visitors Wednesday.

Mr and Mrs Abe Lauritsen, who have been visiting in Wisconsin, are spending a few weeks in Klemme at the Einar Salling home.

There were quite a number of people from this community who took in Ringling Bros. Circus at Mason City yesterday.

The Garner Auto Company delivered two new Fords last week. A Tudor to Anton Brcka, and a business Coupe to Dr. J S. Wesson.

Msdames C. F. Kraus and F. W. Kluckhohn are hostesses to the M. E. Ladies Aid this afternoon at the Irish House

Miss Edith Haupt began work Monday for Valentine Josten, to assist him with the work of keeping up the records at the Creamery

HOUSE FOR RENT—Inquire of Joe E. Johnson. 2tp

Mrs A. G. Koerner entertained the Larkin Club Thursday afternoon. The ladies were treated to delightful refreshments.

Mr. and Mrs. George Wessels and two children, from Meservey, were visiting at the Leppo Wessels home Sunday. Geo. is a brother of Leppo.

3,400 spruce butter tubs, a full carload arrived this week from Ft. Dodge for the use of the Klemme Creamery.

School starts in Klemme, Monday Sept. 3, Labor Day. On account of the holiday the pupils will only be registered and will procure books. Ain't that tough, kids?

Mr. and Mrs. P. M. Wilson and daughter, Gladys, went to Des Moines Monday to make arrangements for Miss Gladys who will attend the Drake University there this fall.

Mrs. Rosendahl has purchased the former Spitler residence in east Klemme, occupied at present by E. A. Finn and family, who will move soon.

The Klemme Creamery reports that business is good and still on the increase. This year for July the total of 1022 tubs of butter was shippedo ut, as against 968 for the same period a year ago. This does not include the butter sold locally by the stores and to patrons.

FARM WANTED

Want to hear from owner of good Iowa farm for sale suitable for general farming and stock raising. If a bargain send price and description. Box 495, Olney, Ill. 1tc

Charlie Yahnke and sons, Melvin and Curtis, and daughter, Wava, of Good Thunder, Minn., came Friday and remained until Sunday evening visiting relatives and friends here.

Mrs. C. F. Keraus returned Sunday evening from several day's visit at Swea City with Mr. and Mrs. T. F. Mitchell. They brought her home.

Carl Heiden, of Dennison, drove to Klemme last Friday, enroute to Cedar Falls. Carl drove his new Ford Tudor, which he received the day before.

The drinking fountain installed by the Auxiliary ladies near the pop corn stand, has been further improved by having a cement platform built around it, and a lattice work back of the fountain.

Henry Barz threshed Tuesday afternoon. Mrs. Lena Schroeder and Max Barz, Mrs. Croner and Dorothy, and Mrs. R. A. Jorgenson and Buster were all out there to help—eat up the good lunch.

Rev. A. W. Gauger and family are this week taking their vacation. They left Monday afternoon to spend a short time at Rudd. From that point they will go to various other Iowa places to visit other relatives and friends

FOR SALE—A Globe Range, is nearly new Call at Mrs. Henry Schuldt, Sr. residence. 3tp

Mr. and Mrs. Clarence Wiles, of Ames came Saturday evening for an over Sunday visit with Klemme friends. Mr. Wiles is still in the automobile business and is selling the Reo "Flying Cloud," Wolverine and some other make. He is driving a Reo sedan himself.

The Auxiliary Ladies have booked another of the season's best and latest pictures, "Seventh Heaven," which will be shown for two nights, Aug 31st and Sept. 1st. Be on the lookout for further details and make your plans now to see this picture.

Dr. D. P. Anderson and Dr. J. S. Wesson drove to Minneapolis yesterday to spend a couple of days at the National Veterinarians Convention. These men ar both "live-wires" in their profession and believe in keeping up with the times by gaining new pointers at the conventions.

Wava Yahnke, of Good Thunder, Minn, and Lew Lewis of Klemme were the guests of honor at a birthday dinner Sunday evening, prepared by Mrs. Lewis. Wava was 19 years old on that date and Lew was 83 years old Wednesday of this week, but Mr. Lewis did not mind celebrating in advance. Those who were present were Henry Lewis and family, Verner Lewis and family, Ethel, Andrew and Clarice Wellemeyer, Reva and Clarence Elder, Gladys Wilson, Frank Gibbs, and Melvin and Curtis Yahnke. All report a fine time.

Klemme people were conspicuous by the large number at the Boy Scout Court of Honor at Camp Roosevelt last Sunday afternoon. We might have missed some, but we did see the folowing there: E. J Arnold and family; Leonard Sampson and family; Mr. and Mrs. Emil Patet; Paul Grange and family; Ben Coobs and family; Dr Geo. Zinn and Tom Nelson, Sr; Tom Nelson, Jr. and family; Art Gimer and family; Frank Gruetzmacher; C. G. Waterman and family; Clarence and Frank Kluckhohn and families; Mrs. Sadie Turgasen and son, Vernon and Mrs. G. W. Kluckhohn; Fred Ridder and Enid Harvey; Mr. and Mrs. Levi Ridder; Wes Schuldt aud wife; John Suckow and family; Dr. and Mrs. D. P. Anderson; Dr. Missman, Mr. Ely and Miss Gertrude Ely of Belmond, and Miss Agnes Ely of Chicago; Gilbert Schaefer and family; Mr. and Mrs. J. N. Day, Wm. Smith and family; Wallace Pavey and family; Verner Lewis, U. G. Smid and H. F. Jost, and R A. Jorgenson and family. A number of Klemme Scouts were up for promotion.

Eggs come in "sealed packages." Anyone can tell when the "package" is opened whether its contents is fit for food.

KLEMME SHUTS OUT BAYSIDE CUBS 1-0

HAMILTON STRUCK OUT EIGHT BATTERS IN GAME

Fast Teams Now Bidding For Game With Local Aggregation

The Klemme base ball team played the Cubs at Bayside last Thursday and shut out that team by a 1 to 0 score, the first time this year that Bayside has been shut out and only their fourth defeat in about twenty three of four games. Earlier in the year Bayside trimmed the locals 7 to 2 on the Klemme diamond.

The game last Thursday has given the Klemme team notoriety and fast teams have already asked to book games. Cedar Falls wants a double header at Cedar Falls and as far away as Dubuque has asked for a game with Klemme. Bayside has the reputation of being the fastest team in North Iowa and has been defeated only by the Winnishiek County Giants and the Cedar Falls Club. By shutting out Bayside last week has placed Klemme on the top shelf with the 'big boys."

Thursday's game was featured by the wonderful pitching of Hamilton, youthful star from Goodell who struck out eight men and held Bayside for five hits. Raw, pitching for Bayside allowed nine hits.

Earl Finn, centerfielder for the locals featured the fielding with perfect handling of seven chances. Hauk featured the play for Bayside handling hot ones at third.

The boys say Bayside players are good sports and complimented the locals on their good playing.

Klemme Wins From Chapin

In a game at the Klemme park Sunday the locals shut out Chapin in an 11 to 0 game.

Hamilton struck out fourtten men and allowed but one hit.

During the whole game only two Chapin men saw first base, one got a hit and the other took a walk.

Future Games On Schedule

The Klemme ball team has the following games booked for the next few weeks:

Swaledale, there Sunday, Aug. 19.
Belmond, there, Sunday, Aug. 26.
Tournament, Belmond, Sept. 2-3.
Clarion at Cornelia Sept. 9th.
Cedar Falls there, Sept. 15-16.

ELLTOWN REFORMED CHURCH OBSERVE 50th ANNIVERSARY

Holding Special Services This Week Commemorating Event

The pastor, Rev. Schmidt and his congregation of the Elltown Reformed Church are having special services this week to commeorate the 50th anniversary of the founding of the church fifty years ago.

Sunday will be an especially big day at Elltown when the Klemme Reformed congregation will worship with them.

NEXT YEAR'S AUTO PLATES ARE BLACK AND GREEN

The automobile license plates for 1929 will have a green background with black numbers and also letters The word "Iowa" will be spelled out and "1929", the year will be used instead of '29 These plates are manufactured at the Reformatory at Anamosa

HIGH TAXES ON ELECTRIC FARM LINES DELAY CONSTRUCTION

"Electricity in the Home is just as appealing to the house wife who lives on the farm as to the city dweller. She knows that it will furnish refrigeration, relief from the heat of cooking during the summer months, wash the clothes, light the home and other innumerable services. The farmer knows that it will pump the water, milk the cows, light the barn and grind the feed

The farmer does not understand the reluctance of the light and power companies to engage in the rural business. It has been explained to the farmer that the investment per customer is too great and that the farmer could not afford to pay each year sufficient to cover interest, depreciation and taxes and up-keep of half a mile of line The average is two farm customers per mile of line constructed The farmer does not appreciate, however, that one of the heavy charges which has had a great deal to do with retarding the building of farm lines are the taxes which are levied against them

To illustrate the Guthrie Center Maquoketa, Marengo and Monticello divisions of the Iowa Electric Company have 125 miles of electric farm lines The taxes for the year 1927 on these lines were $1863 00 or $15 00 per mile, and this tax, together with interest, depreciation and maintenance of the line must be paid out of gross revenue received from the farmers before the light and power company commences to receive anything for the current which it furnishes the farmer over the line.

The light and power companies have been making a study of methods and undertaking to devise means whereby they can give to the farmer the same electric service which is furnished the city dweller at a price which he can afford to pay, and the above heavy tax burden was brought to the attention of the Executive Council at last month's hearing at which the value of electric lines for taxation purposes are fixed.

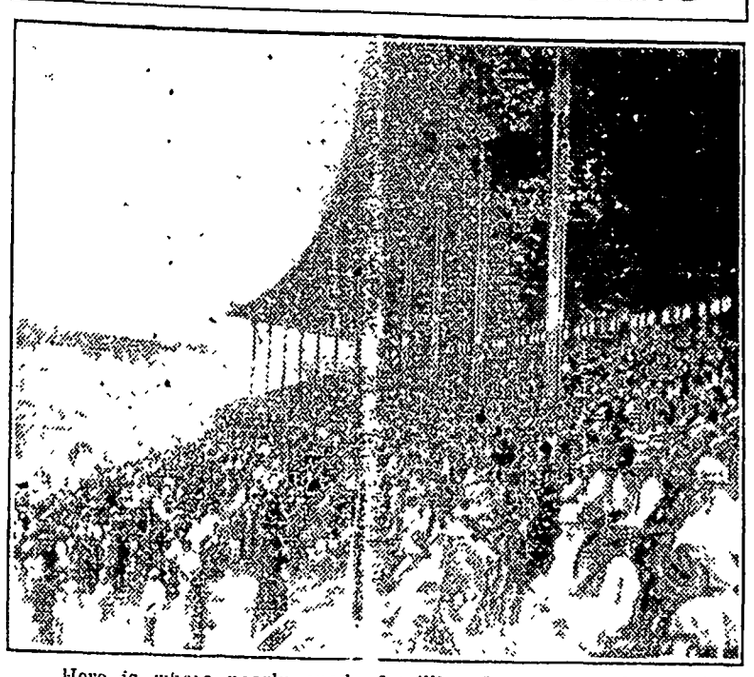
The amount of electricity used by a farm customer has greatly increased within the past few years, and it is believed that within a few years more extensive uses will have been devised so that electricity will be essential for the proper operation of a well managed farm as modern farm machinery.

The Electric Company in reporting to the Executive Council show only the physical value of their lines No reference is made to earning statements and the value of the lines for taxation purposes is based by the Executive Council on physical values only. On the contray, railroad companies in reporting to the Executive Council not only schedule the physical property, but are required to report the gross and net earnings of the property and in fixing the value of the railroads for taxation purposes the Executive Council are required to take into consideration the 'earnings" "and any and all other matters necessary to enable the Council to make a just and equitable assessment."

It has been suggested that until such time as the increased revenues from the electric farm lines, due to increased uses of electricity on the farm, are sufficient, that the law be changed so that the Executive council in fixing the value of farm lines for taxation purposes be permitted to consider the net earnings of the farm electric business. This would relieve the farmers from the tax burden where they have built their own lines.

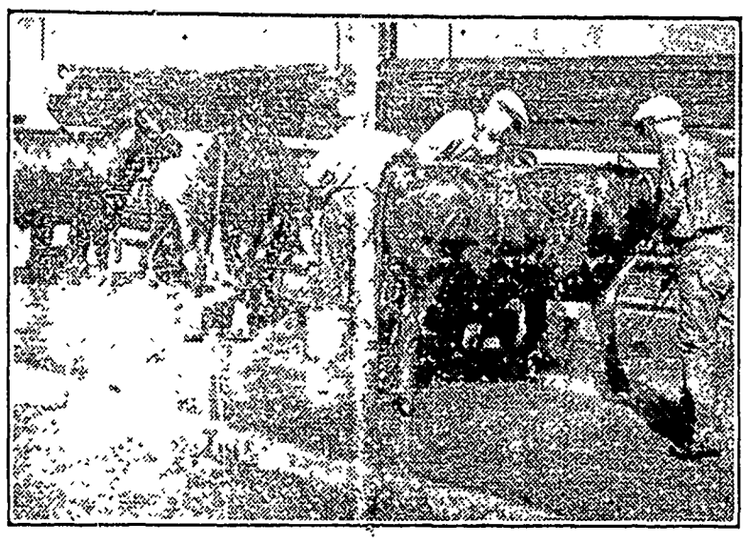
CENTRAL STATES ELECTRIC COMPANY. 1tc.

READY FOR STATE OUTING



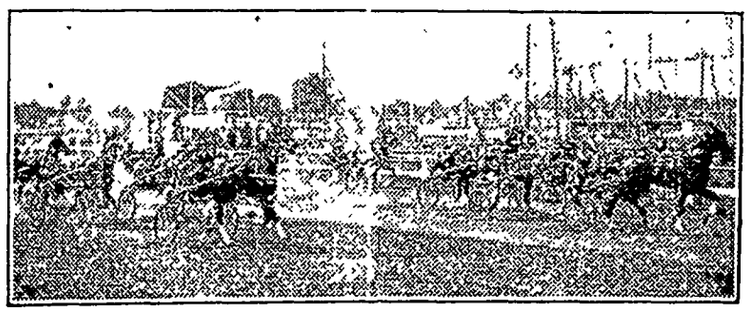
Here is where nearly one-half million Iowans and Missourians will take their annual outing this summer. The above scene shows a section of the mammoth $350,000 amplitheater at the Iowa State Fair, having a seating capacity of nearly 12,500 spectators. The photograph here shows one of the huge crowds of last summer witnessing a thrilling afternoon of horse racing at the fair.

SHOW IOWA'S FINEST CALVES



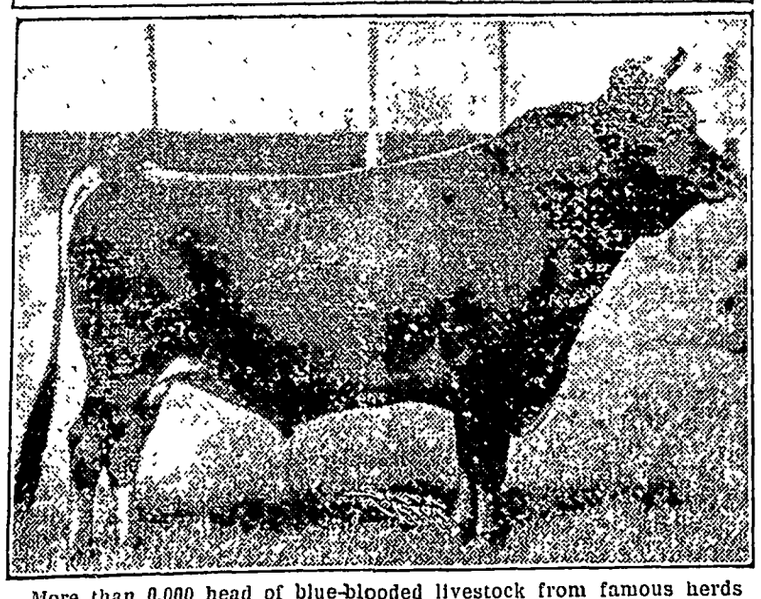
Between 600 and 700 prize baby beeves and dairy calves ownod and raised by boy and girl farmers in all parts of Iowa will compete for the championship of the state in a mammoth calf club show which is to feature the junior department of the Iowa State Fair at Des Moines, August 22 to 31. It is said that this will be the largest showing of boys and girls' livestock to be seen at any state fair in America this year. The above picture shows some of the club members at the State Fair grounds conditioning their entries for the judging ring

$20,000 FOR HORSE RACES



Advance entries indicate that Iowa racing enthusiasts will witness probably the fastest five days of harness and running events that will be seen in the mid-west this season, when the Iowa State Fair classics open at Des Moines August 25. More than $20,000 in purses will be paid to winners during these 5 days, and over 300 horses have been entered for these classics. Saturday, August 25, will be devoted exclusively to running races and the remaining days to a combination of both harness and running events. The above scene was snapped at the Iowa State Fair track during one of the fast finishes last summer.

FAMOUS HERDS AT STATE FAIR



More than 0,000 head of blue-blooded livestock from famous herds in all parts of America are now enroute to Des Moines for the opening of the national livestock show the Iowa State Fair, August 22 to 31. The huge size of the exhibit was revealed this week in an announcement of entries made by A. R. Corey. Above is Blond's Oxford Baron, magnificent bull which was awarded the grand championship ho va State Fair—an example of the splendid ani in the show at Des Moines this year.

MRS. W. F. LAU ATTENDING AUXILIARY CONVENTION

Ladies Legion Auxiliary Having A State Meet At Council Bluffs

Mrs. W. F. Lau left Monday night for Council Bluffs, as a delegate of the Klemme Unit, to attend the American Legion Auxiliary State Convention in session at Council Bluffs this week. Miss Leona Lau was also selected as a delegate but on account of illness was unable to attend the convention.

Mrs. Lau, who is chief operator of the Iowa Union Tel. Co. here is taking a few days vacation and is using it to good advantage to take in this important meeting of the Auxiliary ladies.

ANNIVERSARY AIRPORT DEDICATION, AUGUST 20

Mason City Legion Will Stage Big Time At Aviation Field

The first anniversary of the airport dedication at Mason City, August 29, will be celebrated this year. The program will comprise a number of spectacular events, including maneuvers, races, balloon busting contest, dead stick landings, parachute jumping contest and the manufacturers exhibiting of new planes on the field. The model airplane contest in which over six hundred boys are working on models of various types of aircraft, will also be held on this date.

A number of fliers who have written their names in aviation history will attend. The meet, sponsored by the Drum and Bugle Corps of the Mason City American Legion Post, will bring together the largest gathering of commercial aircraft ever seen in the state.

COUNCIL PROCEEDINGS

Klemme, Iowa,
July 2, 1928

Regular meeting of town council held at Mayor's office.

Miesman, Schuldt, Wellemeyer and Suckow members of the council present.

Minutes of last meeting read and approved as read.

Motion made and seconded to allow the following bills.

A. E. Finn, June salary.	$85.00
Central States Electric Co. June Str Lights	29.58
Klemme Times, Pub Financial Statement, Council Proceedings and Notices	28.38
Standard Oil Co., 160 gallo s Gasoline	26 40
J. H Steeman, Labor	5.20

Bills allowed.

The Council thereupon proceeded with the work of compiling a budget estimate for the following year.

Motion made that meeting be adjourned.

A. J. KUDJE, Clerk. 1tc

HAND INJURED IN THRESHING MACHINE PULLEY

Fred Henschen Received Bad Cut In Accident Monday

While attending to his duties around a threshing separator, Fred Henschen was the victim of a rather severe accident Monday about the noon hour Mr Henschen, separator man for the rig, was working around the machine when a team of horses backed a wagon against him throwing his hand into an outside belt on the machine and into a revolving pulley, cutting a deep gash across the back of his hand which required seven stitches to close the wound. Fred is carrying his arm in a sling but says the wound is healing nicely.

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

No serives Sunday, August 19th.

The congregation is invited to worship with the Elltown Reformed congregation next Sunday. This congregation is celebrating its 50th anniversary

Bible Class and Choir will meet at regular days.

IOWA CORN COSTS ARE BELOW U. S.

WEST NORTH CENTRAL STATES AVERAGE BETTER

Cost Of Raising Bushel Of Corn In Iowa Was 60 Cents

Iowa farmers last year produced corn 10 cents a bushel cheaper than the average for all farmers of the United States, but not so cheaply as the average for farmers of the West North Central sates, judging by the corn cost studies made last year by the agricultural economists of Iowa State College, and of the United States Department of Agriculture.

In a survey of corn production costs, which included 4,778 farms in the United States, the average cost last year was 70 cents a bushel and for the West North Central States 57 cents a bushel. In a similar survey of 93 farms in Iowa, the Iowa farmers' cost averaged 60 cts. a bushel, or ten cents less than the U. S. average and three cents more than the average for farmers in surrounding states.

The government report emphasizes, as did the Iowa State College economists' report, that the average does not represent all farmers, but rather those surveyed. Farmers who cooperate in such studies are considered better than the average so that the actual average cost of all farmers would be somewhat higher.

The United States Department of Agriculture has been carrying on the corn production cost studies for six years. The average found by years are as follows: 66 cents a bushel in 1922; 68 cents a bushel in 1923; 82 cents a bushel in 1924; 69 cents a bushel in 1925; and 70 cents a bushel in both 1926 and in 1927.

CAMP FIRE GIRLS ENTERTAINED AT SIX O'CLOCK DINNER

Girls Had Enjoyable Time At Home Of Clarice Wellemeyer

The Misses Reva Elder and Clarice Wellemeyer entertained the Klemme Camp Fire Girls at a formal six o'clock dinner at the Arthur Wellemeyer home Tuesday evening. The girls report having had a very good time.

The Misses Reva and Clarice put on this dinner as part of their camp fire work in earing second honors.

Half of the girls dressed in boys clothing and brought the other girls to the party.

Fort Phil Kearney's Tragic History

THE WAGON BOX FIGHT Drawn by R. Farrington Elwell

RED CLOUD

CAPT. W. J. FETTERMAN

GEN. HENRY B. CARRINGTON

CAPT. JAMES POWELL

By ELMC SCOTT WATSON

THE recent announcement that plans are under way to restore Fort Phil Kearney in Wyoming and maintain it as a memorial to the old Indian-fighting days in the West recalls the story of an American army post which was one of almost continuous tragedy from the day it was established to the day it was abandoned. Its record in that respect is almost unique, for, as one historian of the frontier, Cyrus Townsend Brady, has put it:

Since the United States began to be there never was such a post as Fort Philip Kearney, commonly called Fort Phil Kearney. From its establishment, in 1865, to its abandonment, some two years later, it was practically in a state of siege. I do not mean that it was beleaguered by the Indians in any formal, persistent investment, but it was so constantly and so closely observed by war parties, hidden in the adjacent woods and the mountain passes, that there was little safety outside its stockade for anything less than a company of infantry or a troop of cavalry; and not always, as we shall see, for these.

Rarely in the history of the Indian wars of the United States have the Indians, no matter how preponderant in force, conducted a regular siege, Pontiac's investment of Detroit being almost unique in that particular. But they literally surrounded Fort Phil Kearney at all times. Nothing escaped their observation and no opportunity to harass and to cut off detached parties of the garrison, to stampede the herds, or to attack the wagon trains, was allowed to pass by. Not a stick of timber could be cut, nor an acre of grass mowed, except under heavy guard. Herds of beef cattle, the horses for the supply wagons and mounted infantry, the mules for the supply wagons, could not graze, even under the walls of the fort, without protection. The country teemed with game Hunting parties were absolutely forbidden. To take a stroll outside the stockade on a summer evening was to invite death, or worse if the stroller happened to be a woman. There was no certainty about the attacks, except an assurance that one was always due at any given time. As old James Bridger, a veteran plainsman and fur trader, a scout whose fame is scarcely less than that of Kit Carson, and the confidential companion advisor of Carrington in 1866, was wont to say to him. "Whar you don't see no Injuns thar they're sartin to be thickest."

Fort Phil Kearney was built on a slightly elevated site between the Big and Little Piney forks of the Powder river in what is now Carbon county, Wyoming, on the Bozeman trail from Fort Laramie to the Montana gold fields. This was in the heart of the richest hunting grounds of the powerful Sioux nation and the Northern Cheyennes, who bitterly resented this intrusion upon their lands. Early in 1866 government commissioners held a council with these tribes at Fort Laramie to secure the right of safe passage of emigrants through this country. The principal objector to signing any such treaty was Red Cloud, the war chief of the Oglala Sioux, and, even when other Indian leaders did sign the treaty, he refused and served notice that he "would stand in the trail" if the whites attempted to invade the country and especially if they tried to build military posts along the trail.

Heedless of this protest and its possible results, the government went on with its plans and sent Col. Henry B. Carrington of the Eighteenth infantry with a little army of 700 men, four pieces of artillery, 226 wagons and enough ambulances to carry the wives and children of several of the officers to establish the new posts. Carrington marched from Fort Laramie to Fort Reno, then 160 miles from Fort Laramie, moved that post 40 miles westward and garrisoned it. Then he pushed on to the site of Fort Phil Kearney, which he built early in the summer of 1866. In August two companies were sent 90 miles northwest to erect and garrison Fort C. F. Smith.

From the first the Indians harassed the parties sent out to cut wood on Piney island, seven miles distant, and there were several lively little fights with a number of casualties when troops were sent out to drive off the raiders. Early in December Capt. W. J. Fetterman of the Eighteenth was sent out with a party of 40 men to protect the wood train. Rashly pursuing a small party of Indians which retreated slowly as he advanced, he soon found his party surrounded, and only the timely arrival of Colonel Carrington with reinforcements saved him and his men. This should have been a lesson to the captain, but as later events proved it was not. He was inexperienced in fighting Indians, but had a vast contempt for them and is said to have once declared that "with 80 men he could ride through the whole Sioux nation."

On December 21 the wood train was attacked about a mile and a half from the fort and Colonel Carrington detached Capt. James W. Powell, who had proved himself a prudent and skillful officer during the desultory fighting throughout the summer, with a force of 76 men to drive the Indians off. At the last moment Captain Fetterman appeared on the scene and demanded that he be given command because he was a senior captain. Although Carrington was fearful that Fetterman's recklessness would lead him into trouble, he granted the request, but gave strict orders "on no account to pursue the Indians beyond Lodge Trail Ridge" (a wooded height beyond where the wood train was corralled). Capt. Frederick Brown, an officer who had shown himself as reckless as Fetterman, asked permission to go along and the force was joined by two civilians, bringing its total up to 81 men—just the force with which Fetterman had boasted he "could ride through the whole Sioux nation."

Although what took place on that day will never be known for certain, it has come down in history as the "Fetterman Massacre"—and as inaccurately as the "Custer Massacre"—for not one of the 81 men returned to Fort Phil Kearney alive. Fetterman had disobeyed orders, probably urged thereto by Brown, had pursued the Indians beyond the Lodge Trail Ridge and was there overwhelmed by Red Cloud's warriors. When Carrington heard the heavy firing he sent out all the available men in the fort—by this time the garrison had been reduced to some 350 through the garrisoning of Fort C. F. Smith and the casualties suffered since Fort Phil Kearney had been established—under Capt. Ten Eyck to reinforce Fetterman. But it was then too late, and all that Carrington found on the field of battle the next day was the scalped and mutilated bodies of Fetterman's men who had died fighting.

Carrington's position was desperate. It was doubtful if the number of men he had left could hold the fort if the Indians, flushed with their success, should attempt an assault. Fortunately, however, a siege of bitter weather swept down at that time which lessened the chances of Indian attack. But he knew that he must have reinforcements if he were to hold the post. He called for volunteers to make the long perilous ride to Fort Laramie and John Phillips, a brave frontiersman, employed in the quartermaster's department and known throughout that part of the country as "Portugee" Phillips, came forward. Although he realized he was risking his life at the hands of the Indians who swarmed about the post or in the bitter cold—the thermometer stood at 25 degrees below zero—Phillips set out on the 236-mile ride to Fort Laramie. The story of that ride is one of the classics of the frontier.

Phillips staggered into Fort Laramie on Christmas night and, after delivering his dispatches, fell exhausted. Great as was the horror with which his message of disaster was received at Fort Laramie, it was greater still when the news was sent out over the wires throughout the country. It was the first great disaster of its kind on the western frontier and coming at a time when it was generally believed that conditions were peaceful there, the story of the Fetterman disaster shocked the whole nation. Unfortunately Carrington, whose conduct had in every respect been skillful and prudent, was made the scapegoat for the deeds of his rash captains. He was immediately relieved of his command and in the face of the bitter weather which still held the country in its grip he was ordered to change his regimental headquarters to Fort Caspar, some distance away, an order that was as cruel as it was foolish. It was not until several years later that partial restitution was made to the brave commander of Fort Phil Kearney and the implied stain upon his fair fame as a soldier removed.

Fort Phil Kearney was reinforced immediately and a year later the soldiers at that post were given a chance to exact a fearful revenge upon Red Cloud's Sioux for the slaughter of their comrades in Fetterman's command. All during the following year the fort was closely invested and late in the summer Red Cloud determined upon one master stroke which would forever drive away the hated white invaders. After his success in December, warriors by the hundred had flocked to his standard and he soon had a force of more than 3,000 braves, eager for blood.

During the summer a civilian outfit was engaged in cutting wood on Piney island for the winter supply of the garrison. A military guard was stationed on the island to beat off any Indian attack and on August 2, 1867 this guard, consisting of 32 men and officers, was under the command of Capt. James W. Powell. Red Cloud had decided to wipe out the woodcutters' camp first and then proceed to an attack on the fort. Early on the morning of August 2 a party of some 200 Indians attacked the woodcutters, who immediately beat a retreat towards the fort, pursued by the Indians. Captain Powell attacked the savages on the rear and when they turned on him, he retreated with his little force to a corral of wagon boxes laid on the ground in the middle of a broad plain.

The Indian leader, believing that it would be a simple matter to wipe out the small force of soldiers, sent a party of 500 mounted warriors to charge the improvised fortress behind whose thin walls Powell and his men were crouching. He did not know that the soldiers had just been issued the latest model breech-loading repeating rifles and that they had an ample supply of ammunition for them. So in a splendid panoply of savage warfare the whooping warriors swept down upon the corral. Powell waited until the Indians were within 50 yards, then gave the word to fire. Immediately an unbroken stream of fire poured forth which mowed the Indians and their mounts down like a scythe of death. But so great was the impetus of their charge that they could not stop until they were almost on top of the wagon boxes. Then their solid front broke, they swerved to each side and rode swiftly out of range of that devastating fire.

Again and again that hot day Red Cloud hurled his warriors against the little band of heroes and again and again their steady fire ripped great holes in the ranks of his charging braves. It was afternoon before Red Cloud had had enough. As a relief party from the fort appeared, he sullenly withdrew his forces and gave up the idea of proceeding against the fort. It was not until some time later that the full measure of Powell's astounding victory was learned. The captain had lost three killed and five wounded, but Red Cloud lost 1,137! Some one has truly said of that fight, "It reads like a story of Cortes." Historians of the frontier call it "The Wagon Box Fight" and are unanimous in pronouncing it one of the greatest victories ever won by the white race over its red antagonists. What the Indians think of it is shown by the fact that to this day the Sioux refer to the fight as the "Bad Medicine Battle" where "the white man made his guns fire themselves without stopping."

Although Red Cloud paid dearly at the Wagon Box Fight for his victory over Fetterman and for all the other toll of soldier lives which he had collected in and around Fort Phil Kearney, the final victory in the dispute over whether that fort should stand on his hunting grounds was his. The next year commissioners were sent out by the government to treat with the Indians—since they couldn't whip them and make them stay whipped! And Red Cloud, the greatest fighting chief the Sioux had ever had, made the powerful United States government "back down" and on the treaty which was signed (and later shamelessly violated by the whites, it might be added) nearly all of his demands were acceded to. One of them was that the fort along the Boseman trail should be abandoned, and accordingly on July 31, 1868—just a little more than two years and two weeks from the date of its establishment—it was evacuated. A little later it was burned to the ground by the Sioux. Now, if present plans go through, a memorial is to be erected on its site which will fittingly commemorate the valor of the men, both white and red, who fought there—the soldiers of Colonel Carrington and Captain Fetterman and Captain Powell of the United States army and the warriors of Red Cloud of the Oglala Sioux.

Stem-Rust Spores in Barberry Bush

Common Plant May Produce 64,000,000,000 in Course of One Year.

(Prepared by the United States Department of Agriculture.)

Calculating the possibilities of the barberry bush as a source of stem rust in wheat has carried investigators of the United States Department of Agriculture into mathematical multiplications that are beyond the reading capacity of the man whose arithmetical tables may have stopped with billions or trillions. Lynn D. Hutton, of the bureau of plant industry, says that a common barberry bush 6 to 8 feet high may produce more than 64,000,000,000 stem-rust spores in a single year.

Spores Are Small.

These spores are extremely small and may be carried by the wind. Each one that alights on a grain or grass plant may produce a rust pustule which contains 200,000 red or summer-rust spores, and any one of these alighting on a grain plant may again multiply itself by about 200,000 within a week or ten days. Just assuming that each spore from the original bush lodged favorably and multiplied, the number of rust spores in the second generation of red rust would be expressed by 256 followed by 19 zeros, besides which the number of cents in all the European war debts combined would make comparatively easy reading.

Grain Loss Is Big.

Four or five additional generations may be produced in a year favorable to rust spread. Fortunately for our food supply only a small percentage of these spores ever actually germinate and damage the small grains. Those that do live, however, are responsible for an average annual loss of 50,000,000 bushels of small grains in the upper Mississippi valley states.

How many barberry bushes may remain as sources of infection is not known. Many have been destroyed as farmers have realized how dangerous they are, but many have not yet been reached. Each one remaining is a source of danger.

Cod Liver Oil Gives Uniformity to Chicks

Those who have made use of cod liver oil—given it a thorough trial for a complete season, feeding it to all fowls on the plant from growing chicks to matured laying and breeding stock—report a decided better and more uniform growth in young chicks, better molt in old birds. Common diseases of the flock have been practically eliminated. The layers produce many more eggs. Eggs for hatching have been more fertile and the eggs hatch better. They also say the cost is nil compared with the result obtained.

The poultry raiser who fails to make use of cod liver oil in his poultry-feeding operations for the layers, breeders and growing stock is making a big mistake. A season's trial will be the best investment ever made.

Lime and Phosphates as Pasture Top Dressings

Some of the English investigators have demonstrated the good effect from lime and phosphates as top dressings of pasture. The carrying capacity has been doubled under such treatment. Previously cattle or sheep grazing on such land had been troubled with rickets resulting in heavy losses from cripples and paralysis. In one such instance reported from England, lime and superphosphate were applied. Samples of the grasses from treated and untreated areas were analyzed showing that the percentage of phosphorus, potash and lime had been more than doubled through the treatment. The increases were as follows: Phosphorus 136 per cent, potash 102 per cent, lime 152 per cent.

Agricultural Notes

Artichokes make good pasture for hogs in late summer or early fall.

* * *

Cut the lawn often and do not remove the clippings. They help to build a good lawn soil.

* * *

The popular vegetable, asparagus, should be cultivated during the summer months even though the stalks are not producing. Efforts along this line will be rewarded next spring by big, healthy stalks.

* * *

Garden plantings, either fruit or vegetable, frequently suffer from lack of moisture during summers. Complete control of weeds and grass in the garden is the protection practiced by the skillful grower.

* * *

Dust wallows are a source of pleasure to the hens during the summer months. Spade up the fresh, moist earth in the shade, and the hens will do the rest. Dust baths are instrumental in keeping lice under control.

* * *

If the pigs do not have permanent shade, such as that provided by trees, put up a temporary structure, says live-stock specialists of the Pennsylvania State college. This is especially important for heavy hogs and sows farrowing in the fall. Also provide plenty of fresh, clean, drinking water in receptacles in which the pigs cannot wallow.

THE COMING STATE FA

Everything is in readiness for opening at Des Moines on Aug. of Iowa's seventy-fourth annual S Fair and Exposition—an exposit which leaders now predict will be greatest both in point of attenda and exhibits of any in the entire tory of Iowa or the midwest.

Six-thousand head of pure-bred tle, horses, swine and sheep from country's most famous breeding fa augmented by prize grains, vegeta and products from Iowa's finest fa and special individual and county plays and demonstrations, assures visitor to the 1928 Iowa State Fai seeing probably the largest agri tural exposition ever held in this co try.

The foremost educational featur the coming fair will be the first nual Iowa Aircraft Show, embrac war flying formations, displays commercial airplanes, and thril parachute jumps and rope slides. aircraft show will be headlined the personal appearance of C George H. Wilkins and Lieut. Eielson, who made the record-bre

CAPT. GEO H. WILKINS

ing flight across the north pole spring. Capt. Wilkins will fly his mous Lockheed-Vega plane in wh he flew from Alaska to Spitzber by way of the pole, once each of the fair. He will also deliver lectures daily, and show motion tures taken during the polar fli The aircraft show will also includ large display of more than twe commercial planes of leading ma a squadron of U. S. Army pla which will stage military maneu and a large captive observation loon from which numerous parach jumps will be made.

Virtually every field of feminine terest will be covered in the ela ate women's fair program which be in progress continuously dur the fair in the Womens and Childre building. Foremost on the wom programs will be such well kn speakers as Mrs. Mignon Quaw famous specialist in recreation entertainment; Miss Fannie Buchan noted writer and lecturer on subj pertaining to music and Miss Joa M. Hansen, home decoration spec ist. A series of high class drama will be presented under the direc of Mrs. Helen Marr Van Tuyl, aesthetic dancing conducted by Marie Barnes Flanagan will also pear on the daily program.

The musical attractions at the ing fair will be headed by Crea and his famous fifty-piece band, companied by noted instrumental

CREATORE

vocal soloists. Other bands and chestras which will entertain at fair this summer, include the wor champion American Legion B from Monahan Post at Sioux C the Argonne Post Legion Band Des Moines; the Iowa champion F Bureau orchestra from Mitc county; the Dallas County Farm B and Girls' Band of 50 musicians; Northwestern Railway Band; Kuhl and his Seven Aces orches the Old Soldiers' Drum Corps, and Spanish American War Veter Drum Corps.

Among the statewide contests to conducted at the coming fair will the Old Fiddlers' contest, state ch pionship horseshoe pitching tour team pulling contest, sheep shea contest, and a contest to determ Iowa's champion tall corn grower.

A special feature of the fair year will be the annual official re of the Iowa National Guard w will be held in the amphithe on Saturday, August 25, at w time the entire state military res will pass in review before Gover Hammill. The fair will also be scene of the official statewide enc ment of the Modern Woodmen America.

Reduced rates are being offered all railroads.

DAIRY FACTS

AIRY COWS ARE ROUGHAGE EATERS

ertain writers on economic probs state that in the future farm anls must more and more depend on ghage and the by-products of grain are not suitable for human food. y say that this necessity will arise upply food for the rapidly increas numbers in the world's population ether this condition ever does come ure, we do know that the grain is expensive part of the cow's ration, the more nearly roughage can be le to supply the feed, the cheaper milk and milk products be proed, writes W. H. Woodley, extenn dairyman, college of agriculture iversity of Arkansas. Grains, high protein content, are especially exsive.

he farmer is fortunate in that he raise a roughage that is high in tein and supply this much needed producing element in hay cheaper n he can buy it in grain. There is bably no section where some kind legume hay cannot be raised. An e of land that will produce two s of soy bean hay yields three s the digestible protein that the e acre will produce in corn (ears stover) and five times more than falfa or other grass hays can be ed. It yields about the same unt of total digestible nutrients as acre of corn, and twice the amount prairie or grass hay. So to the cow both hay and grain.

he milk cow with her four stom s and her ability to consume about times as much feed as the horse, sentially a roughage animal, and only do her best work, and do it st economically when she is supd with all the roughage such as tioned above, that she will conue.

A farmer can buy good grain in the rket and the kind that he wants. even if it was as economic to do he can seldom find hay of the qualand kind that it is best to feed, so lf-defense he must raise it.

omemade Fly Spray Is Beneficial in Summer

lost owners of small herds will pre to buy a prepared fly spray, but ers prefer to mix their own. The lowing ingredients can be purchased any good drug store and have been d successfully by the Iowa experint station:

Coal-tar dip, 4½ quarts; fish oil, 4½ arts, coal oil, 3 quarts; whale oil, quarts; oil of tar, 1½ quarts; laundry soap, 3 bars.

n preparing the spray, the three rs of soap should be dissolved in rm water. Then the other ingreents can be added separately and ough water added to bring the to amount up to thirty gallons.

his spray, like others, is most effective for a few hours after using. It s a pronounced odor which aids it as y repellant, but it does not seem to ect the milk unless some drops in e utensils. The oil in the spray colts dirt but most of this will wash when the cows are out in the rain.

ack of Proper Feeding Accountable for Losses

There is plenty of good authority the statement that one-third of dairy cows are unprofitable, one-rd just about break even and the maining third only are profitable. e situation is accountable in two ys. First, there is lack of proper eding. A dairy cow must have a operly balanced ration in order to her best. Second, there are dairy ws whose breeding is such that they never be made into profitable proers, no matter how they are fed. t a glance at some cows will tell person that they will never be liable for profitable dairy produc-n, but there are large numbers of e in-between kind that can only be d after they have been tested and properly

ut Dairy Heifer Cost by Reducing Protein

That tremendous saving in the cost raising dairy heifers can be made reducing the amount of protein in e ration heretofore considered the inimum amount necessary for norl growth, has been shown by 12 ars of investigation at the Missouri llege of Agriculture. Former standds for the minimum amount of proin are really 20 to 60 per cent too gh, according to the tests. As proin is the most expensive part of the ion and is usually the part that st be purchased, a tremendous savg can be made on the $400,000,000 quired annually to maintain the esent cow population.

Improvement Material

Assuredly, pure-bred bulls must me from an ancestry that has oved to be stronger in production an the grade herds into which they e going. The fact that there were re grade herds in the Iowa cowsting list than there were pure-bred rds does not prove that farmers ust cease to look to pure breds for rd improvement material, however. the first place, the highest produce pure bred herds are seldom put test in cow-testing associations.

POULTRY

WELL-BRED HENS PROVE CHEAPEST

Hens with good breeding often produce two dollars worth of eggs in a year more than hens with poor breeding, aside from their increased value as breeders, according to experiments on the Cornell poultry farm at the college of agriculture at Ithaca, N. Y.

This means that if a poultryman can get low-bred chicks for nothing he could afford to pay one dollar a chick for high-line birds, and still make $1 more a year on each bird than from the low-line birds.

Poultrymen at Cornell point to these facts as evidence that a baby chick co ting ten cents may be dear, while a chick costing fifty cents may be a good investment, if the higher priced chick comes from consistent high-producing stock. Trap nesting, pedigree hatching, and progeny testing must be used to obtain consistent high records.

The records of the hens range from 175 to 302 eggs. Seventy-five per cent of the pedigreed flock laid more than 200 eggs in one year. The males are from hens with pedigrees of 225 eggs to 302 eggs. One pen of 35 pullets on the experiment farm averaged 86 eggs a bird during the four winter months to March 1, or about 22 eggs a bird a month. These eggs were produced during the season of high prices, which is not true of birds that do not have good breeding, the department says. The number of birds that have laid 200 eggs ans increased from 38 in 1921 to 179 in 1927.

Cheap but Ideal Floor Favored for Henhouse

A cheap but ideal floor can be put in a chicken house by filling in about eight inches of cinders, gravel, or crushed rock and covering it with about two inches of rich cement. The porous material under the cement will break up the soil capillarity and tend to keep the floor dry. The filling should be tamped until it forms a solid base for the concrete.

Hollow tile forms a more satisfactory base for the concrete and only one-half an inch of cement is needed to cover it. Tile is more expensive than the other filler, however, and sometimes much harder to get. It should be laid in a layer of sand so the surface of the tile can be made as smooth as possible before the cement covering is put on.

A slope of four inches in twenty feet from the back to the front of the house will tend to keep the litter evenly distributed over the floor. This slope will practically eliminate the disagreeable task of scratching the litter out from under the dropping boards of the ordinary house. There is no better time of the year to put a floor in the chicken house than just before the pullets are put into their winter quarters.

Profit on Goslings Is Made During Holidays

The best profit on market goslings (young geese) is made on those marketed at Christmas and New Years, as a general rule. Turkeys have the call at Thanksgiving. It will not do, however, to neglect the young geese and unless they are kept growing at top speed they will not be large enough to be most profitable when they are wanted for the holiday tables.

Sometimes we read that these young geese will obtain all the food they need in the fields and that they will live and grow if they have nothing but grass and whatever else they can find among nature's stores.

Give Clean Water

Clean and fresh water is as necessary to the success of egg production as is a correctly balanced ration. The man who goes to a lot of trouble with his feeding but is just indifferent with his watering, may expect trouble. Water is one of the chief constituents of an egg and it is required by the hen just as much as a human being requires water to drink. It should be given several times each day, especially in summer.

Must Have Feed

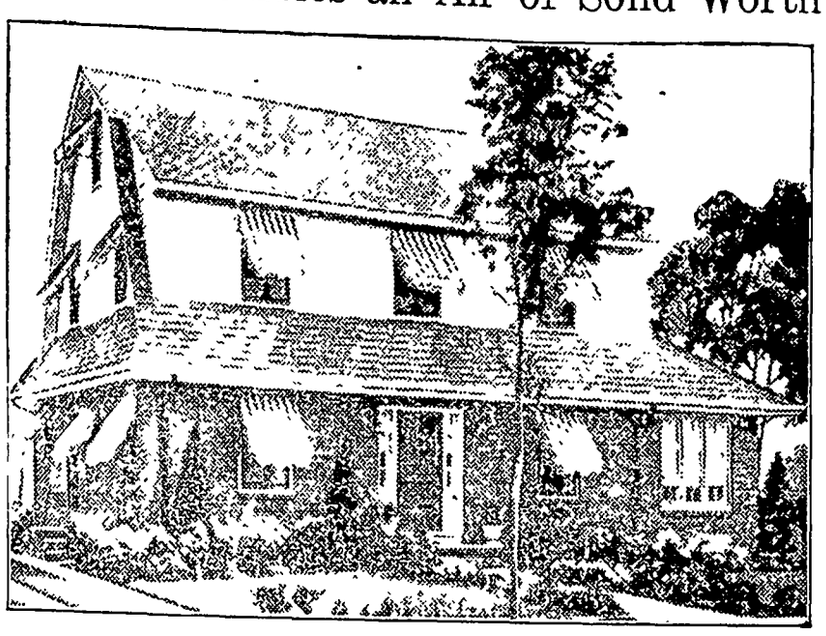
The Purdue university poultry department summarizes the general treatment of the farm hen as follows:

"Hens won't live on hopes and prospects. They must have feed, and plenty of it. The hen does not get enough to eat in summer. The fields, barnyards and feed lots will furnish the hen little else but grains and green food. These alone and in their present insufficient quantities will not be sufficient to produce good egg production."

Culling Nonproducers

An easy and efficient method of culling the nonproducers out of the new hatch of pullets can be accomplished in the following manner, if each hatch has been housed separately: Keep the first 75 per cent of the pullets that come into production and sell the other one-fourth, or those that are last to start producing. By following this practice, few nonproducers will be carried through the winter on high-priced feed, taking up room needed for layers.

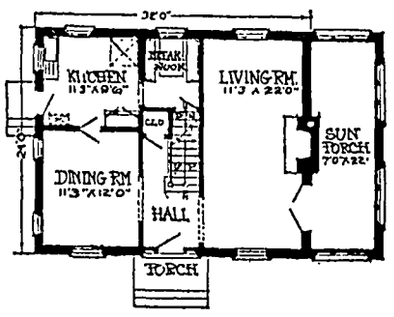
This Home of Brick and Shingles Carries an Air of Solid Worth



By W. A. RADFORD

Mr William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Brick and shingles have been combined in a most pleasing manner in the home illustrated here. The brick walls are carried up to the second floor line and shingles, laid wide to weather, are used on the upper walls. This home presents an appearance of solid comfort and worth, while the

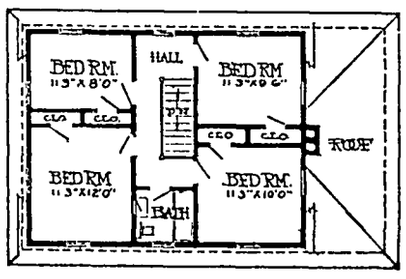


First Floor Plan.

brightly striped awnings add a most appropriate touch of color.

Turning to the floor plans we find a house of seven rooms, breakfast nook and sun porch. There is a central entrance hall which separates both the entrance and the stairs from all of the rooms and which contains a convenient coat closet. To one side of this hall the living room occupies the entire end of the house with the sun porch, of equal length, opening off it. The two are connected with French doors making it possible to throw them together when desired or to separate them into two distinct rooms, when occasion requires.

At the opposite side of the house is the dining room with the kitchen



Second Floor Plan.

to the rear, and just off the kitchen, to the rear of the entrance hall, is a cozy and convenient breakfast nook. There is a side service entrance opening directly into the kitchen and the latter is of the small, compact type which is demanded in modern homes.

Upstairs there are four good sized bedrooms placed in the four corners of the building. One is somewhat larger than the others and another somewhat smaller, an arrangement which is usually found most satisfactory. The bathroom is placed convenient to all these rooms and each is provided with good closet space.

Sunroom Can Be Added After House Is Built

Not many houses or apartments are built with a regular sunroom.

One is usually achieved for the winter by inclosing a porch. But, given a few essentials, it is not difficult to improvise an all-the-year-round sunroom.

If you have—say, in your living room or dining room—a bay window or group of casement windows with a southern exposure, you can transform that end of the room into a sun room by using gayly painted wicker furniture there, placing potted plants on the window sills and adding other sun-room features of a bright, summery aspect.

The main portion of the room will still retain its appearance of living room or dining room, as the case may be; but color harmony should be maintained between that and the sunroom end. The wall space on each side of the bay window is covered with latticework, which has been painted cream or white to match the woodwork of the room. On this, vines are trained with a delightful suggestion of outdoors.

This lattice effect is repeated in the woodwork which conceals the radiator and at the same time forms an attractive window seat, on which blooming plants add to the summery aspect. The radiator cover is painted to match the rest of the woodwork.

Suppose a living room to be decorated in a green-and-brown color scheme, with brightening touches of orange. The walls and woodwork are painted cream. The wicker furniture at the sun room end is painted light green and cushioned with cretonne in which orange, peacock blue and brown are blended on a cream ground. Window drapes and lampshades are of plain, orange silk.

In a dining room with walls painted a light rose and woodwork white, paint the wicker furniture at the sunroom end a deeper rose and cushion the chairs with cretonne having a design in rose, green and black on a white ground.

Black for Sun Parlor Gives Nice Contrast

Black is often used in decorating sun parlors, either as a background for the bright splashes of other color or as a contrast here and there. Because the sun porch is so sunny and so colorful, it can stand some black, which would, perhaps, not be possible in an indoor room. Think of such a sun porch on a summer afternoon—a big wicker armchair or porch swing with brick cushions, and a near-by table holding magazines and lemonade glasses! On a winter afternoon it is just as enticing.

Inglenooks

Built-in inglenooks may be installed in any corner of the home living room, library, sun porch or hall, where a recess is formed either by chimneys or by bay windows extending beyond the normal outline of the room.

Inside Swinging Door Convenient on Garage

Sliding and folding hardware sets for the garage door are a convenience which can be appreciated by the householder at this time of the year, when thought begins to turn toward overhauling. If he has used the ordinary type of garage hardware, with doors swinging out, he has encountered the usual difficulty of removing accumulated snow and ice before the doors could be opened during the winter.

This type of hardware swings the doors inward and to the side of the car, where wind cannot force them into its path. The mechanism is protected from dirt blowing into it, and all sticking and jamming against the ground is eliminated.

Latches and hinges in forged iron for garage doors are available in a number of designs to harmonize with the forged iron hardware now so popular for the rest of the house.

Hardware for garage doors is now obtainable in sets completely boxed and packed with instructions which simplify the installation work.

Oatmeal Paper Takes Paint if Applied Right

Painting over oatmeal paper with flat paint is frequently done and usually with very good results.

Of course, a job of this kind is not as good as where the paper is removed, but if the owner desires to leave the paper on and paint over it a very good effect may be obtained. We suggest that you first sandpaper the seams and then give the walls a coat of white lead paint.

The thinners should be equal quantities linseed oil and turpentine. Size this priming coat with a thin glue size. Some painters prefer to size the paper in order to save paint because oatmeal paper will take a lot of paint by absorption.

We hardly think this is the proper way, because glue size sometimes loosens the paper and causes it to blister. The finishing coats can be applied either glossy or flat as desired.

Beauty of Face Brick Imperishable on Home

Colorful face brick make your new house a real home—substantial, comfortable, satisfying—one that will serve you a lifetime and pass down to your children's children, lovely with the mellowness of the years, precious with the cherished memories of family fireside and genial friends.

In the wide range of attractive face brick colors and textures you will find just the right tones to suit your particular house and your own individual tastes.

Durable, comfortable through all the seasons, safe from fire, slow to depreciate, with low insurance rates and smaller fuel bills, freedom from repair and painting costs, your face brick home will in the long run cost no more than the house built of less enduring materials.

Horticultural News

ULTURE OF PEAR IN FEW SECTIONS

Pear culture has succumbed to unfavorable conditions to a greater extent than perhaps any other fruit. It has beeen planted over a wide variety of conditions, just as has the other fruits, but it is tender to winter cold, has suffered terribly from the scourges of pear blight, does not stand extremes of soil moisture, and hence its commercial production has been narrowed down to a relatively few sections, writes J. H. Gourley in the Ohio Farmer. True the Kieffer, Garber and Le Conte which were derived from the Eastern sand pear and the common pear, are grown over a wide range but are certainly not very popular varieties.

Tukey, in a recent book on pears, gives the following as the ten leading comomercial sorts: Bartlett, Kieffer, Seckel, Clapp Favorite, Beurre d'Anjou, Beurre Clairgeau, Winter Nells, Flemish Beauty, Doyenne' du Cormice, Howell. Ten suited to the home orchard: Bartlett, Seckel, Clapp Favorite, Beurre Bosc, Winter Nells, Dana Hovey, Tyson, Elizabeth, White Doyenne, Bloodgood.

Ten blight resistant sorts: Kieffer, Garber, Le Conte, Sudduth, Seckel, Tyson, Duchess d'Angouleme, Buffum Doyenne Boussock, Beurre Giffard.

The two chief sections of pear culture in the United States are New York state and California. In New York the plantings are more than 50 per cent of Bartlett, followed by Kieffer, Seckel and Clapp Favorite. In California Bartlett is also the leading one followed by Anjore, Bosc, Easter Beurre, Howell and Winter Nells. Half of the California crop is canned or dried and the remainder reaches the market as fresh fruit.

In pruning the bearing tree Tukey states that "Bearing trees in their prime need very little pruning. Cross branches and dead limbs should be removed, and thick trees should be thinned out, as much to help in insect and disease control as any benefit that may be derived in growth."

With the Kieffer, however, a different course must be pursued. Bearing trees are likely to overload and to produce undersized fruit. The customary practice, which really amounts to a thinning operation, is to head back the preceding season's growth about two-thirds each year, commonly termed "stubbing." Some growers prefer to cut back into two-year-old wood every other year. Both practices are successful.

We have stated previously that the pear has a place in northern Ohio and that moderate plantings in the lake region would seem to be justified, where proper cultural attention can be given.

Legumes Are Best Cover Crops for the Orchard

Green crops for plowing under are commonly used in orchards and vineyards in western New York. Many of the best fruit growers practice clean culture up until about the first of August and then sow a cover crop. Vineyardists who object to having a cover crop in the vineyard at picking time, on account of the discomfort caused to pickers by dew and wet weather, commonly sow cover crops in alternate rows.

The legumes, among which are clover, pears and vetch, make the best cover crops, writes L. H. Woodward in the Rural New Yorker. Other crops are oats, rye, buckwheat, turnips and millet. The choice depends on the soil and the kind of fruit. A rotation may be practiced or a mixture of the above crops used. The cover crop should be sown in midsummer, at the time of the last cultivation, and be plowed under late in the fall or very early in the next spring. The grains—oats, rye or barley—should be sown at the rate of two bushels per acre; clover, 15 pounds per acre; vetch, 20 to 40 pounds per acre.

Good Rule Never to Use Sod for Strawberries

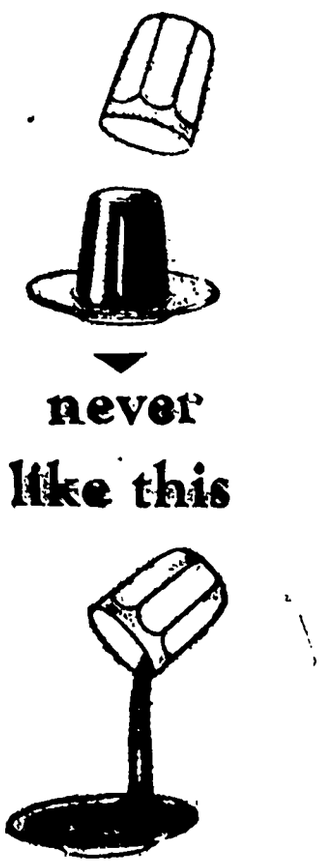
It is a good rule never to use an old sod for strawberries because of the damage that is likely to occur from white grubs and wire worms. Land that has been in potatoes, sweet corn, or other cultivated crop is best from this standpoint. When manure is used just before setting the plants there is danger of introducing weed seeds so either previous manuring or a green manure with fertilizer is best. Two hundred fifty to three hundred pounds of nitrate of soda or sulphate of ammonia, and five hundred pounds of superphosphate (acid phosphate) would be a moderate application for strawberries.

Grafting Grapevines

Grapevines may be field grafted through the ordinary cleft method that is usually employed in top-working apples. The union is made just below the soil level, and while the scions are firmly tied in place no wax is used to cover the jointed parts, they being protected by a mound of loose earth that should extend up to the top buds of the scions.

Vines ten years of age can be successfully cleft-grafted to the desired varieties.

new
PEXEL
makes jelly cost less and it always comes out like this



never like this

PEXEL makes jelly cost less per glass. Cuts boiling time to one minute. Saves your time and fuel. You get more jelly because fruit juice, sugar and flavor are not boiled off. Pexel repays from one to three times the 30c it costs.

Pexel is different. It is a powder, not a liquid. Colorless, tasteless, odorless. It is a 100% pure-fruit product. Makes jelly jell as soon as it is cold. Equally effective with fresh fruits, bottled juice, or unsweetened canned fruits.

Get Pexel at your grocer's. Complete recipe booklet with accurate tables in each package. 30c. The Pexel Company, Chicago, Ill.

For example—with Pexel

4½ cups strawberry juice and 8 cups sugar make 11 glasses jelly.

4½ cups raspberry juice and 8 cups sugar make 11 glasses jelly.

6 cups currant juice, 10 cups sugar make 14 glasses of jelly.

4½ cups grape juice and 7 cups sugar make 10 glasses jelly.

new

Every one is well spoken of at his death. It is forty years after that he has to look out for.

Failed in Attempt to Reach Pole by Balloon

The first attempt at arctic exploration by air, made in 1897, ended disastrously. The Swedish balloonist, S. A. Andree, and two companies, set out for the North pole in a large free balloon. The start was made from Danes island, in the north of Spitzbergen, on July 11, 1897. Five tons of supplies were carried. In an hour the balloon was out of sight. That night, seven and a half hours later, a message buoy, found later, was dropped. This was the last trace of the expedition, although years afterward various unconfirmed rumors of finding the balloon have come out of the Arctic regions of Siberia and Canada.

Long Auto Tow

Dr Eugene W. Fisk of Santa Fe, N. M., claims the long-distance record for being towed. Doctor Fisk found, when he was ready to return from a trip to a far-distant farmhouse, that the generator of his car was burned out. A two-ton truck came to his rescue and towed him 77 miles from La Ventana to Albuquerque, over the most hazardous of mountain roads. The trip took five hours. The tow rope broke once and the truck went on some miles before the driver discovered he had lost his trailer.

Harvest for Harpist

An elderly harpist was plucking the strings of his instrument on a Philadelphia street corner when a prosperous looking business man strode by. The man paused and whispered to the musician. A pleased expression came into the harpist's face as he nodded and swung into the strains of "La Paloma." Off came the man's hat and he began to sing. Song followed song and soon a crowd had gathered to listen to the deep rich baritone. Then the man passed the hat, and with a courteous gesture handed the coins to the old man and walked on.

Fed Up

"Who was it that said he would rather make the songs than the laws of his country?"

'Dunno; but I'd like to make the laws for the people who make the songs we hear nowadays."—London Answers.

She—I suppose you know Alice married money?

He—Oh, yes. They're separated now—aren't they?

She—No—just she and her husband are separated.—Life.

In the Same Boat

Father—Jimmy, open the door for your poor, tired pa. Mamma has locked me out and I want to get in.

Jimmy—Well, she's locked me in and I wanna get out.

Simple

"I've just killed five flies—two males and three females."

"How could you tell?"

"I caught two on the card-table and three on the mirror."

Alfred and Eloise

"What is horse sense anyhow?" inquired Alfred.

"Well, you can't buy it with an automobile," declared wise little Eloise.

BILL'S DEATH NOT TIMELY FOR SANDY

Old Bill Harley, a hermit well known to the fishermen who yearly visited the district of Snake island for holiday sport, was dead. His demise was the subject of conversation as a party of fishermen gathered in camp for the evening meal, and each had a kindly word of regret to express.

"Here comes Sandy McIntosh," remarked one of the group, "even he will feel bad about Old Bill. Sandy we've just heard a bit of bad news."

"Well," said Sandy, "and what is it?"

"Old Bill Harley, over on Snake island, has just kicked out."

"You don't say so!" exclaime Sandy. "Dead, is it? That is too bad Untimely, too."

The others were somewhat surprised at the unemotional Sandy taking it so hard.

"It's true, all right," said some one "but the old chap's death is timely enough. He was a very old man."

"Timely, you say!" exclaimed Sandy "And only yesterday I lent him 9 cents!"—Judge.

FIDGETY GIRL SAT DOWN AS ORDERED

Patrons of a Los Angeles theater seated behind a young woman who mislaid her purse one evening recently, missed a part of the photography because the woman stood up to conduct her search for the lost article, but then enjoyed a little unintentional comedy which others missed.

It was during a court scene put on by the Vitaphone, and the court was hearing parties in a separate support action. Those seated behind the young woman were getting fidgety, when the judge rapped his gavel, and ordered "Order in the court, sit down!"

The woman was so surprised that she sank back into her seat, and there she discovered the missing purse, where it had fallen.

Television Has Gone Far Beyond Theory

Rapid strides are being made in the development of television. A recent demonstration between London and Glasgow was considerably more successful than that between New York and Washington in April. The distance between Glasgow and London is about 440 miles. J. L. Baird, the television expert, was in charge of the new demonstration. Two telephone wires were used—one for television transmission and the other to check the results. The receiver in Glasgow could distinctly see the head and shoulders of the speaker in London. Even the movements of his head, eyes and mouth were distinct. It is now only a matter of a short time, predicts Baird, before television will be practical for transoceanic transmission

Sea Birds Attract

The value of bird protection as a money-earning enterprise has again been shown at Perce, Quebec. Perce rock and Bonaventure island, where sea birds nest in thousands, have long been bird sanctuaries under provincial and Dominion law.

Last winter an addition of 27 rooms was made to a local hotel to accommodate the growing number of nature lovers who come each summer to this mecca of the sea fowl, and an increase was also made in the number of houses where tourists can be accommodated.

Shingled Cats Oust Tabby

Shingled cats from Siam replaced the old-fashioned fireside-loving tabby at the recent fashionable cat show in London. Few of the domestic animals were to be found, and the tiny foreign creature with coat of black and gold was the most popular. One of these, Dion of Allington, was declared champion of all champions and his owner said she would not take $5,000 for him.

Patriotic Chinese Girls

Students of the Jing Nyih girls' school at Shanghai have set a new precedent in Chinese war relief work. They have organized to help the soldiers at the front and to send them gifts, including socks and cigarettes. At a recent theatrical entertainment hundreds of girls pledged themselves to procure funds and gifts for the "Nationalist boys at the front."

"White Coal" in India

India is preparing to get cheap power from rivers that rise in the Himalayas. A complete survey of the mountains has been made, and work already started on the "harnessing" of one of the Punjab rivers. The scheme, it is believed, will add materially to the wealth of India.

Also Minus Socks

Storekeeper (to new clerk)—You began life as a barefoot boy, I understand?

Hiram Todd—Yes, sir; I was born without shoes.

Those Perverse Insects

Wouldn't it be nice if cornborers took to the jimson weed and the boll weevil preferred dog fennel? Why is it that pests like only what we like?—Pathfinder Magazine.

Mark of Greatness

Maturity is always a mark of greatness whether the person possessed of it is old or young.—Woman's Home Companion.

Gertrude Quigley is visiting with friends and relatives at Albia.

Louise Ahrenkeil is visiting in Des Moines.

Mr. and Mrs. Gus O'Krueg have gone to Wisconsin for a visit with relative and friends.

Mr and Mrs George Johnson of Iowa Falls, and Mr. Johnson's parents, visited at the J. J. Cook and W L. Sherwood homes Saturday.

Tauge Matson, who is doing engineering, spent Monday at his parent's home and saw his little niece for the first time

Mr. and Mrs. Jens of Moline, Ill., are the parents of a baby girl born Aug. 6th Mrs Jens will be remembered as Dorothy Allaben.

Mrs L W Wesenberg, Eunice, Nada, Mrs. Clara Butts, Olive, and "Billie," and grandfather Wesenberg spent last week at their cottage at Bayside.

Mr. and Mrs W N. Allaben left Friday morning on their trip east. They expected to spend over Sunday with their daughter, Mrs. Jens, at Moline, Ill.

Friends were sorry to hear of Mrs George Mickesh passing away at her home in Hickory Grove, after a lingering illness The funeral was held at the Congregational Church in Belmond Saturday afternoon Mr Mickesh and relatives have the sympathy of the entire community

Klemme News

Agent M. O Barr informs us the Rock Island will run a special excursion to Okoboji Sunday, leaving here about 7:00 a. m. and getting back about 9:30 p m. The fare is greatly reduced and will be but a little more than a regular fare for both ways.

Earl Finn has rented the Frank Gruetzmacher residence on East Main and will move this week The Finn family have been living in the former Spitler house This was purchased recently by Mrs Rosendahl, who will move into it with her children before school begins

Mrs Will Barz and daughter, Norma, of Garner, and Mrs George Stokesbary and daughter, Florence went to Des Moines Thursday to find rooming places for the girls Norma will attend Drake and Florence will enter a Commercial college

Mrs John Josten visited with her son, Earl at Harris last week a few days, and also enjoyed a short stay at the Rev Lease cottage at Okoboji. Earl brought her home Sunday morning and remained for a couple of days visit in Klemme Earl directs the band at Harris this summer.

Valentine Josten has fully recovered from his illness which kept him at the home of his daughter, Mrs. Fred Becker, in the country for a couple of months Valentine makes regular trips to town and we would say that he is just as "honery" as ever, so he must be feeling fine. Glad to see you, Val!

The dust on the Klemme streets the past week has been vry bad If the City Dads would have the hose unwound once in awhile and soak the dust down it would be greatly appreciated by both the businessmen and residence. Better yet, get a water sprinkler and do the job every day in summer.

Willy Bock, while helping thresh the other day, came out second best in a mix-up with a grain elevator. In some way Will was making an adjustment or changing the position of the elevator when the team backed and threw the elevator against his arm, cutting and bruising it.

Rev and Mrs Albert Muehlmeier of Monticello, Wisconsin, and Rev. and Mrs. John Gatermaun of Plymouth, stopped at the Rev Calvin Grosshuesch home from Friday evening until Saturday They were on their way to the Yellowstone Park. Rev. Muehlmeier was a former pastor of the Klemme Reformed, and Rev Gatermann a former pastor of the Elltown Reformed Church.

HERE'S HOW TO MAKE EASY TEST FOR "JELLING"

Find Out If Juice Has Pectin In It Before Starting

If you are in doubt about whether your fruit juice is going to "jell" try one of these two simple tests for pectin, the jelly making substance in fruit juice, suggests Miss Marcia Turner of Iowa State College.

Epsom Salt Test For Pectin

1 tbsp fruit juice
1 tsp. sugar
½ tbsp. Epsom salts.

Stir all together and let it stand 20 minutes. Pectin will separate out as white, gummy substance.

Wood Alcohol Test

Mix 1 tablespoon hot fruit juice with 1 tablespoon wood alcohol This is poisonous, so do not taste.

Many women have formed the habit of using a commercial pectin with all fruit juices, as a sure means of getting juice to jell, when in fact, the fruit juice containing natural pectin gives even better quality as well as a less expensive product, Miss Turner says.

Wesley Farm Sells For $165 An Acre

Secretary of the Iowa State Fair, Art Corey, has purchased a 200 acre farm north of Wesley. He paid $165 per acre for the place, it is reported

FORTY FIVE PIECE GIRLS BAND AT BAYSIDE PARK SUNDAY

The famous Manchester girls band of forty-five pieces will play concerts at Bayside Park, Clear Lake, next Sunday, August 19th. These 45 young ladies are excellent musicians and have won an enviable reputation. They have played at Bayside several seasons and always draw one of the largest crowds of the year They will probably parade the business section of Clear Lake Sunday noon and will play at Bayside park afternoon and evening The Sumner ball team will again play Ritz's Cubs on the Bayside diamond Sunday Sumner crossed bats with the Cubs on the Bayside diamond two weeks ago and was defeated Now the Sumner aggregation are coming back and hope to make it a game apiece Harold Fisher, manager of the Cubs, does not think they can do it Free movies will also be presented to the Park visitors Sunday Friday night, August 7th. Toppy's Country Club orchestra will supply the music for the Bayside dance and Wednesday night, August 22nd, Bobby Boyson's Midnight Entertainers will furnish the dance tunes

"If cows ever need grain, it is when pastures are only a place to romp and play in the evenings," observes Eugene M Fox, Marion County cow tester

Good Food

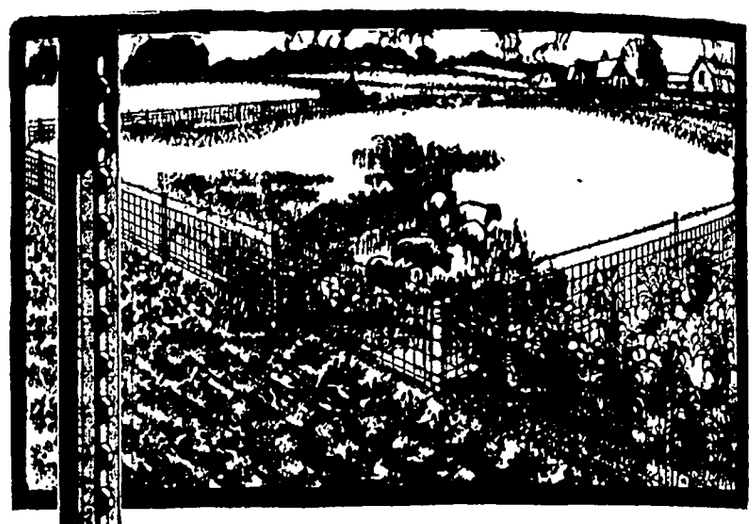
There's a difference in the way vegetables, meats, etc. are cooked and you will recognize it the moment you eat them here.

We serve only the very best the market affords, all well cooked.

As with everything, we think the best is none too good for our patrons.

Have you tried our delicious Ice Cream?

Crystal Cafe
Conrad Quandt, Prop.



It costs more *not* to have good fences than to build them

YOU don't need to have that proved, do you? How many times have you lost enough crops and stock, through weak spots in your fence lines, to pay for many rods of good stout fencing? And what about good pasturage that went to waste in stubble fields, the corn lost that pickers overlooked, the grain wasted because it was lodged and couldn't be harvested—all because you hadn't the fields safely fenced so you could turn in your stock and convert all this waste into money?

The farmer today can't stand these losses—and make a profit on his farm.

Red Top GUARANTEED **Steel Fence Posts**

Come in and let us tell you how to stop them, how to turn wastes into profit, increase your income and raise the value of your farm—how to do it quicker, easier and more substantially by using good fencing erected on long-lived RED TOP steel fence posts.

Northern Lumber Co.

Watch Your Step

During Hot Weather

Hot weather presents many problems to the dairyman, but it certainly pays him to "watch his sep." May we pass along a few suggesions to help you keep up your cream quality in hot weather?

You can produce and deliver to us Extra Quality Cream the year around—hot weather included by observing a few simple rules. They are summed up in three parts:—

FIRST—Cleanliness. Clean, airy barns, kept free from flies and mosquitoes. (Use fly chaser, it pays.) Keep the cows clean. Milk pails should be cleansed regularly. Added attention in keeping your separator spick and span helps in hot weather to keep cream sweet.

SECOND—Keep your cream COOL, in a good cooling tank or otherwise.

THIRD—Make frequent deliveries in hot weathr.

We are quite pleased with the effort our patrons are making to dliver quality cream—but let's all try a little harder—it pays. By keeping up quality in your cream, enables us to keep up quality in the butter we manufactur. We thank you for your co-operation!

Klemme Co-Op. Creamery Co.

An Appreciation

Of The

CENTRAL STATES ELECTRIC COMPANY

Organization's Service

From Jonesboro, Arkansas

Jonesboro, Arkansas Daily Tribune July 30, 1928

AN ARTISTIC JOB

"All artistry does not appear on canvas. We have discovered that even a ditch may be artistically dug. Those who have watched the steady progress of Jonesboro's gas distributing system have seen with admiration and some amazement the workmanlike manner in which the pipes are being installed After digging a trench so straight and neat as to excite the admiration and envy of the most scrupulous housewife, the pipe is inserted, the ditch filled and the sod so carefully replaced that it is almost impossible to see that the earth has been disturbed.

When the gas proposition first came before the City Council some of the Aldermen were a little unfriendly to it because they hated to see the parkways and streets disturbed. They were assured that the disturbance would be slight, but they were dubious. Thy'd seen similar things done and had not forgotten it.

Not a block of paving has been disturbed. By means of modern methods, the tunnels under the tunnels under the pavement have been made without disturbing the surface, while the work in the parkways has been so deftly done that the most fastidious property owner could hardly find grounds for complaint.

The management has also shown a disposition to co-operate will all city departments that is commendable. If Jonesboro's gas plant supplies the fuel with anything like the same degree of satisfaction that has marked the installation to date, the ax payers may well be delighted that the local franchise fell into the hands of John A. Reed and his associates."

This is the kind of workmanlike job this Company is doing all over the territory it serves and only expects the same fair dealing it accords its customers.

Respectfully,

Henry Peck was a business caller in this vicinity Wednesday morning.

Threshing is drawing to a finish after two weeks work.

Mrs Verner Schlawin and her daughter, Lavonne, spent Saturday at the Carl Wille home.

Mrs. William Wenz spent Wednesday at the home of her sister, Mrs Leppo Wessels and family.

Arthur Klinkhammer has been working for Will Wenz the past few weeks

Mr and Mrs. Dick Swalve and family spent Sunday evening at the Julius Tabat home near Thornton.

Mr and Mrs Wm Wenz were at Garner a week ago last Sunday and spent the day with relatives.

Mrs Elmer Schlei spent last Wednesday with Grandma Schlei and also to cook for threshers

Mrs Fred Etchen and Mr Gesswei, of Chicago, were visiting at the George Platt home Wednesday

Miss Leona Buseman is assisting with work at the Fred Schmidt home for a few days

Julius Priebe called at the home of his brother, Herman, last Thursday

Miss Ethel Habercamp spent one day last week with her sister, Mrs. Emil Lau.

Mr and Mrs. Edwin Josten and John Wessels were Garner callers Tuesday evening of last week.

Mrs Carl Wille called at the Wm. Greiman Sr. home Monday of this week

Mr and Mrs. Henry Buseman enjoyed a picnic dinner along with other relatives and friends

Mr. and Mrs. Fred Neuhring and family spent Sunday afternoon at the Will Wenz home.

Alvin Albers has been working for Julius Priebe the past few weeks

Misses Anna Trampel and Florence and Carrie Swalve spent one day last week at the Edwin Josten home.

Mr and Mrs. Henry Buseman and family were Tuesday evening callers at the Hamo Beek and Mrs Frank Roths homes.

Mr and Mrs David Schwichtenberg and family drove to Rockwell one day last week to visit with Mr Schwichtenberg's sister and family

Emma Gold is spending her vacation at the home of her sister, Mrs Carl Wille and family, and attended a 4-H meeting Wednesday.

Leona Buseman and Esther Buseman and Miss Anna Trampel spent Friday of last week at the Dick Swalve home

Mesdames H Buseman and Dick Swalve assisted Mrs. Edwin Josten cook for threshers Wednesday of last week

Mr. and Mrs. Henry Buseman and family, besides other relatives, are enjoying a visit with Mrs. Henry Buseman and family of Estherville.

The fall term opens here Tuesday September 4 If you want a place to work for your board and room, you should make your reservations now.

Liberty News Notes

(Special Times Reporter)

J. J. Stille and wife and son, Kermit, visited in Britt Sunday.

Mrs. Floyd Franklin was a Garner visitor one day this week.

Mr. and Mrs. Abele and children visited her mother, Mrs. Schuldt, in Garner, Sunday.

Mr. and Mrs. J. J Stille and son Kermit visited at the Chas. Bredlow home Sunday.

Mr and Mrs. Will Lemke and children and Ethel Schoenwetter visited in Britt Sunday.

Wayne Lemke left Tuesday for Mason City where he has a job as Clerk in the J. C Penny Store.

Mrs Emil Beier assisted her sister, Mrs. Blumer, with threshers on Wednesday.

Mr and Mrs Eric Clark and son Richard called at the Will Lemke home Saturday.

Mrs Maude Hummel visited at the Art Schoenwetter home Saturday

Mrs Carothers of Garner assisted her daughter, Mrs. Quentin Stille with threshers Monday

Mrs Emil Beier and Miss Lydia Beier attended the Hammon funeral Saturday

Mrs. D. P. Anderson and her mother assisted Mrs. Vic Schoenwetter with threshing Monday

Harold Ridder and Red Carlson drove to Cedar Falls Sunday to spend the day with friends.

Mr and Mrs John Lemke drove to Jewell Sunday to visit with Mrs. Minnie Blumer.

Mr and Mrs. Art Schoenwetter visited at the Floyd Franklin home Sunday.

Mr and Mrs. George Schoenwetter visited at Swaledale Sunday with the Will Ax family.

Mrs. Chas. Bredlow is very ill at her home at this time. She has been a sufferer for some time and is losing her strength day by day.

Mr and Mrs Martin Jenson and children and Walter Anderson and children drove to Waterloo Sunday for a visit with friends.

Miss Meta Lemke left the middle of the week for a vacation in the east part of the state. She expects to be gone about a week.

Grandmother Beier and Lydia Beier spent Friday at the Ben Ridder home. Grandma is seldom able to get away, and she more than enjoyed herself

The Standard Bearers and Kings Heralds expect to give an ice cream social on the 24th of August at the Church A play will be given by the girls and the children will furnish the music.

Gus Kahler from Minnesota visited with his son, Earl over Sunday. He has rented a farm near here and will move back in the spring He formerly owned a farm in Liberty township.

Mr. and Mrs. Emil Beier and Mr and Mrs. Emil Blumer and daughters drove to Des Moines Sunday to spend the day. On the way back they stopped at Jewell for a visit with Miss Minnie Blumer.

Mr. and Mrs. Ralph Jenison and daughter and son, of near Ackley, visited at the Herman Gast home Sunday They drove over in time to attend the morning services and in this way Mrs. Jenison was able to meet many of her old friends.

Mr. and Mrs. C. G. Waterman and daughter, Marian, left early Friday morning for points north. They expected to spend a day in the Twin Cities and from there journey north to Duluth, thence to Brule where if possible C. G. would shake hands with the president and invite him to spend next summer in Klemme. From there they expected to go to Virginia and Hibbing, Minn. to visit the iron mines, and then turn back home, reaching Klemme again the middle of this week.

LOCAL MAN FORECASTS THE WEATHER ACCURATELY

Predicts Fair Weather For Most Of Tho Fall nd Early Winter

Many people do not know that we have right here in Klemme a man who quite accurately predicts the weather for several months ahead but such is the case. We refer you to Wm. Lau if you desire to know about what the weather is going to be.

As a sample of his correctness we quote back a month when he predicted for July, fair weather and warmer.

For the coming few months our townsman predicts as follows:-

August, fair and warmer.

September, first part warm; last part, fair and cooler.

October, mostly unsettled and cool.

November, first part fair and cool, last part warmer and unsettled.

December, mostly fair and warmer for a winter month.

The above is the average stated for each month.

"Bill" promises the editor that about January 1st he will give us his forecast for the whole year We will be glad to publish his report.

Alright, Bill, now if you will just gives us the days on which the fish bite best we will be much obliged!

KLEMME YOUNG FOLKS WILL ATTEND COLLEGE

Quite a number of Klemme boys and girls have already made arrangements to attend college this fall We were not able to get in touch with all, so his list may not be complete. Any names we miss we will greatly appreciate having our attention called to same so that we may add them to this list next week:

Asa Arnold will go to Drake at Des Moines.

Gladys Wilson will attend Drake

Florence Stokesbary, business college at Des Moines.

Harl Gimer expects to attend the Iowa State Colege, Ames, this year.

Clarence Elder, Fred Arnold and Maurice Greiman, Vernon Turgasen and Kermit, Koerner will go back to Ames

Frank Gibbs and Harvey Nelson to Morningside.

Donald Turgasen will enter Iowa State College.

Mr and Mrs. "Abe" Lauritsen will both return to Upper Iowa U at Fayette.

Please give us any names we may have missed.

ABOUT THE OPEN SEASON ON PHEASANT HUNTING

As the annual open season on pheasants draws near, farmers, land owners, sportsmen and others interested are beginning to wonder if the "war" of last fall will be repeated.

It will be remembered that last fall the first counties in the state to be opened included but three of the northern counties, among them being Hancock. Naturally this was the cause of thousands of hunters invading Hancock county for the opening days. The largest number of these hunters came from the various cities of Iowa Many did not know how to handle firearms and many were poor sports, shooting at everything that came up; did not ask permission from land owners, in many cases were insulting to the farmers, and all bent on getting birds that rightfuly belonged to the farmers and sportsmen of Hancock County.

Farmers in the vicinity of Klemme all say they do not want these outside hunters, that the game is here for themselves and their business friends and sportsmen of this county. In this they are not selfish as they feel they got a "raw deal" last year when the State Game Department opened but three counties to start with, causing an influx of hunters and putting our pheasants at a disadvantage.

Some farmers want the open season for Hancock County hunters only, but we doubt if such a petition would be even considered by the department. However, many are in favor of petitioning to have ALL counties in the state opened on the same date, have the same shooting dates in all counties, and all closing on the same date. This method would distribute the hunters over a wide area and no county would suffer. Such a petition will no doubt be given attention, and is fair to all counties alike.

Let's hear from you farmers and sportsmen!

1—Rescue crews working at train wreck near Mounds, Ill., in which eight persons were killed and many injured. 2—President Coolidge, Mrs. Coolidge and mine officials looking over the Rust Iron mine at Hibbing, Minn., largest open pit in the world. 3—Miss Grace Lyons and Lieut. Harry Clark at Roosevelt field planning a route for the New York to Bermuda airline to be started in December.

NEWS REVIEW OF CURRENT EVENTS

Smith, Resenting Preacher's Attack, Challenges Him to Public Meeting.

By EDWARD W. PICKARD

GOV. AL SMITH, Democratic nominee for the Presidency, does not propose to be hit in public without defending himself, and his capacity for self-defense is considerable. Rev. John Roach Straton, militant and fundamentalist pastor of the Calvary Baptist church of New York city, saw fit to declare from his pulpit that Governor Smith was "the deadliest foe in America of the forces of moral progress and true wisdom." The governor promptly challenged the preacher to repeat the statement in his presence in the church during the week of September 2 and give such proof as he might be able to advance, and permit Smith to reply in full. He suggested that the meeting might be conducted by question and answer if the pastor wished. In his letter to Doctor Straton the governor said:

"I do not know why you should make a statement of that kind, but I do know that I will never permit it to go unchallenged. I have spent 25 years in the service of the state in elective office, and the record of that service is open to the public. I do not feel that I should charge you with making this statement for any political purpose, as it was made in a church devoted to the teachings of Christ, one of which was 'Thou shalt not bear false witness against thy neighbor.'"

Doctor Straton said he would give Governor Smith the satisfaction he sought, and suggested the meeting be held in some auditorium larger than that of his church. He also proposed that he and Smith should tour the South in a series of debates.

After reviewing two New York National Guard regiments in camp at Peekskill, Governor Smith devoted most of the week to his executive duties. Among other things he ordered the officials of Saratoga county to clamp the lid tight on gambling and other forms of vice prevalent at Saratoga Springs. Then he journeyed to Chicago for the Brennan funeral.

IN THE death of George E. Brennan of Chicago the Democratic party, both of the nation and of the state of Illinois, suffered a great loss. Mr. Brennan was national committeeman and, since the death of Roger Sullivan, had been the undisputed leader of the Democracy of Illinois; and for years he was high in the councils of the party. Always frankly a "wet," he was one of Al Smith's strongest friends and most valued advisers. He worked for the nomination of Smith in 1924 and largely brought about the selection of Davis when it was seen that Smith could not win. This year he was among the most determined advocates of the nomination of the New York governor. Mr. Brennan was an example of the best type of practical politician, the kind that makes innumerable friends within and without his party and that plays the game hard but cleanly, keeping his own reputation for honesty unsmirched. He sought office but once. In 1926 he ran for the United States senate and came not very far from defeating Frank L. Smith, Republican, whom the senate refused to seat.

SATURDAY was the big day for Herbert Hoover and the Republicans. The candidate received the formal notification of his nomination in the great stadium of Stanford university at Palo Alto, Calif., and delivered his eagerly awaited speech of acceptance. The ceremony was preceded by a concert and stunts by the students. Mr. Hoover's speech was heard by many thousands who were present, and by yet more millions all over the country who were served by the hookup of 100 radio stations. Party leaders from practically every state went to Palo Alto and for several days before and after the notification the candidate was busy discussing with them details of campaign work. Friday was the fifty-fourth anniversary of his birth and he was the guest of newspaper correspondents who accompanied him across the continent at a birthday dinner at a Palo Alto hotel.

REPRESENTATIVES of 31 dry organizations who attended the Kansas City and Houston conventions as observers made public a report in which they denounce Governor Smith for his attitude on the liquor question and call on prohibitionists to disregard their political or religious affiliations and join in defeating Smith by supporting Hoover.

Drys gained a victory in Missouri in both the Republican and the Democratic primaries. The Republicans nominated Roscoe C. Patterson of Springfield for United States senator and Henry S. Caulfield of St. Louis for governor. The Democrats put up Charles M. Hay of St. Louis for the senate and Francis M. Wilson of Platte City for the governorship. Hay's opponent, James A. Collet, is a wet and a protege of Senator Reed.

In the Kansas Republican primaries the farmers scored by nominating Clyde M. Reed for governor over five other aspirants. The Democrats nominated Chauncey B. Little, former congressman.

ONE more attempt to fly the Atlantic ocean from Europo to America failed when Majors Idzikowski and Kubala, Polish airmen, were forced to come down in the water because of a faulty gas feed pipe. Fortunately the German steamer Samos was near by and picked them up. The aviators had started from Paris for New York and reached the vicinity of the Azores before they were compelled to turn back. Their plane was wrecked when it struck the surface of the ocean 60 miles off Cape Finisterre.

POOR Florida was struck by another fierce tropic storm during the week. The central east coast towns received the first blows, and then the storm swept across the state to the gulf, doing vast damage in the south central portion. Houses were unroofed, orchards ravaged and roads made impassable, but strangely there was no loss of life.

Belated reports from Java tell of the destruction of the island of Paloewen, Dutch East Indies, by the eruption of the Rokatindo volcano and resulting earthquake and tidal wave. Six villages were wiped out and the death loss was believed to be about one thousand.

SUBMARINE F1-4 of the Italian navy was sunk by collision with another vessel during maneuvers in the Adriatic and for 34 hours rescue crews labored heroically to raise the craft and save the crew of two officers and twenty-five men. Most of this time the imprisoned men were in communication with the salvagers by telephone, but their messages ceased suddenly and when the submarine was finally hoisted to the surface it was found the entire crew had been killed by chlorine gas liberated when salt water flooded the storage batteries.

IN ONE respect the future of Gene Tunney is now settled. The following announcement was given to the press last week:

"Mrs. George Lauder, Jr., of Greenwich and New York wishes to announce the engagement of her daughter, Mary Josephine Lauder, to Mr. Gene Tunney of New York. No date has been set for the wedding, which will likely take place in New York in the late autumn or winter."

Miss Lauder is listed in the social register and is heiress to a large fortune. She is twenty-one years old and was educated in fashionable schools in this country and France. She is an Episcopalian, while Tunney is a Catholic. The retired champion already has purchased a residence in Greenwich, Conn. His departure for Europe for a walking tour with Thornton Wilder was set for August 16.

CHINESE Nationalists were called to time sharply in a note from American Minister John Van A. MacMurray concerning the continued occupation of American mission property by Nationalist troops. The note said that China has not heeded repeated past protests and declared that "the American mission property in China is treated as though it belonged to an enemy warring with China rather than as the private property of a friendly nation." Mr. MacMurray cited specific instances and declared that this action by the Nationalists had caused an unfavorable impression throughout the world and was painfully disappointing to the American government.

STEFAN RADITCH, leader of the Croatian peasants, who was shot in the Belgrade chamber of deputies some time ago, is dead of his wounds, and observers in central Europe believe there is a chance of civil war in Yugo-Slavia unless outside influences are exerted strongly. The Croats bitterly resent the Serbian domination over the government of the kingdom and recently set up a separate parliament in Zagreb, their own capital.

THOUSANDS of British men and women made a peace pilgrimage to the battlefields of France and Belgium to mark the fourteenth anniversary of the beginning of the World war. They were led by the prince of Wales, Lord Jellicoe, Lady Haig, widow of the British commander, and other notables.

SIR AUSTEN CHAMBERLAIN, British foreign secretary, who has been quite ill for some time, will not be able to go to Paris for the signing on August 27 of the Kellogg anti-war treaty. His place will be taken by Lord Cushendun, appointed acting secretary by the king. Germany is perturbed by Chamberlain's prolonged illness for it had been hoped the question of the early evacuation of the Rhineland could be brought up by Foreign Minister Stresemann at the Paris meeting and settled at Geneva in September. The German press does not like the appointment of Cushendun.

THE Obregon party of Mexico, finding no capable leader in its ranks, has practically disbanded, and its general secretary has announced that he is squarely behind President Calles. This gives Calles a free hand in carrying out his reconstruction program, which includes agrarian laws, rehabilitation of haciendas, recreation of agrarian credit and agrarian banks and the encouragement of foreign capital and immigration. Congress, which is 85 per cent Obregonist, is supporting Calles. It is still considered likely that Aaron Saenz, governor of Nueva Leon, will seek the Presidency in succession to Calles.

Bishop Miguel de la Mora of Mexico City issued a signed statement repudiating the charge that the clergy was responsible for the murder of General Obregon. He said the fact that one Catholic priest and one nun were involved in the crime did not mean that the clergy as a body was responsible. The statement asserted that it was publicly known that the Mother Superior Concepcion Acebeda de la Llata was mentally deranged and that several cases of insanity have been reported in her family.

ONE of President Coolidge's callers at Cedar Lodge on the Brule was Gen. Herbert Lord, director of the budget, who conferred with the Chief Executive on government department estimates. They discussed especially the anticipated Post Office department deficit, which was predicted by Postmaster General New when the interstate commerce commission ordered increased payments to railroads carrying department mail. In the President's opinion this deficit comes because of postal laws enacted by the last congress over his vetoes.

IN THE Olympic track and field games at Amsterdam the United States won first place with a total of 173 points. Finland was second with 102 points, and Great Britain third with 46. In women's competitions Canada stood first with 34 points and the United States second with 28. The Marathon race of 26 miles was won by El Ouafi, a young Algerian metal worker from Paris. Manuel Plaza, a newsboy from Santiago, Chile, finished second. Joie Ray, the veteran American runner, could do no better than fifth.

Mast Prove Capacity for Mountain Climbing

Mont Blanc will soon be as safe for the average tourist as a crossing of the Champs Elysees. This is sufficient to indicate that it will not be entirely without its dangers. The departmental council of Chamonix, however, has decided to increase the number of accredited guides and has opened a series of severe examinations.

The first try-outs lasted a full week, with night-climbing and tracing, with and without dogs, over the most difficult peaks of the region. Among the successful candidates were Marius Farini, French skiing champion, and Jacques Bugnet, the hero of one of Mont Blanc's epics a year ago when he saved the lives of three companions by letting himself to the bottom of a gully. He carried one of them on his back through a raging snowstorm for nearly three miles, and fainted, with both feet badly frozen, just as he reached a rescue hut.—London Mail.

Horse Furniture

Mrs. Pester—Nose bag! Indeed! Where do you get that idea? That's a hand-embroidered laundry bag. It's nothing like a nose bag.

Her Husband — That's what I thought. It's a nose bag for a clothes-horse.

Inexorable Campaigner

"Do you forgive your enemies?"

"I forgive 'em," answered Senator Sorghum. "But I still cherish the belief that they were awful foolish."

Don't fail to study yourself if you would know others.

About all we can expect of coarseness is that it be, at least, concealed.

Here's Speedy Relief for Tender, Aching, Swollen Feet

Moone's Emerald Oil Must Give Complete Satisfaction *Or Money Cheerfully Refunded.*

Your feet may be so swollen and inflamed that you think you can't go another step. Your shoes may feel as if they are cutting right into the flesh. You feel sick all over with the pain and torture, you'd give anything to get relief.

Two or three applications of Moone's Emerald Oil and in fifteen minutes the pain and soreness disappears. A few more applications at regular intervals and the swelling reduces.

And as for Soft Corns and Callouses a few applications each night at bed time and they just seem to shrivel right up and scale off.

No matter how discouraged you have been with powders, foot baths or other applications, if you have not tried Emerald Oil then you have something to learn.

It's a wonderful formula—this combination of essential oils with camphor and other antiseptics so marvelous that thousands of bottles are sold annually for reducing varicose or swollen veins.

Every good druggist guarantees Moone's Emerald Oil to end your foot troubles or money back

In Bloomers

Aunt Tillie, though seventy-eight years old, thoroughly enjoys her stay at a northern Indiana lake every summer, rocking peacefully all day long and observing the goings-on of the younger generation. The other day the manager of the hotel appeared in sports attire, the first time Aunt Tillie had noticed him thus arrayed. "Well," she exclaimed with admiration, "I like you in bloomers!"—Indianapolis News.

That Would Be New

"I wish I could think of something new for a literary afternoon," sighed Eloise.

"Don't have lettuce sandwiches," suggested Alfred.

Merely a Symbol

The head of a woman which appears on the United States 25-cent piece represents simply a generalized head, symbolizing Liberty.

Any circle of society is judged by outsiders by what the fools in it do. So suppress 'em.

World's Sunday Schools

The Federal Council of Churches says that the total number of Sunday schools in the world is estimated at 347,001. The total membership is estimated at 32,677,611. The total number of Sunday schools in Europe is estimated at 83,386, with 9,100,000 members. The total number of Sunday schools in the United States is estimated at 195,343, with 19,970,000 members.

There Is Hope

Mary—Mother, I'm afraid Mrs. Jones will never visit us again.

Mother—What makes you think so?

Mary—How can she if she keeps on staying?

Decision

"Money talks."

"Then I must withhold any campaign contribution."

A little love and understanding, thinks the successful wife, writing in Farm and Fireside, will cover a multitude of sins in a husband.

Quick!
new
energy
in the morning!
Post Toasties
Corn Flakes
Post
TOASTIES
THE Wake-Up FOOD
Breakfast time—and new energy needed after the longest fast of the day!
Post Toasties time, too, for Post Toasties is the wake-up food! Rich in energy—and quick to release that energy to the body because it's so easy to digest.
Enjoy a heaping bowlful with refreshing milk or cream. Everybody loves the crunchy goodness of the crisp, golden flakes.
Post Toasties is an ideal breakfast food for children. It supplies them with wholesome energy needed for school and play.
And so convenient! Serve Post Toasties right out of the package. Have Post Toasties every day—and get daily benefit from that rich store of energy. Try Post Toasties for lunch with fresh fruits or berries—see how satisfying and good it is!
Ask your grocer for Post Toasties—and be sure to get the genuine in the red and yellow package. It's the wake-up food! Postum Company, Inc., Battle Creek, Michigan.

OOD HINTS ON PREPARING CAR

echanical Condition of Car lays Big Part in Pleasure to Be Had.

Motor touring, the summer pastime millions, is pleasant directly in pro-tion to the manner in which the performs, says a statement issued national headquarters of the Amer-n Automobile association, which will e a vast majority of the 44,000,000 will take their annual vacations year on the open road.

The close relationship between the sure of the tour and the condition the car should suggest to every spective tourist the wisdom of see-that the car is performing at its before the trip begins," says the tement. "The need is one that is ored by many motorists until it is ught forcibly to their attention by chanical trouble with its attendant ense and delay."

More Heed to Details.

In preparing the car for the much ferent conditions it will encounter a touring trip, the owner need en-lon no great outlay of money for exhaustive overhaul, says the state-ent. Rather, it points out, the ocess is one of paying a little more ed to the principal details that mark dinarily good car care.

"Battery, generator, distributor, spark gs, valves, carburetor, fuel feed tem, clutch, transmission, differen-l, crankcase lubricant, oil filter, ering mechanism, brakes, tires, cool-g system and wheel bearings are the its chiefly recommended by the A. A. emergency road service ex-rts for attention on the eve of the ur. Summarizing the probable serv-s that each will need, the state-nt says:

"Battery—Remove corrosion from rminals and inspect connections to e that they have not been eaten by e acid. Replace suspected connec-ons. Coat terminals with vaseline or ease. Fill cells to recommended el with distilled water.

Care of Generator.

"Generator—If device is not auto-atically controlled as to output, have arging rate reduced for the tour. It nishes the load on the generator, ile turning on the lights serves no her purpose than to keep the battery om becoming overcharged, which is t so likely as generally believed.

"Distributor—Clean and adjust eaker points. Apply a thin film of ease to the cam.

"Spark plugs—Clean and check ints for condition and clearance. Re-acement, if the plugs have seen a ar's service, is generally advisable.

"Valves—It will pay to have the lves ground if this has not been done r 7,500 miles, regardless of the gas-ine one uses. Valves must seat prop-ly for efficient engine performance. or the tour, it is not wise to adjust em too closely. This means quick lve deterioration and poor perform-ce. Look sharply for burned exhaust lves during the grinding process."

AUTOMOBILE NOTES

There are 27,350 motor vehicles reg-tered in Berlin.

* * *

Hydraulic brakes do not need clean-g as long as they work properly.

* * *

When dollar bills are smaller, what ill the garage mechanic wipe his ands on?

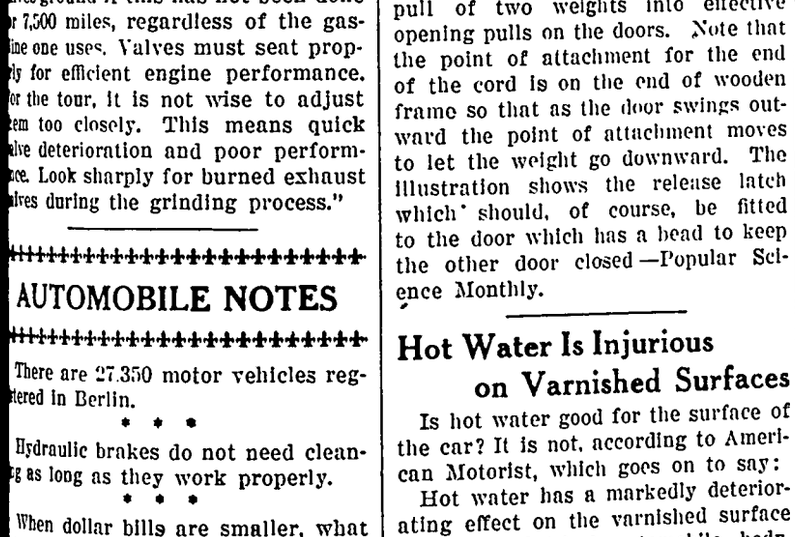
* * *

This new bugle-call type of auto orn tends to bring the pedestrian to ilitary attention so the driver can it him more squarely.

* * *

The idea of arbitrating the matter lways comes too late to be of any ssistance to the man who has dis-uted the right of way with the loco-otive.

MOTOR TRUCK'S LOAD-CARRYING ABILITY



It is estimated that during 1928 probably from 25 per cent to 35 per cent of all motor trucks sold will be put on farms. This indicates the farmer's appreciation of the motor truck's load-carrying ability.

Motor trucks are used to carry almost every conceivable agricultural commodity. They carry the farm products to town, they bring back groceries, feeds, fertilizers, equipment, etc., says the Illinois Farmer. They do this work rapidly and expeditiously in a fraction of the time that is required with other forms of power.

The motor truck is an essential piece of farm operating equipment because it enables the farmer to do his work faster, do his hauling cheaper and to reach markets which heretofore have not been available to him.

Three Kinds of "Pests" Are Always Dangerous

Thomas R. Freebody, vice president of a western motor truck association, enumerates three kinds of automotive "pests" that to him and many others are obnoxious and dangerous on our streets.

First, says Freebody, is the "show-off," who wants to let the world know he's driving a flashy roadster and has lost his manners in doing so.

Second, there's the employed driver who wants to get to his destination in a hurry and has no consideration for others. His horn blowing is more to divert abuse to the injured party than to himself.

Lastly, there is the nervous driver, who Freebody believes is most dangerous of all. He toots his horn at all times, whenever his imagination gets the worst of him.

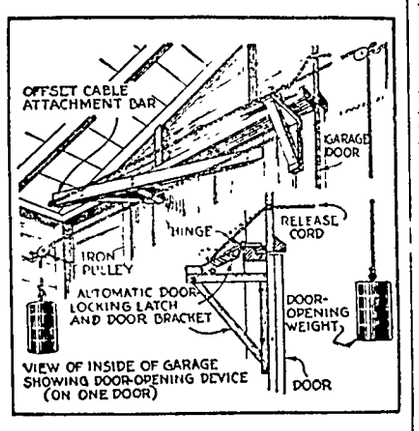
Coolness and restraint are essentials for good driving. Nervousness suggests a fear complex which, if pushed too far on the highway, may be taken up by others like a fast-spreading disease.

A slight touch of the horn button is enough to let the fellow ahead know you want to pass. No end of blowing will get you ahead, however, if the traffic is heavy.

The best that can be done when traffic is heavy is to ride along with it. Hornblowing is useless and troublesome.

Weights and Pulleys to Open the Garage Doors

When you come back from a drive it is a nuisance to have to get out, unlock and open the garage doors, climb back in the car, and drive in. A novel and ingenious way to arrange self-opening garage doors, and details of construction are given in the illustration. Instead of stopping the car you reach out and pull the end of cord placed conveniently near the



Arrangement of Weights and Pulleys to Open Garage Doors and the Release Latch Which Is Used to Put the Handy Device In Operation.

driveway and some distance from the garage doors. The doors at once swing open and you continue into the garage.

The secret lies in the peculiar leverage that translates the downward pull of two weights into effective opening pulls on the doors. Note that the point of attachment for the end of the cord is on the end of wooden frame so that as the door swings outward the point of attachment moves to let the weight go downward. The illustration shows the release latch which should, of course, be fitted to the door which has a head to keep the other door closed.—Popular Science Monthly.

Hot Water Is Injurious on Varnished Surfaces

Is hot water good for the surface of the car? It is not, according to American Motorist, which goes on to say:

Hot water has a markedly deteriorating effect on the varnished surface of a well-finished automobile body. Tepid water is ideal, although cool water may be used without harm. After the car has been properly washed and wiped with chamois it is time well spent to go over it thoroughly with a high-grade automobile or piano polish. Use good grade cheesecloth and be sure to rub until the last trace of wet polish has been removed as a film of polish left on the surface of the car quickly collects a heavy coating of dust.

LIVE STOCK

ESSENTIALS FOR PROFITABLE PORK

Normal, healthy parents, clean farrowing pens, and proper feeding and management of the lactating sow are necessary to profitable pork production.

By the time the pigs are two or three weeks old they will show a desire to eat something besides milk, says Edgar Martin, University of Arkansas. This desire should be satisfied with good pasture and a suitable grain mixture, remembering that skim milk and buttermilk are very high in protein and are, therefore, an excellent growing feed for the rapidly developing pigs.

Along with a suitable quantity and quality of feed, including the mother's amount of exercise, preferably at pasture and in sunshine. The greatest mistakes made in raising young pigs are underfeeding and underexercising. If small pigs are furnished an abundance of exercises at pasture, and given the proper feeds, overfeeding is not likely to occur until after weaning time. Pigs being developed for breeders should not be allowed to become too fat. This is accomplished by hand feeding and governing the allowance by the condition of the future breeders, always giving an abundance of exercise, pasture, shade in summer, water, protein of the right quality, and minerals. Pigs to be sold on the market should be full-fed from birth until weighed to the butcher, and the self-feeder is probably the best method.

Hog Feeding Floor Is Beneficial to Animals

If a hog feeding floor is located on the south or east side of the hog house, the animals will be protected from cold winds and will also receive a maximum amount of sunlight.

Where the ground is firm and well drained, the concrete for the floor may be laid directly on the soil, after it has been levelled and firmly compacted, and all refuse has been removed. If the drainage is poor, however, a six-inch fill of cinders or gravel is recommended.

The concrete used for feeding floors is made with five and one-half gallons of water to the sack of portland cement. In most cases a suitable concrete can be made with 2 cubic feet of sand and three of pebbles or crushed rock to a sack of cement. If this mixture is too dry, use less sand and stone, if it is sloppy or wet, add more of these materials.

The concrete is placed in alternate sections, each of which is ten feet square. As soon as these sections have hardened, the intermediate ones are placed.

If the floor is sloped slightly in one direction, it will drain quickly after rain. A curb placed on three sides of the floor will prevent the hogs from pushing their feed into the ground, where it will be wasted.

Need Less Protein to Grow and Fatten Hogs

Less feed, and especially less protein, is needed to grow and fatten hogs when good pasture is provided. But experiments show that to make the cheapest gains, unless corn is high, the hogs should have plenty of feed and some supplement such as skim milk or tankage along with even the best of pastures. Estimates of the amount of pork an acre of forage will produce range between 240 and 600 pounds depending on the amount and method of feeding. All of them show that there is very little gain while on pasture unless they get some grain with it. It is usually more economical to give a daily feed of three pounds of grain and supplements combined for each 100 pounds of live weight. A quarter of a pound of tankage or its equivalent in milk products to a hog each day when they are getting plenty of grain on pasture will make fast and cheap gains and save grain.

Live Stock Notes

It is very important to keep feed for little pigs fresh and clean to prevent scours.

* * *

It may sometimes be better to fatten thin stockers up to the butcher class than selected feeders up to prime beef.

* * *

It costs more per pound to fatten a steer than the extra flesh will sell for Consequently the selling price for the whole carcass must be enough greater per pound to pay the loss on the added flesh and make a profit.

* * *

Self-feeders and automatic waterers also have an important place in modern systems of swine sanitation. They are particularly adapted to feeding pigs on pasture.

* * *

Individual steel troughs in the hog house are much easier to clean than wooden containers and help to prevent disease and worm infestation.

* * *

Hogs usually eat less tankage from a self-feeder than they do if the supplement is hand-fed, while self-feeders are ideal for feeding minerals.

Not Always on Surface

"He who tells the truth," said Ill Ho, the sage of Chinatown, "must labor long in patient silence to discover it."—Washington Star.

The Proof

Wife—I see that my husband has dried the dishes.

Visitor—How do you know?

Wife—They are still wet.

People who are not bores are exactly the ones who flit away too soon because they fear they will be.

One Secret of Beauty Is Foot Comfort

Frequently you hear people say, "My feet perspire winter and summer when I put on rubbers or heavier footwear—then when I remove my shoes my feet chill quickly and often my hose seem wet through." In every community thousands now use Allen's Foot-Ease in the foot-bath daily and then dust the feet and shake into the shoes this antiseptic, healing powder. Full directions on box. Trial Package and a Foot-Ease Walking Doll sent Free. Address, Allen's Foot-Ease, Le Roy, N. Y.
In a Pinch, Use Allen's Foot-Ease

Only Thinks He Has

"So your son has completed his education." "Great Scott, no! Why, he's just out of college."

Learning and wisdom are not always on good terms.

A wise man prepares for the worst while hoping for the best.

Placard Enabled Her to Make Clean Sweep

Statler, the hotel king, was being complimented on the furnishings in his guest rooms. "Yes," he conceded, "they are much better than we used to have in the old days and the public itself is responsible. The class of the traveling public is improving every year, but I am afraid that in some parts of the country the story of the woman and the hotel placard still goes.

"Mr. King, you know, after reading the courtesy placard on the door of the hotel room turned to his wife and said, 'Have you left anything, dear?'

"'Oh, yes,' exclaimed Mrs. King, looking about the room which she had stripped of everything movable. 'There's a pair of candlesticks on the dresser we might take, too.'"

Volts Keep Fish Straight

The electrical stop now employing 45 volts of current, established on the Rogue river, Oregon, for the purpose of diverting the salmon and steelheads from the turbine race to the fish ladder, is operating without apparent harm to the fish. The electrical stop, while not an entire success, seems to be filling the bill, and much valuable data on the device is expected to be collected during the summer. The device consists of charged wires placed in such a manner as to shock the fish not keeping the channel.

Peculiar Winds

Thermic winds consist of alternate regions of ascending and descending air set in motion by differences of density due to different temperatures. These occur practically everywhere, because the earth's surface absorbs radiant heat from the sun imparts it to air by conduction. Such winds are intensified by different ground colors, the presence of clouds, bodies of water, etc.

Time Brings Changes

The old-fashioned woman, whose wedding ring stayed on her finger from the day it was put on till the day of her death now has a daughter whose ring stays on until she takes it off to put another one on.—Cincinnati Enquirer.

Noise and Music

The difference between noise and music lies in the regularity of the waves or vibrations. When those are of equal length and run at definite intervals, that's music. Otherwise it's a noise.

In a strange city, you lose most of the importance you feel at home.

Life means more when you are green and unsophisticated.

THERE is nothing that has ever taken the place of Bayer Aspirin as an antidote for pain. Safe, or physicians wouldn't use it, and endorse its use by others. Sure, or several million users would have turned to something else. But get real Bayer Aspirin (at any drugstore) with Bayer on the box, and the word *genuine* printed in red:

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

SOFT BUNCH OR BRUISE

on ankle, hock, stifle, knee, or throat is cleaned off promptly by Absorbine without laying up horse. No blister; no pain; no hair gone. At druggists, or $2.50 postpaid. Describe your case for special instructions. Valuable horse book 8-S free.

A satisfied user says: "Colt's knee swollen four to five times normal size. Broke and ran for two weeks. Now almost well. Absorbine is sure great."

Sedentary Job

At one time dramatic critics used to sit on the stage. Nowadays they merely sit on the author, the cast, the scenery and the producer.—Humorist, London.

How little do they see what is, who frame their hasty judgments upon that which seems.—Southey.

TILL BREAKING SALES RECORDS!

GREATEST JULY IN WILLYS-OVERLAND HISTORY

The big forward march of Willys-Overland continues! Following the greatest six months in Willys-Overland's 20-year history, with sales exceeding the entire 1927 output, came July with far more sales than any previous July. 100% more Whippet and Willys-Knight cars were purchased than during July last year.

This success is not surprising. Whippet Fours and Sixes and the three great Willys-Knight Sixes offer a degree of comfort, performance, safety and economy never previously available at such extremely low prices.

Orders now accepted for prompt delivery.

THE NEW Whippet Six

SCHOOL BEGINS IN KLEMME SEPT. 3

LARGEST ENROLLMENT THIS YEAR IN HIGH SCHOOL

Nearly Thirty Will Enter Freshman Class; Seventy In High School

Superintendent M. F Penrod was in Klemme two days the first of the week making some arrangements before school started. While here he interviewed a number of rural eighth grade graduates and succeeded in enroling a large number of them. In all the Freshman class this year will be about thirty in number, the largest class in the history of the Klemme school. The high school attendance this year is expected to number about seventy, according to Mr. Penrod.

There will be no change in the faculty this year, as all of last year teachers were re-elected and all signed contracts for another year. The faculty is as follows:

Superintendent, M. F Penrod.
Principal H. S., Wilma Trumbell
Science, Donald Lewis.
Home Economics, Lenabelle McGinnis.
Athletics and Manual Training, Earl Heiden.
5th and 6th, Phillis Root.
3rd and 4th, Mildred Wheatman.
1st and 2nd, Lenora Wheatman.
Janitor, Emil Patet.

A. D. Gimer is president of the local school board, and the board members are. J. N. Day, R. C. Ludtke, Conrad Quandt and Harry R. Gibbs. Paul Grange is secretary.

School will begin at the usual hour, 9 00 o'clock Monday morning September 3rd, when pupils will be registered and select course of study and be given books.

Any parents or boys and girls interested in knowing more about the course of studies offered should get in touch with Supt. Penrod.

DAIRY OUTLOOK IS ENCOURAGING IN IOWA

Des Moines, August 23.—Good prices, accompanied with good pastures over most of the state, lend encouragement to the dairy producers, according to the ideas presented by the Dairy and Food Division of the Iowa Department of Agriculture.

The recent rains are largely responsible for the good pastures, while the shortage of grass in some other sections of the country has shortened production, as compared to former years and is largely responsible for the better prices.

The present outlook for future prices remains encouraging as the total butter in storage is lighter than normal.

Liberty News Notes

(Special Times Reporter)

Francis Tanner visited at the Ben Kelman home last week.

Mrs. Ralph Ludeke and children called on the Geo. Schoenwetter family Tuesday.

Mr. and Mrs. De Verees called at the Emil Beier home Sunday evening.

Mrs. Ed. Schoenwetter and children visited at the Geo. Schoenwetter home Friday.

Mrs. John Tanner visited Mrs. Art Schoenwetter Tuesday afternoon.

Mr. and Mrs. Oscar Carlson visited near Goodell Sunday with relatives.

Martin Jensen was taken suddenly ill Thursday while threshing. He is much better now but was laid up for a day or two.

Mr. and Mrs. Will Lemke and children drove to PilotKnob Sunday afternoon.

Mr. and Mrs. Albert Borchers of Garner visited at the Emil Beier home Sunday

Mrs. Fred Gates and Lydia Beier assisted Mrs Ben Ridder with cooking for threshers Saturday.

Art Knoke was quite sick last Friday night and unable to work for a day or two.

Mr and Mrs Reimer of Garner visited their daughter, Mrs. Emil Blumer, Saturday.

Miss Bernice Tanner assisted Mrs Otto Pringnitz cook for threshers Tuesday.

Miss Pearl Prull of Ackley visited the J J Stille family a day or two last week

Miss Florence Gates and Mrs Mattie Reemer helped their sister, Mrs Ridder, cook for threshers on Monday evening.

Mr and Mrs Elmer Ludeke and children of Garner were dinner guests at the Art Schoenwetter residence, Sunday.

HE CALLS IOWA CORN BELT A BIG SPONGE

But Dr. Sweeney Says It Soaks Up Sun, Not Liquid

TIME, weekly news magazine in a recent issue quoted Prof. O. R. Sweeney, head of the Chemical Engineering Department at Iowa State College, as saying at th meeting of the American Chemical Society Institute:

"The Corn Belt is a great sponge, soaking up the energy of the sun. Nowhere else in the white man's world is there another such trap for solar power This energy is stored in chemical compounds; not lost True to the laws of physics it is merely changed, can be released again by chemical cunning. Meanwhile the potential energy of hundreds of millions of tons of industrial raw materials is wasted. This waste material is full of cellulose. Already celulose is made into many an industrial product by chemists; paper rayon, wall board, fireproof tile materials, synthetic lumber, insulating materials"

BAYSIDE WILL CELEBRATE ON LABOR DAY

Special Entertainment For Two Days Being Arranged

Bayside Park, Clear Lake, is planning on entertaining the many visitors expected on Labor Day, Monday, September 3rd, and the Sunday preceding Charles Ritz, park operator, states that special entertainment is being arranged for at the park including a double-header ball game which will be playeed on the Bayside diamond. Next Sunday, August 26th, the amusement program at Bayside will include vaudeville, musical concerts, free movies and ball game at three o'clock. Mike Kelly, who has charge of the Bayside boat house, states that fishing is getting better now and that strings are being caught every day The music for the Wednesday and Friday night dances at Bayside is now being furnished entirely by Toppy's Country Club orchestra

THE PUBLIC SOMETIMES GETS GREATER PROFITS OUT OF PUBLIC UTILITIES THAN THE OWNERS

It is a popular belief that public utilities are operated solely for the benefit of the common stockholders. The benefit which the public gets through the payment of taxes is overlooked or forgotten. The fact that the public, through the payment of taxes, in most cases derives a greater profit from the operation of public utilities than the owner of the common stock is not considered.

This condition is well illustrated in the case of Iowa Electric Company. During fourteen years of operation it paid $326,844 40 in taxes, and the common stockholders received in dividends $209,764.24 $269,000 00 of the taxes paid were for State, County, School and Municipal taxes and the public obtained the benefit of these taxes because the payment reduced the amount which th public had to raise from other sources. The government also received $58,281.00 in taxes. This case is not an unusual one.

During the War period and for several years following, there was no rebate in taxes They were paid in full, while the common stockholders received no dividends.

CENTRAL STATES ELECTRIC COMPANY. 1tc

CITY WATER TANKS CLEANED

The past week the two city water tanks at the pumping station were drained, and horoughly cleaned out Our city water at times becomes sort of muddy in appearance and this settles in the tanks so that it is necessary to clean it out occasionally. Howver, a recent laboratory test showed that the Klemme water is pure in every way.

SCOUTS ENJOY OUTING AT EAST TWIN LAKE

Get Practical Experience In The Open Over Night

Last Thursday a number of Boy Scouts of Troop 56, Klemme, under the supervision of Troop Committeeman Rev. C. Grosshuesch, went to East Twin Lake where they made camp for the day and night

The boys were given some practical experience in Scout Tracking and were required to follow a regulation track which had been previously laid out along the lake shore and in the woods. Scout signs were used in constructing the trail, such as twigs and sticks, stones, paper-blazed trees, twisted grass pointers and other signs

Correct methods in building a fire for cooking was demonstrated and the Scouts required to cook in the approved method.

Swimming and boating was enjoyed as recreation. The Scout mile pace was reviewed and several showed proficiency in this.

Monday evening the regular meeting was held at Scout Headquarters at the Parish House and was in charge of A. S. M. Asa Arnold and T C, R. A. Jorgenson Games were enjoyed at the Park for a half hour after which practical demonstrations of the compass and how to find directions with a common watch, were given. T. C., Andrew Wellemeyer, gave two periods of instructions in signaling A few "Indian Wrestles" were injoyed and the meeting dismissed.

SUNBAY BIG DAY AT ELLTOWN CHURCH

OVER 500 PEOPLE ATTEND 50th ANNIVERSARY CELEBRATION

Elltown Reformed First Church In Hancock County

Sunday was a big day at the Elltown Reformed Church's Fiftieth Anniversary celebration and drew people from far and near, and old friends again renewed acquaintances

Many of the former pastors of the church were present and took an active part in the services Sunday Rev H Treick, former pastor of Elltown, now of Eureka, S D, delivered the morning sermon. Rev. Calvin Grosshuesch, of Klemme, brought greetings and good wishes from his congregation in a short talk.

Approximately five hundred persons enjoyed dinner at the new dinning hall in the basement of the church at noon.

Services were again renewed in the afternoon and sermons by Revs. K. J. Stuebbe, of Waukon, and Rev. H. Treick were enjoyed by the congregation and friends who had assembled at the church. A big supper was served at six o'clock and the evening services began at 8:00 o'clock At this time Rev. C. Schmid, pastor of the church, read a historical sketch relating to the early pioneer life of the community, the thirst of the early pioneers for spiritual things which led them to the organizing of he church, and the activities of the congregation up to the present ime. Addresses were enjoyed again when Rev. Stuebbe gave a sermon, and followed by a sermon by Rev. Hueneman, of Foreston, Ill

Monday was featured by a big picnic enjoyed by the entire congregation Tuesday and Wednesday was featured by the convention of the Witness Society.

The anniversary celebration began last week.

110 BUSHELS OATS AN ACRE IS THOUGHT TO BE RECORD

This Is Yield Obtained By Curtiss On Twenty-five Acres

A yield of 110 bushels of oats an acre on 25 acres was obtained this year by Dean C. F. Curtiss of Iowa State College on his Rookwood farm 3 miles south of Ames. As far as known, this is a record oats crop for Iowa.

The variety which the dean grew is Iogren, a strain of Green Russian, selected and developed by the Farm Crops Section of the Iowa Agricultural Experiment Station.

Iogren oats are now grown by a great many farmers who have obtained trial lots of three bushels from the station. The variety was first selected in 1911, carefully tested and the amount of seed increased until in 1922 the first seed was offered to Iowa farmers for trial.

During the first three years after the seed was distibuted, reports from the farmers who had tested it alongside their own varieties showed that the Iogren outyielded the other varieties by an average of 3.6 bushels an acre.

The variety is midseason in maturing and produces a fairly heavy yield of straw as well as of grain.

KLEMME REFORMED CHURCH

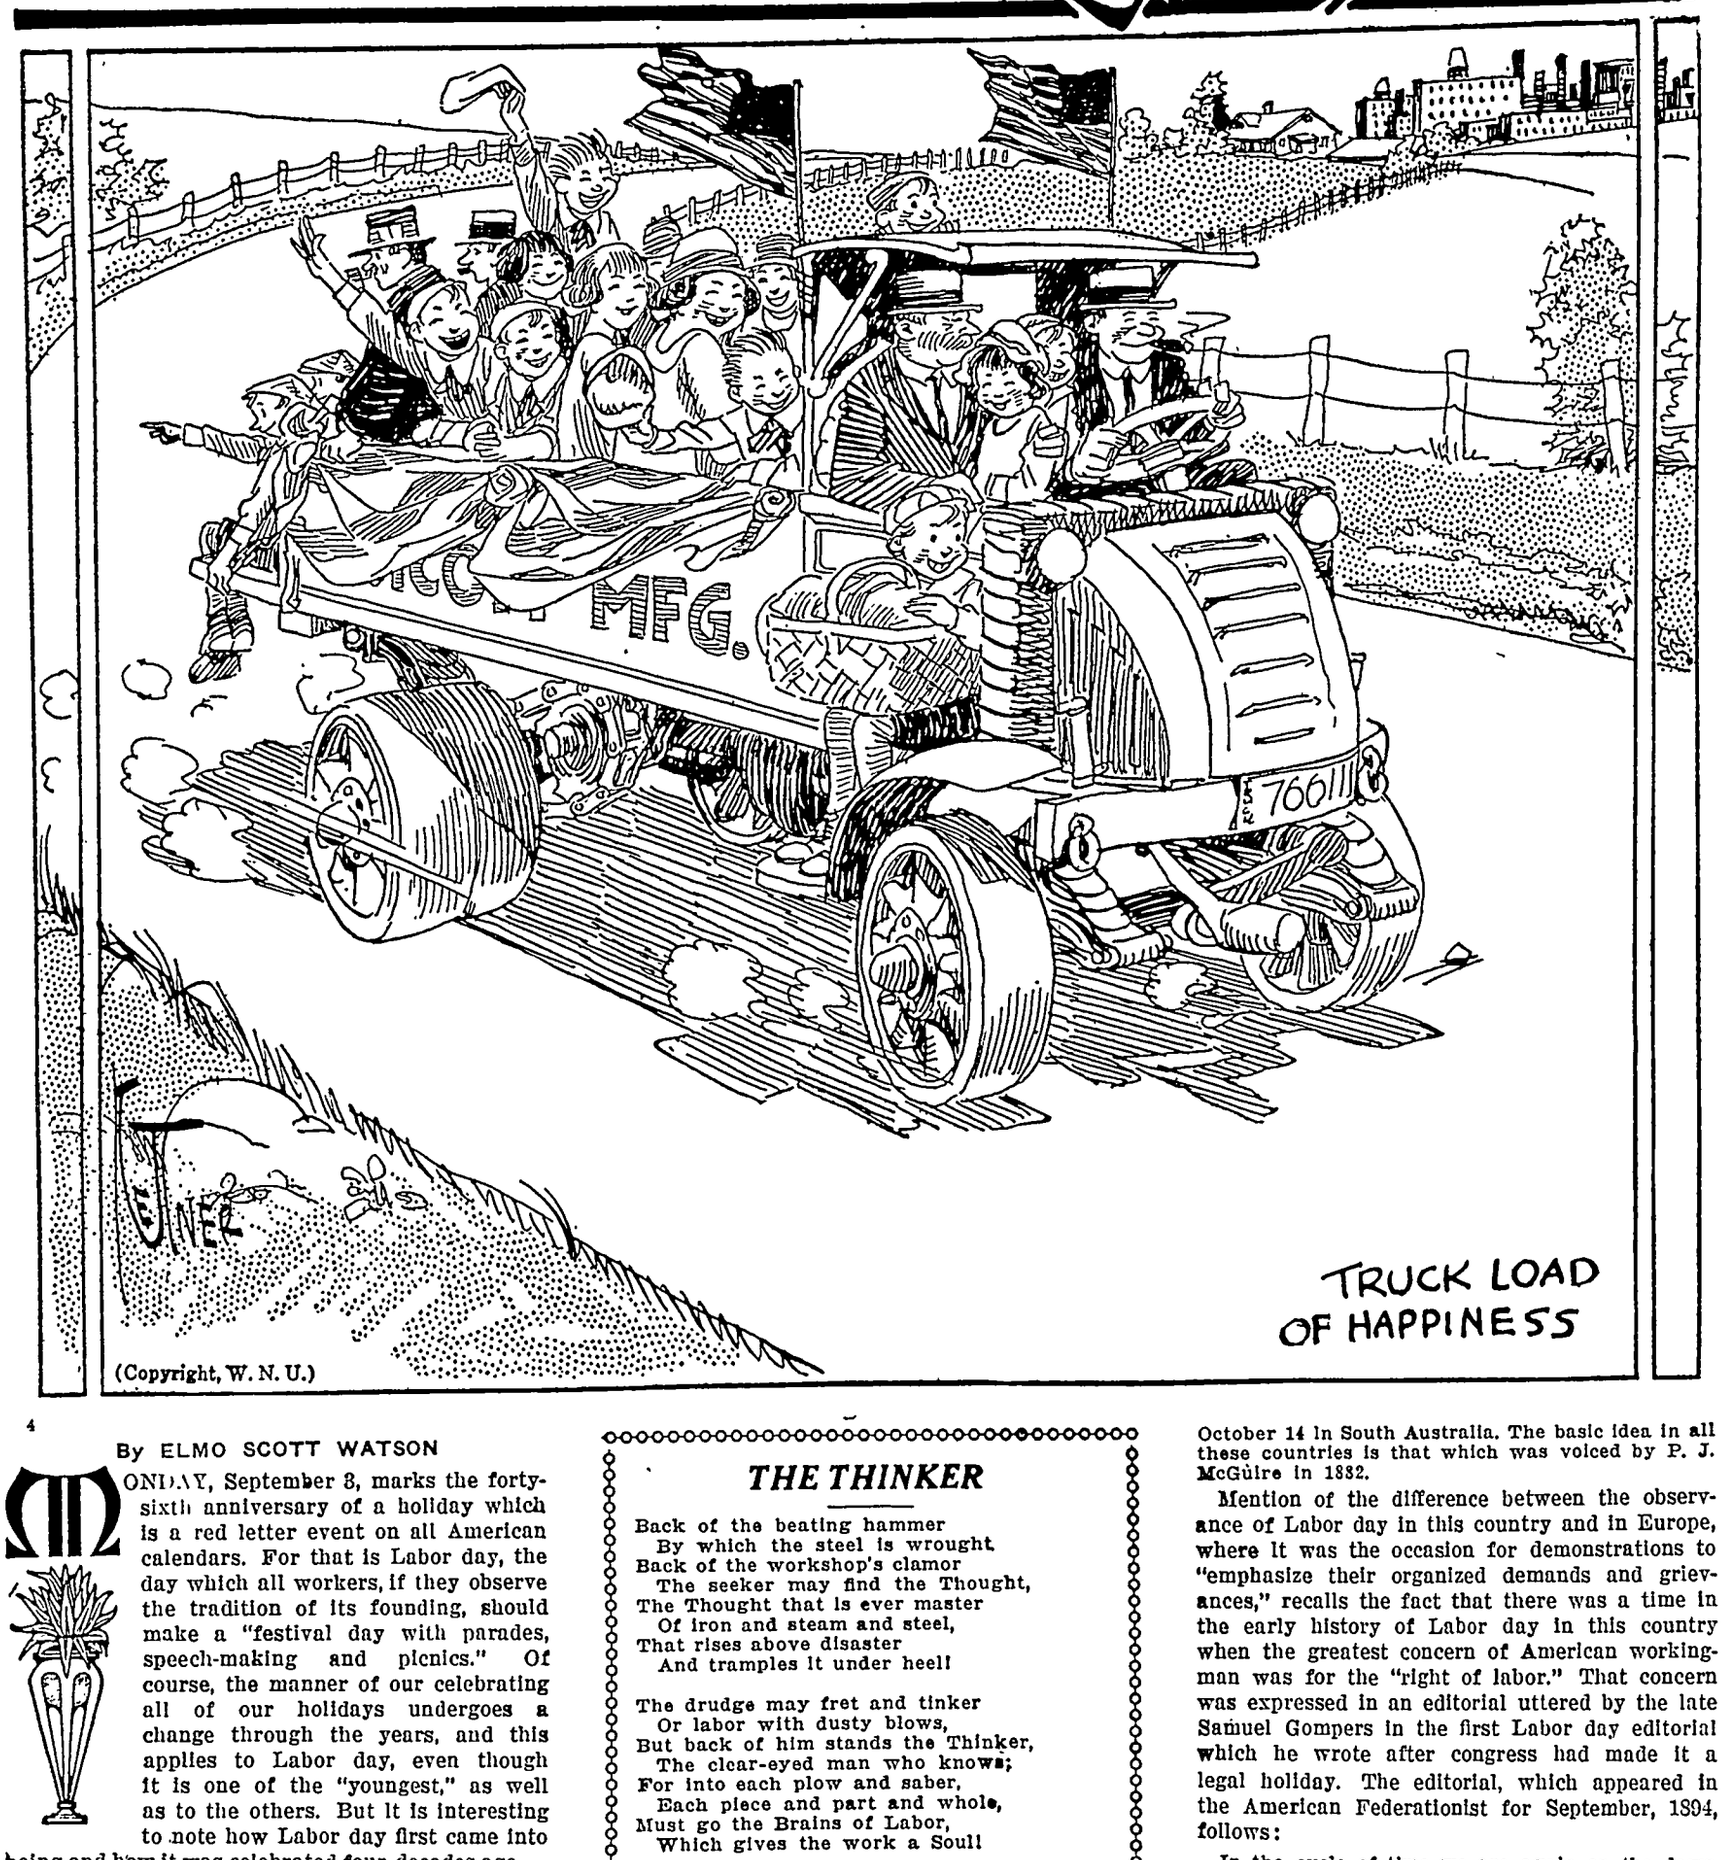
Calvin Grosshuesch, Pastor

10:00 a. m. German Service.
11:00 a. m. Sunday school.
Bible Class Tuesday.
Junior Choir Saturday.

Tuesday, August 28th, the Reformed Church at Kanawha will celebrate a Mission Festival to which our congregation is heartily invited.

Iowa is the second largest butter producing state.

Labor Day, 1928



(Copyright, W. N. U.)

By ELMO SCOTT WATSON

MONDAY, September 3, marks the forty-sixth anniversary of a holiday which is a red letter event on all American calendars. For that is Labor day, the day which all workers, if they observe the tradition of its founding, should make a "festival day with parades, speech-making and picnics." Of course, the manner of our celebrating all of our holidays undergoes a change through the years, and this applies to Labor day, even though it is one of the "youngest," as well as to the others. But it is interesting to note how Labor day first came into being and how it was celebrated four decades ago.

The history of Labor day, as told by a chronicler in the Herald-Tribune of New York, where it originated, is as follows:

A little group of workers in New York city heard the suggestion marking the birth of Labor day and creating a holiday which has encircled the globe. The idea originated May 8, 1882, at a session of the then newly formed Central Labor union of the metropolis. Its sponsor was P. J. McGuire, who was one of the best known labor leaders of his day, for many years secretary of the United Brotherhood of Carpenters and Joiners of America and a vice president of the American Federation of Labor.

McGuire's thought was that one day in the year should be set aside as a general holiday for the men and women who toil. In its initial form the plan contemplated a Labor day, pure and simple, for observance by those who work with hands and muscle. The first celebration of the holiday took place in New York September 5, 1882.

Since that modest beginning the world has taken Labor day to its heart as one of the most important holidays on the calendar. The voice of McGuire has been heard round the world, and by all classes of the population. Labor's holiday has become an international institution for millionaires and workers alike—a festival of relaxation and recuperation for all strata of the social structure. No holiday of the year has greater popularity.

A basic reason for the vogue of Labor day is to be found in the wisdom shown by its originator in choosing the date for the celebration. McGuire's choice was the first Monday in September as a strategic date midway between the Fourth of July and Thanksgiving day. His feeling that this was the most suitable day of the entire year for a new holiday found ready echo in the minds of workers, offering a respite from toil after the blistering weather of July and August. Everybody was ready for a rest at this particular season, and there was prompt response to the suggestion of a double holiday over Sunday and Monday. In recent years there has been a pronounced tendency toward a triple holiday, causing the rest period to extend from Friday evening to Tuesday morning No other holiday of the year offers similar advantage year in and year out.

After the New York celebration of 1882 the popularity of Labor day grew with increasing swiftness until it had extended to practically every state in the Union. It now covers the island possessions of Hawaii, Porto Rico and the Virgin Islands.

Formal action toward nationalizing the holiday was taken by the predecessor of the American Federation of Labor at its annual convention in Chicago in October, 1884. The body was known as the Federation of Organized Trades and Labor Unions of the United States and Canada, then four years of age and strikingly small in comparison with the mighty federation of today. At the Chicago convention, for example, there were but twenty-six delegates, representing a constituency of nineteen international unions, local bodies and central labor unions. The annual report of the financial officer placed the year's expenditures at $543.20, with a treasury balance of $188.04 at the end of the fiscal period. This offers strange contrast with the recent report of the federation, showing a year's receipts of $518,451 and a balance of more than $210,000.

At the Chicago convention the delegates adopted a resolution intended to give Labor day observance national importance. The resolution stipulated that the first Monday in September should be set apart as "a laborers' national holiday," and recommended its observance "by all wage workers, irrespective of sex, calling or nationality."

Popular response for spontaneous, but untiring effort and co-operation on the part of organized labor were required for the procurement of legal sanction for the suspension of work. Congress and state legislative bodies received vigorous and insistent requests for the enactment of federal and state laws recognizing the day as a legal holiday. Ten years elapsed before the passage of a congressional act establishing the first Monday in September as a legal holiday for the District of Columbia and the territories. Oregon has anticipated the federal law by legislative act passed in 1893. Other states fell in line one by one, until the day now ranks as a legal holiday throughout the United States. In most states the status is established through statutory provision. In Wisconsin and Wyoming the observance comes through proclamation by the governors. In the Philippines the celebration takes place on May 1, in accordance with European custom.

The May day celebrations in Continental Europe owe their origin to American initiative. This foreign adoption of the McGuire idea came about in connection with the eight-hour movement inaugurated by the American Federation of Labor in 1889. The same year brought a meeting of the International Labor Congress in Paris. To this meeting a letter was addressed by Samuel Gompers, president of the American body, urging that the international organization should co-operate with the eight-hour movement by making a declaration of sympathy. In his letter Gompers appealed for demonstrations in all European countries to be conducted on May 1 of the following year. The congress complied and started the machinery for widespread continental demonstrations on May 1, 1890.

In this way it came about that the Gompers suggestion was the instrument which created May 1 as the Labor day of Europe. The start, made in 1890, caught the fancy of European workers and May day became the recognized time for demonstrations all over the continent.

In one respect there has been an important difference between the observance of Labor day in the United States and the practice of European workers with reference to the first of May. The American holiday is of recreational character, while European workers have tended to exaggerate the demonstrational system as a means of emphasizing their organized demands and grievances. The result of the early demonstrations was to invite governmental opposition, with frequent clashes between the workers and the police or military forces. In latter years, however, the May day observance has been given more largely to cessation of work, parades, meetings and commemorative exercises devoid of violence or disturbance.

Europe has been slower than the United States in granting legal status as a holiday to the day selected by labor as the time for annual celebration. The countries which have recognized the first of May as a legal holiday are Austria, Czechoslovakia, Esthonia, Finland and Madeira. South American nations recognizing the date are Colombia, Ecuador and Uruguay. Latin America in general follows the European custom of celebrating May day, and the day is a legal holiday in Hayti and Panama.

That the McGuire idea has spread round the world is shown by the circumstance that many British colonies and possessions have their own Labor days. Canada celebrates the first Monday in September, in keeping with the United States custom. Newfoundland observes September 2. Queensland and Western Australia follow the European practice and observe the first of May. "Eight-Hour day" is observed on April 21 in Victoria, Australia; on October 6 in New South Wales, and on October 14 in South Australia. The basic idea in all these countries is that which was voiced by P. J. McGuire in 1882.

Mention of the difference between the observance of Labor day in this country and in Europe, where it was the occasion for demonstrations to "emphasize their organized demands and grievances," recalls the fact that there was a time in the early history of Labor day in this country when the greatest concern of American workingman was for the "right of labor." That concern was expressed in an editorial uttered by the late Samuel Gompers in the first Labor day editorial which he wrote after congress had made it a legal holiday. The editorial, which appeared in the American Federationist for September, 1894, follows:

In the cycle of time we are again on the dawn of our most important national holiday—Labor day. Most important, since it for the first time in the history of the world devotes a day to the recognition of the fact that the wage earners must hereafter be regarded as the important factor in the economy of life. In this day when so many look upon the dark side of the progress of the labor movement and predict worse things in store for the laborer, it is not amiss to direct attention to the fact that the life of the human family is one vast struggle, and that though the progress is not as swift as we, as well as our impatient brothers and sisters of labor, would like it to be, yet the fact that in our decade we can see the rights of labor more clearly defined, the vantage ground obtained, and obtaining a clearer insight into the existing wrongs, the more intelligent perception and determination to achieve labor's rights.

The past year has witnessed several contests, some of them defeats, but though defeated in the immediate object sought, they have awakened a new conscience in the American people, and will contribute more to the thorough organization of the wage workers of our country than hundreds of meetings, speeches or pamphlets. The great conquering armies in the history of the world have had their reverses, and the labor movement cannot expect to be an exception to that rule. Each defeat acts as a trenchant warning to the toilers of America that error must be avoided, that intelligence must prevail, and that no success can come to them unless it is through their own efforts and their own organization, and by their persistency manifested.

Pessimism results in indifference, lethargy and impotency and this in turn simply permits the corporations and trusts and the entire capitalist class to filch from the toiler rights which have been dearly bought.

The organizations of labor must be thorough and complete and above all must be permanent Those organizations which arise like a flash in the pan only go to show how arduous is the struggle before the toiler, in order to overcome the antagonism of the wealth-producing classes of our country.

Today more than ever the toilers recognize how essentially they are thrown upon their own resources; that they have few if any outside their own ranks who sympathize with them in their efforts for the emancipation of mankind.

Toilers, organize. Let us carry on the good work and in a few more revolutions of the earth upon its axis we shall have a better world—a better mankind. Waiting will not accomplish it; deferring till another time will not secure it. Now is the time for the workers of America to come to the standard of their unions and to organize as thoroughly, completely and compactly as is possible. Let each worker bear in mind the words of Longfellow:

In the world's broad field of battle,
In the bivouac of life,
Be not like dumb, driven cattle!
Be a hero in the strife!

There is one significant statement in that editorial by the "Grand Old Man of American Labor." For when Samuel Gompers uttered the words "intelligence must prevail" he was giving it the keynote of what was destined to prove its soundest and most successful policy.

In the years which have followed since that editorial was written, however, the spirit of American labor, as exemplified in Labor day, has changed. It is still steadfast for the "right of labor," but it is also conscious of the responsibility of labor as well. Today the American laborer is the most prosperous of any in the world and that is because he has brought to his task an intelligent conception of both its rights and its obligations, a consciousness of the dignity of his job, no matter what it may be so long as he does it well, and as a thinker, as well as a doer, he is the backbone of the American nation today.

THE THINKER

Back of the beating hammer
By which the steel is wrought
Back of the workshop's clamor
The seeker may find the Thought,
The Thought that is ever master
Of iron and steam and steel,
That rises above disaster
And tramples it under heel!

The drudge may fret and tinker
Or labor with dusty blows,
But back of him stands the Thinker,
The clear-eyed man who knows;
For into each plow and saber,
Each piece and part and whole,
Must go the Brains of Labor,
Which gives the work a Soul!

Back of the motors humming,
Back of the belts that sing,
Back of the hammers drumming,
Back of the cranes that swing,
There is the eye which scans them
Watching through stress and strain,
There is the Mind which plans them—
Back of the brawn, the Brain!

Might of the roaring boiler,
Force of the engine's thrust,
Strength of the sweating toiler,
Greatly in those we trust.
But back of them stands the Schemer,
The Thinker who drives things through;
Back of the Job—the Dreamer
Who's making the dream come true!

—Berton Braley.

LIFE'S LITTLE JESTS

GOING HIM ONE BETTER

Dr. M. W. B. tells this one: "A few years ago, back when cotton was hitting the high spots and even the colored folks were in clover, a colored brother walked into an automobile salesroom in a nearby town and said:

"'Boss, you-all de feller what sell Mistah Washington Smith that 'er supersix automobile?'

"'Yes, said the salesman, 'I believe we did.'

"'Well,' said the colored man, 'Ah wants a superseven.'"—Cincinnati Enquirer.

TOOK COLD

First Chorus Girl—Did she take by exposing herself in that extreme way?
Second Ditto—Yes—took cold.

Connubial Wisdom

That husband is the wisest
And most successful, too,
Who makes "wifie" do exactly
What she wants to do.

Welfare Work

Eloise is a dear little girl who decided to go in for welfare work.

So she came home and explained to her mother that she had made 40 calls on poor people.

"Do you mean to say you saw 40 people in one day?"

"I didn't see all of them, mother. At some places I left cards."

Out of Control

It was past midnight and ominous tramp of heavy feet was heard on the stairs.

"What is that?" she cried, clinging to her airman lover."

"Sounds like your father coming down out of control," he replied in the jargon of his profession.

Just So

"Bird stores seem to run largely to parrots."

"They live one hundred years."

"I see; durable stock."

Absolutely

"Everything he has is better than anything anybody else has."

"A good man to marry, girl."

RAN INTO HER

"How did you meet that girl?"

"Ran into her at a dance."

Mistake

I take the road to yesterday
But find the going slow
For I am held up all the way
By people that I owe.

Not Having Any

Doctor—About nine patients out of ten don't live through this operation. Is there anything I can do for you before we begin?

Dusky Patient—Yessah, kindly hand me mah hat.

Not Being Done

Red—The play isn't at all true to life. The wife continually asks for money.

Deke—Which is quite natural.

Red—But she gets it.

Sounded Suspicious

"Why do you think that Fanny doesn't like you?"

"I told her there was a fool in every family."

"What did she say?"

"She asked if I was an only son."

The Other World

The Impatient Patron — Waiter, didn't you hear me rap on the table?

The Patient Waiter—Was that you rappin' on the table, sir? I heard you but I thought it was spirits.

What Will you do

When your Children Cry for It

There is hardly a household th hasn't heard of Castoria! At least t million homes are never without it. there are children in your fami there's almost daily need of its co fort. And any night may find you ve thankful there's a bottle in the hou Just a few drops, and that colic constipation is relieved; or diarrh checked. A vegetable product; a ba remedy meant for young folks. Castor is about the only thing you have ev heard doctors advise giving to infan Stronger medicines are dangerous to tiny baby, however harmless they m be to grown-ups. Good old Castori Remember the name, and rememb to buy it. It may spare you a slee less, anxious night. It is always read always safe to use; in emergencies, for everyday ailments. Any hour of t day or night that Baby becomes fr ful, or restless. Castoria was new more popular with mothers than it today. Every druggist has it.

Fletcher's CASTORIA

"Flying Scotsman" Train Has Nonstop Recor

England's "Twentieth Century Li ited," the "Flying Scotsman," has ju begun making the longest nonstop r in the world—the 392 miles betwe London and Edinburgh.

Comfort, not speed, is the object, t the time remains at eight and a qua ter hours. Heretofore there has be no way of changing engine crews wit out stopping the train, since it w held dangerous for two crews to o cupy the cab at the same time.

Special locomotive tenders solve th problem. At the end of 200 miles fresh driver and firemen emerge fro the first coach, go through a cover corridor or gangway along the rig side of the tender, and take over t engine. The men relieved go ba the same way and finish the trip passengers.

Added Insult to Injury

"Do you mean to tell me y couldn't see me coming on a straig piece of road like this?" said t owner of the very small car after t collision.

"Sorry, guv'nor," said the lor driver. "I thought it was a fly on m windshield.—Montreal Star.

The ravens fed Elijah—but w what?

MOST people know this absolut antidote for pain, but are you careful to say Bayer when you buy it? And do you always give a glance to se Bayer on the box—and the word *genuine* printed in red? FARM STOCK

CHILDREN USED TO HERD SHEEP

When there are children in the family they will often take delight in herding a flock of sheep in odd corners about the fields where weeds are prevalent. Children take to sheep like robins to a cherry tree, and in most instances can do as well in caring for them as grown persons. In the fall when more time is available the flock may be grazed along the roadside under the watchful eye of some one working near; or when the lambs get old enough to wean, or before that even, they may be safely trusted to graze in the road or in an adjoining field without straying far away. Then there is nothing nicer to clean the weeds out of the cornfield and strip the lower blades off the corn in the fall than a flock of lambs. They hardly ever bother the ears of corn and will pay their owner a mighty good profit for the privilege of converting into mutton and wool roughage that would otherwise be of no value.

Many farmers never think seriously of owning sheep until the price begins to soar. Then they rush in at a high price generally getting out again after the price has slumped. Others start with a few ewes, and often because of the success which invariably comes from handling a small flock, they suddenly begin to expand their operations feverishly, thinking they have discovered a short cut to getting rich quick. As a rule they are not long in discovering that increased operations require a somewhat disproportionate increase in care and attention, lest profit be changed into loss. Here at "Hereford Farms" we keep about 20 to 25 ewes year in and year out; high or low mutton or lambs, cheap wool or good price, our sheep are always as good as anything else and their place on the farm is secure.—William E. Allyn, Missouri Farmer Staff.

Docking Market Lambs Is Profitable Practice

It is possible to market young lambs, weighing 70 to 80 pounds, that have not been docked nor castrated, and receive top market price for them, according to W. G. Kammlade, University of Illinois. However, this is only possible during a short time and lambs so marketed must be young and not have developed any evidence of masculine characteristics, he points out.

"The reason we recommend that all lambs intended for market be docked and castrated is that while we plan on marketing them young, it may not be possible to follow this plan," he says. "Futhermore, if properly done, these operations cause no set-back of the lambs."

The best age to dock and castrate lambs is when they are from ten to twenty days old. At that time the shock is not great and the operations are easily performed.

Treatment for Pigs Is Essential While Young

Young pigs are set back much less by castration than are older ones and consequently this operation should be gotten out of the way as early as possible in the pig's life. Young pigs are also much more conveniently handled during the operation than are older ones and losses among the young ones will also be less and slowing up of gains will be smaller during the healing process.

If the pigs are to be vaccinated after castration, the vaccination should be delayed for a week or ten days to let the wounds from the operation heal properly. On the other hand, if the pigs are to be vaccinated before the operation, as is done in some herds, the castration should not follow until about a month after vaccination.

Improving Sheep Flock by Particular Culling

If you have got a thrifty, profitable flock of sheep and especially if you need a good pure-bred ram, select as many of the best ewe lambs as you have ewes that should be culled out of the flock, keep these ewe lambs to improve your flock. Pick lambs that are the most typical of the breed your flock represents, pick a lamb with legs well set apart, set out on the corners you might say, this will be a lamb with constitution that should develop into a good producing mother. There is much in breeding even in your market flock. Twin-producing and heavy-milking ewes are more apt to produce that kind. Records indicate that the mother ewe controls the twin-producing habit to a much greater extent than does the flock ram.

Money in Sheep

There is good money in sheep, provided, of course, that you do not overstock. One of the most successful sheep men in this country says that there should be ten ewes on every 80-acre farm. This small number will not overstock the place, will not necessitate so much sheep-tight fence, and will not interfere with other farm work. The average farmer who will give sheep reasonable care can make from good money on a small bunch of sheep.

Specialized Egg Farming Growing

Has Been Outstanding Development in Agriculture Since the War.

(Prepared by the United States Department of Agriculture.)

Specialized egg farming has been an outstanding development in American agriculture since the war. It has become an important factor in egg production. Poultry had been one of the nation's largest but least organized agricultural industries. Although nine farmers out of ten kept poultry, few paid attention to the individual hen. Accordingly conditions were very favorable for specialized egg farming. Eggs and poultry were relatively higher in price than dairy products, meat animals, and other farm commodities, and feed prices favored the poultrymen.

Little Capital Needed.

Another stimulus was the fact that little capital was needed to get started in the business, and returns were not long delayed. The business accordingly had a tremendous growth. Originally developed in the vicinity of large cities to supply the local markets, specialized egg farming in some sections increased its output beyond the requirements of the near-by population. Mainly through co-operative effort, however, wider markets were obtained. This resulted in the development of specialized egg-farming communities, which are located principally on the Pacific coast.

Despite the rapid expansion of the business, specialized egg farming remains a minor factor in the total production of eggs in the United States. Farm flocks still account for about 85 per cent of our annual egg crop.

Good Future Probable.

The United States Department of Agriculture believes, however, that a good future for specialized egg farming is probable. Specialized poultrymen cannot expect to survive the competition of the small farm flock if they follow ordinary flock methods and practices. Indications are, however, that they understand the requirements of their business better than to do that. The more successful of them realize that the specialized poultry industry must produce special quality eggs and find a market for them at special prices. It must also maintain not only a high average annual egg production but a high production in the season when the best eggs are scarce.

Hay Costs Are Cut by Use of Windrow Method

Field crops specialists of the Minnesota experiment station have prepared a bulletin on "Hay Making in Minnesota," containing suggestions of use to the farmer as the haying season draws near. This bulletin says that the curing of hay in windrows reduces curing costs.

To make the proper kind of windrow, however, is important, and for this the specialists advise the use of the side-delivery rake with curved teeth. This rake makes a windrow which hastens the curing process with little loss of leaves and little bleaching. The hay is not raked until the leaves are wilted after cutting.

Sunflowers for Silage Favored by Wisconsin

Although sunflowers are not quite as palatable to live stock in silage as is corn, neither do cornborers find them as delicious fare as the crop from which they have been given their name, according to the circular, "Sunflowers for Silage," which has just been released by the University of Wisconsin, Madison, Wis.

The circular tells of the use of sunflowers for silage. In addition to providing an abundance of feed under conditions where corn may not thrive satisfactorily, the sunflowers are effective in controlling most noxious weeds.

Farm Notes

Leghorn pullets should not begin to lay until they are from five to six months old. General purpose breeds take about a month longer.

* * *

Discard any normal boar which has sired one or more herniated pigs. Such a boar will transmit factors for hernia to more than half his offspring.

* * *

Sweet clover is one of the best honey producing plants. The plants bloom abundantly and bees are very fond of the nectar. Sweet clover honey has highest quality.

* * *

Timely succession plantings of vegetables include endive, fennel, dwarf snap beans, root celery, late celery, kale, kohl rabi, and lettuce, say State college vegetable gardeners.

* * *

If yo plan on storing grain it will save money to inspect and repair the granaries now. Eradicate the common grain robbers, rats, which is not such a hard job. Shoot calcium cyanide into the holes with a dust gun

* * *

Cattle can be dehorned at any time of the year excepting during hot weather when flies are bad. However the best time to do this is in the spring or late fall after the flies have left.

The DAIRY

BACTERIA THRIVE IN HOT WEATHER

Bacteria, like other forms of plant life, thrive and grow in warm weather, especially when food and moisture conditions are favorable. Bacteria, or "bugs," in milk or milking utensils have an almost ideal food and moisture supply. When temperature conditions become favorable for their growth during the warm summer months, precautions are required to control them.

The man who milks cows to supply his own table only deserves a clean food for himself and his family. The farmer who sells cream to a creamery owes his community his best efforts toward the production of a high class product. He can thus encourage quality grading and the payment of better prices for a higher class product than he formerly marketed. The constantly expanding dairy industry may gain more of a foothold in his section within the next few years, co-operative creameries may be established and top prices paid for milk and cream properly handled, says the Kansas Farmer.

Five factors essential to clean milk production are: healthy cows with clean udders, clean, healthy attendants, sterilized utensils, cleanliness in milking and in handling the milk, and cooling it to at least 50 degrees Fahrenheit immediately after milking. Keeping milk cool retards growth of bacteria.

Milking machines prevent contamination of the milk from the coat of the cow, from the milker's hands and from the air. Test cups and rubber tubes on the machine, however, must be thoroughly cleaned and sterilized after every milking to control bacterial growth. Some recent tests with several types of milking machines illustrate this point. Milk from machines on which tubes and test cups were not sterilized contained from 200,000 to 1,000,000 bacteria a cubic centimeter. Milk from these same machines, when cups and tubes were sterilized, contained only 2,500 to 5,000 bacteria a cubic centimeter. This count, which is considerably below the requirement of 10,000 or under for certified milk, emphasizes the possibilities for producing a quality product with milking machines.

Drawing water through the machine immediately after milking, first cool and then hot, is one of the most important steps in keeping it clean. Most manufacturers recommend chemicals for cleaning the tubes of their machines. The rinsing of all utensils with cold water removes fluid milk, hot water having a tendency to make it stick. Then a thorough cleaning with hot water, washing powder, a brush and live steam, if available, make uncomfortable conditions for the bacteria.

Cool Cream Immediately After It Is Separated

Cool the cream immediately after separation by setting the can in cold water. The spoiling of cream as well as the decomposition and putrefaction of other foodstuffs is caused by germ life, bacteria, yeast and molds. Like other living organisms, germs require warmth to thrive. In the absence of warmth they are inactive and are unable to continue their work of destruction. When the cream comes from the separator it is warm and in ideal condition for bacterial decomposition and spoiling. If it is cooled promptly the activity of the bacteria is checked and the cream will keep sweet for a reasonable length of time. The lower the temperature to which it is cooled the longer it will keep in normal condition. Cooling to the temperature of the water available on the average farm alone greatly retards bacterial action and prevents spoiling.

Dairy Facts

Use well-bred dairy cows.

* * *

Allow free access to salt daily.

* * *

Follow the practice of the most successful dairymen.

* * *

Use well-balanced rations made from a variety of feeds.

* * *

Give cows six to eight weeks of rest between lactation period.

* * *

Good pasture grass holds a place in the list of delicacies for dairy cows which no other feed can quite fill.

* * *

The ability of grass to produce milk is generally overestimated, and a cow cannot maintain a heavy flow of milk on grass alone.

* * *

Supply an abundance of pure fresh water never colder than that of a deep well.

* * *

Blanket cow immediately after calving if there is danger that the cow will become chilled.

* * *

Remove the afterbirth, if necessary, inside of 48 hours after calving, and do not allow the cow to eat it.

* * *

Remove the calf from its mother after the first two to four days and teach it to drink from a pail.

POULTRY

DOSING FAILS TO DESTROY VERMIN

(Prepared by the United States Department of Agriculture.)

Many farmers and poultrymen have believed it possible that certain chemicals administered as medicine or mixed with feed or water may protect their animals from external parasites. Ignorant and unscrupulous dealers, particularly in the poultry business, have played on this belief. The prevailing idea is that the material is taken up by the blood and then excreted on the surface. Many believe that the parasites are either poisoned in this way, or else that a condition is induced which makes the fowl displeasing to its parasites and causes them to leave. Vendors of nostrums have sold liquids, tablets and powders for use in this way. The insecticide authorities in the United States Department of Agriculture have issued warnings against these remedies, and in many cases have forced the makers to cease advertising and selling the frauds.

In Technical Bulletin 60-T, "Ineffectiveness of Internal Medication of Poultry for the Control of External Parasites," just off the press, departmental investigators give the results of experiments on which they based their opposition to this fakery. In approximately 50 tests of the preparations advertised none showed any indications of value against the common external parasites with which the hens were infested. Lice and mites thrived and multiplied as they might have been expected to do if the "medicine" had not been administered. These tests were the basis of the campaign against the fakers.

In addition, the department carried out tests with a considerable number of other chemicals in addition to those revealed by analysis of these "vermin eradicators." Chemicals tested included magnesium sulphate or epsom salt, sodium carbonate, napthalene, calcium thiosulphate, calcium sulphide, magnesium oxide, sodium sulphate, potassium nitrate, ferric oxide, ferric sulphate, ferrous sulphate, potassium tellurate, potassium tellurite, diethyl diselinide, sodium nitrate, tartar emetic, potassium iodide, sulphur flowers, capsicum, gentian, ginger, fenugreek, garlic, camphor, powdered tobacco, quinine, nux vomica, and others.

In no case was there conclusive evidence of any benefit from dosage. The ticks, lice, mites, and fleas were not eradicated. Furthermore, there is grave danger in giving certain internal medicants to healthy fowls, as their vitality may be decreased to such an extent that the parasites find them an easier prey than they would have been had no doses been administered.

The conclusion of the investigators is that "the use of internal medications against external parasites is detrimental to the poultry industry in that it not only involves useless expenditures but allows the parasites to continue their ravages when they might be destroyed by recognized methods."

Poultry raisers who desire to review for themselves the evidence against the nostrums may obtain Technical Bulletin 60-T free, while the supply lasts, by applying to the United States Department of Agriculture, Washington, D. C.

Poultry Hints

Keep the pullets growing if they are to produce winter eggs. This means keeping the mash hoppers filled.

* * *

More profitable summer egg production will be obtained in flocks that are given continual access to grain and mash rations.

* * *

If shade is provided for the poultry a mash hopper should be placed within easy reach. The birds will range during the morning and late afternoon.

* * *

When new oats and wheat arrive from the threshing machine there is always a temptation to overfeed the birds on the new grains before getting them used to them. This practice often results in heavy losses.

* * *

Chickens appreciate good shade and fresh water this time of the year.

* * *

Sweet or sour skim milk brings big returns when fed to either young or old poultry.

* * *

Feed mash to hens right through the summer. It will increase the egg production and profit.

* * *

Baby chicks are so tiny and the new brooder house looks so big that before we realize what has happened, the chicks are crowded.

* * *

There seems to be direct connection between empty feed hoppers and small eggs as well as in getting them from pullets hatched from small eggs. No matter how clean and fresh these small eggs are they will be graded as number two.

* * *

Confine broody hens the first night they stay on the nest. Have a broody coop with a slat or wire bottom, located in a shady place. Have dry mash, milk and water before them and once a day give one ounce of dry mash moistened with milk.

Receives Recognition From German University

Mr. William E. Weiss.

The University of Cologne, Germany, has just paid to Mr. William E. Weiss, of Wheeling, W. Va., one of the founders and General Manager of Sterling Products (Incorporated), and now Vice-President and General Manager of Drug Incorporated, an unusual distinction by bestowing unanimously upon him the title of Doctor Philosophiae Honoris Causa.

Mr. Weiss is the first and only American to be so honored by this world famous German institution. This mark of preferment came to Mr. Weiss in recognition of his efforts to further the industrial relations that have extended over more than a decade between the Directors and Scientific and Chemical staffs of German and American Pharmaceutical firms that are prominent in international industrial affairs.

During the past few years Mr. Weiss has been a frequent visitor to Europe and is a recognized link in strengthening commercial friendship between the old and new continents, a truth emphasized by the action at Cologne.

Getting Longer

E. T. Stotesbury, the Philadelphia financier, said in a discussion of modern fashions at a dinner at El Mirasol, his beautiful winter residence in Palm Beach:

"I heard a story the other day about a man who happened into the drawing-room as his daughter and some of her girl friends were talking fashions.

"'What's this? What's this?' the man said with a laugh. 'Surely I just overheard the remark that something's getting longer? Tell me—oh, tell me what is getting longer in the dresses of today?'

"'Shoulder straps, dad,' said his daughter."

Of More Use

Gentleman Farmer (to one of the hands)—Here is one of my old hats to make a scarecrow with.

Laborer—If it's all the same to you, sir, I'd rather have one of the mistress'. It would scare 'em more.—Weekly Scotsman.

Hard on Self-Respect

The army is experimenting with transportation of its cavalry horses in trucks. The horse's last vestige of self-respect probably will vanish if the experiment proves a success.

A Short One

Algernon—And how long were you engaged to Clarice?

Bertie—I don't know. I forgot to look at my watch.—London Answers.

There is one real cure for worry; something else to think about if you can only secure it.

The Easiest Way

President Lawrence Lowell of Harvard was condemning, at a dinner in New York, a novelist who by means of blatant press agents stunts had won popularity and wealth.

"The easiest way," said Doctor Lowell, "isn't always the noblest way. A preacher gazed at a young millionaire manufacturer and said:

"'He began as a bobbin' boy, I suppose, and worked his way up step by step.'

"'Not at all,' another preacher answered. 'He began as a football star and married his boss' daughter.'"

Lots of youthful cussedness is due to the boy's mentality being somewhat unbalanced.

Older one grows, the more current writers he puts on his blacklist.

When you make jelly with PEXEL

EVER had jelly fail?—everything done according to Hoyle and the cook-book—yet jelly like soup? Maddening—but now unnecessary!

Pexel makes jelly jell as soon as it is cold. It is tasteless, colorless, odorless. Doesn't affect most delicate flavor or color. Repays from one to three times the 30c it costs by reducing boiling to a minimum and saving fruit juice, sugar, flavor, time and fuel. Not a liquid. Keeps indefinitely.

Get Pexel at your grocer's. Recipe booklet in each package. 30c. The Pexel Company, Chicago, Ill.

BRIGHT BRANDS

You can't correct youth by showing it no respect.

A poor girl who is called pretty is really handsome.

A man is generous to a fault when he fails to correct it.

Try not to outgrow the things that don't cost much.

Let "the conversation lag" once in a while. it may need it.

Even in a furious mob there are some who have misgivings.

An exchange of servants is one way to terminate feminine friendships.

You scarcely ever hear good repartee except on the vaudeville stage.

Mother-in-law joke is scarcely heard any more. It always did lack humor

Life is interesting; and the newspapers make it a thousand times more so

Rumor is the gossip's strong fort and truth is the dynamite gun that reduces it.

When one is extremely wealthy how the ice melts before him in financial circles.

The people don't become quite indignant enough over crime. If they did—whew!

One of the great writers whom one envies in his style of expression is John Ruskin.

It takes a good deal of self-searching to discover if one is guilty of affection or not.

Laziness may be wholly due to the liver. Another buttress to the doctrine of irresponsibility.

If a man could die long enough to get the obituaries printed and then be resurrected to read them!

Champion Optimist

This John Smith is distinguished by being a liveryman still doing business in New York, N. J., although most of his "business" is polishing up his old carriages. He is not at all impressed by the 20,000,000 motor cars in the country. There was the bicycle and look how that fad went by! "I'm over seventy now," he says, "and I've been in this business 50 years and I expect to stay in it. They can't scare me out, because I know the tide is going to turn. Just as soon as this younger generation finds out the fun there is in taking their girls out for a buggy ride, business will pick up again,"—Indianapolis News.

Youthful Composer

Erwin Dressel, age eighteen, is probably the youngest contemporaneous composer to have an opera accepted for production by a large opera house. His opera, entitled "Poor Columbus," will soon be brought out by the Prussian state opera at Cassel. Dressel is orchestra conductor at the municipal theater of Hanover. He first attracted nation-wide attention when, at the age of only fourteen, he composed the incidental music to Shakespeare's "As You Like It" for the state theater at Berlin.

Chickens Rapidly "Picked"

Machine-picked chickens may be the next innovation in the market if a machine from England is widely adopted. By this machine the feathers are plucked by suction, pin feathers and all, at the rate of a bird a minute. The feathers are drawn into a fan-shaped contraption and stuffed dry into a bag. The fan makes 500 revolutions a minute, sufficient to strip an ordinary fryer. It takes about 700 whirlings to pick an old rooster or a hen past its laying prime.

Kings Collect Coins

That kings are collectors of rare coins has been revealed in connection with work done by the king of Italy in publishing a series of books on the coins of Italy. His personal collection of 100,000 specimens is the largest in the world. King George of England also has a large collection, and other rulers are said to have taken a keen interest in the subject.

Bureau Kept Busy

In the course of the operation of the bureau of mines the officials of that department are required to answer nearly 40.000 inquiries in the course of a year. These are made by scientists and persons engaged in mining and metallurgy concerning the products and manufactures of this country.

Another Kind of Trouble

First Lady—She orter take care of that cough of hers. I remember she told me once her old father died of throat trouble.

Second Lady—Ah, but his wasn't the same sort. He was hanged!

Ungrateful Man

Her Husband—I don't see what I get out of this marriage game. You get every cent of my salary.

Mrs. Grabitall—Why, listen to the talk! Don't I pay your income tax?

They Played a Part

So the next war is to be with insects. The last one, as we recall it, wasn't entirely without insects.—Youngstown Vindicator.

Henry Swalve, of Titonka, Mr. Husinga were visitors at t Swalve home Saturday evening men were returning from a vi Kamrar.

FACTS--
Not Dreams

There are today about 400,000 farms in America using electrical service. In four states alone, electricity was extened to 21,217 additional farms during 1927.

Five years ago the possibility of extending electrical service to any considerable number of farms was problematcial. Yet within three years the number of electrified farms in 27 states has nearly doubled. Two hundrd ways in which electricity can make farming pay greater dividends in lvng comfort and dollar-producng efficiency have been developed.

Ruled by the hard-won facts of engineering science, not by theories or dreams, the electric light and power industry is today making one of the few real contributions to the solution of the farmer's problem.

A Natonal rural electric project near Washington is now undertaking the study of new electric labor-saving devices and the electrical treatment of the soil and of crops to increase the pioductivity of farms.

Facts are the foundation on which the electric light and power companies of America have built the structure of a public service unequalled in all the rest of the world.

Watch Your Step
During Hot Weather

Hot weather presents many problems to the dairyman, but it certainly pays him to "watch his sep." May we pass along a few suggesions to help you keep up your cream quality in hot weather?

You can produce and deliver to us Extra Quality Cream the year around—hot weather included by observing a few simple rules. They are summed up in three parts:—

FIRST—Cleanliness. Clean, airy barns, kept free from flies and mosquitoes. (Use fly chaser, it pays.) Keep the cows clean. Milk pails should be cleansed regularly. Added attention in keeping your separator spick and span helps in hot weather to keep cream sweet.

SECOND—Keep your cream COOL, in a good cooling tank or otherwise.

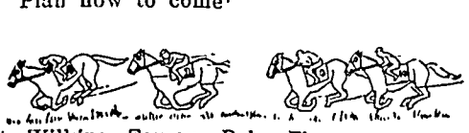
THIRD—Make frequent deliveries in hot weathr.

We are quite pleased with the effort our patrons are making to dliver quality cream—but let's all try a little harder—it pays. By keeping up quality in your cream, enables us to keep up quality in the butter we manufactur. We thank you for your co-operation!

Klemme Co-Op. Creamery Co.

Iowa's Annual outing

NOW for vacation time! At your door the world's greatest agricultural and livestock fair—over five million dollars in educational and amusement features—three hundred acres of exhibits and attractions—one half million attendance expected this year. Never has there been such an outing before—so close you can reach it in a few hours' easy driving. Plan now to come!



Capt. Wilkins, Famous Polar Flyer,
Midwest Aircraft Exposition,
$20,000 Horse Racing Program (5 days),
National Auto Race Classics (2 days),
Fifteen Great Hippodrome Features,

Creatore and His Band, and 6 other famous bands and orchestras,

"Bagdad", oriental fireworks extravaganza,
Society horse shows (4 nights),
80 acre free camp, brilliant midway, etc., etc.,
Over 6,000 head of livestock,
Prize grains and produce exhibits,

2,000 Farm Boys and Girls in competition,
Statewide women's exposition,
40-acre auto and machinery show,
Great horticultural and dairy expositions.

Camp out for a week, or hit the "high spots" for a day. You'll never forget it.

Iowa State Fair

HALF MILLION YEAR

Des Moines Aug 22-31

Thirty-three county farm bureaus will exhibit the most important projects they have carried on this year as a special feature of the Iowa State Fair, Aug. 22-31. Each subject will be of practical value to farmers.

One of the famous war time captive balloons, used at the front for observation purposes, will be an unique feature of the aircraft show at the 1928 Iowa State Fair. The balloon will make daily ascensions and will also take up passengers.

GERMAN TROOPS IN ARMS AGAINST BOAR

Detachments of the German army stationed in Thuringia were recently called into action against an unusual enemy. They were sent into the neighborhood of Eichsfeld, in the Thuringian forest, not to put down an insurrection but to eradicate hundreds of wild boars.

On the whole, the wild boar is an uncommon occurence in German forests. Once he gets a chance to gain a foothold, however, he multiplies rapidly. Breeds of 24 are known.

Near Eichsfeld, where the Thuringian forest is skirted by mountains along its northwest boundary, the wild boar became a veritable plague. Efforts of the farmers to rid themselves of it proved unavailing. They appealed to the district commander of the richswehr, or federal army, who, to the joy of the troops, permitted them to break the monotony of their military life by going on a hunt for wild boars. The casualties were all on the side of the enemy

Hare Evidently Had Good Ear for Music

The late Rev. R. Eastcote of Exeter, England, once told the story of five choristers who, one Sunday evening, were walking along the banks of the Mersey in Cheshire. After a time they sat down on the grass and began to sing an anthem. A hare passing with great swiftness toward the place where they were sitting stopped at about twenty yards distance from them.

She appeared to be highly delighted with the music, and as soon as the singers ceased returned slowly to the wood. When she had nearly reached the end of the field the choristers began to sing again.

The hare stopped, turned round, and came swiftly to the same place and remained listening in seeming rapture and delight until the singing ceased, when it returned to the woods.

World Trip in Submarine

A Dutch scholar has just completed a submarine trip around the world. At some places he was able to detect with comparative ease one of the phenomena known to scientists for some time, the difference in weight of the same objects at various points on the globe. This was done with instruments so delicate that they could not function accurately on board an above-water vessel, due to the motion. The difference in weight is believed to be caused by variations in the density of strata composing the crust of the earth.

Costa Rican Education

The minister of public instruction of Costa Rica says that Costa Rica has no standing army, but has more teachers than policemen, and more educational employees than in any other branch of the government. Education is compulsory between the ages of seven and fourteen, with at least two years of English after the fifth grade. Five years of study is required for bachelor degrees, and there are universities for those desiring higher education.

Lost Radium in Clinkers

Thrown by mistake into a dust bin and then into an incinerator, radium worth $400 was recovered at St Thomas' hospital, London, by scientific examination of the clinkers taken from the incinerator. When the loss was noticed, the radiologist suggested that the ashes be searched, because radium will not burn

MERKELS ANNUAL NINE CENT SALE OFFERS VALUES

It Starts Thursday, August 23 and Will Continue for Nine Days.

Sales are common—you read about them every day until they have become meaningless to you in most cases.

However, there are some sales that stand out from the rest—sales that are intensely interesting to you because of the values and the quality of merchandise offered — sales that you look forward to because you have found in the past years that the values advertised are fully up to your expectations and often better.

Such a sale is Merkel's Nine Day Nine Cent Sale at Mason City. It is an annual event presented this year for the eleventh time. An event which has grown from year to year, until today it is the outstanding merchandising event of north Iowa.

Nine big days when practically every item in the store is reduced in price; when new Fall merchandise is introduced at Special prices—Summer goods at final Clearance prices.

It begins Thursday, August 23rd and will end Saturday night, September 1st. You should plan to attend again this year as you have in the past.

See our double-page advertisement in the Mason City Globe-Gazette published Tuesday, August 21st, and our daily ad in the Globe-Gazette.

THE MERKEL COMPANY
Formerly Killians, Inc.
MASON CITY, IOWA

BAYSIDE

AMUSEMENT PARK
Clear Lake, Iowa

PROGRAM, SUNDAY, AUGUST 28th

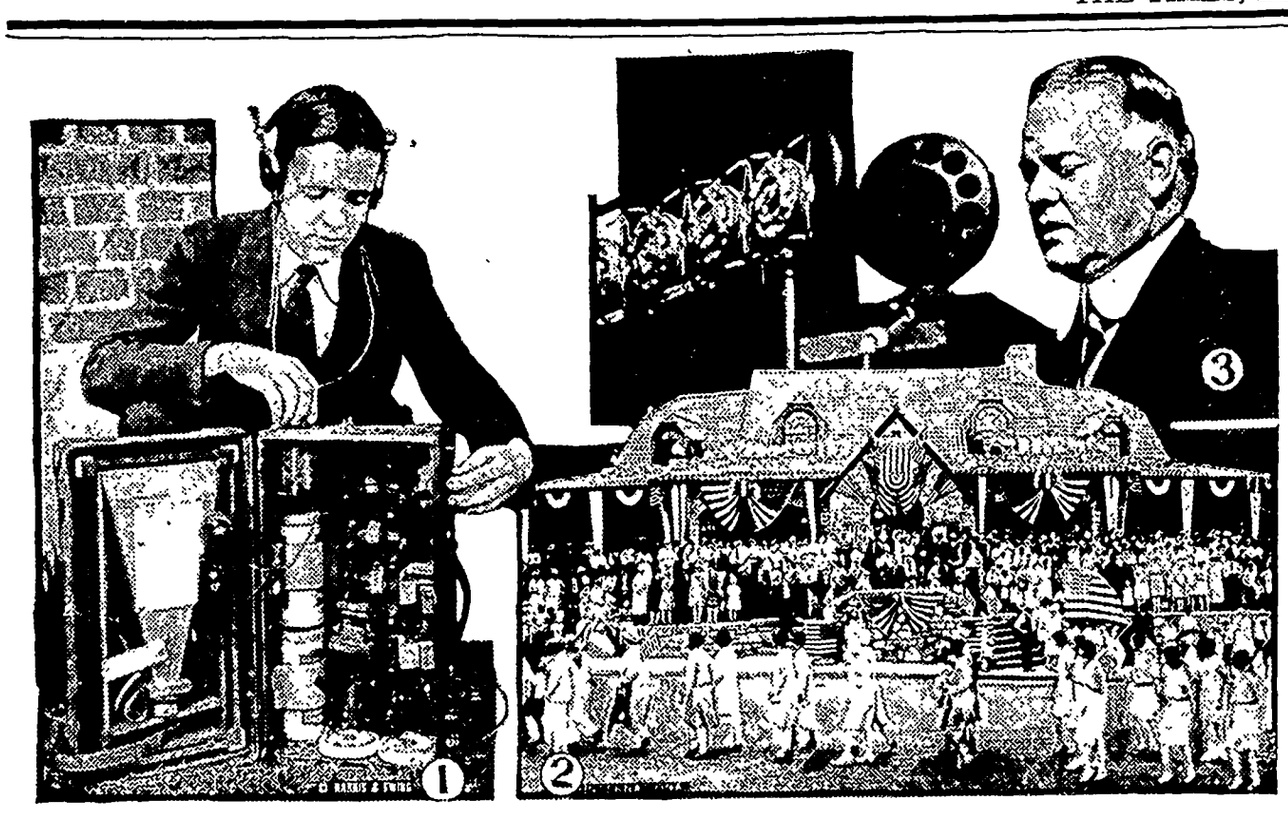
Vaudeville, musical concerts, free movies, real ball game at 3:00 o'clock. Roller skating daily.

—DANCES—

Every Wednesday and Friday night with Toppy's Country Club orchestra. Park plan, dime-a-dance. Sunday, Sept. 2nd and Labor Day, Sept. 3rd, big time at Bayside. Double-header ball game. Plenty of entertainment. Celebrate at Bayside.

—FUN FOR ALL— —ALL FOR FUN—

Policed Parking Grounds For Cars 15c



1—Francis M. Baer, who has resigned his position with the radio laboratory of the bureau of standards to become radio operator with the University of Michigan expedition to Greenland. 2—Parade of women and girls at unveiling of tablet, a mile underground, to the war dead of Luray, Va. 3—Herbert Hoover before the "mike" delivering his speech of acceptance.

NEWS REVIEW OF CURRENT EVENTS

Secretary Kellogg Goes to Paris for Signing of Treaty to Ban War.

By EDWARD W. PICKARD

SECRETARY OF STATE KELLOGG has sailed for France to take part in the ceremony of signing the multilateral anti-war treaty which he has negotiated with the great powers. The signing will take place in Paris on August 27 and the accompanying pomp and circumstance will be worthy of so notable an event. Mr. Kellogg is accompanied by Mrs. Kellogg and William H. Beck, his private secretary. Before sailing he let it be known that he will transact no other official business while abroad, setting at rest the persistent rumors that he would discuss naval limitation and other international subjects with foreign officials. Before returning to America the secretary expects to make a short visit in London and to go to Ireland.

President Coolidge, addressing the convention of the Wisconsin American Legion at Wausau, described the Kellogg treaty as the brightest hope for international peace the world has ever seen and declared that if it had been in existence in 1914 the World war would not have been started. He continued:

"While it would be too much to suppose that war has been entirely banished, yet a new and important barrier, reasonable and honorable, has been set up to prevent it. This agreement proposes a revolutionary policy among nations. It holds a greater hope for peaceful relations than was ever before given to the world. If those who are involved in it, having started it, will finish it, its provisions will prove one of the greatest blessings ever bestowed upon humanity. It is a fitting consummation of the first decade of peace."

Soviet Russia hoped to be invited to sign the Kellogg treaty with the great powers, but Mr. Kellogg said no to this proposition and if Russia signs it must be along with the minor nations. The Soviet press was bitter over this "snub," asserting that the capitalistic powers did not wish the Soviets to sign for that would hinder them from attacking the Bolsheviks. It was said at Riga that Latvia and Esthonia, which are constantly arresting agitators plotting to overturn their governments, are hesitating to sign the pact, since with a neighbor like Russia they would like to know what guarantees and means would be provided by the signatory powers to maintain peace.

WAR clouds that were hovering over central Europe blew away when Marshal Pilsudski addressed his Polish legionnaires at the reunion in Vilna. Ten thousand of the veterans were gathered in the city which is the constitutional capital of Lithuania but is held by Poland, and it had been feared the meeting would be the starting of active warfare against the Liths. But the Polish dictator was exceedingly mild in his address, his only provocative statement being: "Vilna remains mine. I received it as a present from my soldiers. They fought for it and gave it to me, which was a very nice thing to do." Later, reviewing the parade of the legions, he remarked: "Ten years ago we were worried about Vilna, but then we were weak. Now we are strong."

WITH the Croatian and Serb Agrarian deputies absent, the parliament of Yugo-Slavia ratified the Nettune conventions with Italy by a majority of only one vote, and then adjourned. This action, however, by no means ends the trouble in that country. The opposition asserts the constitution calls for a two-thirds vote for treaty ratification, and it is generally admitted the Nettune conventions give the disaffected Croats more power in their demand for home rule. At the same time the treaty leaves Italy with no excuse for interfering in the Yugo-Slav internal affairs. The Croatian peasants' party, in meeting in Zagreb, declared that Stefan Raditch, their murdered leader, remains "the president of the party, although dead," which is interpreted to mean that his spirit still dominates his countrymen. In Rome the ratification of the Nettue pact was hailed as an auspicious sign of the opening of an era of friendly and mutually profitable relations between the two nations.

ONE of the most interesting events of the week, though it was given but brief mention in the newspapers, was the action of the Argentine chamber of deputies canceling the entire war debt of Paraguay to Argentina, amounting to 10,000,000,000 pesos or more than $4,200,000,000. There were indications that Brazil also would cancel its claim against Paraguay, which totals an even greater sum. The cancellations probably will do much toward rehabilitating the credit of Paraguay, which has been at low ebb owing to the huge debts which never could be paid. Jose Guggiari was inaugurated President of Paraguay.

MUCH space was devoted during the week to comments on Herbert Hoover's speech of acceptance. President Coolidge warmly congratulated the candidate on the address, and naturally the other Republican leaders found it a political document of remarkable force and clarity. Naturally, too, the Democrats did not think so much of it, and some of the farm organization leaders called it "disappointing" because it did not outline a specific proposal for agricultural relief, though he promised that a definite plan for this would be forthcoming. Others of the farm leaders highly commended the section on agricultural relief, agreeing with Frank O. Lowden, who said: "Mr. Hoover frankly recognizes that the most urgent economic problem in our nation today is agriculture; and that the solution of this question constitutes the most important obligation of the nation. No farm organization could ask for more in the way of general expression."

The drys were fairly well satisfied with his statement on prohibition, that he does not favor repeal of the Eighteenth amendment and stands for efficient enforcement of the laws enacted thereunder. The wets in the Republican ranks hoped that he would later elaborate his views on the liquor question, revealing them as more to their liking in the matter of modification.

On Thursday Mr. Hoover left Palo Alto for southern California, planning to pass thence through New Mexico and Arizona, up into Iowa and then on to Washington.

OFFICIAL notification of Senator Curtis, Republican vice presidential nominee, drew a big crowd at Topeka Saturday and the ceremony was thoroughly enjoyed by the senator's relatives and fellow townsmen. Senator Simeon D. Fess notified Curtis of his nomination, and the candidate accepted in a characteristic speech which was given wide circulation through a radio hook-up of many stations.

GOVERNOR SMITH, before completing his speech of acceptance, conferred with eleven farm relief advocates from seven states, and also had important talks with such party leaders as Carter Glass, Josephus Daniels, Senator George of Georgia and Senator Walsh of Montana. Mr. Daniels, bone dry, predicted the South would remain solidly Democratic, but frankly told Mr. Smith that if his acceptance address showed a more moist tendency than the people of North Carolina believed in, the normal Democratic majority in that state would be considerably reduced. Despite his own views on the liquor question, Mr. Daniels is warmly supporting Smith, and laughed away the thought that if elected he would nullify prohibition.

Hope for a joint discussion of the candidate's record between him and Dr. John Roach Straton faded last week. The preacher insisted that the affair should be held in some large hall and Mr. Smith said it would be in Calvary Baptist church, where Doctor Straton first made his attack, or nowhere. The governor told the minister he had no intention of conducting a political debate with him but wished to appear in his church to reply to statements "traducing" the governor of New York. The preacher, who has not won much support for his methods, says he will go ahead with the "debate" in the biggest hall he can hire, whether or not the governor appears.

OHIO Democrats nominated Congressman M. L. Davey of Kent for governor and the Republicans selected Myers Y. Cooper of Cincinnati. Both had Anti-Saloon league support. For senator the Democrats named Charles V. Truax and the Republicans renominated Senator Fess. Candidates to fill out the unexpired term of the late Senator Willis are Congressman Theodore E. Burton, Republican, and Graham P. Hunt, Democrat. In Hamilton county Charles P. Taft II, son of Chief Justice Taft, was defeated for renomination as county prosecutor.

ABOUT seventy thousand trainmen and conductors of Western railroads are in process of voting on a proposed strike following the failure of a joint conference with their employers. The result will be made known September 2 and union leaders say the ballot will show that 98 per cent of the men favor a strike. The roads will be given until September 4 to come to an agreement with the men on their wage demands. J. W. Higgins, chairman of the employers' committee, declared the men rejected an offer of arbitration, thus violating the spirit and purpose of the Watson-Parker railroad labor act.

One of the chief obstacles in the way of agreement which previous conferences and arbitrations were unable to surmount is the so-called "double-header" rule, which limits the tonnage and number of cars of trains where two engines are used, and which the railroad heads insist be removed.

NEWS of one of the minor tragedies of aviation comes from Rio de Janeiro. Maj. Carle del Prete, who, with Captain Ferrarin, flew from Rome to Natal, Brazil, was injured in a test flight of a plane at Rio. It was found necessary to amputate his right leg, and he failed to recover from the operation.

HENRY L. STIMSON seems to be doing very well as governor general of the Philippines. Last week he appointed his cabinet from members of the Nationalist party, which carried the last election, and the appointees were immediately confirmed by the island senate. In a statement Senator Sergio Osmena, Filipino leader, said the appointment of the cabinet "shows that the government of the Philippines has returned to normalcy," and further "this happy termination of a past crisis, this beginning of a new understanding, has been attained through an adequate interpretation of the Jones law and department reorganization act."

NOT only Florida, but all the other southern Atlantic states suffered severely from the series of violent storms that came up from the Gulf of Mexico.

SHIP-TO-SHORE mail service with the aid of amphibian airplanes was successfully established when a plane loaded with mail was catapulted from the deck of the French liner Ile de France 450 miles off the port of New York and reached land in about four hours. The saving in time was about 12 hours, and this is expected to be increased. Eventually the same service will be established at the French end of the run. The extra charge for this is quite heavy.

FAR from yielding to Japan, the Nationalist government of China has sent another note to Tokyo reiterating its intention to abrogate the treaty of 1896. The Japanese government is just as determined to refuse revision until China acknowledges the validity of the old pact. Japan has scored one big point in the postponement of the proposed union of Manchuria with Nationalist China. American Minister MacMurray went to Mukden from Peking, and in Tokyo it was believed he had been instructed to investigate the Manchuria situation personally and report to Washington. The Japanese think he is not unsympathetic with them in this matter.

INDIANS USE SPEAR TO CATCH SALMON

Reap Food Supply During Fish Harvest Time.

Toppenish, Wash.—It is salmon time in the big rivers of the northwest states. Indians know it as the harvest time when they catch fat fish and preserve the fillets for winter.

Hour after hour Indian fishermen—from ten to twelve tribes—sit on the stone masonry of the Sunnyside irrigation dam, near here, spears poised, ready to lunge at large leaping chinook or cohoe salmon which are running up the Yakima river to spawn.

Tense, immovable as statues, they wait. Onlookers see the flashing back of the salmon leaping up the smooth waterfall. There is a lightning quick strike and the struggling silver beauty, safely speared, is drawn to land to be unjavelined and the spear is ready for another victim.

The best salmon spears are fitted with barbed hooks and the fish is gaffed, rather than speared. The hook comes off the end of the shaft and dangles on a cord tied to the pole. This, the Indians point out, prevents breakage of the shaft when a thirty or forty pound fish is taken.

Sometimes a lozen big salmon will be hooked by one Indian in a day. At other times days pass without a catch. But the redmen never complain about luck. They poise over the shimmering, tumbling water patiently waiting until fish do come within range.

This primitive life is re-enacted at a score of rapids and dams in other rivers of the Northwest.

On shore squaws and young folks from the tribes split the salmon, hanging the meat over lines or slender poles to sun dry. Before the fish season is passed northwest Indians will have filled many willow baskets with dried fish steaks, insuring them against hunger at winter's coming.

Only Indians from reservations may so fish in northwest streams, being permitted by treaty to do so.

7-Month-Old Alabama Baby Talks Fluently

Birmingham, Ala.—Birmingham is laying claim to possession of the prize infant prodigy—a seven-month-old baby who converses as fluently as a child of several years. When she was one week old she could pronounce words distinctly, and at three weeks she could pronounce a number of words, such as "daddy," "eat," "I want up," and "I want to get up."

The child is Yuvawn, daughter of Mr. and Mrs. James E. Shotts. She was born November 23, 1927. One of the amazing things is that she has cried but twice since she was born—once immediately after her birth, and another time when she had an attack of colic.

Wylodin, her sister, now six years of age, is an accomplished musician. She has memorized pieces of music and can play more than 200 from sight reading at the piano.

Both children are normal and healthy. Both their parents are college graduates, readers and musicians.

U. S. Sets Standards for Wheat Middlings

Washington.—Official standards for purified middlings, semolina and farina have been promulgated by the Department of Agriculture.

The new definitions characterize purified middlings as the clean, sound, granular product obtained in the commercial process of milling wheat, and is that portion of the endosperm retained on 10 XX silk bolting cloth. It contains no more flour than is consistent with good commercial practice, nor more than 15 per cent of moisture.

Semolina is the purified middlings of durum wheat, and farina is the purified middlings of hard wheat other than durum.

Queen of Navy

Washington.—The queen of the navy is the battleship New Mexico. It has been awarded highest honors after competition in battleship efficiency, gunnery, engineering and communication. Now it may fly a pennant known as the "meat ball."

New York Grabs Lead

New York.—The Merchants' Association of New York notes that weather bureau records show that Chicago had an average wind velocity last year of 12 miles an hour while New York had 16.

Bears 200-Word Will Tattooed on His Back

London.—A 200-word will bequeathing large sums of money to several persons has been tattooed on the back of a man who walked into a tattooing establishment in Waterloo road.

He had the will written out on a piece of paper, and asked that it should be transferred to his back. He sat for five hours while the work was done and the will was duly witnessed.

"He was a Colonial, and about thirty years of age," George Burchett, the tattooist, said afterward.

"This is the first will I have ever tattooed during a long experience, and it was difficult, tricky work."

HINTS FOR AUTOISTS ON CAMPING TRIP

Enjoying a Sojourn in the Open in the West.

Autocamping is just like any other business or play activity of man—after you think you know it all, you find you have just begun to learn.

This article sets forth little, but nevertheless important, things for the prospective autocamper to bear in mind.

Here they are:

Should you find yourself without enough bedding, folded newspapers make a good substitute. They exclude cold well and form a fairly comfortable mattress.

Avoid pitching your tent on sandy soil, because such ground will not retain the pegs during a high wind. Sand also has a faculty of creeping into all sorts of food containers.

A toilet kit, similar to those carried by doughboys during the World war, is excellent for outdoor use. Include a steel mirror rather than a glass one.

Should Take Along Ax.

Canvas wash basins should be thoroughly soaked before using and usually will leak a little when filled with hot water.

A short-handled ax, like those used by Boy Scouts, is literally worth its weight in gold on a camping trip.

Briar-proof leggings and trousers are indispensable when one is hiking about the woods.

If you bunk on the ground, a bit of cotton should be placed in the ears to exclude bugs.

Guy ropes which have not been waterproofed will shrink when wet. Therefore loosen them during a storm and before leaving camp for a considerable length of time. This will prevent them tightening and pulling up the stakes.

Keep copious notes and take plenty of pictures. They will repay you many times over for troubles and money expended.

If you want a sleeping bag and don't want to invest in one, pin two woolen army blankets together with heavy pins.

To prolong the life of camp shoes smear the soles with heavy glue and sawdust. This covering will wear well and may be renewed.

Cook Food Over Embers.

A short-handled, strong spade should be a part of your equipment.

For a quick-burning wood fire build it up with sticks, leaving air space between the layers. This forms a draft. Confine your cooking fire to a small space for safety and comfort. Cooking on the embers is best for you to avoid the annoying smoke.

Don't forget to take along a good compass. It may save your life in a heavily timbered country. If you ever get lost and haven't a compass, locate a stream, if possible, and follow it to its source.

Unload firearms when in camp. A heavy pistol and cartridge belt may prove most discomforting to the amateur woodsman.

To kill smell of fish in pots and pans boil a little vinegar and water in them.

Keep supply of matches in tightly corked bottle so as to always have a few usable ones on hand.

Watch Drinking Water.

Be careful of drinking water. Inquire of natives about conditions.

Keep camp clean all of the time for the sake of health as well as appearances. This is easily done if each member of the party has certain tasks to perform, thus making the job a hardship for no one person.

To cool contents of a bottle wrap it in a well-soaked cloth and hang in the breeze under a well-leafed tree.

A sewing kit and mending bag are valuable adjuncts to the camp equipage.

Blisters and tired feet may be prevented by wearing heavy hob-nailed shoes, a pair of light socks next to the feet and heavy woolen socks over them.

The novice must remember that while a camping trip is chiefly pleasure it is not entirely a bed of roses and therefore it behooves him to go well equipped and determined to joy full take a little bitter with the swee

CARRY LIBRARIES TO RURAL PEOPLE

"Book Automobiles" Becoming Popular in Various Sections of Country.

(Prepared by the United States Department of Agriculture.)

"Book automobiles" have made books available to rural communities not within easy reach of city or town libraries. In Los Angeles, Calif., about 409,000 country people, living outside of Los Angeles and 15 other cities having libraries, are supplied with books from the county library. Two book automobiles make daily trips averaging 100 miles each between the central library and over 300 branches located in communities and schools. These automobiles have covered delivery-type bodies containing shelves for several hundred books and are usually driven by a librarian. The most distant branch is 116 miles from the central library.

In Burlington county, N. J., the county library includes a staff of four people and a central building, with 135 branches in stores, grange halls, and farm homes. This library distributes by "book automobile" not only books, but pictures, films, and phonographic records. At each branch the number of books varies from 50 to 1,000, changeable monthly.

In Coahoma county, Miss., which has a population of only 41,511, about 600 books are distributed daily to various branches in the county. This library service is maintained by a contract with the Clarksdale (Miss.) library at $4,000 a year.

There are several hundred county libraries of various kinds in the United States, most of which have been established by popular vote. Some of these are maintained through their connection with a city library in the same county and some are separate county libraries supported by a small county tax.

Sand Box for Auto

Sand on the rails is a great help to the railroad train and now this aid has been brought to the motorist in a simple way of applying it for greater safety when the streets are slippery, says Popular Mechanics Magazine. On a touring car, a container is attached to the front of the radiator and the sand poured under the front wheels through two spouts. A similar installation for larger busses or trucks will have the desired effect.

Taximeters Given Test on Washington Street

Ralph W. Smith of the weights and measures section of the bureau of standards at Washington with one of the taximeters which he has been testing on his personal car about the

Testing Taximeter.

streets of the capitol. Mr. Smith has found that while it made little difference in the registration whether the meter was connected to either the front wheels or the transmission, the amount of air in the tires made considerable difference in the meter reading.

AUTOMOBILE HINTS

Every man has moments of vindictiveness when he wishes he were a hiking or a truck driver.

* * *

Strange some song writer has not parodied that popular old-timer "Where Is My Motoring Boy Tonight?"

* * *

It is a foolish assumption that a swiftly moving motor car can stop quicker than a pedestrian can jump.

* * *

Open water at the North pole again suggests the need of landing stages to show explorers exactly where they have arrived.

* * *

Hitting a bad hole with the brakes set is sure to result in broken springs. There is a double strain on the front springs if the brakes are applied when the front wheels strike a hole or similar obstruction.

THE OLD COMRADES' REUNION

(© by D J. Walsh.)

MYRA'S pruning shears sank through the last of the condemned peach limbs, the severed end dropped to the ound and the girl was ready to deend to the home plateau.

But first she turned her flushed face the breeze coming up from the valy. It had been a brisk morning's ork, pruning the little orchard, and e wind was refreshing.

And ordinarily it was refreshing to ok off into the valley. That was hat had brought her grandfather up ere many years before, and its eauty had been part of Myra's inritance. But as she glanced down ross the steep hills to the clustered wn fifteen miles away a shade of itterness, of resentment even, came her face.

"Myra, o-oh, Myra!" rose a quaverg voice from below.

"Coming, grandfather," she anwered "I've just finished."

Thirty feet down the narrow mountin path, on the next plateau, was a ittle apple orchard and some pear nd cherry trees. In the very edge f these, near the verge where the iew would not be obstructed, was a mall vine-covered cottage, very simle, for it had been built by a onearmed soldier assisted only by his oung wife, but beautiful with the eather-softening years and the cloth-g vines. Thirty or forty feet below, the next mountain shelf, was the egetable garden and wandering up nd down through the rows was a small rmy of chickens also an outflanking orps of turkeys. Myra looked after hem.

The old man was sitting on a bench utside, gazing into the valley. He ore an officer's uniform, well preerved and neat considering the years one by.

"You shouldn't work so hard, Myra," s the girl stopped beside him. "I will elp some tomorrow. I have been a ittle lazy today, but I got to think-g of nearly sixty years ago and its lorious deeds and I—I forgot about ome duties. I think I must be getting old, Myra—into the dreaming ge."

He was silent for some moments, hile her fingers caressed the epaulet n his shoulder. Presently he noticed nd glanced at her with a whimsical, pologetic smile.

"The mood was too strong for me," e explained, "so I put on my unform. The trappings were so much part of the four years that wearing hem made it seem more real. But he old man's mood will soon pass and omorrow he will try to do his share f the work, and the next day—"

"The next day he will not do a hing but sit on the bench here with is uniform on and tell me about the marching away years ago and the rave deeds that followed," interrupted Myra. "And I shall get up a nice inner and sing some of the old war ongs afterward. We'll celebrate the nniversary ourselves and won't even hink of the—the reunion down yonder. We've"—she hesitated, then burst ut:

"It's a shame—shame—shame, grandather! Your own company that you ed through the war, and you the ranking officer left and they haven't even asked you to the company reunion. I suppose it's because we live p in the mountains and are poor. But old soldiers shouldn't think of uch things, even if some of them are ich, it's that second lieutenant's ork. He owns a mill somewhere out Vest, I've heard, and is the next rankng officer. He wants all the glory himself. I hate such—"

"Myra, Myra," remonstrated the old an, "I don't like to hear you say uch things. The boys are all true, oble fellows. I know, for I camped nd fought with them four years and hat very Lieutenant Breck once saved my life at the risk of his own. We were like brothers and there wasn't a single cowardly or unworthy man among them."

"Then why—"

"It was a long time ago, Myra, and other things have come between. Some of the boys probably think I'm dead and others have lost sight of me through the years. We are a long way back and, you know, I've not been down to the town in years. It's merely—"

Myra shook her head.

"You were their leader," she said, "and it was their place to hunt you up. The reunion is only two days off. Maybe it's only forgetting, but I don't like it. I—" Then she caught sight of the distress in his face and with a quick revulsion of feeling she dropped on her knees, clasping the empty sleeve and caressing it tearfully.

"Forgive me, grandfather," she pleaded. "I did not mean to hurt. We won't say anything more about them, but have a nice reunion all to ourselves, and you shall tell of the brave deeds and I will listen as no audience ever listened before."

The old man stroked the bowed head softly.

"So we will—so we will," he agreed. "But they were all brave and true men, those followers of mine, and the ones who are still living cannot have changed. I wish you could see and know them as they really are. I hope —" He paused with the sentence unfinished the wistfulness still in his face.

"What, grandfather?"

"Why—oh, nothing. Only I was wondering whether we would be able to hear some of the music if the wind should be blowing strongly this way. It would be—nice."

"Fifteen miles away?"

"Only fifteen miles—and if the wind blew strongly. We heard the battle of Bull Run twice that distance as we were being hurried to the front. Hark!" leaning forward a little. Then he straightened shaking his head.

"An old man's vagaries, Myra," he smiled. "I thought I heard strains of music—a memory of Bull Run, I suppose."

A few minutes later and then Myra sprang excitedly to her feet, her face full of wonder.

"There is music, grandfather!" she cried. "There is. Listen!"

Clearly and distinctly now it came, borne on the breeze, and evidently from beyond a bend of the mountain path, where they could not see.

The old man had risen, too, and was leaning forward with his one hand behind his ear to hear more distinctly.

"It's a march we used to play in battle and after victory," he whispered. "I seem to hear Bob Tyrell playing it now. But Bob's dead, killed in the very last battle before the surrender. What does it mean, Myra?"

But Myra could only shake her head and wait.

Five minutes and all the time the music growing clearer and more triumphant as it drew nearer. Then around the bend they came, a man on horseback and two men and a driver in an automobile, in which was an empty seat. One of the two men in the car was playing a snare drum, the other a cornet.

Straight up the mountains road they came. the musicians playing steadily, changing from one march to another, all of which were old and familiar to the frail old man who listened with wondering but rapturous face.

Not until they had approached to within a few yards of the bench did the music cease and the horseman slide from his animal. Raising his hand in a quick military salute he sprang forward and caught the hand of the man in front.

"Captain," he exclaimed, his voice breaking a little, "we meet again after nearly sixty years. I have been out West, and returned only a few days ago to spend the remainder of my life in the old neighborhood. When the talk of a reunion began I made inquiries about you and wrote letters to several post offices. But no one seemed to know of your exact whereabouts, though they seemed to think you were still alive. Only yesterday did we hear from a hunter that you were in this vicinity. Now we want you to go back with us and take charge of the reunion—to lead the old company, you know. And—and," hesitatingly, "we have an easy car for you to ride in advance of us so the strain need not be very great."

But the old leader was standing erect now, and his hand had ceased to tremble.

"Thank you, Lieutenant Breck," he swered, with the old-time ring in his voice; "but I shall ride a horse at the head of my company, as in the old days, though the charge be only a peaceful one through the village street instead of toward the mouths of cannons. You need not fear for my strength. But I do not understand about the music. My ears told me it was Bob Tyrell playing the drum, and my eyes declare it is Bob on the seat yonder. And yet I saw poor Bob killed."

"It's Bob's grandson. When he heard I was coming he insisted on coming, too, and approaching your house with music. But we must be starting back for there is a long ride before us. We have secured accommodations for you and your granddaughter at the hotel and the car is an easy one. You have some one you can leave to look after things?"

"Yes, an old negro woman who has a cabin just below us. I will call her."

They had been grasping hands all this time and looking into each other's eyes. Now the strong grasp loosened and the old leader went forward to speak to the men in the car. Myra slipped into the house, her face working.

"I—I didn't understand what old comrades could be to each other," she whispered to herself. "I never realized. But I know now. Dear grandfather—and his dear soldiers!"

World Turns to Idea of Influence of Love

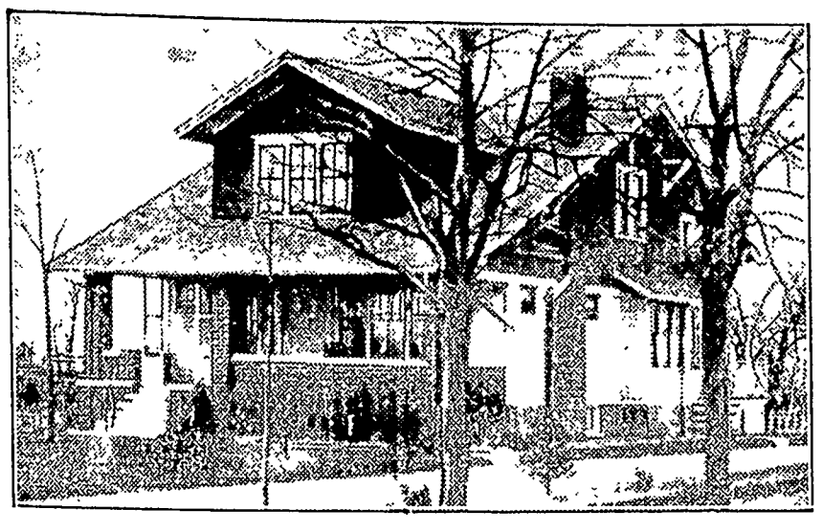
The belief that love is enough, that, as Henry Drummond claimed, it is the greatest thing in the world, used to be regarded as merely a pious and sentimental hope; and the poets and preachers, prophets and philosophers who ventured to hold fast to that belief and continued to express it in their thousand different ways were dismissed rather pityingly, if not contemptuously, as mere dreamers, the idle seers of an impossible era.

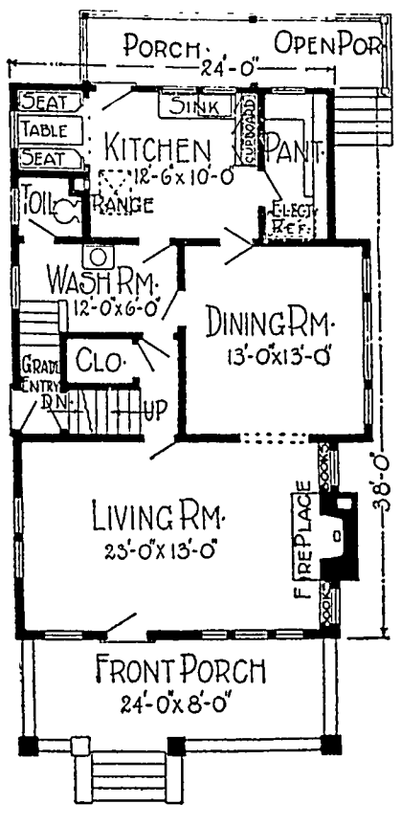
As the world goes on, however, the realization deepens that the "dream" has a substantial basis, social and economic as well as religious and ethical. Love's victory, moreover, is now seen by clear-eyed thinkers to be essential to the future of mankind, or mankind cannot survive.—Liverpool Post and Mercury.

Remembered Small Debt

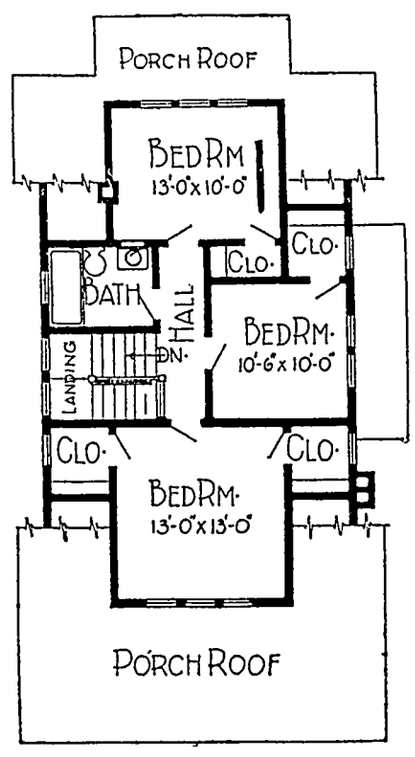
London Tit-Bits tells of a man who walked into a barber shop at St. Albans, recently, and left the price of a shave. Eleven years ago, he said, he had had a shave at the shop but had not paid for it at the time. He had been away ever since, and had made the payment of this small debt the first matter of business on his return.

Bungalow Type of Home Provides Conveniences for Whole Family





First Floor Plan.



Second Floor Plan.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for tho readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The bungalow type of home has been adapted to the needs of the family requiring more space by the inclusion of dormers, so that there will be second-floor sleeping rooms, and the addition of the washroom and other features that are wanted by the family. Such a type of home is shown in the accompanying design.

The floor plans show six rooms, three on the first floor and three on the second. The latter are made possible by the pitch of the roof and the insertion of dormers both at the front and the rear of the house.

The living room is unusually large, 23 feet long and 13 feet wide, extending the width of the house, which is 24 feet by 38 feet deep. Dining room, kitchen and washroom all are conveniently located. Upstairs there are three bedrooms and bath. An attractive and useful feature of the home is the porch, 24 feet long and 8 feet deep.

The use of face brick for the porch pillars, the outside fireplace chimney, and for the foundation wall above the ground level add to the attractiveness of the home.

The floor plans show the room arrangement and the dimensions of each room. A basement, the same size as the house, provides room for the heating plant and storage.

Corner Is Easy Part of Home to Decorate

Many women feel that a corner is a very difficult part of the room to make attractive.

In reality it is quite the easiest part of the room to decorate tastefully, because of the fact that there is a definite background provided; a background is of such necessity to set off the charms of lovely things that often a screen is used for lack of a wall.

The simplest arrangement for a corner is to place a round or an octagonal table there, and use with it a chair, either a windsor, a coxwell or a comfortable wingback chair—at any rate a chair that one will love to read in. On the table there will, of course, be a lamp and books and the little things that make a grouping really a living thing.

But there must be more than this On the walls of this corner there should be pictures. Without these the corner will be dead and unfinished.

What kind of pictures, and what size pictures should be used there? In deciding, remember that the pyramid form is that toward which the artistic furnisher always works.

In creating a grouping of furniture we strive toward the creation of a triangular area. Therefore, the pictures for this grouping must be smaller in width than the top of the table over which they are used. They must not be too small, indeed, but just large enough—and this is a very important matter.

On the left-hand wall of this corner let us place a picture about fourteen inches high and eighteen inches wide. This will hang so that as one standing in the room looks at it, the center of the picture will be just about at the level of the eye. Immediately below this will be placed a smaller picture, about 7 by 9 inches in size. These two pictures will quite well fill the wall and yet there will be plenty of light wall space all around them, as there should be.

On the right-hand wall space of this grouping we shall use a mirror for various reasons. If a picture were used there would perhaps be a feeling of overcrowdedness, or at least a feeling that too many pictures had been used.

Another reason for using a mirror is that the corner of the average room is naturally not particularly light and frequently needs something to brighten it up. More than anything else, a mirror will do this. Not only does it gleam in itself, but it repeats the rich glowing colors that are reflected from the lamp. Therefore, we see two areas of color as we look at the corner—the brilliant orange and blue chintz lamp shade and its reflection in the mirror.

These color areas add immeasurably to the brilliancy of that part of the room. They attract attention to a corner that might otherwise have been flat and dull. The mirror has been placed in such a position that it not only reflects part of the lamp, but also part of the picture on the opposite wall. This is as it should be, for the duty of a mirror is to multiply the color notes in a room, making it a more animated and inviting place.

One-Panel Reinforced Doors Are Enduring

Interior doors that will not warp or crack are undeniably desirable features in the home. The type which assures this is the reinforced door; that is, "a door built within a door." This process combines strength with good looks, as the outer part of this door is finished in a good-quality close-grained wood, adaptable to all forms of painting or finishing.

Interior decorators are now giving close attention to doors to see that they are painted in colors that will harmonize with the rest of the decorations in the different rooms of the house. The reinforced type of door, although a little more expensive to buy, is really cheaper in the long run. Once put in place, it may be forgotten.

It is never necessary to shave them down to take care of warping or swelling, as is often found necessary with a cheaper door.

The "door within a door" type is made in a one-panel door which has the graceful proportions demanded in modern interior decorating practice.

Radiator Heat Is Most Satisfactory in Home

Radiator heat, authorities generally agree, is the most satisfactory. Architects, heating engineers and others admit that only a good radiator heating plant can realize in full measure the fundamental heating requirements, which are health, economy, cleanliness and steady warmth in every room. Further, it has been demonstrated that a good radiator heating plant makes a home easier to sell and raises its investment value.

Select radiators early. Select them with an eye for efficiency, durability and appearance. Many feel that the perfected slender tube type radiator, which occupies one-third less space than radiators with broad, flat surfaces, represents the highest union of beauty with dependable performance.

ORCHARD GLEANINGS

PRUNE AND SPRAY FOR GOOD FRUIT

A $400 return on a $40 investment was H. J. Miller's experience in the proper handling of his home orchard last season, on a Howard county (Mo.) farm. Spraying and pruning turned the trick.

It cost Mr. Miller $16.70 for lime-sulphur and arsenate of lead, and $24 for spraying and pruning. The result was 200 bushels of marketable apples at $2 a bushel. There were also some other apples of a lower grade.

Mr. Miller had become disgusted with his mature orchard when it failed in previous years to produce a bushel of marketable fruit. So last year he was perfectly willing to cooperate with the county agent, Dan E. Miller, in a demonstration to show the value of pruning and spraying, writes R. R. Thomasson of Missouri, in the Farm Life. Three trees were left as a check and received no treatment. Those three failed to provide enough fruit to justify their existence.

An unfavorable season reduced the yield on all the trees. Even so the demonstration was a success in the eyes of both the owner and his neighbors. "There would have been no apples at all if I had not sprayed," Mr. Miller said. A peck of apples to the tree was sufficient to pay for the treatment.

The neglected home orchard, such as Mr. Miller's, is not only unprofitable, but it takes up valuable space that might be utilized by other crops. Unless the trees are to be taken care of, an ax and a grubbing hoe is the best remedy. But Mr. Miller's solution is still better. He will have a fair-sized deposit at the bank this fall, when it is most needed, and will have plenty of apples for his own use.

Young Apple Trees Are Rather Hard to Train

Young apple trees are more difficult to train than are young peach trees. Not all the limbs needed for the framework of the tree can be secured the first year. A central leader must be left until the proper number of framework limbs can be secured spaced over four to six feet of height. Seven or eight limbs is all that an apple tree should have. A tree with this number will be easy to keep pruned and it will be a simple matter to have plenty of bearing wood with little effort.

On certain varieties such as Yellow Transparent it will be very helpful in securing a well shaped tree and a tree that begins bearing at an early age if the framework limbs are spread. This spreading can be most easily accomplished by cutting notches in the ends of lath sawed into various lengths and then inserting these laths between two framework limbs in such a way that both limbs will be spread out. This changes the natural growth habit of the Yellow Transparent completely. Without some such artificial regulation the limbs of the trees of this variety go straight up in the air. The trees of this type are all very slow coming into bearing unless something of this nature is done to them.

Anthracnose Is Common Ill of Black Raspberry

One of the common diseases of the black raspberry is anthracnose, a fungus trouble causing purple blotches on the young canes, also attacking the fruiting spurs. It can be controlled by spraying with lime-sulphur, diluting same two and one-half gallons to fifty gallons of water. Spray again when the young shoots are six to eight inches high, diluting the lime-sulphur solution one gallon to fifty gallons of water. Apply a third spray just before blossoming time using the same solution of lime-sulphur as in the second spray.

Horticultural Hints

If sufficient spray has been applied to wet the tree evenly to the dripping point any more applied is wasted and may even do harm.

* * *

The pear and apple blister mite can be controlled by applying lime-sulphur 12 to 100 any time in the spring before the buds open, according to station authorities.

* * *

The apple curiculio cuts a small round hole in the surface and then eats out a large round cavity deeper in the fruit in which it places its egg. It will breed normally in the small apples.

* * *

Latham, Cuthbert and Herbert are all good red raspberries, and Cumberland and Gregg standard black caps.

* * *

Remove the dead wood and ill-shaped branches from shade and fruit trees. Raspberries and blackberries may be pruned just as soon as they show signs of growth.

* * *

Many growers fail to have the success they should have with their newly grafted trees because they do not give the trees the necessary care after the grafts begin to grow.

MONARCH
QUALITY FOOD PRODUCTS
set the standard. If you paid a dollar a pound you could not buy better food products than those you find packed under the *Monarch* label.

British Collectors Use Queer Methods

Collection agencies in London are even more "hard-boiled" than those in American cities. Not only do red-headed letters come through the mail to debtors, says "The Pathfinder," but when a man has been notified three times that his bill is due a collector in a red uniform calls on him. The bright clothes are to attract attention and embarrass the debtor.

A popular story has it that our word "dun", owes its origin to Joe Dun, famous bailiff in the reign of Henry VII. Dun was a proficient collector of rents, duties and general debts. He resorted to many ruses. He seems to have originated the idea of calling at debtors' houses in odd and colorful costumes to attract attention. Sometimes he would walk up and down in front of the poor wretch's house and broadcast the nature of the debt to the neighborhood. It is against the law in the United States to dun a person by postcard.

Healthiest country you can go to is usually one where the wages are lowest.

HELPED DURING MIDDLE AGE

Woman Took Lydia E. Pinkham's Vegetable Compound

Denver, Colo.—"I have taken six bottles of Lydia E. Pinkham's Vegetable Compound and will take more. I am taking it as a tonic to help me through the Change of Life and I am telling many of my friends to take it as I found nothing before this to help me. I had so many bad feelings at night that I could not sleep and for two years I could not go down town because I was afraid of falling. My mother took the Vegetable Compound years ago with good results and now I am taking it during the Change of Life and recommend it."—MRS. T. A. MILLER, 1611 Adams Street, Denver, Colorado.

BILIOUSNESS RELIEVED . . . QUICKLY

Carter's Little Liver Pills
Purely Vegetable Laxative
move the bowels free from pain and unpleasant after effects. They relieve the system of constipation poisons which many times cause a sour and acid condition in the system. Remember they are a doctor's prescription and can be given with absolute confidence to anybody. All Druggists 25c and 75c Red Packages.
CARTER'S LITTLE LIVER PILLS

PARKER'S HAIR BALSAM
Removes Dandruff—Stops Hair Falling
Restores Color and Beauty to Gray and Faded Hair
60c. and $1.00 at Druggists.
Hiscox Chem. Wks. Patchogue, N. Y.

FLORESTON SHAMPOO—Ideal for use in connection with Parker's Hair Balsam. Makes the hair soft and fluffy. 50 cents by mail or at druggists. Hiscox Chemical Works, Patchogue, N. Y.

The "Weaker" Sex

Bobby (sailing boat)—I know a fine game; let's play at navies and I'll be the admiral.

Jessie—Rightto, but I must be an admiral, too.

Bobby—Aw, no, there can only be one admiral.

Jessie—Then let's play I'm the admiral's wife—that will do just as well.—Sydney Bulletin.

No matter if a man is brusque and unresponsive when you pay him a compliment, he likes it.

You can't paint out wrinkles. They are part of growing old gracefully.

Varicose Veins Reduced *Or Money Back*

Simple Home Treatment That Is Giving Amazing Results.

If you have varicose veins or bunches you can start today to bring them back to normal size, and if you are wise you will do so.

Just get an original bottle of Moone's Emerald Oil at any dispensing pharmacist and apply it night and morning to the enlarged veins. It is very powerful and penetrating.

After a few days' treatment the veins will begin to grow smaller and by regular use will soon reduce to normal.

People who want to reduce varicose veins, or get rid of eczema, ulcers, or piles in a few days should not hesitate to get a bottle at once. It is such a powerful, penetrating antiseptic oil that a small bottle lasts a long time. Any pharmacy can supply you.

KLEMME WON ONE AND LOST ONE

KLEMME WON BALL GAME AT BELMOND SUNDAY

Were Defeated Week Before By 3 To 1 Score At Swaledale

After a 3 to 1 defeat at Swaledale about a week ago, the Klemme ball team hitched up their belts and waded into Belmomd there last Sunday and nearly shut that team out for no scores. Klemme had the game on ice and "setting real pretty" when Belmond took on a spurt of luck in the last of the 9th frame and put across one run, after Klemme had two put away and two strikes on the last man up to bat. Some finish!

Heres the box score for the game last Sunday:

KLEMME (5)	AB	H	R	E
Stokesbary, 2nd.	4	1	1	0
Finn, c. f.	4	4	1	0
Leuritsen, s. s.	3	2	0	1
Tanner, c	4	1	0	0
Wesenberg, 3rd.	4	1	1	0
Leitzinger, 1st.	4	2	1	0
Hamilton, p.	4	2	0	1
Wellemeyer, r. f.	4	3	0	0
Klotzbach, r f.	3	1	1	0
Totals	34	17	5	2

BELMOND (1)	AB	H	R	E
D. Done, r f.	4	1	1	0
Delton, l f.	4	0	0	0
Chapman, p	4	0	0	0
DeCoe, 1st.	3	2	0	0
Sharpe, 2nd	3	1	0	1
Johnson, s s.	3	0	0	0
L. Done, c	3	0	0	2
Studebaker, c. f.	3	0	0	0
Totals	30	4	1	3

Hamilton, pitching for Klemme, struck out nine men. Chapman pitching for Belmond struck out 2 men, and Damm, of Coulter, who pitched an inning for Belmond also struck out two men.

Klemme has had a fair season of baseball and leads their opponents in runs and hits.

Klemme got 199 hits and 77 runs against their opponents 138 hits and 60 runs.

Klemme has lost eight games and won eight todate.

METHODIST CHURCH

A. W. Gauger, Pastor

Our services during the week will be regular with a slight change in time in our evening services.

The prayer meeting and Bible study hour on Thursday evenings has been changed from 8:00 to 7:30 o'clock.

The Sunday evening service likewise will be at 7:30 o'clock from now on.

The conference year is rapidly drawing to a close. It is important that all do their part so that all interests of the church at home and abroad may be cared for, and the year be a successful one in every way.

Miss Octave Church spent the week end at the D. D. Ross home at Garner.

HANCOCK COUNTY CLUBS EXHIBITED AT N. I. FAIR

Hancock County Boys & Girls Are Wuinners In Several Classes

The Hancock County 4-H clubs were well represented at the North Iowa Fair, at Mason City

Ladies Exhibiting In Home Demsisting of Marie and Fannie Landon of Twin Lake township competed in the district demonstration contest and won fourth place This team won the contest at Garner on Achievement Day and will represent the county at the State Fair this week They are in charge of their leader, Mrs Rena Landon The subject of their demonstration is "Bee ming Collars."

Boys Win First And Second

Seven Dairy Heifers were exhibited by members of the Dairy Heifer club James Love, Garner, showed 3 purebred Guernsey heifers and won first, second and third in the club department and also won in the open class Paul Rudenizer, of Britt, showed two grade Holstein heifers and won first and second Richard Reed, Crystal Lake showed a grade Guernsey heifer and won first Dale Brede, Garner, showed his purebred Holstein heifer and won 11th place in a large class of strong competition The boys certainly made a good showing

A Judging Team consisting of Frederick Schneider, Goodell, James Love, Garner, Richard Reed, Crystal Lake, Glenn Kelly, Britt, and Robert Lawhorn, Garner, competed in the livestock judging contest from this county

BAYSIDE WILL HAVE TWO DAY CELEBRATION

Expect Large Crowds For Sunday And Labor Day

Bayside Park, Clear Lake, is arranging to entertain the visitors on next Sunday and Monday, which is Labor Day Charles Ritz, Park operator, is expecting a large crowd over Labor Day Many visitors are expected from a distance on account of the two holidays A star ball team has been picked from the Mason City Twilight League and it will play the Bayside Cubs at Mason City Friday afternoon, Aug 31 Then a return game will be played on the Bayside Park diamond Sunday, September 2nd at three o'clock In case each team wins a game, a third battle will be arranged for Labor Day to decide the winner. The Twilight League has a bunch of real stars Bayside has won 33 games and lost only six during the season So, when these two teams clash, a great ball game is expected No one can pick the winner Goddard a new southpaw, who pitched the Cubs to a 2 to 1 victory over Decorah at the Hampton fair last week, will be on the mound for Bayside Sunday The Sunday and Labor Day visitors at the Park will also be entertained by free movies, musical concerts and the roller skating rink, bathing beach, little train, and all the fun concessions will be ready for the Park visitors The music for the Bayside dance on Friday night, Aug 31, will be furnished by Toppy's Country Club Orchestra

THIS VICINITY GETTING TOO MUCH RAIN LATELY

Several Threshing Rings Held Up On Finishing Work

Every day seems to be rain day in this vicinity The weather man has uncorked the the old rain barrel in the sky and has lost the plug.

This vicinity has had more rain than the farmers want and quite a number of threshing rings still are in need of a few days of steady, dry weather to finish up their work

However, other localities have been visited by severe storms, and in this we are lucky, as we have had no bad storms this year, with the exception of a bad hail in sections last week, which caused some damage in the community.

Humble Hoover Home Is State Shrine

This small cottage at West Branch, Iowa, where Herbert Hoover was born, has emerged from humble obscurity to become one of the historic shrines of the State. It was even smaller at the time of the birth of Republican presidential candidate. Much of the front has been added since he left to go to work on his uncle's farm after his father's death.

TRAMPING SILAGE IS JOB THAT IS UNNECESSARY

Will Keep Just As Well If The Corn Is Moist Enough

Those miles and miles which the farmers have tramped in their silos in order to pack the corn so that the silage would not spoil appears to have been unnecessary Test conducted at the dairy farm of the Iowa State College during the past taree years indicate that if the corn is moist enough it will keep just as well in the silo without any tramping or packing whatever

The college dairy farm has two silos exactly the same size—16 by 36 feet In each of the past three years the corn in one silo has been tramped by taree men, while that in the other has had no tramping One year a boy handled the blower inside the silo by means of a rope, but did no tramping In the other two years, the corn in the untramped silo has been allowed to pile up, tumble over and fill up as it would with no attention paid to it

Despite this difference at filling time, the untramped silage has kept just as well as that thoroly tramped, according to Earl Weaver, head of the college Dairy Husbandry Department In the years when no one handled the blower in the untramped silo, the husks, leaves and lighter, more fluffy particles accumulated at one side of the silo It was teared that these would be so light that hey wouldn't pack well and hence would spoil, but no difference could be found when the silage was taken out for feeding

"At all times, we have been exceedingly careful to get sufficient amount of water into the silo whenever the corn appeared to be the least dry," says Mr Weaver "My observation is that the amount of moisture in the corn or added to the cut corn at filling time is far more important in insurring that the silage will keep than is tramping"

The question is often raised as to whether it is possible to get much more corn into the silo by tramping The college tests indicate that by tramping will result in getting 3 to 10 ons more silage into the silo. Here, too, the amount of moisture in the corn is believed to be an important factor. If water is run into the silo in considerable quantities, the untramped silage will settle much more

A few farmers over the state have tried filling their silos without tramping and many of these have found that the silage kept equally as well as with tramping Some men in past years have put sheep into their silos to insure thoro tramping and various mechanical devices have been manufactured for packing the silage Since labor is one of the big items in producing silage, it appears that many farmers will take advantage of the new ideas on filling if they can produce equally as good silage without tramping

'Bud' Pritchard will leave Garner September 3 or 4 for Lexington, Virginia, where he will enter a military college for a year's study. His brother, John will accompany him to Lexington The trip to the Virginia city will be John's vacation period. "Bud" is an industrious, thrifty young man, and will make good in his college work, we are sure.—Garner Leader.

7th HEAVEN AT IDLE HOUR THIS WEEK FRI. & SAT.

Reported To Be One Of Best Plays On Screen This Season

Director Frank Borzage has achieved another masterpiece in the film version of "7th Heaven," which comes to the Idle Hour Theatre on Friday and Saturday of this week

This Fox production, based on the play by Austin Strong, tells one of the most remarkable love stories, and one of the most beautiful that has ever been written. The plot, revolving as it does around two seemingly mediocre characters brings them literally from the sewers to the great heights of love and self-acrifice through a doctrine of courage and faith.

"Chico," who according to his own valuation is "a very remarkable fellow, and an atheist," is a worker in the sewers of Paris. But his soul soars above his work, as he shows when he selects his home even flights op above the street, as close to the stars as he can get, and overlooking the roof-tops of Paris. And his ambitions are high for one of his class, for he aspires to be a member of the hose corps who wash the streets of Paris, and are considered among the elite of the Montmarte.

"Diane" is nothing more than a dispirited waif of Paris, whose life is dominated by her sister, Nana, an absinthe drinker In spite of the fact that her antecedents are superior to those of Chico, whose parentage is one of the mysteries of the section, she has sunk because of her lack of courage to face and defy her sister, to the lowest depths

It is between these two that the romance of "7th Heaven" is built up into one of the greatest love stories ever produced

This picture will be shown but two nights in Klemme, Friday and Saturday of this week

Besides the feature picture there will be a good comedy and a special musical number by a young artist of Ruthven, Iowa.

The Auxiliary Ladies, who are operating the show, are bringing this special show to Klemme at no advance in prices

ODD FELLOWS TO PICNIC AT CLEAR LAKE, SEPT 3rd

I. O. O. F. And Rebekahs From Four Counties Will Meet

An I O O F. and Rebekah picnic will be held at the Odd Fellow P. M. Park on the south shore of Clear Lake on Monday, September 3rd. All Odd Fellows and Rebekahs and their families and friends of Hancock, Cerro Gordo, Worth and Winnebago have been invited to spend the day at the P. M Park where free coffee will be served at noon, and all urged to bring well filled picnic baskets

Will Enjoy Sports And Program

A program of sports and contests will start at 10.30 o'clock a. m. and will continue thru-out the after noon Following the picnic dinner at noon a program of music and speaking will be enjoyed. The principal speaker of the afternoon will be by H F. Wagner, chief justice of the Iowa supreme court and the past grand master of Iowa I. O. O.F.

FARM BUREAU WOMEN AT THE IOWA STATE FAIR

Ladies re Exhibiting In Home Demstration Department

Hancock County is well represented at the Iowa State Fair Several different lines of work will be represented, according to County Agent, L. T. Nutty.

The women have arranged an exhibit of the Home Furnishing Project work and also numbers for the program This work is in charge of Mrs. Fred Oxley as chairman and he committee consists of Mrs Chas Grau, Mrs R. S Baker, Mrs. H C Armstrong, Mrs. Ernest Schubert, Mrs. Ed. Oxley and Mrs S. B Durant This committee has put in a lot of hard work and have gotten up a very fine exhibit

Girls Clubs Show At Fair

The girls Clothing Club is represented by a demonstration team consisting of Fannie and Marie Landon of Twin Lake township This is the team which won the county contest and who competed at the North Iowa Fair, winning 4th place Charlotte Larson, Crystal Township will represent Hancock County in the State Health Contest.

Boys Also At State Fair

A Livestock Judging team consisting of James Love, Garner, Frederick Schneider, Goodell; Richard Reed, Crystal Lake, and Glenn Kelly, Britt will compete in the livestock judging contest and a grain judging team consisting of Robert Lawhorn, Garner and Fred Griffen, Garner, compete in their class. Eleven baby beeves will be shown by the Baby Beef Club members They are as follows Wayne Lewison, Kanawha; Julan Anderson, Kanawha; Howard Kudje Kanawha, Frederick Schneider, Goodell; Kenneth and Ronald Greiman, Garner; Richard Brouwer, Garner; Erwin Jante, Garner; Pete Van Dusseldorf, Britt, Robert Townsend, Britt, and Arnold Hampel, Garner

HANCOCK COUNTY LIVESTOCK SHIPPERS TO MEET OCT. 11

Fall Series of County, District Meetings Starts Sept. 6

Officials of Iowa cooperative livestock shipping associations will assemble in county and district meetngs in September and October to discuss common problems, according to plans recently announced by Knute Espe, Des Moines, secretary of the Iowa Cooperative Livestock Shippers.

Topics which will be considered include standardization and grading, recent hearings on traffic matters, auditing, local association meetings and others Cooperative agencies in these meetings include extension marketing specialists of the Iowa State College, county agents, farm bureaus and other organizations Meetings will be held in the following counties:

Sept 6, Boone; Sept. 7, Hardin; Sept. 11, Union, Sept 13, Louisa; Sept. 14, Appanoose; Sept 19 Shelby; Sept 21, Greene; Sept 25 Tama; Sept. 27, Benton; Sept. 28 Marshall; Oct. 2, Story; Oct. 3 O'Brien; Oct. 4 Emmet, Oct. 5 Palo Alto; Oct. 9, Kossuth; Oit 10, Worth; Oct. 11, Hancock; Oct 16, Hamilton; Oct. 17, Wright; Oct. 18, Humboldt; and Oct. 19, Iowa.

All officers and managers in or near these counties will be vitally interested in these meetings.

The Swalve "tribe" enjoyed a sort of re-union and picnic at Pilot Knob State Park Sunday. Mr. and Mrs Ben Swalve, and Mr. Swalve's children and their families made up the party and all were present with the exception of two daughters, Mrs. Henry Behrends of Ackley, Iowa, and Mrs. Charles Schuettpeld of South Dakota. Those who were present were: Mr. and Mrs. Ben Swalve, Dick, and John Swalve and families, Herman Priebe and family, Mr. and Mrs. Ing. Lauritsen, and Gilbert Schaeper and family.

COUNTY FAIR NEXT ON PROGRAM

HANCOCK COUNTY FAIR DATES ARE SEPTEMBER 11-12-13-14

Good Livestock nd Agricultural Exhibits Are Now Assured

Plans are being made for the Hancock County Fair, at Britt, on Tuesday, Wednesday, Thursday and Friday, Sept 11-12-13-14 The fair board is putting forth every effort to put on a show this year that will be a credit to the county and that will give the people of the county a real fair It is their earnest desire to have everyone in the county take an interest in the fair and show their interest by attending This is the only way possible to make it a success

Good Exhibits Now Assured

A good exhibit of livestock and agricultural products are assured Entries are already coming in these departments The Boys and Girls 4-H club show will be bigger than ever A tent is being erected to replace the Floral Hall and exhibits previously shown in the building will be shown in this tent. It is thot that good accomodations can be furnished for everything except the fancywork and plans will be made to take care of this, however, this show is not encouraged and a big show in this department cannot be handled Anyone exhibiting must remember that it is absolutely at their own risk, both in regard to weather and theft The art exhibit has been eliminated entirely.

Plenty Of Good Entertainment

Good bands have been contracted with for the music Free attractions are bigger than last year. Six big acts will be on the platform both afternoon and evening In addition this year the board has contracted for Auto Polo This thrilling and exciting game will be put on for twenty to thirty minutes before the grandstand each afternoon and evening. Fast harness races are asured and there will be two good races each afternoon There will be a ball game every day and numerous other attractions.

Amusement For The Kiddies

A ferris wheel and merry-go-round have been contracted with so that the kids will have plenty of rides. A program is being put on Tuesday evening. It is hoped by this means to raise a little additional revenue A good program is assured for this night There will be the free acts and Auto Polo and other entertainments.

Help make the Fair a success by your attendance.

BEN GREIMAN BRINGS IN OUR ANNUAL TREAT

We Proclaim Him Champion Fruit Grower Of The County

Again Tuesday Ben Greiman surprised Ye Editor with a fine supply of home grown plums from the Greiman orchard northwest of our town

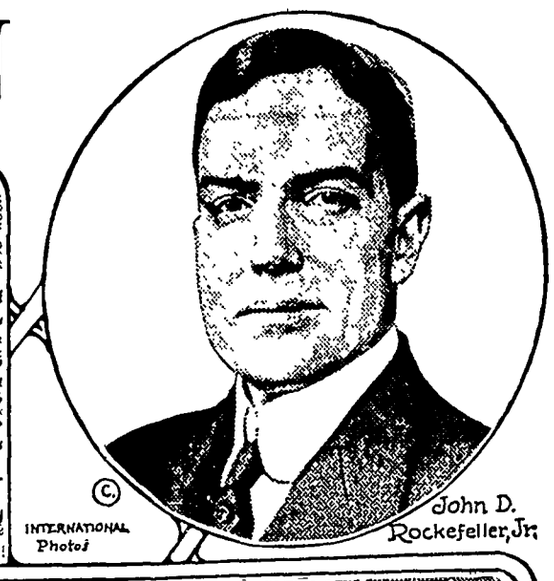
When we speak of plums brought from that orchard we do not mean the ordinary run of fruit. The fruit Ben grows compares favorably in both size and flavor with the big plums shipped in from California They are actually as large as hen's eggs, have a nice juicy meat and a fine flavor.

Ben is quite an authority on any kind of fruit tree and his orchard has a variety of plums and apples Besides this he has as fine a vineyard as any in this part of the state. Anyone who contemplates on setting out fruit trees would profit by consulting Ben as to what kind of trees are best adapted to this locality.

Feeding laying hens moist mash is a good way to maintain egg yield in hot weather.

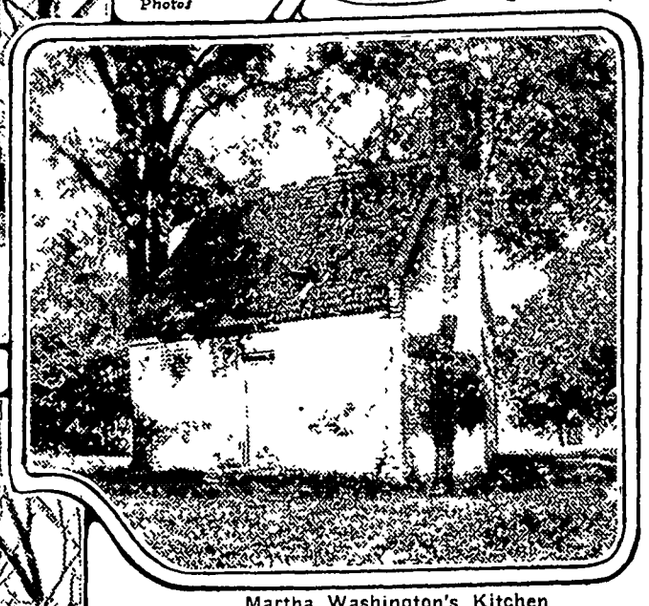
HISTORIC COLONIAL TOWN to LIVE AGAIN

The Vest House

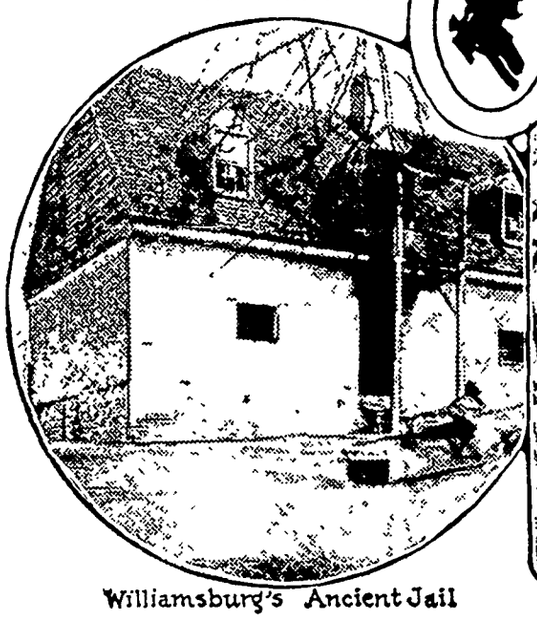


John D. Rockefeller, Jr.

INTERNATIONAL Photos



Martha Washington's Kitchen



Williamsburg's Ancient Jail

Nicholson street in old Williamsburg

By ELMO SCOTT WATSON

THEY'RE turning the clock back two centuries in Williamsburg, Va. Within two years this "Cradle of the United States" will be restored to as nearly an exact replica of the thriving colonial town of the Seventeenth century that it once was, as is possible for an almost unlimited amount of money to make that possible. By that time approximately $5,000,000 will have been spent in the renaissance of the historic capital of the state of Virginia, and for probably the first time in modern history a whole living city will have been turned into a museum of the glorious past where Americans can catch the atmosphere of a romantic era that has gone forever.

Over an area of something like a mile square all that is new will be removed and all that is old put back as nearly as possible as it was 150 years ago. Modern buildings are to be done away with wholesale, and public and private house of the olden days are to be replaced in cases where they have not been spared by time. Back of this amazing transformation is the story of the vision of two men, a minister and a philanthropist. The minister is Rev. William A. R. Goodwin, rector of the Bruton Parish church, the oldest Episcopal church in continuous existence in America, and a member of the faculty at the College of William and Mary, the second oldest institution of higher learning in this country. He originated the idea. The philanthropist is John D. Rockefeller, Jr., who is supplying the money necessary for the restoration and who is giving Doctor Goodwin a free hand in directing the restoration.

Although Williamsburg is a small city (its population probably never exceeded the present figure of some 2,000), it is doubtful if there is any other town in America with which there have been associated so many historic names. In its streets have trod such notables as Washington, Jefferson, Monroe, John Marshall, Patrick Henry, Benjamin Franklin, George Rogers Clark, Franklin, Rochambeau, Lafayette, George Mason, George Wythe, the Randolphs, the Lees and a host of others whose names are a part of our colonial and Revolutionary war history. The site of Williamsburg was originally known as the Middle Plantations and in 1632 Sir Francis Nicholson, at various times governor of Virginia, Maryland and Acadia, laid out a town there and named it in honor of King William. His first intention was to honor his sovereign by laying out the streets in the form of a monogram of W and M, but two ravines interfered with his purpose. So the town was laid out along a main street which he named Duke of Gloucester street, honoring the short-lived prince, Queen Anne's eldest son, and two parallel streets he named Francis and Nicholson, honoring himself! Cross streets were named Nassau, King, Palace and Queen streets and the parallelogram bounded by these streets marks the area of the present restoration.

In 1693 there was built at the west end of Duke of Gloucester street the College of William and Mary and chartered by the joint sovereigns of England after whom it was named. At that time a building designed by the famous Sir Christopher Wren was already standing, as was the Bruton Parish church. In 1699 the government of the colony of Virginia, which then extended to the Mississippi river, was moved from Jamestown to Williamsburg and the day of Williamsburg's glory began. At the other end of Duke of Gloucester street was erected the first building in the United States officially designated "Capitol," which was the seat of the council and the burgesses of the colony from 1701 until the upheaval at the opening of the Revolution resulted in the house of burgesses being officially dissolved and the legislators went down the street to the Apollo room in the Raleigh tavern.

Besides the capitol and the college, the most important building in colonial times was the governor's palace which stood at the head of the "Palace Green," a broad avenue running north from Duke of Gloucester street. The rebuilding of the palace presents a particular difficulty, for no picture exists which shows a complete view of it in its original or enlarged form. It was begun in 1705 and completed during the governorship of Col. Alexander Spotswood, founder of the romantic "Order of the Golden Horseshoe." About 1751 it was reconstructed on a more spacious scale. This was during the governorship of Robert Dinwiddie—the Dinwiddie who sent a certain young Major George Washington on the mission to the French on the Ohio river which led to his taking part in the Braddock tragedy and the Fort Necessity adventure.

The next occupant of the palace after Dinwiddie was Francis Fauquier of whom Thomas Jefferson, then a young student at the college, was a prime favorite, not only with the governor but with the belles of Williamsburg as well. Another participant in the gay social festivities at the palace was George Washington, who dined there with Lord Dunmore, the last British governor of Virginia, before the break came between the colonies and the mother country. When that break came "My Lord Dunmore" collected his men, went to the Powder Horn (built by Colonel Spotswood in the Market square and still standing), took the colony's supply of powder and muskets and silently stole on board ship under cover of night. Whereupon a certain Patrick Henry (who had already heard the cries of "Treason! Treason!" shouted at certain utterances of his), led a party of militia from Hanover, King William, New Kent and Charles City counties to demand the arms back again. He didn't get them, but he did force from the governor a payment of 320 pounds for the munitions, which he took with him to Philadelphia later and deposited in the treasury of the Continental congress.

And after Dunmore had finally fled the colony it was Patrick Henry who occupied the palace as governor. To him in 1778 came another young Virginian, George Rogers Clark, to lay before him his daring scheme for conquering the vast region of the Old Northwest. History has recorded how well Clark succeeded but it is not so well known that his vanquished enemy, Gov. Henry Hamilton, the "Hair Buyer General of Detroit," after the surrender at Vincennes, was sent to Williamsburg as a prisoner of war and was confined in the old jail there which still stands, having done its duty as a prison for more than 200 years. In this prison, too, were confined some of the associates of the notorious pirate, Black Beard, who were executed in 1718. It is interesting to note, by the way, that these pirates were contributors (unwillingly probably) to the cause of higher learning, for on the account books of the College of William and Mary stands the fact that 300 pounds of the original subscriptions for founding the college are credited to "certain pirates!"

Not far from the old jail stands the poor debtors' prison, almost abutting on the First National bank. The building, originally known to the colonists as "Bedlam," the first hospital for insane people in the United States, stands on Francis street. Three generations of the Galt family, all physicians, served as chief medical officers of the insane hospital, over an unbroken period of a century.

One of the famous buildings of Williamsburg, the Raleigh tavern, was destroyed by fire in 1859. It is to be restored. The "ordinary" in this tavern was operated in colonial times by Henry Wetherburn, whose wares were so favorably known that William Randolph sold 200 acres of land to Thomas Jefferson's father for "Henry Wetherburn's biggest bowl of arrack punch."

Raleigh tavern was twice used as an assembly place for the house of burgesses, when the royal governor dissolved the assembly for discussing disloyal petitions and resolutions, including the decision to set aside a day for fasting and prayer in 1774 when news of the blockade of Boston harbor was received.

Raleigh tavern was the birthplace of the Phi Beta Kappa, the first chapter of the well-known scholastic fraternity being established there on December 5, 1776.

The little old colonial courthouse on the court green still stands. On the north side of the court green is the colonial home of Edmund Randolph, who was secretary of state and attorney general in Washington's cabinet. Near it is the Peachy house, headquarters of Rochambeau just before the battle of Yorktown, and also the building in which General Lafayette was entertained when he revisited America. Close to it stands the Griffin house on the Duke of Gloucester street where lived Judge Cyrus Griffin, a member of the Continental congress.

The fine colonial brick home of George Wythe on the east side of the palace green, beside the Bruton Parish churchyard, remains as it stood when Washington and Lafayette together planned the battle of Yorktown there. It was built in 1755 and its owner twenty years later, George Wythe, was a signer of the Declaration of Independence.

Tazewell hall, the birthplace of Edmund Randolph, also remains practically as it was long before the Revolution. Its interior finish is of solid mahogany. The home of another member of the Randolph family, Peyton Randolph, first president of the Continental congress, is not far distant. The Tucker house, in which the wife of John Randolph lived before her marriage, and a fine example of early colonial design in the Blair house, also remains.

Bassett hall, one of the finest ancient buildings in the town, stands at the end of a long lane of trees. It was the property of Burwell Bassett, whose uncle, George Washington, was frequently a visitor. The great-grandfather of Martha Washington is buried in the Burton Parish churchyard. In 1841 Vice President John Tyler was living at Bassett hall when the son of Secretary of State Daniel Webster galloped down the long lane of trees to bring him the news of the death of President Harrison and of his own succession. The house stands in a park of several hundred acres of woodland.

The home of Col. Wilson Miles Cary, a delegate to the Virginia convention in 1776, was frequently visited by Washington when he was studying surveying at William and Mary college, a short walk away. It is said that the parents of Mary Cary discouraged the inconspicuous engineer's wooing of their daughter, and that Mary fainted on the porch of this house some years later when she was the wife of Edward Ambler and General Washington rode past on his triumphal return from his victory over Gen. Lord Cornwallis at Yorktown. Mary's sister was the wife of Lord Fairfax.

Besides the wealth of colonial residences, Williamsburg still possesses many other old public buildings. In William and Mary college stand three excellent examples. The hall, designed by Sir Christopher Wren, is the oldest college building in America, antedating Massachusetts hall at Harvard. The Wren building was ravaged three times by fire but its thick walls remained. Its architectural design is almost as it was originally.

In this building George Washington studied and received his certificate as a surveyor, and it also housed three other Presidents, Jefferson, Monroe and Tyler, and the great first chief justice of the United States, John Marshall, in their student days.

The foundations of the first theater in America, built in 1716, are to be used again for erecting a new building as a replica of the original. The theater contributed to the gaiety and fashionable life for which Williamsburg was known when it was the Old Dominion capital.

At the other end of the Duke of Gloucester street, facing the college nearly a mile away, stands the original little office of the clerk of the house of burgesses, in which the momentous legislative acts of the prerevolutionary period were engrossed. It was a familiar working place for many of the orators and statesmen whose names are forever linked with American independence.

Anatomy of One Reel Comedy

By RING LARDNER

To the Editor:

In a recent letter I give my readers the story of a friend of mine name Joe Cooper that was not getting along so good in his regular job and finely began to take correspondence courses by mail in other lines like short-story writeing and expert acct and cartoonist and etc., and after a wile he got so as he was knocking out close to 50 thousand per annum for his spare time.

Wile theys still another field yet that Joe hasn't went in it and that is writeing photo plays and great big money is promised for good ones because god knows they are a rare bird and if they is some of my readers that finds trouble makeing both ends meet the other and could use a couple 100 thousand a year extra earned in their spare time, why here is the field to go into.

You can pick up most any magazine and find a dozen ads of correspondence schools that learns you how to write photo plays or movies as I have nicknamed them, but how are you going to know that the people that runs them schools has ever wrote a photo play themselfs and for all as you know you may be paying your tuitions to a bird that ain't done anything all their life but pluck pimples off a putting green.

So in order to protect my readers from these kind of vipers I have made it up in my mind to start a school of my own along these lines and my qualifications is that I have wrote 2 photo plays and they both flopped like the sure thing and my system of teaching will be to learn my pupils to write photo plays opposite to like I wrote.

The big money in the screan game today lays in 1 reel comedys.

The things that is necessary in writeing 1 reel comedys is (1) a catchy title (2) a funny idea (3) plenty of laughs (4) witty sub titles. As a sample of what will go and go big, the Ring School of Photo Play Writeing gives the following speciment of a 1 reel comedy.

As a title for this picture we have chose "The Finny Tribe" which in itself will knock them for a goal.

Characters:

GEORGE WOTTLE, a fishmonger (comedy lead)

GERTRUDE WOTTLE, his wife, (comedy lead)

MINNIE QUAGMIRE, her rival (soubrette)

AL SWAMP, a private detective (heavy comedy)

BABY WOTTLE, the Wottle baby (Juvenile)

A Minister of the Gospel, Wottle's clients, etc.

Continuity:

Scene 1—George is in his store sorting fish. A client comes in and looks over the stock. Sub-title: "The customer asks for a flounder." George picks up a fish and hits the client in the eye with it, knocking him down. Sub-title: "I guess that will flounder you." Another client comes in the store. Sub-title: "The customer asks for finnan haddie, but George tells him he only keeps weak fish." The client falls down and tears his trousers.

Scene 2—Gertie is at home setting on the lounge and pulling superfluous hairs out of Baby Wottle's head. The telephone rings. Gertie goes to answer it. Sub-title: "The wrong number." Baby Wottle falls off the lounge and lands on his bean. Sub-title: "Oh, what a headache."

Scene 3—George and Minnie are spooning in the hammock on the Wottle porch. Gertie comes out of the house and catches them. Sub-title: "Caught in the act." The hammock breaks and the lovers set down suddenly on the floor. Sub-title: "It couldn't of been a very good hammock."

Scene 4—Gertie goes to Swamp's detective agency and hires Al Swamp to take up the case. Al puts on his shoes and starts out with Gertie. Sub-title: "The plot sickens." As they are leaving Al's office a swinging door hits them in the eye and knocks them down. Sub-title: "In again, out again, Finnegan."

Scene 5—George and Minnie are spooning in the fish store. Minnie steps on a eel and falls down. Sub-title: "Minnie says her eel slipped. George tells her she ought to wear rubber ones." Al and Gertie come in the store and surprise the lovers. George runs to a fish box and sets on a perch." George tries to get down but falls and tears his trousers. Al tries to pick him up but slips on the slippery floor and tears his trousers. Sub-title: "Al thinks theys more to be patched up than the marital affairs of the Wottles."

Scene 6—They all go to the Wottle home. Minnie loses her interest in George and falls in love with Al. They decide to get married. Sub-title: "Al asks the fair Minnie to become his bride. She says O. K." Al summons a minister and him and Minnie are married with the Wotties as witnesses. Sub-title: "The knot is tied."

Scene 7—The party adjourns to the dining room where a fish breakfast is served. Sub-title: "London Bridges is falling down." In the midst of the hilarity, Baby Wottle chokes on a fish bone and croaks. Sub-title: "Eat jelly fish. No bones."

There you have got your catchy title, your funny idea, your laughable situations and your humorous subtitles. Further and more the construction is perfect you might say.

Good Plant Cover Prevents Erosion

Field With Growing Crop Does Not "Wash" as Seriously as Others.

(Prepared by the United States Department of Agriculture.)

It is well known that a good plant cover checks erosion of the soil, that a pasture, meadow, or a field well covered with a growing crop does not "wash" as seriously as one planted, for example, to corn or cotton, in which the crop does not fully cover the ground. On the western ranges preservation of a good cover of herbaceous and shrubby plants on rough ground used for grazing is particularly necessary. The forest service of the United States Department of Agriculture has given particular attention to the effects of plant growth in checking erosion, and the present policy of issuing grazing permits is designed to insure the preservation of such a cover through prevention of overgrazing.

Value of Grasses.

Clarence L. Forsling of the forest service, says, "The value of grasses and other low-growing plants for protecting watersheds may not be easily recognized because of the somewhat obscure manner in which such plants check surface run-off and erosion. The vegetation intercepts a small part of the falling rain before it reaches the ground. The decaying plant material adds to or at least maintains the humus content, and consequently the water-holding capacity, of the soil. The roots open up the soil to some extent, and thus help the water to penetrate into the ground. The stems and leaves near the ground form physical obstructions to water as it runs down hillsides, reducing its velocity and increasing the chances of its being absorbed by the soil. The reduction of velocity and volume of run-off and the binding power of the roots check erosion.

Maintain Grazing Capacity.

"Under average conditions, where the cover has not already been reduced, grazing practice that will maintain the highest grazing capacity will also maintain the plant cover in a condition for satisfactory protection of the watershed."

Weed Worse Than Quack Combated by Plowing

Leafy spurge is slowly invading South Dakota and it is worse than quack grass or sow thistle. This is the statement made recently by Dr. Arthur T. Evans, head of the botany and plant pathology department at South Dakota State college, when a farmer brought a sample of the weed to his office. The weed may be combated by plowing it up three or four times each summer for at least three summers. Leafy spurge is a yellowish-green weed and grows in patches about three feet high.

The farmer said his neighbor had a 35-acre field taken by the weed and that the township board was going to force him to exterminate the plant. Doctor Evans warned the farmer that if the patch was not killed the whole farm and adjoining ones would soon be worthless.

Up-to-Date Information on Planting Soy Beans

Bulletin 310 of the Illinois station at Urbana contains the best up-to-date information on soy beans. It tells all about planting soy beans, the varieties to use, and how to harvest. A map of Illinois is printed in the bulletin indicating that soy beans are most extensively grown in eastern and southern Illinois. For the state as a whole the acreage is only over 700,000. In other words soy beans are grown as extensively in Illinois as wheat is grown in Iowa. Because of the fact that soy beans are so popular in Illinois the Illinois bulletin should be especially worth while.

Farm Notes

Half the sugar is lost from corn during the first 24 hours after the ears are pulled.

* * *

The food value of eggs has no relation to the color of the shells. Browns or whites are the same inside.

* * *

Loafing hens in the farm flock eat up the profits the busy biddies make. Good poultrymen soon send them to the butcher.

* * *

It costs a great deal less to produce 100 pounds of milk from heavy yielding cows than from cows producing smaller amounts.

* * *

Ants may be exterminated in lawn or garden by driving a rod down into the nest and pouring boiling water, in which potatoes have been boiled, down into the hole. Lye water also is effective.

* * *

The Jersey Black Giant probably is the largest of the American breeds. The standard weights are 13 pounds for the cock, 10 pounds for the hen, 11 pounds for cockerel and 8 pounds for the pullet.

* * *

Chiggers are sometimes serious pests on little chicks. They cannot, however, tolerate flowers of sulphur. Sprinkling it in the down or feathers and an application in the grass where the chicks run will soon check them.

THE GOLDEN HEART

(© by D. J. Walsh.)

MISS ORVILLA CRAMER sat in her high-backed chair and looked sharply at the two young women who were sitting at her feet. She had the air of a queen to whom homage was due and demanded. She was an austere old woman with a hooked nose and high forehead and her mouth closed in a straight, stubborn line. No one knew just how old Miss Orvilla was, nor did they even dare mention the passing years in her presence. She was very wealthy and had bought life rather than won it. No gentle method had she used in dealing with people. She paid as she went and demanded full return for her money. She got just what she paid for—no more and no less. As a young girl, however, she had loved one man and he, proving false to her, she had closed her heart to all softer emotions and looked with disfavor on all love affairs. Family ties meant nothing to her only as they added to the exalted opinion she had for herself. No one loved her, but she was so immensely wealthy that not one of her relatives dared to cross her. If one of her kin went astray the whole family trembled because her threat was if they displeased her her money would go to found a hospital for homeless cats. She was the bugbear of her relatives. Her nearbys and distant cousins even several times removed bowed before her august will. She had fairly spoiled the lives of three generations of her kin.

Today she had ordered into her presence these two young women, daughters of two of her cousins. The girls had come in fear and trembling for well they knew that Aunt Orvilla had something on her mind which was not going to be pleasant to hear. They had racked their brains in speculation and at the appointed time they had appeared in agony of spirit for fear they might do the wrong thing and so cut off their particular branch of the family of a share in the old woman's money.

Nowhere in all the world could a lovelier looking pair of girls be found than these cousins, Betty Walch and Janet Wales, as old Hannah, Miss Orvilla's maid, ushered them into the old woman's presence. Betty was all that her name might imply—plump, dimpled and with big blue innocent eyes. Her pretty head was a perfect mass of bobbed curls, which fairly rippled over her head in a riot of golden ringlets. She was dressed in a simple dress of blue linen, which seemed to exactly match her eyes. She was nineteen. Janet was of a different type. Her hair was a rich burnished red, which concealed depths that looked almost black at times. She was tall and stately and had the wonderful skin that goes with that particular shade of hair. She was even more beautiful than Betty, for her beauty commanded. Janet was twenty. The two girls were a perfect foil for each other.

As the two girls moved forward to the chair in which Miss Orvilla was seated the old woman raised her lorgnette and gave them a long and appraising stare. Then with a stately gesture she motioned for them to be seated on the little footstool at her feet.

"Ah!" she said in a biting voice, "so your parents thought best to let you come at my—" she paused a moment—"request." But both girls felt that she had intended saying, command instead. "You," she said, pointing her finger at Janet, "are all Cramer, and I hope you have a fine spirit and will appreciate what I am about to tell you. And you," she said, pointing to little Betty, who had grown white and pink by turns under the old woman's sharp glance, "are like your father's people—and not at all to my liking, I assure you. But no matter, you may overcome that if you obey me," and in a voice that was as cold as steel the old woman proceeded to unfold her plan.

She said she had picked the two girls as possessing all the good looks of the several branches of the family and if they would agree to her proposition and follow implicitly her direction and not cross her in any way she would divide her great wealth equally between them. As evidence of good faith the girls were to wear the rings she would presently place on their fingers, and she offered for their inspection two wonderful rings—one a large diamond and one a big black opal surrounded by diamonds.

The girls were fairly dazzled by the wonderful gems. Janet uttered a quick little gasp of admiration, but Betty simply sat quietly on her little footstool, with her blue eyes fixed in a fascinated stare at the ugly old woman.

"Now, girls," said Miss Orvilla, "I wish you to spend the greater part of your time in the house with me, so that I may have you under my constant supervision. I will clothe you and see that you have all that money can buy. I will restrict you in only one thing—you must neither of you ever marry. Men only bring unhappiness into a woman's life; be warned by me in time. Money is the only thing that can bring worth-while things. It will buy you all you want that is of any value. You can trust money; you can't trust men."

And so it was settled, Janet, being the older, was offered the choice of the two rings. She chose the big black opal. But when it came to Betty to take her ring she drew back and with a tremble in her voice asked to be allowed a week in which to make up her mind. When the week had passed and Betty was again ordered into Miss Orvilla's presence she burst into tears and confessed that she wanted to go home; that she could no longer live in the big, gloomy house without her dear mother and sisters, and that she had rather be poor all the days of her life and have a heart full of love than possess all the wealth in the world. With coldness and a fine display of scorn she was ordered from Miss Orvilla's presence with her ears smarting under the command to never show her face in that house again.

Janet under Miss Orvilla's tutelage grew haughty and even more cold and arrogant than the old woman herself. In fact, Miss Orvilla often caught her breath when she looked at Janet and wondered if her perfect pupil was not just a little too perfect. Would she some day turn on her and rend her? As time passed she grew almost afraid of the girl with the hard black eyes, and she felt herself growing strangely dissatisfied with her handiwork. She grew suspicious that Janet was only waiting. Time passed. News came that Betty had married a wonderfully promising young man and was happy and contented in her little new bungalow. This news was received with scorn by both Miss Orvilla and Janet.

Miss Orvilla became more and more restless unnder the constant companionship of Janet. She often caught a look in the girl's eyes that caused her to shudder. She felt more and more that Janet was getting impatient for the time when she, Orvilla, should quietly close her eyes and leave her in possession of all. It irked the old woman and as time passed hatred sprang up in her heart toward the girl, such as she had never known in all her life before. First, she hated the girl, and then, as her bodily strength failed and she became obliged to lie for hours and hours with nothing to do but think and think, she realized what a mess she had made of her whole life and what a curse money had been to her and how she had allowed it to spoil the lives of so many of her kin. Only one of the whole tribe had been strong-minded enough to take her own life in her hands and live it without thought of money, and that was little Betty. Miss Orvilla found herself thinking so much about the girl that she finally secretly sent for her to come. But Betty was so busy with her household cares and caring for the little new Betty, who was only just beginning to smile back into her mother's face that she could not come. Instead of this making Miss Orvilla angry, the old woman only smiled when she read the tender little note Betty sent, and when she did finally close her eyes upon this world and her will was read it was found she had done well by all her relatives, but best of all by Betty, whom she mentioned in her will as "the little girl with the golden heart who was wise enough to put love above riches."

Earliest Realty Deal Told of in Genesis

The first real estate transaction ever recorded is found in the book of Genesis. The story shows that the property had been appraised and about $220 paid over before witnesses.

The details of the transaction are found in chapter 23, the seventh to twenty-third verse, which reads as follows:

"After Sara's death Abraham came to the land of Canaan and asked to buy a burying place.

"And said to them: 'If it please your soul that I should bury my dead, hear me, and intercede for me to Ephron the son of Seor. That he may give me the double cave which he hath in the end of his field. For as much money as it is worth he shall give it me before you for a possession of a burying place. Ephron then offered the field for nothing, but Abraham insisted: I beseech thee to hear me. I will give money for the field.'

"And Ephron answered: 'My lord, hear me. The ground which thou desirest is worth 400 sicles of silver. This is the price between me and thee. But what is this? Bury thy dead.'

"And when Abraham heard this he weighed out the money that Ephron had asked in the hearing of the children of Heth, 400 sicles of silver of common current money.

"And the field that before was Ephron's wherein was the double cave looking toward Mambre, both it and the cave and all the trees thereof in all its limits round about was made sure to Abraham."

The constant reference to "in the presence of the people" and "in the sight of the children of Heth" and "in the hearing of the children of Heth," together with the statement that "the field was made sure to Abraham and the cave that was in it for a possession to bury in, by the children of Heth," verse 20, indicates that here is a real estate transaction with appraisal, witnesses and some safeguarding of title.

A "sicle" is obviously a "shekel," which was believed to be worth about 55 cents. This would make the price of the cave about $220. If, as some writers affirm, money was worth ten times as much then as now the price would be nearer $2,000.—New York Herald Tribune.

Never Monopolized

Truth has never been, can never be, contained in any one creed or system.—Mary Augusta Ward.

Couldn't Hold It

The roar and rattle of the express as it rushed through the wayside station was followed by a yell and a crash.

The porter-clerk-signalman-stationmaster dashed out of the office and saw a young man sprawling among overturned milk cans, while a little boy gazed on interestedly.

"What happened?" asked the railway official. "Did he try to catch the express?"

"Yes," murmured the boy, "but it got away again."

By Your Leave

The following is a bishop's description of the kind of preaching sometimes addressed to fashionable congregations: "Brethren, unless you repent, in a measure, and be converted, as it were, you will, I regret to say, be damned to some extent."—Churchman.

Progress in Reverse

"How's your wife coming on with her reducing?"

"Not so good. Every time she loses a pound she celebrates by eating a big meal and gains two."

If a man finds a dollar he invariably spends two in celebrating the discovery.

"WORTH WEIGHT IN GOLD"

Verdict of Woman Who Tried Pinkham's Compound

Tully, N. Y.—"It hurt me to walk or sit down without help and I felt sick and weak. My mother-in-law took Lydia E. Pinkham's Vegetable Compound and she induced me to take it. I am now on the fourth bottle and have also used Lydia E. Pinkham's Sanative Wash. The medicines that will do for me what the Vegetable Compound and Sanative Wash have done are certainly worth their weight in gold. I think I have given them a fair trial and I expect to take two more bottles of the Vegetable Compound."—Mrs. Charles Morgan, R. F. D. 1, Tully, N. Y.

WANTED—Men and Women Suffering from stomach ulcers, indigestion, heartburn, dizziness, belching or sour stomach, or that tired hopeless feeling, to get immediate relief by using FOSS TABLETS. Safe and harmless. Physicians prescribe them. Thousands are enjoying comfort and health by using them. Absolute money back guarantee. Price $1 postpaid. Sample 10 cents. We want a local distributor in your town. Write for details. FOSS PHARMACAL CO., SHUBERT BLDG., ST. PAUL, MINN.

Women Agents Wanted—Make $25 to $50 weekly selling Utrex, the wonderful new remedy for women. Best seller this year. Write for Free selling plan and literature. Utrex Laboratories, 720 Cass St., Chicago, Ill.

W. N. U., DES MOINES, NO. 35–1928.

Good Use

Editor—I can't understand where you get all the paper to write your poetry on when there is such a scarcity of the material.

Poet—Oh, I use the backs of all the bills I receive.

We know some men who claim to be self-made who undoubtedly cheated themselves.

It's a signal triumph for the weather man when his prediction happens to come true.

The Turnover

It is said it costs the government nearly 3 cents a year to keep a paper dollar in circulation. It costs the circulators a lot more than that, but think of the fun they have. During a year the dollar may pay $500 worth of debts.

Some men are unable to distinguish between good advice and a mild insult.

Revenge is a gun that kicks harder than it shoots.

Forget last year's jelly failures
***This year* you have PEXEL**

always this — never this

PEXEL jells all fruits. Requires less boiling. Obtains more jelly. Does not change the most delicate flavor or color of any fruit

EVEN if you've had a dozen failures—or if you never made jelly before—you can make jellies successfully with Pexel. Just add it to fruit juice and bring to full boil. Then add sugar. Bring to vigorous boil once more. Take kettle from range. Skim. Pour into glasses. That's all—*it will be jelled as soon as it is cool.*

When you use Pexel, its price—30c—is repaid from one to three times. Time and fuel are saved. You make more jelly because fruit juice, sugar and flavor are not wasted by prolonged boiling.

Pexel is a 100% pure-fruit product. It is absolutely colorless, tasteless, odorless. It is a powder, not a liquid. Keeps indefinitely. Just as effective in any season with bottled juices or unsweetened canned fruits.

Get Pexel at your grocer's. Only 30c. Recipe booklet with easy-to-follow directions in every package. The Pexel Company, Chicago, Ill.

Here are a few examples of how much jelly Pexel makes:

4½ cups strawberry juice, Pexel, 8 cups sugar make 11 glasses of jelly.
4½ cups raspberry juice, Pexel, 8 cups sugar make 11 glasses of jelly.
6 cups currant juice, Pexel, 10 cups sugar make 14 glasses of jelly.
4½ cups grape juice, Pexel, 7 cups sugar make 10 glasses of jelly.

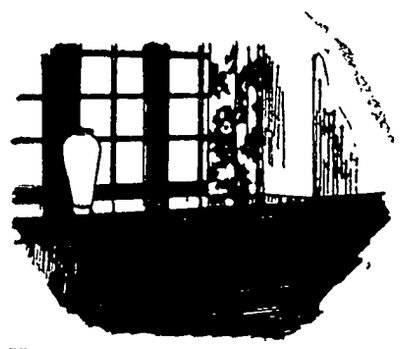
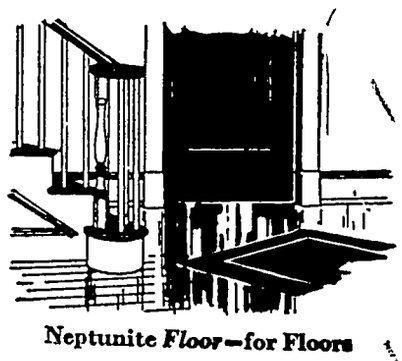
When you refinish floors, woodwork and furniture, choose the right varnish!



Neptunite *Interior*—for Woodwork



Neptunite *Floor*—for Floors

Neptunite *Seat*—for a durable, practical finish on seats and furniture. For a subdued, dull finish, when the work is to be rubbed, use Neptunite *Rubbing*

When you finish anything be sure to get the kind of varnish best suited for the job in hand. Different surfaces—furniture, floors, woodwork and the like—are subjected to different kinds of use and exposure, and each requires a special type of varnish. Then, too, the kind of finish you want—glossy or dull—plays an important part in your selection.

We carry a complete line of LOWE BROTHERS NEPTUNITE VARNISHES. There are five kinds—*Floor* for floors; *Interior* for a gloss finish on standing woodwork; *Seat* for use on pews, seats, and other furniture; *Spar* for exterior use; and *Rubbing* for use when the work is to be rubbed to the dull finish that is popular on all period furniture.

You can't find a better varnish than Neptunite. It is heatproof, marproof, and waterproof. Never turns white—won't even scratch white! Before you re-finish anything, be sure to pay us a visit.

Before you paint, see us

You and each of you are hereby notified that on the 11th day of July, 1928, Geo Zinn filed in the Office of the County Auditor a petition and bond asking that certain lands be esablished in a Drainage District and that the improvement be constructed to drain the same and that Chas. F Merten was appointed as a Preliminary Engineer to make a survey, profile, map and report upon the same and that the said Engineer filed in said Auditor's Office on August 21, 1928, a report, map, plat and profiles recommending that the above described lands be established in a Drainage District, to be known and numbered a Drainage District No. 134, and certain improvements be constructed therein which plan was eutatively approved by he Board of Supervisors of Hancock County, Iowa, on August 24, 1928, but which plan may be amended before final action thereon.

You are further notified that the Board of Supervisors of Hancock County, Iowa, have fixed the 5th day of October, 1928, at the hour of one o'clock P M. as the time for hearing thereon and that all claims for damages on account thereof, except claims for right of way taken by said improvement, and all objections to the establishment of such district and the construction of such improvement must be made in writing and filed in the office of the County Auditor of Hancock County, Iowa, on or before the time fixed for such hearing.

Dated at Garner, Iowa, this 29th day of August, 1928, and published by order of the Board of Supervisors, of Hancock County, Iowa

H. C. MEYER,
County Auditor, Hancock County, Iowa

SCHOOL BEGINS MONDAY, BUT 2-DAY VACATION ALSO

Klemme Teachers Will Attend The County Institute Tues. & Wed.

School will begin in Klemme on Monday morning, Sept. 3rd, when all pupils will register.

However, a vacation will follow immediately as the County Institute will be held at Britt and all teachers are expeced to attend. There will be no school Tuesday or Wednesday on account of institute.

Opossum in Stone

In keeping with the provision that various forms of animal and plant life found within the area be used for decoration motifs on the Cathedral of SS. Paul and Peter, in Washington, an opossum is to have its likeness carved into the great structure now under way. The animal was captured on the cathedral grounds and was posed for a sculptor, says Popular Mechanics Magazine. When finished, the building will constitute a stone record of the animal, bird, insect and flower life of the neighborhood.

Hall to Be Memorial

Out of the sand along its seashore, Atlantic City is building the world's largest convention hall. When it is completed the hall will be large enough to hold the entire populatin of Atlantic City—well over 50,000 persons—and leave room for a three-ring circus and a national bathing beauty contest besides. The huge structure will stand as an unnamed memorial to Mayor Edward L. Bader, who conceived the plan but whose death last January prevented him from seeing his dream take the form of reality.

Insect Pests

Insect posts are still advancing against the forces of science. The cotton crop losses from the boll-weevil in 1927, a year of exceptionally favorable weather, were about 1,487,000 bales, representing a loss of $148,700,400. The corn borer, too, has advanced to the northern limit of corn growing now infesting over 95,650 square miles of Canadian territory.

Request

Pianist—Well, I've played for your father and mother, and now I think I must do something for you. What would you like?

Little Betty—A piece of chocolate, please.

They Stay Put

"Are good husbands hard to find?" asked the sweet young thing.

"No," replied the old married woman, "a good husband spends his time around home and you always know where he is."—Cincinnati Enquirer.

Lamp Swappers

The busiest exchange bureau in the world is the one at which millions of us are forever trying to swap "Old Lamps for New."—American Magazine.

It's Never Happened

One of the sights our neighbor's wife tells us she has never seen is that of a man violating the speed law with a lawn mover Springfield Union

Move Village 200 Miles

Two long trains recently moved the village of the army vocational center of Great Britain from Caterick to near Swinton, England. The population, consisting of residents and officers, were conveyed with the furniture, live stock and other possessions to the new spot, where quarters had been arranged for them. The change was made to the larger quarters in order to care for the growing number of World war veterans who desire vocational training.

INDIANS WISE WHEN THEY CHOSE LIVER

Any custom that has held its own for generations usually has something back of it, no matter how little it appears to be supported by modern science, in the opinion of Hugh S. Cumming, surgeon general of the United States Public Health service.

"For a thousand years," he says, "the Chinese have prescribed the heads of powdered toad fish as a remedy for heart trouble, and now adrelin, the most up-to-date drug for the treatment of heart disease, has been found to exist in the head glands of that fish.

"For generations the fact that American Indian hunters always chose the liver and the white men the meat when the animals they had trapped or killed were divided was quoted as proof of their ignorance and primitive development.

"Yet in the last five years the great nutritive value of liver has come to be recognized and it is prescribed in cases of anemia."

March Became Long Hike

Commander-In-Chief Field Marshal Sir William Birdwood has completed a march of inspection that became a tramping trip along the northeastern frontier of Burma. After inspecting three battalions of military police at Myitkyma and Bbamo, he marched 250 miles from Bhamo to Lashlon. Owing to heavy rains, 60 miles of mud were covered on foot in three days. In addition to this the swollen Shiveli river prevented his car from making the passage from Nam Khan to Muse and Birdwood and his staff walked 25 miles over the Loilun range, 6,300 feet high, down to the Hosi valley.

PERTINENCES

A womanly woman neither worships nor hates a man.

One can be a "free thinker" without being a free talker.

Conceit sometimes makes a man admire his own mistakes.

One way to put in your time is over the pawnbroker's counter.

A man is always discovering things that others knew long ago.

A big heart and a big pocket book seldom travel far together.

In trying to win a girl's heart a young man often loses his head.

The man who tries to prove too much very often proves nothing.

Executive ability is the faculty of getting some one else to do your work.

Show the elderly how to enjoy a vacation and they will take more of them.

Every woman has some aim in life, but what she hits is often a different thing.

None of the predictions of the end of the world affect the price of real estate.

The wise worm doesn't crawl out until after the early bird has eaten his breakfast.

Not one person in 1,000 can describe interestingly a movie he has seen. We've quit trying.

Does it make you happy to be generous? That, then, is one of the happinesses that wealth can bestow.

Memorial Planned Is to Be "Everlasting"

Whiteface mountain is the site for a monument to be illuminated by an eternal perpendicular flame in memory of New York state soldiers who died in the World war Whiteface mountain lies near the head of Lake Placid. The plan is to erect a granite shaft at its summit, topped by an acetylene light, which will be visible for a radius of 125 miles. The radius will include Montreal and numerous resorts in Vermont, New Hampshire and southern Quebec, as well as New York state. The beauty spots from the site of this proposed memorial include 65 bodies of water, among them Lake Placid, the largest lake of its altitude east of the Rocky mountains; the St Lawrence river, Saranac lake, the St. Regis chain, the Ausable river and Lake Champlain. The eternal flame idea is patterned after the light in the Arc de Triomphe in Paris. The memorial includes the construction of a motor road of seven miles to the moumain.

Many City Families Work

A survey of 25,000 families in Chicago shows the average number in a family to be fewer than five. In two-fifths of Chicago families the wife, or children, or both, are wage-earners An interesting fact is that the number of children in divorced homes and the number living in lodging houses and hotels is very small. It takes parents twenty-four years to rear a four-child family. During seven years of this time one child is cared for; during another seven years, two children; during six years, three children, and during the last four years, four children. Best of all, there is nothing more worth while if the children are brought up right.—Capper's Weekly.

Plea for Matrimony

Capt. E. J. King, who holds both the Distinguished Service medal and the Navy cross, and who at the age of forty-seven has just qualified as a flyer was defending marriage at the Army and Navy club.

"The Freudians and the super-realists and the bolshevists," he said, "can knock marriage all they please, but the fact remains—"

And Captain King chuckled.

"The fact remains that a bachelor only gets half as much mileage as a married man out of a pair of socks."—Exchange.

Lions at a Bargain

Lions may be bought for less than greyhounds, according to a valuation placed on wild beasts at the London zoo. Eleven are valued at only $250 each. Tigers are worth at least double, while the Indian rhinoceros, priced at $5,000, has the highest figure. Hippopotomi are considered less valuable, one-year-old "Jimmy" being listed at $2,000. The total valuation of all the zoo animals is nearly $175,000.

Admire American Methods

England is becoming interested in the American method of raising chicks by wholesale and sending them by parcel post to poultry farms. England has many chicken raisers, but no system for sending the birds by mail, and stories that 400,000,000 chickens were carried by parcel post in the past year are almost beyond the Englishman's comprehension.

The Trouble

Sympathetic Neighbor—I hear you lost your husband. It's a terrible thing.

Widow—Yes, indeed. You know what you're losing but you don't know what you'll get the next time.—The Pathfinder

Not a Word

First Maid—Your fiance stutters quite a bit, doesn't he?

Second Maid—Yes; but it doesn't matter. After we are married he won't have a thing to say, anyway.

Change Evidently Needed

"It says in this book that looks are determined by one's diet."

"Then for heaven's sake keep off plain food for a while!"

For Fall - -

Now is the time to get the material for your Fall Fencing—and this is the place where you can get it, and at a price that is not a strain on your pocket-book.

AMERICAN FENCING—we carry a full line of this Woven Wire Fencing in all standard widths. Our price is right, too!

POSTS—We carry a complete line of Red Top Steel Posts, Cedar Posts, Creosoted Corner Posts, Steel Corner Posts, Braces and Steel Gates.

FOR HOGGING DOWN

Evrything needed here for that temporary fence. It don't cost so much either!

FOR FALL TILING

Now is the time to get your tiling done, and we can supply you with high grade tile at lowest prices. See us today!

NEWS REVIEW OF CURRENT EVENTS

Smith in Acceptance Speech Is Outspoken for Change in Prohibition Laws.

By EDWARD W. PICKARD

WITH the courage of his convictions Gov. Al Smith in his speech of acceptance frankly declared his opposition to the Eighteenth amendment and the Volstead act as they now exist. This was the dominant note of his address, which was delivered in the assembly chamber at Albany because of a persistent rain that prevented the outdoor exercises. Necessarily Smith, like Hoover, declared that if elected he would honestly and vigorously enforce the dry laws. He also repeated his belief that the saloon would not and should not return. But the vital part of this section of the speech was a demand for the modification of the Eighteenth amendment to permit the sale of alcoholic beverages by state agencies if approved by popular referendum; and for amendment of the Volstead act to allow each state to determine its own standard of alcoholic content, the maximum not to exceed that provided by the amended Eighteenth amendment. Severely scoring the evil conditions which he said had resulted from the present dry laws and the failure to enforce them, the candidate declared: "I raise what I profoundly believe to be a great moral issue involving the righteousness of our national conduct and the protection of our children's morals."

Concerning the farm relief problem Smith went little further than the Houston platform on which he stands. He promised to take up the matter immediately after election, acting on the advice of experts. He pledged himself to the restoration of honesty in government and to scientific tariff making and declared against "sudden or drastic" changes in the economic system which might upset business. In other matters he followed the platform quite closely.

Unbiased and nonpartisan opinion is that Smith in his address showed he is making his chief play for the Eastern states; that he believes the South will be solid for him, and that his hopes of winning states in the Middle West are not excessive. His prohibition program is clear enough and is workable, and probably satisfies all the wets except those who still insist the Eighteenth amendment should be utterly wiped out. No one supposes it will please the wet Democrats of the South. But it is likely their attitude is fairly expressed by the Arkansas Gazette of Little Rock, which says:

"The Gazette is for the present dry laws, fully and strictly enforced. It cannot shift ground an inch toward compromise with Governor Smith. Nevertheless this newspaper can and will continue to support Governor Smith for President. The changes Governor Smith deems necessary and expedient would be defeated in congress by dry legislative votes."

GOVERNOR SMITH took time last week to reply to the attack on his record in the New York legislature made by William Allen White, which already had been disowned by the Republican publicity chief. The governor justified his votes on liquor and social vice matters by explaining the circumstances, and though White made answer from Paris it was generally admitted that Smith had much the better of the argument.

HERBERT HOOVER in his progress from California to Washington stopped at West Branch, Iowa, the town of his birth, where he was accorded a fine reception by the villagers and took occasion to elaborate his views on farm relief. He made one concrete proposal—that of an adequate federal revolving fund to be placed at the disposal of the farm industry and intelligently used in financing whatever measure of crop control is found necessary to stabilize prices. He also said that, if elected, he would ask ex-Governor Lowden to be among the counselors for a farm solution. He administered a final blow to the equalization plan with the words: "It is not intended to put the government into the control of the business of agriculture, nor to subsidize prices of farm products and pay the losses thereon, either from the federal treasury or by a tax or fee on the farmer."

After a conference with farm leaders in Cedar Rapids, Hoover went on to the national capital.

PRESIDENT COOLIDGE named, as secretary of commerce to succeed Hoover, a personal friend, William F. Whiting of Holyoke, Mass., and the new cabinet member was sworn in immediately at Superior, Wis., in Mr. Coolidge's presence. Mr. Whiting, who is sixty-four years of age, is head of the Whiting Paper company. He has never before held public office but has been keenly interested in politics and was a delegate to the Republican national conventions of 1920, 1924 and 1928. His selection was a surprise in Washington, where it had been expected that either Dr. Julius Klein or Walter F. Brown, both high in the department, would get the appointment.

COMMANDER RICHARD E. BYRD'S antarctic expedition, the most elaborate of its kind ever organized, is on its way toward the South pole. The bark City of New York sailed Saturday from New York carrying planes and equipment to the hopping-off place, and also 31 of the 70 men who compose the expeditionary force. Commander Byrd and the rest of the men will sail in September on the whaler Larsen and the Chelsea, taking more planes and equipment.

The City of New York is under the command of Capt. Frederick C. Melville, a cousin of the late Herman Melville, author of sea stories and creator of "Moby Dick," the great white whale. He has been going to sea since he was thirteen years of age. He is now forty-four. The bark is equipped both with sails and auxiliary engines, but will use its sails whenever possible to conserve the fuel supply.

BERT HASSELL and Parker Cramer, who started to fly from Rockford to Stockholm with stops in Ontario, Greenland and Iceland, reached their first stopping place all right, but on their second hop they disappeared. When hope for their safety was fading amateur radio operators in Chicago received messages from them saying they had been forced to land on a small island "fifty-miles off the Newfoundland coast," that they were safe but their food supply was getting low.

ART GOEBEL, the famous winner of the Dole race from San Francisco to Honolulu last year, established a new record last week. Accompanied by Harry Tucker, he made a non-stop flight across the continent from Los Angeles to New York in 18 hours and 58 minutes. The distance was 2,710 miles and the average speed of their Lockheed-Vega plane was a little over 142 miles an hour.

BUSINESS of running liquor across the Detroit river from Canada went to pot last week when a court in Ottawa ordered the stocks of the exporters seized within 20 days. Forty liquor dealers, most of them in Windsor, were reported to be hastily clearing their stocks for Vancouver, from which point they may, if lucky, be able to get them into the United States. The Windsor rum fleet was dispersed, and in Detroit and nearby places the prices of liquor rose rapidly. The Detroit river trade was estimated by Ontario authorities to have amounted to a million dollars a month.

First efforts by Chicago and Toronto interests to merge all breweries in western Canada under one holding company have been completed with the merging of all breweries in Saskatchewan. The scheme outlined is to organize breweries in Manitoba, Alberta, Saskatchewan, and British Columbia and then to consolidate the organizations into one huge holding company. Coupled with the brewery mergers are plans for a gigantic export business.

NINE persons were killed and property damage amounting to hundreds of thousands of dollars was caused by a terrific wind storm that swept through parts of Minnesota and Iowa. Many buildings were wrecked and crops suffered seriously. The town of Austin, Minn., sustained the worst of the blow. In northern Iowa hail followed the wind and destroyed the corn crop in a large district.

American naval forces are rendering aid to 10,000 inhabitants of Haiti who were made homeless by the recent tropical storm. The crops, especially coffee, were badly damaged and the people in the stricken area were without food and medical supplies until the arrival of the United States naval tug Woodstock.

CHINA has a new trouble, but it isn't likely to arouse great interest at this distance. Western Manchuria has been invaded by a large force of Mongolian cavalry that is led, according to report, by Russians. The Manchurians were defeated in two bloody battles and sections of the railway were destroyed. Japan was worried by the prospect of the weakening of her influence in Manchuria.

ON THE eve of the signing of the Kellogg anti-war treaty France has aroused the animosity of Italy again by holding extensive attack and defense maneuvers in the department of Haute Savoie near the Italian border. Many of the crack French regiments were engaged in the practice and artillery and all the elements in warfare in a mountainous country were used. Italy gave its reorganized army a successful test in maneuvers along the River Po.

Because of the extensive arrangements for his visits in Paris and Dublin, Secretary of State Kellogg abandoned his plan to stop in London after the anti-war pact is signed.

PREMIER ELEUTHERIOS VENIZELOS won an extraordinary victory in the Greek parliamentary elections. The Venizelist party secured 224 seats out of 250. The Royalists elected 20 members, the Kafandarists four and the Pangalists only two. Venizelos now has a free hand to put in operation his program, which includes financial reform and better relations with Yugo-Slavia.

WALDEMARAS, premier of Lithuania, having refused to negotiate in Geneva his country's dispute with Poland, the government at Warsaw has yielded and agreed to the Lithuanian suggestion for a conference at Koenigsberg before the Geneva meeting in order to bring to an end the unofficial state of war between the two countries. The Polish note was notably friendly.

ONE of America's spectacular figures in politics, diplomacy and journalism disappears with the death of Col. George B. Harvey at his summer home in New Hampshire. Nominally a Republican, he was the first to boom Woodrow Wilson for the Presidency, but later they became political enemies, to say the least, and in 1920 Harvey had a good deal to do with the nomination of Harding by the Republicans. His reward was the ambassadorship to the court of St. James. During most of his life he was actively connected with newspapers or magazines and for a time he was president and managing director of Harper & Bros.

Another notable who died last week was Viscount Haldane of Cloan who, as secretary of state for war, created Great Britain's territorial army and thus contributed largely to the success of the allies in the World war. He was driven from office by popular outcry because he reiterated his love for German scholarship, though there was no question of his loyalty.

IF THE Interstate Commerce commission approves the consolidation of the Great Northern and the Northern Pacific railways, there is likely to be a new railroad grouping which would bring into co-operation those lines, the Southern Pacific and the Burlington system. This prediction followed the announcement of important changes in the personnel of some of the companies. Hale Holden, president of the Burlington, is to be chairman of the board of the Southern Pacific, of which Paul Shoup will be made president; and other changes were in prospect. The new grouping, with its rate agreements with Eastern lines, would offer a service spanning the continent by three routes.

DETONATION IS MOTOR PROBLEM

What Happens When Gas Vapor Fires in Cylinder Baffles Engineers.

Just what occurs when gasoline vapor is introduced into a cylinder combustion chamber, compressed and fired is a problem that has baffled automotive engineers. However, they have made progress in its solution with the resultant increase in power and smoothness of operation found in the better cars of today.

Study of the problem is comparable to the youthful researcher who, on July fourth, holds a lighted firecracker in his hand "to see what will happen." Both the boy and the automotive engineers are dealing with something that operates practically instantaneously and with terrific force.

Carbon Knock Resulted.

The principles of an internal combustion engine are well known. Vaporized gasoline is mixed with air, heated, and then drawn into the cylinder by the downward stroke of the piston. The upward piston stroke compresses the vapor and an electric spark explodes the mixture, the resulting explosion transmitting energy to the engine by means of the power stroke of the piston. Engineers also know that increasing compression increases power, up to a certain point and then power is lost and "detonation" or what is commonly known as a carbon knock, results. Also they know that different curves in the combustion chamber influence the useful force of the explosion.

During the two years that a new car was being designed months of effort was expended to obtain best results in combustion. Engineers worked in co-operation with the engineering staff of a large corporation and the laboratories and equipment of the corporation in solving this problem.

Design New Chamber.

This co-operative effort resulted in a new design of combustion chamber which gives high compression performance without the use of special fuel. The compression ratio is 5 to 1, or approximately 98 pounds. The design further controls the explosion so that the rise of pressure within the chambers and cylinders is progressive and the pressure peak is more nearly continuous. This results in additional useful power per explosion.

Two distinctive features bring about this desired result. One is the step-like profile of the chamber roof above the pistons and the other is the curves that form the four sides of each chamber. These factors govern the rate of expansion of the burning gas within the cylinders and bring about the advantages of high compression without "roughness" or detonation.

AUTOMOBILE ITEMS

The automobile has taught us all the difference between a fifth wheel and a spare.

* * *

Nor will it still the highway roadside controversy to call them hotte dogge shoppes.

* * *

If mud and dust are permitted to remain on the finish of a new car, it will soon look like an old one.

* * *

The man who takes a nap while holding a steering wheel usually wakes up holding a harp instead.

* * *

Human Nature, Phase 40—Racing another machine on a country road at 62 miles an hour: Laughing at a hound dog for chasing a mechanical rabbit.

* * *

A Massachusetts man has been arrested for driving his car 11 years without a license. They're so hurried and impatient that they wouldn't even let the poor fellow make it an even dozen.

Shift Wornout Tires to Front Wheels of Auto

It has been pretty definitely established that the rear right tire is the first to wear out, the rear left next, the front right next and the front left last of all.

As a result, practice has become almost general to shift the wornout tires to the front wheels with the idea of evening up the wear.

This, however, is dangerous. When a worn tire blows out on a rear wheel, while the car is traveling at a high rate of speed, the driver still has enough control of the front wheels to guide the car safely out of a dangerous skid.

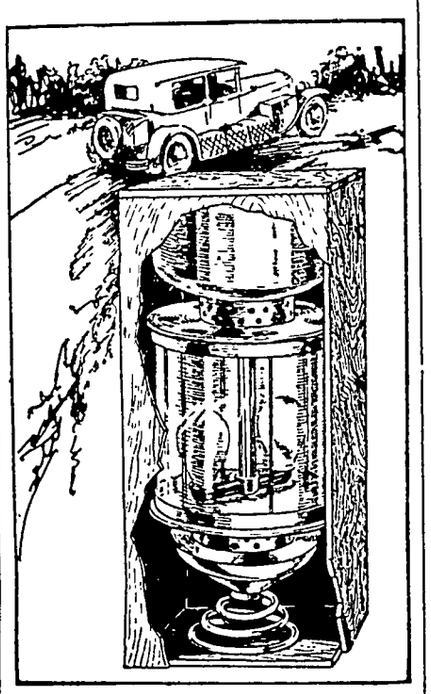
When, however, a front tire lets go, and the car is moving fast, there is almost nothing the driver can do. The steering is thrown out of his control, the car is forced into a serious skid and there is great possibility of injuries to all in the car.

Rather leave a worn out tire on a rear wheel, even though it will wear down so much faster, than risk the dangers that go with changing it to the front. For greater safety, however, a tire that shows the first mark of a tread worn down to the fabric should be taken off and used only as a spare.

Even as a spare, it should be in use only long enough to get a good replacement.

Useful Carrying Case for Gasoline Lanterns

A gasoline lantern is a valuable addition to a motor camper's equipment, but many tourists object to its use because of the frequent breakage of mantles, due to the vibration of the car. The risk of breakage can be eliminated if a coil spring is provided under the dome nut of the lantern as shown, and the lantern is carried in



Gasoline Lantern Case.

an inverted position in a suitable container. The spring should be made of No. 22 or 24-gauge piano wire. The carton in which the lantern was originally packed will serve as a temporary container until a suitable carrying case can be made. The most important thing is to fit the spring and always carry the lantern upside down. —Popular Mechanics Magazine.

Perfect Alignment for Front Wheels Important

Are the front wheels in perfect alignment? If there is any question about it, there is an easy way to find out. Just drive the car over a wet pavement at moderate speeds. Misalignment is certain to show itself through a tendency to skid. If the car feels as if it were skidding, or tending to swerve, even though the steering is straight ahead and the brakes are not being used, the chances are that the alignment is not right and it should be checked up by better methods or by more accurate aligning devices. Since alignment varies if there is much wear on the bushings and steering connections, it is a good plan to run over a rough road and then repeat the test on the smooth, wet paving. Make sure, however, there is no brake dragging.

COMFORTABLE BED FOR OVERNIGHT STOPS

The unique new design for auto interiors which provides a comfortable bed for those who either cannot or do not want to find hotels for the night while touring. By a few easy motions the front and rear seats are adjusted and the bed is ready.

PALACE ORNAMENTS ARE U. S. PRODUCTS

Nepalese Fancy Scales and Cash Registers.

Washington.—American cash registers are ornaments in Nepal.

They glitter from pedestals lining the white marble staircase in the palace of the prime minister, according to an explorer recently returned from India.

Beside the burnished beauty of cash registers gleams the polished nickel of American automatic scales, mechanical chewing gum venders and slot machines. But they are never punched. According to Nepalese ideas a creation of American foundries is better than bronze statues for a staircase.

"American products have a better chance of entering Nepal than Americans," says a bulletin from the Washington (D. C.) headquarters of the National Geographic society, "because the isolated mountain kingdom does not welcome foreigners.

An Absolute Monarchy.

"Only a few British officials are permitted to come over the pass from India and they are not permitted to go far from the capital, Khatmandu. 'The Country of Four Passes,' the Nepalese call their land, which is indeed a walled valley with four hill gates. Their domain under the eves of the Himalayas measures 500 miles long and spreads 140 miles at its greatest width. Within it live 5,600,000 hill people governed by an absolute monarchy.

"The monarch's commands, however, are both made for him and enforced by the prime minister, who lives in the cash-register palace.

"Nepal is the stronghold of orthodox, unadulterated Hinduism. The local caste system has more rules than intercollegiate football. Thus among the high caste are:

1. Brahmans, who eat rice cooked only by members of their own caste. They drink water from the hands of members of castes Nos. 2 to 19.

2. Surmgasi, who eat rice cooked by Brahmans, Thakuris, and Khas only. They drink water from the hands of all castes up to No. 19.

3. Thakuri, who eat rice cooked by Brahmans only. They drink water from hands of all members of all castes up to 19.

4. Khas or Chitsi, who eat rice cooked by Brahmans and Thakuris only and drink water from hands of all members of castes, Nos. 2 to 19.

"The intermediate castes run from 5 to 19, inclusive, and the lower castes from 20 to 24, inclusive.

"The five castes from 20 to 24 do not have Brahmans as priests. Their priests are members of their own castes. They have no dealings of any kind with castes 1 to 19. They must leave the road on the approach of a member of castes Nos. 1 to 19 and call out to give warning of their approach. They may not enter the courtyards of temples.

Army Life Lures Men.

"As among the Russian Cossacks, war is the chief business of the best people in Nepal. The army is the only profession open to a 'gentleman' and so the rare visitor sees troops everywhere.

"Splendid and colorful as are the reviews and state ceremonies with their elephants in gorgeous trappings and the officers in brilliant uniforms, the Nepal women outdo them. They believe in color and lots of it. They fold yards and yards of muslin, gathered at the waist, spreading at the feet, so that a Nepalese belle looks as if she were about to depart for a masquerade ball dressed like a fan held upside down. Above the skirt the Nepal lady wears a tight-fitting velvet jacket. Her hair she winds in a knot, fastened above her forehead with a gold plaque. A heavy gold necklace and bangles complete her attire but the final touch is the theatrical darkening of the eyelids by which she expresses langurous lure. Her female attendants, by way of contrast, wear oriental trousers.

"Nepal is probably the only country in the world reached by stairs. The person lucky enough to get a visitor's permit literally steps down into the valley, because the main road from India ceases to be a road when it gets to the highest passes and at the last gate in the hills, the Chandra Giri, the traveler descends 2,300 feet by stone steps; probably the world's longest stairway. At the bottom are good roads and motor cars to convey the visitor to the capital.

"The view of Nepal valley from the top of the last pass is unequaled, travelers declare. Opposite lie the highest mountains in the world, the Himalayas, always tented under a deep blanket of snow. And at their feet is the blue-veiled valley with its orange groves, yellow fields and red-roofed towns."

22 Couples in Village Celebrate Wedding Day

Fondettes, France.—Twenty-two diamond, golden and silver weddings celebrated the same day is the record of this tiny village of Touraine. The entire population of the countryside turned out in honor of the "old folks" and gave them a tremendous reception.

The 22 couples alone almost filled the little town hall of Fondettes. There were speeches by the mayor, a parade through the village, and free wine for everybody. The old couples afterward danced until midnight with the young folk on the village green

LIVE STOCK

EDER CATTLE HIGH IN PRICE

ices of feeder cattle probably will ain relatively high for some time, e opinion of C. R. Arnold, of the l economics department of the State university. Arnold bases belief on the fact that there is extremely small number of beef e on the ranges, with a decided tage of breeding cows. Further, ld points out, it requires several s to increase this supply to any t extent.

eders at the present time are ring an unusually high price, and ld doubts whether the supply of e will catch up with the demand some time.

e reason for the present shortage e supply of beef cattle goes back ral years, according to Arnold. eme enthusiasm eight or ten years over beef cattle, and high prices breeding animals at that time, a great stimulus to production. a result, the market was over-plied and even the best cattle ers in Ohio began to lose money r barns and feed lots in western o have been empty during the past or five years. When the price of cattle dropped and there was no ntive to buy or raise feeders the eding stock on the ranges was wn on the market and still further ressed the price, but curtailed the ply.

Is this curtailment, at the source supply, which is responsible, at the ent time, for the shortage and prices of feeder cattle and breed-stock.

Many Farms Sows Not Properly Treated

e have frequently observed that many farms the brood sows are not perly cared for. On some farms many sows are kept together for ety, writes Dr. George H. Conn in Indiana Farmer's Guide. Not more n 10 to 15 sows, even in large ds, should be kept in one group. n or less sows make a satisfactory up, while five or six to a group is l better.

nother mistake that is often made o permit horses to run in the same or yards with the brood sows. is is a very dangerous practice and nable brood sows are often injured m colts and horses.

Sows should never be kept in large ups where they can crowd at night keep warm, as this often results in ir developing colds and other con-ions which sometimes become seri-s.

Always keep a lookout for the sows t fight the others in the herd. If a up has an animal in it that is a ter, she should be removed before e injures some of the other sows.

t is a very good practice to keep e brood sows in as small groups as ssible and to pay particular atten-n to their housing to prevent wding during cold weather.

alanced Feeding Best Practice With Swine

t will pay hog feeders even better s year than it did last to use pro-n feeds in moderate amounts to bal-ce corn, according to E. T. Robbins, niversity of Illinois. This is espe-ally true in those sections of the te where local corn has been used .

That it pays to balance corn with itable feeds supplying protein at a w cost was demonstrated beyond all ubt last year by hundreds of farm-s who co-operated with their county rm advisers and the extension serv-e of the agricultural college in keep-g hog feeding records. The predic-on that this practice will pay even tter this year than it did last is sed on the fact that corn is higher price and some of the feeds rich protein lower in price than was the se in 1927.

Live Stock Hints

Cleanliness pays in handling all ypes of farm animals.

* * *

Hog oilers are labor savers in lice nd mange prevention.

* * *

From the sanitation standpoint, cov-ed hog troughs V-shaped open-top ind.

* * *

It has been shown repeatedly that gs can be made to grow faster, make heaper gains, and stay in a healthier nd thriftier condition by adding tank-ge or a good animal protein to the ation.

* * *

It pays to feed turkeys well from he time of first feeding until they are arketed.

* * *

Elimination of all of the progeny of oars which have been known to sire nguinally herniated pigs is strongly dvised. Probably, in some cases, this ould not be practical.

* * *

While blue grass pasture does not ank as high as rape or alfalfa as a orage crop for hogs, it does have con-iderable value for fattening pigs.

The DAIRY

LEGUME HAY IS BEST FOR COWS

When the chemist analyzes a feed he finds water, fat, ash, carbohydrates, and protein which are useful to the dairy cow in her feed ration says a circular, "Feeding Dairy Cows," by R. B. Becker, P. C. McGilliard, and John W. Boher, of the Oklahoma A. and M. college.

Proteins are needed for growth They enter into the composition of muscle, bone, and body fluids, maintain the body, are used in developing the body of the baby calf, and make milk proteins.

Ash or mineral compounds, lime phosphates, and common salt, are in the blood and digestive juices. They maintain the skeleton, and especially make the ash in the milk. Fats, sugars, and starches are burned in the body to provide heat and energy or are used to build body fat, butterfat, and milk sugar.

Some crude fiber is necessary to give a limited amount of bulk to the feed, and to aid in digestion. However, feeds that contain too large amounts of crude fiber are usually not desirable in dairy rations under average conditions, because more energy is used in digesting a pound of crude fiber in the body than a cow gets from this material after it is digested, it continues.

Feeds commonly used for dairy cows divide themselves naturally into six general classes, such as legume hays, grass hays, farm grains, and oil seed, succulent feeds and pasture crops, milling by-products, and miscellaneous feeds.

If a cow is to be given only a single feed, she will thrive longer and produce more milk and butterfat on a legume hay alone than on any other one thing. It is impossible to even have a cow survive for a long period of time when fed straw or cottonseed hulls alone, or on a ration consisting solely of grains. Even alfalfa hay is too bulky to enable the cow to produce a great amount of milk.

In general, roughages are the main source of lime in the rations of milk cows. Roughages are relatively high in crude fiber and on this account yield less total digestible nutrients than do farm grains. Roughages as a whole are low in phosphates which are needed for bone, blood, and milk, though legume hays contain more than twice the amounts found in grass hays.

Individual Feed Record Will Determine Profit

Feeding, more than anything else, determines the profit a cow makes. The average cow is fed carelessly. Too often the farmer feeds the same amount to each animal. A cow cannot produce the greatest amount of milk it is possible for her to produce and do it profitably unless the amount of grain fed her is enough to first meet her bodily needs with enough extra to make the highest yield of milk she is capable of giving.

Increased profits of from 25 to 100 per cent can be secured by any farmer who will adopt the simple method of feeding each of his cows according to her individual production. This means weighing each cow's daily milk production two successive days each month, and then feeding each individual cow a pound of good grain feed each day for every two and one-half to three pounds of milk she produces, if she is of the Jersey or Guernsey breed, and a pound of grain for every three and one-half to four pounds if she is of the Holstein breed.

Feeding Good Cows Grain as Pasture Is Insufficient

"Grass alone is not enough," declares A. J. Cramer, supervisor of Wisconsin Herd Improvement associations, speaking in terms of summer milk production in Wisconsin.

While a firm believer in the fact that it pays to feed grain to good cows, whatever the pasture conditions are, Cramer insists that this season, with pastures being unusually short, many Wisconsin dairy cows will not receive sufficient nutrients to maintain milk production and body flesh, unless their pasturage is supplemented with grain.

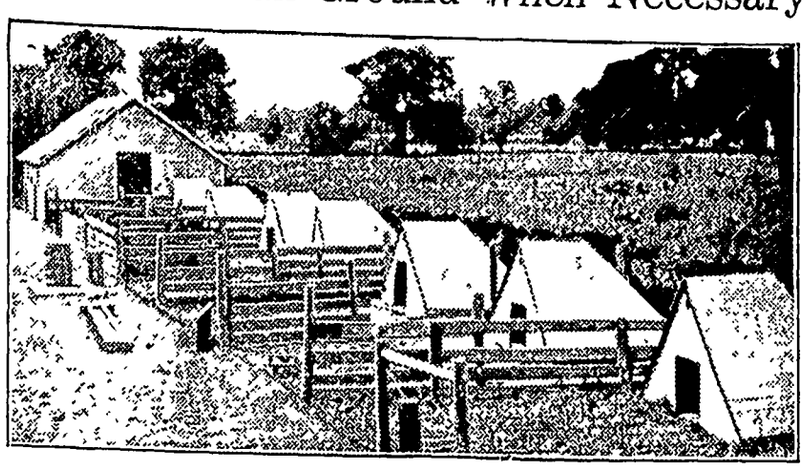
A ration containing about 50 to 75 per cent corn, oats, barley, or hominy will help to maintain the physical condition of our cows, he says. Grass alone will furnish milk, but how long will this heavy milk flow last, without some grain feed to help keep it up, and to hold some of that body weight on our cows? he asks.

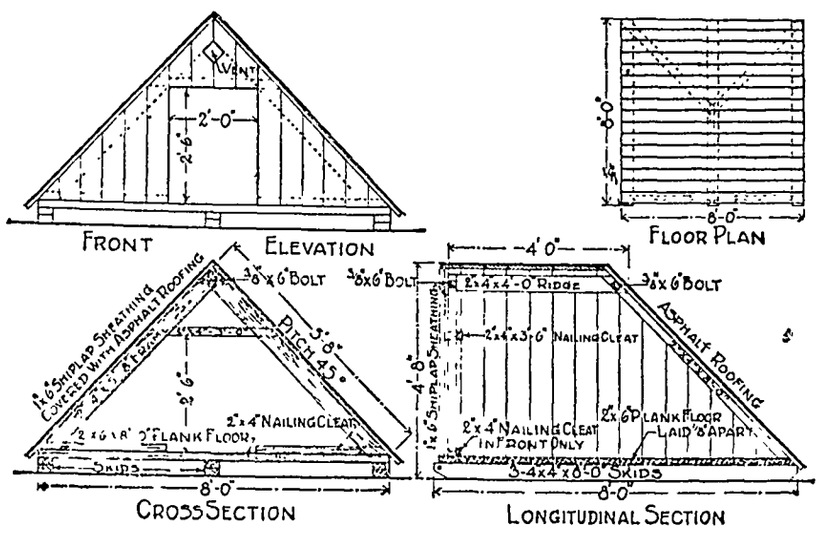
To the doubtful one, he suggests trying grain feeding on one or two cows to learn if it pays.

Silage From Grains

It is fast becoming common practice to use small grains in the making of silage. Any of the small grains may be put into the silo alone or mixed with other crops. Peas and oats form a popular mixture in certain sections of the country. This crop should be cut when the kernel is in the dough stage, also cut fine and packed firmly in the silo. Silage from small grains is usually inferior to that of corn silage, but superior to legume silage.

A-Shaped Hog Houses Can Be Moved to Clean Ground When Necessary





By W. A. RADFORD

Mr William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Since agricultural colleges have been advocating pasturing hogs and pigs on ground that was not used as pasture the year before as a means of saving a greater number of young pigs and to prevent the ravages of round worms and other enemies of hogs, the A-shaped hog house has come into greater use than ever before. An individual home for the sow and her pigs is believed to be the best method of housing.

Shown in the illustration are a number of A-shaped houses, each with a yard for the young pigs to exercise in, while the houses provide shelter at night and when the weather is inclement.

Houses of this type are simple to build, as will be seen by the sectional drawings that accompany the view of the houses and yards. Good matched lumber should be used in order to make sturdy homes that will be weather tight. The walls are well braced, the roofs are of shiplap sheathing covered with asphalt or other weather-tight roofing.

When these houses are used the sow usually is put in the house several weeks before farrowing time, so that she will become accustomed to her home before the pigs arrive. A plank floor raised above the ground so that it will be dry, and good, clean bedding provide the "nests" for the pigs. Glazed sash may be set in the sloping sides of the houses if desired and are beneficial when these houses are used for early spring farrowing.

The advantage of the A-shaped house over the colony farrowing house is that it may be moved to clean ground whenever such action is advisable.

Windows Are Called Eyes of Residence

For many years, probably centuries, windows have been used in residences. In spite of their being so generally used, they have not received the consideration that has been given other items.

When it is considered that windows are the eyes of the home, that they are the means of admitting the sunlight and air, it seems strange that they have been just a part of the house instead of one of the major items which make the house a home.

Casements were the original window. They possessed beautiful lines, were artistic and broke up the flat wall appearance when they were open, so much so that architecture was built around them. The early Americans were among the first to depart from casements, and they took up the double-hung window, or what the French call the "guillotine" window.

Formerly all casements were made of wood, and as time went on the limitations of wood made the casement less serviceable. Wood was subject to weather foibles, and shrunk or stuck, and sooner or later reached a point where the window had to be repaired or replaced.

The natural result was to use steel for these casements, since steel windows had proved so satisfactory in industrial buildings, schools, libraries and banks. This took place within the last five years, and as the acceptance grew, because of the practcal qualities of steel casements, the manufacturers were able to place on the market a steel casement within the price range of most any home owner.

The architects have given wide acceptance to steel casements because of their beauty and efficiency. Steel has none of the limitations of other types of windows, and casements made of steel are today the modern window for residential use.

Draperies, shades and screens can be used with far more satisfying results than is possible with double-hung windows, and they are easy to erect. The fact that movable sections, or ventilators, are integral with the frames insures a more positive result when setting the windows in the wall. The narrow, trim steel lines improve their appearance; their life, under natural performance, is indefinite.

Homes Indicate the People Living in Them

People reflect their environment. Those who live in shabby, down-at-the-heels houses are likely to feel depressed and discouraged. We borrow much of our confidence and spirit from our surroundings. If they have nothing to give—no hope or confidence, no pride in home or joy in living—then they become a liability of such proportions that only the most Herculean strength can resist them.

Oak Flooring Requires Attention Twice Yearly

Oak and other hardwood floors require attention and should be gone over and cleaned and touched up at least twice a year.

They should also be polished frequently and wiped off, using a soft cloth. Remove mud stains with soap and water, but do not use the soap too freely. Be careful with gasoline when removing stains, on account of inflammability. Where benzine fails, try oxalic acid.

A floor that is old and has become dark with age, having been oiled, as kitchen floors usually are, should be treated with varnish remover, which will soften up the oil, which in turn must be removed with cloths, washing off with benzine or turpentine.

Then bleaching powder should be applied over the floor and all difficult spots treated with oxalic solution, used strong. If the acid fails to remove discoloration try the bleaching powder also.

When a floor has been cleaned and touched up year after year it will need an overhauling, a cleaning off with steel wool or varnish remover, whichever may appear better adapted for the purpose. Clean off down to the wood and then finish as with new wood.

Cleaned-off floors do not usually wear as well as new floors, owing partly to the use of chemicals in the cleaning process, some of which remain in the wood fiber and injure the subsequent finish. This may be largely obviated by using neutralizing fluids after the removers or other liquids used. Sal soda may be used, followed with vinegar as a neutralizer, and afterward plenty of clear water.

Tile Used for Floors Roofs and Partitions

Lightweight and incombustible tile for use as fireproof partitions, roof-decks and floors are manufactured from gypsum and wood fiber, with about 97 per cent of the whole being gypsum and the balance wood fiber. When used for partitions such tiles are laid up very much as brick is laid up, only the mortar used is a gypsum mortar.

For roof-decks they are manufactured to special sizes, laid across the steel roof members, fastened and then are ready for any standard kind of a roof covering. When used for floors, they are covered with cement topping, over which the finish flooring is applied.

In addition to barring fire, because of their incombustibility, such tile reduces the transmission of heat and sound from room to room or floor to floor, because of the natural insulating properties of the gypsum from which they are made and because of the hollow air space that each tile contains. They also can be sawed to fit odd-sized spaces with the same ease that wood is sawed and nailed.

FARM POULTRY

COCCIDIOSIS CAN BE CONTROLLED

Drugs, no matter how impressive their labels, are of no value in controlling coccidiosis, chick disease that is fully as bad as it sounds.

The poultrymen who regularly every spring lose chicks from this disease might better put their faith in inexpensive sanitation methods and the feeding of milk to control coccidiosis, according to extension poultry specialists at the Ohio State university.

Scientists at the University of California tried these medicines to control coccidiosis: Hydrochloric acid, catechy, a mixture of bichloride of mercury and sulpho-carbolates, potassium dichromate, powdered ipecac and bismuth subnitrate. None of the drugs was effective.

"The disease can be controlled," the Ohio specialists say, "by sanitation and by liberal feeding of milk. The milk helps by producing acidity in the ceca and by stimulating rapid growth. The mash recommended by the University of California is this: Forty pounds of dry skim milk, 10 pounds of wheat bran, 30 pounds of yellow corn meal, 20 pounds of ground oats or barley.

"Start feeding this mash as soon as the presence of the disease is determined. Keep the mash constantly before the chicks in hoppers. The essential thing is to get sufficient milk into the chick and to keep the house and surroundings absolutely clean.

"Sick chicks should immediately be separated from healthy ones. Burn the dead ones."

More Than One Culling Is Essential in Year

Culling hens is the process of removing from the flock the undesirable, the object being to increase the average egg production of the flock and to retain for breeding purposes those hens which possess superior qualities. While the term culling is usually applied to hens during their laying period, successful poultrymen are constantly employing a system of culling, including the eggs selected for incubation, the young stock at broiler size, the pullets just before they go into their winter laying quarters, and the males used as breeders. The greatest emphasis in the past has been placed on the laying flock on the basis that the best producers in the past will naturally be the best producers in the future.

The first requirement for successful culling is the treatment of the flock prior to the culling process. Obviously good hens will appear as culls if they have not received proper rations or care. The most expert will be helpless in determining the relative value of various hens unless the hens have been fed satisfactory laying rations in adequate amounts.

Egg-Laying Difficulty Is Very Easily Cured

It often happens that a hen has difficulty in laying an egg—probably a particularly large double-yolked one. Such a bird is easily detected. Not only is she to be seen visiting the nest again and again without effect, but she is visibly ill at ease, crouching about with tail down and a generally woe-begone appearance. The quickest way to relieve her is to give her two teaspoonfuls of castor oil (by means of a clean fountain-pen filler), and immediately after to pour into the vent two teaspoonfuls of olive oil. This will inevitably result in the egg being passed within an hour or so.

Like Old Roosts

Pullets learn to like their roosts in the colony houses and fruit trees. After they have been housed for several weeks the weather may be warm and sunshiny, and there is a great temptation to turn out the flock for a few more days of exercise on the range. If this is done, and the pullets have any way of returning to their old roosts, they are apt to leave the laying house some evening, and it is a most discouraging job picking them from the trees.

Corn Is Important

Good yellow corn is very important in mash and scratch feed. Difficulties experienced with coarsely cracked grains have caused some people to not use it as much as would otherwise be the case. When corn is cracked, it should be sifted and the finer parts put into the mash. The remainder should then be used as scratch grain. If fine parts of cracked grain are not fed in the mash, it will not be eaten and will mold on the floors and other damp places.

Sun Saps Pep

Exposure to the sun turns white plumage yellow, bleaches yellow and buff plumage, robs black feathers of their luster and turns them brown. The sun which puts life into chickens, if given in continuous doses saps their pep and stunts their growth. Ducks suffer even more. Poults wilt. Whether it be a shelter of branches or burlap, or the living shade of bushes and trees, give the poultry a hiding place from the hot sun during the summer season.

CAP AND BELLS

THE UP AND DOWN OF IT

He was a good cook, and the explorers were trying to persuade him to make the long flight into the wilds with them.

"Oh, Rastus! Come on and go! Nothing's going to happen to you."

"But what if Ah gits up dar and wants to come down in a hurry?"

"Why, didn't you know the plane was equipped with elevators?"

"Elevatahs! Hee, hee, hee! Dem elevtahs sure to be gwine up jes' when Ah's a-coming down! No, sah, boss. Not me!"—Aero Digest.

BUT ONE OPENING THERE

Applicant—I just stepped in to see if you have an opening for a young man.

Business Man—The only opening I have is the one you just came through. Don't leave the door open as you go out, please.

Puzzled Public

The Public murmurs in surprise
"I'm sure I am not quite a dunce.
A hundred issues now arise.
Can I decide them all at once?"

His Pet Aversion

Defendant (in divorce court)—We could get along all right if my wife did not have the habit of ignoring me entirely at times.

Judge—And you mean to base your defense on the fact that your wife ignores you?

Defendant—Yes, your honor, if there is anything that makes me see red it's ignorance from my wife.—Capper's Weekly.

A Small Order

The Landlord—I'll be fair. I'm willing to spend one month's rent in decorating.

Mr. Littleflat—All right. Here's my check. Put it in one dollar bills and paper the living room with 'em.

No Use for It

The Salesman—I can recommend this machine for its simplicity. A child can operate it.

Old Miss Leftover—Sir! Are you aware that you are addressing an unmarried lady?—Kansas City Times.

THE POOR FISH!

Lobster Cop—Hey, you're pinched!

Impetuous Crowd

The aviator goes his way,
With bold achievements thrilling us.
He tries to land in such a way
That won't result in killing us.

Just a Name to Him

"Then you won't invest?"

"No."

"I tell you this is another Golconda."

"That means nothing to me. What are the original Golconda shares listed at?"

Too Torrid

Auntie—What's the matter, dear? Don't you like your asparagus?

Elsie (four years old)—Yes, auntie, but the handles are so hot.

Setback for Team

Ann—Just think, Ed is on the football team.

Mary—That's fine. What is he? Halfback or quarterback?

Ann—He's a drawback. Charlie Bangs says he's the greatest drawback the team ever had.

Not a Bad Showing

"Does your wife live within your means?"

"Just flops over a little around the edges."

Miss Viloa Freie is entertaining the Larkin Club this afternoon.

Miss Fern Stille is assisting with work at the C. A. Larsen home

GOOD BALL GAMES AT THE HANCOCK COUNTY FAIR SEPEMBER 11-14. 1tc

Bernard Smid was a Mason City isitor Sunday afternoon.

The Missionary Society will meet Sept 6th at the home of Mrs. R. W Elder at 2:30 p. m.

Mrs. Henry Meinders of Belmond ame Tuesday and spent a few days isiting at the T. Blank home.

Mrs John Bock and daughter, Miss Stella were Mason City visitors Tuesday.

Mr. and Mrs. Ed. Buentenbach nd children visited at Mason City Tuesday

Mr and Mrs. Carson and family drove to Kamrar, Sunday for a visit with old friends.

FAST HARNESS RACES AT THE HNCOCK COUNTY FAIR EPTEMBER 11-14 1tc

George Stokesbary and family drove to Blue Earth, Minn. Sunday for a visit

Mr and Mrs. Lew Lewis are enjoying company from Beaver Dam Wis., this week.

Miss Elvira Stille is home from Cedar Falls, where she has been attending summer school

Milvern Ell of Mankato, Minn. visited over the week end with relatives and friends here.

Ernest Lewis and family of Grundy Center visited at the Lew Lewis home Sunday.

Ed Jacobs and family were entertained Sunday for dinner at the home of Mrs Rolfe at Garner.

Mr and Mrs. Chris Jacobs of Garner were entertained for supper at the Ed. Jacobs home Wednesday evning of this wek.

Miss Ruth Johnson left Tuesday r Mason City where she intends to take up a course in nursing t he Mercy Hospital.

Reports are that Miss Leona Lau, who recently underwent an operation at Mercy Hospital, Mason City, s getting along well.

Mss Marlin Croner and Dorothy, ena Schroeder and Adella, and randma Schroeder were Mason ity visitors Tuesday afternoon.

BIG LIVESTOCK AND AGRICULTURAL SHOW AT THE HANCOCK COUNTY FAIR SEPTEMBER 11-14. 1tc

Mr. and Mrs. Eniar Salling drove to Sioux Falls, South Dakota last hursday for a visit with relatives nd friends for several days.

Dr and Mrs. L R Parsons and aughter, Doris, of Belmond, visited at the Dr. Missman home last hursday evening.

Mr and Mrs. C G. Waterman entertained for dinner Sunday Mr and Mrs C F Keraus, and Mr. and Mrs T. F. Mitchell, of Swea City.

The R N A. met Friday afternoon The Misses Viola Freie and Eunice Braund served delicious refreshments.

Clarence Kluckhohn and family and John Etchen and family were Mason City visitors Sunday afternoon.

Elmer Brackett, Jr., of Lincoln, Nebraska came Saturday afternoon for a visit at the R. A. Jorgenson home.

R. A. Jorgenson and family and Elmer Brackett had dinner at the J. Jorgenson home at Garner Sunday.

NOW. is the time for you to get started on your preparation for a business career. The demand for help is wonderfully fine.

THE HAMILTON COLLEGE OF COMMERCE

Mason City, Iowa. 1tc

FOR SALE—A Globe Range, is nearly new. Call at Mrs. Henry Schuldt, Sr. residence. 3tp

Fred Skow and family, who visited for the past week at Cedar Falls, Mason City and other places, returned Tuesday to the J. N. Day home.

Ms. Herb Bailey and daughter, Ruth, who are visiting here, drove to Mason City Wednesday for a visit with Mr. Bailey's brother and family.

Mrs. W. F Pavey, Wayne and Juanita, and Floyd Klotzbach went to McGregor Tuesday for a visit with Mrs. Pavey's parents and other relatives.

Rev. Grosshuesch will leave the first of next week for Waukesha, Wis., to ttend the Synod of the Reformed Church, which will be n session all of next week.

Mrs. Blanche Stille and sons, La Rayne and Keith, left Wednesday evening from Thompson for Valley City, N. D., to spend the winter with Mrs Stile's father there.

AUTO POLO. PLENTY OF EXCITEMENT AND THRILLS AT THE HANCOCK COUNTY FAIR SEPTEMBER 11-14. 1tc

Mr. and Mrs. Ed. French, of Joliet, Illinois, came last Thursday for a visit at the home of Mr. and Mrs. George Stokesbary and family. Mrs Stokesbary is their neice

Mr and Mrs J. N. Day entertained for dinner Friday evening, Mrs. Herb Bailey and daughter, Ruth, nd Mr and Mrs Donald Nissen, of Sioux City

School begins Monday morning, Sept 3. All of last year's teachers return again this year This is perhaps the first time the same teachers have taught for two years here.

Elmer Brackett and Ye Editor went to Ventura Monday and went fishing. The catch consisted of 20 nice perch, averaging a half pound each

Mrs Elmer Arnold returned Friday from Mason City, where she had been staying with Miss Leona Lau, who is a patient at Mercy hospital

Mr. and Mrs. Edwin Kreiger and Mrs Mary Krieger of Mankato, visited at the home of Grandma Schroeder and Mrs. Croner Saturday and Sunday.

The Ladies Aid of the Reformed Church met Wednesday afternoon at the home of Mrs. Lubbe Albers. Delightful refreshments were served by the hostess. All report a nice time

Andrew Wellemeyer expects to leave Klemme the fore part of next week for Kansas City, Kansas, to enter the Junior College there for the coming year Andrew expects to take a commercial course.

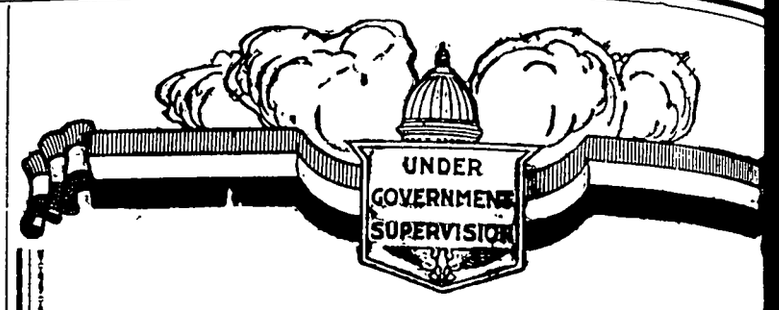
Dr. W. F Missman and son Byrnes, and Mr and Mrs. Ely, returned to Klemme last Thursday evening from Land O'Lakes, Wis., where they spent about ten days at the Missman cottage.

Donald Carson and Donald Gibbs started out last Saturday on a hike through Minnesota, with Winnipeg, Canada as their destination. The boys will have to work fast as Donald Carson has to be back to teach at Blairsburg Monday morning.

Ed. Palmby and family of Vernou Center, Minn., and Ernest Palmby and family and Mrs. Ernest Yahuke and daughter, of Garden City, Minnesota, are visiting with relatives and friends in Klemme and vicinity for a couple of weeks.

H. F. Jost and family drove to Lidderdale Sunday for a visit with relatives and friends. Mrs. Best, mother of Mrs. Jost and Herman Best, returned to Klemme with them and will make her home in Klemme.

The rural home of R. W. Elder and family was the scene of a picnic Sunday when a number of relatives and friends gathered there to spend the day. Those present were Ed. Palmby and family, of Vernon Center, Minn., Ernest Palmby and family of Garden City, Minn., Milvern Ell, of Mankato, Minn., C. A. Larsen and family, Andrew, Clarice, Ruth and Nora Wellemeyer.



What's That Noise?

When a strange noise wakes you in the night, do you lie tense and frightened, thinking of the valuable thigs scattered all over your house, or do you turn over and go back to sleep, secure in the knowledge that your valuables are in our safe deposit vaults?

You can rent a box for less than a cent a day. Can you afford to be without one?

GARNER — IOWA

(From Mason City Globe-Gazette, Thurs. Aug. 16, 1928)

WHIPPET ENDS ENDURANCE RUN

AUTOMOBILE WENT 2,162 MILES IN 48 HOURS, AVERAGING 45 MILES AN HOUR

The Whippet endurance roadster, which started from the fair grounds Monday at 2:30 o'clock in the afternoon, finished its run at the same hour Wednesday afternoon, after having been in operation continuously for 48 hours. The finish took place before the grandstand, the driver making a round of the race track.

The motor was said to be working perfectly after the gruelling grind of the past two days. The car ran 2,162 miles an averaged 45 1-24 miles an hour, including stops and of 51 1-5 miles an hour actual running time.

F. B. WOMEN WIN AT STATE FAIR

HOME FURNISHING EXHIBIT TOOK THIRD PLACE

Other Exhibitors At State Fair Won Out In Field Of Twenty Six

The Home Furnishing County Exhibit put on by the Farm Bureau women of Hancock County won 3rd place at the Iowa State Fair at Des Moines. There were 26 counties exhibiting.

The women are to be complimented on this excellent showing. The committee consisting of Mrs. Fred Oxley, Chairman, Mrs. Ed. Oxley, Mrs. H. C. Armstrong, Mrs. Ernest Schubert, Mrs. S. B. Durant and Mrs Ray S. Baker certainly did some very fine work in getting together the material for this show. The exhibit consised of posters showing the results of the work, a picture wheel showing the pictures of all the township leaders and the different local leaders, different pieces of furniture which had been made or refinished. One article was a chair which was home made and covered with a slip cover The floor of the booth was covered with a piece of refinished linoleum and refinishing was considered a specialty of the women who were in charge of the booth.

A special thirty minute demonstration was given by Mrs. Fred Oxley of Corwith, on China, Silverware and Linen. A number of listeners remarked that this was one of the best demonstrations given Mrs. Fred Oxley, chairman of the committee, spent the entire week in Des Moines and was assisted by Mrs. Ed. Oxly, Mrs. H. C. Armstrong and Miss Neva Oxley. Someone stayed at the booth all of the time in order to explain the different things shown.

DAIRY OUTLOOK IS GOOD SAYS AG. DEPARTMENT

Des Moines, Iowa—Good prices, accompanied with good pastures over most of the state, lend encouragment to the dairy producers, according to the ideas presented by the Dairy and Food Division of the Iowa Department of Agriculture.

The recent rains are largely responsible for the good pastures, while the shortage of grass in some other sections of the country has shortened production, as compared to former yearsand is largely responsible for the better prices.

The present outlook for future prices remains encouraging as the total butter in storage is lighter than normal.

STORMS DAMAGE IOWA FARMS AND CROPS

Des Moines, Iowa—During the past ten days, more damage has been done by excessive rains, hail, wind squalls and tornadoes, than in any similar period in the past 3 years, states the crop bulletin issued by the Weather and Crop Bureau of the Iowa Department of Agriculture. Property losses have often been greater than crop losses.

Corn made fair progress but the condition is somewhat variable. In some localities, the corn is well dented while in others it is in the roasting ear stage. The bulk of the crop has reached the hard dough stage.

Threshing was greatly retarded by rains during the week and is but little further advanced than during the previous week. Grain in the shocks has been further damaged and the straw is of little value except for fertilizer.

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

There will be no services Sunday as the pastor is attending the Synod at Waukesha, Wisconsin.

C. J. Papousk, of Belmond, was in Klemme on business Wednesday.

METHODIST CHURCH NOTES
A. W. Gauger, Pastor

Morning Worship at 10:00 a m
Sunday school at 11.00 a m.
Epworth League 6:45 p m
Evening Worship, 7:30 p m.

Let all young people come out for the Epworth League service which is resumed after the summer season Things of special interest come up at this service and plans will be laid for the coming months.

Our service in Liberty church will be a Childrens' Service like we have had from time to time These services have proven to be interesting in the past and our service next Sunday will fully measure.

"Jack" Wellemeyer left Tuesday evening for Kansas City, Kans. to enter the Junior College there. He He will take up a pre-engineering course "Jack" is a graduate f Klemme high school with the class of 25 and was one of the high students of the school, with no grade below 94. He has had complete charge of the grocery department n his father's store the past three years, and during the meantime he took a course in embalming and funeral directing at Des Moines, passing the State Board last july with a high grade. Jack is the type of young man who will make good anywhere, and we expect to hear him making good at college

YOUNG MEN MARRIED IN SOUTH DAKOTA THIS SUMMER

Frank Miles, son of Mr. and Mrs Ernest Miles, who reside on a farm about ten miles east of Klemme, and Henry Meyers, a young man who formerly worked for Mr. Miles, were both married to Kadoka, So. Dak., young ladies Sept. 3rd.

The young men went to Dakota this summer to work and became acquainted with the girls. A double wedding occured a Alexander, Sept. 3rd, at which time Miss Edith Jakeway became the bride of Henry Meyer, and Miss Bernice Rumsey became the wife of Frank Miles.

Mrs. R. W. Elder is entertaining the M. E Missionary Society this afternoon.

PIANO FOR SALE

We have for sale near Klemme a high grade piano which through reverse circumstances parties are unable to settle for. Anyone wishing to purchase a piano at a bargain, will please write the BROWN MERCHANTILE CO., Box 56, ESTHERVILLE, IOWA, for price, terms and location of same. A30c

Let the Waves Roll On

DRAW JURORS FOR SEPTEMBER TERM

NEXT TERM OF COURT TO BEGIN MONDAY, SEPT 24

Hon. Judge M. H. Kepler, Northwood, Will Preside

The September term of the District Court of Hancock County has been called to meet at Garner, Monday, September 24th, with Judge M. H Kepler, of Northwood, on the bench presiding. However, usually there is no business transacted until the following day, and the jury will probably be called to meet on Tuesday morning, September 25th.

Following is the list of Petit and Grand Juors drawn for the next session of court:-

Petit Jury List

Esther Hallett	Forest City
Edith Durant	Garner
Ida Bohn	Garner
Waren Faber	Forest C'ty
Bert Steinmetz	Forest City
B F Legg	Britt
Clarence Varberg	Forest City
Fred Williams	Britt
Ed Kattelhenry	Garner

HANCOCK COUNTY RURAL TEACHERS

WILL TEACH IN RURAL SHOOLS COMING YEAR

Here's List Of Teachers In Hancock County Rural Schools

The following is a list of teachers who will teach in the rural schools of Hancock County this year:

Amsterdam Township

Trena Vander Ploeg, Bernadine Landsberg, Edith Mulholland, Nellie Duncan, Nora Eliason, Anna Mae Stole, Nettie Larson, all of whom have Kanawha as their mail address.

Avery Township

Alvina Buss, Klemme; Mrs. Nettie Roths, Esther Harberts, Winnie Conklin, Margaret Fuller, all with Goodell address: Anna Homeck, of Meservey; Edith Halfpop, Goodell.

Bingham Township

Bertha Doege, Evelyn Peterson, Evelyn Frederickson, Louise Buns, Anna Rieken, Woden; Herman Naefke, Britt; Cora Rieken, Woden; Schwantje Loechen, Wesley.

Boone Township

Kathleen Graves, Mildred Higdon, Thressa Moe, Lena Anderson, Ella Jacobson, Britt; Mary Mottille, Corwith.

Britt Township

Marguerite Ormsby, Mavis Rapp Hiscocks, Minerva Rydson, Lucille O'Brien, Gertrude Cosgriff, Tena Jacobson, all of Britt.

Concord Township

Lucile Anderson, Lucille Ownes, Beaulah Schipull, Ruby Knaupp, all of Garner.

Crystal Township

Margaret Dickinson, Crystal Lake and Emma Peterson, Britt.

Ell Township

Edna M. Peterson, Mildred Hampel, Frances Habercamp, Garner; Bertha I. Johnson, Klemme; Hilda Peterson, Ventura; Stella Bock, Klemme.

Ellington Township

Irma Bjelland, Luella Lewis, Evelyn Boman, Stella Nelson, all of Forest City; Irene Kester, Garner; Lulu Swenson, Forest City; Lillian Wetterling, Garner; Hazel Keser, Garner.

Erin Township

Buby V. Swanson, Lucille Hunsley, Esther Wallen, Rose Ormsby, all Britt; Norma Stromer, Garner; Geneva Hanson, Faye Robinson, of Kanawha, Edna Benner, Corwith.

Garfield Township

Frances Livermore, Evelyn Waller, Ruby Goll, Helen Horecka, all of Garner; Margaret Lawler, Britt.

Liberty Township

Norma Lenz, Garner; Viola Lackore, Garner; Eleanor Truitt, Britt; Esther Haefner, Britt; Meta Lemke, Garner; Hallie Griemann, Garner; Ethel Wellemeyer, Klemme; Mabel Schaefer, Garner; Dalia Stromer, Garner.

The towns given following the names of the teachers are their post office addresses.

GALT TEAM WINS TOURNAMENT AT BELMOND

Klemme Lost Out In Finals Monday Defeated By Galt

Base ball fans in this vicinity were greatly interested in the little base ball ournament played off at Belmond Sunday and Monday, and in which Klemme made a good showing and got into the final game of the series.

Two games were played each afternoon of the tournament. For the first game Klemme drew Williams defeating them in a spectacular game by a score of 2 to 1.

Belmond and Galt put up the other exhibition when Galt nosed ut Belmond by a 9 to 5 score.

The two games Sunday were between the winners of the first day and the losers. This arrangement paired Belmond against Williams for consolation honors Belmond won the game 6 to 4.

The final game of the tournament was between Klemme and Galt for championship honors.

The locals lost the game by a 4 to 8 score, getting a bad start when Galt took a three to nothing lead in the first frame. However the fans saw a good game despite the difference in scores.

Following is the box score of the final game.

Klemme (4)	AB	R	H	E
Stokesbary, 2b	5	1	1	0
Finn, c f.	5	1	3	0
Lauritsen, s. s.	4	0	0	0
Segileid, 3 b.	4	1	1	2

Hopkins, p.	4	1	1	0
Allison, l. f	4	1	2	0
Chapman, c.	3	0	0	0
Overstein, c.	1	0	0	0
Totals	35	8	8	4

Sunday afternoon Klemme will play Clarion at Lake Cornelia park This promises to be a good game and should furnish the fans with a few thrills.

Negoiations are under way at the present time for a tournament at Galt, to which Klemme has been invited.

IOWA YEAR BOOK OF AGRICULTURE READY

Is Of Special Interest To Farmers; Free For The Asking

Des Moines, Iowa.—People who are interested in a study of the fundamental factors that go to make up Iowa prosperiy are invited to write to the Iowa Department of Agriculture and secure a copy of the recently issued Year Book of Agriculture, for 1927.

"There was an increase in the returns from Beef cattle and cash grain during 1927," states M. G Thornburg, Secretary of Agriculture, in the summary of conditions, "but the decrease in returns for the hogs and poultry products more than offset these gains The returns from dairy products continued to be good and helped farmers to liquidate expenses as well as furnishing him with operating capital."

The Year Book gives a report of all of the major agricultural organizations of the state, the experiment station, extension service and different organizations which receive state aid for special lines of work. Copies of the book may be secured free of charge as long as the supply lasts, by writing to M. G. Thornburg Secretary of Agriculture, Des Moines, Iowa.

COUNTY FAIR TO BE HELD NEXT WEEK

WILL BE HELD FOUR DAYS AT BRITT BEGINNING TUESDAY

Many Special Features On Program This Year

Practically everything is in readiness for the Hancock County Fair to be held at Britt next week Sept 11-12-13-14 The Fair Board has made a special effort to make this one of the best fairs and prospects are that this will be accomplished Exhibit space in the barns has been practically all taken.

A good program has been contracted for for both afternoon and evening. A special feature of the year will be a program on Tuesday evening The 4-H Club Show will be larger than ever. Tents have been contracted for to replace the Floral Hall and these exhibits will be satisfactorily taken care of Aside from the big livestock and agricultural show tho entertainment feature of the fair will be as good as ever. Band music will be furnished by the Woden, Duncan and Britt Bands Six big free acts have been contracted for and will perform both afternoon and evening including Tuesday evening This minute of thrill and excitement will be put on by Capt. Babcock and his auto polo teams They will appear both afternoon and evening and will also be on the program Tuesday evening. A baseball game will be put on each day A big night show has been arranged. The feature of this program will be the Four Horseman Quartet. They have a complete new program. The following is the program that has been worked out

Tuesday, Sept. 11.

Entry Day—Entries close at 6.00 p m All entries must be made before 6:00 p. m Evening program gates open at 6:00 p m Admission, 25 cents. Six free acts, 30 minutes of auto polo. Dance to Al Olson's orchestra.

Wednesday, Spet. 12.

Make your plans now to attend the "home" fair.

FOURTY-FOUR COUNTIES NOW ACCREDITED

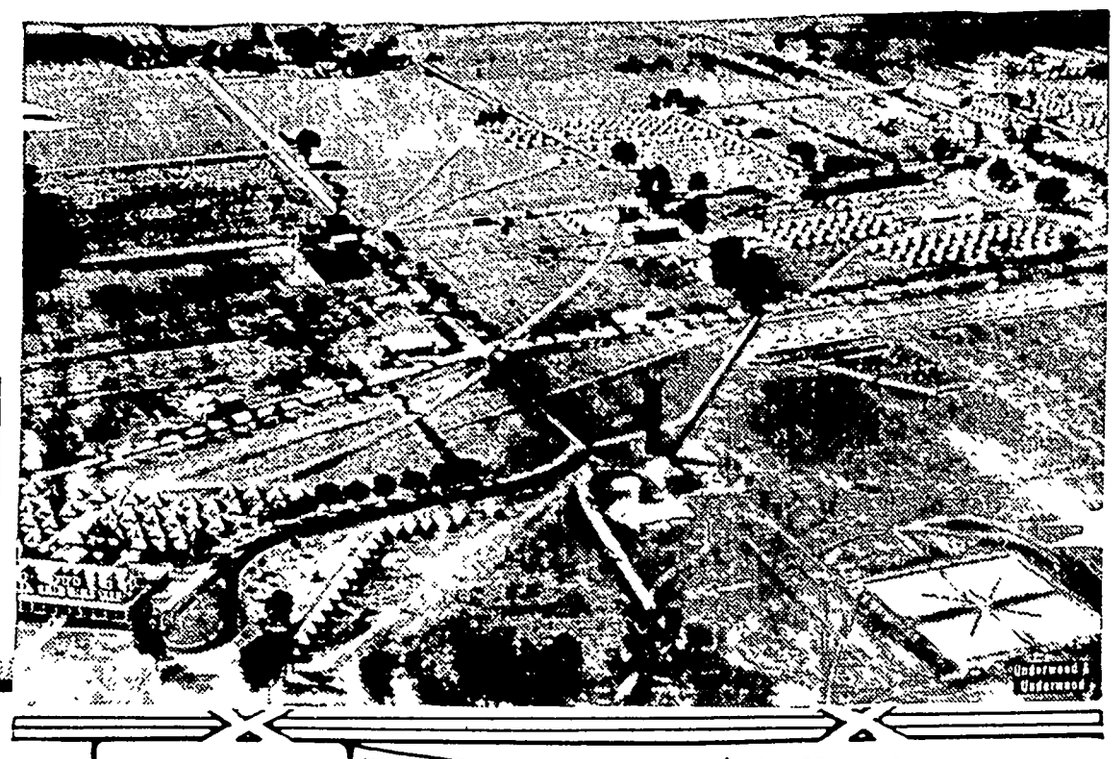
Des Moines, Iowa,—The addition of Cerro Gordo county to the list of Iowa counties that are now modified accredited areas makes 44 Iowa countis that have now cleaned up bovine tuberculosis by a systematic tuberculin testing of their cattle.

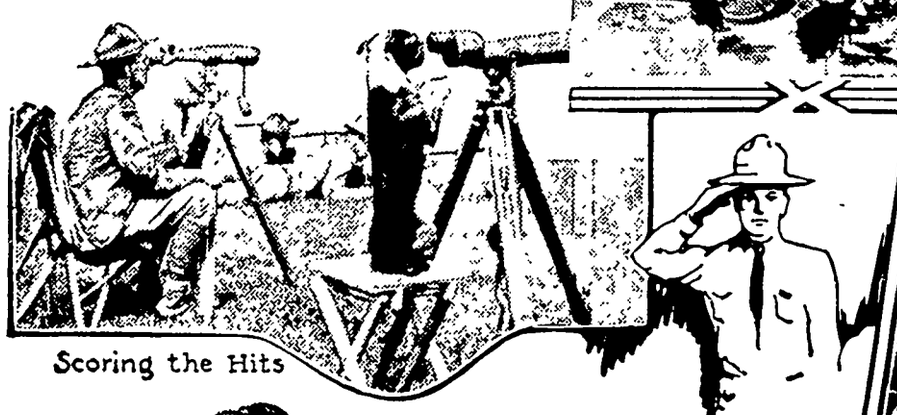
Hardin, Kossuth and Polk counties have also been recommended by M. G. Thornburg, Secretary of Agriculture, for reaccreditation. These counties were accredited three years ago and have been completely retested.

Klemme will be well represented at Upper Iowa University at Fayette this year. Those from here who will attend are: Mr. and Mrs. "Abe" Lauritsen, Luther Tanner, and Verner Hamilton, of Goodell.

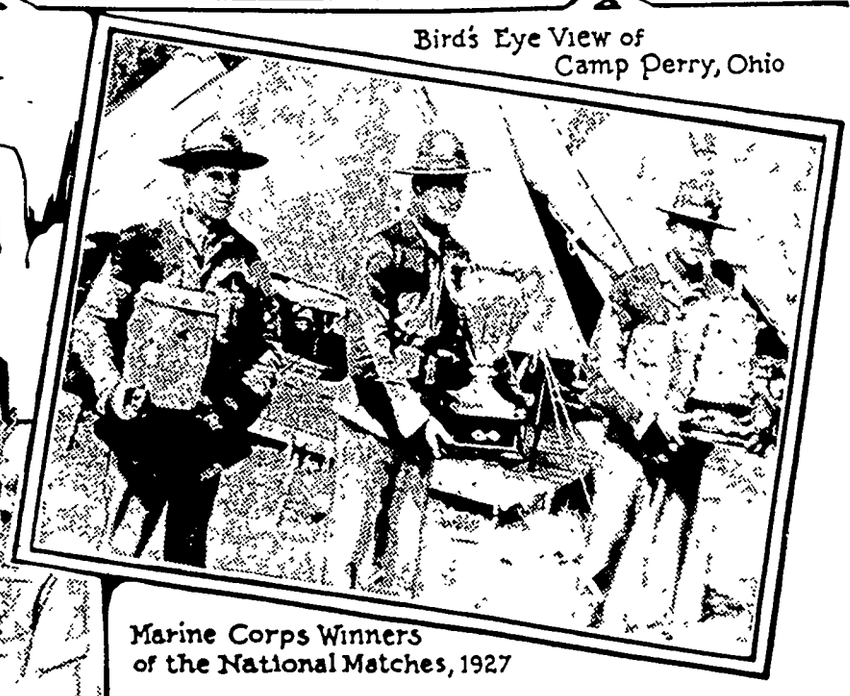
"JOHNNY, Get Your GUN—"

A Modern "Annie Oakley"

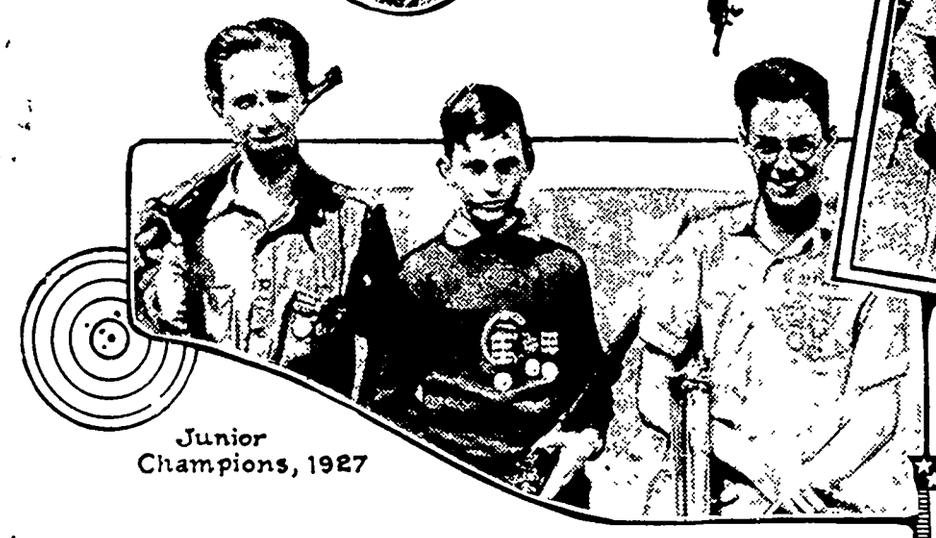




Scoring the Hits



Bird's Eye View of Camp Perry, Ohio



Junior Champions, 1927

Marine Corps Winners of the National Matches, 1927

For the Marksmen of the Country Are Gathering at Camp Perry, Ohio, for the National Rifle Matches.

By ELMO SCOTT WATSON

TIME was when a gun was the commonest weapon, utensil, tool, or whatever you choose to call it, to be found in the hands of an American citizen. That was in the days when there was a frontier, when the West was still to be won, when wild game still formed a part of our daily fare, when there was less law but more justice, fewer courts but fewer criminals because men carried in their hands a thing of wood and iron which could, when the occasion demanded, act as judge, jury and court from which there was no appeal.

And of all the types of weapon which the generic term "gun" covers, the one which was preeminently American was the rifle. "Witness this sweet ancient weapon of our fathers, the American rifle, maker of states, empire builder," writes Emerson Hough in "The Way to the West," "This engine of civilization served its purpose across the timbered Appalachians, down the watershed to the Mississippi, up the long and winding streams of the western lands, over the Rockies, and down the slopes of the Sierras to the farther sea."

But with the passing of the frontier and frontier conditions, the American "laid aside the rifle for the sickle and the plow," and tests of marksmanship fathered by necessity which had become one of the leading sports for a large proportion of our population became almost a lost art. The sport interests of the average American today are of a far different type. He plays golf or tennis and he watches others box or play football, baseball basket ball. But of marksmanship he knows little or nothing. Unless he is one of the comparatively small number of sportsmen who find recreation in trap or target shooting, he gets no thrill from a sports page announcement that a new record in shooting has been established.

However, there are signs that a renaissance of interest in this form of sport is under way. The World war, which put rifles into the hands of millions of young Americans and taught them the thrill of puncturing the bull's-eye, had something to do with it. But more important in crystallizing the interest in the revival of this "lost art" are the annual National Rifle association matches which for the last 20 years have brought to Camp Perry, Ohio, in increasing numbers the crack shots of the country. Last year 2,607 participants stepped up to the firing line in the various contests and this year the matches which are being held from September 11 to 16 are expected to draw an even larger number.

For many years the national matches were dominated by the military element and the winners were largely members of some branch of the national military, or naval establishment. In recent years, however, the matches have attracted more of our nonmilitary population and Camp Perry has recently been called "the biggest civilian camp in America. It is somewhat like a huge automobile tourist camp with between 3,000 and 4,000 persons from all parts of the country, most of them, however, from the smaller towns and cities of the West and Middle West, living under canvas there during the matches. Many of the competitors bring their families with them and they make it a glorified vacation, which is satisfactory in more ways than one. They are having part in a great sporting event and one that is more constructive than just a mere test of marksmanship. It may be argued that, in the last analysis, a man learns to shoot so that he may destroy and kill. But you will find, if you investigate among those who attend the matches at Camp Perry, that they are among the most law-abiding persons in the world. And that goes, not only for the civilians, but for members of the regular military or naval establishment as well. They are all proud of their markmanship and enjoy the sporting element of this test of their skill, but they have the satisfaction also of knowing that they are training themselves to be of real service to their country if it should have need of them.

On the 200 yard firing line

When it is said that whole families come to Camp Perry for the matches, it should not be supposed that the feminine members of it are there merely to look on as their fathers and husbands and brothers take their turn on the ranges. For if you walk through the "squaw camp," as they facetiously refer to the camp for women, you will find plenty of "Annie Oakleys," both young and old, who are as enthusiastic addicts of "Oh, shoot!" as the men and boys. They speak the argot of the rifle range, a tongue that is as Greek to the outsider, but perfectly understandable to those who attend the matches—this talk of windage, mirage, a fish-tail wind, lands, grooves, dope, swabo and the like. And out on the firing line some of these girls can give just as good an account of themselves (and probably even better) with a death-dealing instrument in their hands against the painted targets as their pioneer grandmothers and great-grandmothers and great-great-grandmothers once did, when the occasion arose, against the painted Indians. If you doubt that, ask some of those who attended the national matches last year and watched Miss Louise Thompson, the modern "Annie Oakley," pictured above, do her stuff out on the ranges!

As for the boys, take a look at the medals which adorn the three "Davy Crocketts" shown in the picture labeled "Junior Champions, 1927." In the center is David MacDongal, a sixteen-year-old high school boy from the District of Columbia, who was the winner of both the national individual championship and the high school individual championship in last year's matches. On his left is another sixteen-year-old, Philip Renfer of Norwood, Ohio, who was McDongal's close competitor in the national individual matches and who won the senior classified match. On his right is Lawrence Wilkins, fifteen years old and also hailing from Norwood, Ohio, who won the two-position match. Any of these three youngsters can go out on the range any day and make a record which older marksmen of another day would be proud of.

Although the national rifle matches at Camp Perry are the biggest of their kind in this country, they are quite unlike any other great sports event. Usually there are no huge crowds on the range and no thunderous cheers greet the victor. A few devoted enthusiasts stand back of the firing line, tight-lipped, quiet and intent. But they are appreciative spectators, nevertheless, for they are watching tests of skill which are not spectacular, but which demand the utmost in steadiness of nerve and concentration on the part of the contestant. Stand back of the firing line with them and watch a typical scene. Over on the right is a young marksman. He looks sixteen and is actually on the junior side of twenty. It is his first match. Is he nervous? Not so you could notice it! Nervous men—or boys—don't last long on rifle ranges. But there is a ripple of comment as he shoots a "possible," in other words, he has placed every shot within the edges of the bull (outsiders call it bull's-eye) that looks like a pin point from the firing line. No one cheers. There is not even the polite hand-clapping that greets a tennis champion on the courts. The boy grins as he gathers up his "brass" (the empty shells that the ejector of his rifle has sent spinning to the ground).

The young marksman walks slowly to the next range to fire his final string. However, he avoids the spectators. There is a reason for this. Even the youngest rifleman is prey to the superstition of the range, and it is bad luck to receive congratulations until the last shot is fired. And, by the way, don't ever try to take a snapshot of a shooter until he has finished his match. If his warning does not stop you and he cannot run away, he and his buddies may wreck your camera. Black cats may cross his path, mirrors may smash to bits in his hands, and he will saunter unconcernedly under a leaning ladder; but if he is photographed during a match, that match is lost—and he knows it.

The riflemen are ready to fire the last string at rapid fire. Several of the young marksman's rivals are crowding him, and he is doing some rapid figuring. He knows, with the lead he has secured in the earlier matches, that if he makes 48 out of a possible 50 he is safe. Even if his nearest rival should make a "possible," the young marksman cannot be defeated unless he falls below 48. Any score below that figure will make defeat possible, and even probable.

In rapid-fire a shooter must get off his ten shots within a limited number of seconds. The firers take their places on the firing line, loading and locking their rifles against accidental firing. The officers, stationed on the firing line, walk to and fro to see that all is ready. The field telephone operator sends his "stand-by" messages to the rifle butts, where sweating men operate the targets.

"Ready on the right," cries an official.

"Ready on the left," echoes another.

"Ready on the firing line," calls the operator.

A gong sounds. Up ride the white targets from behind an embankment like a company of soldier ghosts attacking from a trench. Then the guns begin to bark. It is called rapid fire, but to the novice the riflemen seem very slow. How can they ever get in ten shots with such unhurried ease? But these men are able to judge time in split seconds. It seems only an instant after the last burst of firing splits the air that the targets sink slowly from sight.

Our young marksman has his eyes turned toward the butts. There is a babble of voices around him, but he hears nothing distinctly. He is watching with eager interest for the reappearance of the target. Up it comes slowly—too slowly for his wildly beating pulse. Seconds seem like hours. He has set his heart on winning this match and—

Now comes the flash of a white disk. That means "V"—five points—a bull's eye! It flashes again, and again and again. He counts forty points before the disk drops down for a short interval, and again comes up white. That last, slow flash of the disk indicates that one of his shots was inside the bull by a fraction of an inch.

Down goes the disk again. Everything hinges on its next appearance. He knows he has forty-five points. A "miss" means almost certain defeat. A "tree" or better assures victory. Up bobs that fatal disk again. It is red this time, indicating a "four."

Our young marksman now has a total of forty-nine and has won the match. And that, as a famous cartoonist would say, is certainly "one grand and glorious feeling."

Grow Cucumbers for the Market

Now One of the 20 Important Truck Enterprises in This Country.

(Prepared by the United States Department of Agriculture.)

Cucumber growing for table supply, in contrast to production for pickling is now one of the 20 important truck crop enterprises in the United States. In 1920 nearly 40,000 acres were devoted to the crop of slicing or salad cucumber which was valued at nearly $7,000,000. This is exclusive of the crop grown in greenhouses. Cucumbers are grown for carlot shipments in 29 states, but 14 states produce the great bulk of the market supplies with Florida by far the most important producer. Approximately 68,000 acres are planted for pickles.

Business Increases.

From a shipment of 3,689 carloads in 1920 the business increased to nearly 8,500 cars in 1925 and 7,180 in 1926. "The present outlook for table-cucumber consumption does not warrant any great expansion of acreage," says W. R. Beattie of the United States Department of Agriculture, the author of "Cucumber Growing" which has just been published by the department as Farmers' Bulletin 1563-F. "There is need," he adds, "for more intensive culture and the production of higher grade table stock."

The growing of high-grade table cucumbers is rather difficult, owing mainly to the prevalence of insects and diseases which must be overcome by spraying and by other special methods. The bulletin includes descriptions of these difficulties and the methods of control. Returns from the cucumber crop average about $180 an acre, but production costs are high enough to limit profits. Intensive production of cucumbers under sash in the Norfolk (Va.) section and at other points along the Atlantic coast is fairly profitable, especially to growers who are giving the work close attention. Overhead sprinkler systems or subirrigation are in use in some places, and the tendency at present is toward the provision of all the necessary facilities for making a high-grade crop.

Packed for Market.

"Cucumbers should be shipped packed for the market, according to the United States standard grades," the bulletin says, "and under refrigeration wherever conditions require it."

Farmers' Bulletin 1563-F contains information for commercial growers rather than for amateur gardeners, and may be obtained free on application to the Department of Agriculture, Washington, D. C.

Fertilizing Losses of Manure Are Prevented

Losses of the valuable fertilizing constituents of manure through fermentation and leaching may be prevented to a large degree by hauling the manure to the fields as soon as possible after it is voided.

As far as may be practicable it should be immediately spread and incorporated with the soil. If there is no danger of surface wash, it may be spread and left on the surface of the land. The application is best done by the manure spreader. If season and soil conditions are such as to prevent this method of handling and distribution it may be piled in small heaps and spread in early spring. On sloping ground the dressing of manure should be reserved until such time as it can be incorporated with the soil shortly following its application, or surface drainage may cause valuable constituents to be carried away.

Around the Farm

Plenty of clean, fresh water and protection from flies and heat are necessities for the dairy herd.

* * *

Dusting plants and the surrounding ground with air-slaked lime or land plaster has a tendency to keep slugs away.

* * *

The only real basis for measuring success in the production of farm products, be they parsnips or pigs, is by the net return.

* * *

Early plant growth is brought about more easily by putting fertilizer as near the seeds as is possible without injuring germination.

* * *

Keep a close watch on your birds for the appearance of lice and mites. Poultry mites may be controlled by painting the roosts monthly with used crank case oil.

* * *

Small patches of quack grass can be killed by covering with roofing paper or by hoeing every time green spears of the grass appear. If paper is used weight it down with stones or other heavy objects to prevent the wind blowing it off.

* * *

Calves on pasture should be visited frequently, and if the feed gets short they should receive grain or some other supplemental feed, say State college dairy specialists. A check in growth always is expensive because it dwarfs the animal and delays the time that the heifers should come into milk.

DON'T suffer headaches, or any of those pains that Bayer Aspirin can end in a hurry! Physicians prescribe it, and approve its free use, for it does not affect the heart. Every druggist has it, but don't fail to ask the druggist for *Bayer*. And don't take any but the box that says Bayer, with the word *genuine* printed in red.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

When *your* Children Cry for It

Castoria is a comfort when Baby is fretful. No sooner taken than the little one is at ease. If restless, a few drops soon bring contentment. No harm done for Castoria is a baby remedy, meant for babies. Perfectly safe to give the youngest infant; you have the doctor's word for that! It is a vegetable product and you could use it every day. But it's in an emergency that Castoria means most. Some night when constipation must be relieved—or colic pain—or other suffering. Never be without it; some mothers keep an extra bottle unopened, to make sure there will always be Castoria in the house. It is effective for older children, too; read the book that comes with it.

Fletcher's CASTORIA

Here is ment that will be helpful if any- will: Red iodide of mercury, 1 potassium iodide, 1 dram; alco- ounces, and glycerine, 2 ounces. is in well over the sweeney produces a light blister. Re- ey three weeks.

Now Market Milk by Co-operatives

Reports Show Substantial Increase in Quantity for Last Year.

(Prepared by the United States Department of Agriculture.)

Such data as are available indicate that the quantity of fluid milk handled by co-operative associations has been increasing rapidly during the last three to five years. Reports collected by the United States Department of Agriculture for 1924 and 1927 show a substantial increase in quantity for the latter year as compared to the former.

Approximately 11,000,000,000 pounds of fluid milk was marketed through co-operative associations in 1927. This quantity is nearly one-fifth of the estimated quantity used in continental United States for household purposes last year.

Milk in Large Cities.

A large fraction of the total fluid milk used in some of the larger cities passes through co-operative channels in moving from the producers to the consumers. Such is the case in Philadelphia, Baltimore, Washington, New York city, Hartford, Boston, Pittsburgh, Cleveland, Cincinnati, Detroit, Minneapolis and other cities.

There are three general types of co-operative enterprises engaged in marketing fluid milk. These are the Producers' Bargaining association, the Producers' Distributing association and the Consumers' Distributing association. The bargaining association functions chiefly in the determination of the monthly price to be paid by private distributors to the producers. About 60 per cent of the fluid milk marketed co-operatively is under the control of the bargaining associations. It is this type of association which operates in the larger cities.

Distributing Associations.

The producer-operated distributing association assembles, processes and delivers milk to consumers, such as hotels, restaurants and private families. About 40 per cent of the milk marketed co-operatively is handled by this kind of producers' organization. In general, these distributing associations operate in the small cities, although there are producers' associations distributing milk at retail in a few of the very large cities.

At the present time there is but one outstanding consumers' co-operative for handling fluid milk. This is an association serving the residents of Minneapolis. The enterprise buys its supply of milk from a producers' association, puts it in bottles and distributes it to the homes of its members and others.

Buying 2-Pound Package Bees Is Proper Method

For the average farmer or small beekeeper, who wants to keep a few bees or increase his apiary, there is no better way than buying package bees, having them come about ten days preceding fruit bloom. If properly handled, they build up rapidly to full colony size and produce a good crop the same season.

The two-pound package of bees with a young queen seems to be the most popular package. This package seems to ship a little better than a heavier one.

Before the bees arrive, have the hives ready; then, before taking the bees from the express office, see that they are in good condition. Directions for hiving usually accompany shipment or can be found in any bee magazine or book on bees. After hiving, feed the bees a sirup of 50-50 white sugar and water, until there is plenty of honey coming in from outside sources.

Agricultural Hints

Leghorn pullets should not begin to lay until they are from five to six months old.

* * *

Hay should be mowed and stacked for several days before it is baled so that it can sweat.

* * *

People in the United States use about one pint of milk a day per capita; those in England use about half of this.

* * *

With the discovery that egg yolks contain vitamine D, that which offsets rickets, new importance has been added to the egg in feeding children.

* * *

A successful club boy said "Learning to keep records has been one of the most important lessons to me." Some of the rest of us might profit by this remark.

* * *

A good poison bait for slugs is: 20 pounds bran, 1 pound paris green, 2 quarts molasses, 3 oranges or lemons, and about 3½ gallons of water. Scatter the bait in small lumps around the plants in evening.

* * *

Rye furnishes a good pasture for hogs during the fall, winter, and early spring months. Fall farrowed pigs which have access to rye pasture during the fall and winter while they are being fattened for market will make faster gains, and at lower cost for feed than pigs that are fattened—a dry lot. Brood sows that have rye pasture during the winter will farrow stronger and more thrifty pigs.

Snow Real Blanket for Clover Fields

Winterkilling in Northern Sections With Severe Cold.

Winterkilling of alfalfa and clover presents examples that seem to be contradictory, Dr. A. J. Pieters explained to a gathering of seedsmen recently. Doctor Pieters, who is one of the forage-crop specialists of the United States Department of Agriculture, in discussing the adaptation of alfalfa and clover to climatic extremes and in resistance to diseases, said imported seed was, as a rule, inferior to native seed and that strains successful in one region in the United States were to be recommended only for other regions having approximately the same extremes of temperature. Temperature averages are of small service as guides, he said. He also emphasized the important role which snowfall plays in the wintering of alfalfa and clover, particularly in the northern sections where winters are severe.

"We need to know the lowest temperatures," said Doctor Pieters. "Not only that, but we need to know whether these low temperatures will reach the plant. When plants are covered during winter under a heavy blanket of snow, the cold recorded by the weather bureau may never reach them. In the Northeast low temperatures are usually accompanied by heavy snowfalls, so that these low temperatures do not operate effectively on plants at the ground level. As an illustration, Italian clover at Chatham in the northern peninsula of Michigan has never winterkilled so much as it has near Lansing, Mich., or in Ohio, though the air temperatures at Chatham are much lower. The snowfall begins early and the plants are protected by several feet of snow during the entire period of severe weather."

Three Requirements of a Good Alfalfa Seed Bed

Failure to obtain a good stand of alfalfa and to maintain it through the first winter frequently is caused by a poor seedbed. The three requirements of a good seedbed for alfalfa are:

1. A fine but firm soil.
2. Plenty of available moisture at seeding time.
3. A good supply of available plant nutrients at seeding time.

The best time to seed alfalfa under most conditions in eastern Kansas is during August, and the above requirements should be met by the middle of that month. Fortunately, the tillage methods which will produce one of the required conditions will also help produce the others.

One of the most satisfactory methods of preparing the soil for alfalfa is to plow the land very shallow immediately after harvesting a small grain crop and then disk it immediately. The disking will incorporate the stubble with the soil and thus hasten its decay. Shallow cultivation should then be practiced frequently enough until seeding time to prevent the growth of weeds and volunteer grain. Disking should be avoided so far as possible during this period because it leaves the soil too loose and open. The frequent shallow cultivation will make the surface soil fine, and by preventing the growth of weeds will help conserve the soil moisture and plant nutrients. If the soil is not firm below the surface half an inch at seeding time a cultipacker, or a subsurface packer should be used. There is very little danger of having the soil too firm.

Husking Corn With Hogs Most Economical Plan

How times change! Thirty years ago turning a bunch of shotes in the corn field to help themselves would have been looked upon as a lazy man's way of harvesting the crop. Today one is behind the times if he does not know something about hogging down corn. Many experiments have proved the economy of the practice when rightly done. A suitable supplement is of greatest importance. If good forage is available near the corn, it will serve a very useful purpose. Alfalfa, rape, and clover are best in the order named. If forage is not available, tankage or skim milk is best. A mixture of tankage 70 parts, linseed meal 15 parts, and shorts 15 parts is better than tankage alone. Skim milk is fed at a rate of 3 lbs. for each pound of corn consumed or about a gallon and a half per head daily.

Outline of Practical Plan for Filling Silo

For filling the silo, the small silage cutter owned by one or two farmers and operated by the farm tractor or gas engine is cutting the labor requirements for filling silos. If used with corn binders with bundle loading attachments the tiresome work of lifting heavy green bundles of corn stalks is practically eliminated. Field silage cutters which eliminate hand labor entirely are also coming into use.

With the husked corn cribbed with the use of portable or stationary inside elevators, then shelled from cribs having a drag-way in the foundation to eliminate hand scooping from the crib, the corn finds its way to pig, steer, lamb or country elevator, handled entirely by the products of human ingenuity instead of aching muscles and bending backs.

The Easiest Way to Keep in Style

By MAE MARTIN

No woman would wear dresses, or blouses, or stockings of a color that's decidedly out of style or faded, if all of us knew how easy it is to make things fresh, crisp and stylish by the quick magic of home tinting or dyeing.

Anybody can tint or dye successfully with true, fadeless Diamond Dyes. Tinting with them is as easy as bluing, and dyeing takes just a little longer. New, stylish colors appear like magic, right over the old, faded colors. Diamond Dyes never spot, streak or run. They are real dyes, like those used when the cloth was made. Insist on them and save disappointment.

My new 64-page illustrated book, "Color Craft," gives hundreds of money-saving hints for renewing clothes and draperies. It's Free. Write for it now, to Mae Martin, Dept. D-143, Diamond Dyes, Burlington, Vermont.

Reliability Wins

Reliability often means success where carelessness would spell failure. It is a habit that takes care of every obligation in a painstaking manner. It is a sure method of gaining the confidence of others.—Grit.

One Indian Who Works

Many Tall Feathers of the Glacier National Park reservation is one of a few American Indians who retains the respect of his tribesmen although he daily does a squaw's work of chopping his own firewood.

One of the reasons is that he's a widower. Another is that he is close to one hundred years old, and a sage of the council.

Many Tall Feathers had just one love affair in his lifetime and preferred to live with the memory of the cherished one who had joined the Great Spirit in her early womanhood.

Biblical Ferryboat

There is mention of a ferryboat in the Bible. Following the death of his son, Absalom, King David went into retirement, and after he was persuaded to return to his house a ferryboat was sent to bring over the king's household. See II Sam., chapter 10.

Corn Made Into Starch

More than 70,000,000 bushels of corn in this country were converted into starch in the last year.

GIRL KEPT LOSING WEIGHT

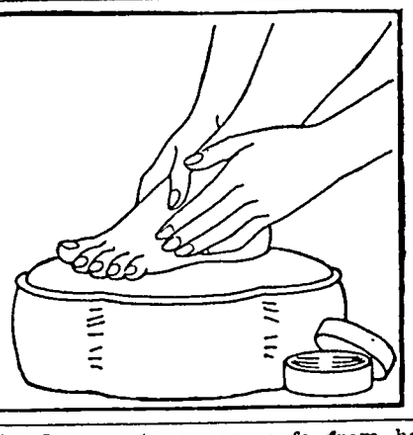
Lydia E. Pinkham's Vegetable Compound Built Her Up

Scobey, Mont.—"I was working for two years—clerking in a store—and seemed to be steadily losing in weight so was forced to give up my work. A neighbor recommended Lydia E. Pinkham's Vegetable Compound to me and I have now taken six bottles and can't tell you how I have appreciated it. I am feeling better and stronger every day. I recommend it to all young girls and if any have the same trouble and will write to me I will gladly answer."—Mrs. Emil H. Gertiis, Box 476, Scobey, Montana.

Cuticura Soothes Burning Aching Feet

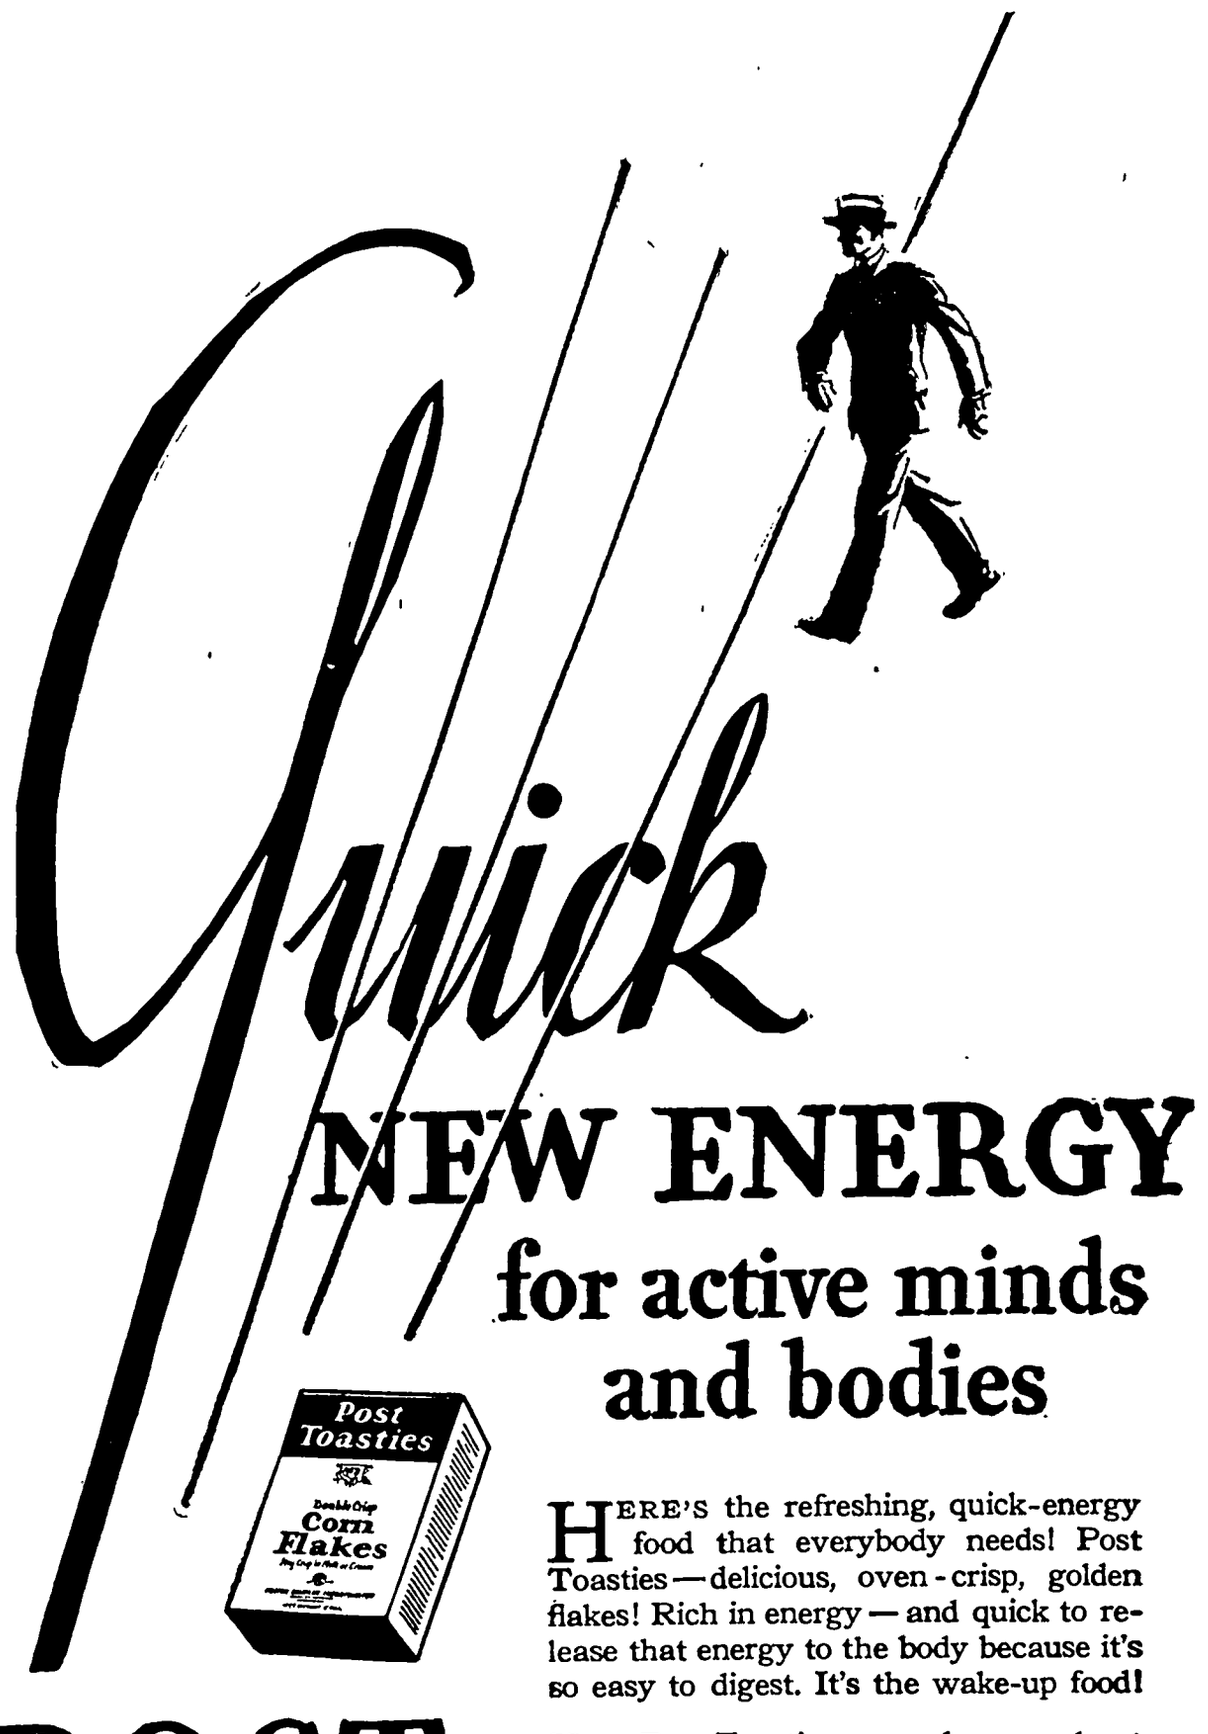
Bathe the feet for several minutes with Cuticura Soap and warm water, then follow with a light application of Cuticura Ointment, gently rubbed in. For tired, hot, irritated feet this treatment is most comforting. Cuticura Talcum is cooling and refreshing.

Soap 25c. Ointment 25 and 50c. Talcum 25c. Sold everywhere. Sample each free. Address: "Cuticura Laboratories, Dept. B4, Malden, Mass."
Cuticura Shaving Stick 25c.



Perhaps all men are liars, but there are times when it is unwise to say so.

In a rut you are safe from hard knocks.



HERE'S the refreshing, quick-energy food that everybody needs! Post Toasties—delicious, oven-crisp, golden flakes! Rich in energy—and quick to release that energy to the body because it's so easy to digest. It's the wake-up food!

Have Post Toasties every day—and get daily benefit from its rich store of energy.

At breakfast give everyone a heaping bowlful, so crisp and good with refreshing milk or cream. Children love that crunchy goodness, and active, growing bodies need the wholesome energy that Post Toasties gives.

Try Post Toasties for lunch—see how good and how satisfying it is with juicy fresh berries and cool milk or cream, and sugar.

And so easy to serve! Right out of the package into the bowl, a golden shower of quick new energy. Golden flakes toasted to a turn, with all the natural flavor of the sun-ripened corn. Rich in energy! Easy to digest! Ideal these warm days.

Ask your grocer for Post Toasties—you'll know the genuine in the famous red and yellow package. It's the wake-up food! Postum Company, Inc., Battle Creek, Mich.

You and each of you are hereby notified that on the 11th day of July, 1928, Geo. Zinn filed in the Office of the County Auditor a petition and bond asking that certain lands be esablished in a Drainage District and that the improvement be constructed to drain the same and that Chas. F. Merten was appointed as a Preliminary Engineer to make a survey, profile, map and report upon the same and that the said Engineer filed in said Auditor's Office on August 21, 1928, a report, map, plat and profiles recommending that the above described lands be established in a Drainage District, to be known and numbered a Drainage District No. 134, and certain improvements be constructed therein which plan was tentatively approved by the Board of Supervisors of Hancock County, Iowa, on August 24, 1928, but which plan may be amended before final action thereon.

You are further notified that the Board of Supervisors of Hancock County, Iowa, have fixed the 5th day of October, 1928, at the hour of one o'clock P M. as the time for hearing thereon and that all claims for damages on account thereof, except claims for right of way taken by said improvement, and all objections to the establishment of such district and the construction of such improvement must be made in writing and filed in the office of the County Auditor of Hancock County, Iowa, on or before the time fixed for such hearing.

Dated at Garner, Iowa, this 29th day of August, 1928, and published by order of the Board of Supervisors, of Hancock County, Iowa

H. C. MEYER,
County Auditor, Hancock County, Iowa.

Girl of Century Ago and Today Compared

We look back with amazement and pity at the woman of 1828, it is said, but, says the London Daily News, we look with admiration also, for it is out of their dreaming and striving that our freedom has come. Poor Miss 1828 offers a striking contrast between the young women of that day and those of the present year.

Look at her standing there, in her stuffy thick clothing, her hideous frilled "pelisse" with its puffed sleeves her face hidden by an ungainly flapping bonnet "as large as an umbrella." She has been grounded in the principles of religion and morality Her head is stuffed with Mangnall's questions, her fingers are sore with working "samplers," her body is still with that strange cult known as "deportment"

She is just sixteen years old and ready to "come out" to a life of social and domestic inanition. When she dances, it is to pace soberly through the measures of a minuet or the quadrilles, for she has not yet been introduced to the "sprightly polka" or the glamorous waltz. Little wonder that she breaks the monotony of her days by occasional fits of hysteria or a graceful swoon.

She had her vanities, poor dear—her looks were one of her few interests. She was as frightened of corpulence as is her modern sister. Rosy fresh cheeks were considered common and she deprived herself of adequate food for fear of growing fat and "material."

Greenland, Long Ago, Colonized by Danes

Greenland was originally colonized by Scandinavians, about the year 1000, but the colony dwindled and became extinct shortly before 1500, owing chiefly to the inroads of the Eskimo. The existing Danish colony was established in 1721. The aborigines, says the Smithsonian institution, are all of Eskimo stock and number altogether about 11,000, including a very large proportion of mixed bloods, who, as a rule, adhere to Eskimo customs and language.

This number seems to be considerably higher than in 1721, but the difference is largely, if not entirely, to be accounted for by the increase of the mixed-blood stock from European intermarriage.

Theory of Arrhenius

Svante August Arrhenius, the noted Swedish chemist and physicist, believes that life is an interstellar element and may be transmitted from one planet to another. According to his conception, life is universally diffused and is constantly emitted from all habitable worlds in the form of spores. These spores traverse space for years, and possibly ages. The majority of them are ultimately destroyed by the heat of some blazing star, but some few, he thinks, find a resting place on bodies which have already reached the habitable stage Life, according to Arrhenius, may also be transmitted from one heavenly body to another by means of meteors —Pathfinder Magazine.

Historic Edifice

Kenilworth castle is in Warwickshire, England It has figured prominently in the history of the country. In 1575 it was the scene of 19 days' entertainment of Queen Elizabeth by the earl of Leicester. The walls originally inclosed an area of 7 acres. The principal portions of the building remaining are the gatehouse, now used as a dwelling house; Caesar's tower, the only portion built by Geoffrey de Clinton now extant, with massive walls 16 feet thick; the Merwyn's tower of Scott's "Kenilworth"; the great hall, built by John of Gaunt, with windows of very beautiful design, and the Leicester buildings, which are in a very ruinous condition.

Purist Enters Objection

An indignant purist, says the St. Paul Pioneer Press, has publicly taken to tusk a prominent Oregon attorney for using the quotation, ascribed to William Congreve, a dramatist of the Eighteenth century: "Hell hath no fury like a woman scorned." He says that there is no such language in Congreve or anywhere else The exact quotation is: "There is no rage like love to hatred turned, nor hath hell a fury like a woman scorned" This is one of such almost innumerable popular modifications of literature which, despite the rage of the purist, continue in use.

Silver in Olden Days

Whatever the difference in mechanical aspects, in many respects our modern life parallels closely the lives of the ancients. The noble and aristocratic Egyptians and Greeks had an exquisite appreciation of the niceties of life. One of their most cherished treasures was their sterling silver, which they had in abundance and from which they drank and feasted. It was their accredited tableware as it was of the nobles of the Roman empire. Cups and vessels of this precious metal have come down to us through the ages in a perfect state of preservation.

Two Greatest Virtues

Education is what enables some people to get along without intelligence. Intelligence is what enables some people to get along without education. A few men possess both virtues; these constitute our real leaders.—Grit.

Liberty News Notes

(Special Times Reporter)

Mrs Emil Beier was a Goodell visitor Monday.

Mr and Mrs. Emil Blumer and children drove to Britt Saturday.

Mr. and Mrs. Floyd Franklin visited in Garner Sunday.

Mr. and Mrs John Lemke nd Mr. and Mrs. Will Lemke attended the State Fair Thursday.

Billie Utterback of Des Moines came Saturday for an indefinite stay at the Emil Beier home.

Mr. and Mrs Clarence Cook, of Kanawha were callers at the Wilbur Haefner home Monday evening.

The schools all through the township started Wednesday for the fall term.

Mr and Mrs Wilbur Haefner were dinner guests at the Emil Beier ome Sunday

HENRY FORD BACKS HOOVER

Auto Manufacturer Tells Why He Is Heart and Soul With Candidate.

SAYS FARMERS NEED HIM

Quality of Hoover's Ability Is a Fact Already Demonstrated by His Record.

By HENRY FORD

In an interview with Samuel Crowther of the Saturday Evening Post

I AM for Hoover for President because he has shown that he can size up any job, pick the right man and direct it through to success Through fourteen years—ever since Belgium—he has been handling some of the biggest jobs in the world. He has made a success of every one of them. He has shown that he is not afraid of size

The greatest job that the world has ever known is now before this country. It is so big that none of the old line politicians even knows that it exists. We have developed this country just enough during the past six or seven years to know that much which was thought to be impossible can be made possible under the right leadership

The task is to make such use of the experience we have gained that we can build rightly for the future. Otherwise we are going to lose all that we have gained.

We have the men, we have the money and we can make the tools for the job But all these will be useless without leadership. That leadership, because the thing is national, must be in the President.

Hoover Has Proved Leadership

The quality of Hoover's leadership requires no experimenting. It is a demonstrated fact.

But of what value is experience in the management of public affairs? What difference does it make who is President?

We all have our personal preferences, but a mere preference is not important. If it be true, as is said, that no real issues are before the country, then any man of reasonable ability will make an acceptable President.

It is quite true that we have no real political issues. But we have an economic problem which looms greater than any of the old issues. It is not in politics. It cannot be described in the old language of politics.

No one is much concerned now with liberty and independence as tied up with the right to vote. We have all the rights our forefathers struggled for. We are concerned with new and different rights and responsibilities. The great issue is to develop this country to a point where every man and woman has the opportunity both to work and to play.

We have proved that wages can be made high. We have now to prove that they can be continuously paid—that there will be no periods of unemployment over which the worker cannot finance himself.

No man is wise enough to say how the future should be planned. But we have right at hand many enormous developments which will keep all of us busy.

Transportation Brings Prosperity

This country could not have developed without transportation. That gave us national markets. These are mass markets, and thus we have been able to use better methods of manufacturing and get higher wages and lower prices. The first rapid transportation came through the railroads. Then came the automobile. The motor vehicles were at first thought to be competitors of the railroads, but now we know that they fit in together.

Business breeds business, and now we have not enough transportation. We must use the great waterways that have been put here for us to use both for transport and for power. Damming them for power improves them for transportation. Besides, the accumulation of these large bodies of water assists the rainfall. We have the Great Lakes and the Mississippi partly in use, but they are doing only a fraction of what they can be made to do. And many other projects only await further planning and coordination. For we know that we are in need of all kinds of transport—by air, by land and by water—and that each has its place and that each will make business for the others. This country needs to have its industry more spread out. Electricity and transport will do this.

This program will circulate billions of dollars. Don't say it will cost billions of dollars, say it will circulate billions of dollars. That is the true way of saying it.

We have the money and will have much more, for every dollar thus spent will produce several dollars. And undertaking this work will mean that for many years—perhaps forever—we shall not have to bother about unemployment anywhere. Both the farm, and the factory will share in every dollar that is paid out to the men actually on the work.

It does not matter to me who does the work or who owns this work when done. It is use, not ownership, that counts.

The bare statement of what this country must do for its own well-being also describes the kind of President it needs. It is not that the President is the director general of the nation or any other kind of absolute ruler. But someone has to be spokesman of the progressive need of the country.

Hoover Knows Language of Progress

Hoover knows the language of modern progress better than any man. As an engineer, he has already planned the water and hydroelectric development of the country; and as a public officer with a knowledge of cause and effect, he knows the great present and future influence of these developments.

From time to time foreign nation have been foolish enough to imagine that by some system of control they could raise the prices to us of raw materials that we had to have. Some of the controls were official and others were semi-official. The British control of rubber was undertaken from the best of motives, but the temptation to boost the price was too strong and so rubber went above a dollar a pound.

Hoover did not ask for legislation or make any protest—any foreign nation has the right to charge us what it pleases. It is up to us to defend ourselves. He called a meeting of the rubber men They learned just how much rubber was already in the country and what could be done toward reclaiming rubber. That broke the artificial price and saved the users of automobiles at least half a billion dollars Incidentally, it caused some of us to make a start toward getting our own sources of rubber A man less versed in the ways of the world and of business would have made a great many speeches and probably had the country talking war—and accomplished nothing but the generation of a great deal of hard feeling.

Can Do Big Things

This man Hoover not only has ideals but he can do things. He knows what to do and where to find the right men.

Among what are said to be issues are prohibition and what is called farm relief. We cannot elect a President who says in advance that he will take the oath of office with a mental reservation not to support the Constitution.

Some farmers are well off and others are not. But I cannot regard the farm as distinct from industry or as in opposition to industry. The one depends on the other. If the farmers do not earn money, then a great industrial market vanishes. If the workers do not earn, then the great market for farm products drops Undoubtedly the freight on farm products is too high, just as is the freight on all products, but this will be cured only by providing more and better methods of transport in the general plan of the development of the country. The farm is small business in a world of big business and only through the development of the country can it become big business. The man who earns money on the farm is doing so by applying the methods which have made industry. That the vast majority of farmers are not failures is shown by the buying power of the farm states

The pensioning of various industries has been tried time and again everywhere in the world. It has never worked and can never work. And no more can it work with farming. In addition, this is a world of lowering prices. Progress is in the direction of learning how to pay wages and earn money with low prices. That has created big business. It will create big farming We are now in the transition period and that is always a period of temporary hardship.

Country's Development Just Begun

In short, we are not using what we have. There is a tendency to think of the country as already developed, when actually the development has scarcely begun. We have already gone further than any other nation. We have done this by taking advantage of science in a large social way for the benefit of all. The whole country is in flux. If an industry or an industrial unit tries—even for a little while—to stand still, it never catches up again.

New methods in farming are coming in as quickly as are the new methods in industry. New methods are adopted in both industry and agriculture only because they make a fuller use of materials and men than did the old methods.

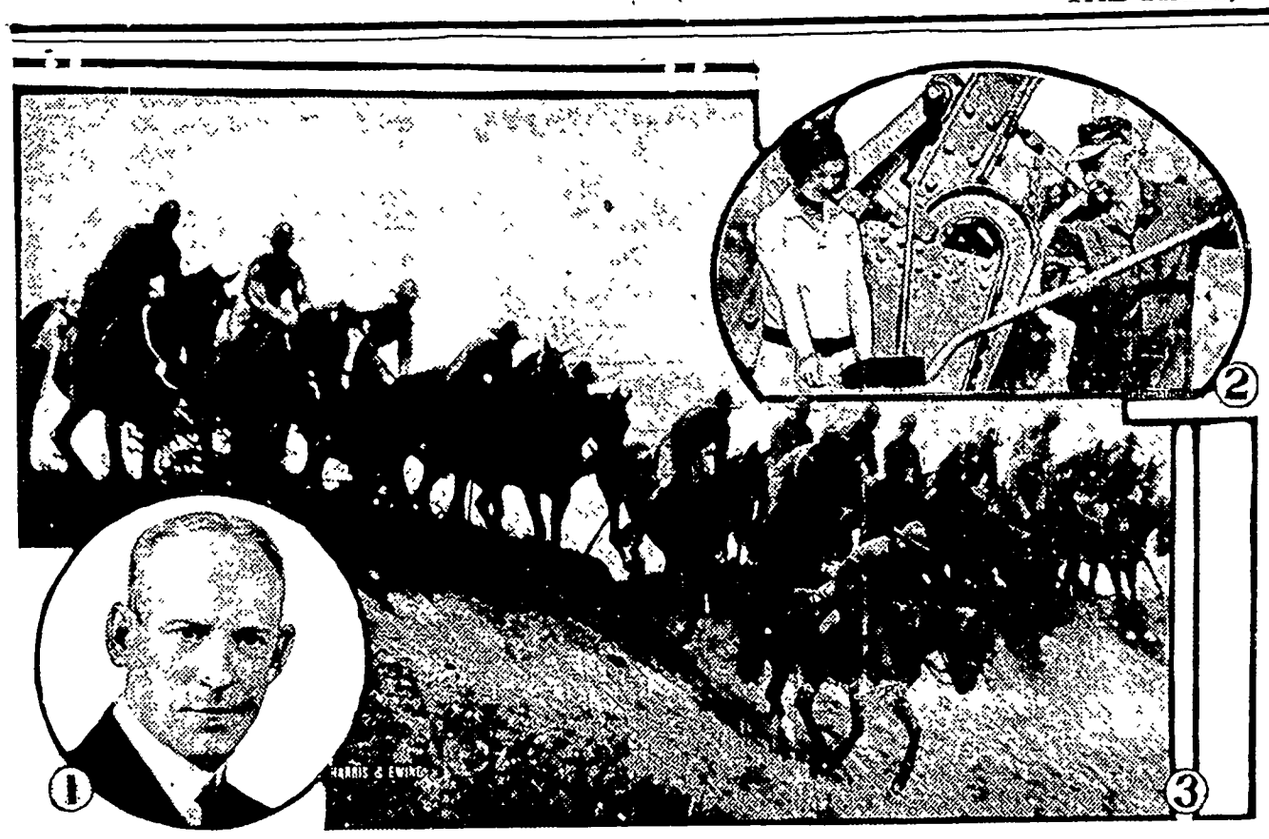
We have reached our present point without plan, but to go much further we need the opening of the country on so broad a basis that the Government itself must aid. The old system is going out of business; there is no cure but the wisdom to welcome the new era, which will not alone solve our present problems but abolish them utterly.

Herbert Hoover has the grasp not only of this country but of the world, and hence of this country's relations with the world. He is a young man, he belongs to the new era. He has the ideas of the new era and the proved ability to put them into practice. That is why I am for him.

Brilliant Record

Ohio State Journal

Herbert Hoover was fully prepared by nature, education and experience to organize and direct the work in the department of commerce. As engineer, economist and student he brought to his task an unusual ability. As an executive he has directed the work of organizing and rounding out that important department.



1—Simon Michelet of Washington, president of the National Get-Out-The-Vote club. 2—Mayor James Rolph, Jr., of San Francisco turning the first soil for the city's $6,000,000 war memorial building group in the civic center. 3—Former Representative John Philip Hill of Maryland, now a colonel in the Three Hundred and Sixth Cavalry at Fort Meyer, Va., taking his troops over a steep bank.

NEWS REVIEW OF CURRENT EVENTS

Many Nations Sign Kellogg Treaty Renouncing War as a National Policy.

By EDWARD W. PICKARD

WAR—selfish and wilful war—is now outlawed. Which is to say that the representatives of fifteen of the leading nations of the world gathered in Paris and signed the Kellogg treaty by which they agree to renounce war as an instrument of national policy in their relations with one another.

Neither Secretary of State Kellogg nor any other of the signers pretends that the pact is a panacea for the ills of the World war nor that the ceremony in the Quai d'Orsay means that there will be no more wars. But as Lord Cushendun, British acting foreign secretary, said, it is the most important step yet made in the long road to realizing eventual world-wide peace.

"The world has not been remade by the signing of the pact," said the British plenipotentiary. "Wars may still occur and we must not be too terribly disappointed if some minor war breaks out in the next few years."

He warned Europeans not to be optimistic that treaties make any change in America's traditional aloofness from European affairs. "There is no implication or any indication of America's part to concern herself with European affairs," he said.

Before it is binding on the United States the pact must be ratified by the senate, and it is certain that there will be a fight on that action next winter, for a good many people, including some senators, profess to believe the treaty will lead us into foreign entanglements and toward membership in the League of Nations. If our senate does act favorably, the other nations signatory will ratify the pact within one year.

The fifteen original signers of the treaty, led by Germany because it came first in the French alphabetical list, are: Germany, United States of America, Belgium, France, Great Britain and Northern Ireland, Canada, Australia, New Zealand, South Africa, Irish Free State, India, Italy, Japan, Poland and Czechoslovakia. The treaty remains open for the adherence of all other powers, and telegrams and cablegrams of adherence began to come in before the ink was dry. Among the first nations to express the wish to sign were Denmark, Norway, Bulgaria, Cuba, Rumania, Yugo-Slavia and Peru. And Yugo-Slavia was first to sign. An especial invitation to join the other signatories was extended to Soviet Russia by M. Herbette, the French ambassador to Moscow.

Here are the two chief articles in the treaty:

"The high contracting parties solemnly declare in the names of their respective peoples that they condemn recourse to war for the solution of international controversies, and renounce it as an instrument of national policy in their relations with one another.

"The high contracting parties agree that the settlement or solution of all disputes or conflicts of whatever nature or of whatever origin they may be, which may arise among them, shall never be sought except by pacific means."

A group of feminists, led by Doris Stevens of America, tried to "crash the gates" at the assemblage of eminent diplomats to obtain recognition for their demand for equal rights for women. They created so much disturbance that Miss Stevens and others were taken into custody by the police.

ASSERTING that any attempt to supervise the production of armaments was calculated merely to mislead the public, Soviet Russia has refused to collaborate with the League of Nations in its present efforts to control the manufacture of arms. Maxim Litvinoff, Soviet vice commissar for foreign affairs, in telegraphing this decision to Sir Eric Drummond, secretary of the League, pointed out his government's contention that the League has done nothing toward the solution of the problem of real disarmament. He insisted that urgent steps should be taken to obtain definite results and avoid the risk of future wars.

PREMIER MUSSOLINI, whose inspired press poked all kinds of fun at the Kellogg treaty, and continues to do so, has submitted to Spain a new treaty with Italy that is looked upon in Europe as his reply to the Anglo-French naval agreement. It is said that Spain is highly flattered by the Duce's attentions, fully realizing that it was Spain's neutrality in the last war which enabled France to concentrate on the east. The sole obstacle appears to be the Spanish king's British sympathies, and it is considered that the deciding voice may be that from the Vatican, to which Fascist diplomats are now said to be turning their warmest attentions.

RUSSIA is striving earnestly to attract foreign capital to that country, and the congress of the Communist internationale, in session at Moscow, has revised a new method to do this, embodied in a resolution which instructs foreign Communist parties energetically to oppose further investments of capital in colonial or half-colonial countries. The resolution classes China, India, Egypt and South Africa as colonial countries. Latin American is classed as half colonial and the order instructs agitators to hinder by all means possible the entrance of capital to such countries. Through arranging strikes, uprisings, and sabotage, the Communists can make these countries appear a poor place to risk money, as compared with Bolshevik Russia.

AMERICAN marines continued their successful attacks on rebel bands in Nicaragua by routing a group commanded by Miguel Ortiz in Neuva Segovia. Amnesty has been granted to Col. Guadalupe Rivera, one of Augustino Sandino's supply chiefs and foragers, who surrendered to the marines at Jingotega. His surrender is believed to have been caused by recent rebel defeats along the Coco river and the capture of his brother by a marine patrol.

BY PROCLAMATION of Gov. Harvey Parnell, last Thursday was a holiday in Arkansas in honor of the state's favorite son, Senator Joe T. Robinson, who on that day was formally notified that he is the Democratic party's nominee for vice president. The governor also called out several units of the National Guard which took part in the parade in Hot Springs, scene of the ceremony, and helped to maintain order. Something like 40,000 persons flocked to Hot Springs, many of them in automobiles, and the traffic problem was serious for there is only one through street in the city. Senator Robinson received the notification standing on the veranda of the Arlington hotel. In front of him were seated 24,000 persons, and other thousands stood in "Bathhouse row" or on roof tops and in windows. For the broadcasting of the ceremony the local radio station's power was increased ten-fold and new lofty towers were erected to prevent interference from the surrounding mountains. Altogether it was a great day for Senator Joe and Arkansas.

OF THE personal defections from one party to the other, the most significant of the week, because of its possible consequences, was that of Senator John J. Blaine of Wisconsin. He is listed in the congressional directory as a Republican, is a La Follette follower and was governor of Wisconsin before being elected to the senate. His predilection for Al Smith was more than suspected, and in a speech at Burlington he said: "I have no doubt that my friends and supporters are going to vote for Governor Smith for President. These are times when partisanship must not blind us. We must condemn Republican silence on the scandal of the Harding administration as an accessory after the fact." Blaine also denounced the methods of the federal prohibition department which he said was honeycombed with crime and bribery. He assailed "snoopers and spies who shoot down innocent men with dum-dum bullets."

The applause that greeted the senator's speech indicated that the La Follettetes of Wisconsin will follow him into the Smith camp.

Democratic Chairman Raskob, during a visit to the Middle West, said the budget of the national committee calls for a fund of $4,000,000. He said the party would spend $500,000 in ten corn belt states and $600,000 in radio campaigning.

HERBERT HOOVER opened his personal headquarters in a house on Massachusetts avenue, Washington, and from now on this will be the base of the Republican Presidential campaign. There the candidate is receiving political workers from all parts of the country and deciding questions of policy. It was stated that he was paying especial attention to New York state and would soon go there to make some speeches. Whether or not he would discuss prohibition was not decided. National Chairman Work, Secretary Fort, and Earl S. Kinsley of Vermont went to Maine for a conference with Republican leaders of that state. The Maine state election comes September 10 and as it is always taken as an indication of relative party strength the Republicans are anxious to poll a heavy vote.

Prohibition party leaders decided that their national ticket should be withdrawn and members of the party advised to vote for Hoover, not as a partisan but as a firm supporter of the Eighteenth amendment.

DOWN in Texas the run-off Democratic primary was won by Congressman Tom Connally by a majority of more than 50,000 over Senator Mayfield. Nomination being equivalent to election, Connally will replace Mayfield in the senate at the expiration of his term.

Incomplete returns showed that Senator Tom Johnson had been renominated by the Republicans of California. Idaho Republicans renominated Senator Frank Gooding.

DIRECTOR OF THE BUDGET LORD issued a report that was not at all pleasing to President Coolidge, since it estimated that there would be a treasury deficit of $94,279,346 for the current fiscal year. It is the first time since the war the government's estimators definitely have forecast a deficit in their annual reports. They base their contention on an increase in prospective government expenditures, due to increased activities of bureaus during the fiscal year 1929 and to a prospective decrease in revenue. This switch in estimates has converted the estimated surplus of $252,540,283, figured upon when the 1929 budget first was fixed, into the deficit.

Mr. Coolidge let it be known that he will take stringent measures to reduce government expenditures during the remainder of his administration. When he returns to Washington about the middle of September he will consult members and department heads on means of cutting expenditures even below what was allotted them in the budget.

MARSHAL EMILE FAYOLLE of France died last week in Paris, at the age of seventy-six years. He was considered one of the most brilliant strategists in the World war and directed many of the French army's most successful actions.

Gov. A. G. Sorlie of North Dakota, who had been ill with heart disease for a month, passed away at the executive mansion in Bismarck. As candidate of the Nonpartisan league he was elected governor in 1924 and was re-elected in 1926 but did not seek renomination this year. He is succeeded by Lieut. Gov. Walter Maddock, a real "dirt farmer."

DIFFERENCES between Western railroads and employees organized in the Brotherhood of Railroad Trainmen and the Order of Railway Conductors are expected to be reconciled by an agreement announced by the United States board of mediation, which has been discussing the issue with both groups since July 22. The proposed settlement, details of which cannot yet be made public, must be ratified by the Association of General Committees on behalf of the railway employees before it goes into effect.

GOOD ROADS AND SAFETY LINKED

Highway Engineers Bring to Bear Knowledge of Accident Prevention.

"There is a real connection between good roads and safety," says Charles M. Hayes, president of the Chicago Motor club. "When a new road is built, it is generally the practice to see that it is properly marked; that the curves are gentle or that they are super-elevated; that as many railroad crossings as possible are avoided. In other words, the highway engineers of today bring to bear knowledge of accident prevention upon their work.

Eliminate Hazards.

"It does not matter what kind of road the new road is; if it is merely changing a cowpath into a country lane, the builders of the lane will eliminate some of the hazards that existed on the cowpath. Roads have a close relation to economy of time, and time is related to safety.

"If the road from the motorist's home to his office is bad in places, he tries to make up the time lost on the bad stretches by going faster than he should where the road is good. If the road were all good, he would most likely travel at an even and moderate rate of speed. Bad roads urge drivers to extra speed; they damage cars; they injure brakes and steering mechanism; and are indirectly responsible for many accidents.

Glaring Headlight Menace.

"The menace of the glaring headlight is more deadly on the unimproved road. The element of danger that is present in hill climbing is almost entirely eliminated on the improved road. The danger of skidding on improved roads is not nearly so great as it is on the unimproved.

"Many old roads, built in the horse and carriage days, crossed railroad tracks diagonally; this is, of course, dangerous. On the new roads, crossings are constructed at right angles with the railroad wherever possible Where expensive roads are built, maintenance must be carried on. Maintenance eliminates washouts and other dangers frequently met with on unimproved roads."

Numerous Auto Thefts When Car Unprotected

Theft of articles from unguarded automobiles is one of the greatest problems of police authorities, especially in the larger cities, and motorists annually lose through their own carelessness baggage and valuable packages which in many instances cannot be replaced.

This statement was issued by national headquarters of the American Automobile association in the form of an appeal to the car owners of the nation to aid in the campaign against this form of larceny.

Unguarded automobiles on streets in business areas offer a better opportunity for the "sneak thief" than one parked several blocks away, says the A. A. A., because in the "hustle and bustle" the thief has a better opportunity to make away with his ill-gotten gain.

Oil Viscosities Differ Very Much in Quality

Oils marketed under different trade names are of different viscosities, and the car owner who keeps this in mind will forestall the possibility of damage to vital engine parts by using too light or too heavy a lubricant. The service station employee usually can apprise the motorist of any differences, and when changing from one brand of oil to another it is the part of wisdom to make inquiry. Lubrication is one thing upon which no chances can be taken, regardless of oil filters, rectifiers and other valuable additions to the car.

First Automobile Built Here Had No Spark Plug

Motorists nowadays know the important function of the spark plugs, but few realize that the first automobiles sold in America were not equipped with them.

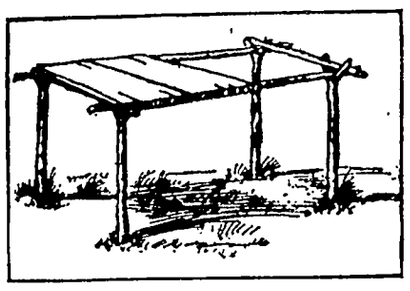
It sounds odd, but it is a fact. In the original one-cylinder car, according to H. Rabezzana, research engineer, ignition was accomplished by a "hot tube" which had to be pre-heated by the motorist—usually with a blow torch. This "hot tube" was one of the chief causes of uncertainty in pioneer motoring. It was slow in reaching the right temperature, uncertain in its functioning and its use fraught with difficulty and danger to the owner.

The first spark plugs introduced were suprisingly bad, the engineer reminds us, and if one of them were used in present-day engines, it would not last a minute at wide-open throttle.

In the intervening years of automotive progress, spark plugs, like other component parts of the automobile, have gradually developed and improved to the end that they might be dependable, trouble-free and long-lived. As a consequence, there are spark plugs today as nearly perfect as it is possible for men and machines to make them.

Something Easily Made Is Useful Camp Table

This camp table is easily made by driving four forked sticks into the ground for legs and laying cross sticks in the forks. The sticks are cut from a tree, and should be as thick as your arm. Measure the height you want your table to be, allow nine inches longer to drive into the ground; sharpen each and fix them into position—lay the cross sticks in the forks and fasten them firmly with string or wire. The table may be covered with flat sheets of bark, but this may be difficult to procure, so four flat boards, wide enough to cover the table, will not take up much room in the camp outfit, and these will do instead of the bark



Camp Table Is Handy.

England Debates Speed Limit for Automobiles

What is to be done with the speed limit? Raise, leave it as it is or abolish it? That is the question that is causing a great deal of discussion in England at the present time. The present limit is 20 miles per hour, and many motorists think that a set speed limit should be abolished altogether and the law against driving "to the public danger" be restored. Proponents of this law point to the fact that five miles per hour is dangerous under some circumstances, while 50 miles is safe under other conditions.

AUTOMOBILE NOTES

The motorist who saves time at a crossing may lose it at the hospital.

* * *

The usual reward for careful driving is that some fool bumps you from behind.

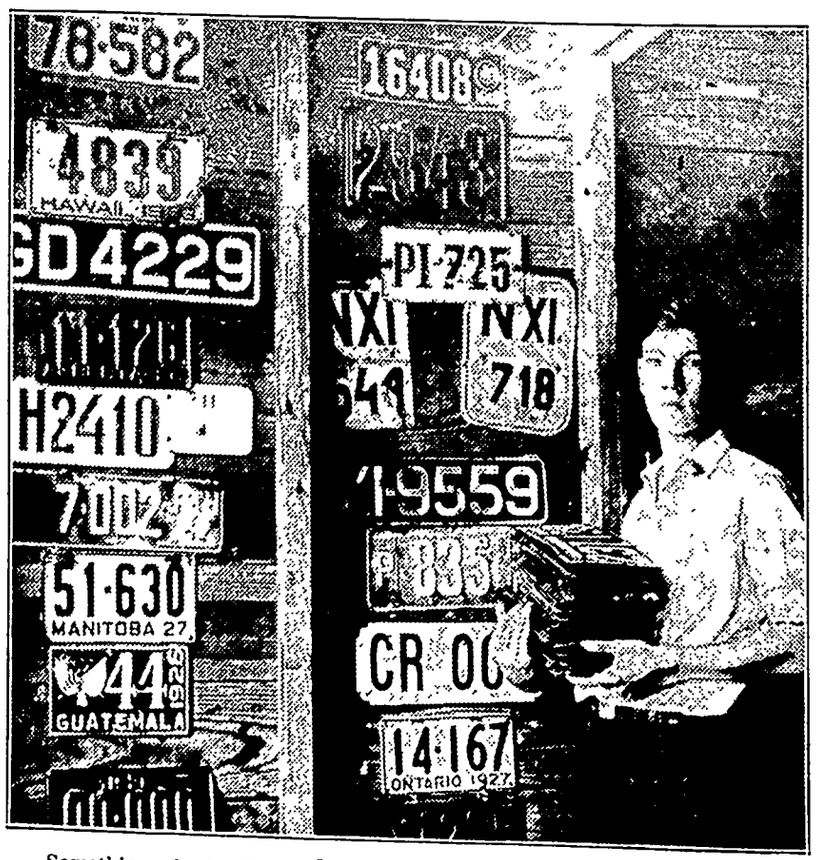
* * *

Good brakes also may save you from making a "bad break" when in the downtown traffic congestion.

* * *

And yet the man who preaches "duty" to his employees howls like other people when the speed cop gets him.

YOUTH COLLECTS AUTO PLATES AS HOBBY

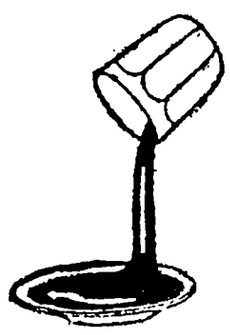


Something absolutely new in collections has been inaugurated by Jack Ermerin of Washington, who has acquired a most remarkable variety of automobile license plates from various parts of the world. Odd-looking plates of Czechoslovakia are neighbors of those from Finland and Haiti and the more familiar tags of Canada and Hawaii. His prize specimen is an Irish Free State tag.

new

less boiling more jelly with PEXEL and always like this

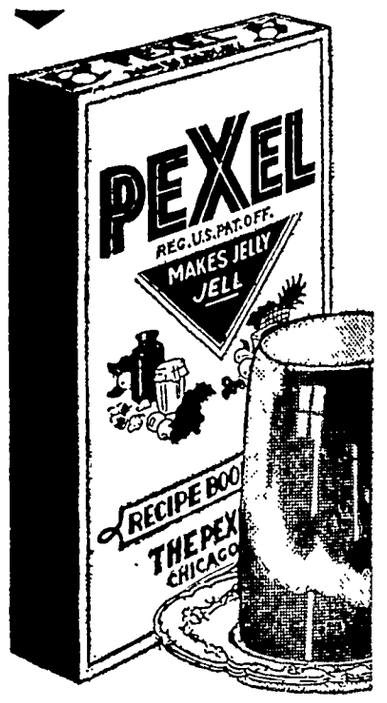
never like this



PEXEL makes jelly jell with most of the usual boiling eliminated. Makes more jelly because fruit, sugar, flavor aren't boiled off. Saves time and fuel. Repays the 30c it costs from one to three times.

Pexel is different. A 100% pure-fruit product. Tasteless, colorless, odorless. Preserves the full flavor and color of your favorite fruit. A powder—not a liquid. Keeps indefinitely. Effective with fresh fruits, bottled fruit juice, or unsweetened canned fruits.

Get Pexel at grocers. Recipe booklet in each package. 30c. The Pexel Company, Chicago, Illinois.



For example—with Pexel

4½ cups strawberry juice and 8 cups sugar make 11 glasses jelly.
4½ cups raspberry juice and 8 cups sugar make 11 glasses jelly.
6 cups currant juice, 10 cups sugar make 14 glasses of jelly.
4½ cups grape juice and 7 cups sugar make 10 glasses jelly.

VICTIM OF MUD PUDDLES

(© by D. J. Walsh.)

AT LAST Judith was to meet Norman Parker after having corresponded with him for three years. It had begun en her chum, Alma, had married a val officer, Bob Whitman, and had ne to Honolulu to live. Letters had n exchanged regularly between the girls and Alma had made frequent ference to Norman Parker, a brother er of her husband's. Then there s a jesting message sent to Judith m Parker, and she had sent one k. Finally a letter had come across Pacific and regular correspondence followed her reply. It had been nned that Judith was to spend a mmer vacation with the Whitmans just when she was planning her rdrobe Bob had decided to leave navy and go into business, so he Alma had returned home.

n more recent letters Lieutenant rker had spoken of an impending ne and just this morning Alma had led Judith, saying "Norm" was in n! He had tried to reach Judith the phone, but had been unsuccess- He was coming out for dinner d Judith was to come, too; Judith not remember saying "good-by" to ma. She hung up the receiver al- st mechanically and all the after- on the big familiar offices of Denton Hornblow, attorneys, took on a rified, strange appearance, and she de three mistakes in one letter!

There was a large framed photo- ph of Parker on her dresser, with scribbled "To my friend Judy" down one corner, and it was to this otograph that she addressed her versation while she dressed with ticulous care.

"I know you are as nice as I—know u are," she said as she carefully w on a sheer chiffon hose which d for the first time been removed m its Christmas tissue. "And I pe you will think I am as nice as I nt you to think me," she added, ping her foot into a trim silver- caded slipper. "I just knew when ought those slippers they would do -some—very—special — occasion! d this is the occasion. Just think, m going to see you face to face! I l all wabbly—honestly, I have just ndered all these three years how I uld feel when you finally came, and w you are here!"

She took her frock from its hanger d held it at arm's length.

"And oh, my lovely, lovely green ss! I have wanted to wear it so ny, many times, but I just felt I uld save it—for some special oc- sion, and this is it! They tell me I uld always wear green—this beau- ul water green, the color of the res you have watched so many es—the color of the water between and—Honolulu!"

There was a light kasha wrap she d bought when she was planning trip to Honolulu and she drew it out her shoulders, viewing her re- ction in the mirror.

"Alma and Bob say I am good look- and—I actually think I am—to- ht! I wonder if he likes sleek bed heads or curly heads like mine. I do hope he doesn't object to un- y hair. I just can't help it because ave curly hair and it won't lie flat my head like Alma's. I wonder "

The Whitmans lived only a short tance from Judith's apartment, but re had been a sharp rain late in afternoon and to save the silver ppers Judith went to the telephone summon a cab. The line was out order.

"I'll just run down to the drug store d have the cab pick me up on the ner," she said to herself as she rned for one last glance in the rror at her green and silver lovell- ss.

She telephoned from the drug store d then took up her post on the rb, thrilled with anticipation of the ening before her; the evening she d wondered about for three years ce the first letter had come from rman Parker; the evening she had ged for since he had started to call Judy.

And then it all happened so quick- A car sped by—bright in its nickel mmings and shining maroon finish. ere was a sharp swish of water as truck a mud puddle near the curb. d Judith looked down with a cry of pair The front of her beautiful en dress was one big dark shadow muddy oily water and it was drip- g on her silver slippers. Her chif- hose were darkly stained and g damply to her flesh.

The maroon roadster was caught in ffic less than half a block ahead through tear dimmed eyes Judith in large letters on the drum type carrier, the words "Senator 8." e license number stood out glar- ly and seemed to defy her as she od wet, bedraggled, furious on the rb, 188-745! The driver, sitting low ind his wheel, a tweed cap pulled r his eyes, was blissfully uncon- ous of the tragedy he had left in wake. For a second Judith leaned akly against the telephone post. en she was about to present herself the offender, when:

"You called a taxi, ma'am? Where " and she was in the depths of the , weeping bitter tears, vowing geance on the driver of the maroon dster The license—188-745—was ly impressed on her mind. She uld report the outrage. A citizen couldn't stand on the curb without being made the victim of ruthless drivers! He must have seen that mud puddle! He must have known the disaster he had caused! And he didn't care! He would pay her cleaning bill —the owner of that roadster! She would sue him! She would talk to Mr. Hornblow, her attorney-employer, in the morning; And then the cab had stopped in front of the brilliantly lighted home of the Whitmans and she started to weep again as she paid the driver. She was a wreck. Alma would let her have a frock for tonight, but oh, that lovely green dress and slippers which she had saved for —a very—special occasion.

Then she stopped short! In the driveway of the Whitman home stood a bright new maroon roadster—the drum type tire carrier proclaimed the fact that it was a "Senator S" and the license plate bore the numbers—188-745!

And Alma was opening the door, kissing her warmly and then looking down at the ruined dress. Judith was again on the verge of tears when she was conscious that a man was standing beside her, his hand extended—that a broad smile flashed across that brown young face above her.

"And this is my friend Judy."

She knew it was Norman Parker, of course, but she also knew that he was the driver of the maroon roadster, for a tweed cap was in his hand. He had just arrived.

"Some beast of a driver drove through a puddle and ruined Judy's dress," explained Alma sympathetically. "Come upstairs, darling, and you can wear my orchid—"

"That's a beastly shame. I think a person who drives like some of these fools in this town should be prosecuted," said Norman Parker indignantly. "And such a beautiful dress. Did you get his license number?"

Judy slipped out of the kasha wrap and turned and smiled sweetly.

"Oh no, I just let him go by—without noticing. Accidents will happen, you know, and it might as well be me —as some one else. I shouldn't have been standing quite so near the curb anyway—and the dress will clean."

Late that night the maroon roadster stopped in front of Judith's apartment, but an arm held her tight as she was about to get out.

"I love you, Judy," whispered Lieut. Norman Parker. "I guess I have always loved you since Alma showed me a snapshot of you and I received your first letter . . . but I love you more than ever now since I found out what a good little sport you were over your spoiled dress. You know dear, life is more or less of a mud puddle unless you know how to step over them or around them, and with you to show me . . . how to smile when I get spattered . . . show me how to make the best of them . . . you do love me, don't you Judy? And we are going back to Honolulu, you and I and the "Senator S"—I bought this new roadster because I—thought you might like it . . . and we'll clear the mud puddles all right, won't we. . ."

Much Like Bringing Coals to Newcastle

Jean Jacques Brousson, the secretary of Anatole France, once picked up at a second-hand book stall a first edition of "Esther" and presented it to France, who thereupon led him to his library and pompously compared it with five other sumptuously bound first editions of "Esther." The master, perceiving his secretary's discomfiture, to cheer him up, told him a story.

"Now, there was once a young man," began M. France, "young and generous like you, who offered a rich financier a tiepin of lapis-lazuli. By the way, what is lapis-lazuli? Is it a stone worn in ties? I am not well versed in jewelry. Well, our Turcaret took the pin, turned it about in contemptuous fingers and then remarked:

"'Thanks. In my country house I have a mantelpiece of lapis-lazuli.'"—Kansas City Star.

Utterly Ridiculous

"Darling," he asked tenderly, as he drew the slender creature closer, "am I the only man you have ever kissed?"

"George," she answered somewhat testily, "before we have any more of this I am going to ask you a few questions. First of all, you know that daddy's a millionaire, don't you?"

"Y-yes," said the perplexed George.

"And you realize that when he dies the whole of his fortune will be left to me?"

"Y-yes."

"Then for goodness' sake be sensible and don't talk rubbish. What difference would it make to you if I had been kissed by a thousand men before I met you?"—Stray Stories.

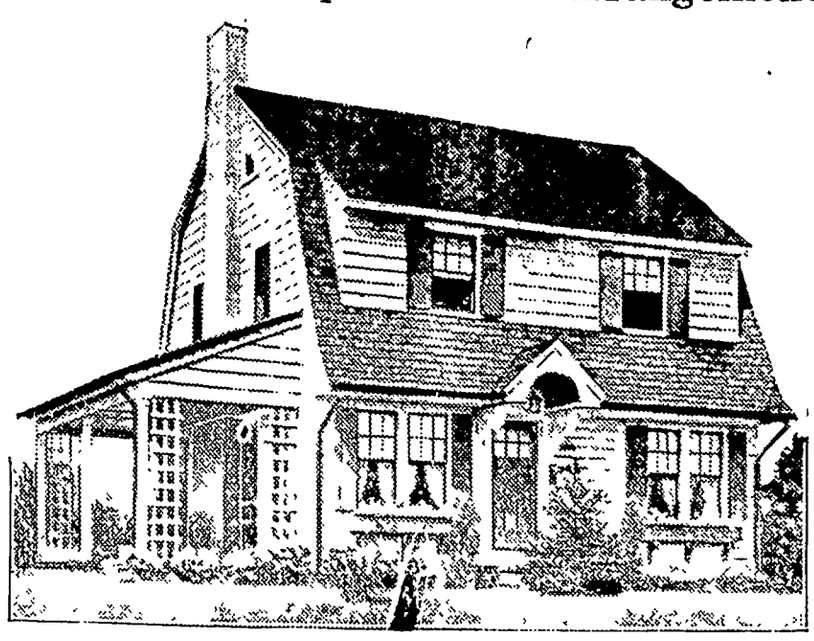
Needs Sympathy

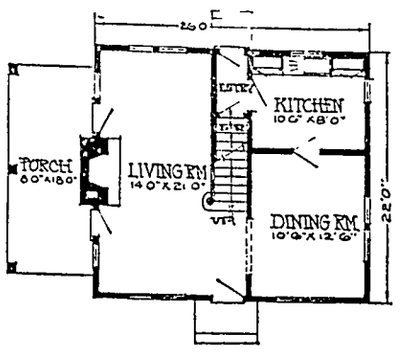
Our sympathies are broad enough to embrace all unhappy humanity and, while we don't think we know her personally, our heart goes out to the correspondent of the heart and home editor who writes to ask what can be done to straighten bow legs, radically reduce hips and bust, remove skin blemishes and cure soft corns between the toes.—Ohio State Journal.

An Old Man's Privilege

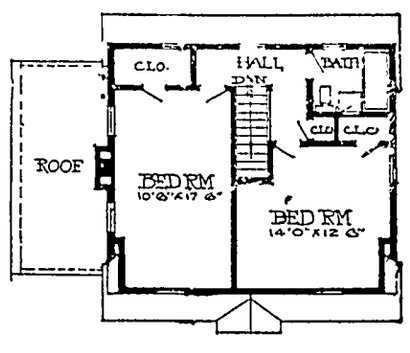
A woman I highly esteem scolds me because she believes I criticise women too much. At seventy-four a man does not admire the ladies as he did at twenty, thirty or forty, and somewhat at fifty and sixty. An elderly man is entitled to a good deal of charity in his vaporings; the mistake is made in admitting him to your presence.—E. W. Howe's Monthly.

Neat Dutch Colonial Home Design With a Compact Room Arrangement





First Floor Plan.



Second Floor Plan.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The ever popular Dutch colonial type of home is well represented in the charming five-room house pictured here. There are a number of advantages in selecting one of the colonial types of architecture when building a new home. Chief among these is the fact of their constant popularity. They are so well and so favorably established that there is no danger that the house will be out of style. This is an important factor in maintaining its value and saleability as well as in assuring permanent satisfaction.

This plan is almost square, which makes for great economy of space, and is so compactly arranged that its five rooms offer a maximum amount of living comfort. There is a large living room occupying one entire side of the lower floor. The front entrance opens directly into this room and the stair to the second floor ascends from it. The living room is connected with the dining room by an arched opening. To the rear of the dining room is the kitchen with an entry opening off it giving access to the basement stair and the rear entrance.

On the second floor are two large bedrooms. Each of these has a closet of ample size, one especially being of larger proportions than usual. The bathroom is conveniently located for both of the bedrooms and there is a linen closet in the hall. By means of the hall window it is possible to obtain excellent cross ventilation for each bedroom, and that without in the least sacrificing the privacy of the rooms.

Harnesses Farm Stream to Do Old Time Chores

The day of wearisome farm chores may be doomed by realization that a small stream of water can be harnessed up, to accomplish work formerly done by the entire rural family.

Citing the case of C. W. Fricke of Albemarle county, Virginia, the Farm and Fireside Magazine reveals how it is possible to make a small stream perhaps a foot deep and fifteen feet wide on the average raise poultry easily and cheaply, heat and light a farmhouse and contribute in a variety of other ways to the farm family's comfort.

"Right on his own place," says the magazine in referring to Mr. Fricke, "he develops and uses an electrical load of ten kilowatts, day and night in winter, and five kilowatts on an average in summer, or a total of 75,640 kilowatt hours a year. The first thing he developed on his place was the power from his small stream; the next an electrical power line from it to the site of his proposed house. The stream pumped its own water up for use in mixing the concrete for the house and drove the concrete mixer and the saws that were used to cut and size the framing material."

As an example of what appliances may be operated by such homemade power the magazine lists the following, among others: A homemade electrical house heater; an electrical range; a house and outbuilding lighting plant; an electrical feed cutter in the cowshed and in the poultry houses, incubators, brooders and drinking fountains all run by electricity.

Proper Hinges Make Homes More Livable

Although usually a somewhat unguarded part of the home, a great deal of the peace of mind and pleasure in occupancy, which is the right of the home owner, depends upon the successful functioning of hinges.

As in practically everything else that enters into home construction, mechanical advancement has taken place in the design and manufacture of hinges. There are now many types of hinges, each suited to the individual needs of a particular location The home owner does well to consider carefully the specific type of hinge which will best serve each door in his house.

The friction hinge, for example, is a noteworthy advance in hinge design adapted to many locations about the house. This hinge is so made that it will securely hold a door in any position in which it may be set for ventilation or privacy, although the friction is not so great that it is difficult to move to the door. Thus, bedroom doors equipped with these hinges may be opened slightly for ventilation, but not so much that privacy will be sacrificed. This hinge is particularly suited to mirror doors.

Type of Fence Means Much to Home Beauty

Many a rear lawn and even some of the front yards are now hemmed in with fences, but they are not merely installed as something useful without regard to the ornamental side, not these modern fences.

The home owner picks his fence as carefully as he does his light fixtures and wall decorations, he calls in an experienced fence "architect" to build the proper type. "Custom built" fences are now a commodity that are called for frequently. There seems to be as many styles in fences as in frocks nowadays, for various fashions in gardens must be matched in fencing. Gardens are no longer simple or nondescript, however, but demand many accessories aside from fences, pergolas, trellises, birdhouses that must match the fence, if there be one.

A popular type fence is of ornamental woven wire with red cedar posts. A chain-link lawn fence also is in demand, for certain type yards or gardens, with the attractive and ornamental wooden fences painted white in trellis effect, or in quaint picket fashion, with graceful gates or archways that gleam enticingly through vines and tall shrubbery, when gardens are luxuriant in the summer.

The old-fashioned type of ornamental miniature wire fence inclosures for flower beds also are back in fashion again, and the formal garden takes on an added "antique" note with fenced-in flower pots.

White Walls No Longer Make Patients "Blue"

Color has come into general use in the last few years in hospitals. Heretofore pure white was thought to be synonymous with sanitary conditions. White paint was put on by the hundreds of gallons, and tints by the thimbleful. The tendency was to have everything bare, bleak white, including walls, beds, furniture and ceilings.

But patients languished and spirits lagged.

Now the monotony of convalescence is relieved by bright warm colors—colored rugs, chairs, cushions, striped awnings, cozy curtains. The walls are done in soft grays, creams, greens and tans, the desired colors being secured by tinting white-lead paint with colors-in-oil. Some hospitals have proved by actual statistics that such attention to color has facilitated the recovery of patients, particularly of those suffering from nervous ailments.

Water Pumps

A redesigned line of pumps for hand, engine and windmill drive in localities without water supply features flange caps of arch span design in steel, declared to be unbreakable in ordinary use. Various models of the pumps are made for water lifts of from 25 to 200 feet. Wearing parts are brushed and renewable.

POULTRY

PROPER TIME TO FATTEN POULTRY

(Prepared by the United States Department of Agriculture.)

Early autumn is the time poultry raisers will usually find advantageous to fatten and dispose of surplus cockerels as well as early hatched pullets of a quality not desired in the flock of winter layers. Market poultry prices are usually highest just before Thanksgiving and Christmas. Another advantage in selling surplus stock fairly early in the season is found in the saving of considerable food material.

Dr. M. A. Jull, poultry husbandman, United States Department of Agriculture, recommends as a fattening ration a soft mash, measured by weight, composed of corn, four parts; oatmeal two parts; middlings, two parts, and beef scrap, one part. The ground grain should be mixed thoroughly and moistened with sour skim milk or buttermilk. Milk is excellent in fattening mixtures and about two pounds, or a quart, of milk is used to each pound of mash.

Care should be taken not to feed the birds too much during the early part of the fattening period. For the first few days of this diet feed lightly three times a day. For the rest of the period give the birds all they will eat three times a day but do not leave it before them. A four-pound cockerel should add a pound in two weeks. Four pounds of the grain ration may produce a pound gain.

Experienced fatteners sometimes keep poultry on the fattening feed for as long as three weeks; but in most commercial fattening plants the birds are fattened for from seven to ten days. There is often a difference of 5 cents a pound between the market price of thin and plump birds. However, farmers in many parts of the country may not find such advantageous marketing opportunities, and the prices received may not pay for the expense and bother of fattening the birds. In such cases it may prove wisest to sell direct with no attempt to fatten the fowls. Many such birds are bought at the markets by fatteners and conditioned and fattened for resale.

Culling Undesirable Hens From the Flock

Culling should be a continuous process from the time the egg is selected until disposition is made of the bird. With the young stock this constitutes removal of unthrifty birds. The pullets should be selected from the standpoint of size, relative rate of maturity, and health. On the other hand, with laying hens, other than the occasional removal of outstanding poor individuals, the ideal time for culling is at the end of the laying season, which runs from July to November. From July on the flock should be examined each month for the purpose of removing the poorer hens. Just how rigid the culling is depends upon the desired reduction of the flock. The later culling enables one to be more exacting in the selection of the superior birds. Obviously it is to the advantage of the poultryman to make more than one culling as he is thereby able to immediately cut down production costs.

Poultry Notes

If pullets are too slow in starting to lay, give them a wet mash daily for a week or so. That often starts them.

* * *

Ground yellow corn, with plenty of milk and a range of rape, clover or alfalfa, will keep the young chicks in good condition.

* * *

An effective way of eradicating lice is by means of sodium fluoride. It is easy to apply and inexpensive, and yet how many fail to take advantage of this valuable procedure.

* * *

The ventilation problem in the poultry house is much easier to solve if the hens are given enough floor space. Three and one-half square feet of floor space should be allowed for each hen in the flock.

* * *

The development of chicks will be checked and hens will stop laying if the common red mites are permitted to grow and develop. In warm weather mites multiply rapidly.

* * *

More than $15,000,000 are lost each year because of fertile eggs put on the market from June to October. Most of this loss comes from the farms because the male birds are kept until fall or winter. It is the eggs fertilized by these males that rot after they leave the farms, causing heavy losses all along the marketing line.

* * *

Good poultry is necessary if there is to be a profit made by keeping it. Specialized farms are becoming more numerous, but for many years to come the main output of eggs and poultry meat will be supplied by the general farms.

* * *

Sweet or sour milk seem to give equally good results in chick feeding. When liquid milk is not available on the farm, it pays to buy a milk substitute. Dried buttermilk is a convenient form of milk substitute to use as it can be mixed with the mash.

Dependable for Every Engine

C. O. D. Dr. Smith's Accredited Chicks. 100 Leg. or Hvy. Mixed $8; Rocks or Reds $9; Orp. or Wyan. $10; Mixed $7 Catalog. Smith Hatcheries, Box 143, Boonville, Mo.

When we think long and seriously is when we suddenly discover that the apparent regard of some one for us is sincere.

OLD FOLKS SAY DR. CALDWELL WAS RIGHT

The basis of treating sickness has not changed since Dr. Caldwell left Medical College in 1875, nor since he placed on the market the laxative prescription he had used in his practice.

He treated constipation, biliousness, headaches, mental depression, indigestion, sour stomach and other indispositions entirely by means of simple vegetable laxatives, herbs and roots. These are still the basis of Dr. Caldwell's Syrup Pepsin, a combination of senna and other mild herbs, with pepsin.

The simpler the remedy for constipation, the safer for the child and for you. And as you can get results in a mild and safe way by using Dr. Caldwell's Syrup Pepsin, why take chances with strong drugs?

A bottle will last several months, and all can use it. It is pleasant to the taste, gentle in action, and free from narcotics. Elderly people find it ideal. All drug stores have the generous bottles, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.

Mr and Mrs. Charlie Crane, and Mrs Erma Schneider, who have been visiting at the home of Mr. and Mrs. Lew Lewis, have returned to their home at Beaver Dam, Wis.

Louie Knoke is the owner of a ew 1 3-4 ton Graham six cylinder truck which he purchased Wednesday Louie now has a fine outfit for his hauling.

Mr and Mrs. J. L. Harr, and Mr. nd Mrs. Hofler and little daughter of Nora Springs called on Mrs. J. Gruetzmacher and Mrs. P. M. Griesmer, Sunday.

Mr. and Mrs. Wm. Neuhring of Rockwell, Iowa, but formerly of near Klemme, are the proud parents of a baby girl. Congratulations!

The Ladies Aid of the Methodist church will meet Sept. 13th. An lection of officers will be held. Each member is asked to bring a paper bag lunch or one covered lish.

Mr. and Mrs Howard Wiles and Mrs. Sarah Behringer, formerly of Ames, are now located at Waukesha Wisconsin, where Howard is employed in a large engineer factory is an inspector.

Ed. Jacobs is having his store repainted this week. Joe Miller is doing the work. We understand some of the other business places on the south side of the street contemplate having a like improvement made

Mr. and Mrs Elmer Brackett and daughter, Annie, of Lincoln, Nebr., drove in Friday afternoon for an over Sunday visit at the R. A. Jorgenson home They drove back to Lincoln Monday, accompanied by Elmer, Jr., who had been visiting in Klemme for about ten days.

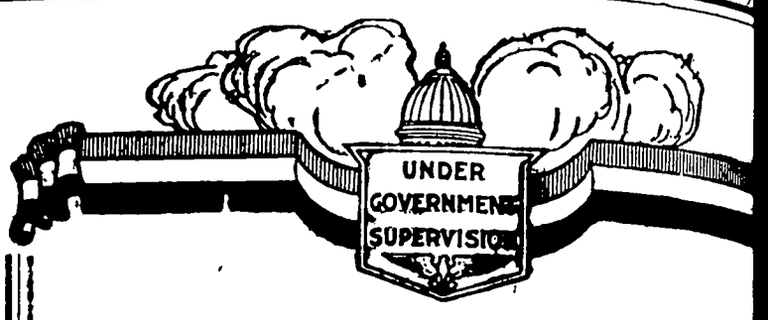
Walter Johnson, who went to the Mayo Clinic at Rochester a few weeks ago for an examination, was operated on Tuesday for apperdicitis and stomach ulcers. Reports are that he is getting along fine. His moher, Mrs. Albert Johnson is staying with him.

Mr and Mrs Alfred Manahl and Mr and Mrs Walter Manahl, all of Waterloo, Iowa, and Mr and Mrs John Velau, of Klemme, were entertained at the Henry Greffen home for dinner Sunday, and to enjoy the day visiting. They reported a fine time.

Kermit Koerner is on his way home from Twin Falls, Idaho. He has spent the summer in forestry work in the north-western states and Canada, as a par of the course in forestry he is taking at Iowa State College. Kermit has seen a lot of beautiful country this past summer in his work.

The public is invited to the big Farm Bureau "Fair" at the home of Mrs. C. A. Arnold Friday evening, Sept. 7th. See the Pageant, eat hot doughnuts and coffee, ice cream and cake. Have a good time. Come out and meet your neighbors at the Farm Bureau Fair!

The Klemme teachers all took in the Institute held at Britt on Monday and Tuesday Agnes Samuelson, Sate Superintendent, talked to all of the teachers in the state over Radio Staion WOI Tuesday morning A radio had been installed and the Hancock County teachers tuned in on the speech.



"It's Gone"

Ho woften, after a fruitless search for some important paper, have you said "it's gone," and then worried yourself sick because of its loss or misplacement. You'll never again have that experience if you keep your valuables in a safe deposit box in our vaults, —they'll always be right there when you want them. Cost? Slight. About a cent a day.

S ENROLLED IN OUR HIGH SCHOOL

FEW LESS ENROLLED IN THE GRADES THIS YEAR

eshman Class Is Larges In The History Of The School

Pupils and teachers came inside ain on Wednesday of last week r another nine months of know- ge seeking and preparation for ture tasks.

Possibly the largest high school rollment in the history of Klem- e is ours now, with 76 names on r roster There have been en- lled a few less than last year in r grades, only 79 as compared th 88 last autumn. According to r Secretary's count there were July 1 of this year 139 of school e residing within our district, but have in our schools at present 5 which means, of course, that ny from other districts are here attendance.

Freshman Class Large

Thirteen non-resident students ve entered our Freshman class ich with our own large class of teen makes probably the largest eshman class ever enrolled in emme High School. How fine would be if all could remain and aduate.

Public Demands Education

The public seems to have con- ded that a high school education essential to success and well be- , judging from the number of rents who now permit or encour- e their children to attend How tunate that our resources per- t these additional four years be- nd what was not long ago thot ficient for the average man.

College enrollments have also in- ased rapidly in modern times, d we are pleased to see Klemme aduates leaving for more extend- preparation at such institutions Drake, Morningside and Upper wa.

Same Faculty Back This Year

We are pleased to have the same ntical faculty that was ours last Their knowledge of our school tem, textbooks, pupils, parents d other acquaintance with each er should give them an advan- e over new instructors. We feel tain many schools cannot claim good teachers as Klemme in ir ability to interest, instruct, d influence children oward the od.

Miss Trumbell, our high school ncipal, who spent a term at nford University, Palo Alto, Cal back, brim full of plans and as- ations for our new school year d her students and we all will fit from her attendance at Her- t Hoover's Alma Mater, the past mmer.

Miss Root, instructor in grades nd 6, will be worth more to us year by reason of her atten- nce at our own State University past summer. We are glad for interest these summer sessions ate and wish more of our teach- in Iowa might attend them.

Others of our faculty saw new nes, experienced new situations travel and visits away from home are back at their tasks better stronger and more interest- for it all. Pupils, we believe, fit as well as teachers when the er can afford to travel and bring their pupils new and rich experi- es from real life ouside of the ol room.

We are highly pleased with the mber enrolled and with the in- st all have shown in their work school thus far.

Building In Good Condition

We are very grateful for the im- rement in our school building which our thanks are due the rd and our capable janitor. Floors, windows, walls and seats e been scrubbed, washed, paint- or varnished. A new metal ceil- has been added to our gymnasi- um, and both our lighting and bell systms have been materially im- proved We all now feel it is up to us to match this improvement by more thorough and efficient ad- ministration and class room work We'd like to have students and parents, as well as our board, feel we are worthy of our hire.

Parents Always Welcome

Parents are very welcome at all times to visit the school and to counsel any here as to their chil- dren's work, health or conduct Let's co-operate in a friendly way in the interests of "Young Ameri- ca" This should be a banner school year for Klemme and her youth.

EARLY PICKED SEED CORN IS CLAIMED TO BE BEST

Artificial Drying Prooves A Good Practice For Farmers

Early selection and artificial dry ing of seed corn are the two prac- tices that should be used by every farmer in order to in ure the best seed possible These are the recom- mendations of plant pathologists of the Iowa Agricultural Experiment Station after cooperating tests on more than 12,000 ears of seed corn made during the winter of 1927-8.

The plant pathologists advise the selection of ears from standing stalks, free from smut, with un- broken, curved shanks Dry the corn in a brooder house, farrowing house or seed house, using a tem- perature between 100 and 110 de- grees F Good ventilation should be provided at all times Corn should be firmly dented before it is gath- ered to prevent the breaking of the seed coat when it is handled Brok- en seed coats allow the entrance of mold organisms

In a comparison of early and late selected seed corn, it was dis- covered that 90 7 percent of the early selected seed was strong, in contrast to 77.4 percent of the late Only 7.2 percent of the early selec- tion was weak, while 12 0 percent of the late was weak; 2 2 percent dead as against 10 6 percent of the late, and 13 2 percent of the early selected seed was moldy in contrast with 23 6 percent of the late Whenever a comparison was made only corn of the same variety and from the same field was used The early selected seed was gathered between Sept 20 and Oct. 5, and the late selections were made after November 1.

The merits of a combination of early selection and artificial drying are emphasized in the following comparison of artificially dried and naturally dried seed, in the tests of which most of the corn used was early selected. All tests were made on corn of the same variety and se- lected at the same time, the only difference being that some was hung up to dry naturally, while an- other part was dried with heat At least 100 ears were used for each sample.

Artificially dried seed was found to be 94 4 percent strong in con- trast with 89 7 percent for seed not dried; 5 1 percent of the dried was weak, while 7 9 percent of the un- dried was weak Only 0 5 percent of the dried seed was dead against 2.4 percent of the seed not dried; and 5 7 percent of the dried seed was moldy, in contrast with 1 5 percent of the undried.

In addition to the value of selec- tion and drying, it was noted that early maturing varieties showed less difference beween early and late selected seed than did late ma- turing varieties. Late maturing va- rieties showed a great increase in dry rot the longer the corn was left in the field.

Gone On Western Trip

Henry Greiman and Reuben nd Walter Henschen left early this morning on an auto trip west and norhwest which will earry them to Montana where they will visit.

On the way out they expec to see the Bad Lands of South Dakota, will tour the Black Hills.

In Montana Henry expects to do a little big game shooting and ac- cordingly ook his high power rifle with him.

The return trip may take them home by way of the Yellowstone.

They expect to be gone for two or three weeks.

WHO RULED OFF THE AIR EVENINGS

RADIO COMMISSION TO CHANGE SCHEDULE NOVEMBER 11

KOIL Only Iowa Station That Will Operate Full Time Schedule

DES MOINES, Sept 13 —Station KOIL of Council Bluffs is the only radio broadcasting station in Iowa retaining a ful-time channel under the national re-allocation of power and frequency announced by the Federal Radio Commission, Wash- ington.

Iowa's two other outstanding stations. WHO of Des Moines and WOC of Davenport, must share their broadcasting channel with other stations after Nov 11, effec- tive date of the re-allocation It is understood the re-allocation will have the effect of confining them to daytime operation This is also true of WOI, Iowa State College at Ames, and WSUI, University, Iowa City.

While KOIL was given the only clear channel, its power was cut from 5,000 to 1,000 watts, and its frequency increased from 940 to 1260, with a resultant lower wave length

WOC will share with KJR of Se- attle, Wash., a frequency of 970 with power of 5,000 watts. WSUI will also be on the 970 band but will have only 500 watts Heretofore WOC broadcast on the 800 band and WSUI on 630.

WHO and WOI will share with KNX of Hollywood, the 1050 kilo- cycle band, all having 5,000 watts power WHO formerly operated on 560 kilocycles and WOI on 1,130 KFNF of Shenandoah has been cut from 2,000 to 500 watts, and must share day and night transmission on 890 kilocycles with WNAX of Yankton, S D, and KUSD of Ver- million, S D. KMA, Shenandoah, was cut from 1,000 to 500 watts, and raised from 760 to 930 kilo- cycles and will share with KGBZ of York, Nebr.

A number of the other smaller Iowa stations were also affected by the proposed change.

COUNCIL PROCEEDINGS

Klemme, Iowa
August 6, 1928

Regular meeting of the Town Council held at the Mayor's Office.

Larsen, Suckow and Missman, members of the Council present.

Minutes of last meeting read and approved as read.

Certification of Tax Levy for 1929 approved as per Budget Estt- mate

Motion made and seconded to al- low the following bills:-

A E Finn, July Salary	$85.00
C. D Smock, 2 Hours of Labor	.80
Klemme Times, Publishing Budget Estimate and Council Proceedings	13.30
J. H. Steeman, 18½ hours Labor	7.40
Lloyd Lau, Mowing weeds	10 50
Bock Oil Co., 180 gallons Gasoline	31 50
W. F Pavey, Sharpening Mower	5.15
P M Wilson, Supplies	1.33
A. H. Ridder, Installing Fountain	3.00
League of Iowa Municipalitties, Dues	10.00
Royer Manufacturing Co., 2nd Payment on Grader	100.00
Central States Elec Co., July Str. Lights	29.02
Etchen Auto Co., Repairs	20.41
John Heginger, 27 Loads Gravel and Hauling, Labor	33.70
P O. Department, Envelopes and Stamps	2 00

Bills allowed.

Motion made and seconded that meeting be adjourned.

A. J. KUDJE,
Clerk.

DUCK SEASON TO OPEN SUNDAY A.M.

DUCK SEASON OPENS SEPT. 16 IN IOWA

A Few Flocks Have Been Seen In Neighborhood Past Week

With the opening date on duck shooting but a few days away, lo- cal sportsmen are getting their am- munition ready, guns oiled, hunt- ng coats, caps and boots dragged out of dark corners and making preparations in general to at least "be on deck" the opening day— ducks or no ducks

A few straggling flocks of ducks have been seen around this part of the country, but it's too early, the weather too mild for any sizeable flights Hunters will never-the- less be stationed at favorite spots on East Twin Lake, Eagle Lake and Clear Lake, waiting for the first streak of dawn, watching the min- ute hands of the old Ingersoll slow- ly point th legal time for pulling of triggers!

Regarding licenses the game laws say.

1718 License to hunt and trap. No person shall hunt, pursue, kill, or take any wild animal, bird, or game in this state in any manner, or trap fur-bearing animals or game without first procuring a li- cense.

1720 Exceptions No license shall be required from owners or ten- ants of farm lands, their wives, children, or employees for hunting, trapping, or fishing upon lands owned or occupied by them.

1721 Consent of parent or guar- dian No license shall be granted any person under eighteen years of age unless the written consent of parents of guardian is attached to the appication.

1767. Closed season for game birds and animals Every person is prohibited from trapping, shooting, killing or taking any of the follow- ing named birds or animals during the following closed season

Wild duck, goose or brant, rail, plover, sandpiper, marsh or beach birds, Wilson or jacksnipe, from January first to September fifteen- th, both dates inclusive.

1768 —Bag limits and possession No person shall shoot or kill to ex- ceed the following numbers of game birds in any one day, respec- tively: fifteen ducks, and fifteen other game birds.

The following are declared to be game birds:

1 The Anatidae, commonly known as swans, geese, brant, and river and sea ducks.

2 The Rallidae, commonly known as rails, coots, mud-hens, and gal- linules,

3. The Limicolae, commonly known as shore birds, plovers, surf birds, snipes, woodcock, sandpipers- tatlers and curlews.

HOW'S YOUR SUBSCRIPTION TO THE KLEMME TIMES?

Your Name And The Date Will In- dicate Expiration Date

How's your subscription to The Klemme Times?

If your paper is past due, or is paid up in advance, you can easily determine which by looking at the date following your name at the op, right hand corner of the front page margin.

It's very simple; for instance if it appears like this:-

Jones, John Sept. 28

that means John Jones' subscription expired Sept. 1, 1928.

Read your own date, and if you are in arrears please send check or call at our office and save us the bother of sending out statemens.

If any error appears on your date notify us at once and we will be glad to correct it.

Thanks! R. A. Jorgenson, Pub.

Fred Kluckhohn and family and Clarence Kluckhohn and family were Clear Lake and Mason City visitors Sunday afternoon.

KLEMME LOST TO CLARION AT CORNELIA SUNDAY

Locals To Play At Galt Tourna- ment Sunday And Monday

Klemme and Clarion played base ball last Sunday at the Lake Cor- nelia Park, with the result that the local boys came home with the small end of a 3 o 0 score. They say Clarion has a way of winning gam- es that can't be beat. Clarion, you know always plays at home!

Here's how the wreck looks:-

Klemmo (0)	AB	H	R	E

Will Enter Tournament

Klemme has signed up to play in the tournament at Galt, which will be played Sunday and Monday. Galt, Klemme, Belmond and Willi- ams are the towns represented.

With the same group at Belmond in a tournament, Klemme played in the finals with Galt

A good crowd of Klemme fans are expected to accompany the boys to Galt Sunday to see the starter

The Confirmation Class will meet Saturday morning at 9:00 o'clock. Pupils may enroll for a 2 or 3 year course.

FARMER BREAKS BOTH BONES IN ANKLE

William Wenz was the victim of a serious accident Monday that re- sulted in both bones of his ankle being broken in a short fall.

Mr Wenz has carpenters at his place doing some work and he was assisting them in building a porch on his house. Mr. Wenz fell about four feet in such a manner that his weight came down on his ankle, breaking both bones.

500 ATTEND AVERY TOWNSHIP FAIR

LARGEST MEETING HELD IN HANCOCK COUNTY

Hiawatha Pageant Was Feature On Farm Bureau Program

It is estimated that more than five hundred people were in atten- dance at the Avery Township Farm Bureau Meeting held at the Mrs. C A. Arnold farm lawn last Friday evening It was perhaps the larges Farm Bureau meeting ever held in this county. The beautiful farm home of Mrs Arnold is an ideal place for a large outdoor gather- ing and the lawn was well lighte with a farm lighting system furn- ished by C J Papousek, of Bel- mond. Plank seats were arranged on the lawn which acomodated sev- eral hundred people.

The program for the evening was held on the lawn in front of the house and was in charge of Mr. H C Barger, president of the Avery Township Farm Bureau. Mr. K. C Ruigh, of Meservey, led the crowd in community singing and several numbers were enjoyed, including, "Pack Up Your Troubles," "There's A Long, Long, Trail," and the Iowa Corn Song. Miss Mildred Johns played the piano acompaniment on all the songs. Mr. Prelipp, sec tary read a report of past acti ties County Agent L. T Nut was present and gave a summa of the exhibits of the county at t State Fair and the places won by various clubs, etc He invited all to attend the County Fair, in sess- ion this week.

Two of he youngest members of the Farm Bureau, Dolores Cook and La Von Sherwood sang a duet that "brot down the house." For an enchore they sang a clever medley with a combination of tunes and 'home-made" verse of the fam- ous Iowa Corn Song and Hail! Hail, the Gang's All Here, introducing to the world the fact that—"Av-er-y! Av-er-ie! That's Where The Smart Folks Grow!"

A beautiful feature of the even- ing's program was a pageant, dram- atizing Longfellow's famous "Hia- watha." The setting was near a for- est of pines, showing the Indians teepees and their camp fires. Tho parts were acted out by Miss Grace Blank, Alonzo Blank, Ed. Gifford and C. I. Carlson. The manuscript was read by Mrs. Barger and the musical accompaniment was play- ed by Miss Johnson, on the violin with piano acompaniment, and Mr. Ruigh supplied the vocal solos.

The Arnold farm yard made a natural setting for the scenes of the Indian camps which made the play very realistic.

Miss Mildred Johnson had a part in the program and gave two violin solos which were greatly enjoyed.

With the program over the great crowd sought the refreshment and exhibit stands of the "Farm Bur- eau Fair" Hot coffee, doughnuts, and home made candy were located at one booth which did a "land-off- ice" business until they ran out of good things to eat. At another of the stands ice cream and cake was on the menu.

An exhibit of farm products was on display at another stand.

Several foot races were run by the young men, boys and girls and a fat lady's race was on the pro- gram We have a suspicion that the "fat lady" who won this race resembled V. A. Cook to some ex- tent.

The Goodell Band, under the di- rection of Supt. Tinkle was on hand and supplied the music, putting on an excellent concert at the close of the program.

Everyone present had a most en- joyable time, and especially the "town folks" say they had a won- derful time with their friends, the farmers.

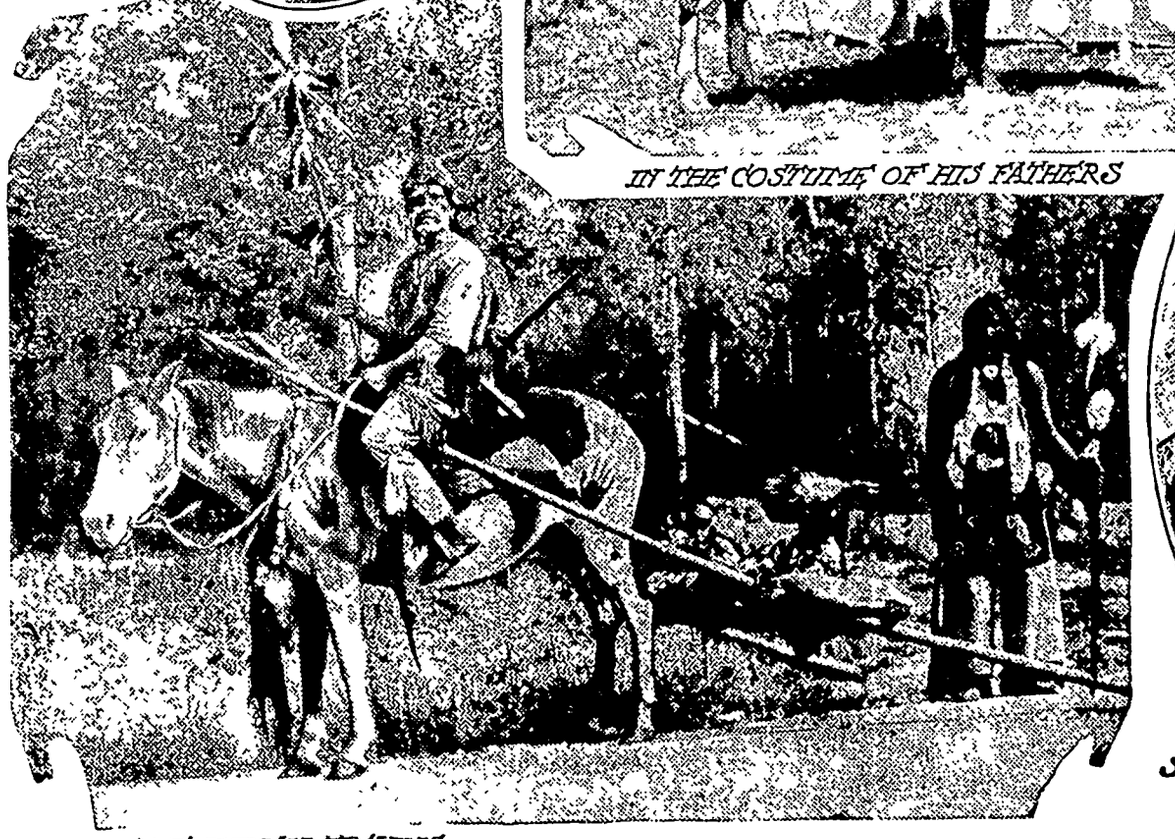
Ruth Johnson, who is taking a training course at Mercy Hospital, spent Sunday afternoon at home. She reports that she likes her new work.

The Red Man Speaks for Himself

CHIEF STANDING BEAR

IN THE COSTUME OF HIS FATHERS

CHIEF BUFFALO CHILD LONG LANCE



THE INDIAN TRAVOIS

SOUNDING SKY AND SPOTTED CALF

Photograph of Chief Standing Bear, courtesy Houghton Mifflin company. Other photographs, courtesy Cosmopolitan Book corporation.

By ELMO SCOTT WATSON

AMERICAN Indian day comes on September 28 and indications are that it will be more widely observed this year than at any time since it was originated in Illinois in 1919. The purpose of American Indian day is to foster more cordial relations and a better understanding between the red and white races, but more especially to bring to the attention of the whites the many accomplishments of the Indian.

In view of that fact, the recent appearance of two books, written by Indians, is especially noteworthy, for in both "My People, the Sioux," by Chief Standing Bear, published by Houghton Mifflin company, and "Long Lance," by Chief Buffalo Child Long Lance, published by the Cosmopolitan Book corporation, the white man can find an accurate portrayal of the Indian character, as exemplified in the life stories of these representatives of two of the finest types of North American Indians—the Sioux and the Blackfeet. For what Chief Standing Bear says in the preface to his book applies to both. He writes:

The preparation of this book has not been with any idea of self-glory. It is just a message to the white race; to bring my people before their eyes in a true and authentic manner. The American Indian has been written about by hundreds of authors of white blood or possibly by an Indian of mixed blood who has spent the greater part of his life away from a reservation. These are not in a position to write accurately about the struggles and disappointments of the Indian.

White men who have tried to write stories about the Indian have either foisted on the public some blood-curdling, impossible "thriller"; or, if they have been in sympathy with the Indian, have written from knowledge which was not accurate and reliable. No one is able to understand the Indian race like an Indian.

A brief review of the career of Standing Bear will show how eminently fitted he is to interpret his people of the red race to the white race. He was born in 1868 when the Sioux were still nomads, whose proud spirit had not yet been tamed by military conquest and by being penned upon on reservations, where they came enough into contact with a certain class of white man to have their primitive virtues corrupted by that contact. As a boy he lived in the buffalo-skin tipi of the old time Plains Indians and received from his elders the spiritual and physical training which resembled that of the Spartans of ancient times; as a young man he knew the thrill of the buffalo chase and the intertribal wars which developed a race of first class fighting men of whom General F. W. Benteen once said "They (the Sioux) are the greatest warriors that the sun ever shone on." Although too young to have a part in the last stand of the Sioux against the United States government in the War of 1876-77, the fact that he was the son of an hereditary chief of the Sioux and one who was prominent in both the war and peace councils of his tribe gave Standing Bear an unusual opportunity to know the facts about some of the incidents of that last stand. And it may be noted in passing that historians of the future might well take into consideration Standing Bear's narrative before writing again of such matters as the Battle of the Little Big Horn where Custer perished, the death of Crazy Horse in the guard house at Camp Robinson, Neb., and the now famous affair at Wounded Knee which some white historians have called a "battle" but which the Sioux to this day call a "massacre."

Standing Bear's education (in the sense in which the white man uses that term) began when he was one of the first group of Sioux children to enter the newly-established school for Indians at Carlisle, Pa., in 1879. It continued there for several years, was supplemented as an employee of John Wanamaker at his store in Philadelphia and continued as an employee of the government on the Rosebud and Pine Ridge reservations, as a member of Buffalo Bill's wild west show both in this country and abroad and as a movie actor in southern California where he now lives. The distance which Standing Bear of the Sioux has covered in "following the white man's road" is nothing less than amazing. In the short space of sixty years there has been written in the history of this individual at least a thousand years of racial history, a giant's stride from barbarism to what we call "civilization"!

Soon after Standing Bear was born his people saw for the first time a railroad train on the Union Pacific railroad, which was then being pushed west. With mixed emotions of amazement and fear they watched this great "snake" go puffing across the prairie, little realizing that it was to be one of the vital forces in bringing about the downfall of their race at the hands of a more powerful and ruthless type of civilization. The naive attitude of the Sioux toward the railroad, as well as toward many other of the things used by the white men, as reflected in the pages of this red man's book, is the best possible commentary upon the great difference between the Standing Bear of 1868 and the Standing Bear of 1928. And reading this, the white man may learn how unjust he has been to the red man—not unjust in the sense that he robbed the Indian of his lands and his freedom and imposed upon him restrictions hateful to a free spirited and roving people, but unjust in his attitude toward the Indian, the attitude which made him expect the red man to adopt almost overnight a social and economic order which the white man had evolved only after centuries of painful effort.

It is this fact which makes the reading of such books as those written by Standing Bear and Buffalo Child Long Lance especially appropriate to the aims of American Indian day. For by doing so, the American of the present day, no matter how indifferent he may be to the "wrongs" perpetrated upon the Indian by Americans of past generations, can come more nearly having an adequate understanding of the Indian point of view, both past and present, and thus be able to do his share in avoiding further injustice to a brave people who still form a not inconsiderable part of the population of this country.

What is true of Chief Standing Bear as an authentic interpreter of the real Indian is no less true of Chief Buffalo Child Long Lance, and the history of his life is as romantic a record of transformation as is that of the Sioux chief's. What that life was is intimated by Irvin S. Cobb, who wrote in the foreword to "Long Lance" this:

It was an altogether another and a different book that my friend Buffalo Child Long Lance might have written. He might have written to tell how he won scholastic and athletic honors at Carlisle and at Manlius; of how, while mastering the white man's tongue, he learned half a dozen tribal languages other than his own; of how, having received a presidential award of appointment to West Point, he threw away that most cherished dream of his—the dream of being a full-blooded Indian officer in the regular army—to cross the line in 1916, and at the first call for recruits for overseas service, to enlist in the Canadian forces; of how, going in as a private, he came out at the end of the World war as a captain of infantry, his body covered with wounds and his breast glittering with medals bestowed for high conduct and gallantry; of how he fought as a sniper, as a raider, as a leader of forlorn hopes in the trenches and across No Man's Land; of how his own people conferred upon him the chieftainship of one of the four principal bands of the Northern Blackfeet; of how, beginning as a reporter on a western Canadian paper, he has earned for himself distinction as a writer of magazines.

He might have told these things, but, being an Indian, he didn't. And I for one am glad that he has written this one. For here, sinking his own engaging personality, his own individual achievements in the background, he depicts graphic phases of a life which has altogether vanished, of a race which is rapidly vanishing I know of no man better fitted than Chief Long Lance to write a true book about the true American Indian and I know of no book on the subject which better reveals the spirit of the Indian in the years that are gone and the spirit of times the like of which will never be seen again.

Although Chief Buffalo Child Long Lance is a younger man than Chief Standing Bear, his recollections of his childhood are of those of a people as primitive as the Sioux from which Standing Bear sprang. They were the Blackfeet, called the "Tigers of the Plains," who were the ruling tribe of a wild domain known as the northwest territories in Canada until 1905 when the provinces of Alberta and Saskatchewan came into being. Go among those Blackfeet today and they will tell you of their thoughts at seeing their first white men—so lately did "civilization" touch their lives.

Long Lance's first remembrance is of an intertribal battle which took place in northern Montana—perhaps on the very spot where today some automobile tourist is camping! And Chief Buffalo Child Long Lance is scarcely thirty years of age. Like Standing Bear he received a Spartan training and learned "to ride, to shoot and speak the truth," and reading in their books of the qualities which this training developed in the Indian boys makes one wonder if perhaps the modern "civilized" American might not learn some profitable lessons in child-training from these "barbarians."

Although of different tribes—and tribes which were ancient and hereditary enemies—there is a striking similarity between the narratives of this Sioux and this Blackfoot. Both bring out very forcibly the qualities of honesty, generosity, true reverence and simple kindliness of the primitive Indian character before it was influenced by the white man's ways. A typical incident is given in Long Lance's book in telling of a buffalo hunt. It was the Indian man's job to provide the meat for the family by killing the buffalo and the Indian woman's job to follow the hunt and skin and dress the dead animals. Long Lance writes:

Each wife knew which animals had been brought down by her husband by the arrow which had been left in it. For every Indian had his arrow painted a certain way, so that anything he killed with it could easily be identified. If he shot a buffalo with a bullet he would circle back and hurl one of his arrows in its body, so his wife would know it was his.

The young son of our late medicine man, White Dog, was sitting on his pony among us boys. He was carrying on his back a quiver full of his dead father's arrows, which his mother had given him to play with. One of the women came over to this lad and took out one of White Dog's arrows and walked out on the field and pulled one of her own husband's arrows out of a buffalo bull and stuck White Dog's arrow in the hole. She said nothing to anyone; but later we saw White Dog's widow squatting over the buffalo, skinning it and sobbing quietly over the bloody pelt.

Just as Standing Bear has written in his book some real "Indian history" from the point of view of the Sioux, so has Long Lance written the story of the relations between the white and red races from the point of view of his people, the Blackfeet. And there is no more thrilling and inspiring (if a person admires pure "grit" in a man, whether he be white or red) story anywhere than his account of the epic of the Indian outlaw, Almighty Voice. Almighty Voice was the son of Sounding Sky and Spotted Calf, who were Long Lance's foster parents, wherefore he knows whereof he writes in telling that warrior's story.

Almighty Voice became an outlaw through an unfortunate chain of circumstances. By mistake he had killed a steer belonging to the government of the Northwest Territories and he was arrested by the mounted police and lodged in jail. One of the police jokingly told him they were "going to hang him for killing that steer," little realizing the terrible effect which this joke would have on the untutored Indian. But Almighty Voice escaped from jail and then began what was perhaps the most famous man-hunt in the history of that famous organization, noted for the fact that it "always gets its man." It is true that the mounted police finally did get Almighty Voice but at a terrible cost.

The hunt for him lasted two years. Finally they cornered him, but it was not until artillery was brought into action and the place in which Almighty Voice and two companions were entrenched thoroughly shelled that he was finally conquered. And when he was conquered, he was no longer able to harm his attackers. For Almighty Voice had died fighting.

Russia Enrolling Women

Ten thousand Ukrainian Communist girls have joined Red Cross detachments recently, it is reported, and 200 more have finished special sanitary courses and are now "red nurses." This is in response to the government's call for "militarization" of the Soviet population in preparation for the expected attack by "capitalism."

Constipation Gone. Has Roses in Her Cheeks Now

"About seven years ago, I was dying slowly of constipation. My system was full of poison, which not only dulled my senses, but my complexion was muddy, eyes blurred, my stomach was ruined, and I was continually catching cold. I did not have any life or energy.

"After reading one of your ads, I bought several bottles of Milks Emulsion, and began improving at once. Improvement was so marked that everyone noticed it, and spoke of how it cleared my skin, made my eyes much brighter, and put roses in my cheeks. In fact, I was an entirely different person. I took altogether 15 large bottles of Milks Emulsion, and looked wonderful and felt the same way. It absolutely made me over. It adds more to your looks than anything I have ever heard of. After I had taken the first 8 bottles, people began to notice the improvement in my skin and my eyes being brighter.

"Every woman should know of it. I have never had a cold since I took Milks Emulsion, no stomach trouble or constipation. I think it is a God-send to humanity.

"A nephew of mine was almost dead of stomach trouble. I started him on Milks Emulsion and while he has only taken 4 bottles, he can eat nearly anything, and is beginning to feel fine.

"You will always find me a Milks Emulsion booster." MRS. REBECCA CAMPBELL, R. R. 1, Dyersburg, Tenn.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Poor Insurance Risk

A President's life is not a particularly good risk. The Presidents elected in 1840, 1860, 1880, 1900 and 1920 all died in office, three of them assassinated. On that theory of cycles a successful candidate in 1940 might feel a trifle nervous.—Barron's Financial Weekly.

At the Druggist's

Nervous Client—Are you sure you have given me the right mixture and not some sort of poison?

Clerk—Yes, I presume it's all right; anyhow you'll soon find out.

Horrible Thought

"I believe in free speech!"

"That's nice. I'd hate to have to pay to hear you!"

Office on Wheels Found Handy for Hotel Manager

As manager of a new hotel, I have to travel between it and my old hotel ten blocks away. The new building is under construction and, the temporary office being dusty and dirty, I found it more convenient to use my sedan as an office when prospective tenants arrived at the new hotel. To facilitate writing, I arranged a sort of desk as shown in the drawing. It consists of a smooth board, hooked across the

Using a Sedan as an Office Which Is Fitted With an Improvised Desk.

sides in front of the rear seat, special fittings being provided for this purpose. In the evening the lights are turned on and meals can be served if desired.—John F. Daschner New York City, in Popular Mechanics Magazine.

Ignition System Should Be Inspected Regularly

Poor pick-up, slow getaway and lack of power in automobiles in most cases is simply due to poor ignition service and is no fault of the car.

This is the opinion of automotive engineers who recommend that the car's ignition system be checked regularly that necessary minor adjustments be made, to insure carefree and economic operation.

A check of the ignition system by a competent mechanic is necessary at least every 10,000 miles, the engineers say, to make sure that battery, cables, breakers and spark plugs are working satisfactorily.

AUTOMOBILE HINTS

A joy-ride" too often proves a grievous occasion.

* * *

Most automobiles are paid for as they are used, but not so rapidly.

* * *

Japan has only two automobile factories, one being under government subsidy.

* * *

We like to see people smile and hear them laugh, but not when we are changing an automobile tire.

* * *

Vacations used to be vacations; now people rest by hurrying in automobiles from one city to another.

* * *

After brakes have been tested it might not be a bad idea to give the back-seat drivers a little inspection.

* * *

Purchase or concealment of an automobile known to have been stolen is made a felony under the new Illinois theft law.

* * *

Many persons look forward with pleasure to the automobile touring season, but it is doubtful whether locomotive engineers do.

* * *

The fact should be borne in mind by careless motorists that license plates are washable and can be kept clean and in a legible condition.

* * *

The engine will be more economical, as well as more powerful, if spark plugs are kept cleaned and replaced with new ones when necessary.

* * *

Any gentleman who can change a tire in the presence of women and children with the mercury at 90 degrees and remain a gentleman is a gentleman indeed.

POULTRY

EARLY PULLETS NEED ATTENTION

"Don't let your early laying pullets get run down in the fall," advise poultrymen of the state college of agriculture at Ithaca. "Don't try to get more than a 50 per cent production, but keep the birds in good healthy condition and feed enough to keep them laying steadily.

"Pullets which come into production early (in August or September) have a tendency toward a production slump and a molt when the short days and cool weather hit them. It is very important to maintain their weight; and adding milk, wet mashes or providing artificial lights at the proper time will help out in the difficulty.

"Feed plenty of hard grain at night. In the morning, feed in proportion to the way in which the pullets are producing. Probably fifteen pounds for each hundred pullets is enough when they are producing 50 per cent or more and the weather is cold. One of the main points to remember is that if they eat more grain they eat less mash, and it is the mash that contains the animal protein and brings the eggs. However, too much mash will cause a temporary increase in egg yield, with a possible dangerous loss in body weight and later production.

"A pint of cod liver oil in every hundred pounds of mash helps keep the birds in good health during the winter. Good health is one of the big assets to any of the poultry flock and that is why the cod liver oil is worth its trouble and cost."

Lookout for Poultry Worms of Many Kinds

There is no way of estimating the loss to the poultry industry caused by worms of various kinds. That there is a loss cannot be denied and several states are now spending much time in finding a solution for the worm problem.

It may be necessary to kill one of the birds to find whether worms are affecting it. Usually a bird with worms looks pale and thin, has rough feathers, wobbles or sways when it walks, drinks much, eats little and sometimes has diarrhea.

There are many remedies on the market, some to destroy long round worms, others to destroy tape worms. There are also combination remedies that are proving satisfactory. Most of these are individual treatments, but it isn't so hard to do as one might think. The worm medicine may be given at the time the hens are culled. This saves both time and money as it is not necessary to treat the ones that are to be sold. Treatment alone is not enough if the ground is full of worm eggs. Clean ground is necessary or old ground plowed and disinfected.

Average Production of Eggs During the Year

As a matter of fact, there is no record of a hen laying an egg a day for a full year. The standard as laid down by the poultry department of Ohio State university is 160 eggs in 365 days. The state average is about 70 eggs. Of course, some high-grade hens do better. More than one hen on the records of the Ohio Poultry Improvement association has beaten the 300-egg mark in 365 days. But they are not common hens.

Egg production for the average hen is at the lowest point in November, when five eggs for the month is the standard requirement. This standard rises month by month to 21 eggs in April, then falls again.

Flies Carry Infection

Remember that flies carry tapeworm eggs. The only place they can get the eggs is from the droppings of infested birds. It will pay to clean the dropping boards frequently this summer. Keep the houses for the young stock as clean as possible so flies will not be attracted. Do not let the young stock range after the old hens. One cannot expect much profit from pullets which go into the laying house heavily infested with worms of any kind.

Sap on Vitality

Right now is an important time in many respects with both old and young fowls. Hot, sultry summer weather is as much of a sap on the vitality of fowls as it is on the vitality of human beings and animals of all sorts. And this is right at the time when the old fowls are getting ready to molt, while the young stock must be kept growing and in perfect condition so they will be ready for the early shows or for profitable early winter laying.

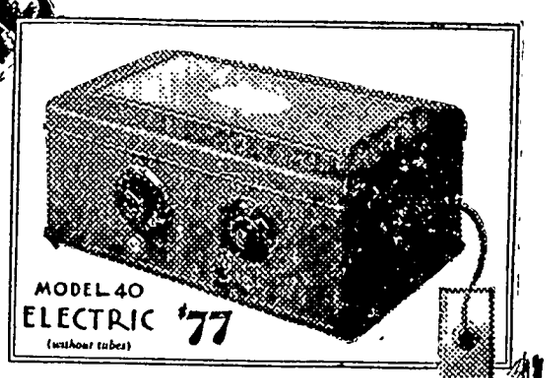
Season for Guineas

The best season for raising young guineas is the hotter part of the summer. As the guinea is a native of a warm country, the young cannot bear much cold or rain, and it takes very careful work to grow young guineas during a cold season. The chicken hen makes a good foster mother for the young guineas and a good-sized hen can cover from 18 to 20 eggs. After the young guineas are hatched, they should be kept in a closed coop until they learn the mother's call.

ATWATER KENT RADIO

Of course you're going to hear
Hoover *and* Smith

THE OLD WAY



THE NEW WAY

MODEL 40 A. C. *set. For 110-120 volt, 50-60 cycle alternating current. Requires six A. C. tubes and one rectifying tube, $77. Also Model 42, with automatic voltage regulator, $86, and Model 44, an extra-powerful "distance" set, $106.*

THANKS to radio, they expect to talk directly to every voter in the United States. Where is the family that can afford to be without a good radio set in this most interesting of Presidential years?

When Smith and Hoover go on the air, you can count on Atwater Kent Radio. Its reliability, its power, its range, its simplicity of operation, as well as its clear tone, have made it the leader everywhere. It comes from the largest radio factory, where workmanship is never slighted. It is not an experiment. You don't have to take it on faith. It is the fruit of twenty-six years' manufacturing experience—six years of radio.

Nearly 1,700,000 owners know that the name Atwater Kent on radio means the same thing as "sterling" on silver.

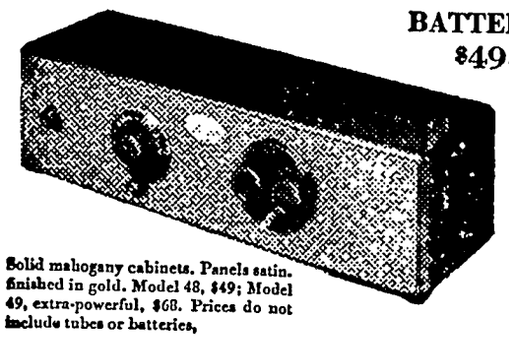
Whether or not your home is equipped with electricity, there is an up-to-date Atwater Kent model to carry on the Atwater Kent tradition of giving the finest reception at the lowest price.

The Atwater Kent electric sets require no batteries. A cord from the compact, satin-finished cabinet plugs into any convenient lamp socket and the current costs only about as much as the lighting of one 40-watt lamp.

The Atwater Kent battery sets have won their reputation for fine performance in 1,400,000 homes—and now both models are again improved for 1929.

From the orange orchards of Southern California to the potato fields of Maine, Atwater Kent Radio is far and away the preferred choice of rural families. The nearest Atwater Kent dealer will gladly show you why, and will advise you in your selection of the model best suited to your needs.

Campaign year! You'll need good radio as you never did before!



BATTERY SETS $49—$68

Copper in Circulation

We are told people need copper in their systems. So they'll have more cents, we suppose.

A very old woman is always proud of her age and everybody felicitates her upon it.

WHAT DR. CALDWELL LEARNED IN 47 YEARS PRACTICE

A physician watched the results of constipation for 47 years, and believed that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation, known as Dr. Caldwell's Syrup Pepsin, is a mild vegetable compound. It can not harm the system and is not habit forming. Syrup Pepsin is pleasant-tasting, and youngsters love it.

Dr. Caldwell did not approve of drastic physics and purges. He did not believe they were good for anybody's system. In a practice of 47 years he never saw any reason for their use when Syrup Pepsin will empty the bowels just as promptly.

Do not let a day go by without a bowel movement. Do not sit and hope, but go to the nearest druggist and get one of the generous bottles of Dr. Caldwell's Syrup Pepsin, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.

Payment in Bulk

A furniture dealer of Ash Grove, Kan., A. Galbraith, sold a bedroom suite to Mrs. L. D. Metcalf. After he delivered it, Mrs. Metcalf pointed to a box on the table. In the box were 6,700 cents. Mrs. Metcalf had been saving the copper coins for four years, and had a few to spare after paying Galbraith the 6,700. They had been put up in rolls of fifty each and weighed eighty-four pounds.

City Man Explains

"How do people in a big city live?"

RECOMMENDS IT TO OTHERS

Lydia E. Pinkham's Vegetable Compound Helps Her So Much

Cleveland, Ohio.—"I sure recommend Lydia E. Pinkham's Vegetable Compound to any woman in the condition I was in. I was so weak and run-down that I could hardly stand up. I could not eat and was full of misery. A friend living on Arcade Avenue told me about this medicine and after taking ten bottles my weakness and nervousness are all gone. I feel like living again. I am still taking it until I feel strong like before. You may use this letter as a testimonial."—Mrs. Elizabeth Toso, 14913 Hale Ave., Cleveland, Ohio.

W. N. U., DES MOINES, NO. 37—1928.

Adobe Brick Being Restored to Favor

"Adobe," humble, sun-dried brick, was used by Franciscan fathers in the building of their missions, and later many homes and commercial structures were erected with these rudely made bricks.

As the years wore on, however, adobe became primarily the stuff of which ruins were likely to be made. The sight-seeing tourist learned to look for the adobe mission and the adobe houses as relics of a romantic past. He scarcely expected to see modern homes built of that material.

Mission-style homes, churches and business blocks long have been popular, but ordinarily these have been built of brick or frame with a coating of stucco.

Lately, however, the old custom of using one's cellar excavation as a source of sun-dried bricks for walls has been revived, and modern small homes and ranchhouses are being built of adobe.

Rat Wore "Corset"

A rat was caught in a trap during a drive at Hastings, Neb. When the animal was taken from the trap it was noticed that it appeared to be wearing a sort of girdle or corset. Examination showed that while the animal was small it had crawled into a marrow bone and had been unable to shake it off. The hole in the bone was not much over an inch in diameter. As the rat grew the waistline could not develop. It looked much like a wasp.

The Only Way

"We'll have to correct that child," declared the accountant.

"It will be very difficult to correct him," said the accountant's wife.

"Nevertheless, we shall have to correct him. We can't rub him out."—Louisville Courier-Journal.

In England, where homes are being constructed of iron and steel, a simple type of steel house frame was erected recently in three hours.

Mr. and Mrs. Tom Nelson, Jr. and son Harvey, drove to Sioux City Tuesday morning. Their mission to that city was to get Harvey comfortably located for the schoolyear as he is enrolled as a Freshman in Morningside College After their business and visit is over at Sioux City they expect to journey southward and will perhaps visit at Shenandoah and other points before returning to Klemme.

MANY ENJOYED PICNIC AT THE LAKE SUNDAY

Sunday was a beautiful day for a picnic and acordingly quite a number of people from Klemme and vicinity formed a gathering for such an outing at Clear Lake.

The following all enjoyed a picnic at the Lake Mr and Mrs Lester Hartbeck and children; Albert Barz and family; Henry Barz and family; Fred Barz and family; Emil Barz and son Max; Mrs. Lena Schroeder; Grandma Schroeder; Mrs. Marlin Croner and daughter, Dorothy; and Fred Kothenbeutal and family.

All had a nice time and said they had more than enough to eat.

Home

The strange fighting that has been going on in Nicaragua led Gen. Hugh Drum to say at a Washington tea:

"They don't battle down there. The rebels' method is more like a street brawl. It reminds me of a story.

"Some years ago, in a war between Chili and Peru, a young war correspondent said to an old one:

"'Neither army goes in for uniforms and in consequence I can't tell which is which.'

"'Oh that's easy, said the old correspondent 'If you see an army running towards Chile it's Chilean, and if it's running towards Peru it's Peruvian.'"—Kansas City Times.

"Died Last Week"

Jimmy, the young son of Mr. and Mrs. George O. Jackson, will be six years old in January and ready for school. Instead of being happy over the prospect, Jimmy does not want to go. The following conversation recently took place between the youngster and his mother:

"Mother, I'm not going to school."

"But, Jim, how can you get out of it? All little boys and girls have to go to school."

"We—ll, I'll just have Bob take a note to the teacher and say 'Jim died last week'"—Indianapolis News.

World's Swiftest Girl

The fleetest girl in the world hails from Japan. Miss Fumiko Terao exchanged her kimono for running shorts, and earned her right to the title of "swiftest girl alive' when she won the 100-meter sprint in the all-Japanese sports carnival held recently near Tokyo.

Her time was 10 4-5 seconds Fumiko has beaten all men runners of her own country and all the best women runners in the world.—London Tit Bits.

Good Start

Diner—That young waiter is looking very proud today.

Head Waiter—Yes, sir; you see, he's just miscalculated his first bill.—Passing Show.

Jealousy

"Why were you speeding?" demanded the cop.

"I wasn't speeding," answered Mr. Brown humbly. "I was just trying to pass the man who bought my old car."

Feminine Age

She—I'm not on speaking terms with Freddie. The mean thing wouldn't give me his seat at the barber's this morning.—Sydney Bulletin.

VARIOUS PLANS TO STEAL TIME AND MONEY FROM THE UNWA

Bankers Association Official Tells How Young Peo Are Fleeced in "Hokum Pokum" Movie Schemes— The Investor Loses Savings by Listening to Messrs. Slick and Smooth.

By W. R. MOREHOUSE

Public Relations Commission, American Bankers Association

THE fabulous salaries paid stars of the first magnitude, the publicity of the "movies" naturally create longin the breasts of thousands of our young Americans to get motion pictures. Because so many are re to leave home, and risk everything o fling at motion pictures, unscrupulous sons have devised ways of fleecing th ambitious young people out of their ings. "Hokum-pokum" schemes of var kinds are used with great success. F courses in the art of acting before camera, fake courses on how to make fake registration gags and screen tests, among the schemes used to separate t thousands of young people from their c

W. R. MOREHOUSE

The pilgrimage to the motion pict centers by thousands of novices usually disastrously for the pilgrims. Natural few are successful, but only a very, few, the ninety and nine meeting with appointment. The truth is, the numbe persons who seek to "break into" the mo exceed the number of available position one hundred to one, while in the realm of popular stars thousands to one.

Don't be misled by the promises of promoters of hok pokum schemes that there is room for all, because this last year over 100,000 young people knocked at the door for admission and were turned away because there was no room on the inside for them. Consult your banker or address the National Better Business Bureau, New York City, for information or advice regarding any enterprise that seeks to gain possession of your mony. They will give disinterested counsel before it is too late.

Also let every investor approached by either Mr. Slick or Mr. Smooth with a proposition yielding big dividends remember that such assurances always spell financial danger ahead. To every investor who is inexperienced in making investments, in other words perhaps just a little green and perhaps a little too easy, any offer coming from this source should be like a red flag warning to come to a complete stop.

Such investments as Mr. Slick or Mr. Smooth offer are too good to be true and therefore they are not true. Slick, Smooth and Company are not miracle workers although from their sales talk you would infer that they could make you rich as if by magic. No, they are not miracle workers—just slick and smooth.

The Estate Gag

Twenty-four "estates" representing 5½ billions of dollars have been used as bait to interest a lot of savers and finally bleed them of their savings. The scheme is built around a supposed search for the heirs to certain phantom estates. At all costs these heirs must be found. Every person who can by any hook or crook, figure it out that he is in anyway related to the deceased are urged by some shyster lawyer or genealogist to send in their names and their life history

Soon they receive glad tidings telling them that their family tree can be traced back to the deceased, in fact, they are a direct descendant and an heir at law.

Like fake raffles everybody who responds to the search is found to be a winner—in other words an "heir." Here is where the rainbow chaser gets trimmed. Before his claim to the mythical thousands can be pressed so as to insure success a demand is made on him to advance attorney's fees and pay the expense of tracing through his genealogy.

Not surmising that he is being ped and seeing only the big ance which he is led to believe soon receive, he draws the necessary from his savings and sends it on, not knowing he tually throwing it away But for like thousands and thousa other rainbow chasers, he part it for the last time.

So-called estate schemes whic produced thousands of "heirs" a

THE NEW FARMING ACCOUNT SCHOOL

The good business farmer today watches his farm accounts carefully. In respect to his labor, his farm stock and his soil, he knows what they can do and how they can be most profitably handled He knows the mathematics of growing feed from the soil, pigs and poultry from the feed and cash profits from pigs and poultry He knows whether he is milking the cow for paying returns or the cow is milking him out of his invested capital. Wherever his accounts show a deficit or insufficient profit on one or more items, he immediately studies to overcome the handicap and correct any mistakes that have been made.

The Agricultural Commission of the American Bankers Association is conducting a nationwide educational campaign for better methods of farm accounting. The commission has been stressing the wisdom of country bankers through cooperation of county agents, calling farmers together, and holding account schools where instruction is given on the use of the farm account books.

Each person is led through the various steps in keeping accounts and each enters his own inventory which he has previously been instructed to take and bring to school. This gives a good start and when properly fol lowed up by letters and an oc visit by the specialist in charg ly aids the man who is earnest to come through his of keeping accounts succ Many times country banks rooms for holding the account In some instances, an employ bank is designated to assist patrons during the year in their accounts.

HOW TO GO BROKE FA

1. Grow only one crop.
2. Keep no livestock.
3. Regard chickens and as nuisances.
4. Take everything from and return nothing.
5. Don't stop gullies or gr crops—let the top soil wash a you will have "bottom" land.
6. Don't plan your farm op It's hard work thinking—trus
7. Regard your woodland would a coal mine, cut every the timber and wear the cle out cultivating it in corn.
8. Hold fast to the idea methods of farming employed grandfather are good enough
9. Be independent—don't your neighbors in any co operation.
10. Mortgage your farm dollar it will stand to buy th would have the cash to buy i lowed a good system of f Division of Extension, Univ Tennessee.

BUTLER ATTACK IS COSTLY TO G. O. P.

Educator's Repudiation of Hoover Swings Many Votes to Smith.

The unqualified repudiation of Herbert Hoover by Dr. Nicholas Murray Butler, President of Columbia University, and President of the Carnegie Endowment Foundation for International Peace, has proved, political observers say, one of the most staggering blows suffered in the present campaign by the Republican forces

Although many prominent Republicans have renounced allegiance to their party since Hoover's nomination, none, it is conceded, has influenced so many votes.

A highly esteemed leader in Republican party affairs since 1887, Dr. Butler has attended every Republican national convention for 40 years. In 1912, following the death of Vice President Sherman, who had been renominated, Dr. Butler became the Republican candidate for Vice President. He was one of his party's most prominent candidates for the nomination for President in 1924.

The reaction to his ringing disavowal of the principles enunciated by Hoover in his acceptance speech was immediate and nation-wide His bold and unequivocal declaration that he could not support a candidate who admitted himself to be in favor of the "continuance of the present reign of lawlessness, debauchery and Government-made crime" brought thousands of letters of congratulation from other dissatisfied Republicans

In a scathing letter, addressed to the editor of the New York Times, Dr. Butler declared he wished to dissociate himself "quickly, publicly and completely on positions on two of the three most important questions now before the American people that were taken by Mr. Hoover in his speech of acceptance"

Noted Authority

Dr. Butler, who has long been in demand by learned bodies as a speaker on questions relating to international relations and the promotion of world peace, ridiculed Hoover for his "wholly false argument" that the squandering of enormous sums on naval armament would cooperate in the maintenance of peace

"The contrary is now the well-demonstrated fact," asserted the educator. "Mr. Hoover dismisses with a few perfunctory words the truly remarkable treaty just now to be signed by ourselves and all the great powers of the earth pledging renunciation of war as an instrument of national policy." He added that Hoover's position was mere "swagger"

He criticized Hoover for "accepting the formula of that paid band of agitators, lobbyists and persecutors which calls itself the Anti-Saloon League," and asserted that it is "quite obvious that Mr. Hoover has no conception of the real problem by which the country is faced"

"That problem," averred Dr. Butler, "has not to do with liquor, not with social experiments, good, bad or indifferent, but with the structure and functions of the Government of the United States."

Accusing the Republican candidate of "hypocrisy" and "contradiction" which "would be comic were it not so unspeakably tragic," the educator declared: "No one can be in favor of the principles upon which our Government rests, or of the Constitution itself, and at the same time in favor of the Eighteenth Amendment, because the two are absolutely contradictory."

"Literally millions of Republicans throughout the country," Dr Butler asserted, are "in full agreement" with him.

HOOVER FARM STATEMENT CALLED "CLEVER DELUSION"

"A very pretty Christmas tree for the American farmer, covered with glistening tinsel and little Christmas bells, but without presents—in other words, a clever delusion"

That is how Herbert Hoover's statement on Agriculture is described by William Hirth, of Columbia, Mo., publisher of the Missouri Farmer, and chairman of the Corn Belt Committee. Mr. Hirth adds:

"Mr. Hoover's message to Agriculture constitutes a lot of cleverly put together bunk that will not fool the thinking farmers of this country. When he admits that after eight years of uninterrupted power the Republican party has failed to meet what he now says is the 'most urgent economic problem in our Nation' he is caught in his own bear trap—how can he confess this indictment against his party in one breath, and then have the nerve to ask the farmers for his vote in the next?"

NORTH CAROLINA FOR SMITH, SAYS DANIELS

RALEIGH, N. C.—Declaring that Governor Smith's acceptance speech "rings true upon the fundamentals of Democracy," Josephus Daniels, Secretary of the Navy during the Wilson Administration, predicted that "North Carolina will continue in the Democratic column."

BALTIMORE, Md. — Richard F. Cleveland, son of President Cleveland, is actively engaged in the campaign to elect Governor Smith President. He is in charge of the speakers bureau in Maryland.

BILL'S DEATH NOT TIMELY FOR SANDY

Old Bill Harley, a hermit well known to the fishermen who yearly visited the district of Snake island for holiday sport, was dead. His demise was the subject of conversation as a party of fishermen gathered in camp for the evening meal, and each had a kindly word of regret to express.

"Here comes Sandy McIntosh," remarked one of the group, "even he will feel bad about Old Bill. Say, we've just heard a bit of bad news."

"Well," said Sandy, "and what is it?"

"Old Bill Harley, over on Snake island, has just kicked out."

"You don't say so!" exclaimed Sandy. "Dead, is it? That is too bad. Untimely, too."

The others were somewhat surprised at the unemotional Sandy taking it so hard.

"It's true, all right," said some one, "but the old chap's death is timely enough. He was a very old man."

"Timely, you say!" exclaimed Sandy. "And only yesterday I lent him 50 cents!"—Judge.

FIDGETY GIRL SAT DOWN AS ORDERED

Patrons of a Los Angeles theater, seated behind a young woman who misplaid her purse one evening recently, missed a part of the photography, because the woman stood up to conduct her search for the lost article, but then enjoyed a little unintentional comedy which others missed.

It was during a court scene put on by the Vitaphone, and the court was hearing parties in a separate support action. Those seated behind the young woman were getting fidgety, when the judge rapped his gavel, and ordered, "Order in the court, sit down!"

The woman was so surprised that she sank back into her seat, and there she discovered the missing purse, where it had fallen.

Television Has Gone Far Beyond Theory

Rapid strides are being made in the development of television. A recent demonstration between London and Glasgow was considerably more successful than that between New York and Washington in April. The distance between Glasgow and London is about 440 miles. J. L. Baird, the television expert, was in charge of the new demonstration. Two telephone wires were used—one for television transmission and the other to check the results. The receiver in Glasgow could distinctly see the head and shoulders of the speaker in London. Even the movements of his head, eyes, and mouth were distinct. It is now only a matter of a short time predicts Baird, before television will be practical for transoceanic transmission.

Sea Birds Attract

The value of bird protection as a money-earning enterprise has again been shown at Perce, Quebec. Perce rock and Bonaventure island, where sea birds nest in thousands, have long been bird sanctuaries under provincial and Dominion law.

Last winter an addition of 27 rooms was made to a local hotel to accommodate the growing number of nature lovers who come each summer to this mecca of the sea fowl, and an increase was also made in the number of houses where tourists can be accommodated.

Shingled Cats Oust Tabby

Shingled cats from Siam replaced the old-fashioned fireside-loving tabby at the recent fashionable cat show in London. Few of the domestic animals were to be found, and the tiny foreign creature with coat of black and gold was the most popular. One of these, Dion of Allington, was declared champion of all champions and his owner said she would not take $5,000 for him.

Patriotic Chinese Girls

Students of the Jing Nyih girls' school at Shanghai have set a new precedent in Chinese war relief work. They have organized to help the soldiers at the front and to send them gifts, including socks and cigarettes. At a recent theatrical entertainment hundreds of girls pledged themselves to procure funds and gifts for the "Nationalist boys at the front."

"White Coal" in India

India is preparing to get cheap power from rivers that rise in the Himalayas. A complete survey of the mountains has been made, and work already started on the "harnessing" of one of the Punjab rivers. The scheme, it is believed, will add materially to the wealth of India.

Also Minus Socks

Storekeeper (to new clerk)—You began life as a barefoot boy, I understand?

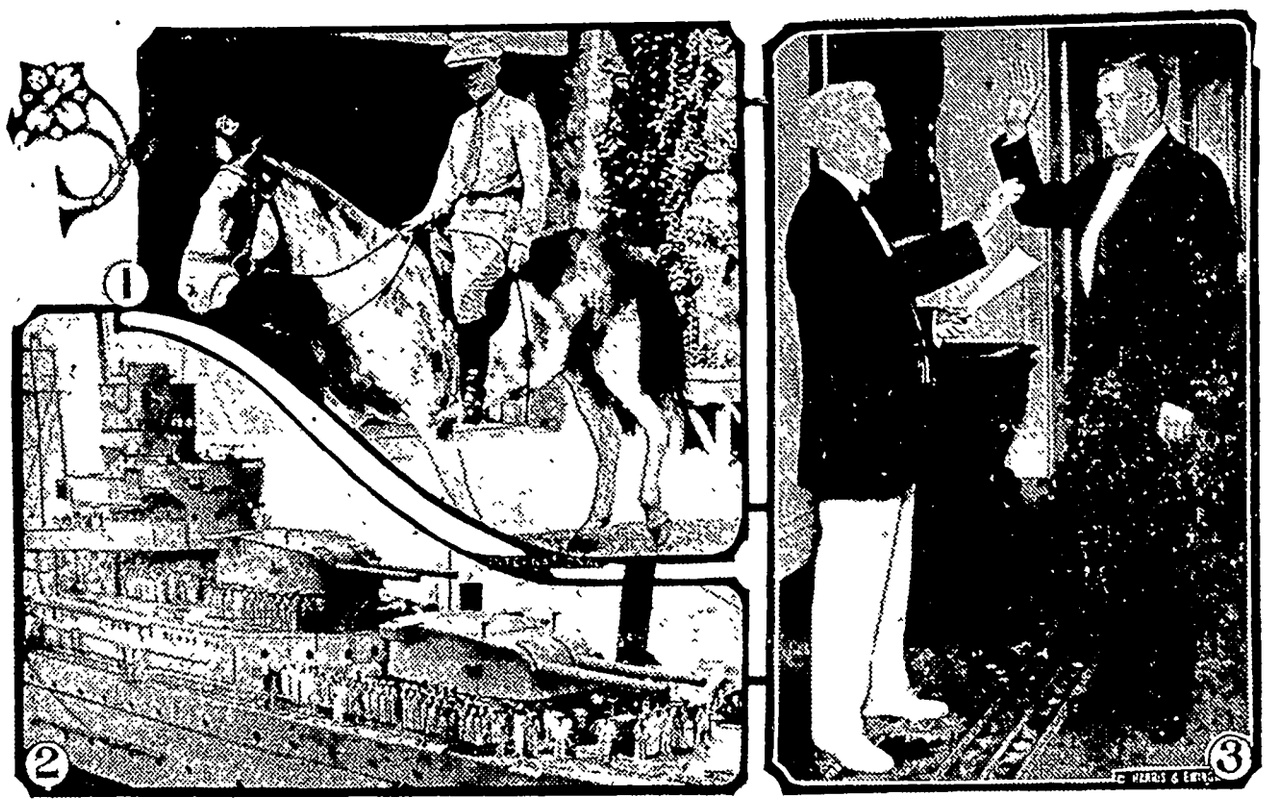
Hiram Todd—Yes, sir; I was born without shoes.

Those Perverse Insects

Wouldn't it be nice if cornborers took to the jimson weed and the boll weevil preferred dog fennel? Why is it that pests like only what we like?—Pathfinder Magazine.

Mark of Greatness

Maturity is always a mark of greatness whether the person possessed of it is old or young.—Woman's Home Companion.



1—Jaime Felix Tschiffely, Argentine archeologist, on his horse "Mancha" which he rode from Buenos Aires to Washington. 2—Deck and gun turrets of the British battleship Australia which made an official visit to New York. 3—J. Ruben Clark of Utah (right) being sworn in as undersecretary of state by William McNeir of the State department.

NEWS REVIEW OF CURRENT EVENTS

Rescue of Rockford Flyers in Greenland—Zogu Now King of Albanians.

By EDWARD W. PICKARD

BERT HASSELL and Parker Cramer, the Rockford (Ill.) aviators who set out on a flight to Stockholm and disappeared, were found alive and safe in Greenland by the University of Michigan expedition and last week started for Denmark by steamer in company with Prof. W. H. Hobbs, leader of the scientific group. Losing their way to Mount Evans, their Greenland destination, the flyers ran out of gas and landed on the ice fields 100 miles inland. For two weeks they tramped over mountains, around fjords, and across sand flats, and finally attracted the attention of the scientists by smoke signals and were rescued. Their Stinson plane was uninjured when they abandoned it, but was believed to have been broken up by later storms.

Though unsuccessful in making the flight to Sweden, the aviators believe they have established the fact that the Greenland route is the best for flights to northern Europe; and in this they are upheld by Vilhjalmur Stefansson, the noted Arctic explorer who says that in Greenland there are tens of thousands of miles of perfectly level ice on which planes can land safely. Mr. Stefansson said the Greenland course in the future will be taken by airplanes and dirigibles to the practical exclusion of the southern routes over 1,600 miles of open water. A direct route between Seattle and Berlin, he explained, would combine a maximum of safety with a minimum of distance, and would bring the west coast of America almost as near to Europe in hours as is the east coast.

FRANCE lost one of her leading statesmen last week in an airplane disaster. Maurice Bokanowski, minister of commerce, aviation, posts, telegraph and telephones and youngest member of the cabinet, was killed when a plane in which he was flying from Toul to Paris crashed just after its start. His four companions also perished and the bodies were burned when the wreck took fire.

One of the worst recent American airplane disasters occurred near Pocatello, Idaho, when a Fokker air mail plane crashed. Six passengers and the pilot were instantly killed.

EUROPE has a new king. Ahmed Zogu, who has been serving as President of Albana, was elevated to the throne by the national assembly without a dissenting vote and assumed the historic name of Scanderbeg III. This Mohammedan, a former mountain chieftain, took a double oath as king, once on the Bible and once on the Koran. He has guaranteed the country complete freedom of worship. Though the people of Tirana, the Albanian capital, seemed happy to have Zogu as king, the chiefs of the Republican party are said to have sent a protest to all European powers, saying the Albanian people would resort to arms to restore the republican form of government. Italy was the first power to recognize the new regime and it was believed the example would be followed by all the others. The king's first official act was the liberation of 2,000 prisoners, and the second was to give bonuses of one month's salary to all state employees.

GERMANY, constantly trying to find some way to get the French army of occupation out of the Rhineland, has made a definite proposition on the subject to France, and last week in Geneva Herr Mueller, chancellor of the reich, had a long private conference with M. Briand, French minister of foreign affairs. It was said that the German plan contemplates the mobilization of a certain portion of the 11,000,000,000 gold marks ($2,750,000,000) in railway debentures as provided under the Dawes plan, for the floating of an international loan and the liquidation of a large portion of France's war indemnity claims. It provides for the fixation of the total amount of reparations which Germany shall pay under the Dawes plan. The Dawes plan merely fixed the amount of annuities without stating how many years they should continue.

It was realized by both Mueller and Briand that the proposition cannot be developed until after the Presidential elections in the United States and an agreement with the next administration at Washington, because the bulk of the reich railway debentures must be floated in the American market.

WHEN the League of Nations assembly opened in Geneva the representatives of Finland, Sweden and Poland stirred up a warm debate by proposing that the league undertake an investigation aimed at checking the abuse of alcohol. The delegates from the wine-producing countries of southern Europe protested and no decision was reached. H. J. Procope of Finland, president of the league council, in his convening address lauded the Kellogg anti-war treaty as an instrument of world peace. That pact is still the subject of lively comment all over the world, and each day more nations signify their intention of adhering to it. Congressman Britten of Chicago, chairman of the house naval committee, who was in Paris, gave out a warning against the idea that the treaty meant the curtailment of the American naval building plan. Congressman La Guardia of New York, also in the French capital, disputed this, saying our program could not be continued without virtually repudiating the pact. In Washington speculation was rife concerning the reservations which will be proposed in the senate by those who profess to fear foreign entanglements. It is generally believed one of these reservations will be to make it clear that America will not permit itself to be drawn into European disputes, and that another will state that we reserve the right to use force, if necessary, to protect our position and interests on the Western hemisphere. After a pleasant visit in Ireland Secretary of State Kellogg sailed for home without going to England.

PRESIDENT CALLES of Mexico in his address before the congress declared he would not continue in office either as a provisional or constitutional President after his term expires on December 1 and would not again seek the office. He made a plea for national unity in selecting and supporting a provisional President and rejoiced that there were no "caudillos" (military-politico leaders) left because they meant danger for the country. While it may be true that there are no caudillos available, the army chieftains still expect to dictate to the Obregonist congress in the choice of a new President.

WISCONSIN'S Republican primary left political affairs in that state rather confused. Senator LaFollette was renominated, overwhelmingly defeating G. W. Mead, conservative. But Walter J. Kohler of Kohler, millionaire and conservative, was victor in the race for the gubernatorial nomination, beating Congressman J. D. Beck, LaFolletteite, and Governor Zimmerman, who sought the support of both factions. The other incumbents of state offices were renominated, defeating the Kohler slate. The defeat of Beck was taken by the conservatives to mean that the LaFollette regime was near its end, despite the personal popularity there of the young senator. Kohler's Democratic opponent will be Mayor A. G. Schmedeman of Madison. The Democratic nominee for senator is M. K. Reilly.

In Michigan the Republicans renominated Governor Green and Senator A. H. Vandenburg, and the Democrats named W. A. Comstock and Maj. J. W. Bailey to oppose them.

RESPONSIBLE leaders of both the Republican and the Democratic parties deeply deplore the forcing to the front of the religious issue in the Presidential campaign; but it is being forced nevertheless. Governor Smith felt compelled last week to take notice of it when he learned that some of his opponents were charging that if he were elected he would head the federal departments and bureaus with Roman Catholics. In reply he called on Robert Moses, a Republican and a Jew whom he appointed secretary of state in 1927, to tell the religious and political affiliations of the members of his cabinet and appointees and of others whose appointments have been approved by him. The results of the inquiry, as given out at Albany, were:

"Members of the governor's cabinet totaling 14; Protestant, 10; Catholic, 3; Jewish, 1. Republican, 8; Democrat, 4; Independent, 2.

"Other present state department and major division heads totaling 25; Protestant, 14; Catholic, 11; Democrat, 14; Republican, 8; Independent, 3.

"Other present state officials, whose appointments were approved by Governor Smith, totaling 156: Protestant, 105; Catholic, 33; Jewish, 11; undesignated, 7; Republican, 72; Democrat, 58; Independent, 9; undesignated, 17."

HERBERT HOOVER has been told by his advisers that the Middle West is safe for him, and so will not make any campaign speeches in that region. He will deliver but one address in the South—at an industrial celebration at Elizabethton, Tenn., on October 6. Senator Brookhart of Iowa was one of those who told Mr. Hoover he was certain to carry the agricultural states, the only necessary thing being "to let the farmers know Hoover's real war record." On the other hand the Republican party in North Dakota has split, the independent wing indorsing Hoover's candidacy and the nonpartisan wing refusing to do so. The latter faction apparently controls the state central committee.

Republican efforts to break into the solid South are resulting in some queer conditions. Republican managers in Alabama and Georgia have consented to the withdrawal of Republican electors from the ticket and the substitution of the names of Democratic electors. In Florida an agreement has been made whereby half the Republican electors on the ticket will be Republicans and the other half Democrats. Assurances have been given that if the Democrats running as electors on the Republican tickets in Alabama and Georgia and Florida receive more votes than the electors running on the ticket headed by Smith and Robinson, they will vote for Hoover and Curtis.

CHICAGO acquires its first billion-dollar financial institution through the merger of the Continental National Bank and Trust company and the Illinois Merchants Trust company, details of which were approved last week. The consolidation forms the biggest banking institution in the country outside of New York. It will rank either second or third in the United States, depending upon whether all the assets go into the merger or whether some of them will be segregated and liquidated.

THE home mission board of the Southern Baptist convention announced from its headquarters in Atlanta that it was unable to pay current salaries because of the discovery of a $1,000,000 shortage in the accounts of Clinton S. Carnes, treasurer, who disappeared August 15. It was found that Carnes kept a secret file in which were entered special loan transactions with more than 150 banks in the South, transactions which never came under the scrutiny of regular auditors or of the church. The joint committees of the church said none of the obligations incurred by Carnes would be repudiated.

SEVEN midwestern financiers were charged with a conspiracy to use the mails to defraud through the sale of nearly $1,000,000 worth of securities in farm loan companies in a joint indictment returned by a federal grand jury in Boston. Those named in the indictment were: Guy Huston, John E. Huston, John L. Boyles and Harold A. Smith, all of Chicago; Walter E. Cravens, Kansas City; Oran F. Schee and Vernon U. Sigler, Des Moines. The charges involve the sale of securities in three companies, the Missouri-Kansas Farm company, the Farm Company of Massachusetts, and the Farmers' Fund of Illinois.

BOTTLE IS SWEPT ACROSS THE OCEAN

Message Brings Reply From North Sea.

Baltimore, Md.—This is the tale of a bottle, a seagoing wine bottle, favored by an ocean's vagaries and wafted by helping breezes from the Grand Banks to the sandy shores of Schleswig-Holstein.

Strange currents and white-capped breakers carried the bottle thousands of miles through the South Atlantic and the cold waters of the North sea back again to the German land which it had left months before.

On April 17, five days out from Bremen, fourteen-year-old Theobald Zahn dropped the bottle into the ocean from the deck of the steamer Berlin of the North German Lloyd line.

Recently young Zahn received a postal from a lighthouse keeper at Westerhever, on the shores of the North sea, saying the bottle had been found, washed ashore by the tide, and the note Theobald had inclosed was plainly decipherable. Theobald, accompanied by his mother, Mrs. Frieda Zahn; his sister, Armanda, eight, and brother, Tony, twelve, left their native home near Munich to join Mr. Zahn in Baltimore.

Off the Grand Banks, Theobald wrote his note and stoppered the bottle.

"Good-by, Germany—we're going to America," he wrote on a piece of paper in German, and followed it with his name and the address at which he expected to live in the new country.

The postal, postmarked Osterhever, Schleswig-Holstein, and addressed to the "Familie Zahn," caused considerable excitement in the 700 block North Duncan street. It was signed by Jakob Pauls, the lighthouse keeper, and read:

"Dear F. Zahn: The bottle post was found by my son on the sixth of July on the sands of Westerhever. Kindly answer if you get this card. With best German wishes."

Two Mountain Climbers Die in Alpine Tragedy

Vienna.—Two young Alpinists died and a third was rescued with frozen feet after being marooned for three days and nights as the result of their attempt to scale the sheer sides of Dachstein, the tallest peak of its range in the Austrian Alps. Four others in the party were unharmed.

The seven young mountain climbers had ascended about 8,000 of the 9,500 feet to the summit when they encountered a snowstorm.

They took shelter on a ledge. One youth, named Sturm went mad. His companions roped him to the rock, but he freed himself and disappeared over the precipice.

A rescue party climbed above them and lowered a rope. One by one they were drawn up, but as the fifth was being hoisted the rope broke and he was hurled back down the mountainside to his death.

Before a new rope could be knotted together, night shut down and the last member of the party was forced to remain over another night.

Pendulum in France Proves Earth Rotates

Bordeaux, France.—Simple proof that the earth still rotates has been produced by making again the famous experiment of the French physicist, Foucault.

A great pendulum, a fine wire with a weight at the end, was suspended freely from the top of the stock exchange cupola and made to swing over a graph sheet. The pendulum continued to swing in the same plane while the graph sheet showed that the earth, and naturally the building, turned under it.

A pendulum 75 feet long was used, each oscillation lasting four and one-half seconds.

This was the method used by Foucault, who made his test in the Pantheon at Paris.

Suicide Uses Dynamite

Akron, Ohio.—Placing six sticks of dynamite under his body, Edward Gertensohlager, forty-five, of Wadsworth, near here, lighted them with fuses and blew himself to pieces in a barn at the rear of his house.

Bans Cigarettes

West Orange, N. J.—Any employee caught smoking cigarettes in Thomas A. Edison's laboratory building will be fired instanter. Notice to that effect, signed by the "wizard" himself, has been posted up.

New Diamond Fields Found in South Africa

Johannesburg, South Africa.—Diamonds have been found on the coast of Namaqualand, southwest Africa. Dr. Hans Merensky, noted American geologist, had long held a theory that the great Orange river, which drains a large portion of southern Africa and empties into the sea of Namaqualand, must have washed down vast quantities of diamonds during the centuries. He therefore went prospecting along the Namaqualand coast and was rewarded by finding the seashore dotted with large precious stones that had been swept up again from the sea bed by the waves.

BARRINGER METEOR BEING EXPLORED

Long Enshrouded in Mystery and Indian Fable.

Winslow, Ariz.—Mining operations are under way to explore and determine the actual content on the giant Barringer meteor of northern Arizona, greatest known meteor on earth and hitherto enshrouded in mystery and Indian fable.

The Barringer meteor, 22 miles from Winslow, created a crater a mile across and approximately 1,000 feet deep when it crashed to earth thousands of years ago.

It displaced over 300,000,000 tons of rock in the impact.

The crater thus created has been the center of scientific and geological interest for 50 years, and for the last 25 years various efforts have been made to reach the great shooting star itself and determine its content.

Named for Geologist.

The work has been carried on principally by D. M. Barringer, Philadelphia geologist, for whom the meteor was named.

Barringer finally located the main body 1,370 feet from the south rim of the crater. Tests showed it to be approximately 400 feet in diameter and to contain 90 per cent meteoric iron, 7 per cent nickel, .2 ounces platinum and .1 ounces iridium per ton.

The main body is estimated to weigh 100,000,000 tons and the metal content to be worth approximately $50 per ton.

Age-old rumors that diamonds existed in the ore were disproved by the tests, which showed only so-called microscopic diamond points of no commercial value.

Actual mining operations just started are under the direction of Barringer and Quincy A. Shaw of Boston of the Calumet & Hecla Mining company. The enterprise is being conducted privately.

Contracts for erecting power plant and hoist machinery and sinking a two-compartment shaft have been let, and initial construction work is under way.

Thousands of dollars have been spent in past years in futile efforts to locate the great star and its estimated wealth of $500,000,000 of metals. The United States Mining, Smelting and Refining company, one of the largest corporations of its kind in the United States, gave up the attempt after spending over $100,000.

Largest Ever Found.

Barringer, however, has stayed with the problem for over 25 years, and after expending his personal fortune finally located the great ore body with sufficient exactitude to bring to his aid the funds and engineering assistance of Eastern mining capital.

The attempt this time will proceed with more data and directness than any of its predecessors.

The most valuable mineral found in the diamond drill tests is iridium worth $275 an ounce.

The Barringer meteor is the largest of the only three Siderite meteors (containing ore) ever found on earth. The other two are the Cape York meteor, weighing 37 tons, discovered by Admiral Peary and now in the New York Museum of Natural History, and the Bacubirito meteor found near Bacubirito, Mex. Neither of the other two Siderites contained platinum or iridium.

Collie Arrested as Thief Was Also Stolen

Lynbrook, L. I.—A trained collie "arrested" in New York city for complicity in a $30 theft was brought back to the home of Dr. Maxwell Galloway here recently, a wiser and more experienced dog.

Doctor Galloway's collie had disappeared on July 5 last. On the same day Leon Isaacs, nineteen, of 193 De Kalb avenue, Brooklyn, passing through this village, was held on a charge of disorderly conduct. The two incidents were at first not connected.

But the other day the doctor, who had been looking for his trained dog in vain, saw a newspaper picture of a dog much like his that had been taken into custody by the police of the Elizabeth street station, Manhattan, along with Isaacs. The tale was told that Isaacs had stolen from Joseph Kiss, Manhattan electrician. While Kiss looked the other way, Isaacs, the police said, took the money from the till and passed it to the collie, who then ran with it to a confederate outside.

Doctor Galloway then went to New York, identified the dog and took it home.

"He was a good dog," said the doctor, "and though well trained, was not trained to steal. He learned such things from others, but he's going to unlearn them with me."

The collie hung his head and wagged his tail.

Shows Sea Monster

Vancouver, B. C.—A nameless marine creature six feet long, having an eel-like body and a head resembling that of a sheep, was on display at provincial police headquarters here recently as evidence of the existence of a "sea monster" in Lake Okanogan, in the interior of British Columbia.

Seedless Cucumber

Hazlemere, B. C.—Production of a comparatively seedless cucumber is claimed by J. B. Steele, operator of a market greenhouse here, by a process in which he has been specializing.

"Gate of the Gods"

It was the idea of the Chaldean and Platonic philosophers that the "gate of the gods" was located in Capricornus, says Nature Magazine. Through this gate souls released by death returned to heaven, while through the "gate of men" in the constellation of Cancer, souls descended from heaven in the bodies of men. The positions of these two "gates" correspond to the positions of the two solstices, winter and summer respectively.

Catalina Island Yields Many Ancient Treasures

Avalon, Santa Catalina Island, Cal.—An attempt to follow ancient trails to the long-lost island temple of Chinigchinich, the Sun God, has resulted instead in the discovery of the burial place of a small Indian princess of 3,000 years ago and evidence indicating that child sacrifices were made in wholesale fashion by tribes of the Channel islands, off the coast of California.

Within a stone urn weighing 134 pounds and fashioned skillfully as though by modern tools was found the skeleton of an Indian girl between five and seven years. Her hands apparently had clutched the rim of an urn, whose rich ornamentation of wampum bespeaks her royal lineage.

In a circle with the urn as a center were counted by Prof. Ralph Glidden, curator of the Catalina museum of Channel Island Indians, the skeletons of 64 children buried in tiers four deep with small heads touching each other.

Beneath them was the skeleton of a seven-foot man. A spear blade still was fixed in the ribs

The sand within the funeral urn had the appearance of ground crystal—apparently, according to the discoverer, a sacred sand used in the burial of Indian royalty—and was far different from that which had sifted over the graves of the other children.

These finds as well as a wealth of obsidian knives, spear points and arrow heads and hundreds of other articles of wampum-inlaid stone and bone have provided material over which Glidden has puzzled since he discovered them.

One thin piece of slate he believes to be a stone map, holes having been drilled to indicate trails to the four main burying grounds on Santa Catalina island.

"It is plausible," Glidden said, "that the strange child burial within the urn and those surrounding it were the result of a natural death of a little girl of high rank and the slaying of 64 attendants and playmates with her. Or they all may have been killed in some religious ceremonial rite.

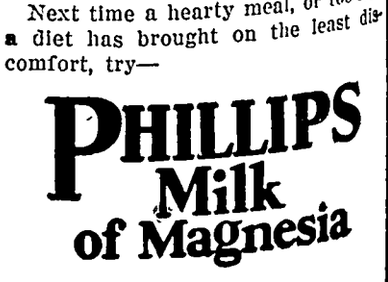
"It is even possible the princess may have been given some potion and buried alive. The way the small hands clutched the outer rim of the bowl makes this a possibility."

Wampum inlaid in four broken circles on the rim of the urn with "gates" leading to the four points of the compass lead Glidden to believe the burial place may be near the site of the temple of Chinigchinich.

Butter Stored for Winter

The Department of Agriculture says that for butter, to be stored for winter use, pasteurized sweet cream should be used, churned at a low temperature and the butter washed so that it will be firm and waxy. Rolls or prints of butter should be wrapped in parchment butter paper, placed in a stone crock, and covered with strong brine. Butter should be stored in as cool a place as is available and in a place free from odors likely to be absorbed by the butter.

Popular trio—three meals a day.



When Food Sours

Lots of folks who think they have "indigestion" have only an acid condition which could be corrected in five or ten minutes. An effective anti-acid like Phillips Milk of Magnesia soon restores digestion to normal.

Phillips does away with all that sourness and gas right after meals. It prevents the distress so apt to occur two hours after eating. What a pleasant preparation to take! And how good it is for the system! Unlike a burning dose of soda—which is but temporary relief at best—Phillips Milk of Magnesia neutralizes many times its volume in acid.

Next time a hearty meal, or too rich a diet has brought on the least discomfort, try—

PHILLIPS Milk of Magnesia

DAIRY TALK

DAIRYMAN PLUGS UP HERD LEAKS

In a year's time, O. D. Glenn, a Crawford (Colo.) dairyman, has increased his monthly return above feed cost by $4.90 for each of the 11 cows in his herd.

Mr. Glenn joined the Crawford Cow Testing association on June 1, 1927, and accurate records have been kept on his herd since then. When he started the cow-testing work, he was getting an average of 241 pounds of butterfat per month for each cow. For every dollar that he invested in feed he received $4.87 for the butterfat sold and had the skim milk left for his hogs ad calves. But there were some "leaks" because a year later his returns were much higher.

For May, 1928, the records of the cow-tester showed the average production of butterfat per cow to be 406.4 pounds for his 13 cows. For this he received $163 above feed cost, a return of $12.50 per cow. It was an increase of $4.90 per cow per month in a year's time. For every dollar that he put into feed, Mr. Glenn received $7.34 for the butterfat sold. In other words his feed cost him 44 cents for every 100 pounds of milk a year ago and 29 cents per 100 pounds of milk on June 1, 1928. These figures merely show the return above feed cost and do not include labor or interest on the investment.

The increased returns from Mr. Glenn's herd may be attributed to the elimination of the "boarder" cows, which the records of the cow-tester exposed, and the maximum use of home-grown feeds in a balanced ration. He ran his cows on pasture in June, July August, September and October. In November he started them on stock beets, alfalfa hay and a balanced ration of grain which the cow-tester recommended to him.

It costs Mr. Glenn 34 cents per month for each cow to have the cow tester's service in making a complete cost-of-production record on each cow. The tester weighs the milk from each cow one day a month and tests it. Besides that, he gives the dairyman hints on the feeding and care of his herd. He also aids members of the cow-testing association to secure pure-bred bulls, exchange bulls and buy better cows.

Young Calves Need Some Shelter From Elements

Young calves protected from the sun and storm make better gains than those allowed to run in the open. Unless there is a good shelter provided where the calves can seek protection, when they wish to do so, animals a few months old should be kept in clean, well ventilated pens in the barn

The effect of sunlight on growth of calves have been studied by some of our experiment stations. It was found where one lot was housed in a darkened shed and the other lot had access to direct sunlight there was little difference in the physical appearance of the two lots.

Short pastures, hot weather and flies must be considered when raising calves. Calves are more likely to receive regular rations when kept in the barn than if allowed to run on pasture. Their thin coating of hair and tender skin make them easy prey for flies. It is not uncommon to find young calves without shelter from the hot sun with the hide quite irritated by the sun's rays.

The first few months are important in the life of the dairy calf. During this time the inherited stimulus for growth is the most active. If this impulse is allowed to spend itself without supplying the proper feed and care, the rate of development will be retarded. In extreme cases it may be permanently lessened. The young calves should not be forgotten during the summer months.

Dairy Notes

Good dairy cows also provide an excellent market for grains such as oats and barley.

* * *

Due to its cooling, slightly laxative action, silage aids greatly in keeping the digestive systems of high-producing dairy cows in good condition.

* * *

The calf should be allowed to suck its dam two or three times a day until the ninth milking or until the milk is normal, after which the calf should be weaned.

* * *

With the shortage of hay which will exist in many sections this year, more dairymen will undoubtedly find silos good investments.

* * *

Rations containing leguminous roughage are likely to contain sufficient minerals. The whole mineral question is still in the experimental stage.

* * *

A question many dairymen are interested in is the relative value, ton for ton, of corn silage and hay for dairy cows. Experiments at the Vermont, Maine, Utah and New Mexico stations have shown that two and one-half to three tons of good silage (depending on the richness in corn grain) is worth as much as one ton of hay for feeding dairy cows.

Inoculating Soil to Help Legumes

Some of Strains Required for Successful Culture of Many Plants.

(Prepared by the United States Department of Agriculture.)

When to inoculate the soil for a legume and when to depend on the presence of the necessary bacteria already in the soil has puzzled many farmers. It is true that soils in many sections of the country are well inoculated with one or more of the strains of bacteria required for successful culture of some of the legumes, and at the same time poorly provided with the bacteria needed by other leguminous crops.

Bacteriologists studying the strains of bacteria that work in the roots of legumes have identified seven common groups, and the members of each group are for the most part capable of inoculating several species of legumes.

Alfalfa Bacteria.

One group listed by bacteriologists of the United States Department of Agriculture includes the alfalfa bacteria which are also capable of inoculating bitter clover, button clover, California bur clover, fenugreek, southern bur clover, white sweet clover, yellow sweet clover, and yellow trefoil. Introduction of alfalfa into some of the areas west of the Mississippi is relatively easy, because the soil is naturally inoculated with the proper bacteria.

The red clover bacteria will also inoculate alsike clover, crimson clover, hop clover, low hop clover, mammoth red clover, rabbit-foot clover, and white clover.

Vetch bacteria inoculate the Canada field pea, common vetch, garden pea, hairy vetch, broad bean (horse bean) lentil, narrow-leaf vetch, purple vetch, and sweet pea.

The garden and navy bean bacteria are interchangeable.

The lupine bacteria inoculate the blue lupine, serradella, the sundial (wild) lupine, and the European yellow lupine.

Cowpea Bacteria.

The legumes inoculated by the cowpea bacteria are, the cowpea, Florida beggarweed, Jack bean, Japan clover, Kudzu, Lima bean, partridge pea, peanut, pigeon pea, tick trefoil, tepary bean, and Deering velvet bean.

The soy bean, unlike the foregoing, is associated with bacteria not related to any of the commonly known strains. This, together with the fact that soy beans have been grown extensively for only twenty-five years in this country, indicates the necessity for artificial inoculation where soy beans are grown for the first time.

If the crop rotation is planned a year or more ahead and it is desired to introduce a legume not hitherto grown, it is possible to make a test planting and determine whether the soil contains the bacteria necessary for the crop. This will be indicated by the presence of the nodules on the roots of the plants in the test plot.

Planting Winter Wheat Sometimes Hard Problem

Winter wheat is a crop which takes nine months to raise, the longest length of time of all our annual crops. There are seasonal vicissitudes and insect pests all along the way. The season may be too dry for the seed to germinate or it may be too wet to sow the crop. High winds and bare ground and low temperatures of winter are a menace—thawing and freezing may ruin the crop and rust, the green bug, hessian fly, army worm and chinch bug may all take their toll. It may be sowed too early or too late. Although late sowing is preferable to excessively early sowing.

Agricultural Notes

In 1927 in the United States 2,263 agricultural agents were employed.

* * *

Regardless of the summer price of milk, it pays to keep the dairy herd in good condition during the summer months.

* * *

Two important ways farmers are lowering the cost of production are by securing high yields and by keeping operating costs at a low figure.

* * *

Temperature of barns will remain more uniform, stock will be healthier, and the frost nuisance will be practically eliminated by good ventilation.

* * *

Careful shocking and stacking of barley is an important factor in securing good quality grain for market. The seed will be discolored and is apt to sprout if left in the stack too long.

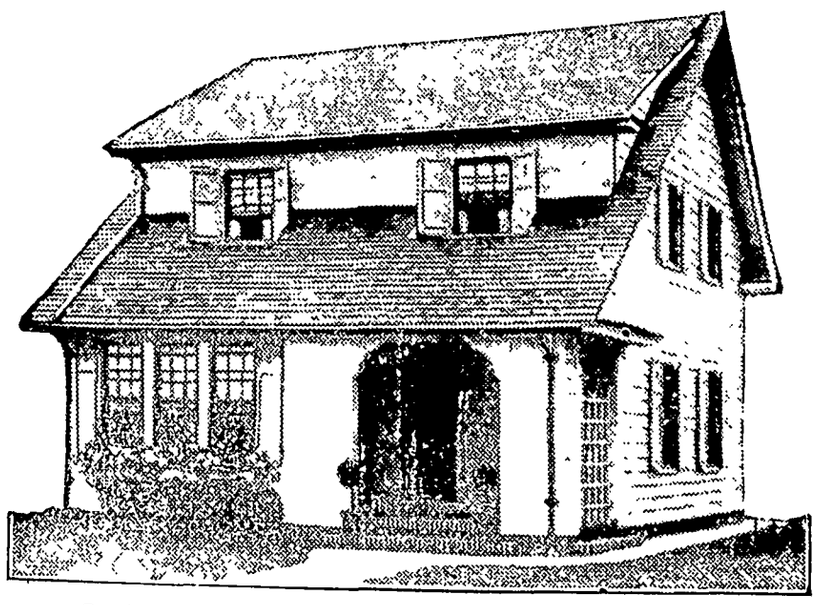
* * *

A promising new variety of alfalfa for the Northern states is the result of a small package of seed received 18 years ago by the United States Department of Agriculture through its office of foreign plant introduction. The new variety is known as "Ladak."

* * *

Bluegrass in pastures is very dependent on a supply of nitrogen for successful growth. This supply is furnished largely by the clovers present, so it is evident that when the clover begins to fail, because of a lack of phosphorus and lime, the bluegrass also begins to fail, because of a lack of nitrogen.

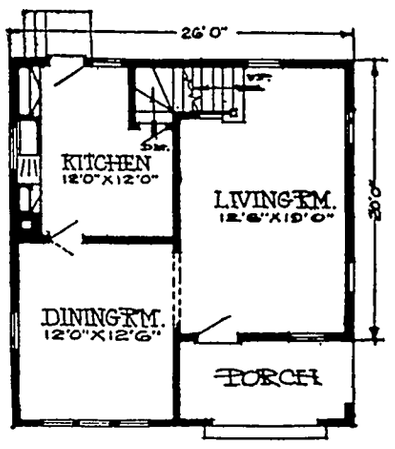
Compact Plan of Charming Cottage Provides for Six Rooms and Bath



By W. A RADFORD

Mr. William A Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Here is a little cottage that seems to typify the idea of home. Its story and a half construction has been designed to produce a charming outward appearance and the interior will be found equally satisfactory. Either wide siding, as used here, or shingles with wide exposure, are appropriate for the outer walls of such a house, according to the taste of the owner. The exterior decoration is quite simple and should be kept so. This decoration consists of the brick work around the steps, window box, shutters and lattice work at the end of the porch. Too much ornament, especially for a small

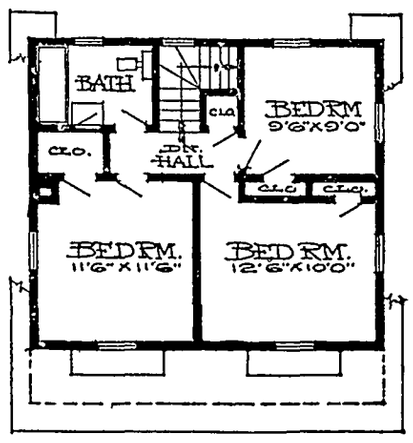


First Floor Plan

house, is entirely out of place, and simplicity is the keynote of attractiveness.

Full wall height for the front bedrooms has been obtained by means of the wide dormer extended across almost the entire width of the front. This also serves to break the front roof expanse in a manner which adds to the pleasing effect of the whole design.

In all, this design provides for six rooms and bath. On the lower floor there is the usual living room, with stairway ascending from one corner to the floor above, dining room and kitchen. These rooms as well as those of the upper floor are surprisingly



Second Floor Plan.

large considering the exterior dimensions of but 26 by 20 feet. This is made possible by the compact rectangular plan, closely approaching square proportions. In this way, too, a roomy home is achieved at moderate cost.

There is also a stairway from the kitchen to the upper floor, the two stairs joining midway between floors. This will be found a most convenient arrangement. Built-in cupboards are provided in the kitchen at either side of the sink which is set below the window after the manner which is in demand these days.

The bedrooms on the second floor are all provided with closets and there is also an ample linen closet in the hallway. Two of these rooms are somewhat larger than the third but all are of sufficient size for comfort and all are provided with good cross ventilation by having windows on two sides of the room. The bathroom occupies the fourth corner of the second floor and is well lighted by a rear window.

Cobblestones Make an Attractive Home

One of nature's hardest materials, the cobblestone, long considered useless, has now been turned to good advantage—that of building beautiful, enduring homes for the man who wants a small home or a summer cottage in the country, points out Allan R. Smith in Your Home Magazine.

"Relics of glacier days, cobblestones are well weathered through centuries and contain no soft material," continues the Your Home writer. "Thus they are enduring as well as fire-safe. And in colors they abound—reds, greens, blues, browns and other hues—yet these are intermingled in such a way that none is bright, the subdued tones of nature predominating with alluring effect. These natural advantages, coupled with the fact that their only cost is that of gathering, are making cobblestones a popular material for medium and low-cost homes. Many of the houses already built are so attractive that families with means sufficient to choose any building material, are selecting cobblestone construction for their new homes."

"Forms for cobblestone work," instructs this practical article in Your Home, "are required only for the inner wall, no outer forms being needed. The form for the wall is built in courses, the sheathing boards against which the wall is built being raised again and again until the wall rises to the required height. Studs used consist of two by four or two by six-inch material placed not more than three feet apart to prevent bulging in the finished wall. The boards coming in contact with the concrete and cobblestones are greased to permit easy removal."

"For the man who wants to build a small home at comparatively little cost," concludes the Your Home writer, "the cobblestone house offers a solution if the country near his site affords the stones in sufficient quantity for the building or at least enough of them to make it unnecessary for him to buy a large percentage of them."

Efficient Radiators

Push nipples, forming what is claimed to be an entirely permanent iron-to-iron joint, feature a line of radiators especially made for the home. Correctly proportioned tubes and ratio of air space to heating surface are said to result in extremely high efficiency.

Painted Walls Still Favorite Decoration

Some people have an idea that paint, as an interior wall decoration, has but recently come into vogue. A visit to the American wing of the Metropolitan Museum of Arts in New York proves the contrary. Painted walls apparently were much in vogue in great-grandmother's day.

For the early American bedroom, in particular, paint offers the best background. A light, plain wall paint throws into relief the framed silhouettes and quaint old prints which belong to that period, whereas against a darker background they would lose their effect.

It is fascinating to make over an ordinary bedroom into the fashion of the early American period. The room must first be robbed of every modern feature, and a new start made. First, the wall may be painted a light buff, and the woodwork white.

On the floor, black paint will be exceedingly effective with this light setting and to add to the durability of this floor a coat of varnish should be applied over the paint. Rag rugs, in which red, blue and yellow are conspicuous colors, will be striking on the glossy black floor.

If one is so fortunate as to possess some choice old mahogany or walnut bed, a chest of drawers, a gateleg table and a straight-backed, rushbottom chair or two—the "early American" aspect of the room is assured without further effect.

Yet, even without these, an old-fashioned effect may be gained from pieces of more recent date, and having them painted. For the painted furniture so much in vogue today is but another revival from an earlier period.

Window drapes of flowered chintz, brass candlesticks, an old-fashioned oil lamp (electrically equipped) with a parchment shade decorated with silhouettes, are appropriate accessories.

Forged Hardware

Forged iron hardware is a link that binds the present more prosaic type of house to the romantic castle gates of Ivanhoe and King Richard. Reproductions of pieces of forged iron in authentic patterns are available at reasonable prices. Hinge straps, handle sets, knockers, H and L hinges, lanterns, foot scrapers, garage and gate hardware are included.

FARM STOCK

WELL-FED PIG IS MOST PROFITABLE

"Pork producers with few exceptions will make more money from their pig crop by full feeding their pigs from birth to market than by limiting the grain ration," says Mark A. McCarty of the animal husbandry division of the University of Minnesota.

"Full feeding pays, for full fed pigs go to market earlier, cash returns come quicker, the labor item and interest charge is reduced, the risk period is shortened, and best of all the early marketed pig sells at a higher price than do pigs that go to a later market due to limited feeding.

"Results of feeding trials at University farm show that full feeding brings about $2.50 more per pig than does limited grain feeding. Full feeding in dry lot is shown to be more profitable than limiting the grain ration.

"Full feeding from birth to market will be found, under average farm conditions, to be a most profitable practice for the producer of market hogs."

Litters are made ready for market in 180 days by the ton litter and pork production project methods.

Hogs Very Susceptible to Certain Germ Ills

The hog is very susceptible to certain germ diseases and worms that thrive in the filth and soil about much-used lots and it is almost unbelievable to note with how much more ease hogs thrive and grow when changed occasionally into new pastures about the farm. In addition to the advantages of new and uninfected ground for growing pigs to run on, there is also the matter of utilizing the stored up fertility which has accumulated about the old lots. There is genuine satisfaction in tending a crop of corn planted on an old hog lot. Also the ground at the same time is being renovated and freed from infection for future use. Most of us have heard the expression many times that if one had rough land about the place that was unfit for cultivation it should be made into a hog lot, says a writer in the Missouri Farmer. I question the wisdom of this saying, though honored with age. Of course it is well to have the timber pastures fenced for hogs, and in fact the whole place for that matter, but if only certain pastures or fields are to be made hog tight we would prefer that they be fields which may be cultivated.

Hayloft in Hog House Is Great Convenience

The hog house is as much in need of a hayloft as other live stock buildings, says Henry Mundt, Sarpy county, Nebraska, who fills the mow of his modern hog house with last-cutting alfalfa. Then, through the winter, this hay is fed regularly in racks on the ground floor so the animals can help themselves.

Mundt provided for the hog house loft when building several years ago. On either end is a hay door through which the hay is pitched by hand. Besides supplying a winter roughage for the hogs the hay provides some degree of protection from cold, thus serving the same purpose as straw in straw loft poultry houses. Mundt favors alfalfa hay also for poultry houses.

Dipping Important

Sheep are dipped primarily to control external parasites, such as lice, ticks and scab mites. Since sheep probably suffer more from parasites than do any other kind of live stock, it is of great importance that dipping be given careful consideration, especially in the South where conditions are most favorable for parasitic increase. The injury caused by external parasites is found in a loss of blood, and in the itching and irritation, which interferes with nutrition.

Live Stock Hints

Big teams cut labor costs.

* * *

Self-feeders for hogs not only save time and labor but increase gains and conserve feed.

* * *

Before an animal can make the best gains with any kind of feed it must be in proper condition to utilize it.

* * *

Feeding a balanced ration helps get pigs ready for an early fall market. Without the right kind of feeds it is impossible. The pigs must be farrowed early.

* * *

Sunshine is one of the best disinfectants. Be sure all live stock is getting plenty of this free nature's tonic, especially the young growing animals.

* * *

Pigs on good pasture, such as alfalfa, rape, or fresh bluegrass, to make the fastest and most economical gains, need only about half as much tankage as pigs in dry lots.

* * *

Spring pigs that are forced along rapidly and marketed early usually bring the most net profit.

ORCHARD GLEANINGS

WIDE VARIETY IN GRADES OF APPLE

There is a decided lack of uniformity in the opinion and decisions of fruit men as to fixing standards of maturity in picking apples. One man may base his opinion on size, another on coloration, and a third will wait until the apples begin to thud down under the trees.

Hence this means that there is a very wide variety of apple grades within the same zone and within the same variety, caused somewhat by the different stages of maturity at which they are harvested. Of course certain outside influences often decide the matter.

It is also quite evident that nobody would like to tackle the job of fixing up a set of maturity standards that might be called reasonable, says the Wisconsin Farmer. Horticulturists are opinionated folks and do not usually accept things with indifference.

Studies have been carried on during the recent seasons by the horticultural office of the United States Department of Agriculture working with several state farms. In Michigan at the East Lansing orchards they tested out Ben Davis, Delicious, Winesap, Jonathan, and Baldwin. The trees were in full bearing and had been in sod for five years.

They conclude that apples will continue to grow in size until picked. From the standpoint of bulk and quantity, and as far as grade is influenced by size, the longer apples remain hanging the better. Neither dessert quality nor keeping value were impaired by the delayed picking.

Color development is a very irregular factor, and sunshine, temperature, humidity, and air currents all play a part in it. Removal from the trees does not stop an apple from changing the undertone color of its unblushed surface. That is, the part not highly colored pink or red will change in storage from green to yellowish green almost as regularly as if unpicked. As a general rule they found that from the standpoint of color much is to be gained by delayed picking as long as practicable.

Softening of the flesh will also vary from season to season and taken alone is hardly a true index of proper maturity. Change of seed cannot be taken as a true indication of maturity either, as in most varieties the seeds change color early in the season and will be brown long before the apple is ripe. The rate of seed color change is not affected so much by the season as outer color.

Growing Raspberries Is Not a Difficult Task

Four years ago we started a little raspberry patch. Planted about 150 bushes, mainly the Latham variety. Our first berries were marketed two years later, writes Alvin M. Peterson of Wisconsin in Farm Life. The patch has grown to 900 bushes now, by planting young bushes from the original plants and their offspring.

Though our land is rather sandy, our plants are thriving. Each year I haul a few loads of good, well-rotted manure on the patch. Then the plants are cultivated and kept free from weeds.

Last year, instead of cultivating the original patch, we mulched it heavily with leaves. This kept the land entirely free from weeds and kept it from drying out. Though the weather was dry, our oldest plants yielded heavily, and the berries were large and juicy.

In the fall we cut out all the old canes, which are then piled up and burned. This makes the hoeing and picking easier, gives the new canes a better chance to develop and keeps down disease.

Horticultural Facts

Trees growing on the richer spots may not need as much fertilizer as does the average tree.

* * *

Strawberries planted in the spring should be kept free from weeds throughout the season if they are to bear well the next spring.

* * *

In nearly every orchard some trees, lagging in growth, should have a heavier application of fertilizer or perhaps, several fertilizings instead of one.

* * *

As soon as strawberries are all picked, start preparing the bed for next season if it is worth keeping over. Cultivate, hoe and fertilize because fruit buds are formed in the late summer and fall.

* * *

In red raspberry varieties, Latham leads in hardiness and size of fruit, but not in quality. King and Cuthbert are of better quality than Latham. Much is written in books about planting crops between rows. Don't do it.

* * *

In the orchard where growth has not been altogether satisfactory, due to lack of readily available plant food, it is decidedly worth while to investigate the possibilities of leguminous cover crops, such as cowpeas, soy beans, vetch, and the like.

LOVE

Blinds—

So does .

BAD

HOOTCH!

FOR THE WHOLE FAMILY

Your egg and chicken troubles will soon evaporate if you use the famous MOR GAIN POULTRY FEEDS—for the whole poultry family.

We handle this line and already have a big army of roosters crowing for us. More eggs and better chicks is the answer.

North Iowa Grain Co.

Fire Wood

We will have in a car of regular nice clean short length millwork clipping wood some time this month. Cobs will be prettly scarce until late in the winter and we would advise you to get in your order for a small load to last until corn shelling time at least. We were unable to get this kind of fire wood last year. Remember, this is nice and clean—ready to put in the stove to start fires.

BETTER CALL US UP AND WE WILL PUT YOUR NAME DOWN FOR WHAT EVER YOU WANT

Wire and Posts

If you wan some cheap wire to hog down corn, come in and take a look at what we have: compare the weights and then the price—and at 28 cents per rod. If you want a cheap fence it can not be beaten.

STEEL POSTS—all kids. Some 6 foot Steel Post for 35 cents. This is not a cheap post—made by the best and most widely known makers of steel post. Take out a trial order and drive them in where you are going to do a little hogging down—it will save you a lot of work.

Right now would be a good time to scatter a sack of Lime around in the Hog Lot—

DOINGS AT SCHOOL THIS PAST WEEK

LOCALS WIN TWO BALL GAMES PAST WEEK

Last week our baseball team crossed bats with the Goodell nine and came hom with the long end of the score column, winning the game 6 to 1.

Thornton Falls Before Locals

On Tuesday evening of this week they engaged Thornton on our own diamond and again emerged victorious; this time by a score of 11 to 1 Thornton started strong and scored first, one run in the second frame, were tied by a run by Klotzbach in the fourth and the count remained knotted until the last half of he fifth inning when our boys started on a rampage and seven players made the circuit. After quickly retiring their opponents in the first half of the sixth they again clouted the Thornton pitcher for hree more runs.

Will Play Goodell Again Today

We play Goodell again on Thursday of his week and hope to treat them same as last week, only in a superior way.

High School Enjoys Outing

Our High School party at the bathing beach at Clear Lake and at the Bayside skating rink on Monday evening of this week was attended by almost our entire high school and faculty and enjoyed, we believe, by all there. Many did their first roller skating and altho spills were of comon occurence and many in an unusual way next day, no serious consequences followed. Many want to skate again including faculty members.

Girls Will Have Glee Club

Mr. Lewis reports a large array of girls out for Glee Club and that quite a few have shown an interest in a beginners' orchestra.

Home Ec Club Is Formed

The Freshmen girls have organized Home Economic Club under the direction of Miss McGinnis. They will study interior decoration, and as a project will plan the decoration of one room in their home. The club will meet at the choolhouse each Wednesday evening from 8:00 until 9:30 o'clock.

New Sewing Machines In Use

Our Freshman class contains 19 girls whose needs nad to be met n a sewing class. The two sewing machines in use had been demanding attention and our Board was prevailed upon to trade them in on new machines. Very liberal allowances were granted on them toward new, impsoved machines, one of them an electric which Miss McGinnis and our girls are very proud of

Class Gives Farewell Party

The Sophomore Class gave a farewell party Wednesday evening for Willis Busch, who will soon move with his parents to Mason City. The class are reluctant to lose a member but hope that the change will mean larger opportunities for him. Willis is a good student and will be missed in school.

Students Making Good

We are more than pleased with the interest and behavior of our students thus far and feel certain our school year will be one of the best Klemme has ever had.

HAYFIELD COUPLE MARRIED HERE WEDNESDAY

Marriage Ceremony Performed At Reformed Parsonage

Fred Lassahn and Mary Speaker, both of Hayfield, were married at the Reformed parsonage by Rev. Calvin Grosshuesch, Wednesday afternoon at 2:30 o'clock.

They were attended by Jerry Speaker and Emily Hoasman, also of Hayfield.

KLEMME COUPLE SURPRISED ON WEDDING ANNIVERSARY

Mr. And Mrs. C. G. Waterman Were "Victims" On 10th Anniversary

Mr. and Mrs C G. Waterman were married ten years Sunday, September 16th In honor of the event a number of friends planned a surprise for them to be staged at the Kerause cottage at Clear Lake

Mr and Mrs Waterman were enticed to the cottage by a well designed scheme and suspected nothing until they got out of the car and were greeted by their friends singing, "Here Comes The Bride"

The cottage had been appropriately decorated with yellow and green crepe paper streamers, and butterflies of the same colors A dcorated "wedding" cake occupied the center of the Bridal Couple's table, and perched on the uppermost top of the cake were two dells dressed to represent the Bride and Groom

Following a well prepared chicken dinner the "blushing bride and dignified groom" were presented with a number of useful and pleasing gifts, which now repose in the kitchen of the Waterman home

Those present besides Mr and Mrs Waterman and Marion, were Mr. and Mrs. C. F Kerause, Mr and Mrs Frank Kluckhohn and children, Mr and Mrs Art Kudje and children, Mr and Mrs. R. A Jorgenson and son, Buster, and Mr and Mrs T F Mitchell of Swea City.

All enjoyed a very pleasant day

NEW OFFICERS ELECTED IN LOCAL AUXILIARY UNIT

Mrs. J. C. Thomas Elected President For Coming Year

At their meeting last Thursday the members of the Local Auxliary Unit held their annual election of officers for the coming year Mrs J C Thomas was elected president and Mrs Ed F Jacobs, vice-pres; Leona Lau will hold the office of secretary and treas.; Marie Blank was elected chaplain, and Berdice Schwichtenberg, Sergeant-at-Arms

A report of the Iowa Auxiliary Convention, held at Council Bluffs some time ago, was given by Mrs W F. Lau, delegate from Klemme

Refreshments were served by Mrs Dave Schwichtenberg and Miss Berdice Schwichtenberg.

RECEPTION FOR TEACHERS FRIDAY

PUBLIC IS INVITED TO COME TO GREET TEACHERS

Cafeteria Lunch Will Be Served Following Program

Everybody is invited to come to the Parish House this Friday evening in a public reception in honor of the teachers of the Klemme School and the Sunday school teachers in the Liberty and Klemmee Churches.

The Committee in charge have asked the Times to announce that this reception is for EVERYBODY and the whole community is invited to be there at 7:30 o'clock

Each family is asked to bring a cake, r pickles, or sandwiches—whichever they prefer, and enough plates and cups for their family

A program is being arranged Everybody come out and give our teachers a royal welcome. We are glad to have them all back in this little city for another year

YOU are invited!

METHODIST CHURCH NOTES

A. W. Gauger, Pastor

This is closing week of the present conference year Many things require our attention as the year closes These are all being taken care of so that the conference year may truly be termed a successful one W are reaching our World Service goal and in other financial matters are striving to measure up

On Monday evening the local official board met to close the year's business On Tuesday evening a joint official board and Sunday school board meeting was held in the Liberty church.

Reports showed that we had the best year there in our pastorate The S S election brought slight changes The retention of the old officials gave proof that they had tried to do their work well and that the congregation repose every confidence in them.

On Thursday evening the Klemme S S. Board will hold its election

Reception Friday Evening

Friday evening a reception will be held in the Parish House for our school teachers as well as for the S S teachers of Klemme and Liberty As stated from the pulpit this is open to all who are interested in our public school as well as in Sunday school work and workers Come and bring a friend. Also some one article of refreshment.

All services next Sunday are regular A glad welcome awaits you and a helpful service is being planned

M. E. LADIES AID WILL STAGE BAZAR THIS FALL

Is An Annual Event For Early Christmas Shoppers

At the meeting of the Ladies Aid Society of the Methodist Church at the Parish House last Thursday, plans were made for holding a Bazar at a later date.

The ladies state that anyone outside of the Sociey who wish to assist may make aprons, towels, fancy work of any kind, and it will be very acceptable to the commitee in charge of he bazar. They will appreciate any assistance given

A cafeteria supper will be served the same evening

The Bazar will be held early so that those who desire can purchase articles for Christmas gifts.

The proceeds of the Bazar will go into the fund which the Society has earned toward the building of a new church in Klemme.

ESTRAY NOTICE

Six spotted hogs came to my place east of Klemme. Owner may have save by proving property, and by paying costs of keep and advertising. PETER MERKEL, Klemme, Iowa (Sp. 20-3t.)

TROOP COMMITTEE CHANGED BY VACANCY

R. A. Jorgenson Assistant Scoutmaster In Troop No. 56

The Troop Committee for Troop 56, Klemme has been re-arranged, because of the vacancy caused by the resignation of Andrew Wellemeyer, who left a few weeks ago to enter a university at Kansas City.

Dr. W. F Missman, chairman of the Committee, called a special meeting Monday evening to appoint men to fill vacancies.

Another vacancy in the Troop was caused by Asst Scoutmaster Asa Arnold leaving for Des Moines where he is attending school The Troop Committee elected R. A. Jorgenson, Troop Committeeman, to fill that office.

This left two places on the Committee to fill and J N Day and C. G Waterman were elected and accepted the offices given them. With the new Troop Committee formed, business matters were taken up, records examined, suggestions outlined and troop activities reviewed and plans made for the future.

The Troop Committee now consists of Dr. Missman, chairman, J N Day, Rev. Grosshuesch, C. G Waterman, and E F. Jacobs. Rev Grosshuesch has charge of practically all out the outdoor activities, such as camping, and hiking. The other men on the committee have supervision over clerical work, the troop equipment, finances, and other matters The success or failure of the Troop rests largely with the Troop Committee.

Dr. D P Anderson is Scoutmaster of Troop 56, and R. A Jorgenson is at this time Assistant. These men are directly responsible to the Troop Committee in carrying out the Scouting Program which may be outlined by the Troop Committee. The entire organization here is connected with and under the jurisdiction of the North Iowa Area Council, with headquarters at Mason City.

COUNTY TEACHERS MEETING SATURDAY AT GARNER

A County Teachers' Meeting will be held in the High School building at Garner, Saturday, September 22 at 9:30 o'clock.

Two members of the Iowa State Teachers' College faculty will be present. Their talks to the teachers will be on the new State Course of Study as related to the subjects of History and Geography.

Teachers are requested to bring their copies of the Course of Study.

There will probably be three study center meetings held in the county during the school year. One will be held at Britt and plans have already been completed for one to be held in Kanawha in February.

We shall be pleased to see every teacher in the county present at these meetings and hope that all will atend at least one of them.

J R Baggs, Couny Superintendent

Sunday afternoon J N. Day's Chevrolet sedan was somewhat demolished when struck by a Ford a few miles west of Garner J. N. Day and family and Wm. Smith and family were driving to Eagle Lake State Park to enjoy a picnic supper. When a few miles west of Garner Mr Day observed a car coming toward him and gradually crowding across the pavement. Mr Day drove off the pavement to give the car more room but could not avoid being hit which resulted in Mr. Day's car having the fenders and running board stripped off The driver of the Ford, a young man, says he was adjusting h carburetor and was not watching the road He assumed all blame and promised to pay for getting the Day car fixed up again It is usually carelessness that causes a large share of auto accidents We presume the young man learned a lesson that he will not soon forget. Luckily, no one was injured.

The Klemme Food Market has installed a nice new grocery counter at their place of business. The new counter is of the latest type and has a nicely arranged display and drawers for bulk groceries.

KLEMME TIED IN GALT TOURNAMENT

KLEMME BROKE EVEN IN GALT BALL TOURNAMENT

Tied With Belmond For Second Place Honors

Klemme did not pan out so well in the tournament Sunday and Monday at which Galt, Belmond, Goldfield and Klemme played.

In the first round, Sunday, Belmond defeated Goldfield in a 10 to 9 game Galt defeated Klemme in a fast game 4 to 2.

Monday's games were between the two winners and two losers of the first round. This paird Galt and Belmond In this game Galt shut Belmond out entirely, 8 to 0

Klemme just about registered a shut-out against Goldfield allowing them but one run and piling up a safe margin of seven runs themselves

Galt won the tournament by the wins over Klemme and Belmond, and Klemme and Belmond were tied for second place with one win and one defeat each.

Those who saw the games say that Klemme played a good game of ball.

When returning home from Clear Lake Sunday evening Frank Kluckhohn and family had a narrow escape from an auto wreck They were driving down a street in Garner when a car, driven by a Belmond woman, accompained by her husband struck the rear of their car ruining the back fender. The Belmond party assumed all blame and pay the costs of fixing up the car which they ran into

GARNER AUTO COMPANY GETS CARLOAD OF NEW FORDS

Several Around Here Now Driving Henry's Latest

The Garner Auto Company received their first carload shipment of the new model Ford cars which they unloaded Saturday afternoon Allie White got a new Tudor Sedan, Harl Gimer a roadster, Bert Mathews a coupe and John Griffen a Fordor Sedan. The new Fords are fine looking jobs. The Garner Auto Company have now delivered quite a number of cars. Prior to this time they drove them through from Des Moines

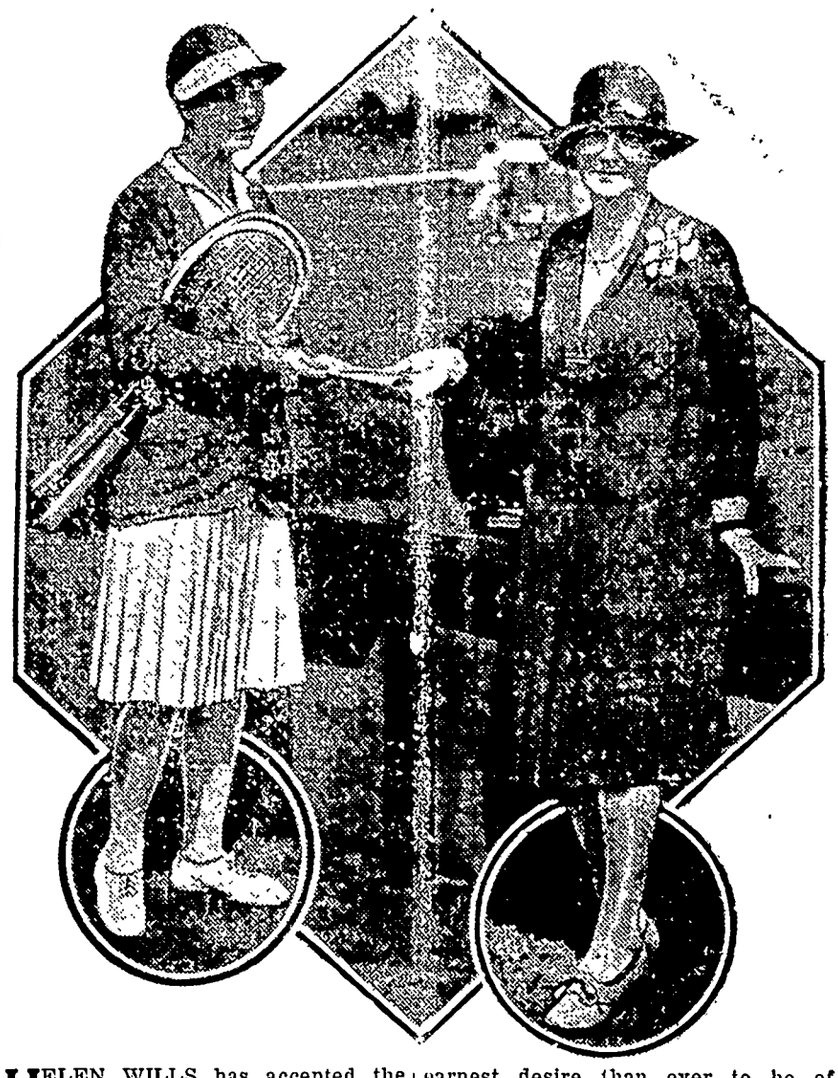
J E Stille and family have rented the George Gruetzmacher residence, now occupied by Charles Busch and family. The Stille family reside in the house west of the Parish House They will move about October 1st The Busch family will move to Mason City, where Mr Busch is at the present time employed at the Decker packing plant. Charles, Jr. will remain in Klemme and will stay with his grandmother, Mrs. Ernest Schuldt and will finish school here, his senior year in Klemme High School.

During the storm last Thursday night at about 10:30 o'clock a bolt of lightning struck the home of Mrs G W. Kluckhohn The lightning struck the roof and tore a small hole, splintering a few rafters, but causing no other damage

The storm of Thursday night and the high winds Friday morning whipped Clear Lake into a seething caldron The waves were so high that they dashed clear across the street on the north shore. The lake shore was badly washed and the street car line along the lake was damaged some by the water washing under the roadbed.

C A Larsen and family, E F. Jacobs and family and Mr and Mrs Walter Lauden were entertained at the John C Larson home Sunday for dinner.

Youth of America Backs Hoover, Says Helen Wills, Tennis Star



HELEN WILLS has accepted the appointment as Chairman of the Sports Division of the Women's National Committee for Hoover from Mrs. F. Louis Slade, National Chairman of the organization,

"Am I voting for Hoover?" she said. "Yes. And why- For the same reason that countless other young people throughout the country are voting for him. It is because they realize that Mr. Hoover possesses just those qualities that will make him a great president," said Miss Wills.

"He said in his speech of acceptance that he wishes to carry the spirit of the youth of the nation into the government. 'Youth,' he said, 'is today pulling at the traces as never before, and is willing to pull a full load. Youth's eagerness contains a more earnest desire than ever to be of service.'

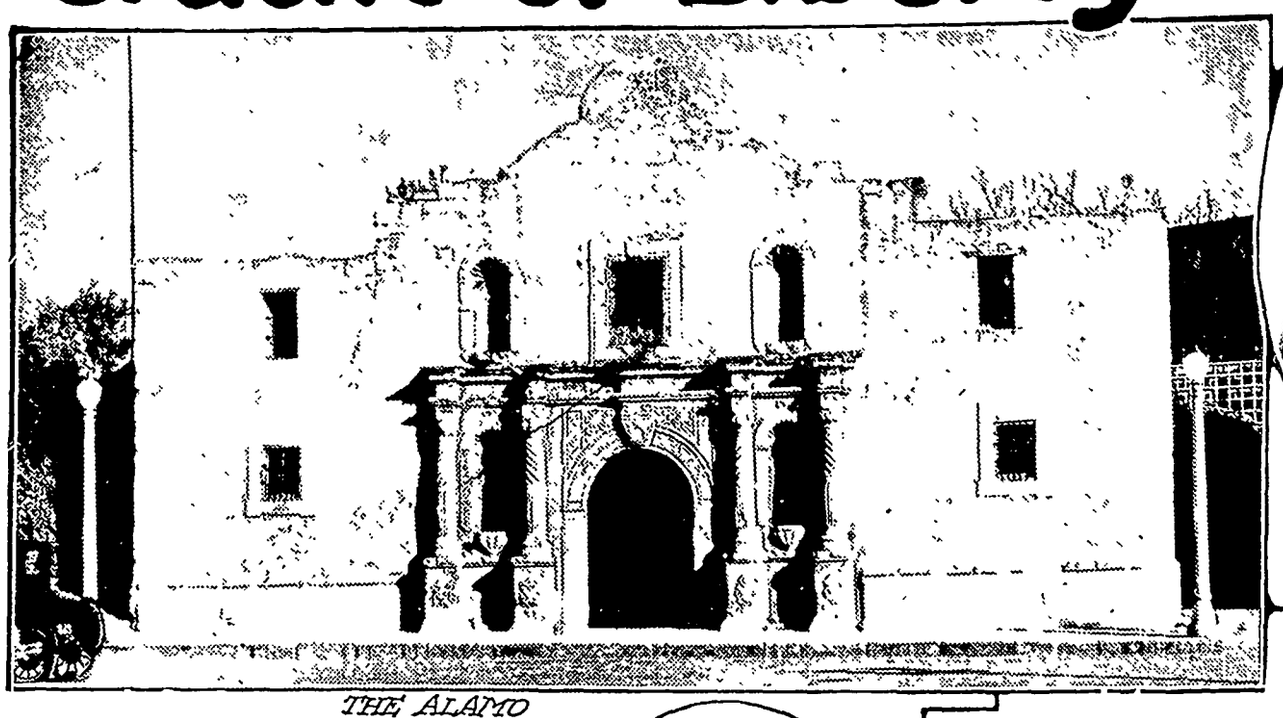
"All youth can admire Herbert Hoover because of his sincerity, intelligence and great industry.

"His achievements, in the past, have been marked with success because of his ability for organization and his wonderful powers of perseverance. His life is a story to fire the imagination and admiration of every young person in the country.

"He spoke of 'Youth's eagerness for service.' He was guided in his own youth by this idea. He has proved since, at home and abroad, that he is a great man.

"May Youth everywhere, by voting for Hoover, show that its ideals are of the highest and that it has the earnest desire 'to be of service.'"

The Legion Meets in a "Cradle of Liberty"

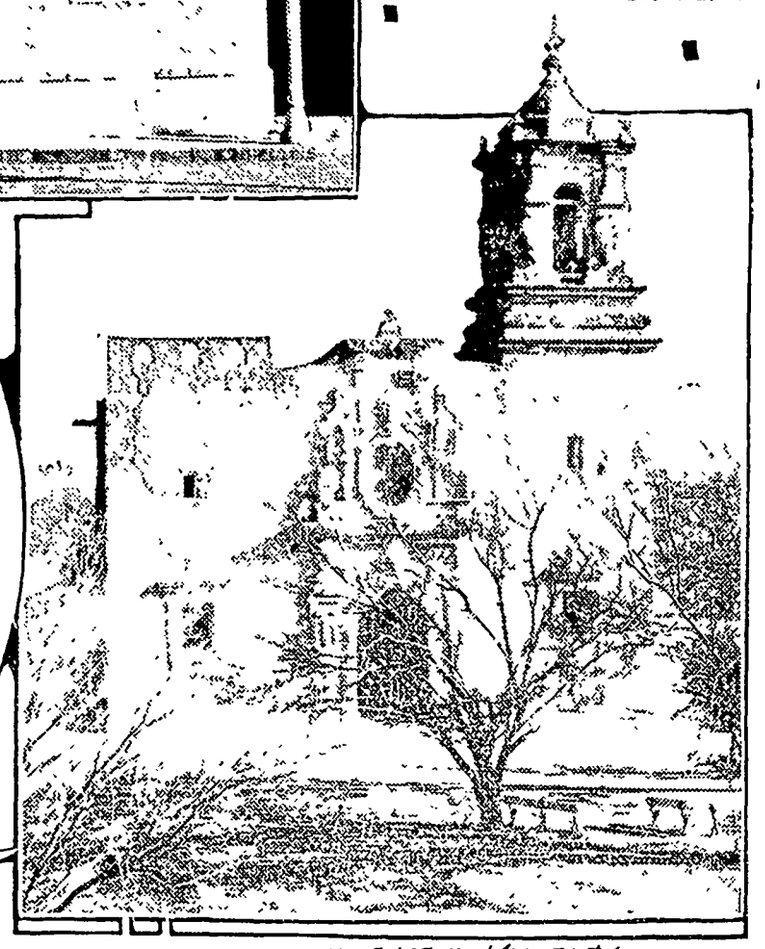


THE ALAMO

DAVID CROCKETT

BEN MILAM

JAMES BOWIE



MISSION SAN JOSE

By ELMO SCOTT WATSON

IT IS doubtful if the American Legion could have done a more appropriate thing than it did when it selected San Antonio, Texas, for the scene of its annual convention. For the tenth anniversary of their successful fight for human liberty will find them assembled in the city of the Alamo, the "cradle of Texas liberty" and the shrine of all Americans who cherish the memory of such valiant fighters in the defense of their country as were those heroes of the Lone Star state.

More than that, the gathering of the Legion in San Antonio on October 8 to 12 will be a "home-coming" for many of its members. More than 200,000 men were trained for World war service at the military camps in or near San Antonio—Fort Sam Houston, Camp Travis, Camp Stanley, Camp Bullis, Camp Normoyle, the San Antonion arsenal, the officers' training camp at Leon Springs and at Kelly Fields No. 1, 2 and 3—and some of them proved on the battlefields of France that "Alamo stuff" was more than just a tradition.

Inspiring as is the story of the Alamo, it is not the only interesting incident in the romantic history of San Antonio. That history goes back exactly four centuries. Although the city itself dates from 1718, it was as long ago as 1528 that there were set in motion the chain of events which led to the establishment of a white settlement there. A shipwreck brought the first white men to the soil of Texas. A Spanish explorer, Cabeza de Vaca, and his companions were stranded on its shores in that year. They lived among the Indians for some time and, although most of the company died during this time, De Vaca managed to make his way eventually to the Spanish settlements in Mexico.

Shipwreck again played a part in that history when La Salle, the dauntless French explorer, in his search for the mouth of the Mississippi was driven far from his course by storms and finally landed at Lavaca bay in 1685. There he founded Fort St. Louis, left a part of his men to found a colony and started out in his search which ended when he was killed by one of his own men. But the founding of this colony stirred the Spanish to an effort to colonize the great Southwestern empire which lay as a middle ground of contention between the Spanish to the south and west Mexico and Central America and the French and English in what is now the United States to the east and north.

In their effort to hem in the French in Louisiana, the Spaniards established a fort and a mission on the Neches river and in the struggle with the French which followed they started a line of missions across Texas in 1716. The previous year a French party on its way to Mexico City to trade with the Spaniards had noticed the favorable site of the present city of San Antonio and laid their plans to plant a colony there. But Spain anticipated France and in 1718 a party of Spanish soldiers, missionaries and mechanics arrived there, established the Mission Alamo and built a village. Later four other missions were established near by and these five ancient buildings are landmarks which will speak most eloquently of San Antonio's historic past to the visiting Legionnaires.

Nearest to the city and best preserved is Mission Concepcion, which was first established not far from the present site of Houston and removed to the vicinity of San Antonio in 1729. It is built in the form of a cross with its twin towers crowned by a Moorish dome which today, as for the past 200 years, echoes back the liturgy of the church and it is distinguished for the blurred remains of the brilliantly beautiful frescoes which once adorned it. Plainer and more simple in its construction than Concepcion is Mission San Juan de Capistrano which is still used as a chapel by the people of the little village near at hand who are said to bear in their faces and characteristics more traces of their Indian ancestors than are found elsewhere in Texas today. Close to this mission is the old aqueduct built by the Indians under the direction of the friars. Unweakened by the ravages of 200 years the stones of its low massive arches still supports one of the first irrigation systems of its kind in the United States and still carries its waters over Piedra creek to the homes and ranches beyond. A road from San Juan leads to Mission San Francisco de Espada, noted for the three bells in its tower which still summon the faithful to worship.

But the gem of the missions is San Jose, called by some architects "the most beautiful of all the world's missions," famous for its wonderfully carved facade and the rose window with its hand-wrought iron grill. According to legend, these carvings were made by a sculptor named Huicar, who fled from Spain to the wilds of Texas to seek forgetfulness of a sweetheart who had proved unfaithful.

Around these missions centered the life of San Antonio, the ancient, with the friars guiding their Indian charges in ways of peace and teaching them the white man's ways of tilling the soil and caring for their herds and flocks. That life was comparatively untouched by outside forces, even after the turning point in the history of that region came in 1803, when Thomas Jefferson made his famous Louisiana Purchase from Napoleon.

The only change that came about which affected San Antonio directly, however, was when Mexico won her independence from Spain and Mexican troops occupied the city as a strategic point to be held in the struggle between the Mexicans and the Americans which was already foreshadowed. That struggle was precipitated in 1835 when the Americans who had settled in Texas rose in rebellion against the maladministration of the Mexican rulers. It began with a skirmish at Gonzales and a battle at Concepcion in October of that year.

On December 10, after a siege and an assault which continued for six days, the city of San Antonio was captured and every Mexican soldier was expelled from the territory. It was during this assault that a Texas hero was made. When the army of Texans appeared before San Antonio, there was some discussion as to whether or not it would be prudent to attempt to storm the city. Finally it was decided that the assault should be made and a call was issued for volunteers to lead the attack. At this juncture, so the story goes, Benjamin R. Milam, a daring and picturesque figure, appeared among the Texans and shouted, "Who will go with old Ben Milam into San Antonio?" There was a roaring response and a rush which established the Texans in the outer parts of the city. Governor Cos, the Mexican ruler, at that time occupied the Old Veramendi palace (the restoration of which is now being planned by the city of San Antonio) and in the yard of this palace Milam was shot down as he was leading his men to the attack.

With these events as preliminaries, the stage was rapidly being set for the most glorious incident in San Antonio's history. After occupying San Antonio, the Texans fortified the buildings of the Mission Alamo as strongly as possible and waited the attack which they knew Santa Anna, the dictator of Mexico, was preparing to launch against them. The commander of the forces in this improvised fort was Lieut. Col. William Barrett Travis, a young lawyer from North Carolina. Associated with him was Col. James Bowie of Georgia, famous as the originator of the Bowie knife of sinister frontier fame, and Col. David Crockett, the famous bear hunter of Tennessee. The force under these leaders consisted of only 140 officers and men, against whom Santa Anna was soon to hurl the power of more than 5,000 Mexican regulars.

On February 23, 1836, Santa Anna appeared before the fort and demanded its surrender, a demand which Travis met by a shot from his battery and the displaying of his flag. Santa Anna immediately displayed a red banner, signifying that no quarter would be given, and began erecting batteries. Although Travis and his men might even then have escaped, he had no thought of doing such a thing. Instead he sent out messengers to his fellow citizens of Texas appealing for aid and declaring that he would never surrender or retreat.

The story of what happened thereafter is too familiar to need detailed retelling here. For all Americans now know how Col. James Butler Bonham, a young South Carolinian, volunteered to break through the Mexican lines and ride for reinforcements, how he reached Colonel Fannin at Goliad 200 miles away and how, when Fannin's relief force of 300 men, through a series of misfortune, was unable to continue, Bonham rode on alone, determined to rejoin Travis, although he knew that he was riding to his death. When he finally made his way into the Alamo again he found that Capt J. W. Smith and a little band of 32 heroes had cut their way through Santa Anna's hosts to die with Travis, Bowie, Crockett and the others.

The story of their death has often been told—an 11-day siege and then a final assault on March 6 which carries the walls of the fort and surrounds the gallant little band with a ring of fire and steel. Travis and Bonham are killed while serving the guns. Bowie, lying on a sickbed leaves a trail of dead Mexicans from the door of his room to the side of his bed before they do him to death and one of them lies sprawled across the Texan's body with that awful American knife buried deep in his heart! Crockett stands at bay in the churchyard, swinging an iron flail of death. It is his famous rifle "Old Betsy" which has fired its last shot. "The Mexicans are piled before him in heaps, but numbers tell; they swarm about him, they leap upon him like hounds upon a great stag, they pull him down, bury their bayonets in his great heart, spurn him, trample upon him, spit upon him—so he makes a fine end!" And thus they all died—ALL, for the monument at Austin, the state capital, tells their story in this line "Thermopylae has its messenger of defeat, the Alamo had none."

A little more than a month later an army of Texans, led by grim old Sam Houston, swept the field of San Jacinto with the cry of "Remember the Alamo!" and the independence of Texas was won. And that is why San Antonio is famous as the city of the Alamo, the "cradle of Texas liberty." Could there be a better place for a group of men who have fought in defense of liberty to meet and commune among themselves as to how best the liberties of their country may be preserved?

Alamo Stuff

["Alamo stuff" was the comment of American soldiers on the heroic resistance of seven of their number who were cut off at a listening post in a German raid, and who fought to the death.]

Out at the listening post at night,
Under the rocket's glow;
The shells are screaming in deadly flight—
They've curtained us here, we know;
They're charging fast over No Man's Land,
And we're in for a time that's rough,
But remember that little Texas band—
We must show 'em the Alamo stuff.

So it's shoot at the shadows, nor watch men fall;
They must pay for each Yank they get;
We'll make it a dashed expensive call
For these first real Huns we've met;
So keep the lead going, then club your gun
And hand out the farewell cuff;
The Texas spirit is called on, son—
Now show 'em the Alamo stuff.

Out at the listening post at morn,
Where brave men chose to die;
Here, 'neath the flash of shells, was born,
The new world's battle cry;
Born of the West—our own frontier—
Where men ne'er cried "enough;"
They died, but Teuton hosts shall fear
That war-call: "Alamo stuff!"

—Arthur Chapman.

Orchard Information

SUMMER PRUNING IS SATISFACTORY

Little difference has been noted between winter-pruned and summer-pruned apple trees on the grounds of the New York state agricultural experiment station at Geneva where a comparison of winter and summer pruning has been in progress for several years. The station horticulturists advocate pruning apple trees in winter, however, when the operation can be more carefully and easily performed.

At this season of the year there is no foliage to prevent the orchardist from seeing at a glance just which branches should be removed. Moreover, as soon as the trees commence to bear it is always difficult to take out wood which should be eliminated because of the crop of fruit.

Baldwin, Boiken, Esopus, Hubbardston, McIntosh, Spy, and Greening have been pruned both in the summer and in the winter on the station grounds. There are no differences to be noted in the size or shape of the trees, it is said, all being equally good, stocky, stout trees with large heads and typical of their respective varieties. The general shape and size of the tops of both summer and winter-pruned trees is the same, and pruning at different periods in the year seems not to have affected the growth, shape, or character of the trees in any respect.

Either practice of pruning will prove satisfactory while the trees are young, but for sake of convenience, fruit growers may well adhere to the usual plan of winter-pruning when the framework of the tree is entirely visible and when other farm operations are less pressing.

Quite Important Point in Care of New Plants

The most important point in the care of the plants upon arrival from the nursery is to keep the roots from drying out. They should be kept moist at all times, by all means. The nursery man will pack the order sufficiently well to reach your station in good shape. After that it is up to you. If you live but 100 miles from the nursery they will be packed for a 100-mile journey and not a 1,000-mile trip. Nursery stock should be called for immediately upon its arrival. The shipment should be opened when it is received, and the roots of the plants and the packing well wet down. If planting is to be done immediately, nothing further need be done, unless the roots appear to be considerably dried out, due perhaps to delayed shipment. In that case the roots should be soaked in water for several hours until they look fresh and plump again.

If planting is to be delayed, due to bad weather or lack of time, for several days, the plants should be heeled in until the time comes. In heeling in trees, vines and bushes, a trench is dug sufficiently wide and deep enough to receive the roots of the plants. This trench should be located on a well-drained spot where the soil is deep and mellow. The bundles of trees or plants are scattered along the trench in a slanting position with their roots in the trench. The roots are next covered with soil, taking care to work it well into all spaces between them. Nursery stock may be kept safe this way until planting time.

Cane Blight Is Serious Disease of the Brambles

Cane blight, one of the fungous diseases, is quite widely distributed throughout the bramble fruit sections and attacks both black and red raspberries, preferring somewhat the blackcap. The purple cane appears to be fairly resistant to this fungus. Cane blight is more serious when we have a warm, wet summer, followed the next year by a wet spring, with a dry period during the ripening season. The fungus winters over on both old and new canes, and it enters the bark through a wound made either by mechanical injury or by insects. The disease oftentimes starts at the surface of the pruning wound and works downward, killing branches as it advances. The canes first begin to wilt and die. The infected part of the cane is somewhat lighter in color, and oftentimes on the surface of the lesions small black dots may be observed, surrounded by smoke-colored patches. These are the spores of the fungus and are carried to other healthy plants by means of rain, mist or insects. So far as known, the fungus gains entrance only through wounds on the canes; wounds are more or less numerous and there is ample chance for infection.

Planting Grapes

In planting grapes the holes are best dug with a spade, especially with a small planting. In a large planting a plow may be used. The roots of the grape plants are trimmed off when injured or broken as in the case of the apple. The roots are spread evenly around the hole and the soil firmed thoroughly about them. Grapes are pruned back to two buds at planting time. The planting distances for grapes are eight feet in the row and rows ten feet apart.

Are You Ready

When your Children Cry for It

Baby has little upsets at times, your care cannot prevent them. But you can be prepared. Then you can do what any experienced nurse would do—what most physicians would tell you to do—give a few drops of plain Castoria. No sooner done than Baby is soothed; relief is just a matter of moments. And you have eased your child without fear of a single doubtful drug; Castoria is a vegetable. So it's safe to use as often as an infant has any little pain you cannot pat away. And it's always ready for the crueler pangs of colic, constipation or diarrhea; effective, too, for older children. *Twenty-five million bottles were bought last year.*

LIVE STOCK

REDUCE LOSSES OF LIVE STOCK

(Prepared by the United States Department of Agriculture.)

Conservative grazing, which assures an abundant supply of nutritious range forage, is an important factor in reducing losses of live stock from poisonous plants, says the Forest Service, United States Department of Agriculture.

At a recent meeting of the Intermountain Livestock Sanitary association, Prof. C. E. Fleming, of the University of Nevada, pointed out that a great many of the death losses from eating poisonous plants were the result of overgrazing and depletion of the better forage plants, which forced the live stock to eat plants of inferior value—including those that are poisonous—in sufficient quantity to prove fatal. Doctor Murray, of Salt Lake City, also stated that in his opinion many losses on the winter range were due to malnutrition as a result of live stock having to subsist mainly on inferior range plants and having an inadequate forage supply.

In the drought region of southern Arizona it is extremely important, the Forest Service has found, to graze the range conservatively, since short rainfall may result in the production of a feed supply materially smaller than usual. It was found that by utilizing approximately 80 per cent of the growth of the important palatable plants in the average year and by reserving a part of the grama range, on which the vegetation cures well on the stalk and is excellent winter feed, losses could be reduced from the average for that region of about 10 per cent to about 2 to 3 per cent of the animals grazed. Not only is there a direct saving to the livestock producer from fewer death losses, but the better condition of animals results in a greater production of young and better development with a more satisfactory price. Thus profits have been made from cattle during the recent trying years where conservative grazing has been practiced, although net losses were shown by those outfits in the region which utilized their range forage too closely.

Proper to Wean Lambs Before Late in Fall

It is advisable to wean the lambs at the age of four and a half months rather than to let them run with the ewes till late in the fall. They can be given better care and feed when separated and the ewe will also do better if she has a rest of two or three months before being bred again. Furthermore, there is danger of the buck lambs serving the ewes after they are four or five months old.

The method of weaning is simple: merely take the lambs away and do not let them see the ewes for two or three days. Keep a close watch on the ewes as it may be necessary to milk some of them a time or two. Feed them oat straw or timothy hay but no grain or succulent food.

Feed twice a day about one-half pound per day per lamb a mixture of two parts oats to one part wheat bran, and keep a good supply of alfalfa or clover hay before them at all times. In addition to this they should have the run of a good pasture. Exercise and sunshine are very important and essential to proper thrift. The buck lambs must be separated from the ewe lambs at time of weaning.

Treat All Bull Calves While They Are Young

"Castrate the bull calves before they are three weeks old if possible and preferably at from three days to a week after birth," suggests Rex Beresford of Iowa State college. The longer the job is put off the harder it is, on both the calf and the operator.

With most calves, early castration avoids flies and heat, and there is less danger of infection in the cooler weather. The chief advantage, however, is in the greater ease in doing the job and the lessened danger and shock to the calf.

Dehorning, where necessary or desirable, may best be done as soon as the "buttons" are well formed, usually at around two to six weeks of age. At this stage they may be destroyed by the careful use of a stick of caustic potash. Clip the hair from the point of the knob or "button," moisten this spot and rub with the caustic until the skin shows raw. If a thorough job is done, no harm will develop and there will be practically no inconvenience to the calf. The calf should not be allowed to get wet immediately after being treated.

Clean After Cholera

Where cholera has occurred in the herd all quarters which the hogs occupied should be disinfected thoroughly. Liberal use of lime in the small lots will help the natural disinfectant agencies. All litter, rubbish, and refuse should be burned. Buildings should be sprayed with some stock dip. Mud wallows should be drained and filled with fresh earth. The soil under buildings should be sprinkled with quicklime or sprayed with disinfectant.

PROPER SERVICE MEANS LOW COST

When the Car Does Not Function Properly It Is Due to Neglect.

When an automobile is harder to start, loses pep on hills, and does not perform as well as it used to the fault is usually due to neglect of the motorist in not having his car inspected until after it has reached such a condition that its loss of efficiency is conspicuous by its poor performance. An automobile properly serviced, engineers agree, should give as good performance after 25,000 miles of driving as it did after 10,000 miles.

Minor Servicing Items.

A few of the principal minor servicing items that should be looked after regularly are recommended by engineering authorities as follows:

Adjust ignition timing.
Clean and adjust contact points.
Adjust hird brush.
Tighten electrical connection
Inspect spark plugs, replacing if necessary
Clean battery terminals.
Inspect lighting and ignition switches and relays.
Clean motor and generator commutators.
Clean distributor cap.
Inspect and replace hose connections.
Adjust or replace fan belt.
Clean all fuel lines, blow out fuel lines and screens.
Adjust carburetor.
Change oil in crankcase.
Check oil filter, renewing if necessary.

The motorist will find that it pays to look after these details from the standpoint of low maintenance cost and satisfactory performance.

London Night Workers Use Bus as Sleeper

An all-night "sleeper" bus is run on the Liverpool street to Cricklewood route, but the owners don't know it is used for that purpose.

The bus carries a number of night workers to their homes and Conductor Bob Hurford knows them as well as they know him. The passengers promptly go to sleep on paying their fares, and Conductor Bob does the rest. At the regular stopping place Bob halts the bus, wakes up the passenger and helps him off.

Other passengers are picked up on the way, but Bob is most interested in his "regulars" and never takes them past their stopping place.

Lubricate Front Wheels to Save the Bearings

Repair shops and dealer service establishments report that they still are making a profit on the motorist's indifference to the lubrication of front-wheel bearings. Because these units rarely require the addition of fresh grease, it seems that many car owners assume they never need any. This attitude is costly.

While many replacement parts are found to cost less than anticipated, bearings do not come under this heading. They are reasonably priced but are not low-priced, and the failure to lubricate them will prove most unwise.

Pushing Dead Car Ahead Likely to Harm Bumper

Pushing another car with the bumper after its battery has died or something else prevents it from starting, is getting to be a common practice now that nearly all cars are bumper equipped. There are certain ways of doing it that are to be preferred to others in the interest of protecting the bumpers.

If the car ahead is bumped to get it under way, the chances are that the nickled surface will be damaged. The better way is to proceed calmly and have the bumpers together before a start is made.

Driver in Rear Seat Is Not Always Guilty One

A Connecticut judge takes it upon himself officially to rebuke the rear-seat driver.

That's all to our liking. But in the same breath he might have directed his remarks to the other extreme and lashed the man at the wheel who seems to take less interest in the way the car is running than the passenger in back.

There are far too many such drivers. They carry on heated conversations with their hands, which should be gripping the steering wheel. They turn their heads when they should have their eyes forward. Their minds are on the conversation in the car rather than the traffic around them.

Of course, a motorist needn't ostracise himself from the party altogether. But it must be remembered that while the automobile is moving the main consideration is not the conversation in the car but the traffic outside.

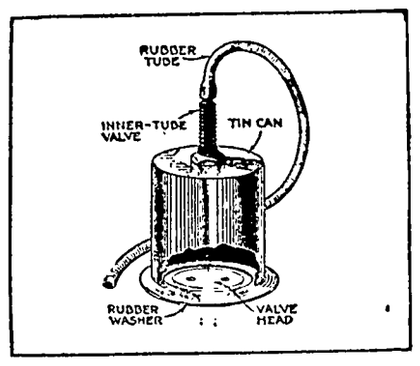
It is quite an achievement to keep eyes and mind on traffic while an interesting argument is going on beside you. To attain this and cultivate it as a habit should be the primary purpose of every motorist. It assures safety.

Anyway, it's the wise man who listens.

Simple Tin Can Tester Is of Big Convenience

It is not necessary to do very much grinding to make an auto valve gas-tight unless the valve is badly warped or pitted. In fact, too much grinding makes the seat too wide. It is, however, difficult to tell when the valve is actually gas-tight. The illustration shows a simple way to make a valve tester that will tell at once if the valve is gas-tight.

Through the bottom of a tin can drill a hole large enough to let the stem of a tire valve pass through. Use washers cut from an old inner tube to make the valve stem an air-tight fit and



Place This Device Over the Valve and if You Can Blow Into It Continuously the Valve Tested Is Not Gas-Tight.

also cut a large rubber washer that can be placed under the edge of the can as shown in the illustration. A short section of rubber tubing slipped over the end of the valve stem completes the equipment. To test a valve, wipe both the face and seat so that they will be free from oil or grinding paste, press the can tightly over the valve with the rubber washer under it, and blow in the tube. If you can continue blowing it proves that air is leaking past the valve and further grinding is needed. Make sure the tester is air-tight by testing it on a flat metal surface. The piston top will serve as a test surface. —Popular Science Monthly.

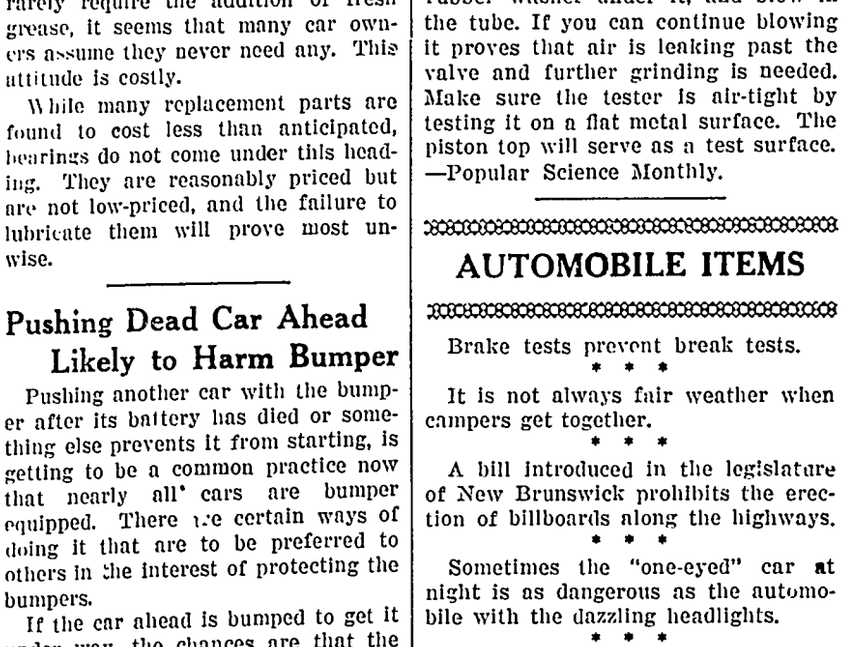
There's some question, of course, as to whether the fellow who tries to beat a train to a crossing is worth saving.

CZECHOSLOVAKIAN WOMAN IS CAR PILOT



Among those who participated in the famous Grand Prize de Lasarte San Sebastian (Spain) automobile race, Miss Jenki, representing Czechoslovakia, is the only woman entry. The veteran driver Dive is giving Miss Jenki some pointers.

DAIRY FACTS

HEAVY MILKERS NEED SOME GRAIN

Cows that give a large flow of milk should receive some grain, no matter how good the pasture may be. For such cows grain is necessary if the milk flow is to be maintained and the body flesh is to be kept in correct condition. On poor pastures the feeding of grain is not a matter of choice; it is a necessity, if the cows are to do well.

It is impossible to make a grain mixture that will balance pasture grass throughout the entire season. In the early spring, pasture grass contains much more protein than it does later in the season. In hot weather droughts affect the growth of pasture grass, making the use of different grains necessary to properly balance the ration. Corn meal, wheat bran, oats, cottonseed meal, oil meal and gluten feeds are some of the best feeds for cows on pasture. From three to ten pounds of grain daily are the extreme limits usually followed for feeding grain to pastured milk cows, the increase being made gradually as pastures become scant. During very dry weather grass becomes low in succulence; and then is the time to call the summer silo into play. But not all farms are yet equipped with what in time will come to be regarded as a dairying necessity. Therefore the only alternative is to cut and feed some kind of green feed, such as corn. When silage is fed, see that the grain mixture is rich in protein, the ingredient which silage lacks. —Jack Baker in the Dairy Farmer.

Government Cows Make Records for Production

As a part of the experimental work in dairy-cattle breeding by the bureau of dairy industry, United States Department of Agriculture, production records are kept of all animals in the herds owned and managed by the bureau. These herds are located at Beltsville, Md.; Huntley, Mont.; Ardmore, S. D.; Woodward, Okla., and Iberia, La. Two of the major dairy breeds are represented, namely, Holstein and Jersey.

At least two records are made of each animal, one at an early age and one when mature. Since these projects were started in 1919, a total of 297 official yearly records of pure-bred cows have been completed. Of these, 190 were made by the 147 Holsteins with an average yearly production per cow of 15,277 pounds of milk and 523 pounds of butterfat at an average age of four years and one month. The 84 head of Jerseys had 107 records with a yearly average of 9,151 pounds of milk and 500 pounds of butter fat per cow at the average age of three years and eleven months.

Color Abnormality May Be Caused by Bacteria

Red milk is an occasional abnormality and may be caused by bacteria getting into sour milk or cream, sometimes by way of the air. A ruptured blood vessel in the udder of the cow will often result in blood getting into the milk in sufficient quantities to color it red.

Scalding of all equipment coming into contact with milk is a practical control measure in combating color abnormalities caused by the growth of bacteria.

With bacteria, the problems is to keep them out, a job that may or may not be easy. Pasteurization will in most cases, if done soon enough, eliminate the trouble from the milk, but will not stop the trouble from occuring again in the next milking. On the other hand, if the color is due to causes other than bacteria, feed, physical ailments of the cow, etc., it will be necessary to meet the problem from another angle.

Silage Is Economical as Dairy Cattle Feed

Dairymen who have had silage that could be used in feeding dairy cattle this fall have not only secured higher returns during the fall months, but are likely to secure better returns during the winter. When cows are allowed to slacken up in their production during the fall months, it is often impossible to get them to respond satisfactorily to better feeding during the winter months.

R. R. Gillingham, tester for the Cedar County Cow Testing association, reports that during the dry weather last fall there was an average drop of 4.5 pounds of butterfat per month per cow in herds which did not have silage, while the cows that were given silage showed very little reduction during the same period. Silage should be considered more than a winter feed.

Feed and Abundance

Cows cannot produce milk unless they have sufficient feed. The heavy producing cow cannot eat enough grass to supply her needs. She must have some additional dry feed. When the pastures get dry all the cows should be given some additional feed. Silage, alfalfa hay, or grain may be used or any combination of these. The fellow with the reputation of being a good feeder is usually an abundant feeder, and he is well repaid by the heavier milk flow obtained.

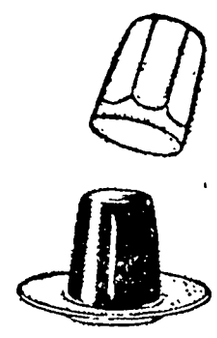
The modern way to make jelly, use PEXEL and get this



never this

JELLY failure is a thing of the past. Pexel is here. It's a 100% pure-fruit product that always makes jelly jell. Absolutely colorless, tasteless, odorless.

Pexel makes any jelly jell by the time it is cold. With it, jelly is ready for the glasses as soon as it comes to full boil. Thus Pexel saves fruit, sugar, flavor, time and fuel. Right here it repays, from one to three times, the 30c it costs.

Get Pexel at your grocer's. A recipe booklet with complete recipes, accurate tables in each package. 30c. The Pexel Company, Chicago, Ill.

For example—with Pexel

4½ cups strawberry juice and 8 cups sugar make 11 glasses jelly.

4½ cups raspberry juice and 8 cups sugar make 11 glasses jelly.

6 cups currant juice and 10 cups sugar make 14 glasses of jelly.

4½ cups grape juice and 7 cups sugar make 10 glasses jelly.

new

Got Rid of "Lodger"

After carrying a stone in his forehead for 25 years, Hans Nilsson, a laborer from Aggarp in the southern Swedish province of Scania, has been relieved of his trouble. When in his 'teens, Nilsson fell one day and received a severe cut in his forehead. After the wound had healed, a swelling remained the size of a marble. Recently the old scar began to bleed and out came a small finely polished stone.

Lesson for Misers in Chinese Legend

An aged Chinese, noted far and wide among his neighbors for his penuriousness, was one day discovered running frantically up and down in front of his small but, beating his breast and crying out in doleful lamentations.

"Woe is me!" he cried, "woe is me! Some one last night stole away the treasure which I had buried in my garden, and left a stone in its place."

"And why do you weep?" asked a neighbor. "You never used your treasure. Bring yourself to believe that the stone is still your treasure. and you will be as well off as you ever were."

The neighbor was right. A buried treasure is of no more value to the world than a buried stone. One of the pathetic truths of life is that so many fail to realize this fact. Had the old miser been generous enough to have shared his treasure with a needy world, he could at least have had the comfort of knowing that many would have joined him in bewailing his loss. But he had lost that which was of value to no one. Not even he himself had made use of it.

Long Sentence Made Matter of Complaint

What is said to be one of the longest single sentences in English on record—a statement of 593 words, covering 56 typewritten lines—was the subject of complaint by counsel in the Court of Appeal, says the London correspondent of the New York Herald Tribune. Analysis of some of the phrases in the average income tax return form is difficult enough, but in the protested instance of circumlocution and ambiguity it was set forth that a Chinese lawyer could not have supplied more redundant or round about language to convey his meaning.

The sentence, stretched word to word in one line, would reach approximately 35 feet, and to utter it would be a breathing exercise almost equal to climbing the whispering gallery in old St. Paul's. The sentence, it was stated to Lord Justices Atkin and Scrutton, appears in the finance act of 1927, and purports to explain "relief in respect of losses in business set up after April 6, 1923."

A Veiled Criticism

E. Berry Wall, whose portrait by Tade Styka is a hit of the Paris salon maintains in maturity that good taste in dress which won him in his youth the title of "king of the dudes."

There is a story to the effect that Mr. Wall ran across a New York friend in a hotel the other day. The New Yorker wore vast Oxford bags of the new bois de rose tint, his coat was cinnamon brown with brass buttons. over his brown shoes white spats were drawn, and his shirt collar, tie and handkerchief were in various shades of pluk.

Mr. Wall shook the New Yorker by the hand and said in a low and sympathetic voice:

"Are you in mourning for some one, Bill?"—Pittsburgh Chronicle-Telegraph.

Old Sailing Vessel

Perhaps the best account that has come down to us in writing, from which a description of a boat in Roman times can be had, is the account of St. Paul's journey in a wheat ship to Rome.

During the storm on the way from Crete to Malta the sailors cast cargo overboard; they nearly lost the ship's boat trailing behind; they undergirded the ship with a cable; they let go their four anchors; the crew tried unsuccessfully to escape in the lifeboat and finally they cast off their anchors, set a foresail and ran the boat onto the beach.

The Price of Silence

The bill collector found that the family he was about to dun had skipped, taking the goods with them After some inquiry he managed to locate the van driver, but that worthy claimed to have no recollection of where he had taken them.

"Come now," said the collector, producing a $5 bill, "this ought to rouse your memory." "It ought to, sir," the van driver admitted, "but you see mine ain't no ordinary memory an' it'll take a deal of rousing. Why, it cost $10 to put it to sleep."—Boston Transcript.

Ham and Eggs

A Hoosier wife was serving the customary coffee and toast for brenkfast The husband, who had recently returned from a trip to the old homeplace in a neighboring state, was talking about the many changes that had occurred.

"I suppose you had so little in common with the folk back there it was dull," said the wife.

"Dull? Not by a long shot. We had a great time talking about the days of ham and eggs for breakfast," replied the vivacious husband.

Impressed

A negro arrested on a banditry charge came before Judge Rosalsky in general sessions in New York and was held in ball of $25,000. When statement was made from the bench to this effect attaches were surprised that the negro was undismayed. Rather there was a look of admiration in his eyes. As he was led toward the bridge of sighs and jail he remarked: "Dat ge'man sho' does talk in magnificent figures."—The New Yorker.

Four Dollar A Year MEN

The energy distributed as electrical service by the electric light and power companies of the United States is available at an average cost of $4 per man-power peer year.

These four-dollars-a-year men are the most efficient laborers the world has ever known. They are the only workers whose wage is less than beefeore the war.

No task is too grat and none too mean for them. Their capacity for beneficial service is unbounded. They are one reason why the workmn in America receive the highest wages in the world, produce the greatest output per man in the world, and enjoy the best living conditions in the world.

Look where you will—in the home, school, factory, street, office, fields, underground—you will find these laborers at work, cheaply and efficiently.

The electric light and power companies are concerned in giving efficient service quite as much as the public is in having it.

The United States has one billion four-dollars-a-year men, represented by the horse-power generated by electric light and power companies in a year. This is equivalent to ten billion man power, or five times the population of the earth.

NEWS REVIEW OF CURRENT EVENTS

Maine Election Notable for Size of G. O. P. Majorities; Smith Nails a Lie.

By EDWARD W. PICKARD

THOSE who still place faith in the old saying "As Maine goes, so goes the nation" are now free to place their bets on Hoover; for the Republican ticket won a sweeping victory in the state election last week. However, no one had doubted that the G. O. P. would elect its candidates, and the significant features were the size of their majorities and the total vote. The former was a surprise to even the most optimistic Republicans. William T. Gardiner defeated E. C. Moran, Jr., for the governorship by nearly 85,000 votes; and Senator Frederick Hale's majority over Herbert E. Holmes was approximately 80,000. The Republican majority was more than double what it was four years ago and four times what it was in 1926. The total vote was about 35,000 less than it was in the last Presidential year, but analysis shows that the loss was mostly sustained by the Democrats. The Republicans had made an especial effort to get out their vote and the Democrats were frankly apathetic. The Republicans elected all four of the state's congressmen.

Naturally, Republican National Chairman Work rejoiced in the Maine outcome and found in it presage for a Hoover victory, asserting that the campaign in the Pine Tree state was waged largely on national issues. On the other hand, Democratic Chairman Raskob saw no omen in the result, saying his party had made no especial effort there and no national issues were decided by the Maine election. He was "surprised the Republicans did not poll a larger vote."

The records show that since 1840, in 15 out of 22 Presidential election years, the result in the Maine state election has correctly foretold the outcome of the Presidential election.

TEXAS provided an exciting incident in the campaign when its state Democratic convention opened in Dallas. A motion that only those delegates loyal to Al Smith be seated started the rumpus. The anti-Smith crowd, led by former Governor Colquitt, promptly bolted, and as they retired from the hall there were innumerable fist fights. The regulars proceeded with their business, "cordially indorsing" the national platform and Smith and in the same set of resolutions calling upon "all officers of the government and all members of the party" to rally for the "destruction of the traffic in alcoholic liquors."

The bolters, about 300 in number, held a separate meeting and adopted resolutions characterizing the nomination of Smith as an unfortunate error. They left the direction of their future activities in the hands of an executive committee headed by Alvin S. Moody of Houston.

WHILE Senator Robinson, Democratic Vice Presidential candidate, was making a whirlwind speaking tour through the South, Governor Smith gave such time as he could spare from state duties to conferences with party leaders and to further refutation of charges made in the deplorable "whispering campaign." Informed that he was accused, in a letter, of being "disgustingly intoxicated" at the New York state fair at Syracuse, he issued a formal denial of the charge, which denial was backed up by the statements of men who were close to him all during the day of his visit to the fair. One of his defenders was one of the governor's political opponents, State Senator Fearon of Syracuse. Others included the newspaper correspondents who accompanied the governor. The letter was said to have been written by a woman of Syracuse to one in Parkersburg, W. Va. Republican Chairman Work has strongly repudiated the whispering campaign as an offense to common decency equally harmful to the candidate maligned and to his opponent. He says Hoover is also the object of scurrilous and false attacks. The Post Office department has taken steps to stop the sending of the vicious statements through the mails. In one instance a lot of post cards were confiscated.

Plans were completed for Governor Smith's tour of a fortnight, September 16-30, during which he speaks in six western cities.

HERBERT HOOVER had a long conference with President Coolidge immediately after the latter's return to Washington, and while there was no announcement of the part the President would take in the campaign, it was said he probably would make one or more addresses in New England. Mr. Hoover is now directing the organization work of his campaign. The radio part is already in operation. The candidate's first real campaign speech was ready for delivery at Newark, N. J., Monday.

National officers of the national Woman's party met in Washington and decided to support Hoover because, they stated, his position is in advance of that of other Presidential candidates. They said they opposed Smith "because he opposes equal rights for women in industry and has had a long record of opposition to equal industrial opportunity for women and has actively sponsored laws handicapping women in earning their livelihood."

WHEN Hoover, praising the Kellogg anti-war treaty, hailed it as one of the great achievements of the Republican administration, Secretary Kellogg showed signs of displeasure for above all things he does not want the pact dragged into partisan politics pending action on it by the senate. Said he: "I do not think the treaty for the renunciation of war should be made a party issue in either the campaign or the senate, and I cannot conceive that it will be." Reservations to the treaty, by the senate, will be vigorously opposed by both Mr. Kellogg and Senator Borah, chairman of the senate foreign relations committee. They believe there is nothing in the treaty that imperils the Monroe Doctrine or other vital interests of the United States.

Despite the fact that most of the nations of the world have accepted the Kellogg pact, Secretary of the Navy Wilbur believes the United States should go right ahead with its navy construction program. He said as much after conferences with naval officials in which both the Kellogg treaty and the mysterious Anglo-French agreement were discussed. Other officials said the Navy department would concentrate on senate approval of the sixteen-ship bill and later would try for the adoption of a large building program.

FORMAL negotiations looking toward complete evacuation of the Rhineland and final settlement of reparations were opened in Geneva by the representatives of Germany, Great Britain, France, Italy and Japan. The first discussions of Germany's plea were promising, although an earlier speech by Premier Briand, attacking Chancellor Mueller's statements of German fulfillment of her pledges, had created some doubt of ultimate agreement. London dispatches said Great Britain and France were in accord on these points:

First, perfect co-operation among the allies.

Second, implicit recognition of the fact that the occupation must continue unless the Germans give other guarantees for the payment of the reparations.

Third, a political guarantee by Germany that the plan for the union with Austria will not be pursued.

Fourth, the consent of Germany to the control of the demilitarized zone of the Rhineland for 25 years.

Fifth, the Germans to take the initiative by presenting concrete proposals.

GENERAL Primo de Rivera, premier of Spain, uncovered another plot against his dictatorship and caused the arrest of several hundred revolutionists who were hatching a coup d'etat. The dictator in a statement to the press said those taken into custody were politicians and others who "live and prosper by provoking disorders," and declared the condition of public order in Spain could not be better in all the country.

Another dictator has been offered a crown, but probably will decline it. This one is Marshal Pilsudsky, who was offered the crown of the "Polish empire" by 1,500 delegates of the monarchists of that country. He already has refused a like honor several times.

CHARLES EVANS HUGHES was elected a member of the permanent court of international justice by the League of Nations to succeed John Bassett Moore, resigned. Mr. Hughes accepted, saying he deemed it a privilege to serve on the court. Since the United States is not a member of the world court, Mr. Hughes does not officially represent this country on the tribunal.

GEN. JOHN J. PERSHING celebrated his sixty-eighth birthday last Thursday and Secretary of War Davis took the occasion to present to the famous soldier four foreign decorations conferred upon him since the World war. These were the Order of the White Lion, class 1, conferred by the President of Czechoslovakia; a medal commemorating the first centenary of the battle of Ayachucho, conferred by the President of Peru; knight commander's cross of the Order of Virtuti Militari, conferred by the President of Poland; and a Venezuelan "Bust of Liberator," two lapel buttons and an album of photographs conferred by the President of Venezuela.

JOHN COOLIDGE, son of the President and Mrs. Coolidge, has obtained a position as a clerk in the general offices of the New York, New Haven & Hartford railroad in New Haven, Conn., and last week began earning his own living. William Wood, secret service operative, will continue to act as bodyguard of the young man until March 4. Miss Florence Trumbull, daughter of the governor of Connecticut, returning from a motor trip through Europe, admitted to reporters that she was likely to become John Coolidge's bride sometime next winter though not before Christmas.

EARL ROWLAND of Kansas won first place in class A of the aerial derby across the continent from New York to Los Angeles. He drove a Cessna monoplane and was in the air 26 hours and 30 minutes. Most of the planes in all three classes made the transcontinental trip safely, and the finish was a great sight for the crowds gathered at the Los Angeles field for the air races and exhibition.

Of the nine planes that started in the nonstop race across the continent not one completed the trip except that piloted by Art Goebel, and that noted aviator had been forced to stop at Prescott, Ariz. The contest was therefore declared no race.

One of the aviators taking part in the local exhibition was Lieut. J. J. Williams of the army. He crashed early in the week and died of his injuries, whereupon Col. Charles Lindbergh reported at army headquarters there and asked to be assigned to take the place of his dead friend. Thereafter the "three musketeers" in little Boening fighters were led by Lindy in their maneuvers.

HIGHLY successful tests of the new submarine safety device called the "lung" were held off the coast of Maryland. Three navy divers went down 155 feet in a diving bell, and, equipped with the "lung," crawled out and made their way to the surface safely and with no discomfort. It was made known that several scores of these devices are being constructed and their final test, that of being used for actual escape from a flooded submarine in 225 feet of water, will be made next month by the same divers. The naval officers expressed a belief that last week's successful test will result in the equipping of all of the 78 submarines in the United States navy with "lungs" for each member of the crew to be placed in the escape compartments of the undersea craft.

PORTO RICO was struck by a tropical hurricane that caused damage of several millions of dollars, mainly in San Juan which bore the brunt of the storm. Tornadoes in Nebraska and South Dakota killed fourteen persons and ruined thousands of dollars worth of property.

POULTRY FACTS

POULTRY BREEDS AND HOW CLASSED

Chickens are divided into classes, breeds and varieties. Birds with the same general characteristics are placed in one class. Classes are then divided into breeds. Each breed of poultry is distinguished from other breeds by differences in type. Breeds are separated into varieties. The different varieties of the same breed are designated by differences in comb or color. All varieties of the same breed should have the same general type characteristics.

There are four general classes of chickens that are common and other classes less common.

The American class consists of birds that are of the general purpose type. They have yellow skin and legs, red ear lobes and legs free from feathers.

The breeds that make up this class are: Plymouth Rock, Wyandotte, Java, Dominique, Rhode Island Red, Rhode Island White, Buckeye, Jersey Black Giants and Chanticleer.

The Mediterranean class are smaller than the American class and are often known as the egg breeders. They are nervous in disposition, very active, compactly built, have white ear lobes and clean legs. The breeds that make up this class, are: Leghorn, Minorca, Spanish, Andalusian and Ancona.

Fowls that make up the Asiatic class are large and clumsy, have red ear lobes and feathers on their legs. They are often referred to as the meat breeds. Brahmas, Cochins and Langshans make up the breeds in this class.

The English class, while not as common as the other three already referred to, probably rank fourth in popularity. These birds are medium in size, have red ear lobes, clean legs that are pink in the buff and white varieties and black in the black varieties. The breeds making up this class are Orpingtons, Dorkings, Red Caps, Sussex and Cornish.

Selling Squab Broilers During Winter Months

Quite a number of the broiler plants make a specialty of squab broilers, which sell best during January and February. They are grown in about eight to ten weeks, the hatches coming out in November and December, and are successfully raised without any outdoor exercise.

The greatest demand for squab broilers is in spring, when game birds are scarce, and a small bird is in demand in restaurants. They should weigh from three-fourths to one pound, and must be plump. Many who ship squab broilers make a great mistake in sending bony, poor ones. Good returns cannot be expected from poor, scraggy birds, half dressed.

The broiler for the winter market must be attractive looking to command a ready sale at good prices. Plump chickens, neatly dressed, free from pin feathers, with unsoiled skin and with perfectly clean legs, will find a ready sale, while poor stuff goes begging. A fat broiler is quite a rarity. The best that can be done, generally, is to have them plump, for the natural tendency of the chick is to use all nutriment for growth and development. The main point is to grow them rapidly.

To grow good broilers there should be dry quarters provided, thoroughly cooked food, comfortable heat (not too high nor too low), regularity in feeding, cleanliness and good light. The chicks must be induced to take plenty of exercise.

Moving Pullet Flock

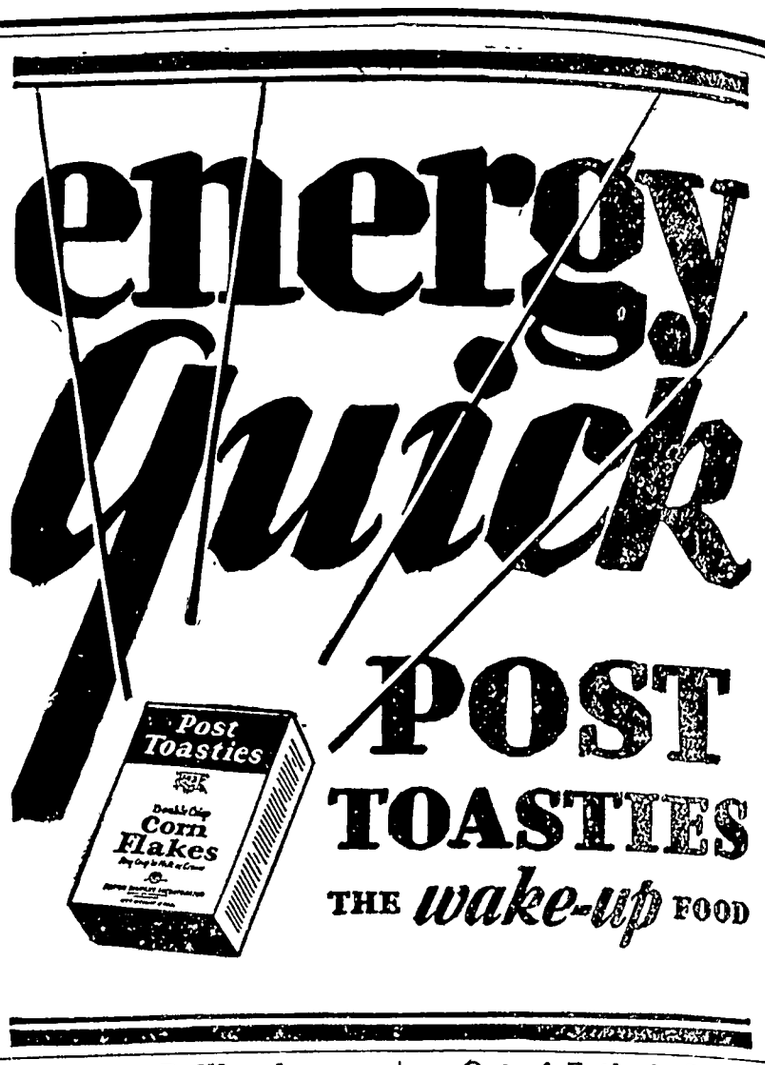
When there are many pullets to be moved it often pays to leave them in the crates over night and move the crates to the laying houses in the morning. Then the poultryman has a better light and can do a better job of culling and treating the birds for lice. As each pullet is taken from the crate, it can be inspected for weight, general health and vigor, and prospective laying ability. All birds that are poor prospects for winter profits can be isolated for future observation.

Improve Egg Quality

Much can be done to improve the quality of eggs produced by careful selection of eggs used for hatching purposes. All undersized, misshapen, off-color, and defective shelled eggs should be eliminated from the incubator. By following such a practice for a few years the quality of eggs laid by a flock should be materially improved. Egg dealers are willing now to pay a premium for high quality eggs. It is well to assort them according to size and color.

Feed to Help Pullets

If pullets must search for their feed on free range they will probably find sufficient food for body maintenance, but growth will be slow and egg production will be impossible until late winter or early spring. Liberal feeding of grain and mash containing 20 per cent of high-grade tankage, or in place of tankage all the milk the pullets can drink, will not only reduce the amount of exercise but will hasten growth and stimulate fall egg production.



Fight Over Bullhead Caused Duck's Death

A large duck was recently found at Portage Inlet, British Columbia, choked to death by a seagull in the act of swallowing a bullhead, according to a correspondent of Field and Stream. The strange occurrence, he says, came about in this manner: The duck had just dived into the water, emerging with a bullhead protruding from its bill. In the meantime a band of seagulls had been circling around in the vicinity of the ducks. One of the gulls immediately detached itself from the others and started to chase the duck. The sawbill, objecting to losing its dinner, pulled the opposite way. The result was that the spikes on the fish's pectoral fins jabbed the duck's neck. It was not long before the unfortunate duck was lying dead on the water with the fish still sticking out of its mouth.

Parrots Society Pets

Parrots have taken Mayfair, London. Everybody who counts in the fashionable district owns one of the birds. When Mayfair's pollies are put outside for their morning constitutional the air is filled with the chatter and gossip of the knowing birds of society. The possibility of a parrot talking too much has not yet become one of society's problems. The birds squawk and scream as much as they like. The duchess of York's parrot was given her during her visit to Australia. It converses with a green parrot a few doors away, owned by the duke of Wellington, who also keeps a room full of Italian singing lovebirds.

Hardy, the Conservative

A publisher was talking about the late Thomas Hardy.

"Hardy was a novelist of the old-fashioned school," he said. "He refused to have a press agent. I visited him once in his Wessex home and urged a press agent on him, but he shook his fine old head.

"'No,' he said, 'no. Eggs sell according to their excellence and not according to the amount of cackling that got done when they were laid.'

"And, by jingo, he was right, too, in his way," the publisher ended. "Hardy died worth half a million."

Buries Two in Coffin

George Hannin, an undertaker of Glasgow, Scotland, has pleaded guilty to having at different times buried two bodies in one coffin in order to cheat the relatives of the price of one box. Most of the bodies were those of children and it was revealed that he would hold one body in his cellar until another was to be buried, altering the date of the death certificates. When he hid the bodies of twins while waiting for a third possible child authorities became suspicious.

Leather is older than the art of writing. Explorers have always found leather wherever they have penetrated.

veniently placed clothes closet. To the right, through an arched opening, is the large living room with a fireplace at the far end. Another arch admits one to the dining room at the rear. This dining room is of surprisingly large dimensions, 11½ by 11 feet.

The dining room connects with the kitchen, a compact and well lighted work room, with the sink placed beneath a window and flanked by handy built-in cupboards. Opening off the kitchen there is an entry with a side service entrance and a stairway leading to the basement.

Above stairs there are three bedrooms grouped about a small hallway. The bath, in one corner, is convenient to all the bedrooms and just beside its door there is a linen closet. Each of the bedrooms is provided with a good closet and all have windows on two sides, providing for cross ventilation.

dequate Wiring" and What It Means

e are hearing more and more adays about the importance of equate wiring" for our homes. s doesn't mean a whole lot to most s. If we have electric light in our e at all, we are given to con- ring that those homes are "ade- tely wired." Sometimes we are ified. but usually we are not, for ational survey has shown very con- ively that the average home is woe- far from being adequately wired. ike "Companionate Marriage," equate wiring" has come in for a of absurd criticism from people have never taken the trouble to out what it means. People who e never even glanced inside the r of Judge Lindsay's book will ily and eloquently denounce his s and theories. And people who e no conception of what consti- s adequate wiring will get furious he mere suggestion that, electrical- t least, perhaps their homes leave ething to be desired.

dequate wiring might be defined a system of house wiring embody- a sufficient number of outlets to vide for proper lighting and effi- t use of electrical appliances, con- ieatly controlled by correctly ed switches, and consisting of h-grade materials throughout. he definite specifications which are particular interest to the home er include a tumbler switch at ry doorway to control lights, a imum of one duplex convenience let and one lighting outlet for ev- fifty square feet of floor space or lve feet of wall space. Such things safety meter service switches and ety panel boards must generally be to the integrity of the contractor, It is imperative to select a thor- ghly reliable contractor.

nother feature the adequately ed home should boast is a bell sys- operated by a bell-ringing trans- mer feeding from a separate cir- t on the lighting distribution panel. t your home can answer "Here" as s specification roll is called you are be congratulated. Very, very few n.

erhaps your reaction to all this is, ell, what of it?" To which we swer that in an inadequately wired me you cannot possibly derive all the benefits which electricity has bestow. You cannot have the de- ed number of portable lamps, fed conspicuously from wall outlets. u cannot have the amount of light cessary to maintain the happiest osphere in your home, and to safe- rd the eyesight of those living in You cannot have the means to plug in labor saving devices swiftly and safely. You cannot use table appliances gracefully and easily. You are probably trailing lengths of unsightly cords from wall brackets or center fixtures to carry current to portable lamps or to furnish additional outlets. That is what of it!

Because people are growing daily more conscious of the advantages of an adequately wired home, apartment house owners are finding it increasingly difficult to rent apartments which are not equipped to supply current properly and easily, and those who would sell a house are encountering the same difficuilty in selling. So quite apart from the comfort adequate wiring can bring to you personally, it is good, sound common sense to see to it that any dwelling you may build is adequately wired.

Plaster for House Made by Chemistry

Huge kilns are blazing in northern Ohio driving the carbonic acid gas out of newly quarried limestone.

A homeseeker in California is discussing his plans with his architect, deciding to have genuine lime-plastered walls in the house.

Many miles and the complex steps of a chemical process are between these two scenes, yet the red-hot limestone in the kilns may later appear as smooth white walls in the California house.

The calcined limestone will be crushed, chemically combined with a carefully measured amount of water in huge steel cylinders and formed into a pure white powder.

Chemists will guide and test the process at every step until lime, the perfect product, appears so smooth and easy working that the plasterer who uses it will say it "spreads like warm butter."

The home owner will enjoy the beauty of perfectly plastered walls and ceilings without ever a thought of the part nature and man had in creating them. His lime-plastered walls will hold their beauty a hundred years. But not one person who sees them will see back of them the chemical process and the chemist who made them possible.

Choosing Colors

The surging wave of color in home decoration carries with it a need for caution. We must live with our colors and therefore we must choose wisely and well, in order that we may get along with them in peace and harmony and comfort. Color, mere color, wrongly chosen, can destroy all these pleasant attributes of home life.

Mange Mites Are Great Liability

Ailment Has Been of Increasing Economic Importance in Central West.

(Prepared by the United States Department of Agriculture.)

The practical side of controlling animal diseases and parasites is shown in a report to the United States Department of Agriculture by Dr. J. O. Wilson, a federal veterinary official stationed in South Dakota. Swine mange has been of increasing economic importance throughout the Central West with the result that in some localities as high as 40 per cent of the hogs slaughtered show evidence of the presence of the mange mite.

Affects Vital Parts.

Since this parasite affects the parts of the hog that are of greatest value—the hams, shoulders and bacon—packers have been purchasing mangy hogs at a discount ranging from 50 cents to $1.50 per hundredweight. For a 250-pound hog the actual discount thus amounts to from $1.25 to $3.75, depending on the extent of mange present. "This estimate" Doctor Wilson adds, "does not take into account the saving of feed in the fattening of a mange-free hog in comparison with the added time and feed necessary to fatten a mangy hog."

In the endeavor to disseminate such information to swine growers in their trade territories, progressive commission firms are using rubber stamps bearing the notice:

MANGY HOGS SELL AT A DISCOUNT
of 50c to $1 50 per CWT
Proper treatment of mange
Infected hogs insures more
RAPID GAINS AND HIGHER PRICES

Briefly, mange mites are a serious liability to the swine producer, as they cause pork products to be classified into lower grades of less value. The losses occur throughout the year, but are somewhat greater during the winter months when control of the parasites by dipping is more difficult. Officials of the bureau of animal industry point out that mange in hogs is readily preventable and control methods are fully discussed in Farmers' Bulletin 1085 which may be obtained on request. In view of the better prices paid for mange-free hogs, averaging about $2.50 a head over those that are affected by the parasites, the slight cost in labor and material for dipping the average herd is repaid many times.

Weeds in Waste Places Should All Be Burned

Weeds along fence rows and old pastures and waste places generally can be best burned during the early fall before seeds have formed. Unless this is done the dry seeds hanging on the dead weeds will be scattered long distances over the snow crust during the winter.

A good plan is to mow the weeds close to the ground while they are still green and rake into piles before the seeds have a chance to scatter. Piles about half the size of a hay cock will dry quickly and burn completely. It helps to rake the loose ends into the coals after the center has burned.

Before Freshening Cow Needs Liberal Feeding

For a month to six weeks before calving the dairy cow should be given all the feed she will clean up. During this dry period she can store up in her body a large amount of nutrients to be drawn upon later during heavy milk flow. It is a well known fact that the heavy milking fresh cow cannot eat enough to supply all the food needed, but has to draw on her body for making milk. The statement that a pound of feed before freshening is worth two pounds after freshening is probably not far from true.

Farm Notes

Alfalfa pasture has a tendency to bloat all ruminant animals. Of course, sheep are in this class.

* * *

The thin pastures that are well covered with weeds should be mowed at least twice during the season.

* * *

Legume hay carrying a large proportion of leaves and cured without getting wet, makes a good winter substitute for green feed for poultry.

* * *

When lime and phosphorus become low in a soil the clovers are unable to compete with the undesirable grasses and weeds for a place in the flora.

* * *

There are many thousands of acres of hilly land in pasture that should have been left in forest. Erosion has started on these and reforestation is the only practical means of stopping it.

* * *

Have you provided a place for those early maturing pullets? They will soon be ready for the winter quarters. Plan to give them a clean, permanent location as it is not advisable to move them after egg production begins.

* * *

Where there are some trees already growing or where there is a good natural seeding of forest trees, it is very detrimental to the growing of the trees to pasture it. Under such conditions the amount of pasture produced is almost negligible.

So Constipated That Life Seemed Hopeless

"In November, 1920, I wrote you for special instructions in the use of Milks Emulsion. I have been constipated for a number of years and suffered with my bowels for a long time. I finally had an X-ray made which definitely located the trouble in my bowels. An operation was advised, but I was afraid of an operation, and your Emulsion had been recommended to me, so I decided to try it.

"I declined in weight from 190½ pounds to less than 120 pounds, and became so weak that I could not turn over in bed without help. I could not eat any solid foods for months, but tanked up on liquid diet, until I threw it up constantly. Nothing passed my bowels except a dry, hard powder.

"Finally when I was convinced that I had only a little longer to live, I resolved to try Milks Emulsion. This was in November, 1920, and after a continuous decline for two years. Now I am happy to say to you that I am greatly improved. At this writing my bowels are fairly regular with proper consistency. I have gained in weight and I am beginning to have an appetite.

"I have taken 15 large bottles of Milks Emulsion and the results have been most satisfactory. I am 65 years old, and still improving. I expect to return East in October and resume active business as mechanical engineer.

"I heartily endorse your Emulsion and I am satisfied that it saved my life." Yours very truly, C. B. RUSSELL, 149 Broadway, Denver, Colo.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Animals From Arctic Brought Into Italy

Italy has imported ten reindeer from Norway and their new home is Mont Blanc (highest of the Alps), where it is intended to acclimate them. This is done not to enrich different regions with curious animals, but for important, economic reasons. Italy has many square miles of unproductive Alpine land, 4,000 or 5,000 feet above sea level, unadapted to cattle raising. If these reindeer flourish on the Italian Alps vast waste land is at their disposal and a heavy production of venison, milk, leather and antlers will be had.

Still another attempt to acclimate Arctic animals was made when six couples of silver foxes were transferred from Canada to Mont Blanc. The purpose, of course, is to acquire their furs, which are now sold on the Italian market for thousands of dollars.

Compound Interest

"Has she kept her girlish figure?"

"Kept it? She's doubled it."—Boston Transcript.

If the world owes every man a living tramps must be the collectors.

Any Woman Can Look Stylish

By MAE MARTIN

Most stylish-looking women are just "good managers." They know simple ways to make last season's things conform to this season's styles.

Thousands of them have learned how easily they can transform a dress or blouse, or coat by the quick magic of home tinting or dyeing. Anyone can do this successfully with true, fadeless Diamond Dyes. The "know-how" is in the dyes. They don't streak or spot like inferior dyes. New, fashionable tints appear like magic right over the out-of-style or faded colors. Only Diamond Dyes produce perfect results. Insist on them and save disappointment.

My new 64-page illustrated book, "Color Craft," gives hundreds of money-saving hints for renewing clothes and draperies. It's Free. Write for it now, to Mae Martin, Dept. E-143, Diamond Dyes, Burlington, Vermont.

Advice for Speed Maniac

Mary, four years old, sat dangling her chubby little legs from a park bench, watching with wide-eyed interest the antics of the many tame squirrels that abound there.

Suddenly a squirrel darted rapidly down a tree trunk just in front of Mary's anxious eyes. As he speedily neared the ground, head first, Mary's interest and alarm grew until she no longer could restrain herself. She clapped her little hands in excitement and cried: "Put on your brakes, Kitty, put on your brakes!"

The one redeeming feature of a pawnshop is the ticket.

8 RECORD-BREAKING MONTHS!

Greatest August in Willys-Overland history—68% gain over last year!

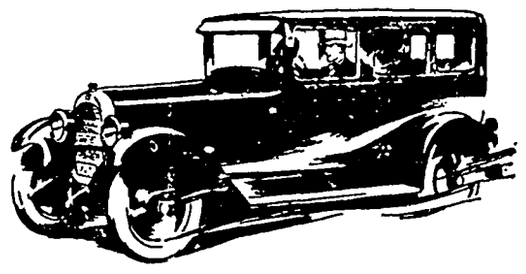
NOW August has added its sweeping plurality to Willys-Overland's impressive total for 1928. Eight consecutive months have broken every record for the corresponding months in all of Willys-Overland's 20-year history.

Last month 68% more people bought Whippet and Willys-Knight cars than in August, 1927—a gain of more than two-thirds!

Experienced motorists are quick to appreciate the superiority of the Whippet Four, with its many engineering advantages never before brought to the light car field;—the Whippet Six, the world's lowest priced Six, with 7-bearing crankshaft and other costly car features;—and the Willys-Knight Six, which now, at the lowest prices in history, brings the unmatchable smoothness, silence, power and operating economy of the *patented* double sleeve-valve engine within easy reach of thousands of new buyers.

WILLYS-KNIGHT DOUBLE SLEEVE VALVE SIX
$995 COACH
Standard Six Coupe $1045; Sedan $1095; Touring $995; Roadster $995. Special Six $1295 to $1495. Great Six $1850 to $2695.

Whippet 4-cylinder SEDAN $610
Touring $455; Roadster (2-pass.) $485; Roadster (with rumble seat) $525; Coupe $535; Cabriolet Coupe (with collapsible top) $595; Coach $535. All Willys-Overland prices f. o. b. Toledo, Ohio, and specifications subject to change without notice. Willys-Overland, Inc., Toledo, Ohio.



Whippet SIX SEDAN $770
WORLD'S LOWEST-PRICED SIX WITH 7-BEARING CRANKSHAFT
Touring $615; Roadster $685; Coach $695; Coupe $695.

TRIMMING!!!!

THE SUCCESSFUL HOG RAISER

—knows that he must balance grain and pastureage with a feed that provides the necessary vitamines and nutriments for the utmost development of his young hogs.

A lot of farmers around here recommend MOR-GAIN PIG MEAL from experience, for building healthier, and heavier hogs.

Cobs will be pretty scarce until late in the winter and we

If you want some cheap wire to hog down corn, come

STEEL POSTS—all kinds. Some 6 foot Steel Post

North Iowa Grain Co.

Fire Wood

We will have in a car of regular nice clean short length millwork clipping wood some time this month. Cobs will be prettly scarce until late in the winter and we would advise you to get in your order for a small load to last until corn shelling time at least. We were unable to get this kind of fire wood last year. Remember, this is nice and clean—ready to put in the stove to start fires.

BETTER CALL US UP AND WE WILL PUT YOUR NAME DOWN FOR WHAT EVER YOU WANT

Wire and Posts

If you wan some cheap wire to hog down corn, come in and take a look at what we have: compare the weights and then the price—and at 28 cents per rod. If you want a cheap fence it can not be beaten.

STEEL POSTS—all kids. Some 6 foot Steel Post for 35 cents. This is not a cheap post—made by the best and most widely known makers of steel post. Take out a trial order and drive them in where you are going to do a little hogging down—it will save you a lot of work.

Right now would be a good time to scatter a sack of Lime around in the Hog Lot—

DOINGS AT SCHOOL THIS PAST WEEK

ACTIVITIES FOR FALL ARE BEING PLANNED

High School Teachers Enjoy Chicken Dinner At Country Home

On Monday evening of ths week our high school teachers and the superintendent accepted an invitation to a six o'clock chicken dinner at the home of Ethel Schoenwetter, one of our lively freshman girls. Some know the place better as the Arthur Schoenwetter farm. We liked the dinner and the fine hospitality of our host and his family. The evening was a very enjoyable one.

Two Teachers Entertained

Miss McGinnis and Miss Trumbell went west again on Tuesday evening to spend the night at the Will Lemke home as guests of Helen, Ethel and Lorraine, who are students in our high school. They report a delightful time.

Mr. Heiden drove to Denn'son last Friday evening to visit home folks, returning Sunday evening

Teachers Shop For School

Several others of our faculty were in Mason City Saturday in the interest of our school. Mr. Lewis securing musical instruments and material for members of his high school orchestra. Miss Lenora Wheatman and Miss Trumbell looking for program material.

. Will Stage Play In October

Miss Trumbell selected a play, while there, which she is now selecting a cast for. Several of our students have been trying out for parts in the play and the cast will be chosen by the time theplay books arrive. The play is entitled, "Mother Cury's Chickens," and has been taken from Kate Douglas Wiggin's novel by the same name. It is said to be a superior production, clean and wholesome, but replete with humor and fine characterization. It has been planned to stage it toward the last of October.

Will Play Swaledale Friday

Mr Helden's base ball team will engage the Swaledale nine on our own diamond Friday evening at 4 o'clock Defeated last year our boys are hopeful of victory this time, but will not find Swaledale easy to beat.

Many Former Students At College

Florence Stokesbary, now enrolled in one of Des Moines' commercial colleges, dropped in on us on Monday morning for a brief call. She reports herself as well pleased with the instruction and training she is getting. Orville, her brother, is now enrolled at Upper Iowa at Fayette, as is also Luther Tanner of the class of '27. We are glad to see our high school graduates leaving their parental roofs for more extended preparation. Harvey Nelson has gone to Morningside, Sioux City while Gladys Wilson and Asa Arnold are now at Drake University in Des Moines.

Klemme can be proud she has such fine representatives in these advanced institutions of learning. Ruth Johnson of 1926 is taking a nurse's training course at Mercy Hospital, Mason City, and seems to feel she has chosen well. Her sister, Ethel, of 1927 class, will probably soon join her.

Others Are Teaching School

Hallie Greimann, Ethel Wellemeyer, Mabel Schaefer and Dora Swanson, we understand, are teaching. Vernon Turgasen is at Ames, Frank Gibbs and Ruth Bailey at Morningside aud Elvira Stille is at Cedar Falls. Others who are not away or teaching this year are, we feel sure, doing their part at home or at useful employment. None are loafing.

CHARLES BARZ DIED AT VALLEY CITY, NORTH DAKOTA

Was Formerly A Farmer In Twin Lake Township

Charles Barz, son of Mr August Barz, of this city, passed away Friday morning at his home near Valley City, North Dakota Funeral services were held there Monday Besides his wife and seven children Mr. Barz leaves his father, and his sister and brothers in this vicinity and many other relatives to mourn his death

Mr. Charles Barz and ihs family formerly slived on a farm in Twin Lakes Township. They moved to North Dakota some eleven years ago.

August Barz has been with his son for several weeks and will return to Klemme the last of this week Saturday Will, Henry, Albert, Fred and Emil Barz drove to Valley City to be present at the funeral serives They returned to this place Tuesday evening

The sympathy of the community is extended to the bereaved family and relatives at this time

Goodell Lady Passed Away

Malinda Sophia Stanbaugh was born at Sandusky, Ohio, August 2, 1848 and died at Goodell, Iowa, on September 24, 1928 She had reached the age of 80 years, 1 month and 22 days

At the age of sixteen she was united in marriage to Mr Martin Bowers and to this union were born twelve children, seven of whom survive their mother The husband died thirty three years ago

For a number of years they resided on the George Kluckhohn farm in north Ell township.

Later she was married to Israel Smith, who also preceded her in death.

For the last several years Mrs Smith made her home with her daughter, Mrs. Jake Bachman at Goodell She was usually in good health, but a few days before her death she became ill and gradually became weaker until she was called away to the great beyond.

Services were conducted by the Rev Scott at the U B. Church at Goodell, Wednesday, and interment was made in the Garner cemetery

"BILL" GAUGER GETS LICENSE TO BROADCAST

Federal Radio Inspector Grants An Amateur License Here

Tuesday William Gauger "devil" of the Times Print Shop, and amateur radio fan, received his official license from the federal radio inspector of Chicago for the 9th district

For the past few years "Bill" has been interested in radio, and especially the broadcasting end of it He studied the code until he could also "pound the brass" in good style

"Bill" has not as yet erected a station but hopes to employ his spare time along that line in the near future

Klemme now has four amateur radio operators who are licensed to broadcast They are Andrew Wellemeyer, Fred Arnold, Jr., Maurice Greimann and William Gauger

"Bill" has been assigned 9 G B M as his station call letters

Mrs. Amanda Kirkwood returned to Klemme Wednesday after spending about a year visiting relatives and old friends at Turrin, N. Y.

MR. AND MRS. BOCK MARRIED 25 YEARS

SURPRISED BY RELATIVES WHO GATHERED SUNDAY

Again Victims Of Surprise Party On Tuesday Evening

Tue day, September 25th marked the twenty-fifth wedding anniversary of Mr and Mrs John Bock, who reside on their farm about three miles east ° Klemme

To properly observe such an important event a surprise celebration was planned by Miss Stella Bock, daughter of Mr and Mrs Bock and Mrs Bock's sisters, Mrs F H. Greimann, Mrs Fred Bell and Mrs Wm Schlawin The ladies kept all the plans very secret and invited about sixty relatives to participate in the celebration which was planned for Sunday, as that was a more convenient day

While Mr and Mrs Bock were attending church Sunday morning the relatives gathered, all bringing well filled baskets of good things to eat to the Bock home When Mr and Mrs Bock arived at their home they were most agreeably surprised

A delicious dinner was served on trays, cafeteria style and the afternoon was spent in visiting and reviewing old times Before her marriage Mrs Bock was Naska Wille, daughter of Mr Henry Wille of this city Following the marriage of Mr and Mrs Bock they moved to the farm in Ell township, east of Klemme, where they still reside They have a beautiful farm home, modern and their farm is one of the best in this section.

Rev Calvin Grosshuesch, pastor of the Reformed Church, gave a plendid talk during the afternoon The guests presented Mr and Mrs John Bock with a substantial purse of silver

Were "Victims" Again Tuesday

Naturally Mr and Mrs Bock supposed that the celebration Sunday would be the only one in honor of their wedding anniversary. However, in this thought they were entirely wrong, as another big celebration was planned to include the many friends of the Bock family

On Tuesday evening about forty friends of Mr and Mrs Bock again surprised them, by quietly driving up into the yard and when Mr and Mrs. Bock stepped out onto their porch to see who had called, were greeted by a loud yell of "surprise!"

The evening was one of great merriment and fun for young and old and many old fashioned games were played and a big time was had by all During the course of the evening's fun a mock wedding was staged Miss Stella Bock was the bride and wore her mother's wedding dress Miss Alvina Buss took the part of the groom and played her part well. On the lapel of her coat she wore the same flower Mr. Bock wore at his wedding twenty-five years ago Dr. D P. Anderson was the officiating clergyman, and read the solemn rites from an old copy of that famous book, the Shears, Sawbuck & Co. catalog The ring bearers were Dorothy Croner and Avis Barz This part of the entertainment proved a big hit. Those who witnessed the ceremony say Dr. Anderson missed his calling by becoming a Doctor of Veterinary Surgery instead of a Doctor of Divinity Miss Bus made a very fine appearing young man and Miss Stella, the blushing bride,was an able assistant in the mock wedding.

Following the games and fun of the evening a delicious lunch was served, consisting of sandwiches, pickles, coffee, cake and ice cream was served. The brick ice cream had a figure "25" in it and the cake was decorated in green and pink and had the numerals, 1903-1928 displayed.

Those present at the party Tuesday night were: Henry Barz and family; Fred Kothenbeutal and family; Mr and Mrs Peter Josten; Mr and Mrs. Elmer Schlei; Wm. Mr and Mrs. Ed., Rosa, and Anna Becker; Mrs. Lena Schoeder; Emil Barz and son, Max; Mrs Marlin Croner and Dorothy; Grandma Schroeder; Dr. and Mrs. D. P. Anderson, and Mrs. E. Schuldt; Mrs. Buss, Gail and Alvina; Dr. Geo. Zinn; Edith Haupt and Adella Kuhlmann.

Needless to say, it was sometime during the wee, smal hours that the party disbanded, leaving with Mr. and Mrs Bock a number of fine gifts of silver and wishing them another twenty-five years at least of a continued life of happiness together.

The Times joins in with wishing Mr and Mrs. Bock many happy returns of the day and extending congratulations on their twenty-fifth wedding anniversary.

NEW CASES ON FILE IN COURT

CASES WHICH HAVE BEEN FILED SINCE LAST TERM

September Docket Has Largo List Of Cases On Record

"THE HOUR GLASS"

Ceaselessly the scroll of time unrolls, bringing to every mortal the changes to which are attached what ever of interest life may hold The hour glass, which symbolizes the passing of tim, supplies the title for a photoplay as told in motion pictures, which will help to bring to every man who is, or hopes to become hea dof a family a fuller realization of his responsibilities First presentation of "The Hour Glass" in Klemme will be given at the Idle Hour Theatre Tuesday, Oct 2 at 8 p m. It will bes nown under the auspices of the Klemme Camp, Modern Woodmen of America, by special arrangement with the national headquarters at Rock Island, Ill. This is a brand new three-reel film with unusual spectacular features and true to-life action. Part of the story was filmed at the Society's free Sanatorium near Colorado Springs where the bright sun and vivid color contrasts make the camera so effective Here, in large part, was euacted an interesting little drama which might have ended in tragedy, but didn't Modern Woodmen who know the signs of the forest may guess why. Others will be afforded the opportunity to find out for themselves when they witness the showing of this interesting photoplay.

Admission will be free and the public is invited to come as guests of the Klemme Camp. 1tc

Pork Storage Situation Improves

Much less pork was in storage n Sept. 1 this year than a year ago. according to a report just issued by the U S. Dept of Agriculture. This is a favorable sign to hog producers, for when holdings are heavy, the tendency is for prices to be lower The movement out of cold storage during August this year was 136 million pounds More eggs were in storage Sept 1 this year than last, but the holdings of butter and beef were less

Feed Tankage When Hogging Down

Hogging-down corn is likely not to be profitable unless the corn is supplemented with a protein feed, such as tankage, with minerals and unless the pigs have a ready, abundant supply of water.

Marriage Licenses Issued The Past Week In Hancock County

September 20, Elmer M. Hillman, Meservey, and Tena Pals, Meservey.

September 22, Allan Stenseth and Mary Case, both of Forest City.

September 24, Gus Reppert, of St. Paul, and Lola Carpenter, Ventura.

September 24, Conrad Lemberg, and Marie Meyer, both of Woden.

Harm Eden and Aletta Meyer, both of Woden secured a license on the 24th.

MRS. C. BREDLOW DIED THURS. EVE.

FUNERAL SERVICES WERE HELD SUNDAY AFTERNOON

Burial Was Made In The Klemme Cemetery

(By Rev. A W. Gauger)

On Thursday evening, September 20, after a long and lingering illness Mrs. Charles Bredlow was called to her eternal home where pain and sorrow are unknown

Mrs Minnie Anna Stille Bredlow, whose departure we mourn today, was born May 14, 1863 in Warren County, Missouri, a daughter of Mr. and Mrs. William Stile, later pioneer residents of this community.

When deceased was ten years old the family moved to Hancock Co., Iowa, where they resided until death called both parents and other members of the family.

In early youth Mrs. Bredlow became interested in things religious and was converted. Soon after she joined the Liberty Methodist Episcopal Church

Those who knew her best, know her as a peace-loving person who loved to be at peace with all the world.

She was united in marriage with Mr Charles Bredlow, on July , 1889 They located on a farm north Liberty Township, where they resided for thirty years. Their married life was a happy one, each supplementing the other in a fine way thus insuring hapiness and being able to carry the burdens of life.

Ten children were born to them They are. Walter, Verner who died in Camp Dodge during the World War, Herbert, Elmer, Helen, now Mrs. Wm. Suckow, Edna, Clarence, Curtis, Mabel and Lester. All reside in this county.

On January 21, 1917 the Bredlow family moved to Vinita, Okla. where they lived until last December when they returned to this locality. They arrived here on Dec. 23. Mrs. Bredlow had often longed for this return and it was the one great desire to return to the home community. Sadness soon began to hover over their home after their arrival when Mrs. Bredlow began to be ill From February on her condition became more grave. At times she seemed to rally, then again her condition became more serious All the while she was losing ground.

Aid from various sources was sought and brought some relief but no restoration of her former health It soon became apparent that her days were numbered.

During all this time she was possessed of a Christian fortitude that helped her carry her burden without a murmur. She enjoyed the fellowship of God and was greatly encouraged by the prayers and the sing of her loved ones

Conscious to her end and realizing that her summons was near, she longed to depart and to be with Jesus.

She died Thursday evening September 20, 1928, leaving her husband, six sons and three daughters six grandchildren and one brother to mourn her death Beside these she is survived by many other relatives and a host of friends.

Funeral services were held Sunday afternoon in Liberty Church, conducted by the pastor. Six sons acted as pall bearers. Interment was made in the Klemme Cemetery.

The funeral was largely attended and the floral tribute was profuse.

Card Of Thanks

We wish to thank all who assisted us during the illness and death of our wife and mother and for the words and acts of sympathy, also for the floral offerings and the singing of the choir.

Mr. Charles Bredlow, and children: Walter, Herbert, Elmer (Helen) Mrs. Will Suckow, Edna, Clarence, Curtis, Mabel, and Lester.

1—British troops in maneuvers in the Rhineland which Germany seeks to free from forces of occupation. 2.—Two of the American army's new whippet tanks that have a speed of twenty miles an hour. 3—Madonna of the Trails monument unveiled on the Santa Fe trail near Council Grove, Kan., one of sixteen to be presented by the Daughters of the American Revolution.

NEWS REVIEW OF CURRENT EVENTS

Florida, Porto Rico, Swept by a Terrific Hurricane—News of the Campaign.

By EDWARD W. PICKARD

ON THE second anniversary of the great Miami hurricane the tropical storm that already had devastated Porto Rico, the Virgin islands and some islands of the Lesser Antilles struck the east coast of Florida in the Palm Beach region and swept through the center of the state, turning again to the northeast and continuing its destructive course along the Atlantic coast. Reports coming through shattered lines of communication showed this hurricane was one of the worst disasters of recent years. The total number of deaths may reach 2,000, and many thousands are homeless and without food and clothing. It is impossible now to make a reasonable estimate of the tremendous property losses.

In Porto Rico late reports place the dead at 175 or more; in Guadeloupe, a French island, nearly 700 were killed; the known dead in Florida number at least 700 and may be many more. The city of West Palm Beach was practically wrecked, and the fatalities were many and the destruction great in the Lake Okeechobee area which was inundated. Palm Beach, too, suffered severely, many fine residences and business buildings being destroyed. Florida National Guardsmen were called out promptly to prevent looting and to aid the sufferers.

The American Red Cross responded immediately to the calls for help from Porto Rico and Florida and supplies and physicians and nurses were hurried to the stricken regions. Generous citizens answered appeals for monetary aid with large subscriptions, John D. Rockefeller, Jr., heading the list in New York with $25,000. Relief Director Baker of the Red Cross went at once to Porto Rico to take charge of the task of restoration on the devastated island.

As the hurricane moved up the seaboard the winds and tremendous seas wrought vast damage. Many vessels were sunk or driven ashore, and seaside communities were driven from their homes by the waters.

HERBERT HOOVER and Governor Smith both started their personal speaking campaigns. The Republican candidate spent two days in New Jersey, and the apparent results of the trip were highly encouraging to his manager. His chief address was delivered in Newark and was directed especially to labor. He declared himself specifically in favor of high wages, free collective bargaining, restrictions on the use of injunctions in labor disputes, tariff schedules protective of American labor, continuance of immigration restriction, further expansion of our foreign export trade, and governmental assistance to the depressed textile and bituminous coal industries.

Democratic Chairman Raskob's retort was that Hoover's speech was the beginning of a Republican campaign to misrepresent the Democratic attitude on the tariff and on immigration.

Hoover's plans at present contemplate only a speech at Elizabethtown, Tenn., on October 6, and addresses in New York and Boston, before returning to California to vote. However considerable pressure is being brought on him to speak also in Chicago and in Texas on his trip across the continent.

Al Smith on his invasion of the Middle West was greeted everywhere by huge and enthusiastic throngs of supporters and also by thousands of agriculturists and their wives who were eager to know what he proposed in the way of farm relief legislation. His first address was in Omaha and was mainly devoted to a discussion of the farm problem. He again declared himself in favor of the essence of the McNary-Haugen bill but neither upheld specifically nor repudiated the equalization fee. Here are his words defining his stand:

"As I read the McNary-Haugen bill, its fundamental purpose is to establish an effective control of the sale of exportable surplus with the cost imposed upon the commodity benefited. For that principle the Democratic platform squarely stands, and for that principle I stand. Mr. Hoover stands squarely opposed to this principle by which the farmer could get the benefit of the tariff. What remains of the McNary-Haugen bill is a mere matter of method, and I do not limit myself to the exact mechanics and method embodied in that bill."

Smith's personal popularity among the workers he met in Omaha, Lincoln, Oklahoma City and elsewhere in the Middle West, pleased him immensely. While in Omaha a bunch of Indians made him a member of the Omaha tribe as "Chief Happy Warrior" and gave him a war bonnet.

Senator Borah started a series of speeches in eight states for the purpose of counteracting the effects of Smith's tour.

UP IN Wisconsin, where the political situation has been so puzzling, the conservative Republican forces, led by Kohler, nominee for governor, bested the La Follette crowd in the state convention by gaining control of the resolutions committee and having the convention indorse Hoover and Curtis and the national platform. The radicals, however, won the chairmanship of the state central committee, the place going to Herman L. Ekern, a devoted follower of La Follette.

Leaders of both parties were satisfied with the results of the primaries in Massachusetts. Benjamin Loring Young, former speaker of the Massachusetts house of representatives and the choice of Herbert Hoover's advisers, was returned a victor over Eben S. Draper, former state senator and choice of the Republican wet faction, as the Republican nominee for United States senator. He will oppose Senator David I. Walsh in November. On the Democratic side, Gen. Charles H. Cole, one of the original Smith-for-President men, won an overwhelming victory over John J. Cummings in the contest for the gubernatorial nomination.

WHILE various religious and prohibition organizations were taking wallops at Al Smith for his attitude on the liquor question, the wet Republicans of the East, who are rather numerous, hailed with delight a letter from Otto Kahn, New York banker, to Vice President Dawes, in which the writer said:

"Knowing Mr. Hoover as both able and courageous, I have no doubt that, if elected, his experience in the actual administration of the Volstead act will lead him to recommend to congress suitable changes in its provisions. And I am convinced that such changes will be—and to be effective must be—not in the direction of increased stringency, but of increased liberality."

SEVERAL notable events in aeronautics marked the week. Juan de la Cierva, Spanish inventor, gave his novel "autogyro" its first severe test by flying across the English channel, and then demonstrated it again in flights at Paris. The machine rises and descends almost vertically by means of a windmill propeller and the wings are nearly negligible, being used only to keep the plane horizontal. It was said the British air force had ordered several of the machines and that France might buy one.

In Detroit the Packard Motor company announced successful completion of test flights with an airplane powered by an oil-burning motor, the first Diesel type aircraft engine ever built. The motor is of a radial air-cooled type and develops 200 horse power. With the use of the Diesel principle of oil for fuel the engine does away with gasoline, ignition systems, spark plugs, and other trouble "bugs." Elimination of those parts, officials said, results from the firing from compression in the cylinders, the Diesel action that has been applied up to this time in only extremely heavy engines for power plants and in boats.

Germany's huge new dirigible, the Graf Zeppelin, was tested in flights from Friedrichshafen and seemed to be entirely satisfactory. It is intended to send this air vessel on a trip to the United States in the near future.

The big Bellanca plane Roma was waiting at Old Orchard, Maine, for suitable conditions for the jump-off on its flight to Rome, and indeed did make one start but had to return because of a broken air intake on the carburetor.

ILLINOIS miners ratified the new scale and the mines at once reopened. But so large a minority of the men are opposed to the resulting reduction in their wages that there were several "wildcat" strikes of considerable moment. Officials of the Mine Workers' union believed the situation would adjust itself in a short time.

The federal mediation board announced that it had failed to adjust the wage differences between 55 Western railroads and their 70,000 trainmen and conductors and had abandoned its efforts. It is now up to the President to create a fact-finding commission if he deems it advisable. The men have voted for a strike but officials said the unions would take no definite action until after October 1.

Charles G. Eagle, New York silk manufacturer, who committed suicide recently, provided in his will for a trust fund of approximately $1,250,000 to purchase hotels and apartments in which worthy working girls live and to aid them in their careers.

HERBERT HOOVER'S name was brought into the federal trade commission's probe of public utility propaganda methods, when it was disclosed that the National Electric Light association purchased 49,500 copies of an address made by the then secretary of commerce in 1925 before the annual convention of the National Association of Railroad and Utilities Commissions.

Among other vouchers produced before the commission was one indicating that William Allen White, nationally known editor, recently in controversy with Governor Smith, the Democratic Presidential nominee, over the latter's legislative record, was paid $500 for an address he made before the Electric Light association's convention in 1926.

NEARLY two thousand men who fought for the Union in the Civil war took part in the parade that marked the opening of the sixty-second encampment of the Grand Army of the Republic, in Denver. To the music of the drum and fife they marched almost a mile, and few were forced to drop out of line. Commander Elbridge Hawk of Sacramento, Calif., reviewed the parade and opened the formal sessions of the encampment.

DR. J. LOUDEN, president of the disarmament commission of the League of Nations, created something of a sensation in Geneva by announcing to the league that he intended to call what would amount to a conference of the five great maritime powers, the United States, Great Britain, France, Italy and Japan, for the purpose of agreeing on some plan for decreasing their naval armaments. Lord Cushendun, British delegate, immediately declared he was sure the proposal would not please his government, and the reaction to it in Washington was decidedly unfavorable. Japan alone openly favored the scheme.

The powers are still stewing over that mysterious Franco-British compromise agreement for limiting auxiliary naval craft. In Washington especially it is the subject of serious consideration by the President and his advisers, who have not made up their minds whether to disapprove of it officially or disregard it for the time being in the hope that it will be dropped. Neither the British nor the French foreign office has submitted more than a summary of the naval section of the agreement.

Serious Injury to Alfalfa Crop

Bacterial Wilt and Winter Injury Discussed in New Circular.

(Prepared by the United States Department of Agriculture.)

Bacterial wilt and winter injury have caused, in recent years, serious injury to alfalfa in many alfalfa growing sections of the country. The two injuries are definitely distinct, and either may occur without the other, although winter injury frequently gives rise to conditions which make for the more rapid and destructive development of bacterial wilt.

F. R. Jones and J. L. Weimer of the bureau of plant industry are authors of Circular 39-C, Bacterial Wilt and Winter Injury of Alfalfa, just off the press and available for free distribution by the United States Department of Agriculture, Washington.

Bacterial wilt may cause the plant to wilt during hot weather of spring or summer, and under this condition the plants die immediately, resembling plants whose roots have been severed by gophers. More frequently the plants show a characteristic dwarfed condition with foliage pale green or yellow. After each successive cutting the new stems are shorter and eventually the plant dies. The injury is due to bacteria entering the underground parts of the plant, causing alterations which may be observed readily in the roots.

Winter injury is most evident in the taproot, and is characterized by partial destruction of the root and crown bark and a hollowing and decay of the roots. The destruction of the root bark affords easy access for the wilt bacteria. Winter injury results from the killing of buds and parts of the crown and roots by severe cold.

"The most important method of controlling the wilt disease," say the authors, "is probably the prevention of the conveyance of bacteria by water from old diseased plants to young fields, especially in the spring when many plants have wounds. Care should be taken to avoid carrying the bacteria to new fields in fragments of stems of diseased plants, with uncleaned seed, or with manure. If the disease is present in a field, its distribution by the knives of the mower can probably be avoided to some extent by mowing when the plants are free from surface moisture."

The use of hardy varieties of alfalfa resistant to winter injury does not always prevent damage by bacterial wilt, but the authors believe it may reduce loss from this cause.

Moldy Silage Caused by the Condition of Corn

Condition of the corn at ensiling time and not poor packing is the cause of moldy and inferior quality silage, according to recent experiments conducted by the Wisconsin Agricultural Experiment station. To eliminate moldy silage, corn should be ensiled shortly after it is dented.

Corn that is over-ripe, wilted or frozen when put into the silo carries large amounts of air. Several days elapse before the oxygen is exhausted in the silage process and it is during this period that molds make rapid growth.

In testing out their theories, the men working on the problem buried three empty crates in silage at varying depths at the time the silo was filled. In late winter or spring, when the crates were dug out as the silage was fed, no signs of spoilage were found around the crates.

Millet Hay Too Low in Protein for Cow Feed

Millet hay is too low in protein content to make good feed for cows unless supplemented with high protein feeds. Hence, millet hay does not give good nourishment to cows when fed alone, and this may cause several kinds of troubles in a herd. Millet hay, when cut at proper stage of maturity, is a fairly good hay if supplemented, but if allowed to ripen seed the threshed straw has little value as feed for cows, though it may be used in a maintenance ration for horses. For good quality of seed it should be allowed to stand until about fully ripe, but the straw does not have any high value for feed.

Agricultural Squibs

Next to milk, meat scraps or tankage are the most accessible and efficient source of animal protein.

* * *

Hog men who do not raise alfalfa for summer, as well as for winter use, are not living up to their opportunities.

* * *

In order to insure a good lamb crop the ewes should be turned on fresh pasture a few weeks before breeding, and should be given a little grain.

* * *

Sunshine is one of the best disinfectants. Be sure all live stock is getting plenty of this free nature's tonic, especially the young growing animals.

* * *

Many people do a lot of figuring to show the increased profit that would come by breeding birds that are heavier producers but they fail to make any additional charge for feed.

SPEEDOMETERS OR SPEED INFORMERS

One of Most Interesting and Important Chapters in Auto Development.

The story of the development of the speedometer provides one of the most interesting and important chapters in the history of speed registering devices according to an engineering bulletin, which goes on to say:

"Speedometers, or speed indicators as they were called in the days before the automobile, were largely used on locomotives, street cars and bicycles. At that time none of them was considered very reliable and their development was slow.

Came Out in 1906.

"As an illustration of the prevailing situation, along about 1906 when automobiles began making their appearance in increasing numbers, a new speedometer came out. It was much larger than the present day speedometer and operated like a barograph—recording with an inked needle on a roll of paper the speed, time and even stops of a car. This was hailed as a promising improvement and caused quite a bit of interest in engineering circles. From that time on, the evolution of the instrument went through many stages, until today we have speedometers as near perfect as it is possible to make them.

"The speedometer has two independent units, each driven from the same shaft—a 'speed' unit to tell how fast you are going and an 'odometer' unit to tell how far you have gone. The speed unit is driven directly by a flexible cable connected to the engine transmission. This cable drives a steel spider or rotor that spins around inside of an aluminum cup which is mounted on a jeweled bearing and is marked to read in miles per hour. This entire assembly is placed between the poles of a permanent horse-shoe magnet. As the car moves along the road, the rotor is driven by the flexible shaft, and a 'magnet drag' between the rotor and the horse-shoe magnet causes the aluminum cup to turn against a hair spring, the amount of turn being directly proportional to the car speed.

"The hair spring returns the cup to 'zero' when the car stops, and by offering a uniform resistance against turning, keeps the readings steady at all speeds.

"In order that the speedometer will accurately function at all speeds, it is checked at several intermediate speeds and the magnet adjusted to give the correct readings. This makes the instrument accurate over its entire range.

How It Operates.

"The odometer unit that tells you how far you have gone is driven by a worm gear from a flexible cable and records both season and trip mileage. Every time the cable turns 1,008 times an additional mile is recorded on the first odometer wheel. Every ten miles on the first wheel, the second wheel is moved one reading, and so on, the maximum reading being 99,999 miles. The 'trip' of the odometer operates the same as the 'season' part but it can also be reset to zero or any mileage desired. It reads up to 99.9 miles and is used to measure the distance traveled on any trip.

"All speedometer heads are geared alike—variations of size tires and rear axle ratios, etc., are taken care of by different combinations of speed drive gears in the transmission. Under-inflation of tires, excessive load, and rough roads are conditions that will cause slight inaccuracies of speedometer indications."

AUTOMOBILE NOTES

Timing gears are a frequent cause of aggravating noises in motors.

* * *

With an ordinance against loud speakers, will a traffic squad on radio right of way be needed as well as on motor right of way?

* * *

New York, Pennsylvania, Ohio, Michigan, Illinois, California and Texas are the seven states having more than 1,000,000 automobiles.

* * *

If, as claimed, science has lengthened the span of human life by ten years, it ought to be an encouragement to the pedestrian. And he can always use encouragement.

Honolulu Schools Have Effective Safety Plan

That education as a preventive of accidents is being accepted everywhere, is shown by a bulletin recently received by the accident prevention department of the Chicago Motor club which says that safety education in the schools of Honolulu has been so effective that not a single child has been fatally injured near a public school during the past six years.

The bulletin points out that "The bureau of education, Department of the Interior, explains that about 35 junior police officers guard street intersections in the vicinity of the school buildings, and that in addition practical safety lessons are given daily in the primary grades. A local newspaper publishes a safety lesson each week which may be used in school instruction. The board of education co-operates with other departments, and some thousand pupils listened to accident prevention talks at public school assemblies which were attended by the sheriff and other public officials."

Breaks Touring Record Across the Continent

Harold M. Fenwick of Philadelphia standing beside the automobile in which he broke the touring record

Harold Fenwick.

from Los Angeles to New York City. He made the trip all alone in 76 hours —not only setting a new speed record but one also of courage and determination.

Traffic Noise Is Much Less Than 60 Years Ago

Those who deplore present conditions of street traffic and who view the noise as a contributory factor to the generation's restlessness will be comforted to know that today's traffic is a "heavenly silence" compared to conditions 60 or 70 years ago. It is a "heavenly silence," at least, according to Richard Pain, who becomes remiscent in a recent issue of the American Messenger.

Writes Mr. Pain: "I can remember 60 or 70 years ago, when most of our streets were stone paved, and even those where macadam was used were seldom kept in good condition, the consequence being that the rumble and the rattle of traffic far exceeded the noise of today. The noise of present traffic compared to that of the time I refer to is, in my opinion, a 'heavenly silence' much to be appreciated by those who, like myself, are old enough to remember the shocking condition of our streets and public vehicles 70 years ago."

Car's Ignition System Should Be Checked

Poor pick-up, slow getaway and lack of power in automobiles in many cases are simply due to poor ignition service and are no fault of the car.

This is the opinion of automotive engineers, who recommend that a car's ignition system be checked regularly that necessary minor adjustments be made to insure carefree and economical operation.

A check of the ignition system by a competent mechanic is necessary at least every 10,000 miles, the engineers say, to make sure the battery, circuit breakers and spark plugs are working satisfactorily.

"DO RIGHT AND BE REWARDED"

(© by D. J. Walsh.)

Going he door she opened it upon the ildered face of old Mr. Brown. He a dark, common-looking old man wore a coarse black shirt and patched trousers; yet this unattractive apparel and the scarcely less presentable shell of mortality contained a personality that was pure and fine if Eloise had taken time to find it out. He looked timidly and pleadingly into the eyes of his daughter-in-law.

"Honey," he said, "I am sorry to bother you but Ma just tipped a pail of hot suds over herself and I guess she is fearfully burned. She didn't want I should tell you, but I want help. Can you come?"

Of course, Eloise went to the assistance of the old pair. What else could she do? They got old Mrs. Brown's wet clothing off and underneath some horrible burns were revealed. Eloise had had a course in first-aid and was able to make the old woman fairly comfortable until the doctor could be sent for.

When the doctor came he gave Eloise a quick glance and in a matter-of-fact way, which left no doubt of what he expected of her, gave some minute instructions in regard to the care of her mother-in-law.

Old Mrs. Brown was ill for several weeks, during which time Eloise was obliged to care for her and, with what help the men could give her, the house as well. There was much to do through all that time and Eloise had no time for self-pity; she was too busy. She made her mother-in-law as comfortable as she could, and indeed she grew almost to love the brave old woman who never uttered a word of complaint and was so perfectly grateful for everything everybody did for her. As for old Mr. Brown, he simply worshed Eloise in his shy way for the care she gave his wife, and the more his daughter-in-law watched him the more she could see that her husband was like his father in temperament.

As for the house, Eloise in order to live there had to revolutionize the whole place. First she packed away the heavy old dishes and brought out her own beautiful china and linen and silver—her wedding presents—which she had thought so entirely out of place in this house. One thing led to another, and by the time the elder Mrs. Brown was able to leave her room the house was as fresh as new paper and paint and plenteous scrubbings with soap and water could make it, and Eloise by the labors of her hands had created a home spirit that was to sweeten and enrich all their lives for many years to come.

As for Mother Brown, as Eloise had learned to call her mother-in-law, she fairly bloomed in the glory of the pretty home Eloise had evolved and gladly enough gave over the reign of the house to her efficient daughter-in-law.

Great Britain "Home" to Her Colonist Sons

A Scottish minister was speaking at a gathering on "The Love of Home," when he related an incident that happened during the World war which brings the idea of home very forcibly to one. He mentioned that in a letter received from France the writer stated that a number of officers belonging to a Scottish regiment, when in their billets behind the firing line, had invited, amongst others, an Australian officer to have dinner with them. The party wore on, and they were sitting round a wood fire, with candles as the illuminant, when the Australian officer remarked: "Would you Scotsmen like to know why we have come all the way from Australia to fight along with you?" Naturally, the Scotsmen answered that they would like to know. The Australian, who was a mandolin player, and had brought his instrument with him in order to entertain the party, remarked: "Then I will tell you how it is." Stepping forward, he blew out the lighted candles one after the other until nothing lighted the room but the wood fire. The Australian then sat down in a shaded corner, picked up his mandolin, and played "Home, Sweet Home." The incident greatly touched the officers.—Montreal Family Herald.

Stone Sack Prized as Relic of Roman Era

Among the interesting curios to be found in the museum at Oxford, England, is a huge stone sack. It is carved as though fresh from a man's back; it bears the mark of a rope which once encircled it in two places, and has the usual puckers at the mouth, where the string once secured the opening. All over the stone can be seen the marks of the coarse sacking which once covered it. Its history is curious. Some years ago it was fished up in the Thames below London bridge, where it must have lain for centuries. Some workman in the time of the Romans was carrying this sack of cement from a boat to the shore, when the burden slipped from his shoulders into the water. There, under the action of the water, it became solid, and as years passed away, the sack at last rotted off, leaving only the hardened cement within.

Rare Pearls

From earliest times pearls have been regarded as things of value. Cleopatra is reputed to have dissolved a pearl and drank it, and according to records of its shape and size it is computed that the jewel so destroyed was worth over £80,000—rather an expensive beverage! The shah of Persia gave £180,000 for a pearl, and the Empress Eugenie was the possessor of a famous necklace of matchless black pearls. The largest pearl ever found, however, was the Beresford-Hope pearl, which weighed 1,800 grains—over six times as much as the oyster that produced it.

Cleaning Up to Increase Yields

Diseases of Wheat and Corn Are Causing Big Losses to Farmers.

(Prepared by the United States Department of Agriculture.)

Wheat scab and corn-ear rots are causing large annual losses in the Central states by reducing acre yields and lowering the quality of the corn and wheat crops, according to the United States Department of Agriculture. Losses from wheat scab have averaged about 12,000,000 bushels of wheat annually for the last nine years. Corn-ear rots, some of which are produced by the wheat-scab organism, have caused a loss of approximately 100,000,000 bushels of corn annually for the last five years.

Cause of Scab and Rots.

The fungous parasites causing wheat scab and most of the corn-ear rots live over winter on dead cornstalks, wheat straw, stubble and other crop refuse. Spores produced by these organisms ripen in the late spring and summer and are blown from the old stalks and straw to the wheat heads and corn ears and cause wheat scab and corn-ear rots.

Much of this damage could be prevented by crop rotation, by clean-up of cornstalks, straw and stubble, and by thorough plowing, says the department. Removing or plowing under all crop refuse, if done in the fall, prevents development of the winter spores, and if done in the spring prevents their movement by wind to the wheat and corn plants.

Studies made in 1919, when these diseases were particularly heavy in several different states in the Corn Belt, provide figures showing the effectiveness of such clean-up measures. In Iowa, Illinois, Indiana, Ohio, Tennessee and Wisconsin the average amount of wheat scab was 40 per cent where the wheat was sown in cornstalks and only 18 per cent where it was sown in plowed oat and wheat fields.

Control of Rots.

The control of the corn-ear rots is just as striking. In 1926 corn was planted on two similar fields, the only difference being in crop rotation and soil preparation. The first field was on clover sod well plowed; the second was on continuous cornland with old stalks poorly plowed under. There was no damage on the first field, while on the second, 45.9 per cent of the ears were affected.

The clean-up program developed for the control of the European corn borer also will control wheat scab and materially reduce the amount of corn-ear rots. These facts should be taken into consideration in advancing the clean-up program in the borer-infested area.

Well-Drained Soil Will Make Conditions Right

When soil is thoroughly drained the plant roots are able to grow deeper and secure a large part of their food from the subsoil. A well-drained soil makes conditions right for the growth of the millions of micro-organisms that play an essential part in preparing food for crop plants. When a soil is waterlogged the air is prevented from passing into it where it is needed for the respiration of these organisms. Wet soils are too cold for the best growth of plants and prevent the decomposition of organic matter and the formation of humus. This keeps such a soil in a poor physical condition.

Soy Bean in Demand for Great Variety of Uses

The soy bean is now in demand for a great variety of uses aside from its value as hay and a green manure to turn under for soil improvement. Several oils are made from soy beans for cooking and salads; soy bean meal is an excellent stock feed; a health flour is made from the bean; it is used to manufacture a rubber substitute, the sprouts are used as green salads, and there are a variety of other uses to which the oriental visitor may be put. The demand for it is growing as manufacturers expand their fields.

Agricultural Notes

The majority of chickens that are marketed are entirely too lean and lanky.

* * *

The neighbor with sick hogs is likely to carry infection on his shoes or his clothing to your hog lots if he is permitted to visit them.

* * *

Don't crowd the late thin lambs on the market. Send only the fat ones, the others can be made to sell higher by good care and some feed.

* * *

Cod liver oil, to prevent leg weakness and promote growth, can be fed to growing chicks in the proportion of one pound to 100 pounds of mash.

* * *

According to results obtained at the University of Alberta, Canada, 50 per cent of the lambs weaned by ewes fed timothy hay die within four weeks after birth.

* * *

The young cockerels should be separated from the pullets by the time they are big enough to fatten, or at the latest by the time they weigh a couple of pounds.

Deep Plowing Best by Special Machines

Kind of Outfit to Use Will Depend on Needs of Soil.

Deep plowing can best be done by machines especially designed for that purpose, according to the agricultural engineering department of the New Jersey State College of Agriculture, Rutgers university.

The kind of outfit to use will depend on the needs of the soil. In any case, deep plowing involves a heavy expenditure in labor, and sometimes in equipment, and is only justified when the cost will be amply repaid.

Deep plowing is usually accomplished by means of an ordinary plow, thus bringing the subsoil to the surface. There are occasions when this practice is desirable, but usually it is preferable simply to loosen and stir the subsoil without bringing it to the top. If the plowing depth is increased gradually at the rate of about one-half inch each year, the problem of turning up subsoil will be less serious. Most plows are designed to do their best work when the plowing depth does not greatly exceed one-half of the width of the plow. For that reason a wide plow should be used for depths beyond eight or nine inches.

Deep tillage may involve merely the stirring of the subsoil or mixing the subsoil and topsoil. The subsoil plow runs in the furrow behind the regular plow and loosens the soil to almost any desired depth. Deep tilling machines are complete plows and may be of either the disk or moldboard type. They usually cut in two stages, i. e., the topsoil is first turned, followed by the subsoil. A depth of 20 inches or even 24 inches may be reached.

The traction necessary for pulling deep tillage machines is ordinarily much greater than for common plows. For this reason tractors are very well suited to this type of work.

Wash and Scald Dairy Utensils After Using

Everything that comes in contact with milk or cream needs washing and scalding after use. Milk contains an abundance of food for bacteria. When remnants of milk are left in the milk utensils they soon sour and produce objectionable odors and flavors. They are breeding places for bacteria and unless removed, quickly and completely, they cause the milk and cream of the next milking to become contaminated and to spoil. No matter how clean and sweet the fresh milk may be, the cream from it cannot reach the creamery in good condition if handled in unwashed and unclean utensils.

After use, the milk pail, strainer, dipper, the separator bowl and all other utensils are best first rinsed with cold water to remove the bulk of milk and cream that adheres to them. Thorough rinsing here makes subsequent washing easy. Then they should be washed with hot water that contains some alkali, such as washing powder. Use brush and plenty of "elbow grease." After washing, they should be rinsed and scalded thoroughly with plenty of boiling water.

Prevent Winter Rodent Losses During the Fall

Farmers in every state face an annual loss running into thousands of dollars each year through the activities of the more common farm rodents—rats and mice. This loss can only be estimated, since it is impossible to get an exact census of the number of each of these small animals existing in each state or to say exactly how much each consumed in a year. The loss is not only in feed consumed, but also in buildings damaged, harness weakened and general depredations of these numerous pests.

Control measures have often been reiterated. Just at present, the one big piece of advice is to get at these pests early in the fall, thus clearing the farm before the cribs are filled with corn and before the ground has become frozen. After the cribs are filled, rats and mice have an ideal hiding place to which they can scurry, once the hunt is on. Boards, boxes and all other places under which the rats and mice may hide will soon be frozen down, making it impossible for the farmer to exterminate all of the pests.

Pruning Small Fruit Is Desirable in Summer

The question, as far as the desirability of summer pruning is concerned, has only one answer in the berry patch. It is highly desirable.

The old canes, which have borne their crop of fruit, may be removed from the berry patch as soon as possible after harvest. This serves to remove any diseased canes and prevent the further spread of disease. It allows all the energy of the root system to go into the production of new cane growth, upon which the following year's fruit production may be expected.

In the case of black raspberries, the new shoots should be pinched off when they reach a height of about two and a half to three feet. The side shoots may be similarly pinched back, as they reach a length of twelve or fourteen inches.

By following this practice on soil where the canes grow rapidly and vigorously, bushy, productive plants may be expected, and the job will be found well worth while, simply in the greater ease of harvesting the following season.

THE KITCHEN CABINET

(©, 1928, Western Nowspaper Union.)

People have to live first before they can see, and they don't think until they are fed, and one needs always to have enough turnips and cabbages to eat without troubling about getting them, in order to see in them anything else except food. —Mrs. Wilkins.

VARIOUS THINGS

Adding the pulp of one-half of a banana to powdered sugar icing makes a most tasty frosting for any cake.

When serving whipped cream cut up a few marshmallows, add to the cream and when well mixed set away on ice for an hour or more. You will have the stiffest and best flavored of cream when serving time comes.

A mayonnaise dressing which is different has added to it a spoonful of apple butter.

When serving roast with boiled onions, did you ever take the onion water to make gravy for the roast? If not try it and add a few letters of vitamine to your meal.

Here is a good homemade sundae which will be enjoyed any day in the week: Put a ball of vanilla ice cream on a slice of canned pineapple. Over it pour a sauce made of canned apricots put through a sieve and sweetened. Sprinkle with some chopped salted almonds and serve.

Hot Spiced Tongue.—Boil, skin and trim a good sized beef tongue. Rub into it one-half teaspoonful of ginger and one tablespoonful of allspice. Fry a small onion in butter, dredge the tongue with flour and brown in a hot frying pan. When nicely browned place in a casserole, add one tablespoonful of flour to the fat in the pan, add one cupful of stock, the juice of a lemon and one-half cupful of seeded raisins. Pour this sauce over the tongue. Bake half an hour and serve.

Milanese Tongue.—Rub a clean beef tongue with salt and pepper and boil until done. Skin. Put a layer of cooked macaroni into a baking dish, add one cupful of strained tomato juice, one tablespoonful of minced onion, one small green pepper chopped. Lay the tongue on this and cover thickly with buttered bread crumbs. Bake until a rich brown.

Date Nut Pudding.—Cream one-third of a cupful of butter, add one cupful of granulated sugar slowly, then add three eggs well beaten, three tablespoonfuls of flour mixed with one-half tablspoonful of baking powder, one cupful of milk and one cupful of walnut meats cut fine. Bake slowly for one hour and serve with whipped cream.

About Bananas.

The banana comes to us in a germ proof package sealed by Nature herself. The thick skin protects the edible portion from bacteria, molds or other contamination. A worm eaten banana is unknown, this fruit is especially free from insect pests.

As a food for children ripe bananas are especially good, because they are nutritious and easily assimilated. The flavor is so delicious that a child will eat them instead of sweets. The fully ripe banana is being used more and more in the dietary of young children.

Among the dietitians who have given careful study to bananas as food for children are Doctor Pease and Doctor Rose of the New York Post-Graduate Medical school and hospital. The following quotation from the American Journal of Diseases of Children, summarizes in part the conclusions of their experiments:

"The banana is a useful fruit that can with profit enter liberally into the child's dietary, provided it is fully ripe or well cooked. If eaten raw, when fully ripe, the banana makes a most delightful and highly nutritious article of food. Its composition does not warrant the use of the banana as the main component of the child's dietary, but it can compete with other fruits, and is decidedly to be preferred to candies."

In the treatment of chronic intestinal digestion (celiac) Doctor Hass of New York has used bananas extensively. This disease is characterized by the inability to utilize properly carbohydrates and fats. In his treatment he has avoided all cabohydrates except those in the extremely ripe banana, and small quantities which occurred in certain milk products which he has used.

When a small cake is desired to serve with punch the following is one which has been recommended:

Hermits.—Cream six tablespoonfuls of butter and two-thirds of a cupful of sugar together, add one beaten egg, two tablespoonfuls of milk and mix well. Sift one and three-fourths cupfuls of flour with two and one-half teaspoonfuls of baking powder, one-half teaspoonful each of nutmeg, clove, nutmeg and salt and one teaspoonful of cinnamon. Add to the first mixture and beat well. Add one cupful of chopped raisins and drop by teaspoonfuls on a greased pan; bake in a hot oven ten to twelve minutes.

Right

Orville Wright, at a dinner in Dayton, talked about his controversy with the Smithsonian Institute.

"My brother and I worked hard," he said. "Our first flight was the result of years of hard work. Well, it's very galling to see the credit of all that work given to another.

"My brother, talking about our years of work, said one day at a dinner in France:

"'Necessity, the mother of invention, found the airplane the hardest one of her children to raise.'"

Constipated Since Childhood; In Fine Shape Now

"I just couldn't resist any longer telling you of your wonderful medicine, Milks Emulsion. I have been constipated as long as I can remember. Had typhoid fever when I was eight years old and since then my bowels haven't moved freely. I have taken pills, salts, castor oil, and everything a person could think of.

"Now, whenever I hear anyone say they are constipated I immediately tell them of Milks Emulsion. I have taken about 12 large bottles, not all of them regular. Now I keep Milks Emulsion in the house and take it regular. I have taken so much medicine that I thought it was all alike.

"I had a sallow complexion, no color, and felt miserable all the time; but now I have the color of health, and health is something I wouldn't exchange with anyone for a fortune. I wouldn't take ten times the price I paid for Milks Emulsion for the results I have obtained.

"I am 19 years old and weigh 105 pounds. Have gained 5 pounds since taking your medicine and am still gaining. My face is round and my arms are getting round. Before, people used to hang their hats on my elbows, thinking they were hatracks. Now I am going to keep on with Milks Emulsion until I weigh 125 pounds.

"You may publish this letter if you wish and anyone that wants to ask me about your medicine may do so. I promise to answer every letter. In fact, I couldn't do enough for Milks Emulsion to repay them for what their medicine has done for me." ROSEMOND BOWER, Frontenac, Kans.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Different

"Algy says Eloise is different from other girls."

"Yes, she likes him."

NURSES know, and doctors have declared there's *nothing* quite like Bayer Aspirin for all sorts of aches and pains, but be sure it *is* genuine Bayer; that name must be on the package, and on every tablet. Bayer is genuine, and the word genuine—in red—is on every box. You can't go wrong if you will just look at the box:

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Fall and early winter egg prices are usually the highest of the year. It pays to feed the hens well thru the summer so that they will lay during this period of high egg prices

It pays to feed young animals well

Corn Brings More Money "on the Hoof"

THE best authorities agree that "hogging down" corn is a profitable practice. Run out temporary fences through your corn and turn in your hogs. They are the best of harvesters—never miss an ear. You save the cost of husking, hauling, cribbing and feeding and get your hogs to market quicker and in better condition.

And for these temporary fences, as well as for permanent fences, use RED TOP steel posts. These can be driven at the rate of 200 to 300 a day, through the hardest soil, by one man using the One Man Driver. Are easily withdrawn and re-driven in a new location.

Red Top
GUARANTEED
Steel Fence Posts

You will save a lot of fence making and repairing time every year if you repair old fences and make new ones with RED TOP Steel Posts. Any fence erected on RED TOPS is there sound and secure for many years of service and enables you to practice the modern program of crop diversification and clear more money from your farm.

Stop in and handle a RED TOP post. Let us show you why it is a better steel post.

A message to the editor of this paper from GENERAL MOTORS

JUST about a year ago we published, in your advertising columns, a message in which we sought to give you and your readers an idea of what General Motors is and what it is trying to accomplish. At that time the public was purchasing our cars at the rate of about one in every three; and our Frigidaire automatic refrigerator and Delco-Light electric plants were leading in popular preference in their respective fields.

Since then each of our car divisions has introduced new, further improved models and public patronage has reached the point where almost one out of two automobiles purchased is a General Motors car. Frigidaire and Delco-Light products have showed comparable increases in sales.

The reason for this is two-fold. First, the public wants value for its automobile dollar and recognizes value when it is given. Second, General Motors is seeking so to conduct its operations as to deserve the goodwill of the public.

We are particularly impressed with the number of letters which have come to us from editors of small city newspapers during recent months. These editors, who are in a position to reflect local sentiment, speak of the goodwill which attaches to General Motors in their communities and express an obviously sincere appreciation of the character of General Motors' advertising in their publications.

For our advertising has been as much concerned with giving your readers facts of helpfulness to them in the purchase of automobiles as with the merits of our own products. Our messages have set forth the principles of trade-in transactions and used car allowances. They have dealt with time payments and the change in the public's attitude toward the used car. Other messages have told of the policies of General Motors and of how our resources are being employed to effect them.

That General Motors enjoys the goodwill of the people in the small cities and on the farms of America gives us an especial satisfaction and confidence in the future. It is in the country sections of the United States that half our population lives. It is there that the whole industry must look in increasing measure for maintenance of the production volume upon which high values and low prices depend. And it is there that General Motors is paying particular attention to its facilities for sales and service.

To our friends in your community we express our thanks.

CLIP THE COUPON

General Motors wants you to know what it is doing to give value to the purchaser of its products. Send in the coupon. There will be no obligation attached.

THE Public's Business

The old dictum that "the laborer is worthy of his hire" has become an economic principle, applicable to capital as well as to labor.

The public's dependence upon electric light and power makes the stability of these companies mandatory upon the companies and of first importance to the public itself. The prosperity of any community and of the electric light and power company serving it go hand in hand.

The electric power companies of America have built their business on the firm and broad foundation of keeping costs to consumers down and service up... Through the application of invention and economies of operation, they have been able to effect material savings which have been shared wth the public to attract new business.

In the life today, the electric light and power business is more than a corporate abstraction. It is the very root of a new system of national economy whose fruits we knw to be less toil, more comfort; less confinement, more leisure; less poverty, more wealth created and distributed to lift the level of living for all people.

For service rendered, electricity is unquestionably the cheapest item in the family budgt. Twenty eight dollars and thirty cents a year, or eight cents a day, is the amount spent by the average American family for electrical service.

Miss Marie Gauger came home from Hampton Friday afternoon for a week end visit.

Mr. and Mrs. Emil Patet were at Hayfield Sunday for dinner and a visit with friends.

Mis Root enjoyed a visit from a young lady, a school teacher from Alden, over Sunday

The W. F. M. S. will meet next Thursday, October 4th at the home of Mrs. Henry Griffen.

Mrs Wm Bell and Mr Bel's mother, who is here from Illinois, visited at the Fred Bell home Wednesday.

Mr. and Mrs. R. H. Fouts, of Sioux City, Iowa, visited from Friday evening until Sunday at the A. D. Gimer home.

The Misses Jennie, Anna and Johanna Albers were visitors at the Haus Barkema home near Meservey Sunday

Mr. and Mrs. Henry Wenck and daughter, Rachael, of Carrol, Iowa came Saturday for a visit until Monday at the H. F. Jost home.

Mrs Lena Schroeder clerked at the Barz store at Garner the latter part of the week, as her brother, Will Barz was absent from the store on acount of the death of his brother at Valley City, N. D.

Mr. and Mrs. Louis Daniels, of Carrol, Iowa, came Tuesday and remained until the following day visiting at the home of Mr. and Mrs. H. F. Jost.

Mr and Mrs. C. A. Frisbee and the Misses Neva Davis and Luella Smeby, of Garner, visited at the R A. Jorgenson home Tuesday afternoon.

Mr. and Mrs. Ben Swalve, Jr. and baby Harlan, and Mr and Mrs. Oscar Wenig and baby, returned to their home at Shegoygan, Wis, Monday, after a week's visit in Klemme.

The Auxiliary Ladies will install their new officers at the October meeting. The list of new officers was published in The Times last week

Rev Gauger left for Cherokee the first of the week to take in the Methodist conference in session at that place. There will be no church services Sunday at the Methodist Church.

At their last meeting, Thursday, Sept. 20, the Ladies Aid Society of the M. E Church elected new officers for the year. They are: President, Mrs R. A orgenson; Vice-President, Mrs J. N Day; Secretary Mrs Chris Gram, 2nd Sec., Mrs. C. G Waterman; Treasurer, Mrs. R. W Elder.

Mr and Mrs. A D Gimer entertained for dinner Sunday the following guests: Mr. and Mrs. H. R. Fouts and daughter of Riceville; Mr and Mrs R. H. Fouts, of Sioux City, Iowa; Mrs Mayme Christensen and Miss Carrie Fouts, of Boise, Idaho; Mr and Mrs Clarence Johnson and son, Robert, and Mr. L. G. Gimer, of this place.

Mrs J. N. Day and Mrs. R. A. Jorgenson were at Belmond Tuesday evening to attend a party given by Mrs. C O. Fitts and Miss Gertrude Ely, at the library. Mrs. Walter Robinson, soprano, of Hampton, and Mrs Geo. Kysteh, reader, of Clarion, provided the program, after which everyone visited and met others. Dainty refreshments were served.

A big success! is the way we can describe the reception held for the teachers at the Parish House last Friday evening A fine program was enjoyed and later a lunch served, consisting of sandwiches, pickles cake, coffee and jello. Supt. Penrod and Rev. Gauger had a special "stand-in" with the cooks for they were served each a hot hamburger sandwich, which in size resembled a small wash-tub They had put in their order for a special sandwich, but got "more than they could bite oc!"

Cows Missed His Boys

J G Edson of Casey knows that it pays to have the same milker milk the same cow regularly, for he found that when his boys were away and missed milking the cows which they regularly milk, the cows gave an average of 4 pounds each less milk than usual As soon as the boys returned the cows came back to their former milk flow. Mr. Edson is a member of the Guthrie County Cow Testing Association and keeps close track of the production and financial returns of his cows.

Boxed Stationery, latest tints 40c, 50c, 60c, 75c, $1.00 and $1.25. At The Times Print Shop. ttc

Lower Farm Prices In August

The general level of farm prices received by producers on Aug 15 was 6 points lower than on July 15 according to the monthly farm price report just issued by the U. S. Dept. of Agriculture, but at 139 it was still 7 points higher than on Aug. 15 last year. The base period taken as 100 is the five-year period 1909-1914.

The School Children of Avery Township are preparing to take part in the next Farm Bureau Meeting which will be given in honor of the dedication of the new school houses. Mr Baggs is expected to be present.

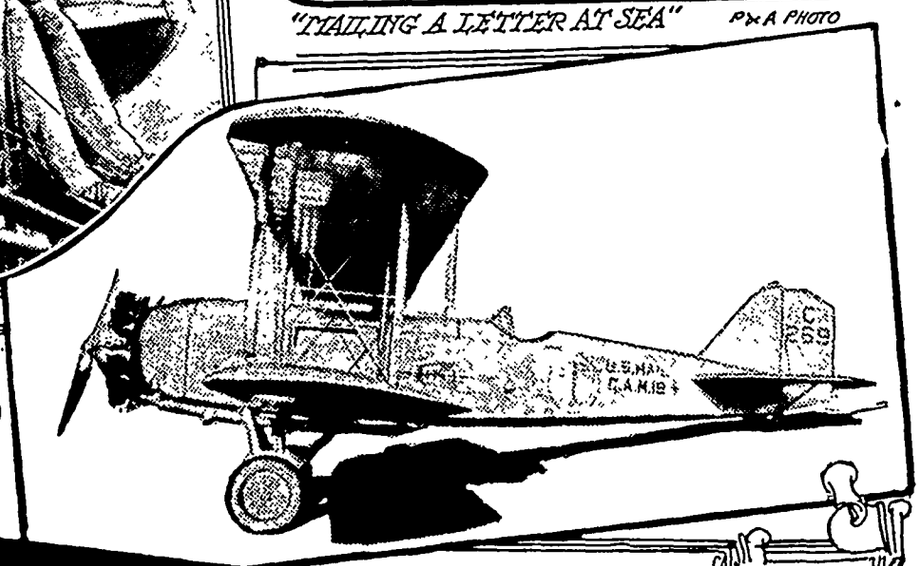
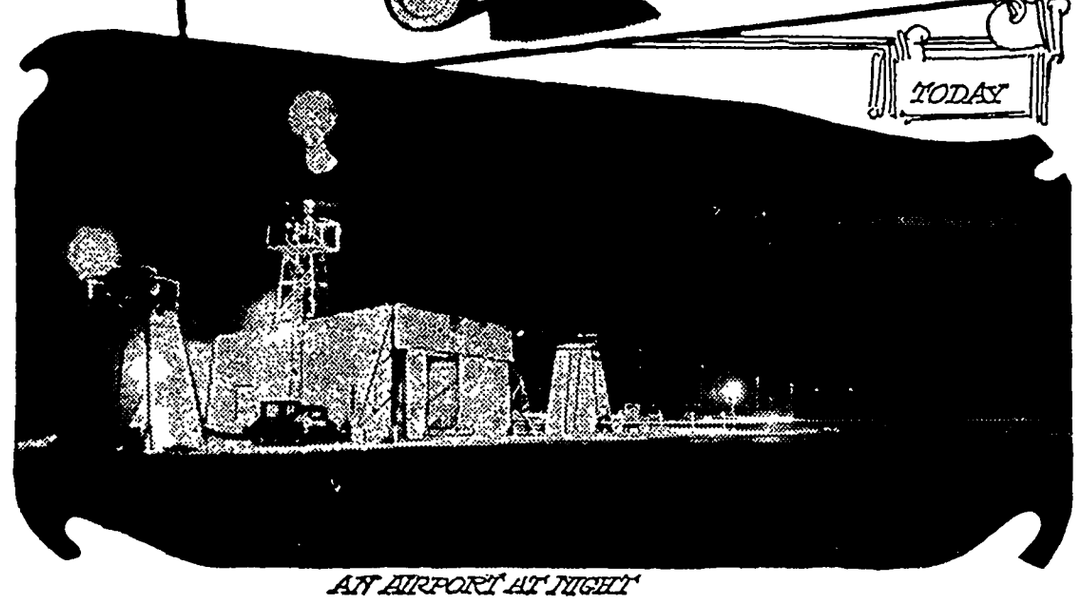
America Takes to the Air

YESTERDAY — P×A PHOTO

"MAILING A LETTER AT SEA" P×A PHOTO



TODAY



AN AIRPORT AT NIGHT

By ELMO SCOTT WATSON

DID you exclaim "Old stuff!" when you read the title of this article? "Of course, America has taken to the air! Orville and Wilbur Wright were the first to do it and that was 20 years ago. And look at all that's happened since then, especially in the last year or two. I guess the feats of Byrd and Chamberlain and Goebel and Lindbergh (and, of course, Ruth Elder and Amelia Earhart) and a lot of others prove that America has taken to the air, all right!"

But do you realize how thoroughly America (and that means ALL of us and not just a few daring flyers) has taken to the air, how intricately the "blue streak" of air travel is woven into the fabric of our national life and how many phases of our daily existence is affected by aviation? And do you realize how rapid are the developments in aviation—not "within the last year" but RIGHT NOW—and how many changing conditions are brought about by the airplane almost overnight? This last is one of the most amazing factors in this subject of America's taking to the air.

Take for instance the matter of "spanning the continent" or "diminishing the space which separates the two coasts of the United States." Do you realize that within seventy-eight years the time for doing that has been cut down from twenty-four days to eighteen hours and fifty-eight minutes? The best way in which to illustrate this astounding fact is to cite the career of a man whose life span of ninety-seven years has seen all of the rapid changes in transportation involved in that reduction take place. He is Ezra Meeker of Oregon Trail fame who claims the distinction of being the only man to cross the United States by ox team, stage coach, train, automobile and airplane.

In 1850 Mr. Meeker could have mailed a letter in New York which after three days by rail and twenty one days by stage coach would be delivered in San Francisco twenty-four days later. In 1860 another of his letters would go by rail in two and a half days to St. Joseph, where it would be carried by pony express in eight days to California; total time ten and one-half days. In 1876 a letter, traveling by special train would have gone from New York to San Francisco in 100 hours or four days and four hours. If Mr. Meeker should mail his letter in New York today to go by the regular mail routes on extra fare trains it would get to San Francisco in 90 hours, or 3 days and 18 hours. But if he put an airmail stamp on it (as he actually did with a letter when the new five cent air mail rate went into effect last summer) 31 hours, or one day and 7 hours, after it left New York it would be in the city of the Golden Gate.

Those statistics deal with regularly scheduled methods of transportation. When dealing with what may be termed "special effort" the records are even better and even more illustrative of the statement that conditions change over night. A record in crossing the continent was made a few years ago when A. H. Smith, president of the New York Central railroad died and a special train was provided to take Mrs. Smith from Los Angeles to New York. The trip was made in 69 hours and 11 minutes. In 1923 Lieutenants Kelly and Macready made a nonstop airplane flight from coast to coast in 26 hours and 58 minutes. For five years that record stood. Then one day in August of this year Art Goebel set out from Los Angeles for New York. He arrived in 18 hours and 58 minutes. Yesterday the Atlantic and the Pacific were 26 hours apart. Today they are but 19 hours apart.

And that fact is typical of the RIGHT NOW rapid development of aviation. What is new yesterday is old today and obsolete tomorrow. Between the time this article is being written and the time you are reading it some of the records quoted in it may already have been broken and some of the facts which are new now may truly be "old stuff" then. For the flight of the aviator establishing a record is faster than the workings of the typewriter, the typesetting machine and the newspaper press in putting the story of his feat into print and getting it to all who would read of it.

Nothing is more typical of the rapid advance of aviation, than the development of the air mail service. There was scarcely a day during the past summer that the newspapers did not tell of some new extension of this service. Perhaps the most important announcement and the one which brought home to most people the fact that aviation was a part of their daily life was the inauguration of the new five-cent rate for airmail. But on that same day Postmaster General New issued an advance announcement of another innovation—steamship-airplane mail service which would save 24 hours between New York and France. Another announcement at about that time was that a 1,260 mile air mail line was to be opened from Key West, Florida, to Porto Rico giving Cuba, Haiti, Santo Domingo and Porto Rico service each way three times a week and that possibly the service would be extended by way of the Leeward and Windward islands to Port of Spain in Trinidad. Still another announcement at that time was the projected opening of a 1,640 mile route from Key West to the Canal Zone serving Cuba, Mexico, Belize, British Honduras, Republic of Honduras, Nicaragua, Costa Rica and the Canal Zone seven times a week. And less than a year after "Lindy's" nonstop Washington-to-Mexico City flight the air mail was preparing to follow him across the border with an air mail route of 2,800 miles, the longest in North America. And these are only a few among the many of the air mail developments which came to pass last summer which are taking place as this is being written and which will be taking place when these words are read.

One high spot in the series, because it offered an opportunity for a recapitulation of air mail progress, was the announcement that on a certain day air mail planes had flown more than 25,000 miles (or the equivalent of the distance around the earth) over 35 states carrying more than seven tons of mail, exclusive of express and passengers. That statement, as had few others, forcibly demonstrated the fact that the day of dependable air transport had definitely arrived and that it was a more important factor in American social and economic life than most Americans realize.

It served, too, to recall the fact that this record of the mail planes, around which this nation is building its commercial aviation, was achieved after many disappointments and much pioneering. Air transport, as we have it today, began with the effort of the Post Office department to transport mail by airplane between New York and Washington ten years ago. Private capital was not interested and it devolved on the government to prove the feasibility of this form of transport. The postoffice expanded the service as funds permitted and late in 1920 the transcontinental route, the longest single airplane route in the world, was established. The mail was flown by day and "trained" by night.

It was apparent that unless night flying was possible, transportation of mail and other commodities by air could not attain maximum benefits. A memorable series of tests of night flying, over unlighted airways, was resorted to. In July, 1924, the transcontinental air mail went on a night and day basis and the time from New York to the Pacific coast was cut to 32 hours. That marked the beginning of the present day era of 24-hours-a-day air mail service.

Private capital began to show interest in taking over the operation of mail routes and in 1925 the postmaster general was given authority to contract with individuals to transport the mail on contract, this to be obtained by competitive bidding on a poundage basis. By September 30, 1927, all of the routes were being operated by private companies. Then began a systematic campaign to acquaint the public with the advantages of air mail and soon the poundage carried began to show substantial increases. New routes had been added and the mileage began to approach the 20,000 mile a day figure. Then came the announcement that the new air mail rate would be five cents for the first ounce and ten cents for each additional ounce and the public responded to it quickly.

Now, just ten years after the first mail was carried by day over a 218-mile "run" between New York and Washington there are 20 routes traversing 35 states, serving 62,000,000 people directly and millions more indirectly, through an air mail train hookup. The planes which made only two stops ten years ago now drop out of the skies onto 102 landing fields, scattered from the Great Lakes to the gulf and from the Pacific to the Atlantic. Cities which were distant yesterday are neighbors today for air mail has reduced the size of America to the dimensions of Texas, when measured in terms of transportation time.

Over these 20 routes during the first six months of this year a total of 42,000,000 letters were carried and in that time 1,051,767 pounds of air mail reached its destination safely and on time. But it is not alone in terms of letters that the new form of transport is so important in modern American life. Air transport has become a vital factor in American business and social life.

Recent increases in the rate of call money have brought airplane mail into a greater use by banks than ever before. With call money hovering around 6 per cent, and reaching 8 per cent in June, this year the highest since 1921, the banks and financial institutions, especially on the Pacific coast where three days' saving in transit time can be made by using air mail, utilize this form of transportation to save interest. And midwest bankers as well sent an increased volume of business air mail to save one or two days interest. Each day approximately $24,000,000 in negotiable paper arrives in Wall Street by airplane from all over the country. It has been estimated that in a year capital arriving in New York by air mail would total $7,200,000,000, and interest saved by the use of air mail is equivalent to $144,000,000, when interest is figured at only 2 per cent.

Thousands of dollars monthly are saved by firms who use air mail to forward bills of lading on cargoes like silk, oil, and rubber landed at seaboard points.

Colorado sweet peas are being shipped daily by air mail and within 24 hours after they are picked they are on sale in middlewest florist shops. California orchids have found enlarged markets since they could be delivered over the airway network. Sentimentally inclined swains are regular patrons of the airways in rushing flowers and presents to distant sweethearts

Such instances of how America has "taken to the air" to speed up communication, to transact business and to take every advantage of the facilities which the air mail routes provide could be multiplied indefinitely. And the end is not yet for January 1, 1929, will see more routes start operations, while work on air ports, necessary to secure air mail service, is going on in all parts of the country and the government reports 665 air ports projected in addition to the hundreds now operating. The lighting of airways continues and today there are "land lubber" lighthouses on mountains and prairie to guide the night pilot, the mileage of lighted airways being 7,000 miles and appropriations to light 4,000 more miles have been made for this fiscal year.

The day of the air mail is here and post office officials predict that the new air mail rates will so stimulate the use of air mail that in a few years practically all first-class mail will go through the air just as it turned to the train when that more modern method silenced the hoof beats of the pony express.

POULTRY

HEN COMFORT IS MOST PROFITABLE

When the rough days of autumn and winter arrive, the hens begin to hunt about for comfort and protection from winter winds and snow. If the poultry house is cold, dark, and uninviting, it is very unprofitable to the owner. It not only shortens up the egg supply, but next spring the hens go to work with a handicap because they have been poorly wintered.

If we give the hens one-half the attention that we do our other stock they start making things count, says a writer in an exchange. Our poultry house is built for economy and comfort for the hens. We are strong believers in the scratching department, making the hen work a lot. To do this we have all the floor space in the building arranged for bad days, for that is when they must work inside. We put up a gunny-sack curtain in front of the perches, which serves for two purposes. It keeps the hens warm when on the perches at night, and keeps them off the perches in the daytime.

Then we partition off the inside with this cheap burlap which breaks possible drafts, and also divides the flock in their work for the day. We also open the windows, and drop down a burlap curtain on bad days to keep out cold air, storms and beating winds. This burlap is almost indispensable in our poultry equipment, and we use much of it. Our front curtain to the main building is made from it, tacked upon frames so it can be raised or lowered as needed.

On snowy, rough days the hens work happily away, more contented than if outside. It has always been our custom to set up a windbreak of cornstalks against the lee sides of the fences and the west and north of the houses, and it is wonderful how the hens will take refuge behind this fodder barrage many winter days when the snow is off.

Consistent Layer Will Molt Late in Season

Most hens stop laying when they begin to molt. It is a fact no longer disputed that a hen, in order to make a high yearly record, must be a consistent layer. The early molting hen is not a consistent layer. She takes all the fall months as a vacation for changing her plumage. The consistent layer molts late and grows her new plumage rapidly.

The hen that under normal conditions molts early, will not lay as many winter eggs as the hen that molts late. Neither will she begin egg production earlier in the spring. No definite date can be set as to early molting. As a general rule, however, the first hens in the flock to molt should be sold, and the last to molt should be kept for breeding purposes.

Hens may be thrown into an early molt by starving while laying heavily; by irregular feeding; by roosting in a house that is poorly ventilated; or in any way that tends suddenly to check egg production. Molt from any of these causes should be avoided, as it is likely to result in a lower total egg production. If the pullets are hatched early, they will be laying in the fall and thus the egg production kept up at all seasons.

Poultry Notes

Teach the chicks to roost, as soon as they are old enough to learn.

* * *

Man must keep chickens free from lice and mites because the chickens can't.

* * *

Good feeding is important so as to maintain the resisting power of the fowls.

* * *

Good ventilation is very essential. If all openings are closed the house will become damp and the air vitiated.

* * *

Heavy egg production, like heavy milk production, can only be secured by liberal feeding of a well balanced ration.

* * *

During the summer months the colony house should be sprayed at regular intervals. A satisfactory spray can be made of three parts of kerosene and one part of crude carbolic. Coal or tar disinfectants are also satisfactory.

* * *

Sodium fluoride, used at the rate of an ounce to a gallon of water, is recommended by specialists for destroying parasites. This should be used on a warm day as a dip, and the birds should be completely immersed in the solution.

* * *

Hens should be as well fed when molting as when laying. Growing their new feathers is, if anything, harder on them than producing eggs.

* * *

Preventing the parasites by keeping the poultry house clean and by the regular use of dips is much more satisfactory than eradicating them once they have infested the flock. To control mites, the roosts and nests should be painted with carbolineum or some equally effective wood preservative. One treatment each year is usually sufficient.

Power of Music

It is significant how artists turn constantly to music to assist in expressing emotions which seem to elude the other arts, in reaching the hearts and imaginations of their hearers.—American Magazine.

A Sour Stomach

In the same time it takes a dose of soda to bring a little temporary relief of gas and sour stomach, Phillips Milk of Magnesia has acidity completely checked, and the digestive organs all tranquilized. Once you have tried this form of relief you will cease to worry about your diet and experience a new freedom in eating.

This pleasant preparation is just as good for children, too. Use it when ever coated tongue or fetid breath signals need of a sweetener. Physicians will tell you that every spoonful of Phillips Milk of Magnesia neutralizes many times its volume in acid. Get the genuine, the name Phillips important. Imitations do not act the same!

PHILLIPS Milk of Magnesia

Double-Deck Road

Plans for a double-decked steel and concrete highway between Atlantic City and Philadelphia are reported under way. It is estimated the cost of constructing such a road will run around $50,000,000.

HELPED DURING MIDDLE AGE

Woman Took Lydia E. Pinkham's Vegetable Compound

Denver, Colo.—"I have taken six bottles of Lydia E. Pinkham's Vegetable Compound and will take more. I am taking it as a tonic to help me through the Change of Life and I am telling many of my friends to take it as I found nothing before this to help me. I had so many bad feelings at night that I could not sleep and for two years I could not go down town because I was afraid of falling. My mother took the Vegetable Compound years ago with good results and now I am taking it during the Change of Life and recommend it."—Mrs. T. A. Miller, 1611 Adams Street, Denver, Colorado.

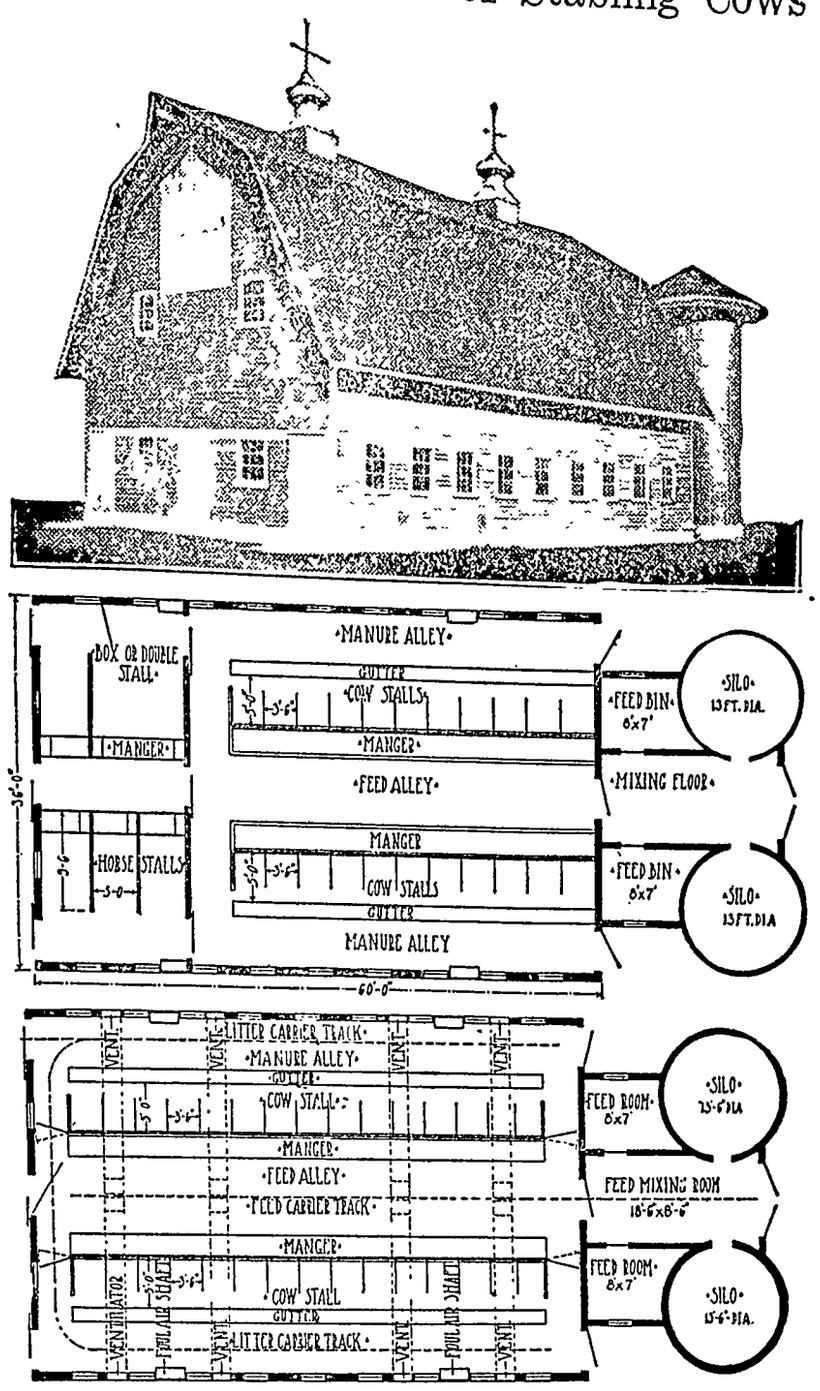
Arrangement of Barn Provides Best Manner of Stabling Cows



By W. A. RADFORD

Mr William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The arrangement of this barn shows the manner of stabling cows in the best dairy barns. The cross-section of the floor shows what is considered the acme of perfection in dairy stable building.

The cows face each other across a feed alley 8 feet wide between the depressions for the manger. From one stall partition across the alley to the other stall partition is 12 feet. The floor in this feed alley is the same height as the top of the manger. The cows' front feet, when standing, are on a level with the bottom of the manger. The manger has a depth of 10 inches and is 2 feet 2 inches in width across the top. The stalls are 3 feet 6 inches wide and 5 feet long, measuring from the stanchions to the gutter. This is the ordinary length and width of a cow stall for full-sized cows.

In practice it is seldom that a dairyman has enough small cows to make the special stall necessary. In this plan, however, four of the stalls are narrower and these may be used for small cows or heifers. The gutter drops six inches from the stall floor. The gutter is 16 inches wide and back of the gutter is an alley floor five feet in width. This alley floor is four inches lower than the stall floor and only two inches above the bottom of the gutter.

The reasons given for the higher feeding floor and the lower alley floor at the rear are that the feed is kept up where it works down into the mangers easily and also that looking at the cows from the front they appear to better advantage when you look down on them. On the other hand milk cows appear better from the rear when standing a little lower than the cows.

Besides this, ventilation is more easily handled when cows face in. Other reasons for this arrangement are that the coarse parts of roughage naturally gravitate down from the feeding alley to the stalls for bedding and from there to the gutter. The outside windows give better light at milking time than could be had by facing the cows the other way.

Dairymen differ in their views about facing cows in or out but it appears that a great many more good stables are built to face cows in than to face them out.

This stable is 36 feet wide, which accounts for the liberal alleyways. When carriers for feed and manure are used, these wide alleys are quite an advantage. While a litter carrier may be run through a narrower hallway, it is much more convenient and satisfactory to have plenty of room.

Home Building Should Blend With Landscape

In building a home, the architectural type should blend in with the surrounding landscape or add to the collective beauty of the other homes immediately adjacent; this item is too often overlooked.

The American colonial type, more especially those of frame with large spacious porches, require a much larger space than the English type, southern Italian or Spanish. To properly bring out all of the artistic lines of the American colonial a wide expanse of open lawn directly in front and as far back as the back line of the house is required.

We find many American colonial homes being wedged in between other types and their beauty lost by reason of restricted area. The real beauty of an American colonial can only be shown through proper landscaping which must be carried on conservatively and not overdone.

Many architects today in planning colonial types have resorted to severity in the lines, a condition made necessary by reason of the small lot area on which the house is built. A very elaborate entrance is about the only departure from the straight lines which is found, although some are using the plaster for ornamental purposes.

The southern type of American colonial differs from the severe New England type in that generous porches and columns were used to beautify as well as lend comfort and hominess to the design.

Tints in Brick

Architects have discovered a new world of beauty in that age-old material, common brick. For each brick is a rough, natural unit of burned clay, with its own individual character in form and color. What architects know now all America will know tomorrow.

Portable Fireplaces Used Without Flue

There are few home lovers whose sensibilities are untouched by the open fireplace, with its connotations of cheerful family gatherings and quiet reflection. There still remain many houses, particularly in the warmer regions of the country, where the fireplace has been omitted, and owners of such homes are confronted with costly bills when it is desired to install flues for the wood or coal-burning fireplace.

With a recently introduced line of portable fireplaces, especially designed to take the realistic electric coal grates, the desire for the fireplace is met at moderate expense. Moved about like any piece of furniture, these may be taken along from rented homes when the family finally does purchase its own house, and may be moved about the house at will.

The portable fireplaces can be supplied to harmonize with any scheme of decoration or style of furnishings.

Electric fire grates are simply connected to any electric outlet and successfully create the illusion of flickering coals by the ingenious arrangement of red glass, electric lights, and little vanes which revolve, causing the "glass coals" to alternately dim and brighten.

Shoulder on Shingles for Self-Locking Effect

The shoulders of certain self-spacing shingles seal the slots. In this way the thousands of openings found in the ordinary individual shingle roof are closed. Neither rain nor snow can blow through the roof boards and between them. Heat from within the house cannot escape. Nor can the heat from the summer sun beat into the house. Such advantages make the most practical of individual shingles.

Around Orchard

KILL PEACH TREE BORERS IN FALL

Attention of peach growers is called to the advisability of fighting the peach-tree borer as the time for making the application of the paradichlorobenzene (paracide) draws near. In normal seasons this treatment should be applied between October 1 and 15, says F. H. Lathrop, chief of the entomology division at Clemson college, Clemson, South Carolina.

To make the application, level the surface of the soil about the base of the tree to the distance of about twelve inches. Remove all weeds, sticks, stones, etc., within this area, but avoid disturbing the soil more than necessary.

The amount of paracide used varies with the age of the trees: one-half ounce for three or four-year-old trees; three-quarters ounce for five-year-old trees, and one ounce for six-year-old trees. It is important to measure the amount of material accurately for an overdose may produce serious injury to the tree.

The paracide is placed in a continuous narrow band on the soil about the base of the tree, leaving a space of two inches between the material and the trunk of the tree. Carefully cover the paracide at once with a few shovels of pulverized earth. Pack this soil firmly about the base of the tree.

On trees three years of age or older this treatment should be left undisturbed for four to six weeks, and ordinarily needs no further attention.

It has been found experimentally that this treatment may be applied even to one-year-old trees without serious injury, providing proper precautions are observed. However, it is doubtful if it is economically advisable to apply this treatment to trees less than three years of age. Infestation is ordinarily not serious in young orchard trees and may be removed without difficulty.

This treatment is not fool proof, and injury is likely to result unless directions are closely followed in making the applications..

Strawberry Varieties on Market of Two Kinds

The strawberry varieties on the market are of two kinds, those that have both pistils and stamens, that is, perfect flowering varieties that need no other kind to cause them to set fruit. Such are Howard 17, Senator Dunlap, and many others. The others produce pistils only and require a perfect flowering variety planted near them in order to secure fruit. These imperfect flowering varieties are usually indicated in the nursery catalogues with "I," meaning imperfect flowering, or sometimes with a "P," meaning pistillate. The Sample is an imperfect or pistillate variety. There are no varieties on the market that are staminate or "male," as such a procedure would be entirely unnecessary. Even the pistillate or "female" varieties produce small abortive stamens but not enough pollen to effect pollination.

Deformed Apple Leaves Worry Many Orchardists

Some concern is being felt among many orchardists regarding a wrinkled and more or less deformed condition of many of the apple leaves. This manifests itself in a dwarfed and wrinkled condition, together with more or less blistering of the leaves. These blisters frequently crack open on the under side of the leaves, leaving a browned edge, which is sometimes mistaken for fungous or insect trouble. Practically all of this injury is due to early freezes. There are other causes of such wrinkled leaves, particularly due to certain types of spraying that occasionally occurs. Of course, nothing can be done to remedy the trouble, but as the season advances less and less of the frosted condition will be noticed.

Horticultural Notes

No two trees in an orchard are exactly alike in shape and amount of growth.

* * *

Some say spray, some say dust, but either is harder on bugs and fungus than neither.

* * *

Keep the cultivator going in the young strawberry bed. The next month determines the 1929 crop.

* * *

Dusting for the control of brown rot of peaches has proven satisfactory. The dust mixture can be prepared at home or bought ready-mixed.

* * *

Pinching tips of growing raspberry canes is a snare and a delusion, fine in theory but poor in practice.

* * *

On our rolling orchard lands temperatures vary from point to point. Therefore, each tree should be treated individually at pruning and fertilizing time.

* * *

Containers for fruit should meet the demand of the consumer and be suitable for the variety of fruit. Small containers are used more now than the larger types.

CRISP AND DELICIOUS

Old and Young

Dr. William Jay Schefflein, chairman of the American Laboratory theater of New York, was condemning a play that portrayed a corrupt set of young people.

"The young are more innocent than the old," he said, "and that play is false.

"An elderly man and an elderly woman were watching the dancers in the ballroom of an ocean liner.

"'How beautiful youth is!' the woman said with a sigh.

"'Yes,' the man agreed, 'youth is very, very beautiful.' And then he added, 'A pity it has been left in the hands of children.'"

Lots and lots of people don't want to make a fortune. They want to enjoy themselves.

New Fire Extinguisher

Two Ohio chemists were as much mystified as anybody recently when they discovered that solutions containing salts of alkali metals, such as potassium, can put out a fire three times as rapidly as standard soda acid types of extinguishers. Their apparatus, says Popular Science Monthly, puts out a blaze in 12 seconds. The best previous record was from 35 to 45 seconds.

Donkey Wins Royal Home

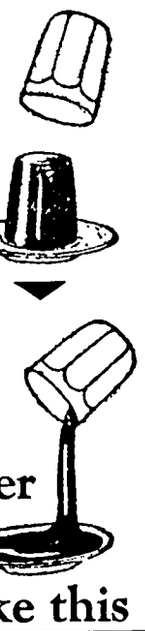
A white donkey with soft, appealing eyes won the heart of Princess Mary, of England when she was in Egypt a few months ago. She paid the owner a handsome sum and now the donkey is living in royal style in London and is the pet of the two sons of the princess.

Jelly made with PEXEL turns out like this

MAKING jelly jell is not a new idea—but Pexel is certainly a new idea. It is tasteless, colorless, odorless! It is a 100% pure-fruit product which, in addition to making jelly jell, saving hours of time, and cutting down cost per glass, does not dilute or change the finest flavor or color.

Pexel saves from one to three times the 30c it costs. Eliminates long and tedious boiling. Saves fruit juice, sugar and flavor—and makes more jelly. Get Pexel at your grocer's. Recipe booklet in each package. 30c. The Pexel Company, Chicago, Ill.

PEXEL MAKES JELLY JELL



never like this

Rapid Pedestrianism

Ordinary walking speeds are accelerated several times, it is claimed, with a pair of spring cog-wheel shoes which were exhibited at a recent show in London, says Popular Mechanics Magazine. They are somewhat like roller skates with a special driving mechanism, which is said to be easy for the wearer and makes it possible to attain a rate as high as 30 miles an hour.

Living River Dredge

The hippopotamus tears up and eats the great plants and weeds that grow in rivers, thus acting as one of nature's great dredges.

Playing Safe

"There is a big element of doubt in marrying a young man," writes a woman in the American Magazine, "but when a girl picks out a man whose character, reputation and income are established, she knows what she is getting."

Soft for Him

She—What do you think of my new dress?

He—I wish it didn't take any more to make you happy than it does to make you a new dress.

If a man takes offense he always makes a poor selection.

BAD LEGS

Do Your Legs Grow Tired Easily?

Do Your Feet and Ankles Swell and Inflame and Get So Sore You Can Hardly Walk?

Have You Varicose or Swollen Veins and Bunches Near the Ankle or Knee ?

IOWA CORN IS 85 PCT. GOOD

SLIGHT DAMAGE IN PARTS OF STATE IS REPORTED

Eighty-five Per Cent Of Iowa Corn Is Good This Year

Killing frosts during the past week stopped the growth of and slightly damaged most of the Iowa corn crop, but no more than 15 per cent of the total was damaged, said Charles D. Reed, director of the Iowa weather bureau and crop bureau in news dispatches today

The corn damage, some of it very slight, ranges to a reduction by half of the value per bushel of the mature crop, Mr. Reed's report said Most of the frosted corn is in areas that were damaged by hail, or replanted late in the spring. Some corn remains green in favored places, mostly along the Mississippi river

Silo filling and fodder cutting continued during the week, and a little husking for feed was started Corn husking is expected to get actively under way by Oct 15 or 20.

Seeding of winter wheat and rye progressed slowly. Lifting of sugar beets has begun with indications of a good yield and fair sugar content A good run on pumpkins was expected by some canning factories.

Fall and winter apples are ripening with nice color.

OCTOBER FIRST FINDS NUMBER ON MOVING LIST

Klemme Families Move About To Other Houses

Fred Gates and family moved into the Valentine Josten house in south-west Klemme Friday Herman Bridges and family moved into the Mrs Mary Waterman property in north Klemme, vacated by the Gates family The house vacated by the Bridges family, in Morningside addition has not been occupied as yet

Chris Reibe came down from Garner Wednesday evening to assist his son-in-law, Paul Mueller and family move. They are moving into the house across the street east of the Town Hall Harry Gram and family, who resided there, moved to the new rooms just remodeled at the old Farmers Lbr Co building

A large moving van from Fort Dodge loaded the Rev Gauger furniture and household goods today and moving them to their new home at Holstein, about forty miles east of Sioux City

John Day is again happy as he went to Garner last Thursday and returned with his car, which received the impressive end of an argument with a fliver a couple weeks ago. The Chivy looks and acts as good as new again.

WESLEY MINISTER COMES TO KLEMME

REV. GAUGER GOES TO CHARGE AT HOLSTEIN, IOWA

Has Served Klemme And Liberty Charges For Five Years

At the annual meeting of the Northwest Iowa Conference of the Methodist Episcopal church appointments were made at Cherokee Monday for the Algona District Rev A W Gauger, pastor of the Klemme-Liberty charge for the past five years was transferred to the Sioux City district and was given the Holstein Iowa charge for the coming year

W H Lease pastor at Algona, was renamed superintendent of the Algona District, of which Klemme and Liberty are members

Rev. H. E. Whyte Comes Here

Rev H E Whyte, former pastor at Wesley, was named to succeed Rev Gauger for the Klemme-Liberty charge

Rev Whyte comes highly recommended He is a young man in the profession but has acomplished fine work Rev Whyte and his wife are expected to arrive in Klemme Friday and he will preach his first sermon here Sunday morning

Rev Gauger and family are leaving today for their new home at Holstein This is one of the most desirable charges in the Sioux City District, and Rev Gauger's appointment to that place is in the way of a promotion The new position carries an increase in salary and is located in a town of about 1300 population and has but the one church to look after

Rev Gauger and his family have done much good in this community the past five years and they will be greatly missed, both in the church circles and the community life, as they were liberal in giving of their time and help in anything for the benefit of others

In appreciation of their long service here the people of Liberty and Klemme last night held a farewell for Rev Gauger and his good family This was largely attended

It is the best wishes of the community which go with them at this time to their new home and work at Holstein

Other Appointments Made

Following is list of the other appointments named for the Algona District -

Alexander, (A C Woodcock), Algona C H Seward, Armstrong, C B Mitchell, Ayrshire, E. E Benn Belmond, J T Snyder; Britt, G. W Eggleston, Buffalo Center, C H Moore; Burt N L Hotchkiss;

Ortmeyer Back To Clarion

Klemme friends will be interested to know that Rev F K Ortmeyer has been returned to Clarion, and Rev C H Van Metre will again stay at Garner Corwin Taylor remains at Kanawha

Clear Lake, J R Tumbleson, Corwith, W J Witter; Crystal Lake Ernest Stanworth, Dolliver, Huntington, O P Mueller, Emmetsburg, M L Sunderland: Estherville, R T Chipperfield; Fenton, E. T Gerkin, Forest City, Hayfield, D M Bush; Goldfield, D. M Simpson; Goodhope, South Cresco, A H Wood; Graettinger, Fremont, Fault Hardy-Renwick, S. I Jacobson; Havelock, C L. Day, Lake Mills, (Ada M. TROOP 56 GIVES FAREWELL PARTY

TROOP OFFICIALS PLAN PARTY FOR SCOUTS WHO LEAVE

William And Carlyle Gauger Move To Holstein, Iowa Today

The ranks of Troop 56, B S A, of Klemme has been thinned down by two Scouts who leave today for Holstein, Iowa, their new home.

Troop Committeemen, Scoutmaster D P Andersen, and Asst S. M, R A Jorgenson, Monday evening staged a farewell party for William and Carlyle Gauger, scouts of the local troop Following the regular meeting Mesdames J N Day, R A Jorgenson and C. G Waterman put on a pot of coffee, fried hamburger sandwiches and soon had a feed fit for a king and all scouts, Troop Committeemen, Officials and Rev and Mrs Gauger joined the boys in making this fine feed disappear in record time Besides the coffee and hamburger sandwiches, cake, ice cream and pickles were also on the menu Troop Comm. Rev. Grosshuesch gave a talk in behalf of the Troop, wishing the boys and their parents the very best at their new home expressing regrets that they were to leave Klemme William Gauger and Rev Gauger responded to the talk A few songs by the scouts and the Troop Committee made up the balance of the impromptu program

Troop 56 regrets to lose these two fine scouts but hope that at Holstein they may continue their work in scouting

FORMER STILLE CAFE AGAIN CHANGES OWNERS

Garner Man Expects To Reopen Cafe In Near Future

The former Stille Cafe, which has been closed for several weeks, was sold Monday to Elmer Christenson, of Garner, who owns a restaurant north of the Gildner Store at Garner

Mr Christenson will operate the two cafes, and will perhaps put a man in charge of the business at his place.

The cafe will again be open for business in the near future.

Mr and Mrs Harvey Stille were the recent proprietors of the Cafe, which they ran for about a year. Prior to that time Chas Busch had the business, which he purchased of M O Barr, who first opened the enterprise in Klemme.

MANY VISITING PASTORS AT MISSION FESTIVAL

Large Number Were Present At Special Services Sunday

The Mission Festival, which was held at the Reformed Church last Sunday was largely atended. A number of pastors and members of nearby churches were present for the services.

The following ministers were present and took part in the program:

Rev. John Neuenschwander, of Melbourne, Iowa; Rev. J. Meyer, of Woden; Rev. O. Poppen, of Belmond, Rev H. Weirenga, of Kanawha, besides many other guests.

Pullets May Lay Too Soon

Immature pullets should not be forced into egg production by feeding them on regular laying ration, caution Iowa State College poultry specialists. Pullets to lay large eggs steadily thruout the winter must have proper body size and weight. Leghorns or other light breeds may be considered ready for a regular laying ration when 3 to 3¼ pounds in weight. Heavier breeds, such as Reds, Rocks and Wyandottes, should weigh 4½ to 5 pounds

Now's the time to think about getting seed corn. Next spring is too late

OPEN SEASON ON PHEASANTS IS DOUBTFUL THIS YEAR

May Have One Open Date Late This Fall For Festive Bird

The Times has been asked on a number of occasions regarding the dates on open season for pheasants this fall. We have been unable to gather any authoritive information on the subject. The following article from the Des Moines Register is self explanatory:-

An open season for pheasant shooting in Iowa this fall is doubtful, officials of the state fish and game department said

Although some requests have been made for petitions to be circulated asking an open season, officials said the number of protests against opening the season out-numbered those on the offensive.

It was stated definitely however, that if the state game warden grants an open season, it will only be for one day and the time will be late in November or early in December

Many Complained of 1927

Many complaints have been registered with the state department over the 1927 open season, which was in effect in nineteen counties. The conflict in the law regarding the daily limit resulted in many of the protests

The law in one place provides for a bag limit not exceeding twelve birds a day, and in another provides for a limit of three cock birds a day The department ruled that three cock birds were all that were permitted, but many violations were reported

Pheasants are reported plentiful in many counties in the northern part of the state, while in others it is reported that the wet weather this spring greatly reduced the number of young birds

The state department is planning on asking the legislature in January to remove the limitation on the department in expenditure of funds, claiming the work of the bureau has been hampered by limiting expenditures to $180,000.

Revenue from licenses in the state averages between $225,000 and $250,000, and officials believe they should not be hampered in carrying on the propagation of fish and game in the state

LATE NEWS DISPATCH SAYS NO PHEASANT SHOOTING

Des Moines, Oct. 4.—W. E. Albert, state game warden, announced Tuesday that there would be no open season on pheasants in Iowa this year. "It was found that the supply was not large enough to warrant the opening of the season," he said."

Eating between meals is one sure way to ruin an appetite. Children who are allowed to piece between meals frequently are the ones who refuse to eat the things they should at meal time.

COWS FEWER IN NUMBER, BUT PROFITS ARE MORE

That's Result Obtained By Cow Testing Associations

When Safely Bros joined the Taylor-Page Cow Testing Association two years ago, they were milking 14 cows. Now they are milking only eight, but are making more profit above feed cost than they formerly got from the 14.

This instance of the value of cow testing association work is reported by Kenneth Birdzel, tester for the Taylor-Page association Only one new cow has been added since the Safelys started testing.

Seven of the poorer producers were culled and this, together with better feeding and management methods learned in the association work, is responsible for the fact that they are making more from the 8 cows than they did from the 14. It takes much less labor to care for 8 than 14 cows and this time saved can be used for other work.

SCOUTS TO STAGE SUPPER FRI. NITE

MONEY NEEDED FOR NO. IOWA AREA COUNCIL EXPENSE

Klemme Troop 56 Want To Do Their Share In This District

How! HOW!

Klemme Scouts of Troop 56 are "raring to go" and on Friday evening beginning at 6 30 p m until all are served are going to put on a real supper at the Parish House The money thus raised will be given to the North Iowa Area Council, with headquarters at Mason City, to be used in defraying expenses in this district Troop 56 wants to put this over big, and put Klemme on the map as a live-wire town and full of Scout PEP!

At their meeting Monday night the Scouts laid plans for the supper for Friday evening, October 12th In addition to the good eats furnished by the Scouts mothers, a Scout program is being arranged by the boys themselves Together with the big supper you will get, a good time and entertainment, you will be helping out one of the finest organizations in the U S

Scouts are planning an advance ticket sale which they will put on a few days The price of a good square Scout Supper is 50 cts. for adults and 35 cts. for children

HOW! HOW! LET'S GO!

And—everybody is invited too Come and bring your friends.

Friday eve, Oct. 12th is the date

Potatoes What Are Potatoes!

It's too bad the state fair is over, otherwise we predict the championship for spud raisers would rest in the hands of Alvin Stokesbary

When it comes to producing fine spuds Alvin goes in for size to boot and compared with the ordinary varieties Alvin's spuds resemble elephants along side other potatoes So large are his spuds that he does not even have to weigh or measure them. He simply dumps out nine on a pile and that's a peck, thirty-six to the bushel, etc For an ordinary family one spud makes a meal, three hundred and fifty-two a whole year's supply.

Alvin has some samples on display at the Meat Market, unless Sam or Happy have had them hauled home

Ye Editor captured one of the spuds a few days ago. We sent our small son with his coaster wagon to haul it home A couple of other boys helped him push the wagon Our good wife peels the potatoe as she needs it, chops off a corner and cooks it With everybody having a good appetite and if company comes to help us out, we may have eaten the potato in a couple of more weeks.

Now you tell one!

WILSON HIGHWAY GETTING A NEW COATING OF GRAVEL

Fifty Or More Trucks Hauling For Highway Number Fifteen

Highway No. 15 is being regraveled this week and about fifty or more trucks are hauling gravel between Klemme and Garner and expect to have the work done by the end of the week. With this part completed the road is practically regraveled all the way from the county line south of Goodell to Garner. Only a light coat of gravel is being applied at this time.

Scout Supper at the Parish House Friday eve., Oct. 12th.

Sir George H. Wilkins (second from right) and members of his expedition that sailed on the Southern Cross for the Antarctic.

NEWS REVIEW OF CURRENT EVENTS

Mabel Willebrandt's Hoover Speeches Create a Stir—Help Storm Victims.

By EDWARD W. PICKARD

MRS. MABEL WILLEBRANDT, assistant attorney general of the United States, was the storm center of the political campaign last week, and if she enjoys publicity she must have had the time of her life for she fairly crowded the candidates themselves off the front page. Mrs. Willebrandt has especial charge of the government's legal proceedings against dry law violators and already had incurred the enmity of wet New Yorkers who resented the raiding of night clubs and similar doings. Then she started out to make speeches for Mr. Hoover and one of her first efforts in this line was an address to a big Methodist gathering in Ohio in which she urged that all members of that church should get together to help in the defeat of Al Smith. That gentleman and countless others immediately accused her of attacking him on religious grounds, and there were numerous demands that she be separated from her government job and also that she be taken from the list of accredited Republican spellbinders. Some of the Hooverites seemed to be fearful lest she become the female Doctor Burchard of the campaign.

Declining to retract or modify any of her utterances, Mrs. Willebrandt asserted she had asked the Methodists to oppose Smith on the ground of his views on prohibition and had made no mention of his religious beliefs. She said Smith himself was trying to "dodge behind his own church," and furthermore that the Democratic candidate was the one who had made prohibition an issue of the campaign. Congressman Walter Newton of Minnesota, chairman of the Republican speakers' bureau, stated that Mrs. Willebrandt was speaking under the auspices of that bureau and that demands for her, from every part of the Middle West, were far more than she could fill.

GOVERNOR SMITH, in the course of his Western tour, spoke at Denver in advocacy of absolute government ownership and control of the natural water power resources of the country and for immediate action in the construction of Boulder canyon dam. Then he moved up through Wyoming to Montana and in Helena devoted most of his address to the Teapot Dome scandal and the alleged responsibility of the Republican party therefor. The chiefs of the seven Indian tribes of the state made him a member with the name "Leading Star." Turning back toward the east, he passed through North Dakota, where the political situation is peculiarly complicated, and during a brief stop in Bismarck he was christened "Chief Charging Hawk" by the Sioux. Thursday night he spoke in St. Paul on a variety of topics, and next day he entered the Wisconsin tangle. It was believed that in his Milwaukee address he might take up the subject of prohibition, hitherto ignored during the tour. Some days before Senator Blaine of Wisconsin had completed his flop by announcing his intention to vote for Smith. Republican leaders said this amounted to little since Blaine never had been a real Republican.

Senator Borah of Idaho was the big gun of the Republican speaking battery during the week and his loudest explosion was in Kansas City, where in lively fashion he contrasted Smith's record and knowledge of the farm problem with that of Hoover, violently assailed the equalization fee, and blew up the charge that Hoover was responsible for the lowering of the price of wheat during the war. He also defended the Eighteenth amendment and paid his disrespects to Tammany.

WITH the approval of President Coolidge, Secretary of State Kellogg sent identic notes to Great Britain and France setting forth our government's attitude toward the naval limitation agreement reached by those two nations. The contents of the notes were not made public, but it was understood that they stated the British and French suggestions could not be accepted by the United States as a basis for naval limitation, and pointed out the reason. The American objection to the Anglo-French agreement was tersely expressed by the London Daily News when it said: "It gives Great Britain unlimited small cruisers, France unlimited small submarines, and gives America nothing she wanted. It is almost too crude to be true." Dispatches from London insist there are no secret clauses in the agreement. Some of the French papers are indignant over the American opposition to the pact, saying England and France are held slaves of the United States by their war debts.

WITHOUT having made much progress toward disarmament, the assembly of the League of Nations ended its fall session. Almost its last act was to pass a resolution that the disarmament preparatory commission should meet again not later than January 1. No mention was made in it of any plan for a general disarmament conference, and Germany and Hungary refused to vote after Count von Bernstorff had made a bitter speech chiding the league for its slowness and asserting that Germany was helpless and surrounded by heavily armed neighbors. At the final session the earl of Lytton, speaking for India, warned the league that while it was firmly established in Europe, its position in Asia was not assured. Costa Rica, which resigned from the league in 1925, gave notice that it would rejoin.

REHABILITATION is now the great task in Florida and Porto Rico and the job is in the hands of the Red Cross, as is that of feeding the thousands of storm sufferers. An immense sum is being raised by popular subscription for these purposes. In Florida the dead are now estimated to number more than 2,300, most of them in the region about Lake Okeechobee, where the dikes broke down and the waters were driven over the land. The exact number never will be known. Reports indicated that the white death list was about 700. The danger of pestilence made it necessary to burn most of the bodies as soon as they were found. The Porto Ricans were reported to be in pitiful state. There were more than 15,000 cases of influenza, and malaria, measles and other diseases prevailed among the refugees. The homeless on the island are stated to number 284,000.

Probably 150 persons, including children, perished when the big Novedades theater in Madrid, Spain, burned. The fire started on the stage and the tragedy closely resembled the burning of the Iroquois theater in Chicago years ago. The flames spread through the business district of the city, destroying many buildings.

Five villages in the state of Coahuila, Mexico, were swept away by floods and many lives were lost. The Chinese city of Hankow was the scene of a tremendous conflagration that destroyed thousands of buildings and an unknown number of lives. The old Spanish fort of Cabrerizas Bajas on a hill above Melilla, Morocco, was demolished by an explosion of the powder magazine and scores of lives were lost.

EMILIO PORTES GIL, secretary of the interior, was elected provisional President of Mexico by a joint session of the senate and chamber of deputies, without opposition. He will take office on December 1, when President Calles' term expires. The congress also ordered that a popular Presidential election should be held on the third Sunday of November, 1929.

Senor Portes Gil will be one of the few Presidents Mexico has ever had of exclusively civilian career, being devoid of any active military experience. Until selected by President Calles for his cabinet he had been governor of Tamaulipas, where he established partial prohibition, suppressed open gambling, and established the first state supported industrial school in Mexico for indigent children. He is known as a friend of the United States. According to a statement issued by him, he will follow the policy of the late President-Elect Alvaro Obregon in the uplift of the peasantry, encouragement of irrigation and extension of schools in the rural districts and mountains. He will work to incorporate the Indians, which form 50 per cent of the population, into the body of the nation. He will go along the lines laid down by President Calles. While organized labor will not be represented in the cabinet, he will, nevertheless, extend a helping hand to the labor unions as part of the government policy to uplift the laboring masses.

INLAND WATERWAYS CORPORATION, in an application filed with the interstate commerce commission, proposes extension of the government barge lines services on the Mississippi and Warrior rivers to all parts of the country through the establishment of joint barge and rail rates and barge and rail through routes. The corporation's application first asks the commission to declare that the services of the barge lines are a public convenience and necessity for expansion of the services to the tributaries of the Mississippi, including the Illinois waterway Virtually every railroad in the country is named in the part of the application asking the establishment of through routes and joint rates. Joint barge and rail rates 20 per cent lower than all-rail rates between specified points are sought by the corporation, that being the basis on which existing barge and rail rates are generally made.

WHEN Nicaraguans go to the polls on November 4 to elect a President every voter will be marked on the hand with a chemical stain as he casts his ballot in order to prevent repeating. To avoid misunderstandings the election board, headed by Gen. Frank L. McCoy, U. S. A., issued a statement explaining that the chemical was harmless and the stain will disappear within a day or two. An election official said malicious agents are spreading reports among the Indians that the Americans will use a chemical that will poison the voters. Other alleged threats to hinder the voting are rumors that the Americans eat children, and that the Sandinistas will attack the booths, or kill those registering or voting.

MME. GANNA WALSKA, opera singer and the wife of Harold F. McCormick of Chicago, is an American citizen, despite her residence in France, and will have to pay duty on jewelry and personal effects which are said to be valued at about $2,500,000. This ruling was made by Philip Elting, collector of the port of New York, who told Henry D Bulkley, attorney for Mademoiselle Walska, that her claim to foreign residence and consequent immunity from duty had been denied. Bulkley immediately made plans to appeal and will, if necessary, carry the matter to the United States Customs court and the Court of Customs Appeal.

ANOTHER "air derby," this time from Los Angeles to Cincinnati, was pulled off last week. First place in class A was won by Robert A. Drake of Pittsburgh, Pa., and in class B by Charles W. Holman of St. Paul. Arthur Goebel, flying his "Yankee Doodle" plane, won the nonstop race in 15 hours and 17 minutes.

CHINESE Nationalists in Shanghai unofficially announced that they had practically completed the reorganization of the system of government, eliminating the previous Soviet form, which was borrowed from Russia. Under the new scheme, General Chiang will head the Nationalist government council, his position being similar to that of President or premier.

Gen. Pai Chung-hsi reported from northern Chihli province that he had completely defeated a remnant of the Chihli-Shantung troops and that Gen. Chang Chung-chang had fled, presumably to the Japanese leased area in Manchuria.

DEATHS of the week include those of Sir Horace Darwin, son of Charles Darwin and himself a noted scientist, and R. F. Outcault, veteran newspaper comic strip artist.

CARBON MONOXIDE IS DEADLY ENEMY

More Than Thousand Human Lives Claimed by Deadly Gas.

"One of man's most deadly enemies, carbon monoxide,' which has been called 'the universal poison gas,' will form the subject of a new educational motion picture film to be produced within the near future by the United States bureau of mines, Department of Commerce," according to a statement issued by the Chicago Motor club, which bases its assertion on a bulletin received from the Department of Commerce at Washington.

Thousand Lives Lost.

"It is said that more than a thousand human lives were claimed by this deadly gas during the past year, and that 700 deaths were due to drivers of automobiles being overcome while their engines were idling in closed garages. In photographing this film, not only will the peril of carbon monoxide contained in automobile engine exhausts be emphasized, but attention will also be given to the hazards due to the presence of carbon monoxide under certain conditions in factories, in homes, and in fact, anywhere that there may be possibilty of exposure to the products of incomplete combustion of fuels."

What Film Will Show.

The Chicago Motor club bulletin points out that, "The film will show how, by proper ventilation, accumulations of carbon monoxide may be prevented. There will also be pictured methods of first aid treatment and resuscitation which may be administered to a victim of the poison gas if found before death has occurred. The film will be given wide circulation by the bureau of mines in the hope that, through the universal language of visualization, knowledge of this deadly enemy of mankind may become widespread, thus serving to diminish the annual heavy death toll from this cause."

Stop Annoying Hissing by Knotting the Hose

Occasionally suction windshield wipers are afflicted with leakage, with the result that the driver will hear an annoying hissing sound when he accelerates the engine. When this happens he's puzzled because he knows that if he disconnects the rubber tubing the hissing will be worse.

Here is where a temporary remedy is in order, no matter how makeshift it may be. With a piece of string tie a loop in the rubber hosing. This will serve as a valve to stop suction at this point.

Another plan is to disconnect the rubber tubing and plug the end of the copper tubing with a piece of chewing gum.

It is also permissible to pinch the end of the copper tubing with the pliers. This may shorten the tube a little, since the pinched part may have to be cut off when the wiper is repaired, but a slightly longer rubber connection will cover this.

AUTOMOBILE ITEMS

Postponing needed repairs only adds to the expense bill.

* * *

There isn't a single dimmer among the bright lights of automobile production.

* * *

Unlike umpires, judges reverse their decisions. A motorist in Ireland was recently fined $1,070 for violation of a traffic rule. Later the judge reduced the fine to $11.25.

* * *

Motor vehicles have become the main factor in transportation in western Australia, where new sections have been developed so rapidly as to outdistance the railroads.

* * *

"I don t recall any such accident," said the hit-and-run driver, as usual. "That's fair enough," replied the judge, easily. "You'll be in jail so long I shall have no recollection that you are there."

Watch Your Car Doors to Prevent Accidents

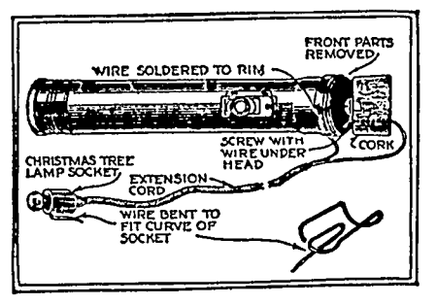
Several serious accidents have been reported during the first six months of the year involving cases where children have fallen out of machines due to extreme carelessness on the part of the motorist, according to a bulletin issued by Si. Mayer, president of the automobile club of Illinois.

Never allow a child to sit next to the door of an automobile if it is possible, nor extend it any such privileges as closing or opening the doors for passengers. In this wise many doors, which would otherwise seem securely fastened have merely been closed without the double-snap lock taking hold. A three-year-old son of a party of tourists was recently hurled to the pavement from a car traveling at an approximate speed of 40 miles per hour. The child was severely injured and may possibly be crippled for life, due, no doubt, to some one's carelessness.

"At this youthful age, the child could not be expected to do the things that the grownup should of done," declared Mr. Mayer, and it is the duty of every motorist having children, or for that matter, anyone as a passenger to carefully guard against this form of accident.

Trouble Light Is Handy in Working Around Car

The best place for a trouble light is where it will shed its rays on the work as nearly as possible in line with the line of sight. When working around a car you constantly shift your point of view, so no matter where you fasten the light there are often shadows just where you want to see what you are doing. Fig. 3 shows how to fix up a trouble light



Design for a Trouble Light for Attachment to Your Hat Brim So That It Shines Always Directly on Work Anywhere About Your Car.

that will always be where you want it. A cork takes the place of the regular reflector and lens, with a screw in the center of the cork to make contact with the center electrode of the battery. A Christmas tree lamp socket or a standard miniature lamp socket is connected to a length of electric light drop cord with one of the wires connected to the screw in the cork and the other to the case by jamming it under the lens retainer ring threads. The socket is attached to the brim of your hat by means of a wire bent as shown in the illustration.—Popular Science Monthly.

Ecuador Bars Cigarette Lighters on Motor Cars

Matches and motor cars may have nothing in common to the layman, but to one American automobile manufacturer they mean something in so far as motor-car shipments to Ecuador are concerned.

In this South American republic the government has just granted a Swedish match concern the sole right to sell matches in that country. Under this contract matches mean anything that produces fire, and therefore electric cigarette lighters come under the government ban.

Ecuadoran consuls all over the world have been instructed to refuse to certify invoices for automobiles on which cigarette lighters are standard equipment, while masters of ships calling at ports in this country must place all foreign matches under seal.

Clearly Seen Road

Never operate a car at such speed that it cannot be stopped within the portion of the road immediately ahead. A clearly seen course is limited by curves and roadside objects upon them; by the brows of hills which are being ascended; by other vehicles; by approaching headlights and the condition of the windshield; by the intensity and direction of projection of headlights and other factors.

RESULTS OF OLYMPIC GAMES BY WIRELESS

Playing Safe

"There is a big element of doubt in marrying a young man," writes a man in the American Magazine, "when a girl picks out a man for character, reputation and income are established, she knows what she is getting."

...d of Constipation. ...mproved Both Health and Looks

...suffered from stomach and bowel trouble for a number of years. I finally got so bad that I had no life or energy left, and felt that there was no help for me. I was completely worn out all the time, had a distressed, haggard look on my face. My mind was dull, my eyes blurred, and I was unable to take an interest in anything. I commenced using Milks Emulsion in May. It occurred to me that the best way to let you see the wonderful improvement Milks Emulsion had made in my health and appearance, would be to send you the picture that I happened to have taken a few weeks before I started using your Milks Emulsion, and to have another picture taken now, and send both to you. I am still taking your Milks Emulsion and improving each day. I know I could have been in my grave had it not been for your Emulsion. I love to take it. It is so pleasant and agreeable.

I only weighed 108 pounds when I began to use Milks Emulsion, and now weigh 138 pounds. It has cleared up my complexion, made my eyes bright and a difference in my looks, as you can see by the two pictures. I don't look like the same woman. To my mind It is Nature's beautifier. I will try to get everyone that I meet to take Milks Emulsion as it is the most wonderful medicine in the world." Yours truly, MISS SARAH KATE WRIGHT, 722 Anderson St., Bristol, Va.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

CARTER'S LITTLE LIVER PILLS

LIVE STOCK

SCIENCE SEEKING ABORTION REMEDY

(Prepared by the United States Department of Agriculture.)

More than $50,000,000 a year is a conservative estimate of the losses from the great animal plague of abortion. Dr. John R. Mohler of the United States Department of Agriculture points out that ten years ago the losses from tuberculosis and abortion were approximately equal. In ten years the tuberculosis losses have been halved and the abortion losses doubled.

In advising live stock growers in regard to the abortion problem Doctor Mohler, who is chief of the bureau of ... industry, does not minimize the seriousness of the condition but he holds out hope for eventual solution, reports marked progress in the understanding of the disease, gives suggestions for identification and control of the disease, and warns farmers, stockmen, and dairymen against medicinal agents for the "cure" of abortion. "Up to the present no medicine for the cure of abortion has proved an effective agent. The variable activity of the disease in a given herd has made it difficult to measure the value of remedies and has led to giving undeserved credit to substances of no value."

"Abortion," says Doctor Mohler, "strikes directly at the source of our cattle supply, and at the very crown, the udder, upon which the functioning of our whole dairy industry depends. The heavy toll of the disease includes not only the loss of calves, loss of milk flow directly incident to the abortion, temporary and permanent sterility and other breeding troubles, but also the reduced milk flow due to the presence and activity of abortion bacilli within the udder."

The bacillus that causes the disease was discovered about thirty years ago by Professor Bang of Denmark. Subsequent study has revealed many facts about the disease and the organism. The bacillus may live for months in dead animal tissue; it may be killed by careful pasteurization and by ordinary disinfectants; its favorite habitat is the pregnant uterus and it does not remain long as a rule in the non-pregnant one; but it may reach the udders of infected cows and there maintain itself for long periods and continuue to infect the milk.

One misconception popularly held, says Doctor Mohler, is the belief in the importance of the genital organs of the bull as a means of spreading the infection. This may at times be of importance, but it is not considered an important agency of the spread of infection. Calves are rarely infected. Two types of the bacillus are recognized, one affecting hogs and one cows, and the strains of bovine bacilli differ widely in virulence.

"The principal channel of infection," Doctor Mohler says, "is the digestive tract. This is contrary to the early belief which incriminated the genital tract as the principal portal of infection. Infection is spread by the aborting cow through the products of abortion and the discharge which follow in enormous amounts." Doctor Mohler emphasizes particularly the danger of infection from an infected cow that has given birth to a calf in a seemingly normal manner. "Cases of apparently normal birth, accompanied by infection in the placenta and discharges, are grave dangers because they are unsuspected."

Discovery of these facts and the fact of the bacillus maintaining itself in the udder for long periods have thrown light on the problem and point the way to better control methods.

Alfalfa Pasture Ideal for All Farm Animals

It is a well recognized fact that alfalfa is the best hog pasture crop we have. Every hog producer should have a patch of it for that purpose. He should have more than that; he should also provide alfalfa hay for his brood sows, as well as for his fall pigs. The fact is that alfalfa hay should be provided for all farm live stock. It can be grown on practically every farm, though in most cases liming of the soil will be necessary in order to get a stand.

Mature brood sows that are being fed one pound of corn per 100 pounds live weight, per day, and one-fourth of a pound of tankage per head per day in addition, will eat half to three-fourths of a pound of alfalfa hay daily. The great value derived from the feeding of it lies in the fact that it gives bulk to the ration and because it furnishes protein, mineral matter and vitamins. Its vitamine content seems to be extremely valuable.

Legume Roughage

It is impossible to say too much in favor of legume roughage as compared with timothy hay as a feed for live stock. It is invaluable for dairy cows, for growing cattle and sheep, and, in fact, for all classes of live stock on the farm. It is even of great value for wintering brood sows. Nor is the high feeding value of legumes the reason for urging a greater acreage of these crops. They are, as every farmer knows, important soil improves and builds.

Less Poisoning by Liberal Feed

Overgrazing of Pastures Forced Animals to Eat Inferior Plants.

(Prepared by the United States Department of Agriculture.)

Conservative grazing, which assures an abundant supply of nutritious range forage, is an important factor in reducing losses of live stock from poisonous plants, says the forest service, United States Department of Agriculture.

Cause of Losses.

At a recent meeting of the Intermountain Live Stock Sanitary association Prof. C. E. Fleming of the University of Nevada pointed out that a great many of the death losses from eating poisonous plants were the result of overgrazing and depletion of the better forage plants, which forced the live stock to eat plants of inferior value—including those that are poisonous—in sufficient quantity to prove fatal. Doctor Murray of Salt Lake City also stated that in his opinion many losses on the winter range were due to malnutrition as a result of live stock having to subsist mainly on inferior range plants and having an inadequate forage supply.

Reduce Losses.

In the drought region of southern Arizona it is extremely important, the forest service has found, to graze the range conservatively, since short rainfall may result in the production of a feed supply materially smaller than usual. It was found that by utilizing approximately 80 per cent of the growth of the important palatable plants in the average year and by reserving a part of the grama range, on which the vegetation cures well on the stalk and is excellent winter feed, losses could be reduced from the average for that region of about 10 per cent to about 2 to 3 per cent of the animals grazed. Not only is there a direct saving to the live-stock producer from fewer death losses, but the better condition of animals results in a greater production of young and better development with a more satisfactory price. Thus, profits have been made from cattle during the recent trying years where conservative grazing has been practiced, although net losses were shown by those outfits in the region which utilized their range forage too closely.

Get Seed Wheat Free of Objectionable Weeds

Many wheat growers in the Corn Belt, because of the extensive winter killing that occurred in this area last season, will be faced with the necessity this year of providing themselves with seed wheat. Seed may often be obtained from neighboring farmers, but it may sometimes be necessary, or it may appear advisable to bring in seed from greater distances. In any case, says the United States Department of Agriculture, the farmer should assure himself that the wheat seed he buys is free from weed seeds. Garlic, cockle, and cheat or chess are especially objectionable and unfortunately are widely prevalent in many wheat-growing areas. When once introduced on a farm they are difficult to eradicate, and grain containing such weed seeds is discounted on the market. A little care in preventing the introduction of noxious weeds in seed wheat may save a lot of trouble.

Highest Grade Alfalfa Is Marketed Profitably

A much greater quantity of high-grade alfalfa could be produced and marketed profitably in the United States, the United States Department of Agriculture believes, if producers would study market demands and make their production and loading practices conform to the market requirements. Hay dealers in all the big alfalfa distributing markets receive each year thousands of orders for high-grade alfalfa hay which can not be filled because of an insufficient quantity of hay of this grade. The chief demand for baled alfalfa hay is from dairymen, and large numbers of them who now depend largely upon mill feeds as sources of protein would doubtless become buyers of alfalfa if supplies of a high-grade hay were available.

Agricultural Notes

The poulterer who markets only plump, juicy broilers, and attractive, delicious roasters, commands the trade.

* * *

The safest procedure of all is to vaccinate all pigs at weaning time. In the long run that is cheap insurance.

* * *

Lambs that receive a good supply of milk and grow rapidly are apt to carry the highly prized "milk or baby fat" when they reach market weight.

* * *

Soy bean hay is considered a very good feed for horses; in fact, it is in a class with alfalfa and clover hay. If the beans are fairly well matured horses which are merely being maintained need little other feed.

* * *

The term "permanent pastures" commonly includes all the land that is left in pasture year after year for a long time. If it is plowed up once in four or five years it can scarcely be included with the permanent pasture land.

Home Gardens Need Proper Fertilizer

Apply Manure at Rate of 10 to 20 Tons Per Acre.

Fertilizer for the typical home garden usually should consist of manure supplemented with a complete vegetable fertilizer or with superphosphate, says F. O. Underwood of the vegetable garden department at the New York State College of Agriculture at Ithaca. Manure should be applied at the rate of 10 to 20 tons to an acre, or, on the basis of smaller areas, 50 to 100 pounds to 100 square feet of space.

The supplementary fertilizers should be applied at the rate of two to three pounds to 100 square feet of garden. On rich soils, it is often advisable to not manure too heavily as tomatoes and root crops may produce excessive top growth at the expense of fruit and roots. Under such conditions either superphosphate or a complete commercial garden fertilizer will usually overcome the difficulty. If manure is not available, leaves, lawn clippings and similar plant refuse may be used as a source of humus. These should be supplemented with two to four pounds of a high-grade garden fertilizer for each 100 square feet.

Where the soil is sour, many vegetable benefit by an application of lime. Six pounds of ground limestone or half as much hydrated lime, may be used for each 100 square feet where there is an indication that lime is needed. Applications may be made every three or four years. Home gardeners should be cautioned, however, that the organism causing scab of potatoes is more active in limed soils, Professor Underwood says.

One way to avoid this difficulty where lime is needed is to put lime on part of the garden at a time and on this part plant vegetables other than potatoes or beets, he points out.

Egg Marketing Methods Described in Bulletin

Egg marketing in this country is the subject of a revised bulletin just issued by the United States Department of Agriculture. It covers the conditions under which market eggs are produced and the methods used in marketing them.

The bulletin, prepared by Rob R. Slocum, marketing specialist of the bureau of agricultural economics, emphasizes the fragile, delicate nature of the egg as a food product and the need for proper handling and speed of delivery to insure the consumer the best possible quality.

Eggs are produced for market on specialized poultry farms of the Atlantic and Pacific coast regions, but in greatest volume on the general farms of the Middle West. In these sections they are concentrated at shipping points and transported by express or by refrigerated freight where they go into immediate consumption or are placed in cold storage to take care of seasonal fluctuations in the rate of production. The marketing channels through which the eggs pass vary greatly in their relative complexity, says the author, depending upon how direct the contacts are between producer and consumer or through how many different hands the eggs pass during their journey to market. Constant effort has been made to improve methods of handling and marketing, including better care on the farms, more frequent marketing, more favorable temperatures by the use of chill rooms, better packing materials, better grading and more efficient distribution, all of which is resulting in a gradual raising of the level of quality of eggs reaching consuming markets and a reduction in breakage.

Copies of the publication, Farmers Bulletin No. 1378-F, Marketing Eggs, may be obtained free from the Department of Agriculture, Washington

Best Time to Cut Sudan Grass for Crop of Seed

The best time to cut Sudan grass for seed is when most of the heads are fully ripe. At that time many of the early heads will shatter, but as the plant tillers abundantly, it is not possible to catch all of the heads at the same stage of maturity.

The seed crop is generally cut with a grain binder and is cured in shocks. Sometimes a corn binder is used when the crop has been planted in rows on rich land and has grown very large and coarse, but ordinarily a grain binder is better. A grain separator will thresh and clean the seed perfectly if the seed is plump and ripe when harvested, but if the seed is cut too early it will be light and some of it will be blown over in the straw. For threshing light seed a clover huller is probably better than a grain separator.

When Pasture Is Short Feed Corn Meal Mash

If the pasture is short, or if it is desirable to force the goslings for an early market, a mash composed of corn meal, wheat middlings and ground oats in equal parts by weight, mixed with 5 per cent of meat scraps, will make an excellent feed. Grit and oyster shell should be available as well as a good supply of water.

Mature geese can be handled in a similar manner. Unless they are being confined for some special reason, they will secure most of their living from good range. During the breeding season they should receive a mash similar to that enumerated above.

POULTRY

PLAN TO FATTEN HOLIDAY TURKEYS

The marketing season for turkeys is from about the middle of November to the last of December.

Confining turkeys during the fattening season has not proved successful. They will eat heartily for two or three days, but after this they will lose their appetite and begin to lose flesh rapidly. Naturally, they are wild birds and thrive only when they have access to open range. During the summer and fall they find an abundance of feed on the average farm; however, it is advisable to give them a small feed at night for the purpose of bringing them home to roost. Grasshoppers and other insects, weeds and grass seeds, green vegetation, berries and grain picked up in the fields and about go to make up the turkey's daily ration, and when all these are plentiful they are in splendid condition when the fattening season arrives.

A satisfactory plan for fattening is to begin by feeding small grain night and morning, not enough at time but that the birds will walk away still a little hungry, and gradually increase the quantity, adding some corn, until they are given all they will eat three times a day. Along at the close of the fattening season corn, supplemented with fresh sour milk, may constitute the full ration. New corn may be fed safely provided the turkeys are gradually accustomed to it, otherwise scours may result.

Various kinds of nuts are a natural fattening feed picked up by turkeys on the range. In parts of Texas many growers, properly situated, depend solely on acorns for fattening their turkeys, and when the mast is plentiful the birds are marketed in fairly good condition.

Use Lights in Poultry House During Winter

A series of cautions for the user of lights in the poultry house is found in the Ohio state poultry calendar. They are as follows:

Grade and pen pullets according to age, condition, and laying qualities, so that each group may be properly handled.

Excessive fall production makes it hard to keep the flock in heavy production during the winter.

Don't use lights to produce more than a 14-hour day. Excessive use of lights means overproduction, followed by a slump.

To avoid a spring molt, discontinue lights slowly in the spring.

Use lights on breeders only after January 1 to 15, in order to help them back into production.

Don't crowd production over 60 per cent, otherwise the flock will become thin and molt.

Be regular in management and use of lights.

Feed grain liberally when using lights.

Always have feed and water available when lights are on.

Do not turn lights off too early in the spring.

Do not stop feeding early and late in the day when lights are finally eliminated.

Early Layers Usually Heavy Egg Producers

Pullets that begin to lay early usually are the heaviest producers in the flock and for this reason it is an excellent practice to mark them so that they can be given due consideration for their performance next year when it comes time to cull the flock, it is pointed out by L. E. Card, of the University of Illinois. Pullets that are extremely late in starting to lay are always certain to be the least desirable birds to use as breeders. In breeding for higher egg production, individuals of this type should be kept out of the breeding pens.

If the early-laying pullets are banded with numbered leg bands, all that is necessary is to make a record of the individual band numbers and the approximate date on which egg laying starts. Another equally satisfactory scheme is to use colored leg bands, in which case a different colored band should be used to mark the pullets that start laying in the different months.

Laying Hen Sings

A laying hen is usually a singing hen and happiness is encouraged by plenty of good oat or wheat straw on the floor. Practical poultrymen differ as to the respective merits of wheat, rye, and oat straw for litter. Each has been used without any noticeable differences as to wearing and sanitary qualities. Rye straw is somewhat stiff and oat straw breaks rather readily. The best advice is to use what is convenient and keep the house in good sanitary condition.

Cause of Fowl Typhoid

Thank your lucky stars if you've never met up with Eberthella sanguinarium. She's the germ that causes fowl typhoid, a most destructive disease. It acts much like fowl cholera, the birds becoming dull, droopy, with pale combs and a greenish or yellowish diarrhoea. Death usually isn't as rapid as with cholera. One mark of typhoid is that the liver enlarges and becomes a brownish or greenish color, while the kidneys look faded, as if cooked.

Makes Life Sweeter

Next time a coated tongue, fetid breath, or acrid skin gives evidence of sour stomach—try Phillips Milk of Magnesia!

Get acquainted with this perfect anti-acid that helps the system keep sound and sweet. That every stomach needs at times. Take it whenever a hearty meal brings any discomfort.

Phillips Milk of Magnesia has won medical endorsement. And convinced millions of men and women they didn't have "indigestion." Don't diet, and don't suffer; just remember Phillips. Pleasant to take, and always effective.

The name Phillips is important; it identifies the genuine product. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

PHILLIPS Milk of Magnesia

Balsam of Myrrh
All dealers are authorized to refund your money for the first bottle if not suited.

Taught to Handle Money

A course of instruction in money management will be given experimentally to elementary pupils in two grades of Driscoll and Devotion schools, Brookline, Mass. The course, planned by a member of the faculty of the economics committee of the Massachusetts Teacher's federation, is a systematic study of the implications of money as they confront the self-supporting adult; the necessity for work; capacity to earn; usefulness of work to others; payment in return for service, and use of money in saving, spending, and giving.—School Life.

The ultimate notion of right is that which tends to the universal good.—Francis Hutcheson.

It is better to remain ignorant than learn things you shouldn't know

DR. CALDWELL'S THREE RULES

Dr. Caldwell watched the results of constipation for 47 years, and believed that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation is a mild vegetable compound. It can not harm the most delicate system and is not habit forming.

The Doctor never did approve of drastic physics and purges. He did not believe they were good for human beings to put into their system. Use Syrup Pepsin for yourself and members of the family in constipation, biliousness, sour and crampy stomach, bad breath, no appetite, headaches, and to break up fevers and colds. Get a bottle today, at any drugstore and observe these three rules of health: Keep the head cool, the feet warm, the bowels open. For a free trial bottle, just write "Syrup Pepsin," Dept. BB, Monticello, Illinois.

The Farmer Finds A Real Champion

Governor Smith's speech on the farm question at Omaha, has set the western prairies on fire with enthusiasm for the Democratic candidate. That in Governor Smith the farmers have at last found a champion who is jumping into the fight for agricultural justice on their side is the keynote of all unbiased comment coming from the Western states.

Governor Smith went to Omaha, in the heart of America's great, farming empire, to tell the farmers that he is prepared immediately on election to take the leadership in getting the kind of agricultural legislation they have been vainly demanding from the Republicans for the past eight years. The response to this offer of friendship and action has been electric.

The people who till the soil and supply the nation with its food are now assured that if Governor Smith is elected they will see the standard of "Equality for Agriculture" hoisted to the flagstaff of the White House. They are expressing their enthusiasm in no uncertain terms.

Especially telling has been the contrast drawn between Governor Smith's pledges for the farmer and Herbert Hoover's policy of evasion. Hoover's hostility to Agriculture has been well known ever since his days as war-time Food Administrator. Now as Republican candidate he is trying desperately hard to cover up his bad past record, but his heart remains the same as before, and his only plan to solve the problem of the surplus crop is to starve the farmers out until there is no more surplus.

On such cruel and unjust policies, Governor Smith has turned his back. He offers the farmer prosperity and equality through the McNary-Haugen principles and the farmers are showing that they know him now as their best friend and chief hope.

Gov. Smith Says---

I pledge to the farmers and to the people of this country that no stone will be left unturned to give immediate and adequate farm relief.

* * *

He (Hoover) wants to drive enough farmers out of business to pull down the surplus crops. The way he wants to relieve the farmer is to destroy him.

* * *

Mr. Hoover, as the chief adviser of the last two administrations, upon the subject of agriculture, assumed a direct responsibility for the hostility and inaction of the Administration, and continues to assume the responsibility by his fulsome indorsement of the record of Coolidge policies.

* * *

"Do you believe that liquor is the great issue of this campaign?" I certainly do not.

* * *

The absolute separation of state and church is part of the fundamental basis of our Constitution. I believe in that separation and in all that it implies.

* * *

I can think of no greater disaster to this country than to have the voters of it divided upon religious lines.

* * *

If there is any citizen of this country who believes that I can promote its welfare, that I am capable of steering the ship of state safely through the next four years, and then votes against me because of my religion, he is not a real, pure, genuine American.

Your Vote— And Your Radio

Your vote will not make you a king. But it will, if used intelligently, give you rights and privileges which you do not now enjoy.

Your vote, with the votes of your fellow citizens, can bring about conditions which will make your home a happier one. It can enable your children to get a better education, a better chance in life. You can use it, with other clear-sighted men and women, to shorten your working hours, to increase your income, to decrease the cost of living. You can make it bring you the full value of your crops.

As a voter, you are today in an advantageous position. By turning the dial on your radio set, you can bring into your own living room the voices—and the opinions and experience—of the Nation's most distinguished speakers, thinkers and legislators. You can hear them discuss the candidates and the campaign issues.

You will want to know why so many eminent business men, educators, social workers, philanthropists, labor leaders and farm experts are breaking party ties to help elect "the most constructive, fearless, honest and human candidate since Lincoln."

You will want to know—and he wants you to know—his record and his pledges on the issues which are of vital importance to you—such issues as farm relief, the tariff, labor legislation, educational reforms, the correction of laws which cannot be enforced.

A gigantic radio hook-up has been arranged to give you that information. From scores of radio stations, six times each week, will come informative talks which will acquaint you fully with the tremendous questions to be determined by this election.

These radio stations are listed below. The schedule will be followed until election day. CUT OUT THE LIST. KEEP IT NEAR YOUR RADIO. BE SURE TO LISTEN IN. Know what you are voting for.

Iowa Farmers Endorse Smith, Condemn Hoover, While G. O. P. Senator Protests

DES MOINES, Iowa.—Still another 'Midd' Western farm organization, the Farmers' Union of Iowa, with 15,000 members, has come out for Gov. Smith.

Unqualifiedly endorsing the Corn Belt Committee resolution endorsing the Democratic platform and candidate, despite an earnest plea for Hoover by Senator Brookhart, it adopted a resolution of its own which said:

"The nomination of Herbert Hoover, pledged as he is to carrying out the Coolidge policy and with his record of injustice to Agriculture, should be resented at the polls by every farmer of the Middle West."

Avery Twin-Lakes News

Emil Lau called at the home of his parents one day last week.

Edwin Josten was a Goodell caller one day last week.

Bill Beier delivered gasoline in this vicinity recently.

Henry Buseman was a Garner caller one day last week.

Julius Priebe was a Mason City caller one day recently.

Herman Lauen of Goodell spent Sunday in Klemme.

Robert Greiman is assisting with work at the Albert Etchen farm

Ben Swalve spent a few days of last week on his farm.

Erwin Priebe spent Monday evening at the Will Wenz home.

Henry Buseman and family spent Thursday evening of last week at the Dick Swalve home.

Mr. and Mrs. George Platt visited at the Fred and Albert Etchen homes last week one day.

Edwin Josten called at the Fred Becker home to see his father, who is ill.

Ronald Tandy spent Sunday last with Arthur Klinkhammer at the Will Wenz home.

Miss Emma Goll spent Monday evening at the home of her sister, Mrs. Carl Wille and family.

A settleup threshing meeting was held at the Wm. Wenz home Monday evening.

Edith Haupt spent one day last week with her sister, Mrs. Elmer Schlei

Mrs. Julius Priebe is visiting at the home of her daughter, Mrs. Paul Goll and husband this week.

Many from this vicinity attended the "Hour Glass" given at the Idle Hour theatre Tuesday evening.

Emma Kothenbeutal spent Tuesday evening with Miss Emma Goll at the Carl Wille home.

David Schwichtenberg hauled grain to Goodell several days last week.

Anna Albers of Goodell spent Sunday evening at the home of Miss Lucille Kraus.

John Wessels spent Sunday afternoon at the home of his parents, Lippo Wessels near Ventura.

Fred Etchen and Robert Greiman called at the Dick Swalve home on Thursday evening.

Herman Priebe has been ill with rheumatism and is not much better at this writing.

A modern corn crib and oat bin combined is being built on the Albert Etchen farm.

The Iowa Union Telephone Company has been repairing and fixing lines in this community recently.

Mr. and Mrs. Harry Walters, of Mecervey, spent Sunday evening at the Ben Swalve home

Edwin Josten and John Wessels were callers at the Albert Etchen farm one day recently.

Mrs. Geo. Platt spent one afternoon of last week at the Fred Etchen home.

Mr. and Mrs. Lippo Wessels and sons spent Sunday last at the Will Wenz home.

A great number from this community attended the Annalu Mission Festival held at the Reformed Church in Klemme Sunday.

The Misses Leona, Esther and Francis, and Franklyn Buseman spent Monday evening at the Dick Swalve home.

Mr. and Mrs. Alvin Swalve spent Tuesday afternoon at the D. Swalve home, returning to their home near Ocheydan in the evening.

Mr. and Mrs Dick Swalve and family, Gilbert Schaper and Julius Priebe spent Sunday evening at the Herman Priebe home.

Mesdames Dick Swalve, Elmer Schlei, Bill Greiman, Jr. and Edna Priebe and Mrs. Alvin Swalve spent Monday evening at the Wm. Wenz home.

Many from this vicinity attended a Farm Bureau meeting held at the Avery Center Schoolhouse last Friday evening. Prizes were awarded and refreshments served.

Mr. and Mrs. Alvin Swalev, of Ocheydan, spent Sunday afternoon at the home of Mrs. Swalve's aunt and family, the Lippo Wessels family.

Mr. and Mrs. William Reuben and daughters, Doris and Della were guests at the home of Mrs. Reuben's parents, Mr. and Mrs. Geo. Albers, Sunday.

Mr. and Mrs. Albert Etchen and sons, Wynton, Merle and Carrol and daughter, Eloise, were entertained to dinner at the Geo. Platt home Sunday.

Mr. and Mrs. Fred Kothenbeutal and daughters, Emma and Gladys, and son Harold, were entertained to dinner at the Henry Barz home Sunday.

Mr. and Mrs. Alvin Swalve, of Ocheydan, Iowa, came Friday of last week for a few days visit with the Swalve and Wenz families. Mrs. Swalve was formerly Esther Wenz.

Mr. and Mrs John Watermiller and sons Jay, Ray and Neale, of Meservey, and Miss Jennie Albers, were guests to a six o'clock dinner at the Dick Swalve home Sunday evening.

Mr. and Mrs. Carl Wille entertained the following to dinner Sunday: Mr. and Mrs. Charles Goll and family, of Garner; Mr. and Mrs. Paul Goll, and the Misses Edna Priebe, Emma Goll, Leona and Esther Buseman, and Arthur Schlawin and Alvin Goll.

Avery Twp. News

(Special Times Reporter)

John Trampel was a business caller at Goodell Thursday.

Mrs. George Buseman was a visitor at the home of her mother, Mrs. Frank Roths, Thursday afternoon.

Some from this community attended the funeral, Wednesday, of Mrs. Jake Bachman's mother.

Ed. Jacobs made some business calls in this locality Thursday evening.

Mr and Mrs. Fred Lente of Kamrar, were visiting at the Ben Swalve Sr home one day last week.

Johnnie A. Trampel assisted with the work at the Will Johnson farm one day last week.

Mr. and Mrs. Will Bachman spent Thursday at their farm south east of town.

Heiko Janssen of Meservey was a business caller at the Peter Trampel home Wednesday afternoon.

Herb Marshall was a business caller at the Dave Ross home at Garner Wednesday.

Mr. and Mrs Clyde Marshall and family were Sunday visitors at the D A. and Herb Marshall home.

Mr and Mrs. Jule Cook and Dolores were shoping in Klemme Saturday evening.

Wava and Wayne Bachman were Sunday dinner guests at the home of their sister, Mrs. Rob Roths.

Mr. and Mrs. Jule Cook and family are now nicely settled in their new home which they recently built.

Dave Ross was a business caller at his farm southeast of town Tuesday.

Mesdames Fred Bachman and Frank Roths spent Tuesday evening at the Jake Bachman home at Goodell.

The Misses Anna and Wemkie Trampel were visiting at the Clarence Bachman home Tuesday afternoon.

Mr. and Mrs. Fred Bachman and daughter, Bonnie, attended the dinner which was given Sunday in honor of Rev. and Mrs. Scott and family, who are leaving soon.

A farm bureau meeting was held at the Avery Center school house Friday evening. The minutes of the last meeting were read and approved, after which a short program was given. Some of the children from each school in the township took a part in the several contests that were given. The winners were given a picture for their school. Light refreshments were served consisting of fruit salad, cookies and coffee.

Quite a few attended the Elmer Boren public sale that was held on Wednesday. Ben Reemstma cried the sale The Boren family are now residing in Goodell.

TEDDY ROOSEVELT TO SPEAK AT MASON CITY

Mason City Plans Biggest Rally In North Iowa

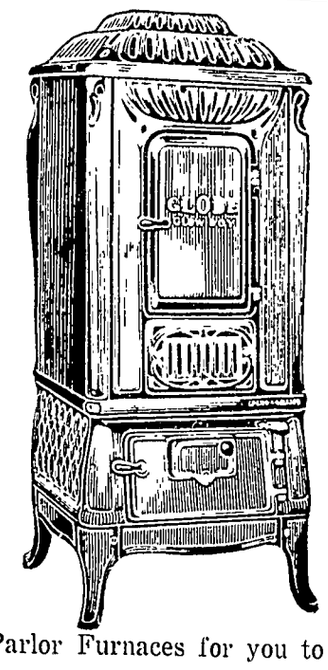
In a letter received this morning from the Cerro Gordo Republican Central Committee, Mason City, we are advised that a prominent speaker will be there on the evening of October 11th. The letter follows - Dear Sir I wish to call your attention to the Republican Rally which is to be held at 8 o'clock on October 11th, at the Armory in Mason City We are head-lining the Hon Theodore Roosevelt, Jr., and with him will be associated some very prominent State Republican

We plan to make this the biggest Republican meeting in northern Iowa.

Remley J Glass, Chairman.

Boxed Stationery, latest tints at 50c, 60c, 75c, $1 00 and $1 25 At The Times Print Shop 1tc

Parlor Furnaces



THE MODERN WAY OF HEATING—

When you install one of our Parlor Furnaces, you are installing a modern heating system at a low cost and your returns on the investment will be a houseful of clean, warm air on the coldest day with fuel economy combined.

We have a large line of Parlor Furnaces for you to choose from:-

GLO-BOY RAY-BOY Sr. RAY-BOY Jr.
WINCHESTER PARLOR FURNACES

Just come in and look them over—we will be glad to explain the various sizes—no obligation whatever.

Now is the time to get your Furnace Ppes. We carry Cast Iron and Armco Galvanized Pipes, Black Iron Stove Pipes, Furnace and Heater Repairs. SEE US FOR THAT SECOND HAND HEATER—We have some bargains here!

E. F. Jacobs

DOINGS AT SCHOOL THIS PAST WEEK

MRS. PRITCHARD WILL SPEAK AT P. T. A. MEETING

First Meeting Of P. T. A. Will Be Held Next Tuesday Eve.

Tuesday night of next week, our first P. T A Program of the year will be given. The program will be approximately as follows:-

Singing Games by the Children of Rooms One and Two

Address, by Mrs Walter Pritchard of Garner. Subject 'American Home"

Election of Officers

Violin Solo, Miss Mildred Johnson

Adjournment We may have light refreshments afterward We hope a lot of parents will come and hear Mrs. Pritchard. Her address will be well worth while

Will Play Thornton Friday

Our base ball team will journey to Thornton on Friday of this week to play a return game We look for a closer game than the one that was played here when the score was 11 to 1 in favor of Klemme.

Swaledale Won Again Here

Swaledale again defeated us as they did lat year. Some of our regulars were out on account of illness and the substitutes had had very little practice. However, the game went ten innings to break the tie. We believe the next game may result more favorably for us.

H. S. Gave Farewell Party

Our high school gave a party on Wednesday evening in honor of William and Carlyle Gauger, who are leaving us this week. We regret very much to lose such fine students, as both boys have been. Both we predict, will be very highly regarded wherever their lot may in the future be cast. They go to a larger school at Holstein and our best wishes go with them. Their parents have been ideal to work with and richly deserve the promotion they have been given.

See it Today!

EVERY customer can now have this beautiful Monarch Step-Stool free! It comes in four attractive colors so that you will be sure to have one that will match the color scheme of your kitchen.

Stop and see it today!

BUFFALO BONES FOUND ON H. A. GREIMANN FARM

Tiler Digs Into Bones While Working On Top Of Small Hill

When J. C. Hanson, tiler, was at work digging a ditch through a small hill on the H. A. Greimann farm northwest of Klemme Saturday, he unearthed some bones.

J. A. Treganza, of Britt, who is quite a naturalist, inspected the bones at the Greimann farm and identified them as belonging to a buffalo. The bones were found about five feet below the surface of a small hill.

Mr. Treganza studied the surroundings and reported the discovery to the Iowa Academy of Science.

PIANO TUNING

J. H. Schmitz, of Mason City, a member of the National Association of Piauo Tuners, is in Klemme now Orders left with Miss Gertrude Ely, music teacher, at her studio at the Jorgenson home, now or at any other time, will receive prompt attention. 18-2c

Miss Bernice Tanner went to Cedar Falls for a week end visit with Mrs Elvira Stille.

Mr and Mrs. Ralph Ludeke were Britt visitors Wednesday afternoon.

Miss Wava Bachman of Mason City spent the week end at the home of her parents, Mr. and Mrs Fred Bachman

The D A. and Herb Marshall families entertained company from Marshalltown for a few days during the last week.

Hare Evidently Had Good Ear for Music

The late Rev. R. Eastcote of Exeter, England, once told the story of five choristers who, one Sunday evening, were walking along the banks of the Mersey in Cheshire. After a time they sat down on the grass and began to sing an anthem. A hare passing with great swiftness toward the place where they were sitting stopped at about twenty yards distance from them.

She appeared to be highly delighted with the music, and as soon as the singers ceased returned slowly to the wood. When she had nearly reached the end of the field the choristers began to sing again.

The hare stopped, turned round, and came swiftly to the same place and remained listening in seeming rapture and delight until the singing ceased when it returned to the woods.

World Trip in Submarine

A Dutch scholar has just completed a submarine trip around the world. At some places he was able to detect with comparative ease one of the phenomena known to scientists for some time, the difference in weight of the same objects at various points on the globe. This was done with instruments so delicate that they could not function accurately on board an above-water vessel, due to the motion. The difference in weight is believed to be caused by variations in the density of strata composing the crust of the earth.

Costa Rican Education

The minister of public instruction of Costa Rica says that Costa Rica has no standing army, but has more teachers than policemen, and more educational employees than in any other branch of the government. Education is compulsory between the ages of seven and fourteen, with at least two years of English after the fifth grade Five years of study is required for bachelor degrees, and there are universities for those desiring higher education.

Lost Radium in Clinkers

Thrown by mistake into a dust bin and then into an incinerator, radium worth $400 was recovered at St Thomas' hospital, London, by scientific examination of the clinkers taken from the incinerator. When the loss was noticed, the radiologist suggested that the ashes be searched, because radium will not burn.

SAYS FARMERS NEED HOOVER AND TARIFF

Congressman Dickinson Warns Against Past Records of Democrats.

PLATFORM IS EVASIVE

Iowa Leader Declares Hoover Knew How to Handle Agricutural Problems.

WOODSTOCK, Ia.—Herbert Hoover and a protective tariff was the specific recommended for the curing of farm ills by Congressman L. J Dickinson of Algona, Ia., a leader of the farm bloc in the House, in an address here this afternoon at the farmers' meeting and Republican rally

"The record of the Democratic party has always been for a tariff for revenue only," Congressman Dickinson said, "and they have never been converted to a tariff for protective purposes.

"Herbert Hoover, in his acceptance speech, declared 'an adequate tariff is the foundation of farm relief' He further declared that 'the domestic mar-

HON. L. J. DICKINSON

ket must be protected. I will use my office and influence to give the farmer the full benefit of our historic tariff policy'

"Protection of dairy commodities has greatly increased under the protective tariff policies as carried out under the present Republican administration. We increased by executive order the tariff on dairy products from eight to twelve cents a pound. This domestic market can be preserved for the American producer under the Republican policies, and it can be lost under the policy outlined by the Democratic platform.

"Apparently, to satisfy a certain group of farmers, a cleverly devised sentence was written into the Democratic platform whereby the party pledges that an honest endeavor will be made to formulate a legislative plan whereby the losses in the control of surplus crops will be charged back against the unit of the product. This is a faint effort to describe the equalization fee. After the adoption of this platform, Governor Smith was quoted in the newspapers as saying that he was opposed to the fee, but that he pledged that the mechanics would be devised through conferences with the friends of agriculture to formulate a legislative program to carry out his platform pledges. This is the same problem over which a dispute has been raging for eight years. The Democratic platform simply adds more confusion to an already confused situation.

"The pledge of Herbert Hoover is definitely certain. He knows in advance how this problem can be handled. Any conference he calls will be merely for the purpose of arranging specific details. His pledge creates the experimental stage of such a program. He believes agriculture can be organized to where it will be self-sustaining, and by reason of his knowledge and experience, he is in a position where he can head that organization."

Sings Hoover Praises

Miss Marion Talley has joined the ranks of Herbert Hoover supporters.

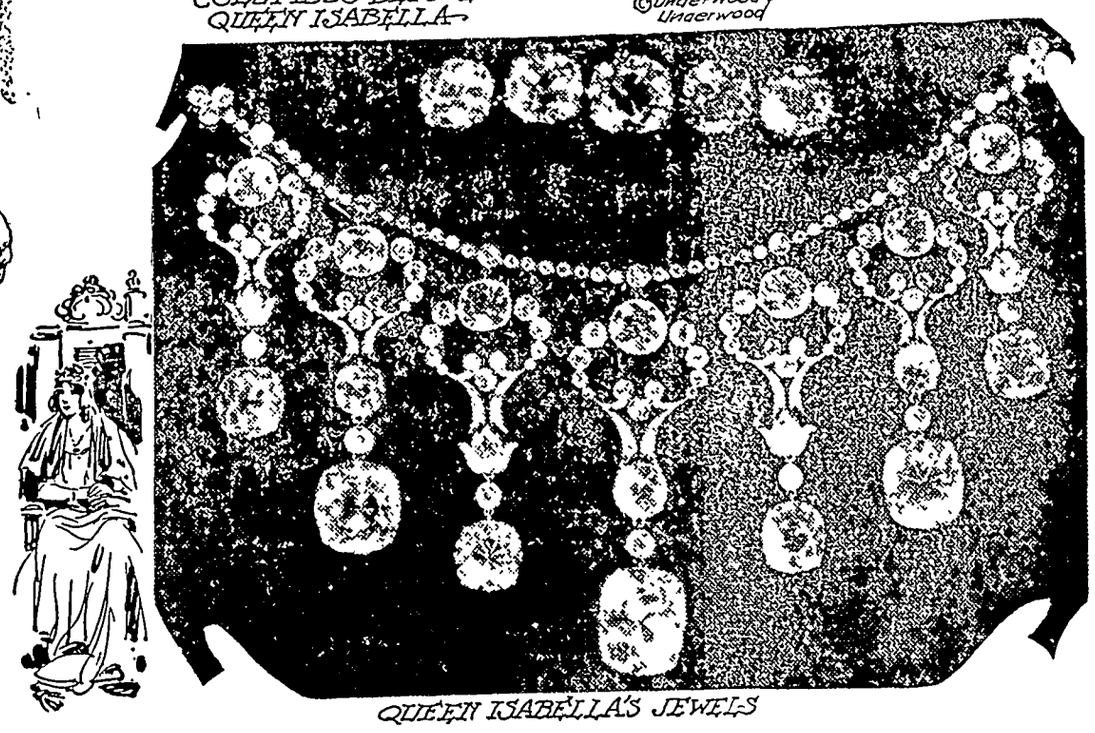
COLUMBUS BEFORE QUEEN ISABELLA

©Underwood & Underwood



QUEEN ISABELLA'S JEWELS

By ELMO SCOTT WATSON

AS COLUMBUS day approaches this year it finds a project under way for paying homage to the name and achievements of Christopher Columbus on a greater scale than has ever before been attempted. In the United States, as well as in other nations in the Western hemisphere, his fame has been perpetuated in the names of hundreds of cities, towns and public squares, monuments have been erected in his honor and the date of his discovery of the New World has been celebrated as an important date in history and a holiday. All of these, however, have been individual memorials.

Now the nations of the two Americas are planning to co-operate in honoring him and, under the auspices of the Pan-American Union, erect a $4,000,000 Christopher Columbus Memorial Lighthouse, a beacon for navigators of both the sea and the air, in the capital of Santo Domingo, the land which Columbus called Hispaniola. The Dominican republic already has set aside a 2,500-acre tract of waterfront land for a Pan-American park, in which the lighthouse is to be built and appropriated money as its share of the cost of the memorial. Legislation proposing similar appropriations have already been introduced in the United States, Cuba and several other countries and the first step, that of holding a competition in which the leading architects of the world have been invited to submit designs, toward realization of the memorial project already has been taken.

No one will deny the appropriateness of this form of a memorial to one of the most famous navigators of all time, and most Americans will applaud the idea of thus honoring once more the man whose courage in facing the terrors of the unknown set him upon that voyage which marks the beginning of American history. From our school days the story of Columbus has been a familiar one to us all and his name stands out in our memory as one of the great figures in the history of our nation. It should be remembered, however, that the discovery of America was not a strictly individual proposition and it does not detract any from the fame of Columbus to give proper credit to others who were concerned in it.

When a final reckoning of credit due is made, outstanding among the names of those who were associated with the Genoese sailor in his great undertaking is the name of a Spanish queen to whom America owes a debt of gratitude which has but scantily been repaid. For had it not been for Isabella of Castile, royal consort of Ferdinand of Aragon and queen of Spain, the voyage of Christopher Columbus might never have been undertaken. To most of us, depending upon our school histories for our information about events of those far-off times, Ferdinand and Isabella are little more than mere names and, except for their association with the name of Columbus, are but dim and shadowy figures in the pageant of American history. We know that after failing to interest the ruler of Portugal in his ambitious project to find a short route to the wealth of the Indies by sailing westward over the Atlantic, Columbus determined to lay his case before the rulers of Spain.

To an American historian, Washington Irving, we are indebted for a clear pen picture of these two monarchs, and especially of Queen Isabella, who were destined to have such an important role in the history of our nation. In his "Life and Voyages of Christopher Columbus" Irving writes:

The time when Columbus thus sought his fortunes at the court of Spain coincided with one of the most brilliant periods of the Spanish monarchy. The union of the kingdoms of Aragon and Castile, by the marriage of Ferdinand and Isabella, had consolidated the Christian power in the peninsula, and put an end to those internal feuds which had so long distracted the country, and insured the domination of the Moslems. The whole force of united Spain was now exerted in the chivalrous enterprise of the Moorish conquest. The Moors, who had once spread over the whole country like an inundation, were now pent up within the mountain boundaries of the kingdom of Granada. The victorious armies of Ferdinand and Isabella were continually advancing, and pressing this fierce people within narrower limits. Under these sovereigns the various petty kingdoms of Spain began to feel and act as one nation, and to rise to eminence in arts as well as arms. Ferdinand and Isabella, it has been remarked, lived together not like man and wife, whose estates are common, under the orders of the husband, but like two monarchs strictly allied. They had separate claims to sovereignty, in virtue of their respective kingdoms; they had separate councils, and were often distant from each other in different parts of their empire, each exercising the royal authority. Yet they were so happily united by common views, common interests, and a great deference for each other, that this double administration never prevented a unity of purpose and of action. All acts of sovereignty were executed in both their names; all public writings were subscribed with both their signatures; their likenesses were stamped together on the public coin, and the royal seal displayed the united arms of Castile and Aragon.

Ferdinand was of middle stature, well proportioned, and hardy and active from athletic exercise. His carriage was free, erect and majestic. He had a clear, serene forehead, which appeared more lofty from his head being partly bald. His eyebrows were large and parted, and, like his hair, of a bright chestnut; his eyes were clear and animated; his complexion was somewhat ruddy, and scorched by the toils of war, his mouth moderate, well formed, and gracious in its expression; his teeth white, though small and irregular; his voice sharp; his speech quick and fluent. His genius was clear and comprehensive; his judgment grave and certain. He was simple in dress and diet, equable in his temper, devout in his religion, and so indefatigable in business that it was said he seemed to repose himself by working. He was a great observer and judge of men, and unparalleled in the science of the cabinet. Such is the picture given of him by the Spanish historians of his time.

While giving his picture, it may not be deemed impertinent to sketch the fortunes of a monarch whose policy had such an effect upon the history of Columbus and the destinies of the New World. Success attended all his measures. Though a younger son, he had ascended the throne of Aragon by inheritance; Castile he obtained by marriage; Granada and Naples by conquest; and he seized upon Navarre as appertaining to any one who could take possession of it, when Pope Julius II excommunicated its sovereigns, Juan and Catalina, and gave their throne to the first occupant. He sent his forces into Africa, and subjugated or reduced to vassalage, Tunis, Tripoli, Algiers, and most of the Barbary powers. A new world was also given to him, without cost, by the discoveries of Columbus, for the expense of the enterprise was borne exclusively by his consort Isabella. He had three objects at heart from the commencement of his reign, which he pursued with bigoted and persecuting zeal: the conquest of the Moors, the expulsion of the Jews, and the establishment of the Inquisition in his dominions.

Contemporary writers have been enthusiastic in their descriptions of Isabella, but time has sanctioned their eulogies. She is one of the purest and most beautiful characters in the pages of history. She was well formed, of the middle size, with great dignity and gracefulness of deportment, and a mingled gravity and sweetness of demeanor. Her complexion was fair; her hair auburn, inclining to red; her eyes were of a clear blue, with a benign expression, and there was a singular modesty in her countenance, gracing, as it did, a wonderful firmness of purpose and earnestness of spirit. Though strongly attached to her husband and studious of his fame, yet she always maintained her distinct rights as an allied prince. She exceeded him in beauty, in personal dignity, in acuteness of genius, and in grandeur of soul. Combining the active and resolute qualities of man with the softer charities of woman, she mingled in the warlike councils of her husband, engaged personally in his enterprises, and in some instances surpassed him in the firmness and intrepidity of her measures; while, being inspired with a truer idea of glory, she infused a more lofty and generous temper into his subtle and calculating policy.

It is in the civil history of their reign, however, that the character of Isabella shines most illustrious. Her fostering and maternal care was continually directed to reform the laws, and heal the ills engendered by a long course of internal wars. She loved her people, and while diligently seeking their good, she mitigated, as much as possible, the harsh measures of her husband, directed to the same end, but inflamed by a mistaken zeal. Thus, though almost bigoted in her piety, and perhaps too much under the influence of ghostly advisers, still she was hostile to every measure calculated to advance religion at the expense of humanity. She strenuously opposed the expulsion of the Jews and the establishment of the Inquisition, though, unfortunately for Spain, her repugnance was slowly vanquished by her confessors. She was always an advocate for clemency to the Moors, although she was the soul of the war against Granada. She considered that war essential to protect the Christian faith, and to relieve her subjects from fierce and formidable enemies. While all her public thoughts and acts were princely and august, her private habits were simple, frugal and unostentatious. In the intervals of state business she assembled round her the ablest men in literature and science, and directed herself by their counsels, in promoting letters and arts. Through her patronage, Salamanca rose to that height which it assumed among the learned institutions of the age. She promoted the distribution of honors and rewards for the promulgation of knowledge; she fostered the art of printing recently invented, and encouraged the establishment of presses in every part of the kingdom; books were admitted free of all duty, and more, we are told, were printed in Spain, at that early period of the art, than in the present literary age.

It is wonderful how much the destinies of countries depend at times upon the virtues of individuals, and how it is given to great spirits by combining, exciting, and directing the latent powers of a nation, to stamp it, as it were, with their own greatness. Such beings realize the idea of guardian angels, appointed by Heaven to watch over the destinies of empires. Such had been Prince Henry for the kingdom of Portugal; and such was now for Spain the illustrious Isabella.

Columbus appeared before Ferdinand and Isabella early in 1486 and after giving his project a hearing they referred it to the queen's confessor, Hernando de Talavera, with instructions to summon a council for its consideration. This council was very deliberate in its actions and, after nearly five years, reported adversely for the ambitious sailor in 1490. But through the efforts of Juan Perez, guardian of the monastery of La Robida, a former confessor to Queen Isabella, Columbus was given another hearing at court, and in January, 1492, another council was summoned to consider his plans.

Contrary as it may be to popular belief, the picture of Columbus as a humble suppliant before the Spanish rulers is not strictly an accurate one. Rather than that of a man asking favors, his attitude was that of a shrewd bargainer in which he demanded of Ferdinand and Isabella a patent of nobility, the admiralty of the ocean, the viceroyalty and government of all lands discovered on his proposed voyage, a commission of 10 per cent upon everything within the limits of his admiralty "which might be bought, exchanged, found or gained" and three caravels to cost approximately $6,000. Such were the rewards which he asked—"rewards which," according to a modern historian, "if granted, would raise him to a dizzy height, to a point of rank, power and riches next to that of the throne itself."

So it is not surprising, perhaps, that for the second time the council reported adversely upon his proposal and he was dismissed from the Spanish court and departed sorrowing for Cordova. And then the hand of a woman intervened in the destiny of Columbus and played its part in the future history of the American nation. Two leagues from Granada, he was overtaken by a royal constable who had been sent posthaste by Isabella with orders for his return. His every demand would be granted! Just what it was that influenced the Spanish queen to take this action has never been satisfactorily explained. There only remains the fact that she did so, even though Ferdinand resented the high price demanded by Columbus for his services and held aloof from agreeing to the bargain until Isabella won him over. According to one story which has come to be inseparably associated with the story of Columbus, the queen in order to win Ferdinand's consent offered her jewels as security for money for the enterprise. Although some historians have characterized this incident as "one of those bits of pure romance that so often creep into the historical narrative and lend fictitious color to it," others give it enough credence to justify the belief that there may be some measure of truth in it.

It is interesting to note that within the past few years there have been offered for sale in this country by a syndicate of jewelers in New Jersey the very gems, it is said, which Queen Isabella pawned to finance Columbus' expedition, and records supporting their authenticity were produced. These jewels consist of 280 stones, weighing 500 carats. In addition to the breastpiece with its seven large drops, weighing 400 carats (the largest weighs 54 carats) there are five other diamonds and the whole set of jewels is valued at $500,000.

Whether or not these stories are true, however, is more or less incidental. The principal fact is that the persistence of the Genoese sailor through many discouragements and backsets, was finally rewarded, his fleet of three little ships set out from Palos, Spain, on August 3, 1492, and, despite the fears of a mutinous crew, "sailed on and on and on" until one October morning four hundred and thirty-six years ago Columbus and his men saw for the first time the shores of the New World. That is the event which we Americans are celebrating again on October 12 and, considering the important part which she had in making that possible, it should be a date not only for honoring Christopher Columbus but for holding in grateful remembrance the Spanish queen, Isabella of Castile, to whom America owes an everlasting debt.

Poison Gophers During Autumn

Best Time to Apply Preventive Measures to Keep Pests Away.

(Prepared by the United States Department of Agriculture.)

The attitude of many farmers toward pocket-gopher control is much like that of the man with the leaky roof: In dry weather the roof didn't need repairing, and when it was raining it was too wet to fix it. Pocket gophers damage such cultivated crops as potatoes, sweet potatoes, and other root crops in the field during the early summer, but one of the most favorable times to apply preventive measures is late in fall, after the potatoes have been harvested and the pocket gophers largely forgotten.

Soil Is Firmer.

At this time the soil is firmer and does not cave in and fill up the runways, so that it is easier to locate the runways and install poison bait in them with a fair chance of the pests traveling frequently over the same route and getting them. During the growing season this is not usually the case. New runways are continually made in the soft, loose soil, and the animals less frequently return to the used tunnels, many of which have caved in and are blocked up. If there are very many pocket gophers at that season, it is a most difficult task to eradicate them without injuring the crops one wishes to save.

Next Planting Free of Pests.

The biological survey of the United States Department of Agriculture urges that attention be given to cleaning up fields infested with pocket-gophers, using two or three applications of poisoned bait if necessary, so that next spring's planting will be free of these pests.

Dry Roughage for Dairy Cows Furnishes Protein

The best kinds of dry roughage to be fed to the dairy cow, in connection with corn silage or roots, are leguminous hays, such as alfalfa, red, crimson, or alsike clover and soy-bean or cowpea hay. While corn silage is an excellent feed, it is not a balanced one, as it does not contain sufficient protein and mineral matter to meet fully the requirements of the cow. The leguminous hays, in addition to being very palatable, have a tendency to correct this deficiency. They are also one of the best and cheapest sources of protein. One or more of these hays can be grown on any farm, and in addition to their value for feeding purposes, they improve the soil in which they are grown. Hay from Canada field peas, sown with oats to prevent the peas from lodging, also makes an excellent roughage.

Corn stover, coarse hay, etc., also find a good market through the dairy cow. This class of roughage is low in protein, however, and when it is used the grain ration must be richer in protein.

Fall Sowing of Alfalfa Will Give Good Results

Where alfalfa patches are cultivated for dairy cattle, farmers will find they can obtain the best results by sowing early in the fall so the crop may get a start before the frost sets in or in the spring after the frost has passed, George P. Grout, professor of dairy husbandry, A. and M. college of Texas, has pointed out.

In this connection, Professor Grout cited results obtained in the cultivation of alfalfa on the college dairy farm, a project conducted in co-operation with the experiment station. Following recent inspection of the two-acre field given over to this project, Professor Grout reports a fine yield of alfalfa. It was planted last January.

For the dry-land belt, sowing in rows to permit cultivation so that all measures possible may be taken to retain moisture and to keep the grass from choking out the crop, is recommended.

Agricultural Hints

When the lambs have reached the age of four or five months, they should be weaned and separated from the ewes.

* * *

Fat chickens are in demand, and those with full, plump bodies, and limbs do not remain on the market very long.

* * *

It is advisable to feed the lambs at certain definite times daily. The lambs soon learn to look for the grain at definite times.

* * *

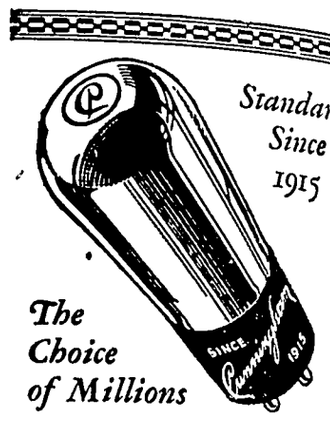
It is very important in producing prime lambs that the ewes be heavy milkers and that they be fed so as to produce to their full capacity.

* * *

Since the ewes milk is the most important item in the food supply of the young lambs it is easy to see that a very definite relation exists between the milk producing capacity of the ewes and the rate of growth of the lambs.

* * *

The lime that is in the soil is subject to a continual loss through leaching out in the drainage water. The rapidity with which it leaches out varies with the amount in the soil, the amount of rainfall, the soil texture, and the kind of covering on the soil.



Being myself no stranger to suffering, I have learned to relieve the sufferings of others.—Virgil.

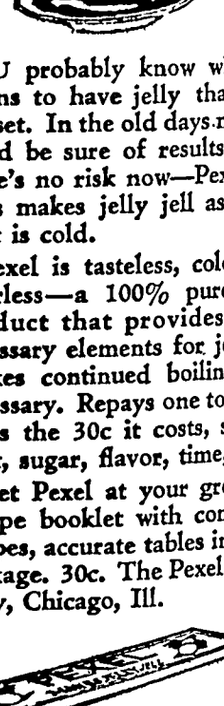
There is nothing truly valuable which can be purchased without pains and labor.—Addison

new

PEXEL

the new sure way to make your jelly turn out like this

no more of this



YOU probably know what it means to have jelly that will not set. In the old days no one could be sure of results. But there's no risk now—Pexel always makes jelly jell as soon as it is cold.

Pexel is tasteless, colorless, odorless—a 100% pure-fruit product that provides only necessary elements for jelling. Makes continued boiling unnecessary. Repays one to three times the 30c it costs, saving fruit, sugar, flavor, time, fuel.

Get Pexel at your grocer's. Recipe booklet with complete recipes, accurate tables in each package. 30c. The Pexel Company, Chicago, Ill.

For example—with Pexel

4½ cups strawberry juice and 8 cups sugar make 11 glasses jelly.

4½ cups raspberry juice and 8 cups sugar make 11 glasses jelly.

6 cups currant juice and 10 cups sugar make 14 glasses of jelly.

4½ cups grape juice and 7 cups sugar make 10 glasses jelly.

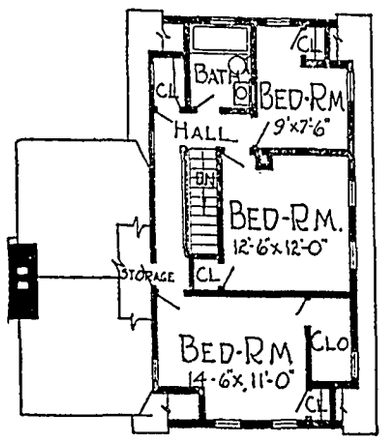
First Floor Plan.

This little home is simple, but es...cially pleasing in appearance, large... because of the broken roof lines ...d boulder chimney. The whole de...gn is well balanced even to the placement of windows which is rather a problem in view of the unusual floor plan.

This floor plan shows a house of seven rooms, bath and extra lavatory, a surprising amount of space for a home which appears quite small from the outside. The arrangement of these rooms is one which can well be studied, not only because it is unusual, but because it is remarkably convenient.



Second Floor Plan

The living room projects from the rest of the building at the front. It is connected with the entrance hall and the dining room, an arched opening being used at the former doorway. This entrance hall is long and narrow and is shaped like a letter "L." It also gives access to the stairs, a first-floor bedroom and the kitchen. Off of it are the extra lavatory and a large coat closet.

The first-floor bedroom, though small, is provided with a bed closet which greatly increases its useful space. Upstairs there are three more bedrooms and bath, a linen closet in the hall and storage space above the living room all arranged, in relation to the hallway, in much the same manner as the first floor rooms.

...hoose Proper Location for Your Refrigerator

There is no other article of kitchen ...uipment more important than the ...frigerator. Upon its efficiency de...nds the success or failure of the ...eal.

And it is the most important factor ... the preservation of nutritive value, ...e vitamine content of the various ...ods which comprise the meal. For ...is reason the refrigerator merits ...rious consideration in every matter ...at may effect its proper functioning.

One of these conditions, of course, ... the location. If the refrigerator is ...aced too near the stove, for in...tance, it is very difficult to maintain ...e proper temperature, and inevita...ly calls for a large ice consumption.

A room in which extremes of tem...erature prevail is also a poor place, ... where the sun shines on it for a ...ng period of time, or where there is ...cessive moisture in the air.

All of these things should be taken ...to consideration, as they seriously ...ffect preservation and produce very ...satisfactory results.

On the other hand, some thought ...hould be taken on the convenience of ...rrangement.

It is well to have it as close as pos...ible to the back door, so that the ice...an can reach it easily and as close ...o the work table as possible, in order ...o save steps.

But, first of all, aim for the location ...hich insures the greatest efficiency; ... place of moderate temperature, nor...al atmospheric conditions, and where ...e same amount of circulation pre...ails constantly. Then place it as con...eniently as possible.

Brass Piping Feature of Well Planned Home

Brass piping in all water lines is an ...ffective agent in the establishment of ...at psychological correctness now be...g emphasized in home design. Au...horities point out that it insures ...gainst two major factors which mili...ate against proper enjoyment of home ...enefits, one suffered by the woman, ...he other by the man of the household.

There is considerable perturbation ...hen the woman sees cherished hang...ings, decorations and furnishings ...uined by water leaks, and when the ...an is confronted with repair bills ...made high because inaccessible water ...pipes must be torn out and replaced.

Wood Lath in Multiple

Wood lath formed into units of eight ...and reinforced at the center are now ...available as a time-saving material ...which is claimed to be much stronger ...than ordinary wood lath.

One-Panel Type Doors Combine Color, Beauty

Substantial workmanship and grace...ful design are combined in a one-panel door widely distributed for home con...struction in this country in which sev...eral unusual patented features are ...utilized to prevent warping and shrink...ing.

The "door within a door" construc...tion is utilized in the manufacture of ...both hardwood and softwood doors of ...the one-panel type, veneered with ...species of woods which successfully ...take any decorative application.

The importance of the expanse rep...resented by doors in interior decora...tion is being more widely recognized ...by specialists in the art with the gen...eral introduction of rather brilliantly ...colored interiors.

Attractive colors are well set off by ...the graceful design of the one-panel ...door, in which the proportions of the ...panel, molding, stiles and rails are ...carefully worked out to artistically fill ...the space, or mass, which the door rep...resents. The close-grained wood of ...this door is well adapted to any ...process of painting, enameling or ...staining.

Door Checks Are Useful Part of Home Hardware

Door checks are a useful addition ...to the hardware of the house. They ...eliminate banging and prevent dou...ble-swinging doors, such as those be...tween dining room and pantry, from ...passing the center.

Such a door swinging freely with...out a check is frequently a source of ...accident and injury. Other places ...where door checks serve a good pur...pose are the screen doors to prevent ...banging, the butler's pantry door to ...expedite quiet service, mirror-door ...closets to prevent slamming and the ...possible breakage of glass and front ...and rear doors to eliminate drafts.

Door checks may be had in two ...types, one attached to the top of the ...door and the other sunk in the floor. ...Both may be bought with the adjust...able feature which permits the door ...to be held in a desired position until ...released by hand or foot, according to ...the location of the check.

Drawer trimmings in built-in clos...ets and cabinets are worth consider...ation. If pulls are used they should ...allow enough space for the hand.

Harmony in Floorings

Harmony in the interior decoration ...of the home depends to a great extent ...upon the flooring. Until recently peo...ple gave little or no thought to this ...really important feature in home ...building and decorating.

POOR NEGLECTED WIFE

(© by D. J. Walsh.)

SHE was not being honest, Marian knew that. But she knew, too, that Gloria Denning had to be snatched up, whirled around and faced about the other way in short order or everything in her life was going to fall in ruins around her beautiful ears. And so when Marian saw Gloria's long shining car stop and Gloria in matchless afternoon ensemble mournfully approach the entrance of the apartment house Marian put on her hat, picked up bag and gloves and left her room. She was waiting to step into the elevator when Gloria emerged.

"Oh—" murmured Gloria, surprise and annoyance together insufficient to obliterate the gloom from her lovely face. "I thought—"

"Oh—" as if overwhelmed with chagrin and remorse sang Marian simultaneously. "I forgot—I am terribly sorry, dear! I promised to visit school this afternoon and stay for the meeting of the Community club. I—I forgot that you had planned to come today. Isn't that perfectly abominable?"

As a matter of fact Marian had not forgotten. But Gloria was going to be dragged out of herself—she had decided that. It was time to try something, anything to save her.

"I'll go back, Gloria—" she said, but she still faced the elevator and her tone was unconvincing.

"Oh, no—" sighed Gloria. "It doesn't make any difference. Nothing makes any difference."

"You're still having a miserable time, are you?" questioned Marian.

Gloria nodded mutely, sadly, stood with drooping head while the cage descended.

"I'll order out my car," Marian suggested in the lobby.

"Oh—don't bother. I'll drop you on my way home," languidly breathed Gloria.

"Point one!" triumphed Marian within herself.

With beautiful, indifferent precision Gloria drew her car up before the school.

"Come on in just a minute, Gloria," the outwardly composed Marian invited. "I'll just stay a minute—maybe—to keep my promise, you know, and then you can take me away and we can talk."

"Well, I don't care. I don't care what I do. I can't forget—can't forget no matter where I am——"

When she had Gloria actually inside the school Marian whispered: "Point two!" Gloria doing something else than teaing and shopping!

She saved the kindergarten room until the last, astute Marian. Why not the fifth grade first—since they were close by it? She knocked on a door. A boy of ten, in overalls, with serious fine brown eyes, ushered them into a pleasant room with luxuriant green plants filling its windows and drawings, paintings, posters and maps providing interesting mural borders. At the blackboards boys and girls were "doing" long division. No doubt about the division being long! Marian marveled at the patience of teachers and pupils alike. A little girl in a charming embroidered dress relieved them of their wraps. Another little girl in a faded gingham as politely indicated chairs. They sat down. But instead of beginning her interested scrutiny of child faces, of teacher and of work that usually preoccupied her in a school, Marian considered Gloria Denning. How gracefully she leaned back in the teacher's chair, her exquisite gleaming clothes attracting the shy admiring glances of little girl eyes. But did not Gloria seem less languid?

But she must expect no miracle, Marian admonished her eager self. Only—if for five minutes Gloria Denning could forget Gloria Denning and Gloria Denning's "faithless husband," Marian conceded there might be a ray of hope. Philip Denning faithless! And yet that was what Gloria said he was. Because he was interested in his profession to the exclusion for perhaps seven hours a day of his wife. She complained that he "dreamed" at home about some big old building, sat and looked for half an hour at a time at a sketch of the cathedral of St. John the Divine and all the while seemed unaware of the existence of his wife. It was unbearable. Her marriage was a farce. She was devoted to Philip. Why shouldn't he be devoted to her? Her home was everything to her. Why shouldn't it be important to him? He got cross when she wanted to talk about the cook's extravagance with the butter. And he didn't like to shop with her. He had enjoyed discussing pillow-cases and towels before their marriage. Now—well, now he was just an architect. She came and talked to Marian about all this. Day after day she came and sang this same mournful, tragic song. And she upbraided Philip. She wept and scolded over the telephone. She pursued him into the sanctuary of "conferences." She had the look of a tragically unhappy woman—and she had been married just two years. "She needs a job," was Marian's diagnosis.

When Marian whispered a suggestion that they visit some other room Gloria didn't want to leave the fifth grade! Well, compromised Marian, perhaps they could come back here later. Only then would Gloria consent to see the second grade in action. There, however, the method of teaching reading interested her and, with amazed eyes, Marian watched her walk between the aisles carefully so she might not bump the tense elbows of little arms busy with making pictures of the reading lesson.

And then the kindergarten! Gloria whispered while they were watching the dismissal of the kindergarten that she would love to be a kindergarten teacher.

The Community club met in the assembly room. All the women of Bryn Athyn knew the beautiful Mrs. Philip Denning. They stared with respectful eyes when Marian led her in. It was the day for the election of officers, and Marian had some women to see before the chairman should call the meeting to order. Did they say that capable Mrs. Snowden couldn't take the presidency because she was moving to Florida? Wasn't that too bad! It was to be hoped they could get somebody as interested and as efficient in her place. Did they know how interested Mrs. Denning was in school and what a natural leader she was? And she whispered to a very, very good friend that if she wanted to nominate Mrs. Philip Denning for president, she, Marian, would second the nomination. Then she sat demurely down beside Gloria. But she got up presently and said she believed entirely too much money was being spent on schools! Honest? Heavens, no! And then Gloria Denning with flashing eyes got up and said she hated to disagree in public with Mrs. Farnsworth, for whose judgment she had great respect, but not enough money was being spent on schools!

"School is the most important thing—next our homes—to every one of us. It should be the chief interest of every woman, whether she has children or not!"

Mrs. Denning was applauded. And Mrs. Denning was elected president of the Bryn Athyn Community club. And she accepted the honor with a perfectly lovely little speech.

"Why, Gloria," reminded Marian when they were in the car at 5:30, "don't you usually call for Philip at about this time?"

"Philip?" questioned Gloria vaguely, "Oh, I suppose we might as well pick him up if he's ready."

Animatedly discussing the schools of Bryn Athyn with Marian Farnsworth, Mrs. Philip Denning was scarcely aware of the appearance of her distinguished architect husband beside the car door. With a nod she relegated him to a back seat and continued to converse upon her important affairs. Marian saw the man's eyes widen and a certain taut anxious irritated look disappear from his handsome face.

"Oh, you've done something, you wicked liar, you," Marian said happily to herself as from her window she watched glide away the long blue shining car of the "faithless husband" and the president of the Bryn Athyn Community club.

Keen Sense of Humor Bar to Advancement

It is commonly recognized that wit is a distracting element to mix with ambition, and the late Chauncey Depew said that it could keep a man out of the Presidency. Benjamin Franklin could have testified that his humorous bent kept him from an honor almost as high. After the American colonists had decided to sever all allegiance with Great Britain the Continental congress selected a committee to draw up a Declaration of Independence. Franklin was very much in the limelight just then and many thought his mind and broad principles best fitted to tackle the important job. Others were not so sure. They pointed out that Franklin had such a reputation as a wit that he might unconsciously inject some devastating humor in the document and render their lofty plans futile, or worse, ridiculous. So Franklin was passed up, as were many others who were suggested. It has never been decisively settled just who did draw up the first draft of the immortal document. It is widely accepted that Thomas Jefferson was its author, but certain evidence was presented that tended to throw doubt on his claims and to point to Thomas Paine as the one responsible. If Paine did write it then Franklin had a hand in it after all in that it was he who was responsible for the English writer's coming to this country in 1774. But Paine never openly claimed authorship.—Detroit News.

Not Petrified Wood

Peculiar rock formations in the Big Bend country of Texas, recently proclaimed to be petrified trees, forming the largest forest of its kind in the world, are now asserted not to be trees at all by Dr. E. H. Sellards of the bureau of economic geology of Texas. Doctor Sellards says in a communication to Science Service that one of the discoverers of the supposed forest revisited the place after he had made his first report, and that the re-examination of the formations convinced him that the peculiar stones were not petrified trees at all. Another visit, by the Texas state land commissioner, confirmed this negative report. Samples of the rock brought out have proved upon investigation by specialists not to be petrified wood.

Prolific Woman Inventor

Because of her success in the field of invention, Miss Beulah Louise Henry, a descendant of Patrick Henry, has won the title of "Lady Edison." She holds 43 patents on articles ranging from valves to dolls. Ideas come to her, she says, while visiting or dining with friends, and she usually visualizes the completed invention, working out the details later.—Popular Mechanics Magazine.

10 minutes ago—

How many people you know end their colds with Bayer Aspirin! And how often you've heard of its prompt relief of sore throat or tonsilitis. No wonder millions take it for colds, neuralgia, rheumatism; and the aches and pains that go with them. The wonder is that anyone still worries through a winter without these tablets! They relieve quickly, yet have no effect whatever on the heart. Friends have told you Bayer Aspirin is marvelous; doctors have declared it harmless. Every druggist has it, with proven directions. Why not put it to the test?

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

BAYER ASPIRIN

DON'T DO THIS!

LEONARD EAR OIL

Improves Hearing, Relieves Head Noises

Nine out of ten cases of DEAFNESS and HEAD NOISES are caused by catarrhal mucus (matter) in the Eustachian Tubes, which connects the nose and the ears. Leonard Ear Oil removes the MUCUS, OPENS UP THE TUBE and THE OTHER AIR PASSAGES OF THE HEAD, and the result is improved Hearing and relief from Head Noises. It is not put in the ears, but is "INSERTED IN THE NOSTRILS" and "RUBBED in BACK OF THE EARS" and special instructions by a noted Ear Specialist in each package for different kinds of Deafness and Head Noises tell you exactly how to take care of your own case. Leonard Ear Oil is not an experiment but has had a very large and constantly growing sale since 1907, and every year it has relieved thousands of people of their Ear Troubles. No matter how long you have been deaf, nor how deaf you are, or what caused your deafness, or how many things you have already tried which have failed to relieve you, Leonard Ear Oil has relieved many such cases as your own. Why not you? The price is $1.25. Leonard Ear Oil is for sale at Druggists, or direct postpaid upon receipt of price.

PROMINENT MAN DIED HERE MON.

NERAL FOR VAL. JOSTEN HELD HERE TODAY

s Active In Community Affairs And Business Of The Creamery

With the passing of Mr. Valen- e Josten, Klemme and the sur- nding community, has lost a st valuable man. One who was ive in the affairs of the commun- in which he lived, in everything upbuild it. Every public move- nt of merit had Mr. Josten's dorsement and his whole-hearted pport. He was a real booster for emme and this community Thus, in a few words we could press a few of the many fine qual- es of our good friend, Valentine ten. However, in this brief re- w we want to touch on his co - tion with the Klemme Co-Oper- ve Creamery, of which he has n Secretary for a past number years. His popularity as an off- r of the local institution is attest- by the fact that each year he s unanimously re-elected to his ce again, thus displaying that the minds of the stockholders of creamery he had given complete tisfaction and best of service. Mr. Josten took more than a ical interest in his office, which s outstanding. A few hours each would have been all that was essary to perform his duties as retary However, his job was "hobby" He put his whole- rted interest into his hoby with result that under his personal k in the field he has built up a mery that today is one of the gest and best in northern Iowa is largely through his personal k that the creamery grew from mall list of some one hundred ons to a list of over four hun- d.

esides being greatly interested his "hobby which he rode to ess," Mr Josten always took an rest and gave of his time and ey to community enterprises public movements. He was ac- in his church life and was al- s ready to answer any summons lemme has lost a good friend, pright, honest and sincere man place can never be filled. is with deepest respect that pen these few words of praise ne whom we have come to know friend of everyone.

TUARY OF MR. VAL. JOSTEN By Rev. Calvin Grosshuesch)

lentine Josten was born on he day of April in the year of our 1864, at Leusburg, Schleswig tein, Germany. His parents ght him to Holy Baptism in the eran Church at Fleusburg n the boy was about 11 years his parents came to America their family and located on a in Ell township, near Garner, . The Josten family found a ch home in the Elltown Reform- hurch. It was here that Valen- received his religious instruc- and was confirmed under Rev. bach.

July 18th. 1890, he was join- marriage to Miss Emeliu Prie- The young couple made their on a farm in Twin Lake town- one-half mile west and two south of Klemme. Soon after Reformed Church at Klemme organized the Josten family un- with this church. Two child- a son and a daughter, were to Mr. and Mrs. Josten.

the year 1916 Mr. Josten left arm in the hands of his son, n, and moved to Klemme with mily. Soon after he had mov- town he was elected to the of Secretary of the Klemme erative Creamery. It soon be- evident that this organization made a wise choice, for Mr. took a whole hearted inter- this work and we may safely hat the success of this institu- was due largely to his untiring t. He enjoyed the confidence of patrons and stockholders who re-elected him to this office from year to year Be ides the office of Secretary, he spent some time in writing insurance

Mr and Mrs. Josten were loyal members of the Klemme Reformed Church Mr Josten served one term in the consistory, as deacon

Mr J sten died on the 24 th day of October, 1928, after a long and painful sickness About four months ago he became ill with heart dis- ease To enable his children to care for him they took him to the home f his daughter, Mrs Fred Becker. During the last four weeks his con- dition became more serious, other complications setting in and great- ly increasing his pain and suffering Mr Josten bore his suffering pati- ently, accepting it as a cross which God had laid on him During the last days of his sickness when his pains became almost unbearable he prayed that the Lord have mercy on him, and take his tired and torn body home The Lord answered his prayer by taking him from this earth Monday at 3 30 o'clock, at the age of 64 years 5 months and 25 days

Surviving him and mourning his death are two children, Mr Edwin Josten, and Mrs Fred Becker; one sister, Mrs Aug Haberkamp, four brothers, Erick, John, Peter and Henry, one grandchild, Irene Beck- er, and many other relatives and friends

Funeral services were held today (Thursday afternoon) beginning at 1 30 o'clock from the home of Mr Fred Becker Church services were held at 2 00 o'clock at the Klemme Reformed Church, with Rev Calvin Grosshuesch in charge of the ser- vice, assisted by Rev A W Gauger of Holstein, Iowa.

Interment was made at the Klem- me Cemetery.

MARRIAGE LICENSE BRISK AT CLERKS OFFICE

One Young Lady Gets Married, But Does Not Change Name

C unty Clerk Chris Johansen and his good looking deputy, Miss Mar- jorie Hanan, were kept busy the past week dishing out permits to the lovelorn to marry

Those who blushingly stepped up to our smiling clerk and his deputy to procure the coveted license were the following

Harm Eden, of Woden, and Al- etta Meyer, of the same place

George Jesse, of Corwith, and Bertha Brown, of Britt

Walter V Davis of Clear Lake and Ina C Wood, also of Clear Lake

Verner A Haberkamp and Fran- cis Marie Burke, both of Garner.

Carl Christensen of Des Moines, and Marie Christensen, of Kanawha In this case the young lady will re- tain her same name after marriage

Max Steinfeldt and Carolyn Rei- ken, both of Woden procured a li- cense

"Not a bad week," says Chris

HAROLD LEITZINGER VICTIM OF SURPRISE SUNDAY

Friends Had Also Planned Special Number On Radio For Him

Quite a number of relatives and friends gathered for a surprise on Harold Leitzinger Sunday, it be- ing his birthday.

Those present were Mr. and Mrs F R Perkins and family of Water- loo; Mrs Arthur Collins of Cedar Falls; and the following from this city: Mr. and Mrs Frank Kluck- hohn and family, Mr and Mrs M O Barr and La Von Ann, Mr and Mrs Harry Gram and daughter, Mrs Collen; and Mr and Mrs George Stokesbary and family. All brought well filled baskets and a fine dinner was served

The surprise on Mr Leitzinger was very successful as he did not suspect anything, nor did he see anything unusual until his friends were all in the house

In the afternoon he was treated to another little surprise when lis- tening to the radio a special num- ber, was played for him from KMA

The M. E Ladies Aid had a real house-cleaning bee at the parson- age in readiness for the new minis- ter and his wife.

DOINGS AT SCHOOL THIS PAST WEEK

HIGH SCHOOL SHOULD PLAY ST. LOUIS CARDINALS

First P. T. A. Program Held Tues- day Evening At Gym

Our baseball team met such luck as the St Louis Cardinals on Tues- day evening, losing to Swaledale by a score of 7 to 1 Guess we'll quit base ball this season and try again next spring Several of our nine will need to help husk the Iowa corn crop and home and father need some consideration

P. T. A. Elects New Officers

Our P T A program Tuesday evening was well attended Mrs. Walter Pritchard and Rev Walsh of Garner both gave interesting ad- dresses Mrs Pritchard talked on "The American Home," and Rev Walsh on the work of the Red Cross

Our grade teachers, Miss Root and the Misses Wheatman, contri- buted not a little to the interest of the program by training some of their children for fold drills, which were presented

At the annual election the follow- ing officers were chosen for the new year Pres. A Wellemeyer; Vice-Pres. Mrs Le nard Sampson; Secretary Miss McGinnis, Treasur- er Mr Lewis

Play Practice Every Evening

Our principal, Miss Trumbell, is at present very busy coaching each school evening from 7 t 9 the cast for our high school play to be stag- ed soon We are looking forward to some good acting on the part of some of our students for they are displaying splendid ability and the play is one of good parts

First Six Weeks Period Ends

This week ends our first six week period of the school year and a re- port will go out next week to each parent showing the instructor's ranking of his or her child or chil- dren We hope they will show few failures

Our system of markings involve letters as last year with the follow- ing meanings A means superior, B above average, C average; D be- low average, and E unsatisfactory or failing C plus means a high av- erage, while D minus means a low average

Students Should Do Home Study

With several more in school than last year as much individual help can not be given More independ- dence will be demanded of students and we hope they will meet the de- mand Some students can do their work creditably at school Others who find the work difficult should reconcile themselves to regular hours of study at home Even our brightest students do well to do some work at home, especially those who contemplate a college course for as college enrollments increase more of our colleges will exclude high school students presenting less than average grades It has hap- pened that high school students have enrolled in some of our better colleges and have failed to carry on despite the fact they were awarded good grades in high scool. Thee x- planation is they had never acquir- ed the ability to really study.

Mr and Mrs Alvin Stokesbary had a lot of company Sunday. When Alvin and his good wife entertain they usually have quite a crowd, and such was the case Sunday when the following were at the Stokes- bary home: Mr and Mrs C A Lar- sen and children and J P. Larsen; A H Yahnke and daughter, Alva of Garden City, Minn.; Mr and Mrs Arthur Leach, and Mrs. Leach and daughter, Marie of Dows; R. W. Elder and family; Ben Katter and family; and Arthur Wellemeyer and family.

Dr. Zinn was a business caller at the court house Friday morning.

FARM BUREAU WOMEN HELD MEETING AT BRITT

Organization Problems And Plans Part Of Program

A meeting of the Farm Bureau project leaders and club chairman was held at Britt, Monday afternoon October 8th. Mrs. Van Bloom of Dayton, District Chairman of Wo- mens Work, was present and dis- ussed general farm bureau organ- zation work A discussion of the constitution and by-laws of the Farm Bureau of the county and the tate was taken up Mrs. Van B m described the new set of by- laws It is the plan to have a uni- form set of by-laws for each county farm bureau

A number of other organization problems were taken up and dis- ussed The farm women are be- coming more interested in farm bur- eau organization They are assist- ng with the organization problems and their help will make a bigger and stronger organization.

METHODIST CHURCH NOTES H. E. Whyte, Pastor

The new conference year is be- fore us We enter into it with high hopes and anticipation for worth while achievements. The full real- ization of our plans however, de- pends upon the hearty co-operation and continued interest of all who desire a better community The church is dedicated to the supreme ask of building Gods Kingdom; and the better it succeeds in this undertaking, in like proportion does he community become better, and more desired place to live

The latch string is always out at the parsonage to any one in need, or to any one having problems we may help to solve In other words, we are here to serve the church and community as best we can in the interests of the Kingdom

Next Sunday, October 14th we will hold communion service at the hour of morning worship both in town and at Liberty There will be preaching service at 7.30 in the ev- ening We are also planning a re- organization of the Epworth League in the near future The devotional meeting Sunday evening will be ead by the pastor, and every young person in our constituency both in town and country are invited to me The meeting will start at 7 45 p m. sharp.

NORTHWEST KLEMME FARMER MARRIES GARNER GIRL

Verner Haberkamp And Miss Burke Married Last Wednesday

Mr Verner Haberkamp and Miss Marie Burke were married last Wednesday afternoon, Oct 3rd, Rev C. A. Schmid performing the ceremony The groom was accom- panied by his brother, Harold, and Miss Pauline Blackstone, cousin of the bride, acted as bridesmaid.

Following the ceremony a wedd- ing dinner was served at the home of Mr and Mrs F E. Blackstone That evening the young couple left on a wedding trip to south east Iowa for a visit with relatives and friends.

Mr. and Mrs. Haberkamp will re- side on his farm northwest of this place.

The Times extends congratula- tions.

Scout Leaders Attend Banquet

S. M. Dr D P. Anderson and A. S M. Ray Jorgenson drove to Mas- on City last Thursday evening to attend a banquet and meeting for Scout Leaders in the North Iowa Council There were about sixty- five men present and an ideal meet- ing was enjoyed. Plans were made to begin a twelve week's course in Scout Leadership in this district. A few days prior to this meeting Dr W F. Misman, chairman of the local troop committee attended a banquet and meeting of the Execu- tive Council at Mason City. At this meeting financing scout work was planned out for the coming year.

T. B. RE-TEST TO BEGIN NEXT WEEK

HANCOCK COUNTY CATTLE TO BE RETESTED FOR T. B.

Work Will Be Completed Before December First

A number of veterinarians em- ployed by the State Department will begin work in Hancock Coun- ty next week to start the job of re- esting every herd of cattle in the county in order that the county will be reaccredited by December 1

Three years ago this coming De- ember, the county was accredited, which meant that tuberculosis a- mong cattle had been reduced to less than one-half of one per cent. In order to comply with the ruling and keep the county on the accred- ited list, the herds must be retested again by December 1st.

The actual number of veterinari- ans that will work is not known but there will be enough to com- plete the work in a short time.

There is no charge made to the herd wner for this work and in case of any reactors the owner is reimbursed at the rate of two-thirds of the difference between the ap- praised price and the salvage price. The appraising is done by the vet- erinary and the owner The five per cent that was active at the time the county was accredited has been removed and the loser will not have to stand this deduction in this test

RALPH LUDEKE TO HAVE HOG SALE NEXT WEEK SATURDAY

Will Offer Forty Head Of Boars To The Highest Bidder

R C Ludeke will have another of his big hog sales next week Sat- urday when he will sell at auction forty head of Poland China Boars

These hogs are of the "Sun Ray's Ideal," and "Night Hawk Jr" breed- ing, a blood line well known to the men raising fine hogs

Mr Ludeke specializes in produc- ing fine hogs and has as nice a herd of Poland Chinas on his farm near Klemme as can be found in this part of the country.

Farmers who are interested in raising better hogs will profit by at- tending this sale.

A more complete description of this sale will be found in Mr Lude- ke's ad, elsewhere in this issue

BOY SCOUT SUPPER WILL BE SERVED THIS FRI. EVE.

Scouts Have Been Busy Selling Tickets The Past Few Days

From all appearances the Scout Supper at the Parish House Friday evening is going over big. Advance ticket sales are increasing daily and a large crowd is expected

Mesdames E J. Arnold, H R. Gibbs and Leonard Sampson are in charge of the supper for the Scouts and we know they will put on a real "feed" The Scouts will wait on tables and generally assist the la- dies with the supper.

The three ladies were present at the scout meeting Monday evening and gave their waiters instructions. Following this the Scouts and the Troop Committee were treated to hot cocoa, cake and pop corn by the ladies. How ! How!

Scouts and officials appreciate these surprises.

Remember the Scout Supper be- gins at 6 00 p. m. and last until all are served.

The prices have been set at 50c for adults,35c for high students, and grade children 25c.

Asst Scoutmaster R. A. Jorgen- son and a number of scouts had a "hot dog" feed Friday evening. The delicious aroma of roasting dogs arose and came to the nostrils of Troop Comm. Rev Grosshuesch. He in turn sought out Dr. Zinn and these gentlemen invaded the scout camp and took part in the destruc- tion of the poor, innocent bow-wow family How! How!

MR. AND MRS. F. J. STOKESBARY MARRIED 25 YEARS

Relatives And Friends Gathered At Their Home Friday Evening

Mr. and Mrs. Joe F. Stokesbary, who dive two and a half miles north of Klemme were the victims of a pleasant surprise by relatives and friends on their twenty-fifth wed- ing annivesary last Friday evening The self-invited guests brought with them well filled baskets for a feast to be served later in the evening

The evening was spent in general visiting, listening to the radio and witnessing a mock wedding staged by Mrs. E. J Stokesbary as groom Ralph Stokesbary as the bride and Clint Stokesbary as chief organist He played the wedding march on a mouth organ. Following the even- ing's entertainment refreshments were served As a gift to Mr. and Mrs. Stokesbary their guests pre- sented them with $25 in silver

Those present were Mr. and Mrs. George Stokesbary and famly, Mr and Mrs E. J. Stokesbary and fam- ily, of Klemme; Albert Yahnke and family of Garden City, Minn.; Clint Stokesbary and family of Joice; Ralph Stokesbary and family of Woodell; F R Perkins and family of Waterloo, Clayton Babcock and family, of Kanawha; Ed. White and family, and Mrs. Chas. Gust- en, of Marshalltown, and Albert Seglam of Radcliffe

WHITE LILLY CAFE TO OPEN SATURDAY FOR BUSINESS

Josephin Stooldryer Is Proprietor Of Former Stille Cafe

Last week the Times carried an item regarding the sale of the Still cafe to Mr. Elmer Christensen, of Garner. Mr Christensen had pos- session of the business but a day or two and did not open it as he had a chance to dispose of the property again, and in the deal Josephin Stooldryer became the new owner.

She will open the Cafe Saturday of this week, under the name of the White Lilly Cafe The place is un- dergoing some changes and will be in up-to-date lunch room

Josephin Stooldryer is experienc- ed in the restaurant business and promises the people of Klemme a first class cafe serving meals, hot coffee, short orders and lunches.

We Miss The Devil Very Much

The above caption should not be taken too seriously, as we do not mean the fire-eating, long horned variety with a pitch fork tail. Oh no! The Times certainly misses our former printer's "devil", Bill Gauger, who left us last Thursday, moving with his parents to Holstein, Iowa Bill was a great help about the print shop and "knew his type lice" At the present time we are the devil, head printer, pressman, linotype operator, and the whole bunch in general We are hoping that somehow or other we might be blesed by running onto another such fine boy as Bill Gauger. May the Holstein printer grab him quick! Bill is worth his weight in gold.

Some "Vanishing Americans"

By ELMO SCOTT WATSON

VANISHING Americans? If you were asked to make a list of them, what would you include in it? The Indian would no doubt head your list, for the red man's name has become inseparably connected with that phrase, no matter how much the Indian bureau at Washington may issue official statements to the effect that the American Indian is not only not decreasing in numbers but increasing. Then you'd probably include the buffalo, the heath hen, the prairie hen, the pronghorn antelope, the elk and the grizzly bear, all of whom are periodically reported as "threatened with extinction" and as periodically reported as "saved" until it is difficult to know just what their status is.

But there is another group of "Vanishing Americans" whose fate seems to be more definitely sealed by the forward march of modern progress than any of the above for, being inanimate things, they cannot be provided by nature lovers with sanctuaries wherein they can propagate their kind. Belonging as they do to conditions in our national history that are gone forever, they are vanishing from the American scene and while a few specimens may be found in various places, you will search in vain for them in most localities that were their natural habitat.

Just as in the case of the first list of "Vanishing Americans," an Indian leads the list in this second list. He is the cigar store Indian, the sign, symbol and guardian angel of the cigar store. It is easy to understand why this is so, for tobacco originated in America and it was only natural that the aboriginal American, the Indian, should be adopted as an appropriate symbol and images of him put in front of places where tobacco was sold. But the origin of this "tribe" of Indians is wrapped in almost as much obscurity as in the much-discussed origin of the American Indian himself.

One theory as to how he came into being, as given in an article in the New York Times, is as follows:

The wooden Indian was first introduced to his job as guardian angel of cigar stores by a man named Chichester, about 1850. The sculptor of these earliest specimens was Tom Millard. In the first days of the fad some of the more aristocratic chiefs were made of metal cast in molds. This type, however, was soon abandoned; even from the first most of the figures were of wood. These were all made by hand, generally of white pine, and considerable skill was required in their shaping. Logs were first blocked out with an ax for the body, after which the arms were attached and the features marked out with a chisel. Finer carving tools gave the finishing touches. They were then painted and mounted on wheels for delivery.

The original sculptors were carvers of ships' figure heads. With the decay of American shipping, carvers here, finding their occupation slipping away from them, made the wooden Indian more than a part-time job. They turned to him as their mainstay.

A year or so ago press dispatches carried the following item of news:

Toronto, Ont.—There died a few days ago in Ste. Anne de Beaupre, Quebec, at the age of eighty-six, Louis Jobin, the originator of the cigar-store Indian.

Louis Jobin's family name does not rest exclusively on his bizarre production. He was described as the greatest wood carver in the world. He carved wood for seventy years, though of late his sight had failed and he had laid away his chisel.

While cigar-store Indians are becoming extinct, those created by Jobin in his early days in the industry are in keen demand by collectors. One of the masterpieces of St. Nicotine stands today at the front door of a tobacconist's shop on the Rue St. Jean, in Quebec city, where it was placed fifty years ago. The owner has refused $500 for it.

Jobin was a humble artist, who never talked of art for art's sake, but did whatever his hand found to do.

What was in demand sixty and seventy years ago was figureheads for ships.

Canada was a center of the wooden shipbuilding industry. So the young Jobin, although he went for a brief period to New York, found more ample scope for his talents at home.

"Forty years I carved for ships," he went on. "Then the steamers came in and iron had no use for wood. I had long carved Indians. I also carved the figure of a notary for a notary's door in Montreal. But for years I have done mostly angels and apostles and saints."

Jobin's art will not altogether die with him. He leaves behind him a nephew, Edouard Marcotte, trained in his craft, and St. Anne, though the great master of wood carving is no more, will not be deprived of sacred iconography.

But whatever the origin of the cigar store Indian, the fact remains that he is a "Vanishing American," as proved by the fact that examples of this form of American "art" are now classed as "antiques" and as such are much in demand by collectors. Three years ago the Cleveland Plain Dealer conducted a "wooden Indian contest," which brought to light a number of these interesting relics and only recently one of them, "Seneca John," alias "The Tiffin Tecumseh," achieved a lasting place in the annals of American antiquities when he was sold by Albinus Elehert, a farmer living near New Riegel, Ohio, for $100 to Henry Ford, who has given the redskin a permanent home in his museum of American antiques at Dearborn, Mich. Mr. Ford had had a "squaw" for some time, but desiring a mate for her, he instituted a search for one which resulted in his acquiring "Seneca John."

As a matter of fact it would seem that Mr. Ford got a bargain when he paid only $100 for "Seneca John," for M. L. Blumenthal, writing in the Saturday Evening Post, reported finding "a much-battered wooden Indian of the sort without which no cigar store was considered au fait or even de rigueur twenty-five years ago" in a junk shop and the dealer asked $350 for it, declaring that the price was "not out of the way at all. It's a male Indian—squaws are cheaper—and it's a good example of early American carving." But his statement that squaws are cheaper is not borne out by the following item which appeared recently in the Paris (Mo.) Mercury:

It is not generally known, but cigar Indians, formerly the outdoor sign of cigar stores, have become valuable antiques, and good specimens bring as high as $500. A firm of dealers has been negotiating with the Paris Cigar company for the very plump and handsome squaw that has graced Main street, Paris, now for more than forty years, but Frank Jones, owner and manager, is a man of sentiment, and has, it is said, turned down an offer of $300 for her. "You see," he said, "she's been here so long and never knocked about either the conversation or the weather, never so much as taken a trip, or changed the cut of her clothes, that it would be cruel to uproot her and sell her either down the river or up. I have known her since a small boy, and am downright attached to her. Some things mean more than money. My squaw is not for sale. She knows too much about Paris, past and present, to risk out of sight, and in addition I know of no other man who can boast of that rarest of all earthly blessings, a wooden squaw who cannot talk. You have no idea how satisfactory she is at times."

And as an indication of how "bullish" the cigar store Indian market has become within the last few years, consider the case of "Chief," the Indian pictured above, who stands in front of a cigar store in Colorado Springs, Colo. Frank and Clinton Osborn, proprietors of the store, report that they have received offers ranging from $500 to $1,000 for this 600-pound metal warrior whom they obtained at an auction sale of unclaimed goods in a storage house in that city fifteen years ago. But they have steadily refused to part with him.

Just as this symbol of the cigar store, is another "Vanishing American," so is the symbol of another business—the figure of a horse which used to stand in front of stores where harness was for sale. Mostly they were life-size figures, made of papier-mache or some similar substance, and on their sleek dapple-gray bodies the harness maker could display to best advantage the shining beauty of black leather and brass mountings of his new harness. Occasionally you would see one of the sort pictured above—a stuffed horse, although these are the rarest of all. This particular one is historic. It was originally owned by the United States Post-Office department for demonstrating the rural free delivery service when a horse and buggy carried rural mail. It was exhibited at the world's fair at St. Louis in 1904, then auctioned off and bought by the Washington harness merchant who now has it standing before his shop.

The motor age is partly responsible for the disappearance of the harness store horse, just as it is for the disappearance of another familiar part of the American scene. What has become of the iron hitching posts which used to stand along every village and city street? They're all gone, or at least they're going fast—these iron uprights surmounted by the figure of a horse's head with a ring in his mouth in which you tied old Dobbin's halter rope or "hitch rein." Or it might have been the figure of a little colored boy holding a ring in his hand for that purpose, but whichever it was, it's gone, along with the long rows of "hitchracks" which once lined Main street as well as the side streets in Homeburg or surrounded every country church and public meeting place.

Add, too, to the list of "Vanishing Americans" the old covered bridge. Of course, there still are plenty of them left in various parts of the country, but how much longer will the 75 to 100-year-old weather-beaten sides of these structures resist the ravages of time or the demand of motorists for concrete bridges over the streams? Essentially a New England product (the earliest known example was one built over the Connecticut at Windsor, Vt., in 1796), covered bridges were built in greater numbers in that part of the country than in any other. However, the New England floods last year took a heavy toll of the structures and many of them have been replaced with more modern types of bridges. This is also the case in other states, so with the steadily decreasing number in use the covered bridge can be listed among those "Americans" which are slowly but surely passing away. Another of the vanishing species is the old grist mill such as the one pictured above. This one, made of hewn logs, was erected before the Revolution and has been owned by one family since that day. Even without this distinction it would be noteworthy for it is one of the few survivors of an early American institution which played an important part in the building of this country.

So the list of relics of another day could be continued indefinitely—toll bridges, blacksmith shops, ferry boats of the old type, "one-hoss shays," livery stables, old stone churns, brick ovens, rail fences, "whatnots," almanacs, village pounds, etc., etc. No doubt enough examples of each can still be found to be the "exceptions which prove the rule," but in general, it is safe to say that only a few more years will see most of them disappear utterly. For they are "Vanishing Americans."

Prevent Smut by Dust Treatment

Method Is Much More Convenient Than Use of Any Liquid.

Ordinary stinking smut of wheat, or bunt as it is called in the West, does not destroy the entire head, as does loose smut, but it atacks the interior of the seed and for this reason is often overlooked. The affected kernels are shorter, more plump, and darker than the healthy kernels. When such kernels are crushed they are found to contain a mass of black powder—the spores of the fungus that causes the smut. Wheat that is badly infected has a distinct fetid odor that is noticeable when it is threshed, according to a report from the state college of agriculture at Ithaca.

Common Treatment.

The treatment commonly used in the past for the control of this smut consisted in immersing the cleaned grain in a solution made by diluting one pint of commercial formaldehyde in 40 gallons of water. The immersion continues not more than a few minutes, during which time the grain should be stirred and the light and smutted kernels, which float to the top, should be skimmed off. The grain is then removed from the solution and should be placed in a pile and covered with sacks or blankets for two hours, after which time it must be spread out to dry.

This method should be used if the grain is badly smutted, but where the smut is not bad, it may be controlled by dusting the seed with powdered copper carbonate.

Dust More Convenient.

The dust method is more convenient than the liquid method, and the grain is not injured by this treatment regardless of when it is done. The grain is mixed with the dust so that every kernel is coated, using two ounces of the dust to each bushel of grain.

The dust should test at least 50 per cent metallic copper and should be fine enough so that 90 per cent of it will pass through, 200 mesh sieve.

The mixing may be done with a shovel on a smooth floor; or a mixing machine, such as a concrete mixer or a barrel churn with baffle boards in it, will do the job.

Quickly Cooling Cream After Separating Helps

Iowa co-operative creameries are generally paying a higher price this year than last in comparison to the price of butter. In reviewing this situation C. Bechtelheimer, secretary of the Co-operative Creamery association, gives the credit to paying added attention to quality.

When quality is the goal, there is nothing that is so important as quickly cooling the cream after separating and before mixing it with older cream. The next most important factor is keeping all of the cream in a clean, cool place until it is ready to be delivered to the market.

A cooling tank connected between the pump and the water tank, or connected with a spring, is the best method of cooling cream and holding the same until it is time to market. Tanks of this kind should be small so that the water will be changed often. They can be cheaply constructed and are worth the price.

Weeds and Dockage Are Result of Foul Seed

Surely no one can expect to sow foul seed and not have weeds and dockage, and yet that is what thousands of farmers are doing right along. Effective cleaning devices are now available at reasonable prices which will remove practically every trace of weed seed and defective kernels and leave only the clean marketable grain, with no loss in hauling, market price, or freight. The dockage removed, when ground fine, makes excellent stock food and removes danger of further fouling of the land.

Agricultural Hints

Conditions are favorable for profits in market hogs this fall and winter.

* * *

It pays to feed turkeys well from the time of first feeding until they are marketed.

* * *

Some one at Clemson college has well said that the farmer who makes hay while the sun shines, also makes repairs while the rain falls.

* * *

An unladen bee can fly forty miles an hour, while one laden with honey cannot go farther than twelve miles in the same time.

* * *

It never pays to produce alfalfa seed on fields badly infected with sweet clover. The practice should be to cut infested fields until no sweet clover is left.

* * *

The markets for farm products are constantly changing. The market for wheat, corn, hogs, cattle, or any other farm product varies from time to time as the factors affecting the supply of and the demand for these products change. No one set time is always the best time to sell. The best time may be judged fairly accurately by following the conditions which affect prices.

ONLY WAY TO HOLD A HUSBAND

(© by D. J. Walsh.)

F THERE ever were two people mismated by environment, it was Blanch and Peter. Blanch is my niece and hers had been a chocolate eclair upbringing. Peter came from pioneer stock—hardy folks who called living, during the grasshopper invasion, on corn bread and "nigger heel." He had been raised on pan dowdy, noodles, boiled dinners and hash. So when Blanch gave him heaven-sent almost starved, and Blanch escaped most of her expensive viands into the garbage pail. She threw out enough every meal to keep Henry and me for a week.

Still, I didn't feel to horn in till one morning when Blanch came over looking like a gravestone.

"I'm leaving Peter," she said.

"Who's the Janie?" I asked calmly.

"Oh, it isn't that, Aunt Jen. Last night was Peter's birthday and I had a lovely dinner. He didn't come home then. Phoned he had to stay down on business. And my dinner gone to pot-a-ste—"

"What did you have?" I demanded.

"Oh, caviare and a tulip salad—"

"Any gravy?"

"Gravy? Why, no. Eclairs and gingerbread.

"Angel food," she said stiffly, "and strawberries."

"At a dollar a box," I snorted.

"That isn't all," she went on tragically. "This morning I happened to pass a restaurant—a common, greasy place. And there sat Peter with his arms wrapped around a stool, eating pie!"

"Many a man," I said tartly, "has eaten pie and lived to tell the tale."

"Common pie," ignored Blanch—"doesn't like my cooking—"

"What did you have for breakfast?"

"Oh, what's the difference? I guess we had corn flakes with fruit. And—no, yes, I forgot to order coffee."

"I see. Expect a man to work all morning on a dish of fodder. Why don't you go home and cook him a real meal once? Apple dumplings, pork chops, turnips—"

"I'm not in the habit of living on prison fare," she wailed.

"No man can live on whipped cream and sawdust," I said firmly. "Peter is one man in a thousand. He has to eat down own to keep body and soul together. It's a wonder you keep up on Peter's salary—"

"We can't," she interrupted. "We had a scene this morning. Peter says we're living beyond our means. That we're not saving a cent. But I can't keep the bills down. Aunt Jen, I believe they cheat me. I order over the phone My grocery bill is about twenty a week."

"Henry would sue me for divorce," I ejaculated.

"Peter says I've got to run the house on a hundred. He told me I could save what I saved out of it for a nestegg. But I can't save a cent. And Peter's going to crab about money I'm going home, so there!"

She burst into fresh weeping. Blanch adored the ground he walked on.

"Blanch," said I, taking the bull by the horns, firmly, "Helen of Troy couldn't have held a husband with chocolate eclairs. It's as true as the fact that all men are at heart Mormons; that the way to their heart is through their stomachs. Now I'll wager that Peter isn't staying downtown tonight on business. He's just getting a square meal somewhere, maybe with some vamp.

Blanch looked at me coldly.

"Peter isn't the kind to take his stenographer out to meals," she said, drawing herself up. "He hasn't gone that far—"

"If he hasn't he will," I told her grimly. "Men are all alike. Suppose we play detective and find out. Not that Peter wants to be unfaithful but well—you've got to feed a man. That's a biological fact. And when you don't, why, they just naturally gravitate toward the forbidden cooky jar"

"I wonder if you're right," murmured Blanch waveringly. Suddenly, she ran to the closet and flung on a hat. "Come on," she said to me tensely. "He's always talking about Hattie King's restaurant. If you're sure about your theory we'll just go down and see if he's there."

"Put on an old raincoat," I directed. "And an old hat. We don't want him to recognize us. We'll just drift in and ask for a sandwich and coffee and then we'll see what we can see."

So we set out. I will admit that Hattie King's restaurant looked inviting on that cold, drizzling afternoon. It was homey and cheerful looking, and the windows had watermelon pink check gingham curtains. There was a delicious smell of hot gingerbread in the air that reminded me of mother's kitchen when I was a little girl. We sat down at a back table close to a curtain that shut off the rear.

And would you believe it, when this Hattie King parted the curtain to take our order, who should be sitting before a little round table set for two, but Peter! Blanch saw him and half started up but I stepped on her foot under the taule. Hattie King brought us our coffee and gingerbread, and then she went back, and we heard them talking. Peter's voice was low, but Hattie King's was loud enough for us to hear if we listened. It was a comfortable voice, deep and rich and motherly.

"Take another hunk of gingerbread—do," she urged. "There's plenty more where that came from. And now what's this about you and your wife quarreling and she leaving you?" She gave a low bubbling laugh. "Huh, didn't I sense that you wasn't hittin' it off the minute you come into my place? Can't fool Hattie King."

"Why, the great big vamp," ejaculated Blanch. "She's leading him on!"

But I strained my ears while Peter uttered something away down in his throat.

"Well, you come to the right place. Boy, you sure did." Again that throaty chuckle. "She means all right but she's young and she don't know men. Of course, your crazy about her, but you don't gibe. And she can't cook—"

"I'm starving to death," groaned Peter. He rose from the table and took out an old pipe. "Mind if I smoke? Of course, you don't. I ought to go back but, by doggies, this is homelike. I'm a cad to tell you but I couldn't help it. You're so-so sort of understanding."

Blanch stood up. I could see at a glance that she had seen Peter reach and take Hattie King's big pudgy hand in his. But I whispered "wait," and she sat down.

"Now listen, boy," came in the big comfortable voice, "you're just a hungry kid, that's all that ails you. Have you told your wife what you told me? Well, you go straight home and read her the riot act. Tell her the truth; how you've been coming to my place not because you're a trifler, but because you're just plain hungry. Tell her if she wants that I should, I'll teach her how to cook real, satisfyin' dishes. And tell her from Hattie King that that's the only way to hold a husband."

I couldn't stop Blanch now. She was shooting right for the front door. I left the money on the check and followed her, looking back to see Hattie King removing our dishes. I couldn't keep up with Blanch at all. And she didn't say one word. But I saw when we passed the street lights that she was crying.

That was a year ago. I was over just last evening. Peter was purring like a tomcat, stretched out on the mohair davenport, with his feet on the cushions. I smelled cabbage. There was the remains of a pot roast on the table, and I caught a glimpse of a pan in the oven partly filled with gingerbread.

"Hello, Aunt Jen," said Peter, swelling up like a poisoned toad. "Help yourself to a piece of my wife's gingerbread. If you don't find it the lamb's lettuce—"

"Peter," demurred Blanch, with a little blush. And talk about affinities! You should have seen the look that passed between them. It all goes to show my contention that any wife has it all over a vamp if she's sensible enough to show her hand.

Map Enables Blind to Travel in Safety

It is reported from the British capital that the most remarkable map of London yet conceived is now contemplated for the use of the blind. It is a map that will convey to the blind, through the sensitive tips of their fingers, a true mental impression of the position of the main thoroughfares, the principal places of interest along those thoroughfares, and the means of access to them. This map will be "drawn" in relief and will consist of a combination of dots and dashes, a medium that has already provided for the sightless what had before been denied to them.

Already the blind of London are in possession of the complete series of plans of London's underground railways that are available for public use. They are able, by the aid of 11 embossed charts, to study in detail the routes of each tube system, the Metropolitan and the district railways, and can follow without any possibility of error the complete inner circle or the whole network of underground services. There are even diagrams demonstrating the construction of the tubes, and the fact, not always realized by normally sighted passengers, that a tube station is itself a tube, only of much greater diameter than that provided for the passage of the cars between the stations.

To Evacuate Old City

Sybaris, ancient Greek town of south Italy, which has provided all European languages with a word expressive of licentious luxury, is to be brought to light after 25 centuries during which its very location was forgotten. The extensive marshland along that part of the gulf of Taranto is to be reclaimed by the Italian government at a cost of $16,000,000. Experts have been detailed to watch for the buried city and a portion of the allotted money will be granted for the excavation. Sybaris was destroyed in the Sixth century B. C. by its neighbor and rival, Croton, which altered the course of a river in order to bury it forever. Some archeologists believe the excavations will supply valuable (and perhaps scandalous) information concerning daily life six centuries anterior to Pompeii.

Observer Has Moon Model

Among the instruments an amateur astronomer in Los Angeles has used in making a relief model of the moon is a dentist's drill. It is helpful in carving out the small craters and other irregularities on the surface of the model, which is fashioned of plaster of paris. Photographs supplied by Mount Wilson observatory and data obtained through two high-powered telescopes of his own have been used by the astronomer in preparing the model.—Popular Mechanics Magazine.

Orchard Information

ANTHRACNOSE IS FUNGOUS DISEASE

Anthracnose is a fungous disease which attacks mainly black raspberries, but it sometimes occurs on red and purple varieties. The disease is widespread and very destructive to commercial berry plantations. The fungus is very noticeable on the canes; frequently they are spotted with grayish areas. As the disease advances, the spots continue to enlarge and become buff or grayish in color, while the outer portion of the area is somewhat raised and purple in color. The infected area enlarges, and ofttimes it girdles the cane, hindering the sap flow, this in return stunting the growth of the plant and decreasing the size of the fruit until it shrivels up or dies on the bush. In badly infected plantations, the leaves are attacked and they show irregular spots having the buff colored centers with purple margins; occasionally the diseased tissue drops out, leaving the shot hole effect. Anthracnose can be kept under control provided the grower will observe the following precautions:

1. Select disease-free stock.
2. All fruit canes should be cut out and burned following berry harvest.
3. Clean cultivation.
4. Spray the plants every season with either lime-sulphur 1 to 10 or bordeaux mixture 4-4-50, using it as a delayed dormant spray or when the leaves just begin to show green. When canes are badly diseased, make a second application not later than seven to ten days before blossoming, using lime-sulphur 1 to 40.

Favorable Fall Weather Favors Pruning of Tree

Fruit growers should take advantage of good fall weather to prune their orchards, is the advice of the fruit men at the State College of Agriculture at Ithaca, N. Y.

Old apple orchards cannot be expected to produce good fruit unless they are pruned. Too, if the trees are dense, they cannot be sprayed well; pruning can be justified on this point alone, they say. Not only can a well-pruned orchard be sprayed better, but it can be sprayed cheaper; the cost of picking fruit is lower, too.

The skyscraper type of tree that is common in some old orchards may be rejuvenated or lowered, but when the cost of labor is high and apples are cheap, it usually doesn't pay.

Tall trees with strong, healthy side branches reasonably close to the ground can be lowered by cutting back to the side branches. After the top is cut back, many small prunings should be made through the tree to aid the individual fruiting branches.

In orchards that are crowded, it is usually best to pull out every other row on the diagonal to divide the space.

Strawberries Succeed on Any Suitable Soil

Strawberries will succeed on any good soil that is well adapted to ordinary farm crops. The lighter or medium soils are to be preferred but any soil used for strawberries should contain plenty of organic matter and be of good moisture-retaining capacity.

Do not plant strawberries upon land that has been in sod or weeds during the previous season, as such land is likely to be infested with white grubs which feed upon the roots of strawberry plants. White grubs are responsible for many strawberry failures each season.

The average soil will be greatly benefited by a heavy application of manure (15 to 20 tons per acre) before planting to strawberries. It is an efficient practice to apply the manure to a cultivated crop a year in advance of strawberries.

Lightly Pruning Apple Trees While Still Young

The present tendency in apple pruning is to prune lightly while the trees are young and more heavily as they grow older. The peach tree, however, is usually pruned quite severely beginning with the time it is set. Now the evidence seems to point in the direction of light thinning out of branches while the peach trees are young, and the customary severe heading back after they have begun fruiting. Three-year-old peach trees in Ohio that were lightly pruned yielded 40 pounds of fruit in both 1925 and 1926, whereas the heavily pruned trees averaged 30 pounds in 1925 and 22 pounds in 1926. In heavy pruning 7 pounds of wood was removed from each tree, and in light pruning only 3 pounds was cut off.

Planting Berries

Gooseberries are planted in rows six feet apart, with the plants four feet apart in the row. This takes a little over 1,800 plants per acre. Raspberries are usually planted at about the same distance, although when kept in hills and cultivated in both directions, many plant them five feet apart in the row. The raspberry plant will yield from one to two quarts of fruit per year. A mature gooseberry plant will do about the same.

THE KITCHEN CABINET

(©, 1928, Western Newspaper Union.)

Strength of character is not mere strength of feeling: It is the resolute restraint of strong feeling; it is unyielding resistance to whatever would disconcert us from without or unsettle us from within.—Dickens.

SEASONABLE FOODS

When one enjoys pastry a delicious pie may be prepared as follows:

Peach Cream Pie.—Bake a pastry shell and fill with sliced peaches, sweetened, top with whipped cream and serve.

Combination Salad.—Mix well one cupful of minced celery, two cupfuls of diced apple, one tablespoonful of peanut butter, one-third of a cupful of mayonnaise. Arrange on lettuce and garnish the top with six raisins.

Poached Eggs With Ham.—Cook very thin slices of ham in a hot frying pan until well frizzled. On rounds of toasted buttered bread place a slice of ham, then a poached egg, sprinkle with salt and pepper and pour hollandaise sauce over each; sprinkle with a bit of parsley and serve.

Hollandaise White Sauce.—Melt three tablespoonfuls of butter in a double boiler, add two tablespoonfuls of flour and blend well. Add gradually one cupful of boiling water, stirring continuously until thickened. Season with one-half teaspoonful of salt, a dash of cayenne and one tablespoonful of lemon juice. More lemon juice may be added if needed. The addition of two well beaten yolks improves the sauce. This sauce is more economical than the real hollandaise which is prepared with one-half cupful of butter, two eggs and no flour.

Molded Cream Cheese.—Soak one tablespoonful of gelatin in one-fourth cupful of cold water, then add one-half cupful of boiling water and stir until dissolved. When just beginning to set, add three drops of tabasco sauce, one-fourth of a teaspoonful of mustard, one-third of a teaspoonful of salt, one-half cupful of grated cheese and one-fourth cupful of chopped pimentoes. Beat one-half cupful of cream until stiff, fold in the gelatin mixture and mold in baking powder cans. Serve unmolded on lettuce with dressing.

Golden Glow Ice Cream.—Boil together two cupfuls of sugar and one cupful of boiling water for five minutes: add one cupful of grated pineapple, one quart can of apricots, put through a sieve and add the juice and pulp of two oranges. Scald two quarts of rich milk: add a tablespoonful of flour mixed with a little cold milk and cook until the starch is cooked. Blend the milk and fruit mixture and freeze. This makes a gallon.

Food for the Child.

Our dietitians tell us that in serving cereals to children, they should never be sugared. Use a few raisins, dates or figs. This sugar will satisfy the need for sweets and will be much more wholesome. The seeds of the fig, the woody fiber of the date and prune add bulk to the food and help in the peristaltic action of the intestine. A child who is well nourished with unsweetened food, has plenty of dried and fresh fruits, will not crave candy.

Pudding such as custards, tapioca, cornstarch and junket served with cream with cubes of jelly or sliced fruit, make delightful desserts which are easy of digestion.

Cocoa made mostly of milk will often be taken, when milk will be refused. For a treat a marshmallow placed on top of the cocoa will make it very festive.

Plain sponge cakes, bread pudding with raisins, dates, prunes or figs served with cream.

Milk toast, using plenty of butter and a rich white sauce thickened with butter and flour. All these are good foods for children.

Graham crackers put together with peanut butter in sandwich form are usually well liked by children and are both tasty and nourishing. With a glass of milk or cocoa they will make a good luncheon or supper.

Pastry, condiments, pickles and rich cakes should never be given to children. Ice creams, water ices, and fruits are always well liked and good for them.

Sometimes the most wholesome of foods disagree; each child should be studied as to his special problems. It is natural for a child to be happy, well and thriving; when he shows any lack, something is wrong and should be adjusted at once.

Ugly temper, pevishness, disobedience may often be directly traced to lack of sleep, good ventilation, proper exercise and lack of the right food.

To the parents is given a great responsibility, for lack of training from infancy ruins health, causes disease, crime and countless days of unhappiness, not only for the children and parents, but for all who come into any relation with them.

Kill Rats Without Danger

A New Exterminator that is Wonderfully Effective yet Safe to Use!

K-R-O is relatively harmless to human beings, livestock, dogs, cats, poultry, yet is guaranteed to kill rats and mice every time.

Avoid Dangerous Poisons

K-R-O does not contain arsenic, phosphorous, barium carbonate or any other deadly poison. Its active ingredient is squill as recommended by the U. S. Dept. of Agriculture in their latest bulletin on "Rat Control."

Many letters testify to the great merit of K-R-O. "I fed K-R-O to three rats, two of my wife's hens and the neighbor's cat. The rats died, and the hens and cat suffered no ill effects. K-R-O is one of the best Rat Exterminators I have ever seen.—Fred V. Bors, Wilber, Nebr."

SOLD ON MONEY-BACK GUARANTEE. 75c at your druggist or direct from us at $1.00 delivered. Large size (four times as much) $2.00. K-R-O Co., Springfield, Ohio.

KILLS-RATS-ONLY

Here's Possible Use for Old Store Teeth

At Webster Beach, Marshfield, lives a lobster man who recently acquired a new set of store teeth that feel real uncomfortable at times. The other day he took out the molars while on one of his trips and laid them on the sternboard of his boat.

A few minutes later a lurch by the craft sent the teeth into the cockpit right into a group of lively lobsters, just out of the water. A big fellow grabbed the teeth in one claw and scampered for a hiding place in the stern of the boat. After a long wait for the lobster to reappear, and with solemn thought as to whether the teeth had been eaten or were still in condition to eat with, lunch was put away without the aid of the teeth.

Finally a gaff was rigged up and the runaway lobster speared and dragged fourth. One claw was still gripping the molars, but they were found to be unharmed and in workable order.

Why wouldn't discarded false teeth sets be good to bait lobster pots with? —Brockton Enterprise.

Smoother Going

If all the pedestrians in the United States were laid end to end, reckless drivers would have an easier job.—Altoona Mirror.

The tatting women do nowadays mostly has an "L" in it.

The Only Time

"Does your motor always knock like that?"

"Oh, no, only when it's running."

Record Gain in Butter Profits

Dairymen Who Use "Dandelion Butter Color" Say It's the Best Investment of All.

The biggest creameries in the country, who are most careful to cater to the whims of the public, are earning record profits by keeping their butter that appetizing June color everyone likes. Ninety per cent of them are doing it with "Dandelion Butter Color." It's the most economical and satisfactory butter color made. Half a teaspoonful colors a gallon of cream! It doesn't color the buttermilk. It's purely vegetable and tasteless. Approved by all State and National Food Laws. Large bottles, only 35¢ at all drug and grocery stores or write Wells and Richardson Co., Inc., Burlington, Vt., for a FREE SAMPLE BOTTLE.

Portugal, one of the few countries with leftwise traffic, has changed to the righthand rule as convenience to tourists.

Genuine BAYER ASPIRIN

SAY "BAYER ASPIRIN" and INSIST!

Proved safe by millions and prescribed by physicians for

Colds, Headache, Neuritis, Lumbago, Pain, Neuralgia, Toothache, Rheumatism

DOES NOT AFFECT THE HEART

HEART OF WEST GOES OUT TO SMITH

Farmers Throng Cities to Take Part in Enthusiastic Ovations.

HE PROMISES IMMEDIATE AND REAL FARM RELIEF

Attacks Bigotry and Intolerance—Challenges the Ku Klux Klan—Exposes Hoover Stand on Water Power—Assails Republican Corruption.

Starting at Omaha, where in a brilliant speech he made a masterly analysis of the farm question, Governor Smith's swing through the West on his first speaking trip of the campaign was one continued triumphal progress.

At Omaha he lined himself squarely side by sido with the farmer, pledging himself to get the farmer a square deal. At Oklahoma City, two days later, with the applause and thanks of the farmers still rising on all sides, he turned with characteristic vigor and courage to the issue of religious tolerance.

At Denver he attacked the connections with the water power trust of the Republican party and the Republican candidate, and explained convincingly his own constructive program with regard to water power Republican corruption, so sensationally revealed in the oil scandal investigations, he assailed in his address at the Montana State Fair at Helena.

Although comment on Governor Smith's farm speech at Omaha has particularly emphasized the warmth and friendship shown by the Democratic candidate for the farmers and his determination to give them the kind of help they want, sight has not been lost of the masterly grasp which he displayed of the farm problem.

Going directly to the heart of the farm question, he said "the trouble is that the farmer is buying in a highly protective market and he is selling in an unprotected one. Everything that is used in the operation of his farm except what he himself produces, is hid behind the tariff wall. It is supposed to function for him but does not"

The Surplus

"A great many of the crops of this country the farmer grows in excess of the needs of the domestic market. That is the 'nigger in the woodpile', That is what you have got to pay your attention to, because as it stands today, the farmer is compelled to offer it in the domestic market first, and the surplus tends to pull down the price that he receives for the whole crop"

Referring to broken Republican campaign promises of 1924, Governor Smith continued, "What did they mean by 'equality between agriculture and industries'? They meant to give the farmer the benefit of the tariff; they know they have not done it The President knows it. Candidate Hoover knows it"

Governor Smith then proceeded to show that Herbert Hoover, the Republican candidate, has absolutely ignored this vital and fundamental part of the farm problem. Mr Hoover is against the McNarey-Haugen bill, was largely responsible for President Coolidge's two vetoes of that measure, and the only suggestion he has ever made for solving the surplus problem is to starve enough farmers into bankruptcy so that there will no longer be any surplus.

Pointing out the harsh cruelty of such a policy, which would mean that millions of farmers would lose their homes and be driven into the cities to find work, Governor Smith pledged himself to a constructive and humane method of saving the farmer from the unfair and ruinous operation of the tariff

He said "As I read the McNary Haugen bill, its fundamental purpose is to establish an effective control of the sale of exportable surplus, with the cost imposed upon the commodity benefited For that principle the Democratic platform squarely stands, and for that principle I squarely stand Mr Hoover stands squarely opposed to this principle by which the farmer could get the benefit of the tariff.

"Here is a clear cut issue, which the farmers and voters of this country must decide I pledge to the farmers and people of the country that no stone will be left unturned to give immediate and adequate farm relief by legislation, carrying into practice this principle for which my party and I stand"

Whispering Campaign

At Oklahoma City, pointing to his long record in New York public affairs and his four terms as Governor of the state, he denounced the secret and underhanded campaign being waged by the Republicans to arouse opposition to him on the grounds of his religion

"There is no greater mockery in the world today" said Governor Smith, "than the burning of the cross, the emblem of Christ, and at the same time breathing hatred

I have the right to say that if there is any citizen in this country who believes that I can promote its welfare, that I am capable of steering the ship of state safely through the next four years, and then votes against me because of my religion, he is not a real, pure genuine American

He showed that religious creeds had made no difference to him in his appointments to office while Governor Protestants having been named in the vast majority of cases and all creeds being represented

BORAH PRAISES HOOVER RECORD AS A LEADER

Veteran Senator Finds Candidate Singularly Fitted to Deal With Present-Day Problems.

PUBLIC SHOWS INTEREST

Biggest Issues Are Agriculture, Conservation, Maintenance of Constitution and Simplification of Government.

By Senator William E. Borah

IN many respects this is an exceptional campaign. I have never taken part in a campaign in which the issues were so extensive in number, and at the same time so serious in their import.

If the discussions can be kept upon a level with the issues involved it will be a campaign worthy of the intelligence and patriotism of the great American electorate. In the campaigns of the past we have had our problems of government, of human freedom,—great political questions We now have our economic problems and they are no less vital to the happiness, and, in my judgment, to the freedom of the people, than the issues which have been settled by the voters in other campaigns.

My feeling is that people look seriously upon the issues of the campaign. They feel deeply. There is more voluntary political activity than I have ever seen in a campaign. This interest is a healthy condition of affairs,—it is the most gratifying feature thus far of the contest.

Voters Independent

It may not be quite orthodox to say so, but I have also discovered an independence of thought and action upon the part of the voters that is refreshing as well as encouraging. No political party is entitled to win unless its candidates and their positions upon public questions command the confidence of the majority of the electorate. Instead of a political party fearing, it ought to covet the earnest and sincere initiative upon the part of the individual voters relative to public questions.

The Republican party has nominated a candidate whose intellectual and moral equipment, whose years of arduous things done and achieved, singularly and especially fit him to organize and harness these great economic forces in harmony with sound business, and, at the same time, in harmony with the rights of the masses.

Born in humble station, acquainted with adversity, taking his steps slowly but with a sure purpose, now a master of economic principles and theories, an engineering, organizing and directing mind, tested at least under the responsibilities of an awful catastrophe and unheard of emergencies, a humanitarian whose vigilance and foresight saved the lives of millions—his record and his qualifications are submitted with confidence to the consideration of the American electorate.

Outstanding Figure

When the great War closed, second only to the Commander-in-Chief and to the General in charge of the forces, the outstanding and impressive figure was Herbert Hoover. Through his brilliant, tireless and resourceful leadership not only were the fighting forces fed, but countless thousands of women and children, even across the fighting lines, were snatched from the skeleton clutch of famine

A great newspaper of a different political faith, speaking of one, and only one, of his many performances during the War, has said "Whatever Mr. Hoover may do in improving our own commerce and bettering commercial relations in the world today, he may have the consciousness that he has written the brightest chapter that any one man has written in the history of the War."

This was in reference to one matter. There are others. Whether composing the war passions of contending foes in order that he might be permitted to feed hungry children, or contending with diplomats and generals for the privilege of passing on food to the helpless and the dying, or setting up the machinery in a foreign land and among a suspicious people with which to feed daily eleven million famine-stricken men and women, whether breaking down and controlling the war spirit that he might care for those on the other side of the conflict, whether finding markets for accumulated food products at the close of the War, or organizing and bringing into marked efficiency a great department of the Government, he has met responsibility with superb confidence and continuing success.

Three presidents have called him to great undertakings. Three presidents have assigned him to extraordinary tasks. He did not fail them. I venture to believe that the American people are going to assign him to a still greater undertaking and still greater responsibility.

A man with his record, with his creed, can safely be entrusted with the affairs of the American people. He possesses that kind of ability which rises to meet the emergency. He was clothed with all but autocratic power and he did not abuse it. He was trusted as few men have been trusted and he was faithful to the trust.

CLINIC

Announcement

—For The Treatment Of—

VARICOSE VEINS and ULCERS
Enlarged Veins and Running Sores Of The Legs

VARICOSE VEINS and ULCERS can be successfully treated by this non-surgical method. You are not confined to your house or bed.

No surgery, no elastic bandages, salves or elastic stockings.

Varicose veins, no matter how large, all disappear and get well in from one to three weeks.

The Ulcer (sores) heal in from three to six weeks. Both heal permanently with no return.

This method, developed in the Copenhagen Clinic, Europe, during the past fifteen years has been used by Dr. Gillmore in his clinic in Minneapolis for several years, will be brought to Garner for the first time at this clinic.

This Clinic will be conducted by Dr. Gillmore of Minneapolis at my office beginning October 8th and continuing each afternoon for one week.

NO CHARGE FOR CONSULTATION or EXAMINATION

—Call or write for definite appointment for the clinic—

MASONIC BUILDING GARNER, IOWA

A "used car" is unused transportation

A GOOD automobile is built to stand years of use. It will provide many thousands of miles of satisfactory transportation.

But only occasionally are all its years and all its mileage used up by one owner. Many owners turn their cars in after an average use of only two to three years—long before the cars' lives have been exhausted.

This custom brings into the market every year so-called "used" cars which represent outstanding opportunities to buy unused transportation at low cost.

Every year more and more people appreciate this fact. Today millions of families are driving cars of which they are the second or third or even fourth owners; and this year the volume of new car sales and trade-in transactions has created wider choices and greater values in *unused transportation* than ever before.

3 out of 5 buy used cars

THREE out of five of the cars you see on the road have been purchased as "used" cars. You cannot tell—nor do you ask yourself—whether the driver of any particular car is its first owner, or its second or its third, providing the car looks well and is running satisfactorily.

The cars which General Motors dealers have accepted in trade vary in name, body style and price. Some have seen sturdy service; in others the potential mileage has scarcely been touched. And all offer a wide field of opportunities—

To the family wanting transportation at lowest possible cost.

To the family wishing to own a car of a higher price class.

To the family needing a second or third car to meet the requirements of all its members.

We invite you to examine the *unused transportation* in the stores of General Motors dealers. For your convenience General Motors extends the GMAC Purchase Plan.

GENERAL MOTORS

CLIP THE COUPON

General Motors wants you to know what it is doing to give value to the purchaser of its products. Send in the coupon. There will be no obligation attached.

GENERAL MOTORS (Dept. A.), Detroit, Mich.
Please send, without obligation to me, illustrated literature describing the General Motors product I have checked—together with the booklets "The Proving Ground" and "Principles and Policies."

HOG SALE!

Of Big Type Poland China Boars

Saturday, Oct. 20

Located on my farm one-fourth mile west of Klemme. Sale starts at 1:00 P. M. Sharp

Offering 40 Head of Boars

"The Boar Is Your Future Herd"

THE OFFERING CONSISTS OF 37 SPRING BOARS AND 3 FALL BOARS

Part of the sale offering is sired by "Sun Ray's Ideal" by "Sun Ray," the sire of the Grand Champion Double Ton Litters. The record of "Sun Ray", sire of four two-ton litters, is still unchallenged. If you desire prolificy, the strong arched, broad back, deep ham, get a "Sun Ray" Boar.

"Night Hawk Jr." is the sire of many of the good boars in this sale. He was sired by "Night Hawk," the 1927 GrandChampion; he and his get winning 90 Firsts and 23 Championships. "Nght Hawk Jr." breeds this uniform type and quality with smoothness, guaranteeing easy feeding and quick maturity.

The estimated slaughter for the coming year is 6,500,000, less than the past year. We predict better returns to the hog producer. You are cordially invited Sat., Oct. 20th.

TERMS—Cash, or make arrangements with the Clerk before the sale.

NEWS REVIEW OF CURRENT EVENTS

New York Democrats Draft Roosevelt—Religion in National Campaign.

By EDWARD W. PICKARD

NO BETTER illustration of the impersonal cruelty of politics could be found than the nomination of Franklin D. Roosevelt for governor of New York by the Democrats of that state. Those who have seen Mr. Roosevelt in recent years and know of his dogged struggle to recover from his physical disability realize that the requirements of the campaign and the fulfillment of his official duties if he is elected are likely to retard seriously his recovery. The New York Democratic leaders knew this, for Mr. Roosevelt had told Governor Smith of it in seeking to avoid the nomination, but his popularity and high character are such that they insisted on drafting him in order to give strength to their ticket. Smith himself told the convention managers to go ahead and nominate Roosevelt, and then, defending himself against the charge of unfeelingness, said to the reporters:

"There is a story going around that I want you to get right on—to the effect that Roosevelt, as governor, would not have to do the work. Of course, that is on its face an absurdity. The real fact is this: Frank Roosevelt today, mentally, is as good as he ever was in his life. Physically, he's as good as he ever was in his life. His whole trouble is in his lack of muscular control of his lower limbs, owing to the infantile paralysis he caught in an epidemic. But the answer to that is that a governor does not have to be an acrobat. We do not elect him for his ability to do a double-back-flip or a handspring.

"Politically, I mean physically, the work of the governorship is brain work. Ninety-five per cent of it is accomplished sitting at a desk. There is no doubt about Frank's ability to do it."

Senator Royal Copeland was renominated without much opposition. His Republican opponent is Alanson B. Houghton, former ambassador to Great Britain. The G. O. P. nominee for governor is Albert Ottinger, now attorney general of the state.

DESPITE the more or less genuine efforts of campaign managers and the earnest protests of liberal-minded gentlemen of both parties, the religious issue is being pushed more and more to the front. Indeed, in many localities it has become the chief issue of the political battle. This is notably true in Texas, where Protestants and Catholics are violently and openly denouncing each other and circulating the ridiculous and fanciful stories that always originate in such religious quarrels. In most other parts of the country this issue is kept somewhat under cover but it is becoming none the less potent. However, it works both ways and so its ultimate effect on the result at the polls is highly problematical. Both Mr. Hoover and Governor Smith have reiterated their pleas for religious tolerance, and they have been ably seconded by the eminent Dr. Henry van Dyke, former moderator of the general assembly of the Presbyterian church. Doctor van Dyke asserts that the election of Mr. Hoover, even in part, by anti-Catholic votes, would be a misfortune for him and a calamity for the country, and then he takes a whack at Mabel Willebrandt.

Following his speech at Elizabeth, Tenn., on Saturday, Mr. Hoover will make five addresses before leaving for California to vote. Among his dates are Boston, October 15, and New York, October 22. It was thought he might also speak in Baltimore. Senator Custis, cruising through the Middle West, spoke on the tariff in Chicago and then toured Indiana. Senator Borah continued to attack Smith on the farm relief issue, and the governor retaliated in kind in interviews. Later on Al plans a speaking trip in the East and into the Southern border states.

JAMES JOSEPH TUNNEY, better known as "Gene," and Josephine Lauder, heiress, were duly married in a hotel in Rome, and in the process the retired champion heavyweight did not add anything to his popularity. So much public interest attached to the pair that the news photographers were on hand by the score, but Mr. Tunney absolutely refused to permit any pictures to be made, nor would he let any reporters witness the ceremony. Both Ambassador Fletcher and the Italian ministry of the interior requested consideration for the camera men, but Gene was adamant. The civil marriage service was performed by Commendator Brofferio, representing the governor of Rome, and the religious ceremony was conducted by Mgr. Breslin, vice rector of the American Ecclesiastical college and one time Tunney's parish priest in New York. The bride and groom departed for a honeymoon in the vicinity of Florence.

GERMANY'S new dirigible, the Count Zeppelin, largest airship in the world, completed its test flights last week in preparation for the flight across the Atlantic to the United States, the start of which was scheduled for October 9. The huge ship—it is nearly three city blocks long—made a most successful flight over Holland and England, remaining in the air 35 hours and carrying 70 passengers.

PROGRESS made by naval aviation since the passage of the five-year air expansion bill in 1926 was outlined in a statement made public by Rear Admiral W. A. Moffett, chief of the bureau of aeronautics. Some of the principal accomplishments listed are replacement of obsolete planes with modern equipment, doubling of the facilities for training aviators at Pensacola, use of a greater number of airplanes with the fleet, winning of 15 world's records by service type planes and the improvement of the air-cooled engine.

FIELD MARSHAL VISCOUNT ALLENBY, who conquered the Turks in Palestine in the World war, has come to America to be the guest of honor of the American Legian at its convention in San Antonio. He is accompanied by Lady Allenby. New York gave the famous British soldier a great reception in Carnegie hall. After he had listened to much praise of his military achievements, he said:

"I hope that the move that you here have made for peace—the Kellogg pact—grows into faith which will do away with the miserable myth which we now have of ending disputes by cutting each other's throats. There is no reason why nations should be allowed to behave more brutally to each other than individuals are allowed to behave. I am not a pacifist, for I do believe that to insure our own protection we must trust to ourselves for our own defense. That doesn't mean that if we see a man looking at us we have to shoot him."

FOREIGN MINISTER BRIAND, with the approval of Premier Poincare and the rest of the French cabinet, has set forth France's position concerning the evacuation of the Rhineland and related questions. She is ready to fix ten billions of dollars as the reparations total which Germany must pay as compensation for preliminary evacuation of the Rhineland, if the reich mobilizes the debt. France insists on obtaining $7,500,000,000, and experts figure the other allies' claims can be compressed into the remaining $2,500,000,000, in view of Great Britain's pronouncement that it only claims sufficient payments to meet its obligations to the United States.

M. Briand announces that a finance conference is scheduled to meet in Paris early in December, with France, Great Britain, Belgium, Italy, Japan and Germany represented, to draft a plan for fiscal liquidation of war indemnities and debts as a preliminary to withdrawing the allied garrison on the Rhine. Experts believe the debt can be mobilized within six or eight years through international loans in annual sections of $500,000,000 to $1,250,000,000.

Representative Fred Britten of Illinois, chairman of the house naval affairs committee, on his return from Europe predicted that both the land and naval disarmament agreements reached by Great Britain and France would fall through because the United States had refused to be "entrapped" into approving the naval compromise plan. That scheme, he asserted, would have left France supreme ashore and England supreme afloat.

FORMAL notice that the United States will not participate in the selection of a permanent central board to investigate ways and means of controlling the traffic in narcotic drugs has been transmitted to the secretary general of the League of nations.

KING ZOGU'S newly crowned head is not being permitted to lie easy in Albania. Dispatches that have leaked across the border say that an uprising started recently in the northern part of the country as the result of the assassination of a mountain chieftain. The killing was attributed to the king and a blood feud against him was declared. The country is in a state of alarm. Eleven persons were executed in one day at Durazzo and 200 others arrested. Zogu, it is stated, is barricaded in the old Presidential palace at Tirana.

JAMES A. GARFIELD, president of the Roosevelt Memorial association, announces that the Roosevelt medals for distinguished service this year are to be presented on October 27 to Col. Charles A. Lindbergh, Charles Evans Hughes and Dr. Frank M. Chapman, ornithologist. Lindbergh is to be honored for the example he has given American youth; Mr. Hughes for his work in administering public office and in developing public and international law, and Doctor Chapman for studies of American bird life.

PAN AMERICA honored the memory of the late Gen. William C. Gorgas last week on the seventy-fourth anniversary of his birth. In the capitals of 21 American republics the avenues and boulevards were gay with flowers and flags, and in Washington there was a great banquet at which the principal guests were diplomatic representatives of these republics. The scientific board of the Gorgas Memorial institute was busy throughout the week arranging for the establishment of the Gorgas Memorial laboratory in Panama for the study of tropical diseases, which was created by congress. The congressional act grants an annuity of $50,000 for its maintenance, and the other 20 American republics together provide $37,500 annually. The laboratory will be a lasting monument to the man whose work in disease control brought him honors from many governments and made possible the building of the Panama canal.

FOR two hundred years the Ancient and Honorable Artillery Company of Massachusetts has gathered annually for a feast at which the members drank in port wine the health of the king of England and, since the Revolution, of the President of the United States. This year the company held its banquet in Toronto, and persuaded Sir Henry Drayton, liquor commissioner, to lift Ontario's liquor restrictions so they could continue their old custom. But Premier Ferguson heard of it and countermanded the order. Said he: "They'll have to drink the king's health in water. I am not allowed to have wines at my banquets." So the Ancient and Honorables drank the toasts in soda water, with many a wry face. And their friends back home had a good laugh.

TWO new air mail routes from Chicago were opened last week. One is to Mexico City by way of Kansas City, Dallas and Laredo. The other is to Montreal via Cleveland and New York city. Service started simultaneously from both ends of the routes and will be daily.

MAE WEST, actress and playwright, seems determined to force filthy plays on New York city. Not long ago she served a short term in prison for the offense, and last week she put on the stage another and dirtier play. Mae and all the members of the cast were arrested twice and Mayor Walker ordered the show permanently closed.

SPARK PLUGS ARE EASILY CLEANED

To Function Properly They Must Be Kept Free of Excess Carbon.

No automobile will operate with maximum efficiency unless the spark plugs function properly. And as the best spark plugs lose their full effectiveness after a season's driving—or approximately 10,000 miles, it is important that the motorist know how to properly care for them during this time.

In the first place the spark gap should be set at .020 to .025 of an inch.

Spark plugs to function properly must be kept free of excess carbon and oil formations.

Cleaning Easily Done.

Cleaning is easily done. Simply fill the lower part of the plug with alcohol, or any liquid metal polish, and allow to stand for a few seconds; take a piece of wire covered with one thickness of cloth and rub the carbon from the insulator then wipe clean and dry thoroughly before replacing in the engine. Cleaning a plug in this way is far better than taking it apart to clean. When a plug is once taken apart there is greater danger that it will not be put together securely again, which would cause leakage due to it not being tight. This in turn causes loss of power.

In cleaning the sparking points use emery cloth or a knife.

Where Worn, Change Plugs.

In cases where the electrode is badly worn away cleaning with emery cloth is of no avail; likewise when the insulator is coated heavily the best and most economical remedy is to change plugs since the coating cannot be cleaned off readily.

When spark plugs are severely worn, loss of power is often evident and eventually missing of the engine will occur which in turn produces the following major troubles:

1. Oil pumping, causing formation of carbon and sticky valves.
2. Poor starting and excessive drain on the battery.
3. Poor running; loss of power, especially on hills.
4. Higher gasoline consumption.
5. Larger engine repair expense.
6. Poor driving satisfaction.

Grade Crossings Taking Heavy Toll in Country

Since 1920 a total of 16,793 persons have been killed in grade-crossing accidents throughout the United States. During 1927 a total of 2,371 persons were killed and 6,613 were injured in these accidents. Louisiana reported the highest death rate, with 3.02 fatalities for each 10,000 registered automobiles. Mississippi was second, with 2.02 deaths per 10,000 cars. The lowest fatality rate was found in Wyoming where no persons were killed and only one injured at grade crossings during the year. Rhode Island had a low death rate of .08 persons per 10,000 automobiles. At the beginning of the year there were 206,533 unprotected grade crossings.

AUTOMOBILE HINTS

Did you ever notice that the smaller the car the bigger the driver?

* * *

Matters should be so arranged that road hogs could drive to the great open spaces and fight it out among themselves.

* * *

Despite the fact that motorists are prone to prejudices in this way or that, thousands are fickle in regard to the gasoline they use.

* * *

Do not permit the wheels of a car to rest in a puddle of oil on the street or in the garage. Oil is injurious to rubber and will ruin tires.

* * *

A manufacturer claims a score of various steels in the fabrication of his auto, but the most prominent metal is the brass of the driver who hogs the road.

Different Fuel Pumps Available for Any Car

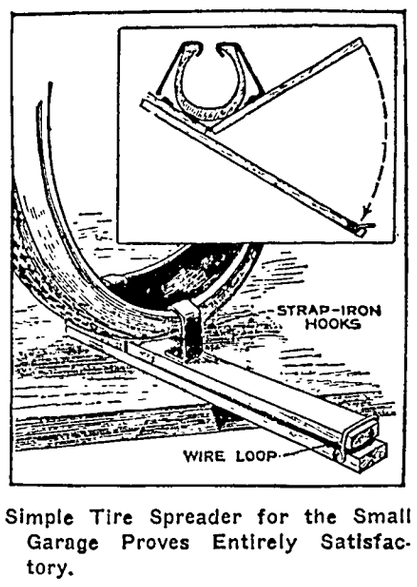
Now that cars are capable of climbing steep hills at 40 or 50 miles an hour, some natural problems arise in the matter of keeping the engine supplied with fuel. Many cars are coming through either with larger vacuum tanks or positive fuel pumps, but provision has not always been made to take care of this.

At wide-open throttle on a long, steep hill an engine is using a maximum amount of fuel. Many car owners have found their engines limping toward the top without appreciating that it was simply a case of not getting gas fast enough.

Various fuel pumps operating on different principles now are available for installation on any car which may be afflicted with shortage of gas in hill climbing at high speed or for cars which are being used in a way the manufacturer did not anticipate. If the engine seems slow toward the top of the hill, and misses a bit, don't blame the valves or think it is overheating until you have made sure it gets a full supply of gas.

Homemade Tire Spreader of Considerable Utility

To make inspection of the inside of tires, the homemade spreader shown in the drawing will be found of considerable utility. It consists of two strap-iron hooks, cut and bent to the shape indicated and attached to wooden arms, which are hinged together, as shown. When the arms are brought together and locked in that position by a wire loop, the walls of the tire will be held apart, enabling the workman to examine the inside.—Lowell R. Butcher, Des Moines Iowa, in Popular Mechanics Magazine.



Simple Tire Spreader for the Small Garage Proves Entirely Satisfactory.

Posture Affects Ease in Riding Qualities of Car

It's the way people sit on the back seat that has so much to do with the various opinions they entertain about riding qualities.

If you lounge too much on the seat you are certain to feel the road shocks through your back and shoulders where you are not used to it. The easiest ride can always be had by sitting on the edge of the seat, upright.

One reason why the auxiliary seats of a seven-passenger car always seem comfortable is because they make passengers sit upright.

Manufacturers have been giving these facts consideration this past year, and this explains why some cars ride so much better than others of the same priced class. That is because the seats are shaped to compel the passenger to sit in the most comfortable position.

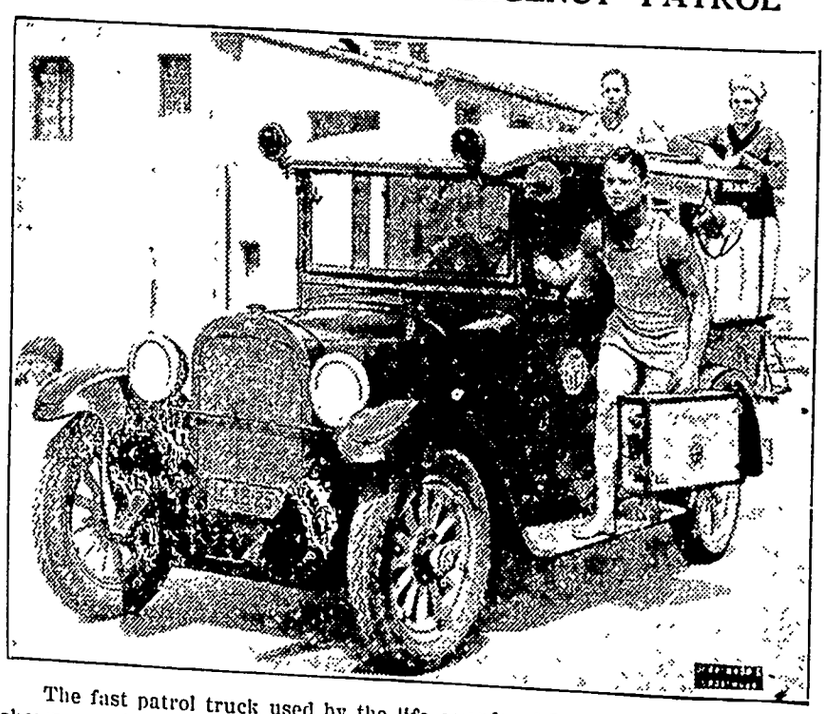
Using Grade Separation to Prevent Accidents

Several leading cities in the country are adopting the policy of separating the crosswise motor traffic from the main thoroughfare at busy intersections by elevating or depressing the crosswise thoroughfare.

In some cases the grade separation is effected by raising the level of one street slightly and depressing the level of the other so that there is a minimum change of grade at either thoroughfare.

Among the cities which have adopted such improvements are New York, Chicago, Detroit, Pittsburgh, St. Louis and San Francisco.

LIFE GUARDS USE EMERGENCY PATROL



The fast patrol truck used by the life guards of Los Angeles. A guard is shown on the running board with an inhalator or pulmotor. The guards answer the distress calls of bathers much the same as fire calls are answered in cities by the fire department.

The Woman Driver

I like to drive with Champion Spark Plugs because I know I'll not be annoyed with engine trouble due to faulty spark plugs.

Champion is the better spark plug because it has an exclusive silli-manite insulator specially treated to withstand the much higher temperatures of the modern high-compression engine. Also a new patented solid copper gasket-seal that remains absolutely gas-tight under high compression. Special analysis electrodes which assure a fixed spark-gap under all driving conditions.

Beginning October 4th and every Thursday thereafter the Champion Sparkers will broadcast over the Blue Network of the National Broadcasting Company from 8:30 to 9:00 p. m. Eastern Standard Time.

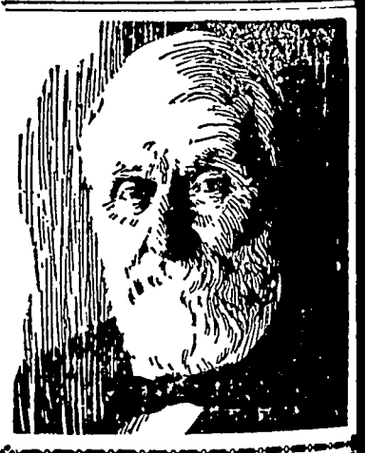
Aviator's Good Work

Joseph Salzman, veteran aviator an instructor, and Oscar Rothlin, a you who hopes some day to be a full fledged pilot, took off from the San Francisco airport on an instruction hop. Just after the plane had left the ground it was discovered that the landing gear had become broken. Salzman ordered young Rothlin to take the controls while he climbed out on the wing to repair the landing gear. After more than an hour's work, with the aid of a safety belt, shoelaces and a piece of wire, the gear was repaired so well that a perfect landing was made when the plane descended.

Real rivalry is that between the two movie theaters in a small town.

In close touch—stingy near relatives.



OLD FOLKS SAY DR. CALDWELL WAS RIGHT

The basis of treating sickness has not changed since Dr. Caldwell left Medical College in 1875, nor since he placed on the market the laxative prescription he had used in his practice.

He treated constipation, biliousness, headaches, mental depression, indigestion, sour stomach and other indispositions entirely by means of simple vegetable laxatives, herbs and roots. These are still the basis of Dr. Caldwell's Syrup Pepsin, a combination of senna and other mild herbs, with pepsin.

The simpler the remedy for constipation, the safer for the child and for you. And as you can get results in a mild and safe way by using Dr. Caldwell's Syrup Pepsin, why take chances with strong drugs?

A bottle will last several months, and all can use it. It is pleasant to the taste, gentle in action, and free from narcotics. Elderly people find it ideal. All drug stores have the generous bottles, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.

BURSAL ENLARGEMENTS

What Will you do

When your Children Cry for It

There is hardly a household that isn't heard of Castoria! At least five million homes are never without it. If there are children in your family, there's almost daily need of its comfort. And any night may find you very thankful there's a bottle in the house. Just a few drops, and that colic or constipation is relieved; or diarrhea checked. A vegetable product; a baby remedy meant for young folks. Castoria is about the only thing you have ever heard doctors advise giving to infants. Stronger medicines are dangerous to a tiny baby, however harmless they may be to grown-ups. Good old Castoria! Remember the name, and remember to buy it. It may spare you a sleepless, anxious night. It is always ready always safe to use; in emergencies, or for everyday ailments. Any hour of the day or night that Baby becomes fretful, or restless. Castoria was never more popular with mothers than it is today. Every druggist has it.

Fletcher's CASTORIA

For Old Sores

Sanford's Balsam of Myrrh

Money back for first bottle if not suited. All dealers.

Checker Player "Trained"

John Cumming, an eighty-year-old checker player of Philadelphia, has ideas of his own about physical training for mental exertion. When he competed in a checker tournament in that city, he brought his trainer with him. After Cumming had disposed of his first opponent, the trainer went into action. He gave the octogenarian a sip of water and made him recline in his chair while his second fanned him with a hat. After each match the performance was repeated and each successive opponent proved easier picking. At the end of the tournament Cumming was fully able to step forward to receive the winner's cup.

Wool Production

Arranged in their order of importance the chief sources of the world's wool supply are: Australia, South America, United States, New Zealand, Great Britain, South Africa.

Civil War Battles

There were 2,400 military engagements in the Civil war considered important enough to be identified by name.

CAN NOW DO ANY WORK

Thanks to Lydia E. Pinkham's Vegetable Compound

Denison, Texas.—"I think there is no tonic equal to Lydia E. Pinkham's Vegetable Compound for nervousness and I have used Lydia E. Pinkham's Sanative Wash and the Pills for Constipation. I can certainly praise your medicines for what they have done for me and I wish you success in the future. I can do any kind of work now and when women ask me what has helped me I recommend your medicines. I will answer any letters I receive asking about them." —Mrs. Emma Gregg, Route 3, Box 53, Denison, Texas.

BAD LEGS

Have You Varicose or Swollen Veins and Bunches Near Ankle or Knee?

To stop the misery, pain or soreness, help reduce the dangerous, swollen veins and strengthen the legs, use Moone's Emerald Oil. This clean, powerful, penetrating yet safe antiseptic healing oil is obtainable at all first-class drug stores.

In hundreds of cases Moone's Emerald Oil has given blessed relief. Splendid for Ulcers, Old Sores, Broken Veins, and Troublesome Cases of Eczema.

MOONE'S EMERALD OIL

The DAIRY

CORRECT FEEDING NOW PAYS DOUBLE

"Start now to prepare for next winter's milk checks."

A. J. Cramer, dairy husbandman at the University of Wisconsin, is reminding the members of the state's 167 cow testing associations, that "the feed and care given the dairy herd during the late summer when pastures are short will have a big influence on the production of the cows several months later." This, he feels, "is especially true of the fall freshening cows."

The dry weather during middle summer has resulted in short pastures. As a result many dairy cows are needing additional feed in order to keep up their milk flow and body weight. A drop in milk flow often reduces the income from the herd to such an extent that there is no profit left for the dairyman.

The specialist advises feeding a grain mixture to all high producing cows even on the best of pasture and adds that after pasture gets short all cows should receive grain or silage in addition to the pasture if profitable returns are to be expected. He calls attention to the experience of many of the 4,000 farmers who are keeping close watch of their feeding and profits through cow testing association work.

The cow that is dry and will freshen in the fall is in position to receive the worst set-back from dry pastures, Cramer believes. It is common knowledge to dairymen that if a cow is thin when she freshens her production will suffer during the entire lactation period following. It is just as true but not as generally known that the thin cow will have a lower test than if she were in good flesh while milking. The reduced yield and lower test resulting from a thin condition make it doubly important to keep her in good flesh while dry.

A grain mixture recommended for the milking herd consists of 200 pounds ground barley, corn or hominy, 100 pounds wheat bran, and 100 pounds of linseed meal, cottonseed meal or gluten feed. One pound of this should be fed for each four or five pounds of milk produced. For the dry cow the testing official advises equal parts by weight of ground oats, ground barley, or corn, wheat bran and a high protein feed. From three to eight pounds daily should be fed, depending on condition of the cow.

Lists Seven Problems Imminent in Dairying

Seven important economic problems face the dairy industry today and it is the job of the scientist and teacher to lead in their solution, K. L. Hatch, assistant director of agricultural extension at the University of Wisconsin, told the American Dairy Science association, at its recent meeting in Madison. His list of subjects, toward which more research should be directed, consists of economy of production, herd testing, recognition of quality, establishment of a new set of standards for dairy products, packaging of cheese, and the use of electricity.

"Each of these problems is imminent," he declared, "and should challenge both branches of dairying—production and manufacturing. They are economic problems and can only be solved with facts which are not now obtainable."

In research experiments, more emphasis should be centered on such factors as labor costs, dry cow expenses, depreciated herd costs, bull costs, and capital charges, such as interest, taxes, insurance, and depreciation.

In dairy manufacturing, uneconomical practices still prevail, Hatch said. Small, unsanitary, and wholly inefficient plants are the rule, and little effort is made to give to the consumer the type of product which appeals to his taste.

Dairy Facts

Most cream separators will do a much better job of skimming the milk when it is warm.

* * *

The herd bull should be tied up or be penned away from the herd until, at least, November 1, as it is very important to avoid having cows freshen during the warm months.

* * *

The usual farm-grown ration does not contain enough protein for a good milk-producing ration. For instance, a ration made up of mixed hay, corn silage, cornmeal, oats and bran is lacking in protein, but contains an excess of carbohydrates and fat.

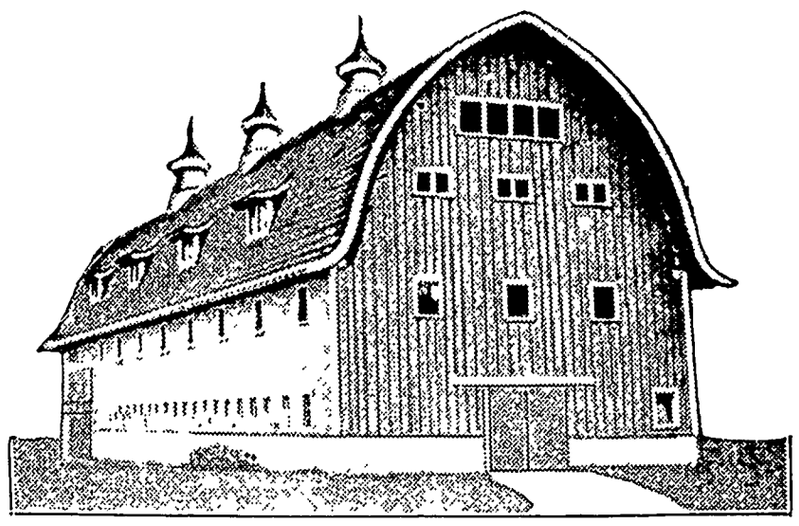
* * *

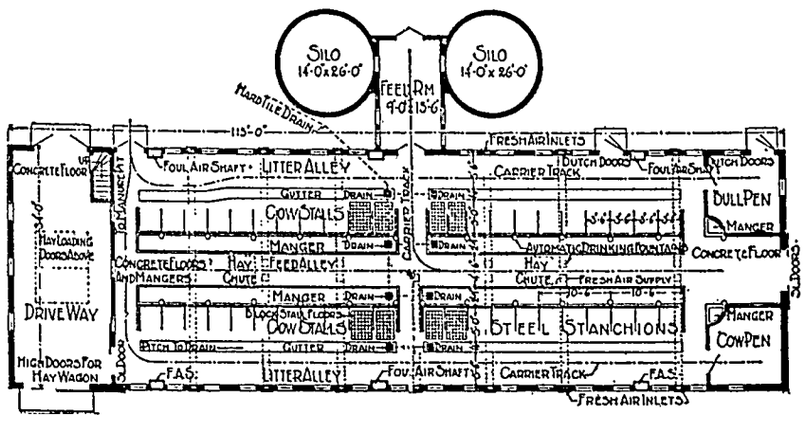
When the milking is done by machine, the rubber tubes and teat cups, after washing, should be placed in a disinfectant solution, allowed to soak until the next milking, and then rinsed out again with clean water before use.

* * *

By using pure-bred bulls it is possible to build a herd of scrub cattle into a high quality herd. This has been demonstrated at the South Dakota State college experiment station through approximately 15 years' investigation.

Modern Dairy Structure, 34 by 115, Designed to House Large Herd





By W. A. RADFORD

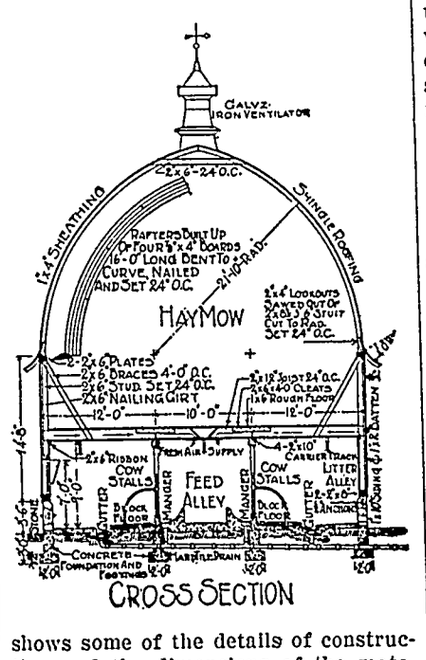
Mr William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The design for a dairy barn shown here is one that will appeal to the owner of a rather large herd of dairy cows. It is 34 feet wide and 115 feet long, and it contains two rows of stanchions that will accommodate 48 milking cows. At one end of the stable floor is the bull pen and a cow pen; at the other end is a driveway through the building with an overhead door to the mow floor.

The building is of frame construction set on a concrete foundation with the foundation walls extending up to the windows, which admit sunlight and air to the stable. An almost continuous row of windows on either side of the building throw the sunlight to the rear of the stalls on both sides which makes for more sanitary conditions in the barn. The cows face a feed alley which runs through the building. At each two stallheads there is an automatic drinking cup to furnish the cows with a continuous supply of fresh water. The barn is equipped with steel stanchions, concrete manger and gutter, while overhead is a carrier track for conveying feed to the mangers and to remove the litter.

Twin silos, each 14 by 26 feet, are at the rear of the barn at either side of a feed room. The carrier track runs into this feed room to enable the caretaker to transport the silage directly from the silos to the mangers.

The cross section of the building



CROSS SECTION

shows some of the details of construction and the dimensions of the materials used.

This modern dairy barn is of the type that makes dairy farming profitable. The work of caring for the animals can be done easily; they are kept healthy and will produce the greatest amount of milk at the least cost.

Concrete Work an Aid in Beautifying Home

For the man who likes to make beautiful and useful things around the house, the wonders of portland cement never grow old. This material can be fashioned into lawn benches, flagstone walks, garden pools and many other home improvements.

Many fail to take hold of an opportunity like this for want of proper guidance. Practical information is what you need, and then will come the fascinating work of turning out a first-class job.

Concrete is finding an ever-wider range of usefulness around the house, whether in the city or country. But, first of all, let us consider the more strictly utilitarian uses. They include walks, drives, retaining walls, steps, porch floors, well covers, cisterns, etc. The modern home cannot get along without such construction.

The astonishing story of concrete, however, has to do with the decorative instinct. There are numerous ways in which concrete may be employed to give a beauty touch to the home and its surroundings. In this group are lawn benches, bird baths, sun dials, flagstone walks, lily pools, flower beds, flower boxes, arbors, garden walls, etc.

Concrete makes for beauty, therefore, as well as for permanence. The fundamentals of making good concrete should be fully understood before any work is commenced.

Insulated Walls Will Keep Automobile Warm

Winter care of the car—at least if it is kept in a private garage—is always a difficult problem. That is, it is difficult unless one is fortunate enough to have heat in the garage.

Most private garages are simply frame buildings with an exterior finish to match the home, but with no more than the exterior finish to shut out the cold. But there are ways of overcoming the nuisance of a cold garage. And of these ways, the best, easiest and most economical is to line the inner walls with some insulating material that will shut out cold.

Old-Style Fixtures Used

A committee of engineers has made a recent survey of electrical wiring in this country to determine how well equipped homes are to make use of electricity. It has reported that more than half the houses that are already wired are using antiquated fixtures.

Veneer of Brick Adds Value to Older Homes

Brick veneering has, within recent years, become an accepted type of home exterior finish, particularly in remodeling work. The house skillfully sheathed with the one thickness of brick laid on their sides, which forms the veneer, defies detection as a frame structure by any one but the initiated.

The thin shell of brick is securely tied to the sheathing boards, or in the case of remodeling work, clapboards or shingles, by ties, usually of crimped corrugated iron. These are nailed to the boards and their crimped surfaces laid between the bricks and embedded in the mortar.

Moldings may be applied to the window and door frames of old houses to bring them out to the surface of the brick work. The foundation, if not wide enough to carry the brick, must have an extra piece added from the footings or corbeled out to form a shelf on which the brick may "set."

Frequently a veneering, artistically applied in that most easily available of all materials, common brick, will add many times its cost to the value of an outmodeled dwelling structure.

Window Seats an Added Convenience in Home

Humidifying inclosures, placed over low radiators at windows, where efficient heating dictates that radiators should be placed, form excellent window seats and may be obtained in any finish to match trim, woodwork or furniture.

Bay windows and projecting windows of all types afford excellent opportunity for the creation of an interesting window nook, which, with perhaps a bookshelf or two, becomes a charming spot for relaxation and reading or sewing during the day.

The work can frequently be done by the handy man of the household, and the housewife may upholster the seat with material to match curtains or furnishings.

Use for Two Bathrooms

Not only are many new homes being built with two bathrooms, one usually of larger size and the other compact, but in old homes as well extra bathrooms are being installed to provide lavatory and bathing facilities downstairs as well as upstairs, and to take care of the needs of the growing family without interference or embarrassment.

LIVE STOCK

WAY TO PREVENT STOMACH WORMS

Various salt-and-drug mixtures have been used by sheep raisers who at times give glowing accounts as to their effectiveness as stomach worm preventives. The mixture of salt and copperas is one of those frequently suggested. While this mixture has not been put to test by any state experiment station, other mixtures have been tried. The results secured in these tests may permit of some general deductions as to the effectiveness of this method of preventing stomach worms.

One often hears of the high efficiency of tobacco, given either in the salt or in the feed, as a stomach worm preventive. Two tests conducted by the bureau of animal industry of the United States Department of Agriculture, and one test by the Ohio Experiment station, showed tobacco to be of no value in preventing stomach worms. At the Ohio Experiment station a group of lambs were allowed salt which had incorporated in it 1 c. c. of 40 per cent nicotine sulphate for each ounce of salt. This salt and nicotine mixture was so strong that it caused the death of one lamb and the illness of another lamb, and yet it had no worth as a stomach worm preventive. It is hard to conceive, therefore, of any mixture which will be effective against stomach worms and yet not harmful to the sheep, especially when a drug such as nicotine sulphate, which is effective when used as a drench, fails so completely when used in a salt mixture, and this even though allowed in a concentration sufficient to jeopardize the health of the sheep.

Corn Alone for Pigs Is Not Satisfactory

Generally, corn alone will not prove a satisfactory feed for full-feeding pigs even when they are on a legume or rape pasture, according to Ohio State university.

Corn and tankage or corn and a mixture of two parts tankage and one part oil meal will produce more rapid gains and less feed will be required to produce 100 pounds of gain than when corn alone or corn and middlings are used.

If the pigs are on bluegrass pasture or have no forage at all, it recommends corn supplemented by a mixture of 50 pounds of tankage, 25 pounds of oil meal, and 25 pounds of alfalfa meal or ground alfalfa.

If skim milk is available in sufficient quantities it may be substituted for all or part of the recommended protein supplement. In general, corn, hominy, or corn and barley fed at the rate of 20 pounds to one pound of protein supplements, will prove to be the most practical combination for full-feeding pigs on pasture when both rate and economy of gain are considered.

Information on Goats by Iowa State College

A new circular concerning the breeds and methods of feeding and handling milk goats has been issued by Iowa State college, Ames, Iowa. The circular, written by C. A. Matthews and Earl Weaver, blasts the popular notion that goats will thrive on almost any kind of feed from tin cans to newspapers.

Milk can be produced on a commercial scale more cheaply from dairy cows than from goats, according to the circular, so it is not expected that goats will replace dairy cows in the United States to any great extent. The economical advantage for goats must be found under conditions where they can be kept cheaper than dairy cows or where there is a sufficient price advantage for goat's milk, according to the circular.

Live Stock Notes

Dock and castrate the lambs.

* * *

A horse hide furnishes about 18 pounds of leather.

* * *

Rainy weather is a good time to trim the hoofs of your calf or calves.

* * *

Most horses which die in pain expire in silence, or utter merely a moan or whine.

* * *

Ewes which are to be bred should be gaining in weight at the time of the breeding season.

* * *

To bring the top price a lamb must be fat but, as a rule, it must not weigh over 85 pounds when marketed.

* * *

It is an impossibility to breed good cattle from an inferior sire. The cost of the sire should be a secondary consideration.

* * *

It was thought, a few years ago, that silage-fed cattle shrank more in shipment than those finished on dry roughage. It has now been abundantly demonstrated, however, that if silage is withheld for the last day or two before shipment and dry roughage fed instead, cattle fattened on silage will not shrink any more than those which have received no silage.

NEW BEAUTY for YOUR CLOTHES

By Mae Martin

Don't envy some other woman her ability to look attractive and stylish on less than you have. Learn her secret! Give new beauty and variety to your dresses by the quick magic of home dyeing and tinting. Perfect results are possible only with true, fadeless Diamond Dyes, the standard for over 50 years. Insist on them and save disappointment. They are real dyes, the kind used when the cloth was made. They are so easy to use. New colors appear like magic right over the old, faded ones. Twenty million packages used a year shows their popularity.

My new 64-page illustrated book, 'Color Craft," gives hundreds of money-saving hints for renewing clothes and draperies. It's Free. Write for it now, to Mae Martin, Dept. F-143, Diamond Dyes, Burlington Vermont.

Blind Telephone Operator

Sixty-four years old and blind since birth, Mrs. Clara Raney has just completed her thirty-sixth year as telephone operator at the town of Melrose, near Delphos, Ohio. Seated in the tiny cottage in which she lives, Mrs. Raney pulls plugs and operates drops on her switchboard, and tells how easy these things are for her without her sight. Ability to distinguish a difference in the sound of the bells makes her job simple, she said.—Indianapolis News.

Says He Had Taken a Wagon-Load of Physics

"In November, 1920, I wrote you for advice as to the use of Milks Emulsion. I had been bothered with my bowels for a long time. They would not move unless I took something all the time. If I neglected that, I would get bedfast, dizzy and take with fever.

"This is a malaria country, and I have taken a wagon-load of purgatives, salts, etc. This finally gave me stomach trouble in very bad form, and I commenced to lose weight, and had no appetite. My tongue became so coated that it cracked open.

"Since writing you, I have taken your Emulsion regularly and have found it a great remedy. It sure does all you claim for it and more, too. It is a fine medicine, and I will gladly recommend it to anyone.

"We are now handling it in our store and I am selling it right along and recommend it to all of my customers. I thank you for the instructions you gave and the results that I received from same."

Yours truly, W. A. CLUCK, Mgr., Globe Mercantile Co., Greenway, Ark.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

As girls grow older they think less of love and more of money.

Acidity

The common cause of digestive difficulties is excess acid. Soda cannot alter this condition, and it burns the stomach. Something that will neutralize the acidity is the sensible thing to take. That is why physicians tell the public to use Phillips Milk of Magnesia.

One spoonful of this delightful preparation can neutralize many times its volume in acid. It acts instantly; relief is quick, and very apparent. All gas is dispelled; all sourness is soon gone; the whole system is sweetened. Do try this perfect anti-acid, and remember it is just as good for children, too, and pleasant for them to take.

Any drug store has the genuine, prescriptional product.

SCOUT DAY WINS TICKET CONTEST

BOYS CLEAR SEVENTY DOLLARS ON SUPPER VENTURE

Dorance Day Star Salesman When It Comes To Selling Tickets

Right off the bat every Scout in Troop 66, Klemme, the Troop Committee and the scout leaders want to thank everybody for their very liberal patronage and support given to make the Scout Supper last Friday evening such a wonderful success. The gross receipts of the supper totaled $83.10, and with a sale of a few items after the supper of surplus food brought the amount up to $86.05. Total expenses of about $16 96 leaves a net profit f the venture at $69.09 How! How!

As most of you perhaps know the Troop is a part of the North Iowa Council Headquarters were in immediate need of funds from troops in all parts of the district and our Troop Committee was required to furnish our share from Klemme. The proposition was submitted to the Scouts who in turn took it up with their mothers and decided to jump into the harness and help out in raising the money. Thanks to the mothers, and others, who took an interest in the affair and with the Scouts helped to raise the money needed for Council Expense

Day And Keeper Win Prizes

To put pep into the advance sale of tickets for the supper two prizes were ffered To the Scout turning in the most money on ticket sales would be given a pocket telescope The second prize offered was a subscription to Boy's Life for one year Dorance Day won the first prize, the pocket telescope 'hands down," as his total ticket sale amounted to $23 85, having sold a total of 54 tickets. Alvin Keeper was next in line and turned in a total of $13.35, having sold 29 tickets. Byrnes Missman was a close third with a total of $9 80 and 20 tickets sold Clarence Kluckhohn was next with 12 tickets The Scouts sold a total of 174 tickets. In this amount there were 130 adults, 12 high school and 32 childrens tickets. A number of tickets were sold at the door

All of the Scouts did fine in their ticket sale and some worked early and late to make the supper a big success.

A nice feature of the evening was the fact that the Camp Fire Girls and their leader, Miss Marie Blank, attended in a body and took part in the scout songs, and rendered a few of their own. The high school teachers and Miss Viola Freie at the piano also helped out on the musical part of the program. The Scouts wish to thank them for their part.

As we remarked before the mothers of the scouts, and others connected with the Troop provided the food and prepared it. The Scouts had charge of the dining room and waited on tables, found seats for their guests, and othewise looked after the comfort of all.

How' How!

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

We had a very fine attendance at all church services both in town and at Liberty last Sunday, in spite of heavy roads and threatening weather.

This coming Sunday has been set aside as "Go to Church Sunday." If you have not been attending any church, this is a good time to make a start. The church is here to help you, and we shall endeavor to make its services inspirational and devotional. The subject for the morning hour will be, "The Contagion of a Growing Church." Come and worship with your neighbors and friends, and thus will the Lord's Day be profitable to all.

The attendance at the evening preaching service has been very good but we hope to increase that also. Your presence will help

STATEMENT OF THE OWNERSHIP, Management, Etc., Required by the Act of Congress of August 24, 1912.

Of The Klemme Times, published weekly at Klemme, Iowa for Oct. 1, 1928

STATE OF IOWA,

R A Jorgenson, Klemme, Iowa

That the owner is R A. Jorgenson Klemme, Iowa.

That the known bondholders, mortgagees, and other security holders are None.

R A JORGENSON.

Sworn to and subscribed before me this 28th day of Sept, 1928
(SEAL) C G WATERMAN
(My commission expires July 4, 1930)

4-YEAR OLD GIRL IN FATAL ACCIDENT

HATTIE HUDSON DIES OF INJURIES IN AUTO ACCIDENT

Little Girl Struck By Auto In Yard At Parent's Home

Little Hattie Louise Hudson, 4 year old daughter of Mr and Mrs F J Hudson, died last Thursday afternoon at about 3 o'clock from injuries suffered in an accident on one of the Lindon Ranch farms east of Klemme where her parents reside, at 11 o'clock that morning

Mr Wendell, of Meservey had been at the Hudson farm on business matters, as we get it, and had been out in a nearby field interviewing Mr Hudson, and was returning to the farm yard in his car and to reach the road had to drive between two buildings into the farm yard It was at this time that the little girl ran in front of the car as it was coming into the yard She was knocked down and the front wheels passed over her, we are told Her parents and Mr Wendell rushed her to Klemme for medical attention N broken bones were found and but slight bruises The little miss was apparently getting along fine until after the noon hour when it was decided best to take her to a Mason City hospital for more definite examination. She was accordingly rushed to a Mason City hospital, but died a few minutes before reaching the place Internal injuries were perhaps the cause of her death

The little girl was born May 29, 1924, near Clear Lake. Funeral services were held at the Methodist Church at Clear Lake Sunday afternoon

The parents have the entire sympathy of the community in their sorrow

BASKET SOCIAL

Stop! Listen' There will be a basket and pie social Fri eve, Oct 26 at Dist. No 8, Liberty twp., 4 mi. west of Klemme All are welcome Please bring baskets or pie. Mabel L. Schaefer, teacher. 1c

Everybody invited Ethel Wellemeyer, teacher; Lester Stille, director. 1tp

DOINGS AT SCHOOL THIS PAST WEEK

COUNTY SCHOOL MASTERS HAD MEETING FRIDAY EVE

High School Play Will Be Given On Friday Evening, Nov. 2nd

The members of the Hancock County Schoolmasters' Club met last Friday evening at the home of Supt Wolf of Kanawha where they were invited to a six o'clock dinner

The time and places of the county contests were fixed and some details involving each threshed out and settled Klemme was awarded one of the Preliminary County Declamatory Contests as last year and must again compete with Goodell, Hayfield and Garner. The final contest will be held at Garner and the County Basket Ball Tourney will again be held at Britt These contests will be staged in February, the exact dates depending upon the state contest in each of these two activities

Play Will Be Exraordinary

Our high school play, "Mother Carey's Chickens," will be staged Friday evening, November 2 A lot of work is involved in staging this excellent play and we are hoping for excellent weather and roads on that date It is a royalty play and expenses larger than usual will need to be met from the door receipts We hope no very large wagers will be made on the outcome of the election until after the play tickets have been purchased More will be mentioned later

Junior Girl Wants A Place

A very capable Junior girl would welcome a place to work for her board and room this winter. Anyone needing her may be put in touch with her by notifying the superintendent

Are Voted As Best Students

The combined rankings of the members of the 14 seniors by themselve individually and independently f each other we find places the following students at the top of the class from the standpoint f ability and good class work Lawrence Greimann, Mabel Schuldt, Kenneth Gast, and Marie Carson

Rankings of the Juniors by the Juniors leave at the top of that class Clarice Wellemeyer, Raymond Barz, Lela Bachman and Wayne Pavey

There are ther splendid studnets in each of these two classes, students who may go farther and make a greater mark in the world than any of these four placed first by their classmates But it is highly complimentary to these students to be judged by their classmates as being in the upper quartile or one-fourth of their class Students well liked by their class mates and ranked high in real ability by them as judged by their daily performance in their classes leave us on graduation day with signs writ large for their future success No one should now infer that all four of these students are unquestionably superior to all others of their respective classes for human judgement is not infallible These judgements were made hurriedly and if made again might result in others of each class being placed ahead of some of these We merely give them for what each may think they are worth and for the interest they may arouse.

Harvey Nelson Heard From

We received just recently a letter from Harvey Nelson who is now enrolled at Morningside College, at Sioux City He speaks approvingly of the instruction he received at Klemme in preparation for his work there and adds that a high school collegestudent needs to apply himself in high school in order to keep abreast of his fellows when he later enters college. We wish we could be as confident of the success of all our graduates as we feel about Harvey He displayed splendid ability and learned while in high school to hold himself steadily to daily preparation of assigned work But there are others of the class of '28 that will reflect credit on our local school for which we feel proud.

50,000 RIVER FISH DUMPED IN EAST LAKE LAST WEEK

Game Fish From Mississippi River Have New Home

Last Friday 50,000 Mississippi River fish rnaging in size from fingerlings to 5 and 6 inches in length were placed in East Twin Lake by Jay Griggs, Geo Mickesh and Warner Butts. The shipment consisted of Crappies, Blue Gills and Sunfish.

The State Game and Fish department seine the fish out of swamps along the river after high water, as the fish get into these "traps" during high water and cannot get back to their old swimming holes in the river

The fish were sent to Mr. Griggs and he says so carefully were they handled that there were not more than a dozen dead fish in the entire lot

East Lake is one of the finest small lakes in Iowa It has ample natural food and game fish thrive in it water Sportsmen in this part of the state are glad to see the state department take an interest in this lake Much of the improvement thus far has been done by donations of interested men There is still a lot of room for improvement

CAMP FIRE GIRLS PROGRAM IS NEXT

CAMP FIRE GIRLS WILL PUT ON PLAY NEXT WEEK FRIDAY

Home Talent Play Will Consist Of Three Big Acts

The Klemme Camp Fire Girls are going to put on a play entitled "The Call of Wohelo" t will consist of three acts, and there will be some special surprise for spectators between acts. There are ten girls in the cast and under their leader, Miss Marie Blank, have been working hard to make this a success.

Like the Boy Scouts, the Camp Fire Girls organization is a movement that the public should get behind and give them strong support

Let's everybody plan to take in the Camp Fire girls show and help them put this over BIG. Let's pack the house to capacity.

Byrnes Missman celebrated his birthday Sunday and in honor of the event his mother preapred a big dinner for him and invited his grandparents, Mr. and Mrs Ely and his aunt, Miss Gertrude Ely of Belmond, to spend the day.

FARMERS GRAVEL ROAD SOUTH OF KLEMME

Held Graveling "Bee" One Day Last Week; Covered Old Mud Hole

Some of the neighboring farmers got together last week to put in shape a short stretch of road south of town, from the town limits to the bridge at the U. G. Smid farm.

They got the road all in fine shape and then hauled gravel from Allie White's pit and spread it The job should end the old mud hole and maybe the good work will go on

Herman Schuldt is road superintendent for this part of the woods.

Fine stuff, farmers! Keep up the good work so we town dubs can get out and visit you easier'

Drake Sorority Pledges Klemme Young Lady

Des Moines, Ia., Oct. 18.—(Special). Miss Gladys Wilson of Klemme, Ia., a student at Drake University and a graduate of Klemme High School has pledged to the Kappa Alpha Theta sorority, one of the seven social sororities on the Drake campus After a strenuous rush week, Miss Wilson decided to pledge to the Kappa Alpha Theta organization and is now beginning her pledging period

4-H CLUB WILL HAVE BANQUET

IS NOW AN ANNUAL AFFAIR IN HANCOCK COUNTY

Committees Busy Arranging For A Program And Other Details

The Annual 4-H Club Banquet will be held at Garner on Saturday, October 20th at 6:30 o'clock p m 4-H club members in Hancock Co. and their parents and friends are invited to attend this banquet

The committees are busy arranging the program and making preparations. Miss Lulu Tregoning and Mr J S Quist of the Extension Service at Ames will be here to take part in the program. Reports from the different clubs will be given.

This banquet is one of the big affairs of the club work in Hancock County and is held annually The attendance has always been quite large and the prospects are that here will be a good attendance again this year.

All club members and others attending should phone or write the Farm Bureau Office or notify the club leader of their township. The price will be 50 cents per plate.

FOURTH LESSON IN CLOTHING WORK BEING GIVEN

The fourth training school for local leaders is being given, to the Hancock County Farm Bureau Women during this week and last. Miss Merle Ramer has charge of this work and there will be one more lesson given in December when this project will be completed.

POLITICAL MEET AT KANAWHA

Milo Reno, President of the Farmers Union of Iowa, will speak t Kanawha Opera House Saturday evening, October 20, at 7:30 P. M. Reno will answer Brookhart who speaks at Kanawha, October 17th Reno is speaking under the auspices of the Agricultural Equality Voters League of Iowa.

Card Of Thanks

We wish to express our appreciation of the help given us during the illness and death of our father, for the flowers from the Legion-Auxiliary during his illness, and for the words of sympathy, acts of kindness and floral contributions. The Josten Children.

BASKET SOCIAL

There will be a basket and pie social at the Wayside School, Dist No. 2, Avery Twp., on Friday, Oct. 26, 1928 Ladies please bring baskets or pie. Nettie Roths, teacher.*

ISSUE NEW POULTRY BULLETIN

Two On Brooder Houses, One On Straw Loft House

Three new poultry bulletins, for which there has long been a demand, are just off the press and are ready for public distribution

Extension Bulletin No. 144 explains the construction and use of the Iowa Model One-Room Brooder House. This brooder house is adapted to use on the average general farm and acomodates about 250 chicks.

Extension Bulletin No. 145 takes up in detail the Warm and Cool Room Brooder House, which is designed to accomodate from 350 to 400 chicks in one unit. This house measures 12 by 16 feet. Both bulletins 144 and 145 are four pages in size.

Extension Bulletin No 146, eight pages, discusses the Straw Loft Poultry House, especially recommended for the maintenance of uniform temperature resulting from a 2-foot layer of straw in the loft.

These bulletins may be obtained by writing to Agricultural Extension Service, Morrill Hall, Iowa State College, Ames, Iowa

RESOLUTIONS OF RESPECT

WHEREAS, Death has come to our Creamery Circle of our Secretary and the All Wise God has removed our beloved friend and fellow-worker, Valentine Josten, and

WHEREAS, In the Death of Mr Josten the community has lost a good and valuable man, and caused a vacancy in our community; therefor be it

RESOLVED, That we as Directors and Officers of The Klemme Co-Operative Creamery Company do sincerely mourn his death, and hereby extend our heartfelt sympathy to the bereaved family and relatives, and be it further

RESOLVED: That a copy of this resolution be sent to the family, a copy spread on the records of the Creamery, and a copy sent to The Klemme Times for publication.

(Signed)
V D GIMER, Manager
H. R. STROMER

NO HUNTING

Positively no hunting, trapping or trespassing permitted on my land. Albert Johnson. 1tp

PUBLIC NOTICE

I will allow no hunting, trapping or trespassing on my farm. Herman Priebe. 2tp

Give "Biddy" Time To Eat

If corn is fed on the cob—chopped up—to laying hens during winter, the evening feed should be given about an hour earlier than when shelled corn is used, so as to allow sufficient time for the birds to eat what they need.

NEARBY AND YONDER

By T. T. Maxey

Dead Letters

THE receipt of unbelievably large numbers of letters addressed to individuals and concerns which could not be located at the address given and could not be returned to the writers because no return address was given, led the Post Office department, as far back as 1825, to establish a dead-letter office in Washington for the purpose of working out a proper disposition of such mail. Incidentally, the large amount of money found in unclaimed letters likewise led to the establishment of our present postal money order system in 1864.

But the flood of undeliverable letters continued to increase at an alarming rate and the establishment of the parcels post made matters worse so that several branch offices had to be opened.

Undeliverable letters are opened and destroyed unless they contain something of value or information making their return to the writers possible. Those containing anything of obvious value are held for one year awaiting claim, after which time, if unclaimed, the contents become government property. Letters carrying name and address of sender are returned. Undeliverable parcels are held for a time and finally disposed of at public auction.

During a recent year, the postmaster general reported the disposition of 24,056,982 undeliverable letters; 3,952,074 being delivered, 19,810,020 destroyed, 80,027 filed awaiting claim, 244,077 "under treatment" and 535,376 unclaimed parcels, of which 161,406 were delivered, 52,582 destroyed and the balance to be finally disposed of at auction.

During a recent January some 5,000,000 undeliverable Christmas cards reached the various dead letter offices and only about 10 per cent could be returned because the senders failed to show their addresses.

* * *

The King of Oakdom

IT IS said that there are about a score of species and in the neighborhood of 300 varieties of oak trees in this country; also that they vary as broadly in habits and appearance as a like number of human families bearing the same name, and that each variety thrives best in its own kind of home, wears its own kind of bark and grows its own sort of leaf.

His excellency, the wye oak, is said to be the king of all the oaks in America. His royal highness resides on the celebrated eastern shore (Chesapeake bay region) of the state of Maryland—in Talbot county, to be exact.

Standing near the highway which parallels the bay shore—somewhat apart from other trees as if to show off to better advantage—and surrounded by a protecting fence, this old resident proudly exhibits a sign—that the visitor may understand just who he is—which imparts the surprising information that his trunk, one foot from the ground, is 57 feet in circumference, his top spread 140 feet, that he is 89 feet high and about three hundred seventy-five years old.

After lingering to enjoy the solitude of his presence and learning that he probably is the largest oak east of the Mississippi, if not in the entire United States, and the oldest tree in eastern United States, the visitor naturally feels ennobled and departs with a keen admiration for this lusty giant and wishes him continued good health and contentment.

* * *

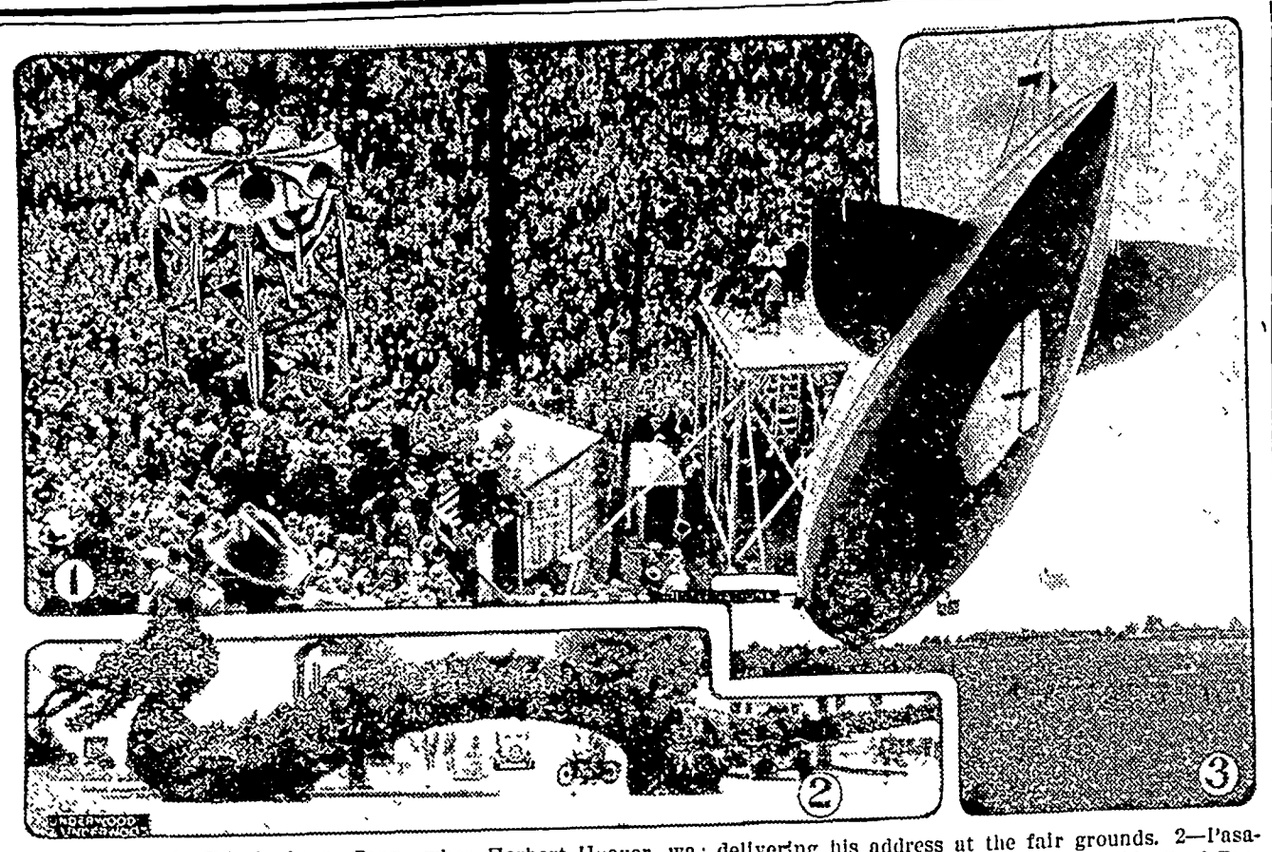
The Wisconsin Dells

GEOLOGISTS declare that once upon a time that section of the United States which is now designated as Wisconsin was covered by a massive sheet of ice—somewhat like the Greenland of today. This ice period probably came to an end some 50,000 years ago. As this far-reaching ice field began to melt and break up and Wisconsin took its place in the sun, the ice water escaped by cutting a channel through a sandstone ridge which ran crosswise to its course and the Dells of Wisconsin river came into existence and the river sought a connection with the Father of Waters so as to have an outlet for its liquid cargo.

The Dells extend some seven miles up and down the river, have a minimum width of about 50 feet, a depth of from 60 to 120 feet, and their unusual beauty is the outstanding feature of this valley.

Here, for hundreds of centuries, nature's elements have quietly worked, wearing, carving and etching the sandstone walls of the river into an ornate and unique panoramic scenic attraction. Outstanding features have been appropriately named by visitors. For instance, one finely chiseled lateral canyon is so narrow that two persons cannot pass at the same time—hence, "Fat man's misery." Bold cliffs, deep chasms, striking rock formations, sculptured walls, fluted columns and other forms of nature's handiwork are arrayed on all sides, presenting, en masse, a mingling of the beautiful and the picturesque that is as rare as it is unusual.

(©, 1928, Western Newspaper Union.)



1—Scene in Elizabethton, Tenn., when Herbert Hoover was delivering his address at the fair grounds. 2—Pasadena's float in parade, a dragon made of flowers nearly a block long. 3—Stern view of the huge dirigible Graf Zeppelin ready for her flight from Germany to the United States.

NEWS REVIEW OF CURRENT EVENTS

Italy Also Rejects Anglo-French Navy Agreement —Smith Invades South.

BY EDWARD W. PICKARD

ITALY, like the United States, has rejected the Anglo-French agreement as a basis for future naval limitation. Premier Mussolini's note is not so abrupt as Secretary Kellogg's, but is just as specific in its objections to naval limitation by categories, and undoubtedly completes the destruction of the agreement.

The note reaffirms Premier Mussolini's declaration in the Italian senate last June, when he said, "Italy is ready to accept as the limit of armaments any figure, even the lowest, provided it is not exceeded by any other continental European power," meaning, of course, France. It insists, however, on consideration of all branches of arms, land, naval, and air, in any discussion for disarmament.

The Fascist note launches into a lengthy explanation of why it favors limitation of global tonnage for navies instead of limitation by categories. The argument is identical with that advanced by the American delegation at the tripartite naval conference at Geneva a year ago, and repeated in the American reply to the French-British memorandum.

"Each state must be left free to use its tonnage quota the way it believes it best answers its particular needs, both as regards the type of ships and its armament," Mussolini explains.

France, which admittedly would be the chief beneficiary of the agreement with England, is mighty touchy on the subject. Last week the authorities in Paris seized the person of Harold Horan, correspondent of the Universal Service, because he had cabled to New York a letter Foreign Minister Briand had sent to French ambassadors regarding the interpretation of the pact, and compelled him to agree to leave the country. Mr. Horan's explanation was that his employer, William Randolph Hearst, had handed him the document with instructions to send it to America.

The British cabinet voted to make public all the documents and correspondence in connection with the agreement "as soon as practicable." It was necessary first to get the consent of all the nations concerned. Sir Austen Chamberlain, British foreign secretary, who is now in California in search of health and a rest, declined to discuss this subject or any other affairs of state. He is suffering from neuritis in his left arm but is said to be getting better and gaining weight.

GEN. CHIANG KAI-SHEK, generalissimo of the Chinese Nationalist armies, was elected first President of the Nationalist government of the country, including Manchuria, and was inaugurated on the seventeenth anniversary of the revolt against the emperor on October 10, 1921. Chiang, who is only forty-one years old, actually is only President of the government state council, but as he is also chairman of the Koumintang central executive committee, which controls the government, he is the dominant figure in China. The United States, Germany, France and the Netherlands were the only foreign governments that cabled congratulations to General Chiang.

Dr. S. Parkes Cadman, chairman of the China famine relief organization in New York, has received from a mission in Kansu a letter telling of terrible conditions in that remote province. Last year's earthquake killed 85,000 and reduced 100,000 to dire poverty; this year's crops were ruined by drought and famine conditions prevail already; and to cap the climax the Moslems, who form a third of the population are in revolt and have massacred at least 200,000 persons.

GOV. AL SMITH was almost quiescent the first part of last week, so far as the campaign was concerned, but Wednesday night he left New York for a visit to the solid South. He passed through part of North Carolina and Tennessee, making no set speeches but appearing frequently on the rear platform of his car and stopping at Chattanooga for a conference with party leaders. Then he proceeded to Louisville, where he delivered an address on Saturday. His schedule called for a week of campaigning from Missouri to Ohio with a speech in Chicago October 19; then a brief rest in Albany followed by a final tour of two weeks in Atlantic seaboard cities. Gov. Albert C. Ritchie of Maryland opened the Democratic campaign in Chicago with a rousing speech, most of which was devoted to the religious issue and a vigorous attack on intolerance. The rest of the time he spoke on prohibition, which he doesn't like. Ritchie was followed in Chicago by Mayor Jimmy Walker of New York.

Herbert Hoover, whose appearance in Elizabethton, Tenn., was declared by his supporters to have been a great success in the way of winning votes, put in much time preparing for his Boston address. He also conferred with New York state Republican leaders and told them the result there was up to them. They appeared fairly confident but do not underestimate the battle that confronts them.

H. O. Hansbrough, once a Republican senator from North Dakota and now a supporter of Al Smith, put forth the charge last week in a Minneapolis speech that Hoover "is credited" with owning oil and mining properties in Colombia and Mexico, and demanded that he withdraw from the campaign and permit the selection of a Republican candidate "who cannot be influenced in handling our foreign relations." Henry J. Allen, director of Republican publicity, learning that Hansbrough was to make the accusation, wired him that there was no foundation for the statement and that it could only be uttered for the purpose of gaining votes by deliberate lies. Hansbrough, however, delivered his address and made the charges, which he insisted were "based on facts."

SAN ANTONIO surrendered absolutely to the American Legion and the former service men had a fine time at their convention in the Texas city. General Pershing delivered an address on the opening day devoted mainly to a plea to the Legion to create an interest in good government that would impel voters to go to the polls on election day. Lord Allenby of England was given a great ovation when he was presented with the Legion's distinguished service cross. Wednesday the big parade was staged, with about 10,000 members of the Legion and its auxiliary in line and numerous bands filling the air with melody. The procession was more than four hours passing the Alamo where it was reviewed by various dignitaries. Louisville was awarded next year's convention, and Paul V. McNutt, dean of Indiana university law school, was elected national commander.

UNITED SPANISH WAR VETERANS held their annual convention in Havana, Cuba, where more than 7,000 members and their friends were welcomed by President Machado. Col. William L. Grayson of Savannah, Ga., was elected commander in chief almost unanimously; and Otto Raths of Minnesota senior vice commander and Frank E. Shea of Connecticut junior vice commander. The parade, which was held on the anniversary of Cuba's ten-year revolt, was participated in by Cuban army contingents and officers and men from the battleship Texas. The Maine memorial was officially dedicated with impressive ceremonies.

THE American navy's big dirigible Los Angeles successfully made the round trip from Lakehurst to San Antonio and back for the purpose of visiting the Texas city at the time of the American Legion convention. One night air mail flyer made complaint that he narrowly escaped collision with the airship because of its lack of lights.

COMMANDER RICHARD E. BYRD is finally on his way to the Antarctic, for, with members of his party, he set sail from San Pedro, Calif., in the whaler O. A. Larsen, the flagship of his expedition. The other three vessels will be met in New Zealand and the expedition will go thence to Ross sea. Byrd expects to make an airplane flight over the South pole, but this will be only an incident, for the commander's chief purpose is to make a long and intensive study of the Antarctic regions.

CLERGY and lay members of the Episcopal church in large numbers gathered in Washington for the forty-ninth triennial general convention of the church. The opening service was held in the natural amphitheater on Mount St. Alban, and President Coolidge delivered an address in which he emphasized religion as the underpinning of all government and of all society. In the first session of the house of deputies Dr. Ze Barney Phillips of Washington was elected chairman.

PRESIDENT COOLIDGE learned the other day that a score of ministers to foreign countries who graduated to their present positions from the foreign service of the Department of State had tentatively agreed to try to hold on to their jobs by withholding their resignations when Mr. Coolidge retires next March. The President thereupon made it known that the future of these "career" diplomats would rest wholly in the hands of his successor who will have full power to remove them.

President Coolidge has appointed an unusually large number of career men to the highest diplomatic posts. While sympathetic toward as permanent a foreign service as it is possible to attain, the President fears the present reported move on the part of the ministers is simply another manifestation of a disposition by some government services to attempt to organize themselves into self-perpetuating bodies.

EVIDENCE against dry law offenders obtained by tapping wires is still admissible in federal courts regardless of state laws making wire tapping a crime, for the United States Supreme court has refused to review its decision so holding. Justice Holmes dissented in the original case, denouncing the government for wilfully breaking one law to enforce another. New York was aroused by the discovery that about thirty persons had died there within a few days supposedly from drinking alcohol that had been poisoned by government agents to make it nonpotable. The police promptly closed a lot of speakeasies in the lower East side section where most of the alcohol was obtained.

FOR the second consecutive time the New York Yankees of the American league won the world series, defeating the St. Louis Cardinals of the National league in four straight games. The final game was remarkable for the number of home runs, Babe Ruth closed the season in a blaze of glory by making three. As their share of the gate receipts the Yanks received $5,531 each, and the Cards $4,197 each.

TEXTILE workers of New Bedford, Mass., have called off their strike that had lasted 25 weeks and accepted a compromise under which wages will be reduced 5 per cent instead of 10, and the manufacturers will hereafter give the workers 30 days' notice of any proposed wage cut.

GRAF ZEPPELIN, the huge German dirigible, the first to cross the Atlantic carrying paid passengers, started from Friedrichshafen Thursday morning on its memorable flight and landed at Lakehurst, N. J., where the navy air station had made all preparations to ground and house the airship. There were but three paying passengers, two of whom were Americans. Press representatives numbered four. The official guests included Commander Charles E. Rosendahl of the United States navy, representatives of the German and Spanish governments, Lady Grace Drummond Hay and Count Brandstein-Zeppelin, the inventor's son-in-law. Dr. Hugo Eckener, commander of the dirigible, was also its chief pilot. A large quantity of mail was brought over on the airship.

It was expected the Graf Zeppelin would remain in the United States about ten days and then return to Germany.

OLD SHAKER COLONY FINALLY DIES OUT

Last Surviving Member Passes Away in Ohio.

Lebanon, Ohio.—The once famous and prosperous Shaker colony at New Union, near here, has passed into history with the death of its director and last survivor, James F. Fennessey.

Organized in 1805, the colony of religious communists prospered and grew to an enrollment of 3,000 members owning 4,500 acres of land in the latter part of the last century. Since then, however, membership has steadily dwindled.

Marriage did not exist in the colony. The only additions to the membership were by conversion to the faith. The belief was said to have originated in England, though the parent organization in the United States was the Shaker colony at Lebanon, N. Y.

Fennessey, born in Cincinnati in 1852, joined the colony in 1882. At that time the colony was extraordinarily prosperous, but later came into desperate straits. Officers came from the parent colony and placed Fennessey at the helm as director. He took the leadership at a time when the colony faced an indebtedness of approximately $160,000. He brought the colony out of debt and established resources well over $500,000.

Fennessey continued at the head of the colony, but members tired of the life and drifted away. He himself, in the latter years of his life, said the communist idea had many disadvantages, especially because of the Shakers' belief in regard to marriage. The greatest disadvantage of the life was the lack of any incentive for individual attainment, he said.

In 1912 the United Brethren church bought the property for approximately $350,000 and established a children's and old people's home. The provision was made, however, that any Shakers residing there at the time might live at the colony the remainder of their lives. By 1920 all but five had left, and all except Fennessey departed in that year.

'Twas Custom in Ur for Queen to Die With King

Cleveland, Ohio.—The queen of ancient Ur, whose body was dug up recently, was only twenty-seven years old when she was slain so that she could be buried with her husband, according to Dr. T. Wingate Todd of Western Reserve university, an authority on the age of skeletons.

The king himself, Doctor Todd said, was forty-five, when he died. The bodies of the king, the queen and one of the nobles of the court were recovered in excavations in Chaldea.

"The skulls of the queen and the noble of the court had been crushed," said Doctor Todd. "Evidently they had been beaten with some sort of club. It was the custom when the king died for his queen and court to be buried with him.

The scientist made the examination of the skeletons in Europe this summer at the request of Sir Arthur Kent of the college of surgeons of the British museum.

Guard Against Injury of Washington Statue

Richmond, Va.—The dome of the state capitol here, designed by Thomas Jefferson, will be strengthened and made fireproof to assure protection of the famous Houdoun statue of George Washington which stands directly under it.

Years ago, connoisseurs gave this work a monetary value of $1,000,000 and authorities now believe that it would bring approximately $5,000,000 if placed on the art market today.

In marble, yellow with age, it portrays a regal Washington whose lineaments follow faithfully the features of the first President of the United States.

Brighten Up Bridge to Prevent Suicides

London.—Authorities are trying by psychology to disuade would-be suicides from jumping into the Thames from Blackfriars bridge.

Alarmed at the increasing number of persons taking their lives at this old Roman river landing, they have painted the former somber, "sad" black bridge in a "happy" combination of light green, trimmed with bright yellow.

Modern King Tut's Tomb Is Gold-Lined

Buenos Aires.—Press reports of a tomb lined with pure gold and worth $500,000 have aroused nation-wide interest. It is said to be one of the family vaults in the Chacarita cemetery and was built by Angel Roverano 19 years ago.

In addition to the gold lining, the vault contains a small statue of a woman executed by Bitolfi, for which the sculptor is said to have received $30,000. Various religious objets d'art in closed in the vault are believed to be worth more than $200,000.

The floor is a mosaic of small gold blocks, but it was never finished. Senor Roverano's will provided that the vault should be sealed after the death of a brother, his only surviving relative. This occurred several years ago.

BAD LEGS

Have You Varicose or Swollen Veins and Bunches Near Ankle or Knee?

To stop the misery, pain or soreness, help reduce the dangerous swollen veins and strengthen the legs, use Moone's Emerald Oil. This clean, powerful, penetrating yet safe antiseptic healing oil is obtainable at all first-class drug stores.

In hundreds of cases Moone's Emerald Oil has given blessed relief. Splendid for Ulcers, Old Sores, Broken Veins and Troublesome Cases of Eczema.

MOONE'S EMERALD OIL

Ancient Pistol

H. M. Raab, of Dallastown, Pa., collector of old horse pistols manufactured in the United States, recently came into possession of a weapon which was manufactured in Virginia in 1805. The weapon is said to be the oldest of its type in existence, as the oldest previous date for the style was 1865.

You Cannot Have Health If Constipated

"I am writing you in regard to Milks Emulsion. About two years ago I became constipated and suffered with piles. I tried all kinds of advertised medicines and didn't get any results. I would have to take a cathartic every night. I fell off in weight from 185 to 165 pounds. I got so skinny I didn't look like myself.

"A friend advised me to try Milks Emulsion. After taking one or two bottles it did me so much good I wrote you for advice in the treatment of my case. I followed the instructions you gave me and used twelve bottles of Milks Emulsion and I am now in perfect health. I have gained 25 pounds. I recommend Milks Emulsion to every sufferer of constipation.

"I want to thank you for your advice." Yours truly, W. L. JONES, Greensboro, Ala., R. F. D. No. 5, Box 84.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Past Turned to Account

A new profession has sprung up in France to meet popular demand, that of "rent agent for prehistoric depths." These are agencies which have obtained options on fields suspected of hiding rich archeological deposits or prehistoric cemeteries and allow them to be worked at a fixed rental.

He Wants to Know

"What's the town up to, Zeke?"
"Hauling sawdust."
"Revival or circus?"

This Little Girl Got Well Quick

"Just after her third birthday, my little daughter, Connie, had a serious attack of intestinal flu," says Mrs. H. W. Turnage, of Cadwalder St., San Antonio, Texas. "She left her very weak and pale. Her bowels wouldn't act right, she had no appetite and nothing agreed with her.

"Our physician told us to give her some California Fig Syrup. It made her pick up right away, and now she is as robust and happy as any child in our neighborhood. I give California Fig Syrup full credit for her wonderful condition. It is a great thing for children."

Children like the rich, fruity taste of California Fig Syrup, and you can give it to them as often as they need it, because it is purely vegetable. It has over 50 years leading physicians have recommended it, and its overwhelming sales record of over four million bottles a year shows it gives satisfaction. Nothing compares with it as a gentle but certain laxative, and it goes further than this. It regulates the stomach and bowels and gives tone and strength to these organs so they continue to act normally, of their own accord.

There are many imitations of California Fig Syrup, so look for the name "California" on the carton to be sure you get the genuine.

HEALTH IS CHEAP

At Any Price. The millionaire is poor if he has lost his HEALTH. THE MAGNECOIL SYSTEM OF TREATMENT will restore HEALTH. It is not a cure-all. But 95 per cent of the so-called diseases will respond to its magic influence. Wire for information and free booklet, stating ailment.

FARM STOCK

WORMY PIGS ARE EASY TO CURE

Wormy pigs are unthrifty, unhappy and unprofitable. They consume tremendous amounts of feed on which little return is secured and yet they may be made entirely healthy by a single treatment of a vermifuge and laxative.

"But," says W. W. Shay, swine extension specialist at the North Carolina State college, "do the job of administering the drug correctly or save time by not doing it at all. The method we have found best in our tests is to diet the wormy animals on a rather thin slop for two days, then withhold all food on the night of the second day. Allow no food at all on the third day and administer the vermifuge on the night of this day. On the morning of the fourth day, give a laxative and about one hour later follow this with a light feed, semiliquid in character. On the morning of the fifth day, take the pigs from the worm infested lot into a clean pasture or lot and full feed them as rapidly as possible with safety."

If these directions are followed, states Mr. Shay, worms in pigs will be eliminated. The vermifuge used is a drug called Santonin, and is very effective when administered on an empty stomach and followed twelve hours later with the purgative. This drug is taken voluntarily by the pig and the danger of forcible feeding is thus eliminated.

Mr. Shay advised never to give over 8 grains of the Santonin to a hog. This is the maximum dose for a large animal. A pig weighing 25 pounds should have two grains; 50 pounds, three grains; 75 pounds, four grains; 100 pounds, 5 grains and a pig weighing 125 pounds should have six grains. The drug is bought in powder form and is first dissolved in a small quantity of warm water. This is then thoroughly mixed with the thin slop and no more slop should be fed than the pigs will clean up. The slop needs to be fed in a trough long enough for all the pigs to be dosed. Invariably follow this dosage 12 hours later with the Epsom salts at the rate of one ounce to one gallon of warm water or milk with sufficient wheat shorts added to disguise the taste.

Easy to Raise Lambs by Feeding in Creep

Just as the beef calf makes the largest number of pounds of gain from a given amount of feed when it is full fed from birth to block, so also does the lamb. The calf that is fed grain in a creep while still nursing its dam not only makes excellent use of its feed, but it can also be put into the feed lot after weaning without the slightest loss in weight. The same is true of the lamb when it is given a grain ration in a creep while it is still drawing nourishment from its dam. Such a lamb can easily be made to reach a weight of 80 to 90 pounds at four months of age, and thus be sold before there is likely to be any loss from the stomach worm.

A good grain ration for such feeding consists of five parts by weight of corn, four of oats and one of a protein concentrate to balance the ration and provide plenty of protein. In connection with such feeding plenty of fresh drinking water as well as salt should be provided. Shade also helps the lamb to make good gains. Creep feeding of lambs not only brings about a maximum of feed, but it also gets them ready for the early market when, on the average, prices are higher than later in the season. The cheapest possible gains should be the aim of every live stock producer.

Show Animals Rendered Immune to Hog Cholera

Show hogs usually are rendered immune to cholera before they enter the circuit. However, when they are brought back home between fairs or after the show season is over they should be isolated, not because there is danger of their having cholera, but because there is a possibility that they may carry infection in their bodies to the hogs at home. In some territories occasionally a farmer borrows or lends hogs for breeding purposes or sows may be brought to the farm to be bred. Utmost precautions are necessary in cases of this kind. No strange hogs should be brought on the place nor should any breeding animals be permitted to leave if there are any sick hogs in the neighborhood. Even though there is no apparent sickness in the community it is safest to isolate all breeding animals that have come in contact with hogs from neighboring farms.

Pasture for Lambs

Pasture should not be grazed continuously by lambs. At least two lots should be provided as continuous pasturing is conducive to the development of stomach worms and other parasites. Thousands of lambs become infested with parasites yearly due in the main to the continued use of the same pasture. To do well, lambs should be changed from pasture to pasture at least every two or three weeks throughout the summer and until early autumn.

Increase Yields of Sugar Beets

Phosphate Fertilizer Makes Higher Percentage of Beet Crop.

(Prepared by the United States Department of Agriculture.)

Bigger yields of sugar beets, with a higher percentage of sugar, can be produced on practically all soils where the crop is grown merely by the application of a sufficient amount of superphosphate.

Limiting Element.

Extensive experiments conducted in several different states and extending over a period of years have given conclusive evidence that phosphorus is the limiting element in most fields of sugar beets, according to the bureau of chemistry and soils of the United States Department of Agriculture. In these experiments it was found that enough superphosphate to carry 80 pounds of phosphoric acid increased the yield of sugar beets about seven tons per acre, while 80 pounds of ammonia gave an increase of only one and one-half tons, and potash used at the same rate gave no increase.

When either ammonia or potash was substituted for one-fifth of the phosphate in these tests, the yields were slightly better than where the phosphate was used alone. Large commercial plantings as well as some of the experimental fields have shown that even as small an amount as 125 pounds per acre of 16 per cent superphosphate (acid phosphate) will give very profitable increases. The beneficial effect of the phosphorus is most marked early in the season, thus indicating that the good results are due mainly to the early start this fertilizer gives the plant.

Sweeter Beets Secured.

In addition to greater yields secured the beets from the fertilized fields were from 1 to 2 per cent sweeter than those from unfertilized fields. The low cost of the phosphate fertilizer and the fact that it is easily applied are also factors which favor the use of phosphates in certain sugar-beet-growing districts.

Young Birds Are More Profitable Than Old

Many poultrymen have not as yet come to the realization that young birds are the money makers on poultry farms. The heaviest production is secured during the first year after a pullet starts laying. This fact is substantiated by the results of trap-nest records from many experiment stations.

At the Michigan station the records on fowls showed an average production of 221 eggs per fowl during the first year of production, as compared to an average production of 170 eggs during the second year. This shows an increase of 28.6 per cent in favor of the younger birds from the standpoint of returns.

At the Nebraska station the first year production records averaged 224 eggs per fowl as compared to an average of 164 eggs for the second year. This is 37 per cent higher production the first year.

At the Kansas station the average for the first year totaled 232 eggs, as compared to an average of 156 for the second year, or a total increase of 48 per cent in favor of the first year's production.

Results at other stations show a similar difference in favor of the production during the pullet year.

Scatter Corn in Crib if Soft and Immature

Soft and immature corn is like to spoil if piled up too fast and should be scattered over as wide a space as possible when filling the crib. The common practice of allowing the corn to pile up as high as possible before changing the spout or conveyor from the portable or inside elevator will prove disastrous this fall unless in exceptional cases where the corn is ripe and dry. Changing the spout to deliver the corn to a different place each time a load is elevated to the crib will give the corn a much better chance to dry out. Ventilators of wood or hollow tile laid at frequent intervals through the crib will also greatly aid the drying process.

Agricultural Notes

An exceedingly good dairy cow will produce a ton of milk a month.

* * *

Successful farming is seen in good homes, schools, churches, roads and community life.

* * *

No internal medicine or chemical mixed with feed succeeds in keeping poultry free from external parasites.

* * *

Dairy improvement associations have grown in number from 120 to 522 in the past eight years, and in number of cows tested from 40,000 to 142,084.

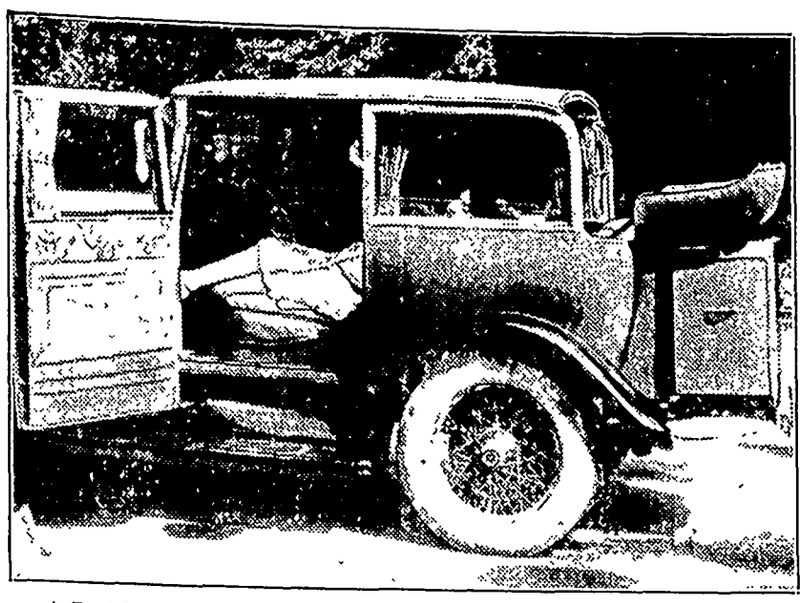
* * *

Where a proper balance between cultivated, legume, and small grain crops is maintained, a real crop rotation results. This will aid in the maintenance of a productive soil.

* * *

Permanent pastures need manure, lime, and fertilizer to keep them in a highly productive state, according to farm crop specialists of the Pennsylvania State college.

LUXURIOUS COT AFTER TIRING JOURNEY



A Parisian miss reclining in her car after a tiring journey. By rearranging the seats in this new car and by throwing back the hood, a luxurious and practical cot is assured.

MODERN CARS ARE MUCH IMPROVED

Many Little Details of 20 Years Ago Have Been Done Away With.

Interesting reminiscences of automobiles and automobiling 20 years ago are narrated by B. W. de Guichard, a pioneer in the automobile industry, and head of the AC Spark Plug company, which rounds out its twentieth anniversary this month.

"Today the motorist steps into his car, turns on the ignition and is comfortably and confidently away on his journey," Mr. de Guichard said.

"Twenty years ago this same motorist, perhaps, used a tea kettle full of hot water to prime his machine, pouring some of the hot water into the radiator and some of it over the carburetor. Then he would bend over and crank the car; if adroit at this operation, he would escape a broken arm.

Care of Headlights.

"There were the headlights that had to be filled with oil in the real early days; a little later, carbide lights were introduced. With this method the motorist found it necessary to see that the tank was supplied with water and carbide.

"Riding over a rough road, and there certainly were plenty of them, the carbide lights would suddenly flare up like Vesuvius and then as quickly fade away. Following the carbides came the acetylene pressure tank, which was quite an improvement. It will be remembered that all of these lamps had to be lighted with a match.

"There were no garages along the roadways 20 years ago and few passersby to render help, so in case of a punctured tire the motorist would begin work on changing the offending bolted on, lug or clincher type fabric tire. Inflating the tire was done by hand pump. There was no such thing as carry an inflated spare tire in the early days. And changing a flat tire then often meant half a day's work, a pair of badly skinned hands and anything but a sweet disposition.

Introduce Shock Absorbers.

"Shock absorbers were unheard of in the early days. This didn't make motoring over the bumpy roads any better. Windshield wipers were another unknown appliance, but they weren't needed anyway because everybody jacked their cars up in the garages and kept them there because road conditions made it impossible to use them.

"While there was no such thing as a spark plug 30 odd years ago, in the days of sprockets and skepticism the accepted means of firing the fuel mixture was a fearful contrivance known as a 'hot tube.'

"Equipped with a blow torch the motorist would proceed to heat up the tube. If he couldn't get the tube hot enough, the engine remained dead. If the tube became overheated—bam, backfire, bandages.

"When it looked as though that hardy band of pioneer motorists was destined for extinction, the fiendish 'hot tube' was discarded in favor of spark plugs.

Spark Plugs Improved.

"The first spark plugs were nothing to enthuse about. They were bought by the peck and thrown away by the bushel. But in the intervening years of automobile progress, spark plugs like other component parts of the automobile have been gradually developed and improved until they are as nearly perfect as it is possible to make them.

"Today improved engine design eliminates necessity of the tea kettle full of hot water; better tires have reduced greatly necessity for changing. Improved roads and cars make winter driving as popular as at any season, and certainly more appreciated. On any well traveled road the motorist is able as a rule to get service when necessary.

"Cars are being driven longer today because of engineering development, and better driving conditions and because of the protective devices on the car such as oil filters, air cleaners, crankcase ventilation, gasoline strainers, balloon tires, shock absorbers, lacquers and paints, instrument board indicators, etc. Again, another factor in the long life and economic operation of today's automobile is the owner's knowledge of the importance of keeping the car serviced regularly."

Real Cooling Agent Is Air Through Radiator

Most car owners who know anything at all about the mysteries under the hood appreciate that if the supply of water in the radiator isn't adequate the engine will tend to overheat, but how many know that a reduction in the volume of water reduces the efficiency of the air cooling system?

"What has air cooling to do with a water cooled engine?" the average motorist asks. The answer is that the engine is only indirectly cooled by water and that the real cooling agent is the flow of air through the radiator core.

The more water there is in this core the more heat is exposed to the air flow. Thus if the water supply is allowed to become too low the air cooling becomes inefficient at the same time.

This explains why a motor will run cool up to a certain point and then suddenly overheat when the water level gets too low.

Safety Automobile Seat for Baby Saves Mother

Infants ride in the automobile with safety when strapped to a special seat that rests securely by the driver's side. The bottom part fits under the cushion, which holds it in

Seat in Place; How It Is Adjusted Under Cushion, and in Use, With Straps About the Baby.

position, while bands attached to the back are carried about the baby's waist and chest. The unit is of special service when driving with small children.—Popular Mechanics Magazine.

Know Your Car Is Good Advice to Auto Owners

It has been said repeatedly that it is important to know wherein your new car differs from its predecessor. But car owners are just commencing to take the idea seriously.

This is particularly true of owners of cars with more modern lubricating systems. The man whose former engine had no pressure lubrication to the valve tappets is quite apt to get into trouble. He may remove the covers, drive the car between adjustments of the tappets, and lift the hood again to find oil splattered all over the works.

In one of the new models of a low-priced car oil stands in the valve compartment all the time. Thus if the uninitiated owner removes the valve cover plates without placing a bucket under the engine pan he is certain to make a mess of his garage floor.

AUTOMOBILE HINTS

Today's greatest uplift movement is jacking up autos.

* * *

Brakes should be inspected every 500 miles or 30 days, depending on the use to which the car is put.

* * *

It appears that some of the jay walkers are motorists hurrying back to the safety of their parked cars.

* * *

England has a rubber business which is liable to fret the American motorist almost as much as that ancient and highly significant tea tax.

* * *

With two-car families on the increase, it is of some comfort to know that the reckless driver, unlike the two-gun man, can use only one weapon at a time.

POULTRY

CULL AND MARK PRODUCING HEN

Fall is a season of year when flocks of poultry should be culled, according to L. H. Schwartz of Purdue university. Getting rid of the nonproducers now means better living conditions for the birds which are left. It gives the better birds a chance to produce eggs from now on when the price of eggs begins to rise. It will also reduce the feed bill.

Poultry flocks should, of course, be culled regularly. Any birds which show indications of positive sickness, poor laying capacity and lacking in vigor should be culled whenever seen. This is the time when a number of birds will take a vacation from laying. The nonlaying bird will show a comb which is either dried or beginning to dry up, a close space between the pelvic bones and keel and between the pelvic bones themselves. The longer they are out of laying the heavier may be the deposit of fat on the pelvic bones.

The birds may also be in a molt. All molting may not be due to poor laying. It may be the result of feeding a ration which is not high in protein. Purdue university recommends the following ration to feed to laying birds: Grain, 300 pounds yellow corn and 200 pounds of wheat; mash, 100 pounds each of ground yellow corn, wheat bran and middlings and 75 pounds of meat scrap.

It is very desirable also not only to cull the birds now, but to mark those which show every indication of being high producers. Those birds which show no molt have a large body capacity and have a large soft abdomen are the ones which should be marked as possible breeders for another year.

Many folks who have culled their flocks at this season of the year have received, actually, more eggs from the remainder of the flock than they did when they had the culls in with the whole flock.

Whitewash Henhouse in Fall for Winter Use

A coat of whitewash or cold water white paint on the inside walls of the poultry house will brighten up the interior and make it lighter during the winter months when the hen needs all the light she can get.

To make whitewash: Slack a half bushel of quicklime or lump lime with boiling water, keeping it covered during the process. Strain it and add a peck of salt dissolved in warm water, three pounds of ground rice boiled in water until it is a thin paste, a half pound of powdered Spanish whiting, and a pound of clear blue dissolved in water. Mix these together well and let the mixture stand for several days. Heat it and apply as hot as possible with a whitewash brush. Alum added to whitewash will make it stick better. Use an ounce to a gallon. Molasses makes the lime more soluble and makes it penetrate wood or plaster more deeply. Use a pint of molasses to a gallon of whitewash. A pound of cheap bar soap dissolved in a gallon of boiling water and added to five gallons of thick whitewash will give the finished job a gloss like that of an oil paint.

Let Wing Feathers on White Leghorns Alone

The practice of pulling out the wing feathers to prevent the birds from flying the fences (a vice especially peculiar to Leghorns) is both slovenly and harmful to the birds themselves. The butt end of the feather quill of a growing bird contains juices which are essential to its satisfactory development, and the wing feathers should therefore be cut, unless the poultryman wishes his birds to undergo a setback.

Probably it is cheaper in the long run to buy a good commercial pullet mash, ready mixed, rather than to mix one's own ingredients. Several well known firms of feed merchants supply excellent pullet mashes at a price which justifies the saving of labor and possible noting, however, that it is more than advisable to deal with a reputable firm in this matter.

Good Mash Feed

What is a good mash? That depends. If you have plenty of skim milk for your fowls, say a gallon daily to 30 hens, why then a mixture of such feeds as wheat middlings, ground oats, wheat bran and corn meal will do very nicely—with maybe a little meat scraps or high-grade tankage to tempt the appetite. But if you have no skim milk, the mash should contain 15 to 20 per cent of meat scraps or high-grade tankage with the other feeds mentioned.

Hens to Select

In selecting hens pick those that have capacity for feed. The little short, dumpy kind of a hen cannot consume enough feed to make her a profitable layer. Chickens with good capacity and good appetities are the ones that fill the egg basket. If chickens eat a lot of feed and still do not lay, it is time to look at the ration and find out what is lacking. One of the faults of many feeders is that they do not give their hens enough feed, rather than too much.

WHAT DR. CALDWELL LEARNED IN 47 YEARS PRACTICE

A physician watched the results of constipation for 47 years, and believed that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation, known as Dr. Caldwell's Syrup Pepsin, is a mild vegetable compound. It can not harm the system and is not habit forming. Syrup Pepsin is pleasant-tasting, and youngsters love it.

Dr. Caldwell did not approve of drastic physics and purges. He did not believe they were good for anybody's system. In a practice of 47 years he never saw any reason for their use when Syrup Pepsin will empty the bowels just as promptly.

Do not let a day go by without a bowel movement. Do not sit and hope, but go to the nearest druggist and get one of the generous bottles of Dr. Caldwell's Syrup Pepsin, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.

For Piles, Corns Bunions, Chilblains, etc.
Hanford's Balsam of Myrrh
All dealers are authorized to refund your money for the first bottle if not suited.

Mr. and Mrs. R. A. Jorgenson and son, Buster, spent Sunday at the Jay Griggs home.

Mr. and Mrs. W. L. Sherwood and Mrs J J. Cook were callers at Clear Lake Thursday.

Mr. and Mrs. J. J Cook and Dolorys were Belmond callers Wednesday evening.

Dr. D. P. Anderson was a caller at the W. L. Sherwood home Thurday evening

Rev. and Mrs. Percy and son are now nicely settled in their new home.

Mrs Anton Ahrenkeil and son, Taalkeus, were shopping in Klemme Saturday.

Mint Cline held a closing out sale Monday and contemplates moving to Florida.

Supt Baggs visited school Tuesday afternoon in the Griggs District.

Mr and Mrs John Meinderts drive to Council Bluffs Friday and returned Saturday night.

Raphal Kearnan of Belmond was a caller at the Jay Griggs home on Sunday.

Most farmers in this vicinity have started to husk corn. The yield is not so good as was expected, but the quality is fine.

The Missionary society will be held this Friday. The ladies will prepare a box to send to Porto Rico.

Jay Buchanan, Fernon Grigg, Mike Kearney and Clifford Chase attended a sale near Thornton on Wednesday

Mr and Mrs Ralph Busse of St. Cloud, Minn returned home last Thursday after spending several days visiting here.

Dan Miller who has been very ill at his home since recovering from an operation at the Hampton hospital is slowly improving, which his friends are glad to hear.

A birthday party was held at the Anson Avery home Thursday, in honor of Mrs. Avery's birthday. Quite a number of ladies were present and had an enjoyable time.

Mr. and Mrs. Hio Harberts entertained a number of friends to dinner Sunday in honor of their daughter, Mrs. Joe Houghton and husband who are visiting here from Idaho.

John Rust drove to Ames last Friday to get his daughter, Edna, and the Schneider children, also Wayne Wesenberg and Archie Conklin, who are students of Iowa State. They returned Sunday.

How They Fight Corn Borers

New York State College of Agriculture specialists are telling their farmers that a big part of the battle against the European corn borer in that state is fought in the fall. They recommend cutting all corn as close to the ground as possible and then shredding the stalks or putting them into the silo. The corn stubbles, they say, should then be plowed under deeply, making sure that all of them are covered up.

New Egg Poster Available

A new poster urging and telling how to produce high quality eggs is just off the press and is ready for distribution. The poster, which was prepared by extension specialists at Iowa State College, may be obtained either from the local county agent or by writing to the college at Ames for it. Selling of high quality eggs by farmers will mean a higher price to them because of a greater demand

Children are prettier and more comfortable in simple hats and clothes than when dressed in fussy, elaborate things, say home economists a tIowa State College. Children, they say, are also less likely to become self conscious and difficult to please as they grow older if the clothing is simple.

A postcard addressed to the Bulletin Section, Iowa State College at Ames, will bring a list of all available agricultural bulletins.

A flock of sheep provides one of the best and easiest ways to clean up weeds along the fence rows in the fields.

A renewed interest in raising colts is reported in some sections of Iowa.

A bit of skimmilk is a big aid in pushing fall pigs.

Fall plowing reduces the spring rush.

Send in your news items or call us on the phone. We want the news and are glad to have your co-operation Times Office

Hens Need Green Feed

Laying hens during winter should receive green feeds in their rations. Green food in the form of ground alfalfa in the laying mash should be fed in addition to germinated oats. Limited quantities of cabbage, beets, carrots and the like may be used with good results.

"Four-Square" Lumber
—And—
"Edgewood" Shingles

We have found by experience that buying cheap Building Material is unwise, both for the seller as well as for the buyer.

In the last year or two we have been trying to get better lumber and also better shingles, but when buying such lumber as "FOUR SQUARE" and "EDGEWOOD" shingles you must not compaer them with other competitive shingels and lumber that you might get cheaper. We have had in one car of the 100 per cent clear and 100 per cent edge grain shingles and the trade can readily see the difference. Watch for "EDGEWOOD" advertisements in the Farm Papers and other up to date papers.

Now, as to "FOUR SQUARE" Lumber, this is put out by the Weyerhaeuser people and is backed up by them it is guaranteed to be up to grade, no machine defects and each board is cut SQUARE, thus saving a lot of time and labor. It will pay you to ask to see these two brands of building material.

FARMERS—Just look over this fine list of Thirty Six Farmers of this community who the last two weeks in September have received cream checks for $40 and over for cream sold to the Klemme Co-Operative Creamery. Get busy and lets try to double this list—we would like to see your name on the list each two weeks.

These folks who regularly receive large cream checks every two weeks are real boosters for the Klemme Creamery. They will tell you it pays to patronize us!

REMEMBER—if you bring or send to us highest quality cream at all times, we can PAY YOU HIGHEST PRICES in return for the extra precaution you use in delivering to us the best of cream. We thank you for your co-operation, farmers!

Klemme Co-op. Creamery Company

NOTICE TO BIDDERS

Construction Of Drainage Improvement

Notice is hereby given that the Board of Supervisors of Hancock County, Iowa, will be in session at the Court House at Garner, Iowa, on the 12th day of November, 1928 at 1:30 P. M. for the purpose of receiving bids for the construction of drainage improvement, known and designated as Drainage District Number 134 Hancock County, Iowa.

Said work to be let in one Section, known as Section One

The time fixed for the commencement and completion of the contract shall be as follows Work must be commenced on or before the first day of April 1929, and completed on or before the first day of August 1929.

Bids will be received on the following items

Length	Size Tile Main	Average Depth
3000'	14"	5 9
1000'	12"	6 8
700'	10"	6.6
560'	8"	5.6
	Lateral 25.	
900'	8"	5 2
	Lateral 25—Branch 4	
250'	6"	4 5

1 - 18" intake.
1 - 12" intake.

Average haul from Klemme about 6 miles Average haul from Meservey about 7 miles.

Bids will be received for material alone, for labor alone, or for complete labor and material Bids for material shall include the tile delivered along the line of the ditch as ordered by the engineer Bids for labor shall include digging the ditches, laying the tile, backfilling the trench level with the adjoining ground, and the intakes complete

Tile to be Number One Vitrified Clay Tile in all sizes

All tile to be delivered at the ditch side subject to inspection at this point and to be delivered as ordered by the construction engineer

All ditches and drains to be constructed in all respects in accordance with the plat, profiles and specificatoins on file in the Auditor's Office at Garner Iowa, subject only to such changes and alterations as may be made as provided by law

Sealed bids will be received at the office of the Auditor of Hancock County, Iowa up to 1:30 P M, on the day of the letting

Each bid must be accompanied by a cash deposit or by a certified check in a sum equal to 10% of the total amount of the bid as a guarantee of good faith of the bidder

The Board will at their discretion, let the work to the lowest responsible bidder, reserving however the right to reject any or all bids and also reserving the right to adjourn the time of awarding the contract

ALL BIDS NOT MADE IN CONFORMANCE WITH THE ABOVE REQUIREMENTS WILL BE REJECTED

The party to whom any contract is being awarded will be required to attend at the office of the Auditor of Hancock County, Iowa within ten days after such award and execute a contract, thereby agreeing to all provisions, terms and conditions thereof and shall file with the County Auditor a bond, subject to his approval, for a sum equal to seventy-five per cent of the amount of the bid, and in case the party to whom any work is awarded fails to enter into this contract and furnish bond within ten days as herein required the deposit of such party shall thereupon become forfeited to Drainage District No 134 Hancock County, Iowa, together with all rights under said award

The depsits of the unsuccessful bidders will be returned to them within twenty-four hours after demand, and the deposit of the successful bidder will be returned to him upon his executing the contract and filing with the County Auditor the bond as herein required.

In making the award the facilities, reputation, and responsibility of the bidder will be given due weight.

By virtue of statutory authority a preference will be given to materials, products, supplies, provisions and all other articles produced, manufactured, made or grown within the State of Iowa.

By order of the Board of Supervisors of Hancock County, Iowa.

Dated at Garner, Iowa this 13 day of October, 1928.

H C MEYER,
County Auditor,
(Oct 18-25) Hancock County, Ia.

You Are Invited To Attend Our 8th Big Type

HOG SALE!

Of Big Type Poland China Boars

Saturday, Oct. 20

Located on my farm one-fourth mile west of Klemme. Sale starts at 1:00 P. M. Sharp

Offering 40 Head of Boars

"The Boar Is Your Future Herd"

THE OFFERING CONSISTS OF 37 SPRING BOARS AND 3 FALL BOARS

Part of the sale offering is sired by "Sun Ray's Ideal" by "Sun Ray," the sire of the Grand Champion Double Ton Litters. The record of "Sun Ray", sire of four two-ton litters, is still unchallenged. If you desire prolificy, the strong arched, broad back, deep ham, get a "Sun Ray" Boar.

"Night Hawk Jr." is the sire of many of the good boars in this sale. He was sired by "Night Hawk," the 1927 GrandChampion; he and his get winning 90 Firsts and 23 Championships. "Nght Hawk Jr." breeds this uniform type and quality with smoothness, guaranteeing easy feeding and quick maturity.

The estimated slaughter for the coming year is 6,500,000, less than the past year. We predict better returns to the hog producer. You are cordially invited Sat., Oct. 20th.

TERMS—Cash, or make arrangements with the Clerk before the sale.

R. C. LUDEKE, *OWNER Klemme, Iowa*

L. A. Matern & B. A. Reemstma, Auctioneers First National Bank, Klemme, Clerk.

Try to attend this sale. If impossible, send bids in our care to Auctioneers.

Avery Twin-Lakes News

Mike Kurtz of Klemme was a Goodell caller one day recently

Jake Watermiller was a Klemme caller Saturday evening.

Albert Etchen called at the Edwin Josten home last Saturday.

Mrs Frank Sandrey was a Belmond caller Monday morning.

Mr and Mrs. Fred Etchen spent Sunday visiting relatives.

Mr and Mrs. Fred Etchen were Mason City callers one day last week

Mr and Mrs Elmer Schlei entertained several friends and relatives at their home last Tuesday evening.

Dick Swalve assisted with the work at the Will Wenz farm several days last week.

John Wessels spent Sunday at the home of his parents, the Lippo Wessels home

Bennie Beek assisted with work at the Henry Buseman farm during the latter's absence

Mrs Frank Sandrey and daughters Ava and Katherine were Belmond calers Monday morning.

Many neighbors and friends attended the funeral of Mr. Valentine Josten held last Thursday.

'Boots" Erdley has been assisting with work at the Bim Church home the past summer

Mr and Mrs. Fred Kothenbeutal were Garner callers one day recently.

Mr and Mrs Herman Neuhring and daughter Dorothy were shopping in Mason City last Saturday.

The Iowa Union Telephone Company has been repairing telephoner in this community recently.

"It's Going to Be a Long Cold Winter" Short Mild ?

4

By ELMO SCOTT WATSON

NOW is the time for the weather prophets to get in their good work and tell us in advance just what kind of winter we are going to have. And if they run true to form some of them will predict a "long, cold winter," while others, just as positive of their advance information on the 90 days of December, January and February, plus as many days before, in November, and as many days after, in March, as logically constitute the cold season, will declare, "It's going to be a short, mild winter."

If it is the "long, cold winter school of prophets who are having their say they will point to the fact that:

The breastbone of the Thanksgiving goose is thick and solid

The ducks and geese went South fully six weeks ahead of their schedule.

Hornets have built their queer paper houses high to avoid deeply drifted snow.

The husks on the corn were tight about the ears at harvest time.

The squirrels have laid in an extra large supply of nuts.

The foxes' fur is heavier than usual.

The muskrats have built their stick houses earlier than usual.

The beaver has prepared his home, with a good supply of food in it, at least a month earlier than usual.

The acorns are unusually plentiful, so that those animals which depend upon them for food will not run short before the winter is over.

The opossum is holing up underground.

Toadstools on the logs have many wrinkles.

The owls have retired to the woods much earlier than usual.

But if it is the "short, mild winter" host of prognosticators who are being oracular, they will tell you their belief is based upon the fact that:

The breastbone of the Thanksgiving goose is thin.

The ducks and geese were in no hurry to reach their popular winter resorts in the South.

The hornets have built their nests near the ground.

The husks on the corn were loose and easily stripped off.

The squirrels evidently believe that the world owes them a living for they've laid up but few nuts against the day when foraging for food will be necessary.

The foxes' fur is light.

The muskrats and the beavers were very leisurely about getting their houses in order for the winter.

There are not many acorns in the woods this year.

The opossum is depending upon a hollow tree for his winter home.

Toadstools on the logs have few, if any, wrinkles.

The owls are still too-whitting and too-whooing about the farmhouses of an evening.

So there you are! Take your choice as to the kind of winter you'll have. Then seek out the local oracles and if one of them doesn't predict the kind of winter you want, another probably will. As for weather predicting by local oracles in general and one famous case in particular consider this historic instance which was revived not so long ago by Charles F. Talman, writing in the New York Times Magazine as follows:

This blather about what is said in remote settlements on the subject of winter portents is a hardy annual, as much as the apotheosis of the groundhog on February 2 and the revival of Swithin's sainted memory on July 15. Much of it is quite obviously meant to be taken with several large grains of salt.

It is obvious that many a country newspaper correspondent keeps a weather prophet handy at all times in the upper right-hand drawer of his writing table. Not only in the autumn but also at any opportune moment throughout the year this familiar spirit is evoked to enlighten the world with his meteorological wisdom. There was one remarkable case, now fading into an oblivion from which it deserves to be rescued, in which not merely one but a whole bevy of these obedient sprites haunted the sanctum of a talented Munchausen in Reading, Pa.

This town, with the surrounding Berks county, is a stronghold of Pennsylvania-Germanism. The region is rich in folklore, much of which relates to weather, and it appears to always have been well supplied with weather prognosticators of local renown. Writing of these worthies in the Pennsylvania-German of July 1905, Rev. John Baer Stoudt says:

"Every fall after the Thanksgiving festival all eyes are turned to the city of Reading, and we anxiously await the predictions and forecasts of the weather for the subsequent winter by the famous goosebone prophet, Elias Hartz. It was with a sigh and a shiver that last fall we received his famous prophecy of an 'old-fashioned winter, with blizzards, zero weather and heavy snows.' But our fears and anxieties were somewhat allayed when his forecasts were followed by those of Isaac E. Henning and Benjamin Stover, both of Reading; Abraham Strausser of Bloomsburg and George Young of Hill Church, each of whom predicted a mild winter. Every one of the above-named gentlemen calculates and makes his forecasts by separate and independent methods."

The unvarnished facts about the Berks county weather prophets and the traditional signs and omens upon which they based their predictions make a colorful story. Between the years 1907 and 1913 long accounts of the prophets and their doings appeared, under a Reading date line, in Philadelphia newspapers and were widely copied in other parts of the country. These things were not confined to one season of the year, but they rose to a climax of entertainment in the autumn, when the rural sages were alleged to hold a "convention," at which they decided what kind of winter was in store. In 1912, for example, the report of their proceedings reads, in part, as follows:

"The weather prophets of Berks county, Pennsylvania, who have forecast the weather for many years, held their annual convention at Lobachsville, this county, when, by a two-third vote, it was agreed that the coming winter will be an unusually severe one. Weather prognosticators from all sections of the county were represented and exchanged their views on the subject. Many are close followers of the veteran goosebone weather prophet, Elias Hartz, who died several years ago and who was considered one of the best weather prophets of his day.

"Loyal supporters of the goosebone theory all declare for a severe winter. They have noticed the covering of feathers on geese born last spring and say that they have the appearance of being ruffled considerably. This leads them to believe that after the geese are killed for Thanksgiving day the breast bone will show many discolorations.

"The annual convention of the weather prognosticators was interesting in every particular. Those in attendance expressed their views freely. Some are guided by the action of small animals and reptiles, while others pay close attention to the trees and shrubbery.

"Gideon Keller of Brecknock, aged eighty-two years, said:

"'When I was a boy I learned the signs of the weather from my father, who always foretold the seasons with success. We will have a cold winter, and it will not start late either. I believe the seasons are changing, tho summers are becoming shorter and cooler, and the winters longer and more severe. The leaves on the trees began to color some weeks ago and have already started to fall. This is an indication that the winter will be cold. The apple crop is earlier than usual. Another sign of a cold winter is the fact that the weeds are very tall. Nature permits the weeds to grow tall to make provisions for the birds and animals that use this food.'

"Quite a number of other weather prophets made their predictions. It was reported in substance that muskrats have begun building early; that corn husks are thick, with the stalks leaning to the west; that geese, ducks and chickens are growing a thick down under their feathers and a bony substance on their feet; that squirrels are laying up unusual supplies of provender; that toadstools on old logs have many wrinkles; and that owls have retired to the woods much earlier than usual."

In this and other bulletins from Berks the prophets mentioned were all fictitious with the exception of Hartz, who was a celebrity of earlier date, and their reputed conventions were, of course, equally mythical; but the prophetic methods ascribed to them were very largely identical with those that have prevailed from early times among the Pennsylvania Germans, as well as among people of other racial groups in America.

The hoax was admirably carried out. Millions of newspaper readers all over the country took it seriously, and it even ruffled for a moment the serenity of the United States government. At the close of 1912 the weather bureau established one of its regular stations at Reading. When official weather forecasts began to appear at that place, the native prophets were reported to be up in arms. Finally in January, 1913, a newspaper item was widely circulated to the effect that a meeting of the local prognosticators had been held at Boyertown, at which resolutions were drawn up strongly condemning the federal authorities for the invasion of their territory. This led to an official investigation. The myth was exploded, and thus a goodly fellowship of prophets whose sage announcements had been quoted far and wide in the press melted into thin air.

The writer quoted above then proceeds to demolish some of these "weather signs," especially those in regard to this "long, cold" or "short, mild" winter. Commenting upon the goosebone prophecy, the thickness or tightness of corn husks, the storing of food by squirrels and the thickness of the fox's fur, he continues:

These and many similar notions are not, so far as anybody knows, based on actual observations, scientific or otherwise, but purely on tradition. In order to justify them on scientific grounds we should have to assume that certain weather conditions in the autumn, differing in some degree from the average, are invariably followed by certain types of winter. If this were the case, then animals and plants might be supposed to have acquired, through a process of evolution, reactions to the various autumnal conditions that would tend to prepare them for the consequent winter conditions. Analysis of meteorological records fails, however, to disclose any such definite relationship between abnormal features of the weather in autumn and the character of the subsequent winter.

There has been very little scientific discussion of the alleged biological phenomena just mentioned. One of the few naturalists who ever gave the subject serious attention was the late Dr. Charles C. Abbott. For twenty years he kept records of the building of muskrat houses and the amount of nuts and seeds stored by squirrels in the neighborhood of his home in New Jersey. According to a tradition prevailing in that state and elsewhere, muskrats build houses above ground only in the autumn preceding unusually cold winters, while in other years they take up their quarters in subterranean burrows. So far as Abbott's observations go there is no truth in this idea.

The list of animals whose habits are supposed to prognosticate winter weather is a long one. It is said that if opossums are found in the autumn in hollow trees, the winter will be milder than if they burrow in the ground. Dunwoody, in his "Weather Proverbs," says: "In early and long winters the beaver cuts his winter supply of wood and prepares one month earlier than in mild, late winters." An English authority on weather lore mentions the belief that "when the field mouse makes its burrows with the opening to the south, it expects a severe winter; when to the north, it apprehends much rain."

Birds of passage are said to migrate early or late in the autumn according to the kind of winter at hand, but not the slightest support of this notion is to be found in the voluminous records of bird migrations that have been collected in recent times by such agencies as the United States biological survey. The flight of geese is popularly supposed to be of special significance. One fantastic tradition has it that these birds form figures in their flight, denoting the number of weeks of freezing weather to follow. This idea is reminiscent of the divining methods practiced by the Roman augurs.

The appearance of the Arctic birds in the autumn far south of their usual haunts has been thought to forebode a hard winter—a notion that was espoused by the late John Burroughs. The rather plausible assumption involved is that the birds are driven south by exceptionally severe conditions in the Arctic, and that such conditions should be followed by severe weather in middle latitudes. The meteorological relations between the polar regions and the temperate zone are, however, by no means so simple as the champions of this belief suppose, nor does it rest on systematic observations of any sort.

In some rural districts hornets are said to build their nests low before a cold winter and high before a mild one; but according to J. B. Stoudt just the opposite of this belief prevails among the Germans of eastern Pennsylvania. A common kind of caterpillar—the larva of the moth Isia Isabella—which has been described as "the woolliest woolly bear," is looked on as a prophet of winter in some of the eastern states. The "fur" of this creature is part black and part yellow. We are told that the black denotes cold winter weather and the yellow mild and also that the arrangement of the colors and the amount of each indicate the order and duration of cold and mild spells in winter. Actually, according to Dr. F. E. Lutz, the coloration is related to the moisture conditions of antecedent weather.

Popular beliefs on the subject of weather prediction are invulnerable. It is a waste of time to disprove them. The prophet of a cold or a mild winter is sure to see the verification of his forecast in some of the cold or mild periods of which every winter in our kaleidoscopic climate is composed. Moreover, a mild winter in one part of a country as big as ours is often a rigorous one in another part. So the picturesque lore of winter portents is hardly doomed to early extinction.

But just because some of these predictions in regard to the kind of winter we are going to have are based upon false premises, there is no reason to declare that all of the sayings in regard to the weather which have been handed down from generation to generation are not true. In fact, many of them, based upon long observation, are often reliable and no less an authority than Dr. W. J. Humphreys of the United States weather bureau has set the seal of his approval upon some of these.

"A pretty good guess is to be found in the verse 'if the sun sets in gray, the next day will be a rainy day,'" Dr. Humphreys declares. "There is also much reason in the saying, 'When the grass is dry at morning light, look for rain before the night. When dew is on the grass, rain will never come to pass,' for one of the very best indicators of weather for the day is the state of dew in the morning. It gathers on grass and other exposed objects when they are cool enough to condense it out of the air, just as moisture is condensed on the side of a pitcher filled with ice water. Now, the grass and other outdoor things cool considerably only on clear, still nights, the kind that occur during a spell of fine weather and at no other time. Hence a heavy dew means that the air was still and the sky clear, at least during the latter half of the night. And it is pretty certain that if there was neither wind or clouds during that time the day will be a good one for all outside work."

WHAT'S THE WEATHER AT HOME?

Hundreds of travelers daily leaving Washington view this weather map at the Union station before boarding their trains. A glance at any one of the 48 states will tell you what the weather is for 24 hours ahead. The map is changed daily. Two travelers can be seen looking over the chart before train time.

Talleyrand's Fame as Diplomat Well Won

Madame De Stael, talking to Talleyrand, suddenly snapped at him, with pointed coquetterie:

"If Madame Grant and I had the misfortune simultaneously to fall into the river before your eyes, which of us two would you attempt to save first?"

Talleyrand, old fox, answered smilingly:

"But, madame, you are a perfect swimmer."

At dinner Talleyrand was once asked what was the difference between a diplomat and a woman of the world. Instantly he replied:

"If a diplomat says 'Yes' he means 'Perhaps,' if he says 'Perhaps' he means 'No'; if he says 'No,' he is not a diplomat. But if a lady says 'No,' she most likely means 'Perhaps'; if she says 'Perhaps' she means 'Yes'; but if she says 'Yes,' she is not a woman of the world."—Kansas City Star.

Clean Kidneys By Drinking Lots of Water

Take Salts to Flush Kidneys If Bladder Bothers or Back Hurts

Eating too much rich food may produce kidney trouble in some form, says a well-known authority, because the acids created excite the kidneys. Then they become overworked, get sluggish, clog up and cause all sorts of distress, particularly backache and misery in the kidney region, rheumatic twinges, severe headaches, acid stomach, constipation, torpid liver, sleeplessness, bladder and urinary irritation.

The moment your back hurts or kidneys aren't acting right, or if bladder bothers you, begin drinking lots of good water and also get about four ounces of Jad Salts from any good pharmacy; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys may then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to flush clogged kidneys and stimulate them to activity; also to neutralize the acids in the system so that they no longer irritate, thus often relieving bladder disorders.

Jad Salts cannot injure anyone; makes a delightful effervescent lithia-water drink which millions of men and women take now and then to help keep the kidneys and urinary organs clean, thus often avoiding serious kidney disorders.

Pathetic Faithfulness

A setter dog that refused to leave a canine pal in death caused motorists at Beaumont, Texas, to send a hurry call to police headquarters. The dog was sitting beside the body of his stricken comrade in the center of the highway, defying drivers to run him down as they had the other dog. One automobile had been thrown into the ditch to avoid hitting the setter. It was not until the dead dog had been moved to the side of the road that the other permitted traffic to move normally.

A Pest

Blinks—What kind of a fellow is he?

Jinks—Well, he is the kind who doesn't know that there are several million other things besides himself that could be used as the subject of a conversation.

To hurry too much shows that you are not the captain of your time, though you may be of your soul.

Makes Life Sweeter

Children's stomachs sour, and n an anti-acid. Keep their syst sweet with Phillips Milk of Magne

When tongue or breath tells of condition—correct it with a spoo of Phillips. Most men and women h been comforted by this unive sweetener—more mothers should voke its aid for their children. It pleasant thing to take, yet neutral more acid than the harsher things often employed for the purpose, household should be without it.

Phillips is the genuine, presc tional product physicians endorse general use; the name is import "Milk of Magnesia" has been the U registered trade mark of the Cha H. Phillips Chemical Co. and its decessor Charles H. Phillips since 1

Lydia E. Pinkham's Vegetab Compound Helped Her So Muc

Kingston, Mo.—"I have not tak anything but Lydia E. Pinkha Vegetable Co pound for months and cannot praise enough. I weigh about 100 poun and was not a to do any ki of work. housework w done by mother and out-of-doors wo was not done. have taken four bottles of the Veg table Compound and now I am w and strong and feel fine. I got sister-in-law to take it after her l baby came and she is stronger no I cannot praise it enough."—M HATTIE V. EASTIN, R. 1, Kingst Missouri.

A hollow flint picked up by a at Chute forest in Wiltshire, Engl contained a handful of gold coins years old.

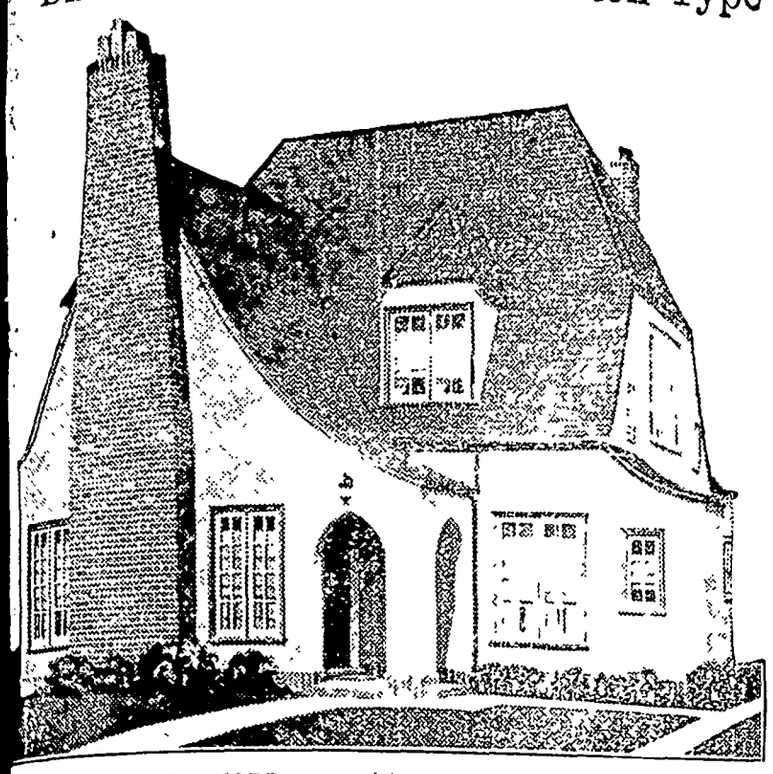
-take it! It's Bayer

The nurse tells you to take Bayer Aspirin because she knows it's *safe*. Doctors have told her so. It has no effect on the heart, s take it to stop a headache or check a cold. For almost instan relief of neuralgia, neuritis, rheumatism; even lumbago. But b sure it's Bayer—the *genuine* Aspirin. At druggists, with prove directions for its many uses.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

BAYER **ASPIRIN**

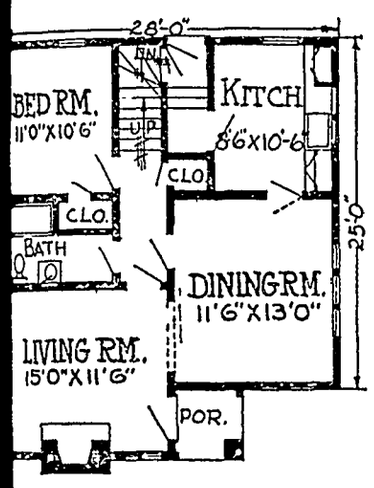
ttractive Home in French Style, Different From More Common Type



By W. A. RADFORD

Mr. William A. Radford will answer estions and give advice FREE OF ST on all subjects pertaining to prac- al home building, for the readers of s paper On account of his wide perience as editor, author and man- acturer, he is, without doubt, the hest authority on all these sub- ts. Address all inquiries to William Radford, No. 1827 Prairie avenue, icago, Ill., and only inclose two-cent mp for reply.

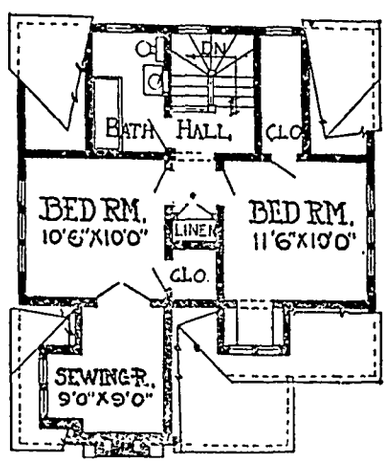
Essentially French in its architec- al style, this stucco-finished home ers an interesting and pleasing va- ation from the more common styles dwelling house which line the eets of our American cities and wns. This is a style which has, of e, become increasingly popular ong those persons who are seek- to improve the appearance as well



First Floor Plan.

the comfort and convenience of the erage home.

The construction is frame covered ith stucco, in harmony with the ar- itectural style. The stucco is quite ain though various textures could be ed to good effect as desired. In se- cting a texture, however, care should be taken to avoid one which is appro- priate to the architecture. The win- dows, as will be noted, are all of the casement type This is a particular- ly good detail for a house of this sort. Ornament is largely conspicuous by its absence though the solid brick chimney and brickwork about the foun- dation are sufficient for the purpose.



Second Floor Plan.

The chief claim to beauty lies in the excellent lines of the house as a whole.

The floor plan is an interesting one. Seven rooms, a sewing room, and two baths are provided. On the first floor, in addition to the usual living room, dining room and kitchen, there is a bedroom and bath. This will be found a great convenience by the housewife who must care for very small children, or is suitable for a maid's room.

Upstairs there are two more bed- rooms and a bath. Off of one bedroom is a large sewing room which might also serve as a playroom for children if such a need were greater. Each of the bedrooms is provided with a closet of ample size, one particularly large, and there is also a linen closet in the hall close by the bathroom.

loset Window Worth More Than Its Cost

If a window is put in a closet there no musty, dusty smell; clothes are sily distinguished, and the contents the closet are much more easily ched for.

Not only should plenty of hangers provided for every closet, the hang- s carefully bought so as to keep the rment in good condition, but pro- sion should be made for hats and oes as well.

In some of the more completely uipped wardrobes are separate lls, fitted with doors, for the hats d shoes. If such an arrangement ems inadvisable, then shelves should built, either just above and out of e way of the dress rod, or at one d of the wardrobe to hold hats in t boxes and others just deep enough r the length of the shoes.

The hat boxes may be covered with right cretonne or gay paper, and ese will add to the charm of the oset. If there is not room for a sep- ate shoe shelf, a wooden framework slats or metal rods may be fastened the inside of the closet door and e shoes placed in these.

laster Cracks May Be Repaired by Home Owner

Cracks in plaster are a bane to ery home owner whose house is un- uipped with metal lath. Fortunate- , most of such cracks can be re- ired by the home owner himself ith no more trouble than is expend- on any of the average jobs that he es around the house. Care should exercised to use a patching plaster ich has been manufactured spe- ically for such work. This will lp toward a good job.

Such patching plaster can be pur- ased in packages and requires only addition of water to make it ready use.

odern Bathrooms Now Being Done in Colors

The modern bathroom has "gone lor," as has every other room in the ell-decorated house.

Linen towels have for some time en a feature of the scheme with eir colored damask borders. These ay be pink, green, mauve, yellow— ghtly pastel shades.

Another novelty is hand-painted de- gns on linen towels. These are skill lly applied in delicate shades and ey be laundered with impunity.

Important Things to Know About Building

Separate footings beneath the posts that carry the beam midway down the house should be at least two feet square and ten inches deep. They should be independent of the basement floor. A concrete base should be raised above the footing so as to bring the foot of the post at least six inches above finish of the floor to prevent rot- ting of the wooden post.

If during a driving rain there is seepage around the window casings at the top it is because flashing was not used at these places. Have the out- side finish removed from the top of the windows and galvanized iron or copper flashing laid over each window casing.

Fifty years' exposure will not effect the durability of good building brick. They may be stained by mortar, they may be broken, chipped, and otherwise unsuitable for facing. However, such brick may be employed for backing very satisfactorily.

There are several different kinds of glass which admit varied amounts of the ultra violet rays. The glass is clear, not distinguishable from ordi- nary glass. The cost is considerably greater than common glass.

Wall Paper Is Easiest Form of Home Finishing

There is no way to bring original- ity into your scheme of home decora- tion more easily than by using a de- lightful wall paper.

There are myriads of good wall pa- per designs, lovely in color and charm- ing in design, that are both beautiful and original.

Their use immediately sets your room apart from the rest, for the large wall spaces dominate the scheme and strike a note of unusual interest that is not duplicated by a plain wall. There are so many wall paper pat- terns that there is no reason why any kind of effect cannot be achieved by their use.

Wall paper is made to simulate many other materials—marble, chintz, linen, violet, ribbons, tile, wood and others, and the art of printing it has reached such a state of proficiency that sometimes it is difficult after the paper is hung to tell the copy from the original These papers give many attractive opportunities to the home decorator to make her home different from the general run, and they are adequate expressions of her own good taste and sense of what makes charm.

ORCHARD GLEANINGS

GIVE STRAWBERRY BED GOOD MULCH

Strawberry beds should be mulched with straw, leaves, shredded corn fod- der or other fairly fine material after the ground freezes. Whatever mulch- ing material is used, it should be as free from weed seeds as possible, oth- erwise the strawberry bed will be- come foul, according to the State Col- lege of Agriculture at Ithaca, N. Y., which also gives suggestions for late fall care of grapes and bush fruits.

Strawberry mulch should be ap- plied evenly over the ground to the depth of two or three inches. With straw, this usually requires two or three tons to an acre. In the spring after the plants start to grow, the mulch should be raised with a fork in spots where it is too thick for the plants to grow through.

The college points out that most growers find that a strawberry mulch pays because fields so treated fre- quently yield 400 to 500 quarts more to the acre than those not mulched.

With raspberries and blackberries, the canes that have not been removed should be cut and burned. In the northern part of the state in sec- tions where temperatures commonly reach 30 degrees or more below zero, raspberries, blackberries and tender varieties of grapes need winter pro- tection. This may be provided by "laying down" the canes before the ground freezes and covering them with earth. Straw may be put over the canes first and this held down with earth.

Currants and gooseberries are hardy and need no winter protection.

Ways of Bracing Weak Trees Are Suggested

Methods of bracing weak trees are suggested by the New York State Col- lege of Agriculture at Ithaca. Braces should be placed four feet or more above the weak crotch in order to be effective, and this may be done any day in the year before the tree comes into heavy bearing.

Three methods are illustrated. In two methods the materials used are No. 0 galvanized wire or small wire cable, wood screws, three-eighths, one- half, or five-eighths inch, with eyes, preferably welded. By one method the screws or bolts are fastened into the main branches of the trees, then wire is fastened to these and stretched directly between the branches. In another the wires are fastened with screws or bolts to the main limbs as before but are all fastened to a heavy harness ring in the center, held in place by the wires.

The third method illustrates the use of natural braces. Watersprout growths are intertwined at the prescribed dis- tance above the crotch. As the trees grow these remaining intertwined, form natural grafts, and furnish a strong living brace.

The college says the cost of any of these methods is small as compared with the value of a bearing tree.

Horticultural Notes

Too many farm orchards are left to grow and bear as they will, with no pruning.

* * *

Scale insects infest apples, peaches, pears, plums, cherries, gooseberries, currants, raspberries, blackberries, roses, lilacs, and many shade trees and ornamental shrubs.

* * *

In thinning out a neglected tree nu- merous small cuts made throughout the top will give much better results than the removal of large branches leaving large open spaces.

* * *

Commercial fruit growers are in- clined to plant too many varieties in their orchards. Three or four varie- ties of winter apples are enough, two varieties of cherries will answer.

* * *

A fairly safe rule to follow in prun- ing is to make as few large cuts as possible. If the tree has been proper- ly pruned from planting, large cuts will be necessary only in unusual cases.

* * *

Scale insects cannot be killed by poisons which will enter their breath- ing pores, as the waxy scale over the insects is ample protection against such insecticides. Hence they must be smothered.

* * *

Missing vines in a vineyard can be replaced by carrying a cane from an adjoining vine to the vacant spot and layering it there. A section of the cane should be buried and left attached to the parent vine for one or two years.

* * *

Strawberries should be covered with a light coat of straw. This will pre- vent winter killing of the plants. Wild grass is a suitable and cheap material to use for this purpose. Any coarse grass is good, however.

* * *

Midwinter is the time to choose and order fruit plants for early spring planting. In general, such order should call for only old, tried varieties. Very few of the new varieties which are offered for sale at high prices prove to be worthy of a place in the orchard or garden.

ATWATER KENT RADIO

That Voice . . .

you'd know it anywhere!

"DID you hear Hoover? What did you think of that speech of Smith's?"

Hear this historic campaign clearly through an Atwater Kent. You won't miss a word—a syllable. Atwater Kent tone is famous for clarity. Atwater Kent workmanship can be relied upon. Atwater Kent resources make prices low.

Electric or battery—your choice

Some homes have central-station elec- tricity, some don't. Both kinds want fine radio. So Atwater Kent offers modern instruments in two forms.

With the all-electric set, you need no batteries. Your radio is operated in the same way your lamps are lighted—from the house current, either A. C. or D. C. The current costs considerably less than a cent an hour—about as much as reading a newspaper by the light of a single 40- watt lamp. Think of hearing Smith or Hoover for less than a cent!

With an Atwater Kent battery set the programs will also come in clearly and strongly—whether you want speech or music—for the Atwater Kent name-plate on *any* set spells good, reliable reception.

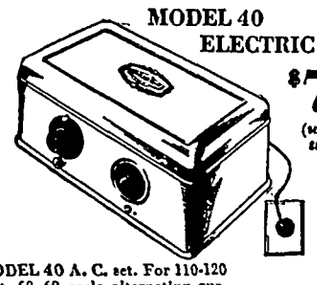
Nearly 2,000,000 owners prove it

There's nothing untried about Atwater Kent Radio. Each year for six years it has set the pace in improvements, per- formance and price. Among rural families as well as in the cities, it is far and away the leader in sales and popularity. The nearest Atwater Kent dealer will be glad to give you a demonstration and advise you in the selection of your model.

On the air—every Sunday night—Atwater Kent Hour —listen in!

Prices slightly higher west of the Rockies

MODEL 40 ELECTRIC SET $77 (without tubes)



MODEL 40 A. C. set. For 110-120 volt, 50-60 cycle alternating cur- rent. Requires six A. C. tubes and one rectifying tube, $77 (without tubes). Also Model 42, with automatic voltage regulator, $86 (without tubes), and Model 44, an extra-powerful "distance" set, $106 (without tubes).

H. Lord, Ph. D. ..Laurence Greiman
Sam Barry ... Edwin Thiemann

Miss Trumbell has been coaching this cast and after a summer session at Stanford, California, feels she knows something about staging high school plays and we believe the public will be pleased with this production We hope to welcome a large house Tickets will be sold by boys in school this week end They may in turn be exchanged for reserved seats at the Wilson Pharmacy on Wednesday morning of next week or any time thereafter until Friday evening the night of the play, Nov. 2.

A quotation from the play, 'It anything gets me excited it is to see Lallie Joy Popham in the moonlight."

High School Subjects This Year

It may be of interest to some to learn what the subjects are being offered this year in our high school They are as follows:

NINTH GRADE

First Semester	Second Sem.
Eng Comp.	Eng. Comp
Algebra	Algebra
General Science	General Science
Domestic Science	Dom. Science
Manual Training	Man Training

TENTH GRADE

First Semester	Second Sem.
English	English
Occupations	To be Elected
Agriculture	Agriculture
Plane Geometry	Plane Geom

ELEVENTH GRADE

First Semester	Second Sem.
English	English
Economics	Economics
European History	Euro History
First Latin or	First Latin or
Bookkeeping	Bookkeeping

TWELVETH GRADE

First Semester	Second Sem.
English	English
Physics	Physics
Economics with Juniors	Economics with Juniors
Latin or	Latin or
Bookkeeping	Bookkeeping

As will be observed our two upper clases aret his year combined. Both are taking economics and both classes some are pursuing Latin while others are studying bookkeeping.

This is the first year for some time that Latin has been offered, but it has been made an elective instead of being required. Those preferring were permitted to study bookkeeping. Quite new text books have been procured in each of these subjects and in both subjects students are doing good work.

A new Freshman English text has been introduced this year which both students and instructor feel is conducive to better work

Baggs Visits Our School

County Superintendent Baggs must have dropped in on us unawares on Tuesday of this week for some boks were left us that were ordered through his office. No doubt be is busy with rural school problems these days or he would have tarried a while with us

Attended Drake Football Game

Upon invitation of Mr Wilson, our local druggist the superintendent spent some time in Des Moines this week end and was permitted to see an interesting foot ball game at Drake Stadium, under the floodlights at 8 00 p m The game was between Drake and Grinnell and won by Drake It was a wonderful trip for both the superintendent and druggist We found Gladys Wilson enjoying her work at Drake University and predict she will be one of the leaders there as she was in riga school

Visited Other Graduates

We got to see other Klemme graduates at Ames where we stopped to unload Mr Elder who went with us to see his son Clarence We feel justly proud of our representation at these two advanced institutions of learning We belive they are all making good and may be heard from later What a wonderful opportunity it is to be qualified for and have the means to attend a good first class college in this great land of ours The boy who can complete a four yeear high school course today and fails to do so closes the door to the finest and choicest pleasures of his existence on earth and robs himself of the satisfaction which comes to those who enjoy serving thers well

Mr Wilson and I saw a great improvement in Drake University since we were students there Both wished we could live through those days again

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

It has been urged that Sunday, Oct 28th be observed thru out the church as "Good Citizenship Day' Believing this to be an important matter some recognition of the request will be given in the morning service The subject of the sermon will be "God's Morning "

SURPRISED ON 20TH ANNIVERSARY

MR. AND MRS. LEWIS GRIFFEN MARRIED 20 YEARS

Relatives And Friends Stage Surprise Dinner Sunday

A pleasant surprise awaited Mr and Mrs Lewis Griffen when they returned home from church Sunday, October 21st, this being the 20th anniversary of their wedding day

The relatives of the family had gathered at the home, six miles west of Klemme, to give the unsuspecting couple a glad hand when they arrived

A delicious dinner was served followed by a short program. Mrs Sadie Lemke rendered a piano solo, Rev Grosshuesch gave a short address, and Mr. William Schawin presented the couple with a hand painted china set, in the name of the relatives The afternoon was spent in pleasant conversation and entertainment Before leaving a sweet lunch was served to the guests The following people were present

Mrs Caroline Schlawin, mother of Mrs Griffen; Mr. and Mrs Wm Schlawin and family, Mr. and Mrs Gottlob Goll and family, Mr. and Mrs. Otto Schlawin and family; Mr and Mrs Reine Schlawin and family, Mr and Mrs Werner Schlawin and family; Mr and Mrs. Carl Wille and family; Mr and Mrs Arthur Brouwer and family; Mr. and Mrs Noah Holt and family; Rev. and Mrs C Grosshuesch and family, Mr and Mrs Paul Goll, Mr and Mrs. Ben Greiman; Mr. and Mrs Henry Bohmen; Mr. and Mrs. Otto Lemke; Raymond, Clifford, Clarence, Richard, Meta and Mabel Brouwer.

BASKET SOCIAL

There will be a basket and pie social at the Wayside School, Dist. No. 2, Avery Twp, on Friday, Oct 26, 1928 Ladies please bring baskets or pie. Nettie Roths, teacher.*

FARM BUREAU LADIES MEETINGS

ALL DAY MEETING HELD AT HOME OF MRS. J. GRIGGS

Rain And Bad Roads Cut Down On The Attendance

The Avery Township Farm Bureau Ladies Co-Operators of the training school, held an all day meeting at the Jay Griggs home on Wednesday. On account of the rain and bad roads all the leaders were unable to attend.

Miss Ramer, of Ames, conducted the lesson, which was on the care of clothes She explained how that clothes may be successfully dry-cleaned, protected, stored and mended. Each lady received the recipe of how to mix the Javelle water to be used in the water for bleaching white clothes, also how to remove ink, rust and other various stains from fine washable fabrics

At the noon hour luncheon was served by the hostess, assisted by Mesdames C. A Arnold, L. Wilson and W L. Sherwood.

In the afternoon some very useful patterns were cut such as clothe protectors, shoe bags, laundry bags and aprons.

The meeting adjourned at 4:00 o'clock, each one present felt the day had been beneficially spent, as this was a very interesting meeting and all enjoyed Miss Ramer's demonstrations.

The next meeting will be held in November at the Lew Wilson home and that will complete the course for this year.

Those present were as follows:- Mesdames C A. Arnold, W L. Sherwood, Wm. Gealow, Lew Wilson. Wm Johnson, J J. Cook and Miss Merle Ramer.

ELL AND LIBERTY F. B. LADIES HOLD ALL DAY MEETING

Held Clothing Course Lesson At The Home Of Mrs. Fred Greiman

The Ell and Liberty Township Farm Bureau Ladies held their 4th lesson in the third year clothing course at the home of Mrs. Fred Greiman, Tuesday, October 16th. This was an all day meeting and twenty-five ladies were present.

The project taken up was, "Care of Clothing." Miss Merle Ramer gave some very helpful suggestions Some very fine patterns were also cut at this meeting.

A delicious dinner was served cafeteria style at the noon hour.

The ladies report they had a very profitable as well as an enjoyable day.

ELL TOWNSHIP 4-H CLUB GIRLS MAKE OWN CLOTHING

Last Meeting Of The Year Held At The Home Of Bernice Weaver

The 4-H Clothing Club of Ell Township met Saturday, October 20th, at the new, charming and unique home of Bernice Weaver The atmosphere of the new home served as an ideal place for the last regular meeting of the year. Nearly all of the members were present

During the business part of the meeting the year's work was summarized. Seventy-five garments were made during the year at a saving of $103. Practically all of the members do their own sewing and sometimes their family sewing besides Health, music, manners, laying of patterns, selection of appropriate dresses, colors, materials etc, were studied this year Darning, patching, making of button holes were practiced

Much of this year's success is due to the faithful work of the leader Mrs Chas Griffen

Officers this year were President Luella Goll; Vice Pres. Pearl Newberger. Secretary-Treas, Charlotte Greimann, Club Reporter, Mildred Hampel.

The Liberty and Klemme M E Church members and friends joined together last Friday vening in a reception for their new pastor and iwfe, Rev. and Mrs Whyte The reception was held at the Liberty church The party was in the way of a surprise, as Rev. and Mrs Whyte had been asked to come out to Liberty to attend a board meeting They found the supposed board meeting was well attended as the church was full of people After a program light refreshments were served in the church dining room The program given was largely made up of singing by Liberty's fine choir of young ladies with Mrs. L Abele at the piano Group singing was led by Supt M F. Penrod. A short talk was given by boht Mr Emil Beier, supt of the Liberty S S, and Tom Nelson, supt of the Klemme S. S. Rev and Mrs Whyte were given a "pond" shower of miscellaneous groceries, foods, etc. He gave a short talk in which he said that he and Mrs. Whyte were well pleased with the fine spirit shown by the members of the churches and they were sure they would enjoy the work here

Be sure to attend the Basket Social at Liberty No 7, Tuesday night, Oct 30 The main feature of the evening will be the play, "Sambo, Lil Sal and the Pancake Party" put on by the pupils of the school. Ethel Wellemeyer, teacher 1tc

4-H CLUB BANQUET WAS BIG SUCCESS

ANNUAL AFFAIR WAS ATTENDED BY OVER A HUNDRED

Local Girls Entertained With Music On Program

One hundred Twenty-six Hancock County 4-H Club Members, parents and friends attended the third annual Club Banquet held at the Masonic Hall at Garner, on Saturday evening, October 20th This is one of the big annual events of the Farm Bureau Club Work Everyone present enjoyed themselves and pronounced it another successful club banquet

Miss Dorothy Trulson of Britt, County President of 4-H Clubs acted as toastmistress and the address of welcome was given by Miss Ruth Bienert of Forest City, County vice president of the Clubs. The main speakers on the program were Miss Lulu Tregoning and Mr F. P Reed of the Extension Service They both brought out in their talks, the value of 4-H Club Work and also what they had accomplished over the state Reports were given by the representatives of the different clubs as follows:

Crystal township club, Minnie Mortenson

Madison township club, Lucile Bomar.

Concord township, Evelyn Peterson

Britt township club, Leona Fier.

Orthel township club, Adelaide Hefte

Ell township club, Charlotte Greiman

Twin Lake township club, Fann Landon.

In the Baby Beef Club, Richard Brouwer of Ell township gave a report; from the Dairy Heifer club, Dale Brede from Concord township, from the Corn Club, Wayne Chambers of Boone township and from the Sow and Litter club, Richard Reed of Crystal township These reports showed that the club work is very active in the different parts of the county and there was much interest being shown in it

Music was furnished by the Johnson sisters, of Klemme A whistling solo was given by Ruth Gelner, of Forest City and a vocal duet by Elizabeth and Marjorie Stewart of Ell township Short talks were given by Mr Tierney of Garner; C. Reed, leader of the Crystal township Calf and Pig Club; Miss Merle Ramer, Home Demonstration Agent and Mr L T. Nutty, County Agent.

FORMER KLEMME BOY IN THE DRAKE U. GLEE CLUB

Elmer Ax, Now Of Swaledale, Is Making Good As Singer

Elmer Ax, son of Mr. and Mrs. Wm Ax, former Klemme residents but who now reside near Swaledale, who is enrolled as a student of the Bible at Drake University has won a place on the college glee club following the try-out of voices by the director, Prof. G. J. Malmin.

Membership in the official club which makes an annual tour, is one of the most coveted honors at the university.

PUBLIC NOTICE

I will allow no hunting, trapping or trespassing on my farm. Herman Priebe. 2tp

NEARBY AND YONDER

By T. T. Maxey

A Canine Cemetery

THE village of Hartsdale, some twenty miles north of New York city, boasts a cemetery for dogs—the first in America, established in 1896. This resting place for departed aristocrats of dogdom comprises about five acres, is laid out in winding walks, planted with shrubs and trees and contains several hundred interments.

Single plots measuring two by three feet, sell for $24; the operating company will furnish caskets a prices ranging from $10 to $20 cement vaults may be purchased if desired, prices varying from $75 to $150; interment charges range from $2 to $5. Many beautiful monuments — some quite unique, others carrying a photograph of the departed dog, many quite expensive, one is said to have cost $1,300—dot the grounds.

The operating company sods the graves, plants flowers and keeps plots in perfect order. Many of the graves of these departed pets are regularly supplied with bouquets of freshly cut flowers.

Judging from the inscriptions on these monuments, many much-loved pets rest here in peace. One reads, "Ah Sin, Puppy, died June, 1924. He traveled 66,000 miles with his Master and Mammy"; another, "Our Skippie, died April 23, 1919—born a dog, lived like a gentleman, died beloved;" another, "Collie—12 years—Clinker X. He was born in the purple and a gentleman;" still, another, "Rastus—the smartest, most lovable monkey that lived."

The central stone, topped by the figure of a dog in striking pose, is decorated to the memory of the War Dog and was erected by popular subscription by dog lovers, for valiant service rendered during the World war.

The Largest Gold Mine

BACK in the mid-seventies a mad gold rush to the Black hills of South Dakota—that region over which two Indian tribes, the Crows and the Siouxs, fought desperately until the latter won in a final clash near Battle mountain and it finally passed, by treaty, into the custody of Uncle Sam—claimed the attention of the universe.

Then the scene was changed and in the wake of the gold discovery came a new fame, induced by the activities of Buffalo Bill, Deadwood Dick, Wild Bill Hickock, Calamity Jane and other picturesque characters which were attracted to the hills.

Gold is still mined in the hills, but the work is carried on in such a quiet and businesslike manner that it attracts little attention beyond the local confines.

As a matter of fact, the largest producing gold mine in the United States and the one from which has come the bulk of South Dakota's production, is located at Lead in the Deadwood district. Its shafts range from 800 to 2,400 feet in depth and it contains upwards of 60 miles of tunnels, drifts and crosscuts. This great Homestake mine has produced more than $200,000,000 worth of the yellow metal, continues to produce it at the rate of $6,000,000 to $8,000,000 per annum and still has something like 13,000,000 tons of ore blocked out and remaining in the mine. As a side line, this mine also produces considerable silver—82,000 ounces, for instance, valued at approximately $5,000,000, in 1926.

* * *

Bonsecours Market

JUST as Montreal—which the Indians dubbed Hochelago and the French explorer changed to Montreal — corruption of Mont Royal, from the mountain which rises high behind it—with its domes and spires and historic background impresses one as being a different sort of a city, so also does ancient Bonsecours market there smack strongly of other days and give off a distinctly French-Canadian atmosphere.

The unusual attraction of this quaint market of another land springs from the extraordinary gatherings of queerly garbed provincial farmers and others who assemble to barter strange wares on market days. In addition to the customary array of foodstuffs, there also may be seen all manner of home-made and hand-made articles such as native-grown tobacco, old-fashioned, hand-woven, rag carpets, rosaries, split-bottomed chairs and odd nicknacks. Jostling through this good-natured crowd, listening to the jabbering, watching the peculiar gestures among the bargainers as the trading progresses and sizing up the numerous types of characters affords an experience that is both interesting and entirely out of the ordinary.

Montreal's oldest church—Notre Dame de Bonsecours, 1771—resting on the same foundation as did the original wooden chapel of 1657, neighbors with the market and vies with it, too, for attention. Here, a gigantic statue of the Virgin—credited with the possession of miraculous powers to aid men who follow the sea, has been the patron saint of French sailors in the port of Montreal for more than 250 years.

(©, 1928, Western Newspaper Union.)

1—Gov. Al Smith and party greeted by Governor Horton of Tennessee at Chattanooga in the Democratic candidate's tour of the border states. 2—Graf Zeppelin touching American soil as it landed at Lakehurst, N. J. 3—Rev. Ze Barney Phillips of Washington, who was elected president of the house of deputies of the Protestant Episcopal church.

NEWS REVIEW OF CURRENT EVENTS

Smith's Trip Through Border States and to Chicago —Hoover at Boston.

By EDWARD W. PICKARD

POLITICALLY speaking, the news of the week centered in Al Smith's tour of the border states, which carried him as far as Sedalia, Mo., whence he passed up through northern Illinois to Chicago for a stop of several days. The trip demonstrated the personal popularity of the Democratic candidate, for everywhere he was greeted by wildly cheering throngs. In Louisville he spoke mainly on the tariff, and the Republicans asserted that he "ditched" the traditional dogma thereon in that speech. Next day the governor paid a reverent visit to the birthplace of Abraham Lincoln at Hodgenville, Ky., and from there passed on to St. Louis, which city gave him what was described as the biggest and loudest ovation he had received since his nomination. He made no set speech there, but moved onward to Sedalia and there delivered an address on the topic of "Coolidge Economy." He declared the Coolidge administration was actually guilty of willful waste, giving facts and figures supposed to support this assertion, and attacking the statements made by Director of the Budget Lord and Secretary of the Treasury Mellon.

Chicago came next on the itinerary, though when Smith's train passed through Springfield he was induced to talk when a loud speaker on wheels was brought alongside the rear platform on which he was displaying himself. A tremendous and noisy crowd welcomed him to Chicago, and after a day of rest and work on his address he made a tour of the city, appeared at banquets and, Friday night, spoke to an enthusiastic crowd that filled the One Hundred and Thirty-first Infantry armory to bursting.

HERBERT Hoover's personal contribution of the week to the campaign was his address in Boston, where before 9,000 friendly listeners in the city arena he told of the country's economic prosperity for which the Republican party claims the credit. Continuance of the protective tariff, he argued, is necessary for the continuance of this prosperity, and he sought to refute Smith's assertions in that connection. In replying to the Democratic attempt to show that changes in tariff would be made by them that would hurt business or labor, Hoover said that eight months ago every Democrat in the senate voted for a resolution designed to reduce the tariff. In Springfield and other Massachusetts' cities through which he passed Hoover made earnest pleas that every citizen should take an active interest in the Presidential campaign and that every Republican should loyally support his party.

Senator Borah, big gun of the Republican-speaking battery, invaded the South last week and delivered two rousing speeches at Salisbury and Charlotte, N. C. In the former he appealed especially to the women voters to help defeat Smith and so prevent the overthrow of prohibition. In Charlotte the senator defended at length the record of Hoover as food administrator during the war, asserting that he always showed himself to be the friend of the farmer and was ever vigilant to do the very best for the protection of the American producers. Reviewing the agricultural situation after the armistice, the senator declared that Hoover opposed the proposal of the agricultural advisory committee in 1918 to fix a minimum price for wheat of $2.46 a bushel because it would not "be just to the consumers." From North Carolina Senator Borah moved into Tennessee, speaking at Chattanooga.

EXCEPT for the stupid and boorish behavior of the customs official detailed to Lakehurst, the arrival of the German dirigible Graf Zeppelin and the reception accorded its commander, crew and passegers, were all that could be asked. Before going to the hangars in New Jersey the huge airship spent an hour circling over New York city, and next day Dr. Hugo Eckener and his men were received formally by the metropolis with the usual accompaniments of parade through streets filled with confetti and ticker tape, speeches at the city hall and a banquet. On Friday Doctor Eckener was the guest of President Coolidge at breakfast in the White House.

Meanwhile the injuries sustained by the Zeppelin just before reaching America were being repaired and the airship was being made ready for a two days' tour of the Midwest which would take it over Chicago, Cleveland, Akron, Cincinnati and Detroit with probable stop at the last named city, which has a mooring mast.

While in New York Doctor Eckener announced tentative plans for the formation of a trans-Atlantic Zeppelin mail and passenger service to be capitalized for $14,000,000 and discussed the details with several financiers. He said to interviewers that he wanted American capitalists to entrust the $14,000,000 to him and his German confreres. The sum would be used to build four new Zeppelins, each bigger than the Graf Zeppelin, and to use them on regular all-year-round voyages between Germany and an American airport near Washington or Baltimore. If the money can be obtained Doctor Eckener said $8,000,000 would be spent on the four new gas bags and $0,000,000 would be paid out for new hangars in Germany and the United States. Two of the dirigibles would be built in Germany and two in America.

Dispatches from Buenos Aires said the Argentine post-office officials had signed a contract with a Spanish Transaerial company for the carrying of mail monthly between Spain and the Argentine, and the company named is reported to have leased the Graf Zeppelin for two years.

Several delegates to the convention of the Investment Bankers' association at Atlantic City started for an airplane ride Thursday. The plane went into a nose dive and crashed and W. O. Chanute, a banker of Denver and grandson of Octave Chanute, "the father of aviation," was killed. Seven other men were injured.

Baron von Huenefeld, who was flying from Germany to Tokyo, made a forced landing in a suburb of the latter city and his plane was badly smashed. The baron and his two companions escaped unhurt. They had lost their way in a rainstorm.

NEW YORK'S big sewer scandal reached its climax with the conviction of Maurice E. Connolly, who resigned under fire as borough president of Queens last April, and Frederick Seely, who was design engineer in the Queens' sewer bureau. They were found guilty by a jury of conspiring with the late John M. Phillips, sewer pipe manufacturer, to defraud the city in contracts for $29,000,000 public sewers. Connolly was given the maximum sentence of one year in prison and $500 fine. The evidence in the trial indicated that Phillips grafted more than $10,000,000 in ten years. It is expected a taxpayers' suit will be started to recover from Connolly and the Phillips estate the money illegally expended.

ANOTHER interesting instance of fundamentalism in the southern border states has arisen. Charles Smith of New York, president of the American Association for the Advancement of Atheism, went down to Arkansas to work against a proposed anti-evolution law to be voted on in the general election next month. He was arrested in Little Rock on a charge of distributing printed material "calculated to provoke a breach of the peace" and was fined $25 and costs, not being permitted to testify in his own behalf because he refused to take the customary oath. Smith decided to serve out his fine in prison as a protest, he said, against the state laws that prohibit atheists from testifying in courts or holding public office.

ATTORNEY GENERAL SARGENT ruled that the contract of December 20, between the United States government and the Sinclair Crude Oil Purchasing company, for the sale of the government's royalty oil in the Salt Creek field in Wyoming was invalid. Mr. Sargent based his decision on two circumstances: First, that the contract was not let in a manner required by law, and, second, that the secretary of the interior did not have legal power to sign a contract containing an option provision in favor of the Sinclair Oil Purchasing company.

The original award to the Sinclair concern granted a lease for five years with option of renewal for another five years. The option was renewed February 20, 1928, by Hubert Work, secretary of the interior, after consulting departmental counsel. Doctor Work says this renewal was required by the contract and that criticism of his action "is entirely of campaign origin."

COMMERCIAL and municipal activities in the city of Lodz, Poland, were brought to a standstill by a general strike enforced in behalf of striking textile workers. City employees were forced to quit work, street cars and taxis were stopped, theaters were closed, and even the members of the municipal council, most of them Socialists, closed their desks. Printers were out only a few hours, and soldiers kept the telephone exchanges open. Street riots provoked by Communist agitators were numerous, and later the strike spread to other cities.

PREMIER MUSSOLINI of Italy in a radio address informed the farmers of the country that he intended henceforth to devote the major reconstruction efforts of Fascism to agriculture and that the government would place billions of lire at their disposal. Thousands of acres that have lain idle since the days of the old Romans are to be brought under cultivation, and irrigation and reforestation are to receive much attention. The duce then distributed about $85,000 in prizes to grain growers. Already Italy is growing almost enough wheat to support its population.

For the first time since the Italian kingdom was established in 1870 a death sentence for murder was passed and executed the other day in Rome. Capital punishment for certain degrees of murder was introduced in the new Fascist code, and Michele Magglora, who murdered two Fascists for political reasons only, was the first victim.

STEPHEN BETHLEN, premier of Hungary, has announced that the people of that country will soon be called on to vote for the selection of a king to sit on the throne that has been vacant since the abdication of King Charles in 1918. Bethlen said he was opposed to the choice of Archduke Otto, the sixteen-year-old son of Charles, and it appears that Archduke Albert, son of the Hapsburg Archduke Frederick, is the leading contender. Premier Mussolini of Italy has let it be known that he will oppose the selection of any Hapsburg for the Hungarian throne.

WILLIAM EDWARD HICKMAN, the youth who kidnaped and murdered twelve-year-old Marion Parker, daughter of a Los Angeles banker, paid for his crime with his life on Friday. He was hanged at San Quentin prison, all efforts to save him from the gallows having failed. Hickman confessed to many other crimes "to ease his conscience," and after embracing the Roman Catholic religion said that he was assured of salvation.

DEATHS of the week included those of Dowager Empress Marie of Russia, mother of the last czar; William J. Flynn, former chief of the United States secret service, and Benjamin Strong, governor of the New York Federal Reserve bank.

DID you know that there were any royalists in the United States? Well, there are, for a meeting of the "Royalist League of America" was called for Sunday in the city hall auditorium of Dallas, Texas. Richard Potts, secretary-general, who issued the call, said "the time has come to begin active propaganda for the conversion by orderly processes of the United States government into a monarchy."

CHRISTMAS SEAL SALE

Des Moines, Iowa.—Twenty-five Million Christmas Seals are being offered for sale in every county, town and school district in Iowa during the annual campaign which extends from Thanksgiving to Christmas.

This quota if placed end to end would make a design of the emblematic double-barred cross reaching from Rock Rapids to Keokuk with arms extending from Onawa to Algona and from Council Bluffs to Mason City.

The proceeds of the seal sale are used by the local associations in various forms of child health work, nursing, weighing and measuring, health education, fresh air camps, clinics, dental inspection, school health supplies such as scales, first aid kits, thermometers, posters, books, etc., and a portion by the State Tuberculosis Association in the prevention of tuberculosis both in humans and animals, in the discovery and prevention of heart disease, and in general health work.

The 1928 design for the annual Christmas Seal sale was voted the most beautiful of all the twenty-one emblems of the national tuberculosis movement since its beginning in 1907, according to the result of a poll of the opinion of county chairmen, taken by the Iowa Tuberculosis Association.

A viking ship with swelling sails bearing the international emblem, the double barred cross, speeds through a foam-capped sea. On the blue background are the words "Christmas Greeting 1928."

The color scheme is red, gold, green and blue. The sails of the ship are white and gold, the hull red and gold, the waves green and white. The color of the sky is a happy shade of blue which is deep and rich and at the same time vivid.

The design signifies the hope and joy that has been and will be brought to thousands of sufferers through restoration to health. It is a reminder of the more than 50 per cent reduction in the tuberculosis death rate in the twenty-one years history of the seal. It is bringing to the children of today the promise of a life span lengthened by nearly three years through the reduction of infant mortality and the prevention in later life of contagious disease.

WHERE CHRISTMAS SEAL MONEY GOES.

The question, "What becomes of the money paid for Christmas seals?" is answered in an eight-page illustrated pamphlet entitled The Service of the Seals. 40,000 copies of this, printed by the Board of Control of State Institutions at Anamosa, will be distributed throughout the state by the Iowa Tuberculosis Association and local Christmas seal committees during the annual seal campaign which extends from Thanksgiving to Christmas.

According to this pamphlet Christmas seals funds are used locally for school health supplies such as first aid kits, thermometers, scales, doormats, blotters, book covers, drinking cups, paper towels, tooth brushes, height and weight cards, weight tags, measuring charts, songs, plays, pageants, stories, pamphlets, magazines, posters, chore pictures, exhibit material, books for teachers and school library such as "Health Training in Schools"; nurses' supplies such as record and inspection forms, tongue blades, eye charts, clinical and first aid material; school health projects such as essay, speaking and poster contests, Modern Health Crusade for teaching health habits, hot lunches, milk, nutrition classes, nursing inspections, dental surveys; public meetings, moving pictures, exhibits at fairs, health parades, health Sunday; county tuberculosis and heart clinics, children's clinics open air schools, preventoria (fresh air camps), relief in tuberculosis cases, promotion of local regulations such as milk ordinances, publicity for periodic examination and other health projects such as anti-spitting, fly, open-window, clean-up and safety campaigns.

Haynes Predicts Big Majority For State Road Bond Issue

Des Moines, Ia.: Reports received at headquarters of the Iowa Good Roads Association here have led Colonel Glenn C. Haynes, executive secretary of that organization, to predict that voters of Iowa will approve the State Road Bond Issue by a two to one majority at the general election, Nov. 6th.

"On any economic problem, affecting the welfare and progress of the state, you can depend upon the people of Iowa to render a sane, sensible decision", Colonel Haynes said. And he further says:

"For that reason, there is absolutely no doubt but what the majority of voters will cast a 'yes' ballot on the State Road Bond Issue proposal. For, if the State Road Bond Issue carries, Iowa has everything to gain and not a single thing to lose. Try as hard as they can, opponents of good roads have been unable to advance one fair, substantial reason why anyone should vote against the bond issue".

ORCHARD GLEANINGS

PLANT IN WELL-PREPARED SO

In preparing land for planting ideal procedure is to plow deep a thoroughly pulverize with harrow cultivator. A well-prepared piece land makes planting easier and p in increased growth and a bet stand of plants. The plot may marked off for planting in a num of different ways. Sometimes the d or cultivator may be driven so as mark the rows. Stakes may be and a hand garden plow used o home-made marker. Considerat should be taken as to whether cu vation is to be done by hand or a one-horse or two-horse cultiva and the rows spaced accordingly irregular and rough land, where wa ing is apt to occur, it is a good id to have the rows follow the cont of the land.

Apple, cherry and plum trees handled and planted about the sa except in regard to planting distanc In the permanent apple orchard trees should be planted 36 by 36 f apart for best results. If fillers a used the planting is made 18 by feet and every other tree is remov when crowding begins. Fillers a extra trees planted to fill in space needed by the permanent orchard til later on. Fillers will give seve good crops before it is necessary remove them. Failure to remove th at the proper time will cause seri injury to the trees that are to saved. Most varieties of cherries w do well planted 20 by 20 feet. Plu may be planted from 12 to 15 fe each way.

Control San Jose Scale by Best Winter Spra

The proper type of oil spray, pr erly diluted and applied, has giv better control of San Jose scale th has been the case with lime-sulphu These sprays are cheaper than a other of the dormant sprays, and addition to controlling scale, can, properly used, be depended upon f control of the fruit tree leaf roller a some other insects. If properly ma from the right class of oils, and pro erly diluted, there is practically injury to apple or peach where sprays are applied in the dorman For the past five or six years, ma commercial orchards have been spray with the oil sprays each year wit out the slightest sign of injury. the delayed dormant spray, nicoti sulphate may be combined with so of the oil sprays of the first tw classes and used at a strength of to 2,000, with very good results again aphids. It will cost only from one-ha to two-thirds as much to spray a orchard with the oil sprays as is th case with lime-sulphur. Summer oi are promising, but more experien with this class of sprays is needed b fore any very definite recommend tions can be made.

Improving Vineyard by Attention to Detail

When the vineyard has ceased produce in the abundance that is be expected from the really good vin yard, there are four important ste to consider in bringing it back in high production.

The first of these is proper drainag of the land. To the commercial grow er of considerable experience, this of prime importance. Following thi put into practice the control of i sects and diseases affecting the vin yard. In the control of some of th insects and diseases it may be nece sary to turn to cultural practices course, but in any case, after the cu tural practices comes the question commercial and natural fertilizer

According to experiments in Ne York, properly drained and cultivate vineyards in which insect pests an diseases are held in check by carefu spraying, may be benefited material by the addition of nitrogen.

Eight Grape Varieties for Starting Vineyar

Eight varieties of grapes deserv special consideration in setting o new vineyards, according to Dr. U Hedrick of the New York agricultur experiment station at Geneva. The varieties, named in order of the ripening, are Portland, Ontario, Wo den, Delaware, Niagara, Concor Sheridan and Catawba.

The Portland and Ontario are tw early green grapes developed by th station and are claimed to be super or in quality of fruit and sturdines of vine to any other early green grap These two early sorts, with Niagar a midseason variety, make an exce lent combination for either home commercial plantings.

Best Pruning Tools

The two most important pruning tools are the swivel pruning saw an the pruning shears. With these tw implements the grower may handl the pruning work efficiently in a youn orchard. After the trees reach th bearing age and there is occasion t do more and heavier pruning wor other pruning tools will facilitate th task. A larger pruning saw, a pai of long-handled shears or loppers an other implements may be needed an used effectively.

Dorothy's Mother Proves Claim

Children don't ordinarily take to medicines but here's one that all of them love. Perhaps it shouldn't be called a medicine at all. It's more like a rich, concentrated food. It's pure, wholesome, sweet to the taste and sweet in your child's little stomach. It builds up and strengthens weak, puny, underweight children, makes them eat heartily, brings the roses back to their cheeks, makes them playful, energetic, full of life. And no bilious, headachy, constipated, feverish, fretful baby or child ever failed to respond to the gentle influence of California Fig Syrup on their little bowels. It starts lazy bowels quick, cleans them out thoroughly, tones and strengthens them so they continue to act normally, of their own accord.

Millions of mothers know about California Fig Syrup from experience. A Western mother, Mrs. J. G. Moore, 219 Cliff Ave., San Antonio, Texas, says: "California Fig Syrup is certainly all that's claimed for it. I have proved that with my little Dorothy. She was a bottle baby and very delicate. Her bowels were weak. I started her on Fig Syrup when she was a few months old and it regulated her, quick. I have used it with her ever since for colds and every little set-back and her wonderful condition tells better than words how it helps."

Don't be imposed on. See that the Fig Syrup you buy bears the name, "California" so you'll get the genuine, famous for 50 years.

Swiss Bomb Hailstorm

In an effort to break up a hailstorm and prevent damage to crops Swiss scientists recently bombed the clouds with high explosive rockets, says Popular Mechanics Magazine. Opinion after the experiment was divided, however, as to the value of the results achieved.

Kill Rats Without Danger

A New Exterminator that is Wonderfully Effective yet Safe to Use!

K-R-O is relatively harmless to human beings, livestock, dogs, cats, poultry, yet is guaranteed to kill rats and mice every time.

Avoid Dangerous Poisons

K-R-O does not contain arsenic, phosphorus, barium carbonate or any other deadly poison. Its active ingredient is squill as recommended by the U. S. Dept. of Agriculture in their latest bulletin on "Rat Control."

Many letters testify to the great merit of K-R-O.

"One of our customers purchased a can of K-R-O and put it out according to directions and a few days later picked up 42 dead rats.—Hays Pharmacy, Philadelphia, Miss."

SOLD ON MONEY-BACK GUARANTEE. 75c at your druggist or direct from us at $1.00 delivered. Large size (four times as much) $2.00. The K-R-O Company, Springfield, Ohio.

K-R-O

KILLS-RATS-ONLY

There's nothing like leather—with the possible exception of Welsh rarebit.

WILL DO ALL IT CLAIMS TO DO

Mrs. Steele Says of Lydia E. Pinkham's Vegetable Compound

Pratt, W. Va.—"I was so weak and nervous that I was in bed most all the time and couldn't sit up and I am only 30 years old. I saw your advertising in a magazine and after I had taken three doses of Lydia E. Pinkham's Vegetable Compound I could feel that I was better. After taking two bottles I began doing my work and I feel like a new woman. I recommend the Vegetable Compound to my friends and say it will do all it claims to do and more. I will gladly answer all letters I recive."—Mrs. S. E. Steele, Pratt, W. Va.

POULTRY

HOUSE PULLETS EARLY IN FALL

The mistake is often made of allowing the pullets to remain upon the growing range too long. If the birds are healthy and all other conditions are correct, there is no reason why they should not be removed to the laying houses just as soon as they reach maturity.

Flocks hatched in March or earlier are ready for the permanent quarters after midsummer. If we leave them on the range too long, they will start laying, and the result is that a later removal to the laying house will stop production or slow it up. One of the surest ways to bring on a premature molt is the removal of pullets, already laying, to new quarters.

We naturally expect pullets, which start production in the summer, to have a late molt, but it is a serious matter when this molt comes on two months before we ought to expect it. I believe we should hatch the pullets at a time that will bring them to maturity at just the time we want them to start laying, says a writer in the Indiana Farmers' Guide. At any rate, the mature birds should not be left on the range after they are ready to start laying. Leghorns, and other egg breeds, should be ready for housing at five months of age, while the large breeds need another month to reach maturity.

It is a good plan to start feeding the egg mash at about the time the birds reach maturity. We should not feed too heavily of egg making mash until they are mature. It is a mistake to force early production at the expense of size. Immature pullets lay small eggs and that is not a desirable condition.

Clean up the houses and be ready for the pullets just as early as you begin to find eggs about the range. House them at this time and you will find it will make a good deal of difference in the production of the flock during the fall and winter.

Supply Needed Minerals to Aid Egg Production

It has been estimated that the shell of an average egg is 8 per cent of the egg, and that a hen with a yearly production of 160 eggs requires 1.6 pounds of minerals to cover her egg production, besides what she needs in the line of mineral matter for the upkeep of her own body. It is the lack of this mineral matter that causes a hen to start the egg-eating, or the feather-picking habits. Both of these vices are due to a large extent, to a deficiency in the ration of some element that the fowls are craving.

Keeping oyster shell before the hens continually helps to supply minerals to a considerable extent. Fresh bones run through a bone grinder supply much needed elements. In some towns bones may be obtained from the local butcher shops.

In Ohio a good formula for supplying the mineral matter to the hens' ration has been worked out. This consists of 60 per cent finely ground bone meal, 20 per cent finely ground limestone and 20 per cent salt. This is thoroughly mixed, and 4 per cent is added to the mash in place of meat scraps. If less than 10 per cent of meat scraps is used both the mineral ration and the meat scraps may be included in the mash.

Poultry Items

Sweet or sour milk seems to give equally good results in chick feeding.

* * *

Colds and roup are preventable diseases. If we remove the causes the diseases will not occur.

* * *

Watch for the pullets that lay early, and mark them. They make the high producers—the ones to get next spring's hatching eggs from.

* * *

A chicken may now be hatched by electricity, raised and grown with an electric brooder and electric light, and finally cooked for your table by the same energy.

* * *

The vitality and vigor of the stock must be conserved. If one breeds from weak and diseased stock there will be constant trouble with colds and roup.

* * *

Leghorn pullets should not begin to lay until they are from five to six months old. General purpose breeds take about a month longer.

* * *

Carbolineum, creosote, or crude carbolic acid make the best spray material to use in poultry houses to keep down red mites.

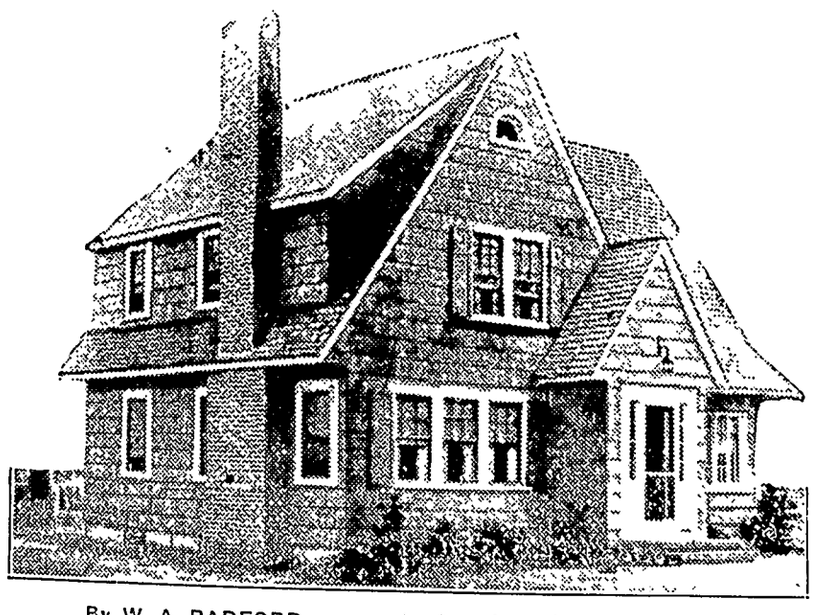
* * *

Although it may seem that the birds are foraging an adequate food supply during the summer, their ration is often incomplete, and is very frequently short in protein. Feeds rich in this material are not always grown on the farm, and is a direct result of the deficiency.

* * *

Geese are the best grazers of all poultry. A large part of their diet after the first four weeks is composed of green feed. For this reason they cannot be raised successfully unless feed of this kind is furnished.

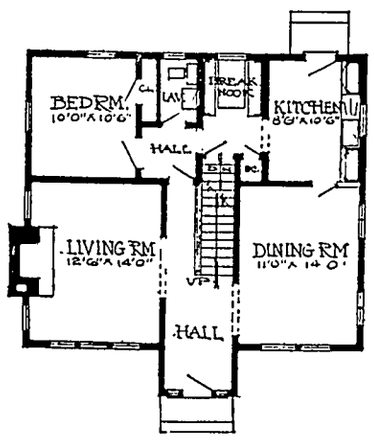
Wide Shingles and Broken Roof Lines Create Charming Effect



By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

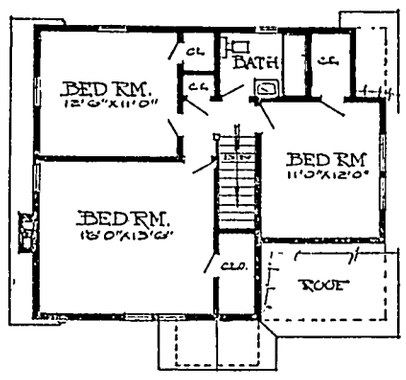
Wide laid shingles, neat shutters, a charming entrance light, brick steps, these are some of the details which contribute to the pleasing appearance of this home. But all these details might be present in a house which would still fall short of the desired effectiveness. The details must all be there but they must also be combined in a harmonious whole. This requires skillful designing. In this case skillful designing has been applied with a most happy result.



First Floor Plan.

Skillful design is seen here not only in the harmonious combination of well selected details but also in the proportionment and line. The treatment of roof lines, in particular, is good and does much to make this small home attractive. All the monotony of roof lines which is so frequently seen in small houses has been avoided.

Turning to the floor plans one is surprised to find that this little home is, in fact, a seven-room house and that the rooms are really of ample size. From the front entrance one passes into a central hallway, with the dining room and living room at either side, and the stairway leading up to the floor above. This hallway opens on through to the rear, giving access to a bedroom, back of the living room, and to a lavatory, a breakfast nook and the kitchen. The kitchen is directly to the rear of the dining room and is provided with a rear service entrance.



Second-Floor Plan.

On the second floor there are three bedrooms, one quite large and the other two smaller, and the bathroom. Each of the bedrooms has a large closet and there is also a linen closet in the hall close to the bathroom.

Wall Board Must Be Sized Before Painting

Painting wall board is a matter owners should understand, as this material, appearing in many forms and materials, is being widely used in renovating, due to its adaptability and moderate cost.

Wall board, like plaster, is of a porous nature. For this reason a foundation for paint must be prepared, and proper preparation of the surface is of first importance. The most commonly used wall boards are divided into two types—those constructed of a plaster-like material and those constructed of pulp.

The latter type always requires a size of the same nature as the size used for plaster. Wall boards of plaster-like material are treated with a size by the manufacturers, but it is usually a weak size, and it is advisable to resize the product before applying paint. Under no condition should a glue size be used for wall board. The reason for sizing is to prevent what painters call "suction," or the absorption by the porous board of the liquid portion of the paint, leaving the pigment on the surface to dry and dust off.

After the size is dry the board may be painted in the usual manner; two undercoats and a finish coat are recommended. Wall board is commonly given a plain painted finish. When properly sized and given two priming coats it is well adapted to glazing, two-toning, scrumbling, mottling, or any other special finish.

A third type of wall board, made of vegetable fibers, some having insulating properties, is coming into wide use. These require special surface preparation prior to painting. A size containing pigment is strongly recommended, and such a size, consisting of varnish and pigment, not only seals the surface against suction, but also forms an opaque coating that acts as the first undercoat.

In other words, it eliminates one of the processes of wall painting required by the old method, which consisted of sizing with varnish, applying two undercoats and one finishing coat. It is good practice to use a size containing a pigment for all types of wall board or even plaster walls. As a finish for the rough type of insulating wall boards a plastic paint may give best results.

Cleaning Tile Floors

To clean tiled floors dissolve four ounces of shaved yellow soap and four ounces of washing soda in a gallon of hot water and apply to the floor with a stiff brush. Rinse with clear water and wipe with soft cloths. Stains will generally vanish under the following treatment: Make a paste of whiting and a strong solution of soda. Apply it very thickly and leave it for two or three days.

Builds House That Is Absolutely Fireproof

Can one imagine a house two stories high, with seven rooms, all modern conveniences, artistic in every detail, and not a particle of anything inflammable in its construction?

Such a house has been built by an architectural firm of Detroit as an example of 100 per cent fireproof construction.

Even the floors are made of asbestos composition laid on concrete which is supported by steel joints. Walls of the house are steel frame units connected and covered with insulating material and metal lath on both sides. Outside of the house is three-coat waterproofed stucco on metal lath. Inside walls are hardwall plaster on metal lath, leaving a dead air space between.

This absolutely fireproof construction is carried out in every detail. The windows are of cottage casement type with steel sash. The roof is built of steel trusses and covered with cement tile. All the inside partitions are of hardwall plaster on metal lath.

Doors, door and window trim, baseboards, picture moldings and chair rail are of steel, finished in enamel to represent walnut. Stair stringers and risers are also of steel with enamel finish. The stair treads are cement mortar on metal lath topped with composition flooring.

The architects say that it was erected at a cost no greater than that of a frame structure of good materials and workmanship on the same plans.

Light, Room, Fresh Air for That Dingy Attic

The third-floor attic often holds many unsuspected possibilities for intelligent utilization. The matter of adequate light and ventilation frequently appears as the stumbling block which prevents the home owner from planning the many uses which he can put the space to. Cutting new dormers, however, will usually provide light and air which will adequately serve the new rooms, and the cost of the work will probably be less than the average person would anticipate if consideration is given to certain factors.

The size of the dormers should be governed by the width of the space between the roof rafters. If the dormer can be cut through the roof without cutting the rafters the work can be done much more cheaply. Where it is necessary to cut at least one rafter it may be necessary to reinforce the others at the points where the headers from the dormer framing are jointed to them.

Roof Is an Index

The appearance of a roof bespeaks the taste and standing of the family that lives beneath it.

LIVE STOCK NEWS

REMEMBER NEED OF CLEAN SOIL

It is a well recognized fact nowadays that to raise pigs successfully the McLean county system must be followed, which means raising them under sanitary conditions so that they will not become infested with the roundworm and a lot of the ordinary so-called filth diseases such as bull-nose, sniffles, necrotic enteritis, mange, etc., says the Wisconsin Agriculturist. The McLean system is comparatively simple and can be carried out by any man who is willing to do a little extra work to avoid the usual heavy losses and lack of thrift seen among pigs raised in old hog-lots that are full of worm eggs and disease germs.

The first step to take in the sanitation program is to thoroughly clean out the farrowing quarters and then scrub the floor and partitions with one pound of lye dissolved in 30 gallons of boiling water and finally spraying the walls with a strong stock dip. The lye loosens the dirt and the hot water kills the roundworm eggs, while disinfectant destroys germs of infectious diseases. The next step consists in washing each sow's sides and udder with warm water and soap to remove the worm eggs that are certain to adhere to her body if she has been running in an old hog lot. Two or three days before farrowing, place the clean sow in the clean, well-bedded farrowing pen. When her pigs are a week or two old, if the pen is needed by other sows, haul (don't drive) her and her litter to a clean pasture. This pasture, of course, must be provided with movable houses for shelter.

Experience has shown that pigs raised on clean ground till four months old are invariably much more thrifty, make more rapid gain in weight and make their gain on less feed than when they are raised on worm-infested ground. There are many types of excellent movable houses on the market which in most cases can be purchased for less than it costs to build them at home. Some even use these houses for farrowing, especially for fall farrowing. However, when a central hog house is available this usually proves more satisfactory, as the pigs can then be given more and better attention at farrowing time.

How to Handle Lambs While Being Docked

When the lambs are to be docked, their mothers should be put in a small lot and the lambs separated and put into a very small pen nearby where they will not have room to run about but can be picked up easily. It is important that they should not be run or excited before docking. A lamb that has been chased or frightened is very likely to bleed freely when docked. They should be handled as quietly and quickly as possible and put back with their mothers as soon as they are docked. Leave them without further disturbance for a few hours unless it is necessary to handle some of them to stop excessive bleeding.

Feeding Young Steers to Sell for Slaughter

Feeders who have become accustomed to fattening aged steers do not always succeed as well the first time they try feeding calves or yearlings. Young cattle being fattened for market require different handling than older steers. It takes longer to finish calves, usually requiring from six to eight months of feeding to secure good market finish. Calves require full grain feeding in order to become sufficiently fat to sell for slaughter. If limited grain feeding is practiced with young steers, they will make good growth but will not become fat.

Live Stock Hints

Whenever a hog is sick cholera should always be suspected.

* * *

The state veterinarian of Nebraska says it is unwise to ring the noses of hogs.

* * *

Feed the lambs on choice grain and roughage or on very good, clean pasture.

* * *

In the postal service, valuable packages are carried by registered mail. Likewise, in the live stock industry, the registered male delivers the best goods.

* * *

To produce the best results, the lambs should be fed in a creep from which the ewes are excluded. That makes it certain that the lambs will get the full benefit from all the feed.

* * *

A ewe which is in good physical condition at the time of breeding is more sure to produce and also more likely to produce twins instead of a single lamb.

* * *

Hog mange is caused by a mange mite which burrows into the skin to lay its eggs. It greatly worries infested animals, causing them to rub and irritate the skin until it becomes cracked and thickened, making them generally unthrifty. Death often occurs when small pigs are infested.

It May Be *Urgent*

When *your* Children Cry for It

Castoria is a comfort when Baby is fretful. No sooner taken than the little one is at ease. If restless, a few drops soon bring contentment. No harm done, for Castoria is a baby remedy, meant for babies. Perfectly safe to give the youngest infant; you have the doctors' word for that! It is a vegetable product and you could use it every day. But it's in an emergency that Castoria means most. Some night when constipation must be relieved—or colic pains—or other suffering. Never be without it; some mothers keep an extra bottle, unopened, to make sure there will always be Castoria in the house. It is effective for older children, too; read the book that comes with it.

Fletcher's CASTORIA

Hanford's Balsam of Myrrh

Since 1846 Has Healed Wounds and Sores on Man and Beast

Money back for first bottle if not suited. All dealers.

Active Cigar Butt

When a lighted cigar butt was tossed out of an eight-story window in a Pittsburgh building it first struck an awning over a sixth-floor window. From there it bounced to a fifth floor awning, thence to a second-floor awning and to the ground, leaving enough ashes to set fire to each one of the three drapings.

When Food Sours

Lots of folks who think they have "indigestion" have only an acid condition which could be corrected in five or ten minutes. An effective anti-acid like Phillips Milk of Magnesia soon restores digestion to normal.

Phillips does away with all that sourness and gas right after meals. It prevents the distress so apt to occur two hours after eating. What a pleasant preparation to take! And how good it is for the system! Unlike a burning dose of soda—which is but temporary relief at best—Phillips Milk of Magnesia neutralizes many times its volume in acid.

Next time a hearty meal, or too rich a diet has brought on the least discomfort, try—

PHILLIPS Milk of Magnesia

Bad Legs

Do Your Feet and Ankles Swell and Inflame and Get so Sore You Can Hardly Walk?

Have You Varicose or Swollen Veins and Bunches Near Ankle or Knee?

To stop the misery, pain or soreness, help reduce the dangerous swollen veins and strengthen the legs, use Moone's Emerald Oil. This clean, powerful, penetrating yet safe antiseptic healing oil is obtainable at all first-class drug stores.

In hundreds of cases Moone's Emerald Oil has given blessed relief. Wonderful for Ulcers, Old Sores, Broken Veins and Troublesome Cases of Eczema.

MOONE'S EMERALD OIL

KREMOLA SKIN BLEACH

Wonderful and sure. Makes your skin beautiful, also cures eczema. Price $1.25. Free booklet. Freckle Ointment removes freckles. Used over forty years. $1.25 and 65c. Ask your dealer or write Dr. C. N. Berry Co., 2975 Michigan Ave., Chicago

Four members of the local Boy Scout Troop the past week have been working on Merit badges, under the supervision of R A Jorgenson The boys have about completed all tests for a merit badge on Cycling Saturday Byrnes Missman, Harold Jost and Alvin Keeper completed their 50 mile ride, going to Hutchins and back. Dorance Day started with them but was forced to return home for repairs He then made the trip Sunday.

The dedication for the new school house was held Monday evening in District No 2. The children gave a short program after which Mr J. R Baggs of Garner, gave a very good speech Light refreshments were served consisting of doughnuts and coffee.

The children and their teacher in District No Two moved into their new school house Thursday. The new seats have not arrived yet so they are using the old ones. This is the first of the three new school houses to be finished in the township

BILL'S DEATH NOT TIMELY FOR SANDY

Old Bill Harley, a hermit well known to the fishermen who yearly visited the district of Snake island for holiday sport, was dead. His demise was the subject of conversation as a party of fishermen gathered in camp for the evening meal, and each had a kindly word of regret to express.

"Here comes Sandy McIntosh," remarked one of the group, "even he will feel bad about Old Bill. Sandy, we've just heard a bit of bad news."

"Well," said Sandy, "and what is it?"

"Old Bill Harley, over on Snake Island, has just kicked out."

"You don't say so!" exclaimed Sandy "Dead, is it? That is too bad Untimely, too."

The others were somewhat surprised at the unemotional Sandy taking it so hard.

"It's true, all right," said some one, "but the old chap's death is timely, enough. He was a very old man."

"Timely, you say!" exclaimed Sandy. "And only yesterday I lent him 90 cents!"—Judge.

FIDGETY GIRL SAT DOWN AS ORDERED

Patrons of a Los Angeles theater, seated behind a young woman who mislaid her purse one evening recently, missed a part of the photography, because the woman stood up to conduct her search for the lost article, but then enjoyed a little unintentional comedy which others missed.

It was during a court scene put on by the Vitaphone, and the court was hearing parties in a separate support action. Those seated behind the young woman were getting fidgety, when the judge rapped his gavel, and ordered. "Order in the court, sit down!"

The woman was so surprised that she sank back into her seat, and there she discovered the missing purse, where it had fallen.

Television Has Gone Far Beyond Theory

Rapid strides are being made in the development of television. A recent demonstration between London and Glasgow was considerably more successful than that between New York and Washington in April. The distance between Glasgow and London is about 440 miles. J. L. Baird, the television expert, was in charge of the new demonstration. Two telephone wires were used—one for television transmission and the other to check the results. The receiver in Glasgow could distinctly see the head and shoulders of the speaker in London. Even the movements of his head, eyes and mouth were distinct. It is now only a matter of a short time, predicts Baird, before television will be practical for transoceanic transmission.

"Four-Square" Lumber

—And—

"Edgewood" Shingles

We have found by experience that buying cheap Building Material is unwise, both for the seller as well as for the buyer.

In the last year or two we have been trying to get better lumber and also better shingles, but when buying such lumber as "FOUR SQUARE" and "EDGEWOOD" shingles you must not compaer them with other competitive shingels and lumber that you might get cheaper. We have had in one car of the 100 per cent clear and 100 per cent edge grain shingles and the trade can readily see the difference. Watch for "EDGEWOOD" advertisements in the Farm Papers and other up to date papers.

Now, as to "FOUR SQUARE" Lumber, this is put out by the Weyerhaeuser people and is backed up by them, it is guaranteed to be up to grade, no machine defects and each board is cut SQUARE, thus saving a lot of time and labor. It will pay you to ask to see these two brands of building material.

Nellie Griggs Enjoys Birthday Party

Nellie Griggs had a birthday Friday so her mother invited a number of her friends to her home after school from 4:00 to 5:30 o'clock to help her celebrate the occasion. Refreshments were served and games were played, then each one present received a candy all-day sucker, dressed in crepe paper like a little doll They all departed for home at 5 30 o'clock, leaving many useful gifts for Nellie and wishing her many, many more happy birthdays.

Fishing Was Good At East Twin Lake Sunday

Perhaps the article in the Times last week regarding the game fish in East Twin Lake had some effect There were a great many people at East Twin Lake ifshing Sunday The Lake was spotted with boats and the shores lined with people fishing It is estimated they were practically all catching the limit of unusually large perch and a few wall eyed pike. It was estimated there were at least 1,000 of these large perch caught Sunday The fishermen came in from the following towns: Klemme, Goodell, Belmond, Clarion, Meservey, Kanawha, Corwith, Luverne and Britt Who says we can't raise fish in East Twin Lake?

The First Lady of the Land

By LOUISE M. COMSTOCK

WHEN Mrs. Herbert Hoover or Mrs. Al Smith sets up her domestic menage in the White House next March, she will do it according to customs established by 32 predecessors women of unusual personalities and talents who have molded to its present form the glamorous role of First Lady of the Land.

Love, romance, adventure, success and failure have come to them while mistresses of the nation's first home. Three of them, Letitia Christian Tyler, Caroline Scott Harrison and Ellen Axson Wilson died there; three more, Julia Gardner Tyler, Frances Folsom Cleveland and Edith Galt Wilson, by marrying men already in office, came to the White House as brides. Only two of our Presidents were bachelors when inaugurated, a proportion which shows them to be no exception to the rest of humanity in this particular respect. They were James Buchanan and Grover Cleveland, and Mr. Cleveland remained single only a year after his term began. Three Presidents were widowers when they took the oath of office and to daughters or sisters fell the responsibilities of First Lady of the Land.

Martha Washington, the first to hold this position, had no White House in which to entertain the diplomats and foreign guests of the new Republic, but the elaborate formality of the receptions, levees and musicales held in the temporary Presidential residence at Philadelphia set a definite social tradition. "Lady" Washington was a widow when she married the famous general, the mother of two children, and she brought him a $100,000 estate which helped make him the richest colonist in his part of the country. She is described as a quiet, unassuming woman, a good mother and a charming hostess, who held "court" with her idolized husband with ease and grace in spite of the lavish ceremony the times demanded.

It was thus to Abigail Smith Adams, wife of the second President of the United States, that fell the distinction of being the first mistress of the White House. She was introduced to her new abode on a bleak November day in 1800. Behind her lay a torturous stage-coach journey over the miles of mud and wilderness which lay between her and her luxurious Philadelphia home. And before her—well, read what that staid and brilliant woman wrote her sister a little later:

"I arrived about one o'clock at this place, known by the name of the City, and the name is all you can call so, as I expected to find it a new country, with houses scattered over a space of ten miles and trees and stumps in plenty with a castle of a house—so I found it. The President's house is in a beautiful situation, in front of which is the Potomac. . . . I have been to Georgetown. . . . It is the dirtiest hole I ever saw for a place of any trade or respectability of inhabitants. . . . This house is twice as large as our meeting house. I believe the great hall is as big. I am sure it is twice as long. Cut your coat according to your cloth—but this house is built for ages to come!"

Mrs. Adams was compelled to endure embryonic Washington only three months, for President Jefferson moved in the next March. Jefferson was a widower and affairs at the "Castle" were ordered by his two daughters and by the vivacious and popular Dolly Madison, at that time wife of the secretary of state. For 16 years, while Jefferson and her husband were President, Mrs. Madison built to colorful dignity the social life of the new White House; for over 50 years she held undisputed sway over Washington society. She was not handsome; it has even been said that, though brought up in the Quaker faith, she rouged, took snuff and played cards for high stakes. But, according to one of her biographers, this daughter of South Carolina "is believed to have made a greater contribution to the social life of the country than any other woman who had the honor of living in the White House."

Though Dolly Madison was twenty-one years younger than her distinguished husband, they lived together happily for forty-two years. When he died at Montpelier, his widow returned to Washington and though then nearly seventy and in straitened circumstances, she made her little house opposite Lafayette square, now the home of the Cosmos club, a magnetic center of social life. Her death in 1849, when she was seventy-seven, was mourned by the entire capital.

Her immediate successors, though perhaps less well known, each left the stamp of her personality upon the social regime of the White House. There was Elizabeth Monroe, a quiet, intellectual woman of stately bearing, and Louisa Johnson Adams, who, though born abroad, educated in foreign courts and "a person far beyond the average of her generation," was prevented by ill health from continuing the festivities initiated by Dolly Madison. Though Rachel Jackson died, perhaps of a broken heart, some months before "Old Hickory" was inaugurated and though she was much maligned during the stormy campaign which preceded his election, his passionate devotion to her memory was responsible for momentous events during his administration, though social life at the White House was actually in the hands of her sister-in-law, Mrs. A. J. Donelson. And it was Angelica Singleton, his daughter-in-law and a charming belle of the South, who presided over official dinners for President Van Buren, a widower.

Letitia Tyler, made First Lady of the Land by the death of President Harrison only a few months after his inauguration, died in the White House. President Tyler met the woman who was to be his second wife, Julia Gardner of New York, in story book fashion. They were brought together by the death of her father, who was killed in an explosion on the Potomac and whose body was brought to the White House immediately after the accident.

The brilliant activity with which the new Mrs. Tyler brought her husband's administration to a close ended abruptly with the entrance of Sarah Childress Polk, a beauty of the dark Spanish type with a regal manner, whose strict religious beliefs caused her to banish dancing and the serving of refreshments from White House functions. Margaret Smith Taylor undertook the duties of First Lady of the Land reluctantly, resenting the demands this new honor made upon the husband she had already seen though the hazards of a spectacular career as Indian fighter. Consequently, so it is said, she sat quietly knitting and smoking a favorite pipe while her daughter, Mrs. William Wallace Bliss, saw to the installation of new lighting fixtures and furniture in the Presidential mansion and entertained for her father.

Abigail Powers Fillmore, a self-educated woman and a school teacher before her marriage, was another who, this time because of lameness, put the burden of playing hostess on a daughter. And Jane Means Pierce entered the important role under a cloud of grief for the death of her thirteen-year-old son killed in a railroad accident, and though a competent if somewhat detached hostess, she had such a dislike of politics that they were never discussed in the President's home while she was around!

During the administration of the bachelor President, James Buchanan, his ravishing niece, Harriet Lane Johnston, one of the most beautiful and popular of the women who have held that position, played First Lady of the Land and brought to the historic mansion once again a period of high festivity. Then came Mary Todd Lincoln, "a pleasant-faced, cheerful woman, who would be satisfactory in her place," whose life at the Capital, darkened by the death of her son Willie and the President's assassination, could not have been a very happy one. Her successor, Eliza McCardle Johnson, though she taught her husband to read and write, was an invalid while she lived in Washington and was forced to relinquish the duties of her exalted position to a daughter.

A new social era, as well as new furniture and decorations, entered the White House when Julia Dent Grant became its mistress. A talent for entertaining and unfailing energy enabled her to promote a continuous round of gala functions, among them the brilliant marriage of her daughter Nellie, one of her four children. Lucy Webb Hayes, also an excellent hostess, modified the nature of White House entertainment by banishing the serving of intoxicating liquors. And the custom of lavish and efficient entertainment established by these two was ably continued by Mrs. John E. McElroy, sister of President Arthur, and successor to Lucretia Garfield, whose term as First Lady was cut short by her husband's assassination.

Though President Cleveland entered office a bachelor, his marriage to Francis Folsom soon after gave Washington one of the most popular hostesses it has ever known. The young Mrs. Cleveland was the idol of the women of her generation, many of whom still remember the dresses she wore at her famous public receptions. Caroline Scott Harrison, an unusual woman, skilled in painting and music and the first president general of the Daughters of the American Revolution, died in the White House, leaving her responsibilities to a daughter, Mrs. McKee.

At the close of President McKinley's administration, a quiet one socially, due to the ill health of his wife, Ida Saxton McKinley, Edith Carow Roosevelt, another woman still fondly remembered, became First Lady of the Land. She was an engaging, intelligent person, keenly interested in the activities of her famous husband and such a devoted mother to her five children that she has been called the "American Cornelia." The best remembered occasion of her life in the historic mansion is the marriage of Alice Roosevelt to Nicholas Longworth, present speaker of the house.

With Helen Herron Taft, the new interests of modern woman were introduced into the White House. Mrs. Taft was active in civic enterprise and was the founder of the Cincinnati Symphony orchestra. Her successor, Edith Axson Wilson died during her husband's first term in office and was followed by Edith Galt Wilson, mistress of the nation's first home during the troublesome times of the World war. Florence King Harding was again a modern woman with modern ideas, being the first President's wife with the power to vote.

To the demands of a most elaborate social program Grace Goodhue Coolidge, who after seven years as First Lady of the Land yields her position next March, has lent a charm and tact that have endeared her to the American people. She is a graduate of the University of Vermont and before her marriage taught in a school for the deaf in Northampton. Through the death of one of her two sons, Calvin, Jr., the long illness of her mother and the death of her husband's father, through wearing years of continuous publicity, she has maintained a calm, gracious dignity, and been always a true First Lady of the Land.

The Highroad

Barnard M. Baruch, discussing success, said at a luncheon in New York:

"Julius Rosenwald, the mail order king, imputes his success to luck. I would impute it to pluck, or whatever the quality is that makes a man fight on the harder, the more he is knocked down and kicked about."

Mr. Baruch paused a moment; then he said impressively:

"Failure is the highroad to success."

Touches that Add Style to Dresses

By MAE MARTIN

It's amazing to see how faded, out-of-style dresses can be transformed by a few buttons, a little braid and the quick magic of home dyeing or tinting. You don't need any experience to tint or dye successfully if you are sure to use true, fadeless Diamond Dyes. Tinting with them is easy as bluing, and dyeing takes just a little more time to "set" the colors. They never give things that re-dyed look which comes from using inferior dyes. Insist on Diamond Dyes and save disappointment. Over 20 million packages used a year.

My new 64-page illustrated book, "Color Craft," gives hundreds of money-saving hints for renewing clothes and draperies. It's Free. Write for it, now, to Mae Martin, Dept. G-143, Diamond Dyes, Burlington Vermont.

Horse's Hoofs Start Fire

More than 2,000 acres of forest land in California were swept by fire recently, the blaze being started by sparks from a horse's hoofs, according to the report of the state forester, says Popular Mechanics Magazine. This is believed to be the first verified instance of an occurrence of this kind, although other fires, starting in this manner, have been reported.

Electrical Contractor Gives Advice to Others

"I think Milks Emulsion should be advertised all over the world, so as to help all of the sick.

"In 1912 I had a great deal of trouble with my stomach and bowels. For several years I tried everything that I saw advertised, but I kept getting worse all the time. I got so bad that I was in bed for three months in 1916. While in Philadelphia in 1917 I happened to see one of your ads. I had tried everything that I thought was any good, but concluded to give Milks Emulsion a trial. It could not do any worse than the rest.

"To my surprise it regulated my bowels and I found I did not suffer any more after eating and had no pain at all. I continued the use of Milks Emulsion for six months, until I was in fine health and have been for the past eight years. When I think of the way I suffered night and day for six years, I feel that every person with stomach and bowel trouble should know about Milks Emulsion." Yours truly, S. B. PEDDICORD, JR., Electrical contractor, 1435 W. Baltimore St., Baltimore, Md.

PEED LAWS ARE MORE GENEROUS

pinion in Favor of Mini- mum Rule Is Growing in Many States.

nation-wide tendency on the part the states to liberalize speed lim- and to judge the recklessness of driver on the facts in the case disclosed by a legislative survey ertaken by the American Automo- association.

creased speed limits were legis- d in at least ten states during the ions of the legislatures last year e the problem is to be considered large number of the other states impending sessions, according to statement by the organization. es Karl W. Miller in the Detroit s.

o far, however, only one state, nnecticut, has followed Michigan's mple by abolishing the speed lim- and requiring only that speed be sonable and proper."

Facilitates Traffic.

'Move on' seems to be the watch- d on the highways in the open ntry and this has done much to ilitate the movement of the ever- reasing number of automobiles," s the statement. "There is a rked increase of opinion in favor minimum speed laws, this thought g advanced by state officials who e observed over a long period of e that many accidents are due to ple taking a chance in getting out the line of slow-moving traffic."

Increase Speed Limits.

total of 23 states have increased r speed limits during the past e years, according to the A. A. A hese states are:

labama, 30 to 45; Arizona, 20 to Connecticut, 30 to "proper and eful operation"; Florida, 30 to Georgia, 30 to 40; Idaho, 30 to Indiana, 25 to 40; Iowa, 25 to Kentucky, 30 to 40; Maryland, to 40; Michigan, 35 to "reason- e and proper"; New Hampshire, to 35; New Jersey, 30 to 35; North rolina, 30 to 45; North Dakota. to 35; Oregon, 30 to 35; Pennsyl- nia, 30 to 35; Rhode Island, 25 to South Carolina, 35 to 45; Ten- ssee, 20 to 30; Vermont, 25 to 30; rginia, 30 to 35, and Washington, to 40.

eck Meters of Speed Cops, Says Auto Club

he American Automobile associa- n urges that police and court offi- ls see that police speedometers absolutely correct at all times d at all speeds in order that mo- car owners may be assured of jus- e to which they are entitled in rt on a speeding charge. It is de- red that a host of motorists have n unfairly fined tens of thousands dollars because "police and court icials do not realize that the eedometer is by no means the ac- rate instrument of measurement it supposed to be."

peed of 22 Miles Best on All Crowded Highways

A speed of 22 miles per hour per- s the maximum capacity of a wded highway, according to inves- tations made by the Pennsylvania partment of highways.

f all drivers maintained this speed, would be possible for 1,000 vehicles pass a given point in one hour on ne-lane highway.

f the speed is increased, it becomes cessary for the vehicles to stay far- r apart and the capacity of the d is decreased. If the vehicles go wer and closer together, the ca- city of the road also decreases.

Guarding Against Oil Lag Quite Important

It isn't necessary to be an engineer to understand what is meant by "lag of oil pressure," even though it does sound technical. It is obvious that the pressure of the oil circulating in an engine should be in proportion to the needs of the bearings and other vital points requiring unfailing lubrication. When this oil pressure is not high enough for engine speed it is said to "lag."

The amount of lag is increased by unskillful driving. Since oil pressure is regulated by engine speed, a driver has only to accelerate too rapidly or to force his engine suddenly to start the pressure lagging. This may pave the way for trouble.

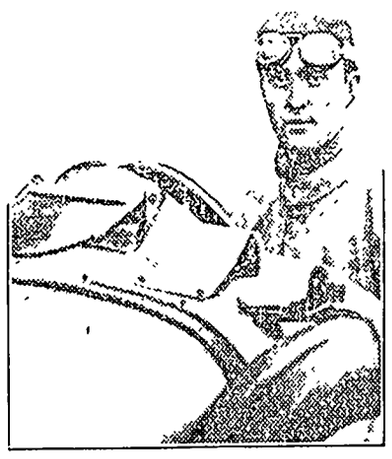
The best rule is to accelerate a little, then cut down engine speed and then accelerate again. This gives oil pressure a moment to catch up with engine demands. If acceleration is reasonably progressive the amount of lag will never be enough to cause trouble.

Courtesy of the Road Is Worthy of Consideration

Mr. Motorist, are you considerate of the other fellow when on the highway, or do you feel that the road is yours and to blazes with the other fellow? The golden rule of road courtesy is far from being selfish nor remote of thoughtlessness. Si Mayer, president of the Automobile Club of Illinois in a bulletin issued by that organization, asks that a fifty-fifty break be given your neighbor of the road, which combination of reciprocity is sure to bring about more genial relationship on the highways.

"To receive courteous treatment, it is always best to first practice the procedure yourself," declared Mr. Mayer.

One of Greatest Racers



Chiron, one of Europe's greatest automobile racers, is seated in his big racing car just before the sixth annual meet at San Sebastian, Spain.

AUTOMOBILE NOTES

How does a weak tire know you are all dressed up and ready for a party?

* * *

There are all kinds of weak tires, including those who know when it is beginning to get dark.

* * *

If they begin making rubber tires from corn, a fellow is likely to find a cob in his tubes any time.

* * *

Incidentally, the speeder who was pursued for 18 miles and then fined $150 got a run for his money.

* * *

The way rubber casings and tubes are going down there should be a greater demand for teething rings.

* * *

Uniform markers are to be adopted for through highways, and now if the constables had uniform markers the speeders would not have so much to worry about.

Get Fertilizers in Compact Form

New Commercial Mixtures With Nitrogen Compounds Increase Plant Food.

Concentrated fertilizers are here this season. More than that, they will receive greater consideration from New York farmers and probably will be used far more extensively in the years to come, says Prof. E. L. Worthen of the agronomy department of the New York State College of Agriculture at Ithaca, N. Y.

Synthetic Nitrogenous Materials.

The development of so-called concentrated mixed fertilizers results from advances in the manufacture of synthetic nitrogenous materials. These materials are higher in plant food than the animal, fish or vegetable materials which have commonly been used as carriers of plant foods for commercial fertilizer.

All the nitrogen in a fertilizer may come through synthetic materials or "chemicals." While an objection has been raised because these concentrated fertilizers do not contain nitrogen in the form of organic materials, experiments do not show any consistent superiority of nitrogen from organic sources as compared with that from "chemicals." Results from concentrated fertilizers, although still somewhat incomplete, indicate an approximate equal value, pound for pound, of plant food in concentrated mixtures and in fertilizers of ordinary, low concentration.

Advocate Ratios.

Buyers of fertilizer will be advised more and more to consider using ratios such as 1-2-1, 1-3-1, or 1-1-1 instead of the analysis such as 5-10-5. The analyses which have been used for years by New York farmers indicate the percentages of plant food contained. However, since concentrated fertilizer may carry double or triple as much plant food as those less concentrated, the use of ratios to represent the plant food contained instead of the exact formula is advised.

Professor Worthen points out that it is possible to injure seeds or young plants unless the rate of application of concentrated fertilizer is reduced. If a 10-20-10 fertilizer replaces a 5-10-5, the rate of application should be reduced one half, for example.

Special precautions should be taken to prevent the fertilizer from coming in direct contact with the seed, but if the rate of application is not unduly heavy and if the fertilizer is properly mixed with the soil, crops will not be injured.

Colloids in Soils Have Much to Do With Plants

Now that such words as legumes, humus and bacteria have become familiar to farmers and their relation to the soil fertility is understood, the term "colloid" is about to claim the attention of soil builders. Soil colloids consist mainly of organic matter and partially decomposed mineral substances existing in a very finely divided state. These colloids are important, scientists are finding out, because they have much to do with plant growth. The extent of bacterial action in the soil, its water holding capacity and the solubility of the plant foods depend very largely upon the nature of the colloids present.

Fall Plowing for Trees Is Favored by Forester

"Proper tillage of the soil is probably the most necessary prerequisite to successful tree growing," says C. W. Watkins, Nebraska extension forester. He advises the man who plans to set out trees in the spring to plow the ground in the fall. This conserves the moisture and makes a compact, moist soil for planting in the spring. There will be enough moisture stored in the fall plowed land to start the trees in the spring even if there is very little rain at that time. After the trees are planted, regular cultivation and an occasional hoeing will prevent weed growth and give the trees a chance to get started.

Agricultural Squibs

No economical substitute for the use of liming materials in growing legumes has been found.

* * *

The home gardener may extend his growing season in the fall by the use of hotbeds and cold frames.

* * *

Giving your dairy barn a good system of ventilation now means healthier stock and purer milk in the winter.

* * *

Federal specialists estimate that per cent less chickens are being raised on American farms this year than in 1927.

* * *

The production of hogs, beef cattle and horses moves in cycles. That is, there is a period of large production followed by a period of lesser production. Prices move in the opposite direction.

* * *

Moving pullets from the range to the laying house is delicate work in so far as the pullets are concerned. Remember that they are going into strange quarters and will receive new management from now on. Sudden changes are often disastrous to egg production.

ONE OF OLDEST AUTOMOBILES IN COUNTRY

One of the oldest automobiles in the country—owned and still driven a farmer near The Dalles, Ore. Yes Siree, it still chugs along, too!

IMPORTANT TO MOTHERS OF UNDERWEIGHT CHILDREN

"Two Tablespoons of Karo in a Glass of Milk *doubles its Food Value*"!

THIS statement is made by one of America's greatest child specialists.

"Karo", says this physician, "is not only a delicious sweet, but *the ideal food* for the underweight child. Karo can be added to the diet without spoiling the appetite for other foods—and it improves the taste of milk."

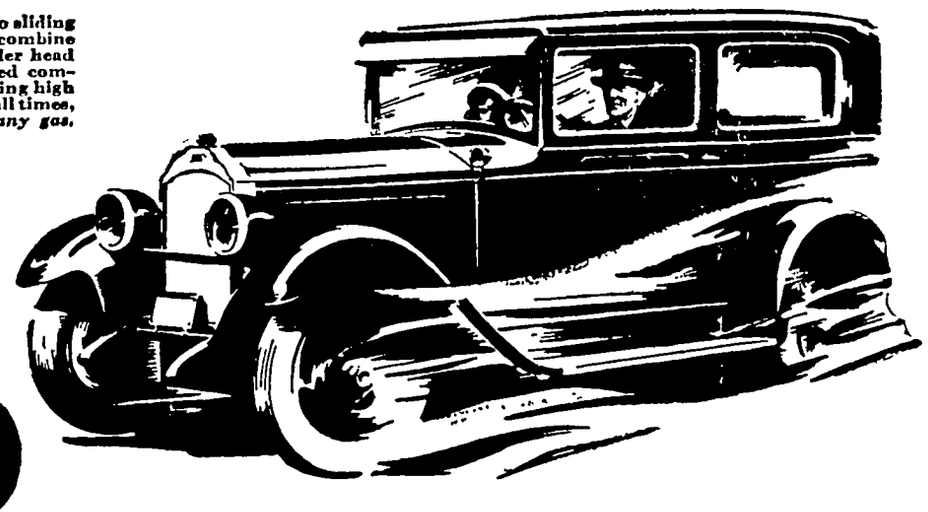
Karo has a high energy value—there are 120 calories per ounce in it—almost twice the energy value of eggs and lean beef, weight for weight.

Further—Karo is easily digested—giving children muscular energy *immediately*.

Serve the kiddies plenty of Karo in milk, on cereals, on sliced bread—and watch their weight improve.

Economy—compare Karo, pound for pound, with the price of other staple foods. Isn't Karo economical?

In the Knight engine, two sliding sleeves in each cylinder combine with the spherical cylinder head to form a perfectly sealed combustion chamber—assuring high uniform compression at all times, at all speeds and *with any gas.*



PERFORMANCE always at its best

Thousands more now enjoy Willys-Knight's smoothness, silence and power—at record low prices

STANDARD COACH $995

Other Willys-Knight models $995 to $2695. Prices f.o.b. Toledo, Ohio, and specifications subject to change without notice.

THE *patented* Willys-Knight double sleeve-valve engine is as fresh at the end of a hard day's run as at the start—and after thousands of miles you will find this superior motor even smoother and quieter than on the day you took delivery.

Its simplicity of design insures remarkable freedom from carbon troubles and repairs. There are no valves to grind, no valve springs to weaken. At the lowest price in history, the Standard Six is bringing the advantages of Willys-Knight's sparkling activity, sustained brilliance and ease of control to thousands of new and enthusiastic owners.

A PARLOR FURNACE that IS a FURNACE

Some Reasons

Why

The wonderful comfort and satisfaction of cozily heated roo and warm floors can be yours And you can banish forever t dirt, the discomfort, the fuel waste and nuisance of stove te ding!

The big beautiful GLOW BOY requires but a fraction of t time and attention that an ordinary stove demands. And mu less fuel too! The large slotted fire pot—it weighs 119 poun —need not be filled but one to three times in twenty-four hou It holds from 65 to 85 pounds of coal, real furnace capacit And the big wheel bearing grate is so easily operated.

GLOW BOY is truly a furnace thru and thru. Its 650 poun of Globe Analysis cast iron will perform wonderful heating se vice year after year. It actually has more heating power th many basement furnaces. It is amazing to know that GLO BOY has greater warm air circulating power than the combin capacities of five of the largests size base burners! And t wonderful comfort of warm floors! Even on a zero day t floor is safe and cozy for the youngstres GLOW BOY circulat without causing unpleasant floor drafts.

Come In And See Our Display Of Parlor Furnaces!

E. F. Jacobs

DOINGS AT SCHOOL THIS PAST WEEK

HIGH SCHOOL PLAY THIS FRIDA YEVENING AT GYM

Some Of The Grades Enjoyed Party This Week

We expect a well filled house at our High School Gym on Friday evening of this week at 8:00 p m. as our ticket salesmen have reported a good demand for the tickets to the play being staged by the Athletic Dept Reserved seats are 50c and 35c. We feel certain the program will be a delight to all who are present and in good health

Grades Earn Parties

The fifth and sixth grade room, having earned the reward promised for thirty days of perfect attendance left at 2:30 Wednesday afternoon for an ike with their teacher, Miss Root. With lunches to carry they made their way to the John Larson home in the country where they were given a royal welcome. They played games and ate their lunches and returned to Klemme before dusk.

Our grades 3 and 4 and their school teacher, Miss Mildred Wheatman also turned their backs on the school house the same evening a. they too had just completed 30 days of perfect attendance. They spent the time in frolic at the Parish House and enjoyed refreshments.

Junior Red Cross Work Here

Rev Walsh, of Garner, county Red Cross Chairman, called at our school Wednesday morning of this week and addressed our upper grades and high school on the work the Red Cross is doing in ours and in other countries. Our students were interested and responded favorably to his suggestion to organize and givet heir share required for membership ofo ur school in the Junior Red Cross. Mrs. R. A. Jorgenson was present as local leader She will give general directions to our teachers and supply them with posters and other material furnished for the November drive. Klemme can be depended upon to do its full share is our confident prediction.

High School Will Cast Vote

Our high school on next Tuesday afternoon at 3:15 will devote some time to the merits of the two leading candidates for President. Both sides will be presented in a fair and impartial manner. Those desiring to listen in may do so with the understanding that they do not neglect to vote. The right to vote has cost no little sacrifice on the part of both men and women of days long ago struggling against autocratic rulers and selfish overlords and should be more appreciated. Our high school will do what it can to encourage voting at this election aud we hope to equal or excell other towns of our county or state in the proportion of men and women voting. We are not doing this in the interest of any candidate or party. We feel it will reflect credit on our community to have it said her citizens went to the polls on elcetion day and did what they could for their country, state, and community welfare. It is true we must vote for many men we are not sure will represent or serve us well, but with every qualified voter exercising the right of franchise America is more apt to go forward and less apt to fall a prey to political demagogues. Let's all go to the polls next Tuesday and vote our honest convictions regardless of whether they are the convictions of others. Let's be good Americans and vote for better America.

Pupils Perfect In Attendance To Date

GRADES 1 AND 2—

Charles Bock, Cecil Leitzinger, Stanley Ludeke, Elsie Drake, Elnor Schuldt, Pearl Wade, Marian Wattmann, James Deal, Reuben Grossnesch, Chester Ward, Arlene Blickenderfer, Ruth Heginger, Doris Johnson.

GRADE 3—

Raymond Jorgenson, Thelma Gimer, Lester Knoke, Eldo Knoke, Paul Schuldt, Avis Barz, Ruth Blickenderfer, Juanita Pavey.

GRADE 4—

Max Barz, Norman Sampson, Doris Ludeke, Carmen Kluckhohn, N ra Wellemeyer

Fifth Grade All Perfect

The Fifth Grade for the first six weeks have had perfect attendance and punctuality (They still have a perfect record of attendance and punctuality to date.)

The pupils in the Sixth grade who have not been absent or tardy are: Everet Barz, Walter Klotzbach, Harriet Gibbs, Mable Griffen, Bessie Larson, June Ludeke, Ruth Wellemeyer

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

The following is the church program for Sunday, Nov. 4th

Morning worsaip and preaching service:-

Klemme 10·00 a m

Liberty 11·00 a m.

Subject "Life's Universal Law, and It's Lesson"

Sunday school. Klemme at 11 00 a. m Liberty at 10·00 a. m

Epworth League at 6·45 p. m.

Evening preaching service at 7·30 o'clock Subject "Conditions of a deepening acquaintance with God."

THE FIRST SNOW OF THE YEAR FELL THIS MORNING

A cold, drizzly rain last night turned into snow this morning, and a light coat of slushy snow decorated the scenery for the first time this fall. It gives a touch of winter that gladens the hearts of coal dealers, and should pep up business in all lines of fall and winter trade So far we have enjoyed wonderful fall weather and no doubt we will have many fine days yet before the winter really sets in.

MARRIAGE LICENSES ISSUED

The following marriage licenses were issued in Hancock County recently:

On October 15 a license was issued to C E Mitchell and Miss Ruth Rinehart, both of Council Bluffs

On October 25th Alfred W. Hutchinson and Nettie Bird, both of Woden were granted a license

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

10·00 a m English service

11:00 a. m. Sunday school

Quarterly reports of the teachers.

The Young Peoples Bible Class will meet Wednesday evening instead of Tuesday next week

The Confirmation Class meets every Tuesday and Saturday

Junior Choir at 8:00 o'clock on Saturday evening.

There was quite a family gathering at the T. Blank home Sunday when a number of the children and their families assembled. Mr. and Mrs. Fred Blank and daughter, of Morrison, Iowa, started out in their car and picked up Mr. and Mrs. Casey Blank, at Reinbeck and brought them to Klemme. Mr. and Mrs. Worthy Usher, of Rowan, and Mr. and Mrs. Tony Ahrenkeil and son, of Goodell drove up also. And Miss Marie Blank and Miss Gracka Quandt, of this place, made up the balance of the company for dinner.

A poultry and egg dealers meeting was held at Britt Monday evening, conducted by State Inspector Thomas Poultry dealers from two counties were present to get the facts laid down by the Inspector regarding the buying of poultry and eggs and the standards required for shipment. Henry Lewis, and Mr. and Mrs Gram, of Klemme attended.

Sumner Trumbell, carrier on R. F. D. One, Klemme, is making his route in a new Ford coupe.

High School Play

Mother Carey's Chickens

Play Director: Miss Wilma Trumbell, H. S. Principal

At The Klemme High School Gymnasium
FRIDAY EVENING, NOVEMBER 2, 1928

—CAST OF C IARACTERS—.

OSSIAN POPHAM	Glenn Lange
GILBERT CAREY	Clarence Lemke
NANCY CAREY	Edna Nelson
MOTHER CAREY	Clarice Wellemeyer
KATHLEEN CAREY	Jane Dutheridge
PETER CAREY	Everet Barz
COUSIN ANN CHADWICK	Lela Bachman
JULIA CAREY	Lucile Kraus
MRS. OSSIAN POPHAM	Reva Elder
LALLIE JOY POPHAM	Thelma Kluckhohn
RALPH THURSTON	Raymond Barz
CYRIL LORD	Raymond Schuldt
TOM HAMILTON	Oral Gibson
HENRY LORD, Ph. D.	Laurence Greimann
SAM BERRY	Edwin Thiemann

ACT I. Time—An April Afternoon.

Place—A New England Village, living room of the Yellow House in Beulah.

ACT II. Time: A May Afternoon.

Place or Scene: Same as Act I.

ACT III. Time June, 3:00 P. M.

Scene: Barn of the Yellow House in Beulah.

—Net Proceeds of Play Used For Athletics—

JURY LIST DRAWN FOR NOV. TERM

SEVERAL KLEMME FOLKS ON NOVEMBER JURY LIST

Judge M. F. Edwards Will Preside At Next Term Of Court

The next term of the District Court in Hancock County is called for Monday, November 19th., with the Hon. M F. Edwards as the presiding judge.

Following is the jury list for the November term -

Ed. Becker	Klemme
Mrs J. P Spalla	Britt
Mike Malek	Garner
G P Morgan	Britt
Zora Merten	Garner
Mrs Rosa Larsen	Klemme
Irwin Rasmus	Garner
John Minders	Belmond
Frank Kelley	Britt
Minnie Lenz	Klemme
Fred Barz	Ventura
Clarence Keil	Forest City
Harry Paulson	Forest City
Willie Phillips	Woden
Mrs E A. Couper	Britt
James Tlach	Britt
Carl Suckow	Garner
John Cundiff	Kanawha
Frank Wellick	Britt
Alice Naumann	Corwith
L. N Thompson	Britt
Ruth Twaites	Garner
Arth Lonning	Britt
R. S. Kent	Britt
Amel Wittek	Britt
Robert Rhodes	Goodell
Chas. Cockerell	Britt
Victor Jensen	Britt
H. J. Thieman	Klemme
Jake Swenson	Kanawha

Grand Jury For November

M. S. Burgitt	Britt
E. J. Blumer	Garner
Arthur Wellemeyer,	Klemme
Geo. Sanford	Corwith
Frank Chizek	Garner
C. H. Schissel	Garner
John Ruoss	Forest City
Ernest Senne	Woden
Wray Hallett	Forest City
L. B. Miller	Kanawha
J. M. Ziellie	Goodell
John Dominy	Goodell

ROYAL NEIGHBORS ENTERTAIN WITH CAR DPARTY

The Klemme Royal Neighbors gave their first card party of the season at their hall last Thursday evening. Following the party the ladies served their guests a delightful lunch. Quite a number attended as they had ten tables in operation. All enjoyed a good time.

CAMP FIRE GIRLS CLEARED $40 ON THEIR PLAY

Their Play Was Well Attended And Was A Fine Attraction

The Klemme Camp Fire Girls and their leader are to be complimented on the splendid manner in which they successfully put over their play, "The Call of Wohelo," at the Idle Hour Theatre last Friday evening. They girls took in $51.00 and after paying expenses cleared $38.25, a rather neat sum.

The play in every detail was well acted and each girl in the cast is to be complimented on the way she took her part. Naturally in a play of any kind there are outstanding parts and special mention is due Valeria Koerner for the manner in which she acted the part of an Indian Maid, a rather difficult part. Blanche Gimer had a major part in the play, which she handled well Gracka Quandt and Nova Koerner were heard frequently and much of the story centered around their acting Irene Johnson played her part well as the "camp misfit Others of the Camp Fire Girls appearing in the play and each doing her part in a commendable way were Ethel Barz, the camp mother, Reva Elder, Clarice Wellemeyer, Thelma Kluckhohn, and Hilda Keeper, the latter appearing on the stage for the first time and carried her part well

Lucile Kraus put on a negro dialog betwween acts that was very clever. Gracka Quandt gave a piano solo, and Irene Johnson and Blanche Gimer a vocal duet

Miss Marie Blank, leader of the Camp Fire Girls wants to thank all who attended and gave their support to the success of the play She especially wishes to thank Miss Trumbell who "made up" the girls and for material or help given by Paul Grange, Donald Gibbs, Arthur Wellemeyer, Ed. Jacobs, and others

The Boy Scouts showed their interest by attending the play in a body, and the Camp Fire Girls had a section reserved for them

The Camp Fire Girls had a ticket selling contest on which resulted as follows: Gracka Quandt sold 48 tickets; Thelma Kluckhohn was next highest with 29 and Blanche Gimer placed third with 13 tickets sold. The other girls all sold tickets

HAROLD RIDDER HURT IN CORN PICKER TUESDAY

Is At Mason City Hospital Where He Was Taken For Attention

Harold Ridder was badly injured Tuesday when picking corn with a machine and tractor Just how the accident happened is nto certain.

Harold had stepped off the tractor to release some corn stalks in the machine which is pulled by a tractor and has a power take-up. It is thought his clothing got caught in the take-off and hrew him. In the mix up his left reg was broken near the knee, his right leg bruised and crushed from the ankle to the knee and his head badly cut.

A local doctor was called and who took him to Mason City to a hospital.

NOTICE OF PROBATE OF WILL

STATE OF IOWA,
Hancock County, ss.
To All Whom It May Concern:

YOU ARE HEREBY NOTIFIED, That an instrument of writing purporting to be the last Will and Testament of Valentine Josten, deceased, dated Aug. 30, 1928, having been this day filed, opened and read, Monday the 19 day of October, 1928 is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 10:00 o'clock A. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated andallowde as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, Oct 18, 1928.

CHRIS J. JOHANSEN,
Clerk of District Court.
(Oct. 25, Nov. 1-8, 1928).

GET OUT AND VOTE TUESDAY, NOV. 6

EVERY VOTER SHOULD GO TO THE POLLS TUESDAY

You Have Seven Choices On The Ballot This Fall

Tuesday is election day and it is the duty of every voter to go to the polls and cast his ballot.

Whether you are Republican, Democrat, Socialist, or what we do not tell you how you should vote that is your privelege If yuo are for Hoover, go vote that way. If you are supporting Smith then go and give him your support at the ballot box. Let's get out a one hundred per cent vote in this county on next Tuesday VOTE!

As to voting. There is a circle at the top of each ticket on the ballot. If you put a cross mark in that circle you automatically vote for every man on that ticket. But suppose you want to vote, say the Republican ticket straight, with the exception of a few candidates. All you have to do is mark the circle, then go to the other ticket you want to vote and mark the squares by the men you want. By this method yuo vote for all men on the ticket under the circle with the exception of the men you have voted for on the opposite ticket, or tickets.

If you make a mistake, do not try to erase your error but ask the judges for another ballot. Do not place a mark of any kind other than an X on the ballot

Besides the presidential ballot you will receive a yellow ballot on the state road bond measure.

VOTE NEXT TUESDAY!

CHURCH BOARD ENTERTAINED M. E. CONGREGATION

The Methodist Church Board entertained the Klemme Congregation last Thursday evening at the Parish Hous to an oyster stew. Rev. Leaso the District Superintendent was present an addressed the gathering. Plans for putting into effect a budget plan for financing the church was decided upon and pledge cards passed out and signed up. All present enjoyed a good time socially, and the business part of the meeting was quite successful.

LOYAL WORKER S. S. CLASS GAVE DINNER SUNDAY

The members of the Loyal Workers Sunday School class of the M E. Church enjoyed a dinner at the Parish House Sunday noon and then enjoyed a social time during the after dinner hours About sixty people attended the dinner Sunday. The Loyal Workers is perhaps the largest class in Sunday school and have an enrollment of about thirty.

HALLOWE'EN PRANKS

We thought Hallowe'en would pass along quietly this year, but this morning we found that the Main Street was decorated with the usual asortment of small buildings. wagons, ladders, signs, barrels and other articles. The identity of the jokers is no secret and boys as well as girls were in the crowd of midnight workers.

Now, wouldn't it be a real joke if our authorities forced them to lug all the stuff back to where it came from?

Hwever, we have heard of no complaints of any real damage done by the Hallowe'en jokers.

SALE OF SCHOOL HOUSES

On Saturday, November 17th, at 10:00 o'clock a. m. at the Center School, the Avery township school board will sell at Public Auction to the highest bidder for cash, the following property: The old school houses in Districts 2, 6 and 8, some desks, stoves, etc. It is understood that buildings in District6 and 8 aer not to be removed until new houses are completed and occupied. 3tc.

NEARBY AND YONDER

By T. T. Maxey

Pipe Lines

BACK in 1865, in Pennsylvania, an underground transportation system was born. Strange as it may seem, it has continued to grow until today it has about 90,000 miles of line, mainly between the Rocky mountains and the Atlantic ocean, does an unbelievably large and slippery business, operates almost automatically and continuously and yet so quietly that relatively few persons know much about it.

Curiously enough, the petroleum pipe-line system of America, like a railroad, has its main and branch lines, terminals, storage yards, stations, dispatchers, telephone and telegraph systems. Generally speaking, its transporting pipes vary in size from four to twelve inches and mainly are laid underground at varying depths or on river beds. Sometimes they follow their own routes. Their capacity varies according to working conditions. Ordinarily a four-inch line can be counted on to handle about 3,800 and an eight-inch line about 21,000 barrels per day.

Pumping stations, two to ninety miles apart, depending upon local conditions, but generally about forty miles apart, to keep the oil on the move from well to tank, to storage yard, to refinery, to market, as needed. Day and night, week days and Sundays, this gooey fluid that lubricates the nation's machinery moves, incessantly yet silently, on its way. Gauges keep the operating officials advised when leaks or stoppages occur and communicating systems bring the repair gangs who see to it that the service is quickly re-established.

In addition to being a greasy business, pipe-line traffic is chiefly a one-way business—east. Very little of it moves in the reverse direction.

* * *

Spanning the St. Lawrence

TIME was when the wonders of the world numbered seven, but that time has gone forever. Today, wonders are numerous. One of them is the giant boulevard of steel which engineers have flung across and high above the waters of the majestic St. Lawrence river and is known to the world as the Quebec bridge.

This structure is peculiar in design in that the central span, 640 feet long and weighing 5,000 tons, hangs suspended between the two end spans at a height of 172 feet above the water, instead of resting upon piers. This middle span was built ashore, floated to mid stream on scows and then lifted bodily into place and securely fastened. This job went down in history as one of the greatest engineering feats of all time.

Without a sight of the bridge or a photograph of it, it is well nigh impossible for one to form an adequate conception of its tremendous size. One of its caissons goes down more than 100 feet below high water; one pier rises 160 feet above its foundation; the center to center width of the main trusses is 88 feet; the center to center distance between the two main piers is 1,800 feet, and the total length of the steel work 3,239 feet.

Its construction set the owner—the Canadian National railways—back to the tune of about $15,000,000, but it shortened the haul between Halifax and Winnipeg by about 200 miles, and that was far more important.

* * *

Mint Farming

ACCORDING to one of Uncle Sam's publications some 17,500 acres of peppermint, including about 2,000 acres of spearmint, are farmed in the United States. Two-thirds of this acreage is in northern Indiana, about one-fourth in southern Michigan—the combined area comprising the largest known peppermint-producing section in the world, the remainder in Washington, Oregon and New York.

Certain muck and peat soils seem best adapted to this culture. Planted in rows, harrowed when young and later weeded by hand, it is harvested with mowing machines. Harvest time ranges from late July to early September, according to weather and crop conditions. Two to three tons of herb per acre is an average yield. The hay is distilled in vats—about 325 pounds of hay producing a pound of oil. One traveling through a mint-farming section during harvesting time will note that the country round about it is permeated by a noticeably sweetish odor.

The oil brings the money. It is sold by the pound. The yield may range from next to nothing to 100 pounds per acre—the average being from 25 to 75 pounds. The price may fluctuate from $1 per pound in over-supply seasons to $25 per pound in short-crop seasons—the general average being about $2.50 per pound.

Formerly, certain quantities of juicy mint leaves were used in making a very celebrated concoction rather widely and fondly known as mint julep. Today, the oil is chiefly used in flavoring extracts, medicines and cosmetics. Such of the crop as is exported normally goes to England, Germany and France.

NEWS REVIEW OF CURRENT EVENTS

Politics Grows Hot as the Presidential Campaign Draws to a Close.

By EDWARD W. PICKARD

WITH the end of the campaign in sight, politics was sizzling and all other news was subordinated to that relating to the race for the Presidency. Candidate Hoover invaded Candidate Smith's territory in a speech in New York city and sharply denounced the Smith policies; and he was ably seconded by Charles Evans Hughes in speeches in St. Joseph, Mo., and Chicago. Candidate Smith came right back at them with a lively address before a wildly enthusiastic audience in Boston. The Democratic cause was bolstered by the action of Senator George W. Norris of Nebraska, who announced that he was supporting Smith and began a series of speeches in his behalf.

Unprejudiced observers were intensely interested in the nonpartisan post-card poll conducted by the Literary Digest. Almost complete returns announced by that publication showed Hoover holding a strong lead over Smith "with impressive indications that the Republicans may capture several states in the 'Solid South' that have been Democratic for more than fifty years." Of a grand total of over 2,700,000 votes tabulated Hoover had 1,717,041 and Smith polled 971,356, a ratio of approximately 63 to 36.

These returns showed Hoover ahead in every state except Georgia, Louisiana, Mississippi and South Carolina, which Smith was carrying with ample reserves. The Republican plurality shown in Alabama and Arkansas was so slight that the Literary Digest classed the outcome in both states as doubtful. In Wisconsin, Minnesota, North and South Dakota, called doubtful by many political authorities, this poll showed Hoover leading by odds as high as 2½ to 1.

In a separate section of the poll in which the entire electorate of several large cities was polled Smith had a decided advantage in New York city with 139,020 votes to Hoover's 103,847, while Hoover led in Chicago by 98,863 to 70,769, and in Philadelphia by 69,494 to 48,172.

IN HIS new York speech Hoover devoted much attention to Smith's proposals concerning liquor traffic, agricultural relief and hydro-electric power, asserting that, if adopted, they would be "a long step toward the abandonment of our American system and a surrender to the destructive operation of governmental conduct of commercial business." He said the "bureaucratizing of the business of our country" is a false liberalism, and the Democratic proposals he denounced as only a step toward state socialism.

Al Smith's retort to this was most vigorous and highly pleased the delirious 14,000 who heard him in Boston and cheered as he denounced the Republicans as reactionaries. "The cry of socialism," he said, "has been patented by the powerful interests that desire to put a damper on progressive legislation. Failing to meet the arguments fairly and squarely, special interest falls back on the old stock phrase of 'socialism.' The people of New York state are tired of the stock argument, have discovered that it means nothing, that it is simply subterfuge and camouflage, and I am satisfied that the people of the nation in their wisdom will so appraise it.

"As far as all these problems are concerned, I have certainly used words to convey my meaning, and I have not attempted to conceal it, and it made no difference in what part of the country I was talking.

"To refer to the remedies for all these evils as state socialism is not constructive statesmanship, it is not leadership, and leadership is what this country is hungry for today. It has not had it in the last eight years, and it has little prospect of it in the four to come in the event of Republican success."

MANY political wiseacres figured that Hoover lost votes in Wisconsin and perhaps in Minnesota and the Dakotas by his attack on Smith's proposals as state socialism, for those propositions are practically identical with the ideas of the late Senator LaFollette and his son, the present senator. The LaFollette vote, it was asserted, was now almost consolidated against Hoover. Californians, too, objected to the Republican candidate's reiterated views on water power as they applied to the Boulder dam project. The effect of Senator Norris' coming out for Smith was uncertain, though he has a large personal following. Though Charles Evans Hughes in his addresses scored what he called Smith's "claptrap," he conceded to Al most of the good qualities and achievements claimed for him by the Democrats, but he then set forth at length the reasons why he preferred Hoover as President. He denounced religious intolerance, and asserted that the prohibition question offered only a sham battle.

ACCORDING to an announcement by Secretary of War Davis, operations on the government project for controlling the flood waters of the Mississippi river are proceeding so rapidly that it is now almost certain the entire appropriation of $24,000,000 for work this year will be expended or obligated before June 30, 1929.

"To date," Mr. Davis said, "sixty-five contracts have been let for levee work involving the movement of 15,194,500 cubic yards of material. In addition, work involving placement of 6,769,000 cubic yards is being done. It is proposed to undertake still more levee work this year which will bring the total expenditures for this class of work from the current appropriation up to about $10,000,000."

HAVING completed its inquiry into the publicity phases of the propaganda methods of public utility companies, the federal trade commission ran up against a snag and its investigation was halted. It proposed to scrutinize the books of the concerns, but the officials of the Electric Bond and Share company of New York refused to testify as witnesses. It was then up to the commission to seek aid in the federal courts, with the prospect of many months of litigation.

The right of the commission to compel industries to open their books has been challenged several times in recent years, and the probability that just such a controversy as that precipitated by the Electric Bond and Share company would develop to block the inquiry led Senator Walsh to urge that a special senate committee be created to conduct the power probe.

OSCAR F. GRAB, founder of the women's wear firm of O. F. Grab & Co., of New York, will become vice president of a new bank at the end of the year and announced that at that time he will transfer the entire business of the company, amounting to $1,000,000, as a gift to 14 persons who have been in his employ for from five to eighteen years. Mr. Grab came from Vienna to the United States and began work at $3 a week.

AS THE climax of a conference on major industries at Columbia university, New York, some two thousand persons gathered at a banquet in the Hotel Astor paid tribute to seven pioneers of American industry. The honored guests were Henry Ford, representing the automobile industry; Orville Wright, aviation; Thomas A. Edison, invention; Charles M. Schwab, iron and steel; Julius Rosenwald, merchandishing; George Eastman, photography, and Harvey S. Firestone, rubber. Cyrus H. K. Curtis, publisher, and Gleen H. Curtiss, airplane manufacturer, were kept away by illness. Dr. Nicholas Murray Butler presided and introduced the guests, and the principal speaker was Lord Melchett of England, chairman of Imperial Chemical Industries, Ltd.

Charles E. Mitchell, president of the National City bank, told the audience that danger in the current financial situation seemed to be "largely psychological." "I do not think we have need at the moment to be fearful," said Mr. Mitchell. "I cannot see what is going to disturb the situation. I believe that we are more likely to move out of the troublesome times that are seen by many at the moment into comparatively clear waters, because this country, in its present state of prosperity, is piling up savings so fast and those savings are flowing so rapidly into the security account that the loan account should come down even if the price level advance to some extent."

PUBLICATION by the British foreign office of the text of the Anglo-French naval limitation agreement that caused so much unfavorable comment revealed little new, but aroused the London newspapers to fresh denunciations of the stupidity of those who negotiated the deal which was killed by the opposition of the United States and Italy. The published correspondence shows that, as was supposed, England sold its opposition to France's trained military reserves on the army problem, despite almost solid opposition from the rest of the continental powers, and France in exchange threw overboard its demand for global tonnage limitation for navies, and slid over to the support of the London admiralty's demand for restriction by categories.

FRENCH MINISTER OF JUSTICE Barthou is putting the brakes on the American divorce industry in France. At the opening of the courts where Americans present their pleas for divorce he warned the judges and lawyers to give the strictest surveillance to all petitions filed by foreigners. Regulations have been so tightened that there is talk of transferring the base of American divorce operations to another country where the requirements are not so severe. Switzerland may be selected.

RESUMPTION of anti-Semitic riots in Budapest last week were so serious that the authorities closed four universities. Students and workmen fought fierce street battles, and there was a hot debate in parliament that ended in a challenge to a duel. The outbreaks among the students started several weeks ago, when they alleged that the government was foisting upon the institutions a greater proportion of Jewish students than was allowed by law.

GEORGE BARR McCUTCHEON, one of the most popular and successful of American novelists of the day, died suddenly in New York while a guest at a luncheon. He had been under treatment for heart disease for 18 months. Mr. McCutcheon, who was born in Indiana 02 years ago, made his first big hit with the romance "Graustark" in 1901. This was followed by many other stories which won him fame and a large fortune.

Another notable who passed away last week was Adolf Kraus of Chicago, who for 30 years was a leader of the Jewish race in this country. He was also well known as a lawyer and a public official.

Gaetano, Cardinal de Lai, died in Rome after a long illness. With his demise, for the first time in the annals of the Catholic church the foreign cardinals outnumber the Italians in the sacred organization. This preponderance of foreigners may be prolonged by the new appointments and might conceivably result in the election of a non-Italian pope on the death of Pius XI.

Charles A. Towne, former United States senator from Minnesota, died in Tucson, Ariz., while on a speaking tour for Smith and Robinson.

IN THE house of bishops at the general convention of Episcopalians in Washington the following resolution, introduced by the bishop of Erie, was adopted:

"Resolved, That, facing the danger of the spirit of lawlessness in American life, we welcome the renewed efforts of the government of the United States to enforce strictly and impartially the prohibition laws and the antinarcotic laws, which are so widely and cynically disregarded. And we call upon the people of our church to set a good example of that obedience to law without which no democracy can endure."

TREE ON WHICH MEN DIED NOW WITHERED

Ghost City of West Has Story of Three Hangings.

Denver, Colo.—Five miles from Webster, Colo., where a state highway and the Platte river part, there is a little clearing in a grove of quaking aspen. Old-timers say the spot is mysteriously barren; no vegetation has thrived there since more than half a century ago. And the unproductive area is spreading.

This little wasteland surrounded by greenery encircles a grave. Three bodies were dumped unceremoniously there. They were covered with dirt. No marker was placed. Is there a connection between the grave and the barrenness? Old-timers cannot explain why, but they nod their heads. They know that elsewhere the trees and shrubs and flowers bloom.

The three men who are buried there appeared in the boom town of Hall Valley when Colorado pioneers believed that it would become the metropolis of Colorado. It slipped, however, into the limbo of other ghost cities of the West. Today the motorist might easily pass it by. Only the ruins of a million dollar smelter attest to the one-time industry. Many specimens of ore, heavily laden with silver and lead, may be picked up on the site.

Once Well Known.

Yet in 1849 Hall Valley was as well known as Denver is today. There in that raw, mountainous country, where a precarious highway is sparsely dotted with tumbling pine slab cabins, an Englishman succeeded for a while in developing a gathering place for miners from the hills and a center of lumbering. In the beginning Hall Valley bore a different name. There is none living, however, who knows what it was.

William Hall, the Englishman, gave the settlement its great impetus. Fresh from London in 1860, he was lured by tales of gold in the Rockies. He dreamed of a golden city in a land of treasure. He visited the site. His hopes heightened when he saw ore being taken out of granite ribbed sides of Whale park.

Hall had money, but not enough. He promoted a syndicate of fellow countrymen and acquired control of the settlement to which he gave his name—Hall Valley. He was ready to spend a million in launching the city.

The government recognized the settlement by establishing a post office there. But soon after its auspicious beginning Hall Valley began to show signs of backsliding. First the smelter had been constructed faultily. The various processes would not extract a maximum amount of silver and lead from the ore. Hall hurried to England for funds to improve the smelter and develop the town. But he was refused. He never returned.

Town Declines Rapidly.

Mines closed. Other smelters were constructed at more strategic points and took business away from the Hall smelter. The town declined seriously. The smelter decayed. Where Hall's fine home once stood there is only a clearing in a grove of trees—and an unmarked grave. No one knows about the grave.

From the roadside one cannot see the ruins of the former three-deck smelter. But, by following directions, one can find a mile beyond Handcart creek a twisted mass of steel and wood which once was Hall's million-dollar ore reduction plant. And, not far away, in the shadow of Bullion mountain, is the town's "hanging" tree.

Here transgressors of the code of the West paid for their crimes. Here three men were hanged without justification, according to the story. And the tree revolted, withered, and died. Its dry remains can be seen.

These men visited Hall Valley in its palmy days, strangers. Some one in authority accused them of jumping claims on Bullion mountain. That night there was a trial. The defense was allowed no witnesses. The three men were found guilty, escorted to the towering pine tree, and hanged.

Soon afterward it was whispered that justice had miscarried. Then (the story continues) the topmost branches of the tree blanched and rotted. The blight spread until, only a year or two ago, the enfeebled roots gave way and the tree fell.

After the men had been hanged their bodies were removed to a lonely burial ground and thrown in a common, crude grave. That grave now is the center of a clearing where no trees will grow.

Identification Cards for Nebraska Students

Lincoln, Neb.—New students at the University of Nebraska carry identification cards bearing their signatures and pictures as well as descriptions. Other students carry similar cards minus the photographs.

Credit difficulties in Lincoln caused by persons falsely representing themselves as students, loss of library books, purchasing of football tickets by nonstudents, difficulties in cashing checks and troubles in student elections were reasons for initation of the identification system.

Beggars Form Trust

Moscow.—The city's best beggars have organized a trust. It has 150 members whose monthly income varies from $15 to $250 each. The president of the trust gets a rakeoff. There are 7,500 beggars in the city not affiliated with the trust.

Makes Life Sweeter

Too much to eat—too rich a di or too much smoking. Lots of th cause sour stomach, but one thing correct it quickly. Phillips Mil Magnesia will alkalinize the Take a spoonful of this plea preparation, and the system is sweetened.

CARTER'S LITTLE PIL

FARM POULTRY

CHICKEN THIEVES ARE REAL PIKERS

Chicken thieves, which long have been the target for rather drastic action in Illinois, have been shown up as pikers by disease, a henhouse "bandit" that too often plunders without even being noticed, much less caught, says H. H. Alp, poultry extension specialist of the college of agriculture, University of Illinois. Farmers in this state last year lost $5,000 chickens from disease for every $1 that they lost by chicken thieves," he said.

"The lesson in this for the farm flock owner is to see that the colony or brooder house and the young chickens are on clean ground that is kept clean," Alp says. "Last year a number of poultry men lost chickens from disease and parasites even after moving the house and chicks to clean ground. In most cases these losses were due to the ground within a radius of 10 to 15 feet of the house getting badly contaminated with droppings and filth. Good clean range will be of little value in preventing disease trouble as long as the ground adjoining the house is dirty.

"To prevent this, move the house a few feet every month, plow or spade the ground around the house, or what may be the simplest and best way, sweep the ground weekly with a good stiff broom and do away with the sweepings. Such a cleaning will help prevent both round worm and coccidiosis organisms from completing their life cycles.

"Like that around the colony house, the ground around the mash hopper and the drinking dish soon become contaminated with droppings. To overcome this, hoppers and drinking dishes may be placed on platforms with a one-quarter or one-half inch mesh wire top.

"House flies should be guarded against for they are an intermediate host for tapeworms. All filth and rubbish which breeds flies should be destroyed. Using rock phosphate and gypsum on chicken manure will check fly breeding."

Proper Feed for Flock During Winter Season

On the feeding of the flock depends to a large extent not only the general health of the birds, but also the economy which promotes success. It is a subject, however, which should be studied with a large amount of common sense, for there are no hard and fast rules which can be laid down as applying to every case. The price of feeds and the general environment should be considered in determining the right rations.

For the largest profit a good proportion of the eggs should be secured during the winter. If two extra eggs a week can be obtained from each hen a good profit will be made, while if the product is increased by only one egg a week in winter, this one egg will pay for all the feed the hen eats. To obtain this greater production not only should the fowls be young and of a good laying breed, but the feeder should have full knowledge of the proper feed and its preparation.

The nutriment in the feed of laying hens serves a two-fold purpose—to repair waste and furnish heat to the fowl.

Geese Thrive Best if They Are Given Range

Unlike other fowls, geese are by nature more like sheep or cattle, as they are grazing fowls and should have access to good pasture, and will thrive best on free range which they should have both winter and summer. Even when the ground is covered with snow, geese will find plenty of grass along a stream of water. Clover hay and corn stover are fine for them to pick at during the winter months, and if they have a good supply they will need but a very small amount of grain. In the summer, when they can get plenty of grass, they do not need a single kernel of grain and will thrive and keep in fine condition without it.

Poultry Business

Poultry is now the sixth agricultural commodity in value in the United States, amounting to $1,181,000,000 for poultry and eggs during the past year. Harry R. Lewis, of Rhode Island, president of the National Poultry council, called on General Lord, director of the budget bureau recently, in company with several members of the organization to ask for larger appropriations for the fiscal year 1930, to solve new problems arising in the poultry industry.

Storing Poultry

During some periods of the year large quantities of dressed birds of different kinds are put into storage the heavy packing season is during the fall and winter months. The broiler season comes on during the late spring and summer months. The rapid changes which are taking place in the production of poultry makes the marketing more of a year-round business than was the case five or ten years ago. This reduces the number put into storage.

Keeping Scales Clean, Essential

Slight Displacement of Poise May Result in Error in Weight.

(Prepared by the United States Department of Agriculture.)

A suggestion to weighmasters at public stock yards issued recently by the packers and stock yards division may also serve as a caution to farmers and live stock producers who maintain scales on their farms, the United States Department of Agriculture believes.

Attention to Details.

"It is essential," said the statement authorized by Dr. John R. Mohler, chief of the bureau of animal industry, "that weighmasters give careful attention to the smallest details. Alertness on their part may enable them to recognize and prevent the development of conditions, apparently trifling, which, however, may affect the weights obtained over the scales. For instance, it is important that the weighmaster keep the notches of the beam clean. A little dirt, causing a slight displacement of the poise, may result in an appreciable error in the weight. In a recent test it was found that, owing to an accumulation of dust in the notches, one of them was 12 pounds slow. This meant a loss to the seller of 12 pounds for every draft weighed over the scale in which this notch was used.

Using Compressed Air.

"It may be of interest to know that compressed air is now being used to clean the working parts of scales at one of the markets. An air compressor operated by a small gasoline engine and mounted on a yard wagon is pulled up to the scales and used for blowing out dust, dirt, and rust from round the pivots and bearings of the scale."

Alfalfa Thrives Best in Well-Prepared Bed

Alfalfa does best sowed in a seedbed that is firm below the surface but has the surface in good tilth and free from weeds, says John H. Barron of the New York State College of Agriculture at Ithaca, N. Y.

If alfalfa is seeded with spring grain, fall-plowed land gives best results. But if the land was not plowed last fall, it should be plowed early in the spring and seeding should be delayed as long as possible. "Alfalfa cannot do well if the land is plowed today and the seed is sowed tomorrow!" he says.

On land that is plowed this spring, the best practice is to plow early and then wait until June 15 or July 1 to sow the seed. At this time, of course, alfalfa would be sowed alone.

Alfalfa usually does not do well when it is sowed in either fall-sowed or spring-sowed grain, for even though the seed bed is firm, the surface is not in good tilth. Then, too, the grain overshadows the alfalfa and tends to choke it out.

Green Manure Crops Are Becoming of Importance

Green manure crops are becoming of greater importance each year on American farms for the reason that the new land is gone and the old must be maintained in fertility. There is, however, no cash value to a green manure crop and the tendency is to avoid planting one if it is not absolutely necessary. White sweet clover has been pastured successfully with no apparent loss in the improvement value of the crop when plowed under. It does not make as good hay as alfalfa, yet it is tolerable if handled properly. Best of all the seed is not expensive. At 15 to 20 pounds per acre the cost is somewhere around $2 an acre. Compared with two or three times that cost for other legumes the difference is striking. Even the much talked of soy beans will cost $4 an acre to seed. All of these factors make white sweet clover stand out as a crop worth becoming acquainted with and worth learning how to handle.

Agricultural Hints

Trees make about 67 per cent of their growth at night, and the rest in daylight.

* * *

Usually brood sows which have had rye pasture during the winter will farrow stronger and more thrifty pigs.

* * *

The size of the manure pit will depend upon the size of the herd, the method of handling the litter, and how often the pit can be emptied.

* * *

Farm machinery will help a lot in this farm relief idea—and you don't have to wait for congress to act, either.

* * *

What we need is for these one-horse farmers to find out that they can drive two, three and four horses at one time.

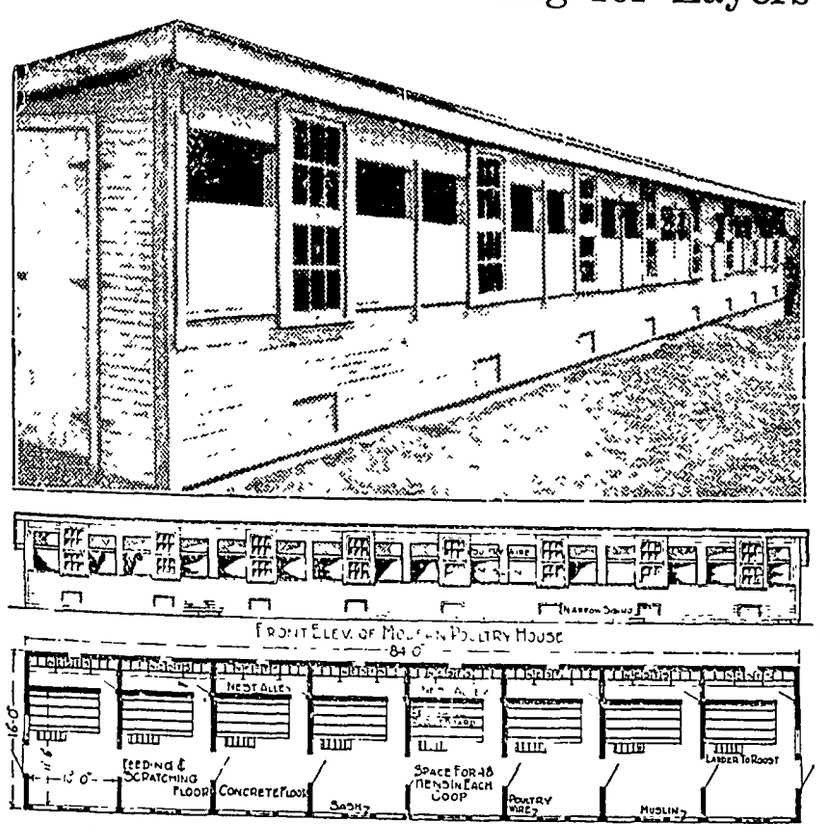
* * *

Have you tried working more than two horses to a machine? It pays to have plenty of power and one man direct the work.

* * *

One of the best ways to save hard-earned money on the farm is by protecting machinery from rust and ruin. Proper housing as soon as work permits will add years to the life of the machinery.

Shed Roof Type of Poultry House Affords Good Housing for Layers



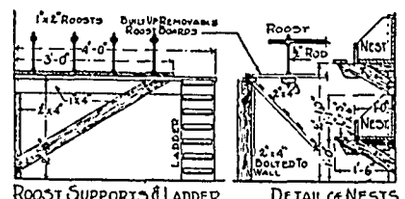
By W. A. RADFORD

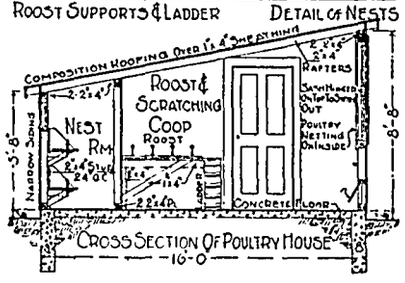
Mr William A Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Successful poultry raisers have learned that too much attention can not be paid to the housing of a laying flock in the winter time to earn the greatest profit. Hens lay as well in the early part of winter as they do in summer, providing they are given as near summer weather conditions and the feed that is available in summer. Shown in the illustration is a shed-roof type poultry house that has come into general use.

It will be noted by the floor plan shown in the illustration herewith that this house is 16 feet wide and is divided into 10-foot sections, there being eight of them in the house shown. This permits groups of 40 or 50 hens being kept separate. This may be desirable for a number of reasons, especially when eggs are produced for hatching or the eggs are trapnested.

The cross section of the poultry house gives some of the details of construction and the arrangement of the equipment. It will be noted that this arrangement is rather unusual in that the roosting and scratching sections of the house are separated from the nestroom. Details of the roost supports and ladder and of the nests are also shown.





The house illustrated was equipped with electric lights so that during the short days of the winter the working time of the hens can be prolonged by turning on the lights in the morning and keeping them on after dusk in the evening. Ventilation of the house is secured through the arrangement of the windows, they being hinged at the top.

Plaster of Paris Used to Patch Cracks in Wall

Patching the walls is essential to the housewife's own satisfaction, but more so if there is any thought of selling the house.

For few things can spoil the appearance of a room so completely as yawning cracks in the plaster. Moreover, they are insanitary because they harbor dirt and vermin.

Plaster of paris is often tried as a patching material. But it never gives permanent satisfaction. A little lesson in physics will show why.

Both plaster of paris and ordinary wall plaster are gypsum. But each is made according to a special process so that plaster of paris is chemically denser than common plaster.

Now, when changes in temperature affect the wall the ordinary plaster contracts and expands more freely than the denser plaster of paris does. So the two materials pull apart and the original crack or other blemish reappears.

This is true also of cements and fillers which sometimes are tried for patching.

Yet the housewife or her husband cannot be expected to buy a bag of wall plaster and a quantity of graded sand and to mix them in right proportions and then apply them. In the first place, only a little plaster is needed for the ordinary repair job and a building supply dealer would not care to break a bag to sell so small a quantity.

To meet this situation which thousands of home owners face annually, numerous manufacturers have put on the market in recent years, special patching packages. They are ready mixed, so that all that is needed is to stir in water, mix to the proper consistency and apply.

If there are large broken spaces in the wall a trowel ought to be used. If there are only fine cracks a putty knife or some smooth edged kitchen utensil will serve. The patching plaster should be worked into the cracks until it reaches the lath.

Consider Type of People in New Neighborhood

While a family may think that it would like to live close to relatives and friends, this factor should not be given too much weight. Nevertheless, the general type of people living in the neighborhood is important, especially if there are children in the family, who should be brought up in the right kind of surroundings.

Glazing Compound

For bedding and glazing skylights, conservatories and glass construction generally, setting tiles in floors and walls and similar work, an elastic glazing composition is said to offer a convenient and durable setting material. It may also be used to caulk window frames and to point up masonry and flashings

Here Are Rules for Treatment of Floor

Floors should be as mellow and inconspicuous in color as possible, but always in a color that harmonizes with the general finish of the room.

The finish of permanent flooring is highly important to the general appearance of the room, and the possible combinations of soft and hard woods, linoleum and composition floorings are of interest to anyone who is planning a home.

In general, hardwood floors are better and more durable, particularly if the floor is not to be entirely covered. If the floor is to be covered with carpet, soft wood is desirable; it is also used in country houses and successfully finished with paint or stain. The hardwoods include oak, maple, birch and beech. White pine, fir and red spruce come under the head of soft woods.

If a linoleum floor covering is desired, it should be laid at the time the house is built. Many housekeepers prefer tile and composition floors for the bathroom, kitchen and service quarters, as they are waterproof and can be cleaned with soap and water as often as necessary.

If hardwood floors are used, they can be finished with wax, or varnished and then waxed, and polished at regular intervals with a dry mop. Floors of soft woods should be oiled at intervals. Linoleum floors should be waxed.

Garage Door Hardware Facilitates Car Use

Quick and easy to open and close, a new line of locks, bolts and latches for garage doors will considerably add to the convenience of this increasingly important part of the home and facilitate use of the car. The new lock, the most complete unit of the line, combines in one installation the functions of a keyed lock, door pull, foot bolt and chain bolt. The operation of the whole thing is by the simple turn of a key.

The latch is primarily intended for the control of doors operating inwardly, such as the service door on sliding, folding and sliding-around-corner garage sets. Its outstanding advantage is that it combines the convenience of a key operated cylinder lock with the security and flexibility of a large latch bar. Even though the door warp or sag, the bar will still engage the strike. An additional feature is a sturdy door pull which makes other outside hardware unnecessary.

Combination Door Locks

The vexation and irritation of mislaid keys are eliminated with a new door lock operating on the combination principle for many years used in safes and vaults. Individual combination may be used or one combination used for front and rear and other doors.

FARM STOCK

INSURE SPRING CROP OF LAMBS

A geat deal of the success with the lambs in the spring depends on the feed and care given the ewes during the winter.

If ewes are to develop good lambs they must have good feed and plenty of exercise. This does not mean that they should be fat. The aim should be to keep them in good thrifty condition. If plenty of roughage is available the ewes, as a rule, will not need grain feed until about six weeks before lambing. Alfalfa hay is one of the best feeds for breeding ewes, writes Turner Wright in the Iowa Homestead. The clover hays are also good and should be used when alfalfa is not available, or they can be mixed with the alfalfa to very good advantage. The use of corn stover or sorghum and similar fodders will help to lower the cost of the winter keep, but as these feeds supply only a small amount of growth materials, the ewes should not be forced to subsist on them alone as weak lambs will likely be the result. Used in connection with alfalfa or one of the clover hays, however, they make a very good winter ration.

Watch the flock closely, and if any of the ewes begin to get thin in flesh, start feeding those ewes a small amount of grain each day. All the ewes in the flock ought to be put on a light grain feed about six weeks before lambing. About a half pound a day of a mixture of about two-thirds oats and one-third corn or barley for each ewe is very good for the grain ration. If one is fortunate enough to have a good wheat or rye pasture available, the ewes should have access to it at all times when weather conditions will permit. No other winter feed gives quite such good results.

A supply of good water at all times is an important consideration. If the water can be heated in very cold weather just enough to remove the chill, it will be better for the ewes. Many sheepmen make the mistake of housing their flock too closely in tight barns during the winter. A good dry place is all that is needed. It is very important to keep sheep from getting wet in the winter. A mature sheep does not need much protection from the cold as its fleece will keep it warm enough. A good shed, open to the south, will serve the purpose of winter shelter very well.

Distemper Is Disease Common Among Horses

Distemper is a disease common in colts and young horses. It is caused by pus-producing germs which usually gain entrance into the upper air passages and cause inflammation and discharge. From the upper air passages they are transferred to the kernels under the jaw and these kernels become the seat of an abscess. The germs, however, may enter through wounds or even through the walls of the intestines or other mucous membranes. For this reason colts never should be castrated when they are exposed distemper infection.

Distemper usually is confined to mucous membranes of the nose and throat and the other lymph nodes belonging to these parts. The disease usually runs its course in two or three weeks. In some cases, however, infection becomes localized in other parts of the body and may cause abscesses on the belly or the chest. Tendon sheaths or joints also may become infected and skin eruptions may even make an appearance. Cases in which there are abscesses in inaccessible places are practically hopeless. Animals which recover seldom regain their full measure of health.

Polluted Water Will Disseminate Germs

Polluted drinking water is one of the surest means of disseminating disease germs and internal parasites in live stock. Surface water contaminated with body waste of animals is one of the great sources of disease.

A good supply of pure water should be provided. However, this is only a half step in the right direction. Before this safe water supply can be effective it is necessary to remove all opportunity for animals to drink from polluted water such as may be found in wagon ruts, tracks and other depressions. Yards should be adequately drained and holes or bogs should be fenced off to keep stock from drinking from them.

A water supply never is better than the worst which the animals have access to. Only when it is impossible for animals to get contaminated water can the stockman reap the benefit of a safe water supply.

Strong Young Boar

The young boar should show masculinity. He should have a strong, well arched back, well-sprung ribs, and a good covering of flesh. The skin should be free from wrinkles. Of particular importance is the quality of bone and the conformation of the feet and legs. The legs should be well set on short, straight, strong pasterns.

The boar is half the herd with respect to transmission of heritable characters from the parents to offspring.

Fought Fire With Milk

Spontaneous combustion of new hay caused a fire which destroyed a large barn near Tulare, Calif. Power connections being burned out, a bucket brigade was formed by neighbors, and this prompt action resulted in the saving of a horse barn nearby. Skimmed milk and whey were used in place of water, unavailable with the power supply cut off.

No Foreigners Employed

All employees of the United States postal service must be American citizens.

When You Catch Cold Rub On Musterole

Musterole is easy to apply and works right away. It may prevent a cold from turning into "flu" or pneumonia. It does all the good work of grandmother's mustard plaster.

Musterole is recommended by many doctors and nurses. Try Musterole for sore throat, cold on the chest, rheumatism, lumbago, pleurisy, stiff neck, bronchitis, asthma, neuralgia, congestion, pains and aches of the back and joints, sprains, sore muscles, bruises, chilblains, frosted feet—colds of all sorts.

To Mothers: **Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.**

PUBLIC MEASURE

IOWA ROAD BOND BILL

"Shall the following Public Measure, being an act of the extra session of the 42nd general assembly, be adopted and approved?"

YES ☐
NO ☐

IOWA ROAD BOND BILL ENACTED AT THE EXTRA SESSION OF THE 42D G A., FOR SUBMISSION TO VOTE OF THE PEOPLE ON NOVEMBER 6, 1928.

(S. F 1, Chapter 2 Acts of the Extra Session of the 42d G A.)

An Act to provide a comprehensive program for improvement of the primary road system of the State of Iowa, to authorize the State of Iowa to become indebted in the amount of $100,000 000 in connection therewith, to provide for the issuance and sale of bonds of said state in evidence of said indebtedness, to budget the primary road fund so as to maintain the primary roads and aid in the payment of the cost of said primary road improvements and to permit the payment therefrom of principal and interest of said bonds and bonds issued by any county in said state payable from said fund, to appropriate primary road funds for the payment of the principal and interest of said state road bonds; to provide for the imposition, levy and collection of a direct annual tax sufficient to pay the principal and interest of said state road bonds, and to provide for the submission of this Act to the people to be voted upon at the general election to be held in the year nineteen hundred twenty- eight.

Be it enacted by the General Assembly of the State of Iowa:

Section 1 The following portions of the primary road system (except such parts thereof as may heretofore have been paved) shall be surfaced with pavement

Primary road number 1, from a point nine miles north of Fairfield by way of Birmingham and Keosauqua to a point on primary road number 3 south of Keosauqua

Primary road number 2 from a point on primary road No. 61 west of Grandview by way of Columbus Junction, Washington, Sigourney, Oskaloosa, Knoxville, Indianola, Winterset, and Greenfield, to a point on primary road number 71 south of Atlantic, and from a point on primary road number 71 westerly to a point on primary road number 32 at Lewis.

Primary road number 3 from a point on primary road number 61 west of Ft Madison, by way of Farmington, Bloomfield, Centerville, Corydon, Leon, Mt Ayr, Bedford, Clarinda, Shenandoah, and Sidney to Nebraska City.

Primary road number 4 from a point on the Missouri line southeast of Hamburg, by way of Hamburg and Sidney, to a point on primary road number 34 north of Hillsdale. Also from Avoca by way of Harlan, Denison and Odebolt to a point on primary road number 20 west of Early

Primary road number 5, from Ft Dodge, by way of Manson, Storm Lake, and Cherokee to Le Mars.

Primary road number 6 from Centerville by way of Albia, Knoxville, and Carlisle to Des Moines.

Primary road number 7 from Des Moines by way of Dallas Center, Guthrie Center Hamlin, Harlan and Avoca to Council Bluffs

Primary road number 9 from Lansing by way of Waukon, Decorah, Cresco, Osage Manly, Forest City, Swea City, Fairmont Spirit Lake, Sibley, and Rock Rapids to a point on the South Dakota line north of Larchwood

Primary road number 10, from Strawberry Point by way of Oelwein, Waverly, Aurora Hampton, Clarion, Humboldt, Pocahontas Linn Grove, Paullina, and Orange City to a point on primary road number 10 west of Orange City

Primary road number 11, from Cedar Rapids by way of Independence and Oelwein, to West Union

Primary road number 13, from Marion by way of Central City to Manchester. Also from Strawberry Point by way of Elkader to a point on primary road number 18 west of McGregor.

Primary road number 14 between Corydon and Chariton Also from its intersection with primary road number 58 through Grundy Center to its intersection with primary road number 57

Primary road number 15, from Ames by way of Blairsburg, Belmond, and Garner to Forest City.

Primary road number 16, from Mt. Ayr to Winterset. Also from Adel by way of Ogden Ft. Dodge, Humboldt and Algona to its intersection with primary road number 9

Primary road number 17, from Estherville by way of Emmetsburg, Pocahontas, to Rockwell City. Also from Perry to junction with primary road number 16

Primary road number 18, from McGregor by way of Postville, West Union, New Hampton, Charles City, Mason City, Garner, Algona, Emmetsburg, Spencer, and Sheldon to a point on primary road number 75 near Perkins.

Primary road number 20, from Dubuque by way of Manchester, Independence, Waterloo, Iowa Falls, Webster City, Ft Dodge, Rockwell City, Sac City, and Correctionville to Sioux City

Primary road number 21 from Primghar to a point on primary road number 18 east of Sanborn Also, from Ida Grove to a point on primary road number 20 east of Holstein.

Primary road number 28 from Martensdale by way of Ft. Des Moines to Des Moines.

Primary road number 30 from Clinton by way of Lowden, Cedar Rapids, Belle Plaine, Tama, Marshalltown, Nevada Boone. Jefferson, Carroll, Denison, and Missouri Valley to Council Bluffs.

Primary road number 32 from Davenport by way of Iowa City, Marengo Grinnell, Newton, Des Moines, Adel Redfield, Dexter, Adair, Atlantic, and Oakland to Council Bluffs.

Primary road number 34 from Burlington by way of Mt Pleasant, Fairfield, Ottumwa, Albia, Chariton, Osceola Creston, Corning, Red Oak, and Glenwood, to Council Bluffs.

Primary road number 38 from Muscatine to Wilton. Also from Tipton to Stanwood.

Primary road number 48 from Red Oak through Essex to Shenandoah

Primary road number 55 from Dubuque by way of Luxemburg, Guttenberg, Postville, Calmar, and Decorah to a point on the Minnesota line north of Burr Oak.

Primary road number 57 from its intersection on primary road number 14 by way of Dike to Cedar Falls.

Primary road number 58 from Eldora to a point on primary road number 134 west of Eldora. Also east of Eldora to a point on primary road number 14

Primary road number 59 from Oskaloosa by way of Montezuma, Tama, Traer, Hudson, and Waterloo, to a point on primary road number 10 east of Waverly.

Primary road number 60 from a point on primary road number 30 east of Boone by way of Madrid to Des Moines

Primary road number 61 from Keokuk by way of Ft. Madison, Burlington Wapello, Muscatine, Davenport, Dewitt and Maquoketa to Dubuque.

Primary road number 63 from Des Moines by way of Prairie City, Pella Oskaloosa, Ottumwa, and Bloomfield to a point on the Missouri line southwest of Bloomfield.

Primary road number 65 from Leon by way of Osceola. Indianola, Des Moines, Ames, Colo, Iowa Falls, Hampton, Mason City, and Northwood to a point on the Minnesota line north of Northwood.

Primary road number 69 from Leon by way of Lamoni to the Missouri line south of Lamoni.

Primary road number 71 from the Missouri line near Braddyville by way of Clarinda, Villisca, Altantic, Audubon Carroll, Sac City, Storm Lake, Spencer and Spirit Lake to a point on the Minnesota line northeast of Spirit Lake

Primary road number 74 from Tipton by way of New Liberty to Davenport

All other primary roads or portions thereof, contracts for the paving of which have been let by the Highway Commission prior to the taking effect of this act.

All other primary roads (except such portions thereof as may have heretofore been hard surfaced or graveled) shall be surfaced with gravel, sand clay or other type of low cost surfacing Provided, however, that after the completion of 50% of the pavement herein authorized the state highway commission may surface with pavement as current primary road funds are available any road heretofore designated to be graveled but current primary road funds shall not be used for paving roads herein designated for gravel when their use thereof will result in postponing the completion of the paving of roads hereinbefore specified for paving beyond six years after the taking effect of this act.

Sec. 2 Said work of surfacing the primary roads and the grading, drainage, bridging, and incidental work in connection therewith shall, in so far as possible, be completed within six years after the taking effect of this act, provided, however, the program of primary road construction work in any county which has authorized primary road bonds shall not be delayed or retarded by reason of the adoption of this act

Sec. 3. In order to provide funds with which to aid in meeting the cost of improving the primary roads as this act provides, the State of Iowa is hereby authorized to become indebted in the amount of one hundred million dollars ($100,000,000) and in evidence thereof there shall be issued and sold negotiable serial bonds of the state as hereinafter provided. The total amount of bonds issued hereunder shall not exceed one hundred million dollars The total amount of outstanding state bonds issued hereunder plus the total amount of outstanding county primary road bonds plus the total amount of outstanding bonds issued to refund county primary road bonds shall not at any time exceed the sum of one hundred million dollars The proceeds of said bonds shall be paid into the treasury of the state to be expended in the improvement of the primary roads of the state as provided in this act, and for expenses incurred in carying out the provisions of this act

Sec. 4 The bonds herein authorized shall be general obligations of the State of Iowa. They shall be issued in serial form and shall bear interest at the rate of not to exceed four per cent per annum, payable semi annually Each bond shall be due and payable on the date stipulated on the face thereof which date shall be not more than twenty years after the date of issuance, and said bonds shall not be taxed Both principal and interest shall be payable at the office of the treasurer of the State of Iowa, or at any other place designated by the executive council Each bond shall be signed by the governor under the great seal of the State of Iowa, attested by the secretary of state, and countersigned by the auditor of state Interest coupons thereto attached shall bear the lithographed facsimile signature of the auditor of state and the full faith, credit and resources of the State of Iowa are hereby pledged for the payment of said bonds and the interest thereon. Said bonds may be of such form as will permit registration of ownership.

Sec 5 All bonds herein authorized shall be sold by the executive council of the State of Iowa in accordance with the provisions of chapter 63 of the code of 1927. Said advertisement and sale shall take place before the bonds are printed.

It shall be the duty of the secretary of the executive council to cause to be prepared the forms of advertisements, resolutions, agreements, and other necessary forms, for the use of the executive council in the advertisement and sale of bonds as provided in this act, and to prepare and cause to be printed the proper form of bond and to deliver said blank bonds to the proper officials for signature.

Sec. 6. The executive council shall from time to time by resolutions cause to be issued and sold such portions of such bonds as may be necessary to meet the construction costs of the road improvement outlined in this act, and all such resolutions shall be entered at large in the minutes of the council's proceedings. Such resolutions shall clearly specify the amount of bonds authorized, the denomination of each bond, the number or designation of each bond, the rate of interest which each bond shall bear, the date of each bond, the maturity date of each bond, and the authorization of the governor to sign said bonds, under the great seal of the state, the authorization of the secretary of state to attest said bonds, and the authorization of the auditor of state to countersign said bonds. Said bonds shall mature and be payable as follows.

Three million dollars ($3,000,000) in each of the years 1935 to 1937, both inclusive

Four million dollars ($4,000,000) in each of the years 1938 to 1941, both inclusive.

Five million dollars ($5,000,000) in each of the years 1942 to 1946, both inclusive.

Six million dollars ($6,000,000) in each of the years 1947 to 1952, both inclusive;

Seven million dollars ($7,000,000) in each of the years 1953 and 1954.

When signed and attested said bonds shall be delivered to the auditor of state who shall countersign the same charge the treasurer of state with such bonds. and deliver the samo to such latter officer who shall be responsible therefor in his bond The treasurer of state shall dispose of said bonds according to the terms of the sale previously entered into by the executive council, and shall credit the proceeds thereof to the primary road bond fund.

Sec. 7 Said primary road bond funds hereby appropriated for and shall be used in the establishment and construction of the primary road system, including the drainage, grading, surfacing construction of bridges and culverts, the elimination or improvement of railroad crossings, the acquiring of additional right of way, and all other expenses incurred in the construction of said primary road system, as this act provides All of the provisions of the primary road law in so far as the same are applicable shall apply to the work done and the expenditures made under the provisions of this act.

Sec. 8. For the purpose of permitting payment of both principal and interest of the state road bonds issued under the provisions of this act the primary road fund is hereby budgeted in the following manner The state highway commission shall, on or before July first of each year make an estimate of the amount required during the ensuing year to maintain the primary road system and shall transfer said amount so estimated from the primary road furd to the primary road maintenance fund. All moneys remaining in the primary road fund each year, or so much thereof as may be necessary are hereby appropriated and dedicated for the payment, first of the interest and principal of the primary road bonds issued by any county and the interest and principal of bonds issued by any county to refund primary road bonds and second, the payment of the interest and principal of bonds issued by the state under the provisions of this act, maturing in said ensuing year, and the appropriation of said remaining primary road funds for such purpose shall take precedence over any other provisions of the law now in force or hereafter enacted in relation to said fund. Any amount remaining in said primary road fund in any year after setting aside a sufficient amount to maintain the primary roads and to pay the maturing interest and principal of both state and county bonds as above provided shall be used for the purposes enumerated in chapter 241-B1, code, 1927 as amended by acts of the special session of the forty-second general assembly.

The said commission shall thereupon certify to the treasurer of state, (a) the estimated amount of the primary road fund for the ensuing year, (b) the amount set aside for maintaining the primary roads, (c) the amount required for the payment of the maturing interest and principal of primary road bonds issued by any county and the amount required for the payment of the maturing interest and principal of bonds issued by any county to refund primary road bonds, (d) the amount required to retire county primary road bonds subject to call as provided in Sec. 10 hereof, (e) the amount required to pay the maturing interest and principal of primary road bonds issued under this Act, and (f) the estimated amount of the primary road fund for the ensuing yoar available for construction work on the primary roads.

Sec. 9. The maturing interest and principal of primary road bonds issued by any county, and bonds issued by any county to refund primary road bonds, shall be paid from the portion of the primary road fund budgeted for that purpose as hereinbefore provided. Thirty days prior to the maturing of any of said bonds or interest thereon, the state highway commission shall prepare a voucher in favor of the county treasurer and drawn against the primary road fund in the amount of said maturing interest and principal. Said voucher shall be paid from the primary road fund in the same manner as other primary road claims. The funds so received by any county treasurer shall be used for paying the maturing interest and principal of such bonds, and for no other purpose.

Sec. 10. Immediately prior to the May first interest payment date next following the taking effect of this act and annually thereafter, the highway commission shall ascertain the amount of funds in the primary road fund available to pay off and retire primary road bonds issued by any county and subject to call on said interest payment date. The state highway commission shall use such primary road funds that may be available for that purpose and shall cause suitable vouchers to be prepared and executed, and forward same to the treasurer of each county in which any of said primary road bonds are subject to call, an amount sufficient to pay the same. The county treasurer shall use said funds for the retirement of such bonds and for no other purpose. He shall immediately upon receipt of said funds call in and retire such bonds then subject to call.

Sec 11. There is hereby created a primary road bond redemption fund from which all payments shall be made in redeeming primary road bonds issued by the state, and the payment of interest on said bonds. Whenever any bonds issued hereunder or interest thereon are about to mature, the state highway commission shall prepare a voucher drawn against the primary road fund and in favor of the treasurer of state for the benefit of the primary road bond redemption fund in the amount of said maturing bonds and interest. Said voucher shall be forwarded to the auditor of state, who shall draw his warrant therefor, and the same shall be delivered to the treasurer of state, who shall charge the primary road fund with the amount thereof and credit said amount to the primary road bond redemption fund. Said primary road bond redemption fund shall be used in the redemption of said primary road bonds and for the payment of the interest thereon and for no other purpose.

Sec. 12. In each year after this act becomes effective and until all of the bonds issued horeunder shall have been retired, there is hereby imposed and levied upon all the taxable property within the State of Iowa, in addition to all other taxes, to be included and added to the tax levied for state purposes, a direct annual tax for such amount as shall be necessary and sufficient, together with the amount available for that purpose from the primary road fund, to pay the interest and principal of all bonds issued under the provisions of this act, as and when the same accrues and becomes due. The proceeds of such direct annual tax are hereby appropriated for the payment of interest and principal of bonds issued hereunder and when collected by the treasurer of shall be credited to the primary bond redemption fund.

The treasurer of state shall annually certify to the executive council, prior to the time for the levy of general taxes, the amount of money required to be raised to pay the principal and interest on bonds issued under this act and maturing in the ensuing year. The said executive council shall annually fix the rate of tax necessary to be levied and assessed upon the valuation of taxable property within the state to produce funds sufficient to pay the principal and interest, and such additional annual direct tax shall be levied certified, assessed, and collected at the same time and in the same manner as are taxes for general state purposes provided, however, that if money in the primary road fund has been appropriated and is set apart for the purpose for which said direct annual tax is hereby levied and imposed, the treasurer of state, in annually certifying to the executive council the amount required, shall specify the amount of money from the primary road fund so appropriated, and the rate levied by the executive council shall make proper allowance and reduction for such money so appropriated and set apart from the primary road fund.

Sec. 13. While section 15 hereof is in effect, the laws of the state relating to motor vehicle license fees and gasoline license fees accredited to the primary road fund, shall not be changed so as to reduce the funds now arising therefrom, and the said proceeds from such license fees shall not be used for any other purpose than as specified in this act.

Sec. 14. If this act is adopted by the people, the state department of highways shall upon the adoption by the executive council of the first resolution authorizing the issuance of bonds hereunder immediately bring an action testing the validity of this act, and in that action the executive council shall proceed no further toward the issuance of bonds hereunder until the validity of this act shall have been determined.

Should the supreme court of Iowa decide that the use of primary road funds derived from motor vehicle license fees and gasoline license fees for payment of principal and interest of state bonds as provided in this act is unconstitutional then this whole act shall be void and invalid and no bonds shall be issued hereunder.

Sec. 15. The provisions of the preceding sections shall remain in force and effect without amendment, and will in any way affect the rights or security of the holders of any bonds, so long as any thereof shall be outstanding, except that this act shall cease to be effective after the expiration of ninety days after all of the bonds have been legally called for payment.

Sec. 16. The authorization vote for any county to issue bonds for primary road work shall become null and void as to any such bonds not actually issued and sold, immediately upon the issuance of any state primary road bonds authorized under the provisions of this act, and no county primary road bonds shall be issued thereafter Any county primary road bonds issued after this act takes effect shall cancel the authorization, under this act, for the issuance of an equal amount of state primary road bonds, and said county primary road bonds, issued after this act takes effect, shall mature and be payable at such times specified herein for the payment of an equal amount of the earliest maturing state primary road bonds.

Sec. 17. Interest accruing to the state on primary road bond funds on hand shall be credited by the treasurer of state to the primary road bond redemption fund and shall not be diverted to the general sinking fund under the provisions of chapter 55-A1 of the code of 1927.

Sec. 18. This act after publication as provided by law shall be submitted to the people of the State of Iowa at the general election to be held in November nineteen hundred twenty-eight, and shall take effect if at such election it shall receive a majority of the votes cast for and against it.

Approved March 14, 1928.

CONSTITUTIONAL AMENDMENT

REPRESENTATION IN THE SENATE

"Shall the following Constitutional Amendment, same being an act of the 41st general assembly, and agreed to by the 42nd general assembly, be adopted and approved?"

YES ☐
NO ☐

Joint Resolution proposing an amendment to section thirty-four (34) of article three (3) of the constitution of the state of Iowa, as said section now appears on page fifty-three (53), code, 1924, relating to the apportionment of the state into senatorial districts.

Be it resolved by the General Assembly of the State of Iowa:

Section 1. Number of senators. That the following amendment to section thirty-four (34) of article three (3) of the constitution of the state of Iowa, as said section now appears on page fifty-three (53), code, 1924, be and the same is hereby proposed:

That the period (.) at the end of said section thirty-four (34) of article three (3) of the constitution of the state of Iowa be stricken and the following inserted:

", but no county shall be entitled to more than one (1) senator."

Sec. 2. Be it further resolved that the foregoing proposed amendment be and the same is hereby referred to the legislature to be chosen at the next general election for members of the next general assembly, and that the secretary of state cause the same to be published for three (3) months previous to the date of said election as provided by law.

Approved April 3, A. D. 1925.

I, H. C. Meyer, County Auditor of Hancock County, Iowa, hereby certify that the above and foregoing is a full, true and correct copy of the Road Bond Measure and Constitutional Amen Ballot to be voted at the General Elecion, November 6th, 1928, in Hancock County, Iowa.

The tumult and the shouting dies—
The captains and the kings depart;
Still stands thine ancient sacrifice,
An humble and a contrite heart,
Lord God of hosts, be with us yet,
Lest we forget'—Lest we forget!
—Rudyard Kipling's "Recessional."

By ELMO SCOTT WATSON

TEN years ago, on November 11, 1918, the greatest war in history came to an end. Ten years ago the cannon which had thundered unceasingly for more than four years were suddenly still and the dead silence which followed was more awe-inspiring than had been the mighty diapason of the guns. Ten years ago men looked at each other in unbelieving wonder—they could not realize that the war was over. Nor could they realize then what their accomplishment had been nor what new page they had written in history. They were too near to it to see the meaning of it all clearly. All that they knew then—or cared to know—was that the armistice was signed—it was over—"le guerre est fini!"

And now, a decade later, they know but little more than they did one minute after 11 o'clock on November 11, 1918. Ten years is too short a time to give the mind of man a proper perspective on as mighty an event as the World war. It may be done after ten times ten years, although, as a popular American novelist has said in one of his romances of the Revolutionary war: "After a hundred years the history of a great war waged by a successful nation is commonly reviewed by that nation with retrospective complacency. Distance dims the panorama; haze obscures the ragged gaps in the pageant until the long lines of victorious armies move smoothly across the horizon, with never an abyss to check their triumph."

But even though the meaning of that conflict cannot yet be written down, because the reverberations of the pistol shot fired by a madman in Sarajevo in the summer of 1914 are still being heard in various parts of the world, there is one chapter in the history of the World war that can be written with at least a fair degree of accuracy. What of the "captains and the kings" in whose hands lay the destiny of nations in those years and in whose minds momentous decisions had to be made not once but repeatedly? It was the common soldier, of course, the poilu, the Tommy, the Anzac, the Canuck and the Yank, who fought the war, and there is no need to examine into how well he did his job. The results speak for that. They won the war. But what of the men who had the say as to how they should fight it, these "captains" who had to decide how much "cannon fodder" they could afford to spend in winning an essential victory? Did they in their planning and directing the fighting do their job as well as did the men who had to do the fighting? Is it yet too early to adjudge them fairly and say what their place in history as war leaders shall be?

Let an English officer who is generally accepted as a military critic of the first rank answer that. He is Capt. B. H. Liddell Hart, successor to Colonel Repington as military critic of the London Daily Telegraph and military adviser of the Encyclopedia Brittanica, and in a book "Reputations Ten Years After," published by Little, Brown and Company, he evaluates the "captains" of the World war. The preface to the book states his method of doing so as follows:

These studies have been approached essentially in the spirit of an historian. They have been treated in the manner of a portrait painter.

The moment for them has been chosen in order to achieve the closest possible reconciliation between the advantage of contemporary experience of events and personalities on the one hand, and, on the other, the evidence of the documentary records which are now available to throw light on the critical actions and discussions which influenced the course of the World war. Thus may history approximate the most nearly to truth.

After this introduction, the "portrait painter" proceeds to depict Marshal Joffre, "The Modern Delphic Oracle"; Erich Von Falkenhayn, "The Extravagance of Prudence"; Marshal Gallieni, "The Real Victor of the Marne"; Haig of Bermersyde, "The Essence of Britain"; Ferdinand Foch, "The Symbol of the Victorious Will"; Erich Ludendorff, "The Robot Napoleon"; Petain, "Military Economist"; Allenby of Megiddo, "The Evolution of a Leader"; Hunter Liggett "A Professor of War—and Human Nature"; and "Black Jack" Pershing, "The '100-Per-Cent American'"

To Americans, no doubt, the opinion expressed by this British military expert of the man who was chosen to lead their sons and brothers in battle will be more interesting than his "portraits" of any of the other "captains." Here is his summary of Pershing:

The phrase "100-per-cent American" has become both a discription and a motto since the war. If General Pershing was not the prototype, he deserves to be—for it fits aptly both as a description of him and as a motto for him . . .

In the study of Pershing's uncompromising advance toward his own goal (i. e. that American troops should be under American command and not divided up among the allies) lies the main historical interest of his first year in France. Grant is held up as history's great example of a man who, having fixed his goal in his mind, pursued it unswervingly and with almost unique pertinacity despite all obstacles—and without hesitating over the cost. Pershing, who had other points of resemblance to Grant, maintained his purpose with determination at least equal to that of Grant, and under difficulties greater in all respects save only that Grant had to drive a tired, Pershing a fresh, steed. Where Grant had a Lincoln behind him, Pershing had far less resolute and clear-sighted support. And Grant had no allies to complicate his problem. A cynic might even say that the war for Pershing consisted of fifteen months' fighting at the rear and two months' fighting at the front. . . .

Reviewing the course of the war's last phase, it would seem beyond doubt that Pershing was unfairly tried, that an exploitation of the St. Mihiel stroke by an advance toward Metz, with the "blooded" divisions and long-standing preparations, which he used at St. Mihiel, would have made better progress than the Meuse-Argonne advance. Even so, however, it could hardly have made the rapid penetration which was essential to fulfill his strategic aim. Thus the ultimate verdict on his strategy, as on his training doctrine, must be that it was more idealistic than realistic. Like the French, in the early phase of the war, it foundered on the rock of the machine guns. He thought that he was spreading a new gospel of faith when actually it was an old faith exploded. This was the one flaw in the great structure he built.

It may even be said that he omitted but one factor from his calculations—German machine guns—and was right in all his calculations but one—their effect. It was the abrupt discovery by his troops of this omission which shook their initial trust in him, and led to some of the sweeping unjust post-war criticisms. This change of attitude was typified in a story which was widely told. In a column of American troops on the march a voice was heard saying, "Pershing says he'll take Metz if it costs a hundred thousand lives." Silence for a moment. Then another voice: "Ain't he a d—d generous guy!"

Yet even this remark has an undercurrent of chastened yet grudging admiration which is a tribute to the driving force of Pershing and to the fortitude of his men. He lacked the personal magnetism which can make men lay down their lives gladly—He was far from a Robert E. Lee. But he had the character which compelled men not only to die, but to work—cursing him, perhaps, but respecting him. He was hard, but life had tried him hardly, and if he gave affection to few it was generous when given—to those who had shown themselves MEN by his high standard. When he visited the battlefields after the war he stood silent awhile before the monument on the mound at Montdidier dedicated to the First American division. At length, 'n a voice husky with emotion, he said, "That was the best d—d division in ANY army." It was a tribute from the heart.

As for his achievement, it is sufficient to say that there was perhaps no other man who would or could have built the structure of the American army on the scale he planned. And without that army the war could hardly have been saved and could not have been won.

As for the allied generalissimo, Marshall Ferdinand Foch, Captain Hart compares him to Napoleon and says:

As Foch developed a deeper insight into human nature and the nature of a national war, so he gained a clearer vision of the goal of the war—and he knew when to stop. Thus, if he will rank below Napoleon as a strategist, he may be placed higher as a grand strategist, for of such the security and prosperity of the nation after the war are a better test than brilliancy of maneuver. In his centenary oration on Napoleon, Foch himself foreshadowed this verdict: "He forgot that a man cannot be God; that beyond the individual there is the nation; that beyond man there is morale; and that war is not the supreme goal, for beyond that there is peace."

It may be true that Napoleon forgot more than Foch ever knew. But Napoleon forgot. Foch learned.

In one of the leaders of the enemy, the military expert sees another Napoleonic figure, but in this case he was a "Robot Napoleon." That figure is Erich Ludendorff, the German chief of staff under Hindenburg, of whom he writes:

. . . If it is still too early to estimate Ludendorff's stature in world history, it is possible through the thinning mists to perceive the outline of a figure molded on a great scale, perhaps the greatest of all among the leaders of the war of 1914-1918, and with the attributes, save of personal magnetism, which may even inspire a second Napoleonic legend. Should this legendary magnification come to pass, the verdict of today may be a true mean between the nadir of 1919 (when Ludendorff was "the scapegoat of defeat, as execrated by the mass of his countrymen and as belittled by the mass of his victorious foes as Napoleon on the morrow of Waterloo") and the zenith of tomorrow.

He was essentially the product of his country and of his age, which had been molded by the industrial revolution and Nineteenth century philosophy. For half a century Germany had been converting herself into a gigantic war machine and in Ludendorff she at least found the one mechanized brain capable of controlling this scientific master, which in size alone was too vast to be human. . . . Most of the leaders were swept up by the machine and carried helplessly away, but Ludendorff mastered it for long enough to impress a Napoleonic stamp on the otherwise incoherent process of mechanical slaughter politely termed "attrition." On Ludendorff the verdict of history may well be that he was the Robot Napoleon.

Of the other "portraits" which are presented to aid in appraisal of these "captains" of the World war there is that of Petain who "has been reproached for excessive caution. It would be more true to say that he was excessively careful—of lives. While the motto of a brilliant fighting leader like Mangin was 'victory at any price,' Petain's motto was 'victory at the smallest price.' . . . It is almost certain that the French army would never have recovered if Petain had not been called to command in 1917. He made victory possible. . . . Thus the verdict of history on Petain is likely to read: 'The man who, like Fabius, saved his country by avoiding battle, and who, like Carnot, was the organizer of victory.'"

Then there is the British general who, "As a gentleman and as a pattern of noble character, Haig will stand out in the rolls of history, chevalier sans peur et sans reproche, more spotless by far than most of Britain's national heroes. Most of all, perhaps, because in his qualities and defects he was the very embodiment of the national character and the army tradition."

Two others, whose "portraits" are presented in this book should be noted together since their names are likely to go down in history together. One is Marshal Joffre who, "If his brain was as solid as his appearance, lacking in flexibility and imagination, his external effect on the minds of others enabled him to become the rock on which France held and Germany foundered." And of this man, popularly known as the 'Hero of the Marne," Captain Hart declares, "Joffre was not a general, but a national nerve sedative." Although at a dark hour in the war when it was necessary to maintain French morale Joffre was held up to the world as "the symbol of France triumphant," Captain Hart declares that, "Today, when this need has passed with the emergency, justice and gratitude demand that the world should recognize Gallieni, rather than Joffre, as the victor of the Marne. For it was Joseph Simon Gallieni, marshal of France, who "in the dark days of early September, 1914, saved France and changed the face of the World war by bringing about the 'miracle of the Marne.'"

THE DAIRY

RIGHT FEED FOR A DAIRY HEIFER

Dairymen should become more far-sighted in raising young stock, for the quality of the future herd depends largely on breeding and inherited productive capacity. If the heifer is stunted by poor feeding and neglect she will not become the kind of animal we want when she calves. She will be lacking in capacity, and as the consumption of roughage is necessary for economical milk production, it will be found that in the end it does not pay to neglect the young stock. One cause for the marked difference in the size of cows of the same breeding as found in different herds is this factor of ration when young, says J. P. LaMaster, chief of the dairy division, at Clemson college, South Carolina.

During the summer, on good pasture, little if any, grain is needed if the heifer is at least ten months old; but when pastures are poor or dried up, a little grain is necessary. In winter, however, to get the most rapid growth it is necessary to supply a considerable proportion of the nutrients in the form of concentrates. Where even the best roughage is fed alone, the growth will not be as much as where grain is fed also.

The following are suggestions for rations for heifers in winter:

1. When silage and legume hay are available: corn silage, alfalfa, cowpea or soybean hay at will. For heifers less than ten months old, two pounds of grain daily in addition. The grain must be equal parts of corn and oats. For heifers within three months of calving, in order to insure good flesh at that time, three to five pounds of grain should be fed depending on condition.

2. When corn silage is available but not legume hay: Silage at will and hay or fodder. Two or three pounds of concentrates should be fed daily, one pound of which should be of high protein content such as cottonseed meal. Equal parts of corn, oats, and bran and one-third cottonseed meal.

3. When legume hay is on hand but no silage: Feed all the hay they will clean up and also two pounds of corn and oats.

4. When no silage or legume hay is available: It will pay to buy legume hay; or if grass hay is fed alone, feed all they will clean up. A grain ration for mixed hay will have to be somewhat higher in protein, such as three pounds of a mixture of two parts of corn and one part of cottonseed meal.

Great Care Required in Selecting Record Cows

If the farmer wants a record cow he must buy a cow with a record, and a good one, too, says the New York State College of Agriculture. Time is needed to make good selections, and it is well to seek aid from competent and trustworthy persons.

If a dairyman is buying his cow through a cattle dealer he should be able to trust him, and when he does not know a trustworthy dealer, he should seek assistance from a county breed association or the cattle sales company of the county in which the animal is to be bought. The names and full information about these organizations may be obtained from the county agricultural agents. In case there are no such organizations, county agents can supply prospective buyers with the names of reliable breeders, dairymen, or dealers in the county.

The New York state college says that too much caution cannot be used in buying cows for, although extra time may be needed during the purchasing, much time and money can be saved later on. Dairymen who have lost herds because of random buying are more careful in the future.

Ropy Milk or Cream Is Caused by Minute Germs

Ropy milk or cream is caused by germs that get into the milk after it comes from the cow. These germs usually live in water from which they get into the milk. If your cow has access to water in which she stands or stands in a muddy place these germs get onto the switch of her tail or on the flanks and when dry fall into the milk pail while the milking is being done. In other cases these germs are found in the water tank and get onto the utensils from which they infect the milk.

Clean and thoroughly disinfect all dairy utensils with boiling water. Clean and disinfect the stock tank. Before milking wipe the switch and flanks with a damp cloth to prevent any dirt or dust from falling into the milk. A thorough cleaning and disinfecting will usually end the trouble.

Iodized Milk

At the Ohio station it was found that where no iodine was fed to dairy cows, no trace of the chemical could be detected in the milk. But all tests made of milk from cows receiving two grains of calcium iodine or potassium iodine per day, or two ounces of seaweed rich in iodine, showed an appreciable amount of iodine in the milk. It has not yet been determined whether there may be advantages to humans in consuming iodized milk or not.

SAME PRESCRIPTION HE WROTE IN 189

When Dr. Caldwell started to pr medicine, back in 1875, the needs laxative were not as great as t People lived normal lives, ate wholesome food, and got plenty of air. But even that early there drastic physics and purges for the of constipation which Dr. Caldwel not believe were good for human b

The prescription for constipation he used early in his practice, and he put in drug stores in 1892 unde name of Dr. Caldwell's Syrup P is a liquid vegetable remedy, int for women, children and elderly p and they need just such a mild, bowel stimulant.

This prescription has proven its and is now the largest selling l laxative. It has won the confiden people who needed it to get relief headaches, biliousness, flatulence, gestion, loss of appetite and sleep breath, dyspepsia, colds, fevers. At druggist, or write "Syrup Pep Dept. BB, Monticello, Illinois, for trial bottle.

Bad Legs

Do Your Feet and Ankles Swell and Inflame and Get So Sore You Can Hardly Walk?

Have You Varicose or Swollen Veins and Bunches Near Ankle or Knee?

To stop the misery, pain or soreness, help reduce the dangerous swollen veins and strengthen the legs, use Moone's Emerald Oil. This clean, powerful, penetrating yet safe antiseptic healing oil is obtainable at all first-class drug stores.

In hundreds of cases Moone's Emerald Oil has given blessed relief. Use it for Ulcers, Old Sores, Broken Veins and Troublesome Cases of Eczema.

MOONE'S EMERALD OIL

WHEN CHILDREN FRE

It isn't right for the little tots to fret they wouldn't if they felt right. Consti tion, headache, wor feverishness, breath; any of th will make a child f They need the plea remedy—MOTHER GRA SWEET POWDERS. T regulate the bow break up colds, reli feverishness, teeth disorders and stom troubles.

TRADE MARK

Used by Mothers for over 80 years. All dr gists sell Mother Gray's Sweet Powders. today. *Trial package* Free. Address THE MOTHER GRAY CO., Le Roy, N.

Rare

"I don't see why you call thi rare volume."

"It came back after I had lent it

Home would be far sweeter there wasn't so much outright dor in the household.

Books are a wonderful help t man—especially bankbooks and p etbooks.

COULD NOT GET OUT OF BE

Lydia E. Pinkham's Vegetab Compound Strengthened He

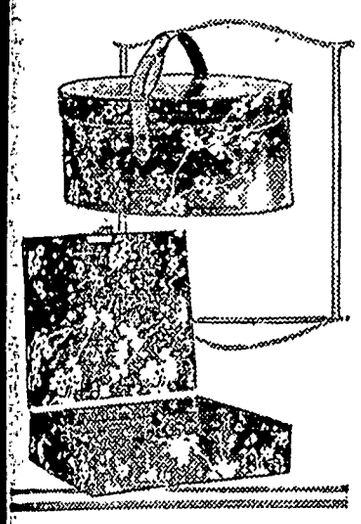
Elkhart, Ind.—"I had a tired fee ing and was unable to get out of b without the he of my husban We heard of t Vegetable Co pound and d cided to try I am still taki it and it sure a help to me. can do my wo without resti before I a through. I kno that if wom will give the Vegetable Compound trial they can overcome those tir and worn-out feelings. I cannot e press the happiness I have receiv and how completely it has made ov my home."—Mrs. D. H. Sibert, 13 Laurel St., Elkhart, Indiana.

Things to Give as Christmas Presents

Crepe Paper "Hanky" Bag

A bit of flowered crepe paper, a ...me doll head, a short length of ...se partout gold paper binding, some ...te, and you have the materials re...ired for the creating of this win...e bag, wherein soiled handker...iefs are out of sight. There's an ...ening at each side as indicated in ...e picture. At little expense of time ...d money one could remember any ...mber of friends at Christmas time ...th this pretty, useful gift.

Artful Utility Boxes

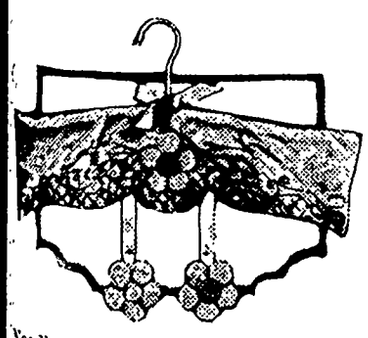


Of all welcome gifts at Yuletide ...ne so welcome as a set of boudoir ...utility boxes. They make exquisite ...xes to hold everything these days. ...oes, hosiery, stationery, hats, vanity ...ems—a whole retinue of boxes is a ...ecessary household equipment. What ...quisite artistry is used in their ...aking! Many of the papers with ...hich they are covered are imported ...d their coloring and designs add ...eauty to any room. Just the thing ...r the woman who enjoys meeting ...ith her sewing club is the oval sew...g case in the picture. She will also ...nd plenty of use for the utility box ...own. It has compartments.

Clever Tea "Cozy"

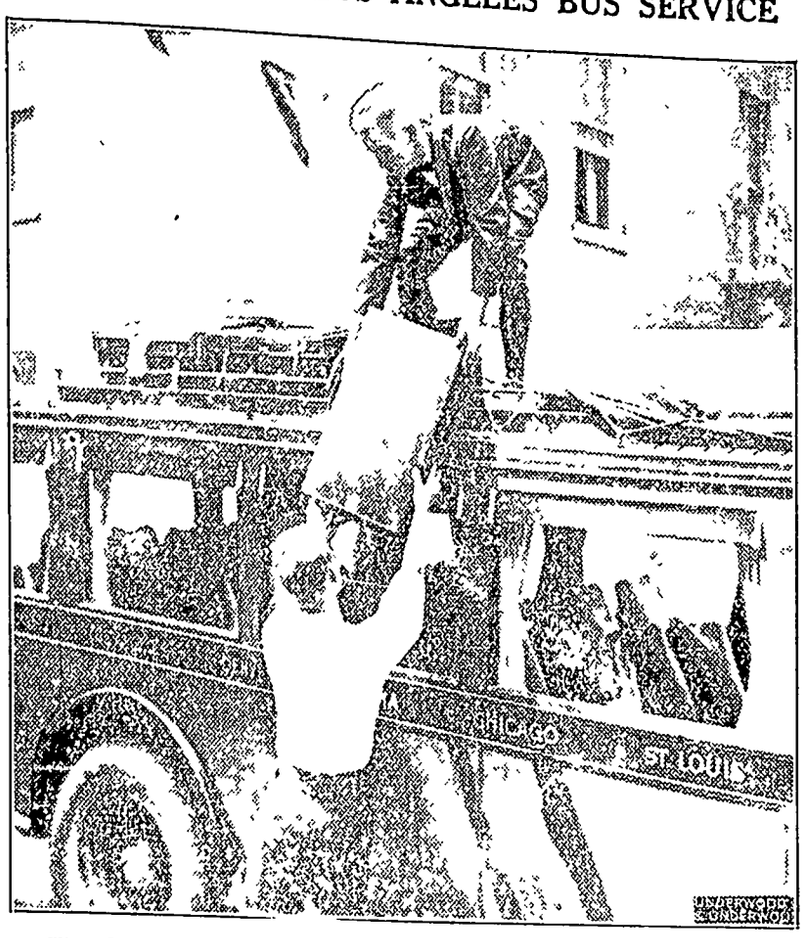
"Just what I wanted" is what the ...ou housewife will be writing in her ...ote of thanks to the donor of this ...lever and useful gift. This "cozy" ...nd holder set is made of quilted sa...een. The design is unique, being a ...ird's head, with wings suggested in ...e lines of the quilting. Slipped ...er the tea or coffee urn it ...eeps the contents hot and steaming. ...ith the aid of this handy device the ...istress of the house or her maid ...n serve biscuits hot from the oven.

Quilted Things Popular



Needlewomen are finding in hand ...uilting a fascinating pastime. From ...ple little articles to whole boudoir ...ts of most elaborate sort, are being ...uilted for Yuletide gifts. These range ...om exquisite scalloped taffeta cover...ds and lovely decorative matching ...ushions to cases for nightrobes, hand...erchiefs, gloves and such. Quilted ...ed-jackets are the "last word" in ...Christmas giving. They are of taffeta ...n delectable shades with wide hand...uilted borderings all around, the ...me needlework decorating pockets ...d collars. One cannot own too ...y, especially when they are as ... as the rose taffeta one in the ...ture.

NEW YORK AND LOS ANGELES BUS SERVICE



The first transcontinental bus service plying between New York and Los Angeles regularly has been inaugurated. The trip takes 5 days and 14 hours and passengers may stop overnight at any city through which they pass and take the next incoming bus the following morning. The 26 chairs may be used in either a sitting or reclining position, thus affording ease and comfort throughout the journey. This is the longest bus ride in the world.

MUCH OF FATIGUE IS UNNECESSARY

Many Little Driving 'Tricks' Which Will Conserve Driver's Energy.

"Much of the fatigue experienced by the average motorist is owing to an unnecessary expenditure of energy in the act of handling his automobile in traffic," says Charles M. Hayes, president of the Chicago Motor club

Approaching Curves.

"There is plenty of available evidence to substantiate this point. Take the case of curves, especially on a strange highway. It is a driving error to approach a curve at high rate of speed, and to overcome this the driver is forced to apply his brakes suddenly, and at the same time put forth a great deal of strength to steer the car around the curve safely. There may be many curves in the course of a day's drive, and if the driver continues to approach them at a high rate of speed, he will have used up a great deal of energy by the end of the day.

"Then there is the driver who thinks there is no necessity of shifting to second gear when descending a hill, in spite of warning signs. This means that he will have to hold his car back with the brakes—another useless expenditure of strength.

Another Driving Blunder.

"Approaching at high speed any point where it is known in advance that a stop must be made is another driving blunder that leaves the driver exhausted at the end of the day, as this practice requires sudden and vigorous application of brakes, and, as a result, muscular fatigue.

"There are many little driving 'tricks', which, if the motorist will learn and practice, will not only conserve the driver's energy, but will also lengthen the life of the car."

Road Hogs Develop in the First 1,000 Miles

There is one time in the career of nearly every motorist when he subconsciously is inclined to be a road hog. Unless he is aware of this temptation he is likely to make himself a general nuisance.

The time in question is right after the acquisition of a new car. Breaking-in the engine carefully requires driving slowly for the first 1,000 miles. Now, driving slowly is only one element of road-hoggishness, but it is the first one. The second, keeping in the middle of the road, is likely to be the product of inattention, or concentration on the operation of the machine in the case of the new car owner.

Therefore, he should keep a close check on what part of the highway he uses in putting the first 1,000 miles on his brand-new speedometer. Otherwise, he becomes a road hog.

Motorists Pay Big Road Tax Over Poor Highways

Motorists pay a bad roads tax equivalent to 22.3 cents on every gallon of gas consumed on a poor highway. The Chicago Motor club reports that this conclusion was drawn from experiments recently conducted in Washington, Iowa and North Carolina.

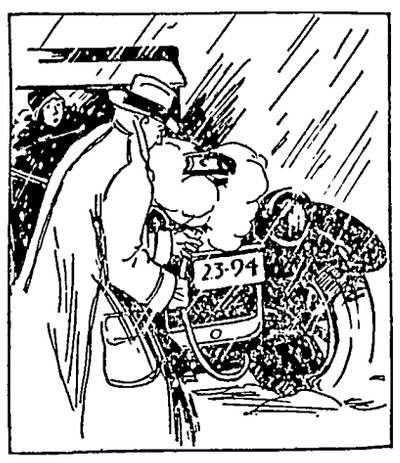
The figures were based on the premise of a car making 10 miles to the gallon on a rough highway. On a basis of a speed of 33 miles per hour, the test showed the cost of gasoline and tires per one thousand miles over rough roads used in the experiments was $35.10 for an average four cylinder car weighing 3,500 pounds loaded. The cost for the same car at the same speed over a very smooth improved road was only $12.80, according to the tests

Adjustment of Bearings Depends on Crankpin

Bearing adjustments are incomplete if they are made without first having determined the condition of the crankpin, which is susceptible to uneven wear. It frequently happens that what looks like a perfect job of bearing tightening is most disillusioning when the engine is started, largely because the journal is worn "out of round." The condition of this part should be determined before any adjustment is made. If grinding is necessary, it is a fairly simple job with the up-to-date facilities of the average repair shop.

Simple Way to Thaw Out Radiator When Frozen

If your radiator freezes while you are driving, a simple way to thaw it is to attach a short length of rubber hose to the overflow pipe from which



With a length of hose attached to the lower outlet of your overflow pipe, you can convey steam through the fins of a frozen radiator and speedily thaw it out.

the steam is flowing and squirt the steam through the fins of the radiator. Start at the top and work downward. Keep the motor idling slowly and when the flow of steam stops you will know that all the ice which has clogged the lower portion of the radiator has melted.—Popular Science Monthly.

Color Seen as Factor in Reducing Accidents

A prominent safety engineer recently pointed to brilliant body colors as a means of reducing motor accidents. Bright colors, because they can be seen at much greater distances and attract attention much more readily, are an important factor in driving safety. Chromium plating which is found on all bright surfaces supplements the color factor of safety. The armored steel body adopted by Studebaker in 1925 as standard for its entire line has demonstrated the wisdom of Studebaker engineers repeatedly by withstanding crashes as only steel can.

AUTOMOBILE ITEMS

One thing the driver of a flivver airplane will not have to worry about is a grade crossing.

* * *

"Don't test your brakes on the other fellow's car" is a slogan being circulated by a safety advocate.

* * *

An autoist is suing another for $25,000 as a result of a collision of their machines. He is holding out his hand.

* * *

In view of the pronounced success of windshields of that type, there are expectations that something can be done eventually about a nonshattering hope.

* * *

With most cars, particularly those equipped with a plate clutch, one may shift from first directly into high in starting with a normal load on smooth pavements.

Horticultural News

PRUNE GRAPES FOR FRUIT AND SHADE

Grape vines on arbors are usually expected to furnish shade and act as a screen as well as produce fruit. Pruning decides how well they serve these three purposes, states J. H. Clark, associate professor of pomology at the New Jersey experiment station.

A very light pruning preserves the density and general shape of the vines but is likely to cause poor, short growth and a small crop of inferior bunches. On the other hand if the vines are pruned severely, as they are in commercial vineyards the fruit will be of much better quality, but so few canes are left that very little shade will be produced in early summer.

The one-year-old, smooth-barked, light brown canes are the ones which bear the fruit buds. For best production of first-class fruit, a mature Concord vine should carry 40 to 60 buds after pruning. Where shade is desired this number of buds mays be considerably increased, although the clusters produced will not be so large. These buds may be left on a few canes, each bearing six to ten buds, or on a number of short spurs, preferably the former. Such canes should be tied in at least two places to prevent their being broken off by the weight of the fruit.

Old neglected vines will probably have new wood only at the ends of long, crooked trunks. If as much as possible of the old wood is removed, leaving only enough to support the one-year-old canes which were left to produce the crop, growth will be more vigorous, pruning will be easier next year, and the general appearance of the arbor will be greatly improved.

Pruning Practices in Various Large Orchards

Fall and winter pruning, as well as spring pruning, are more or less standard practices in large orchards in Eastern and Central states, and on the Pacific coast. Pruning at a time when other work is not pressing has been considered advantageous. In large orchards the work must be started in late fall in order to be completed before spring work begins. Investigators have shown that in regions where they were working there was no appreciable difference in the response of the plant to pruning at different times within the dormant season. Bedford and Pickering, reporting in 1905 on pruning work at the Woburn Experimental Fruit farm, England, stated that they found no appreciable advantage in pruning at one period of the dormant season in preference to any other. Chandler reports for New York conditions that generally no injuries resulted from fall and winter pruning, but that very heavy pruning sometimes resulted in injury. He states that at the Missouri experiment station no difference in injury had been noted on peach and other fruits from severe fall and winter pruning, even when the pruning was done while the wood was frozen hard.

Mulch Strawberries

Strawberry beds should be mulched the first time the soil freezes sufficiently solid to bear up a loaded wagon. Straw or hay to a depth of four inches should be applied over the entire patch. Brush may be used to advantage. Leaves should not be utilized, as they will pack so tightly under the snow that the strawberry plants will be smothered.

Horticultural Facts

Pruning should be done every year. The results will be more satisfactory and less time will be required than when the growth accumulates for a number of years.

* * *

The aggregate capital invested in an orchard is more likely to exceed $500 per acre than it is to fall below that figure, except perhaps for peaches, because of their early bearing.

* * *

If the far sighted peach grower would let his orchard stay in sweet clover for two or three years before setting it out those two or three years should prove very valuable indeed during the life of the orchard.

* * *

In a small orchard, when weather conditions are favorable, it is usually very practical to have a portable packing table, and sort and pack the apples just as they come from the trees.

* * *

It is just as important to keep the tools in first-class condition for work as it is to have a complete and satisfactory outfit.

* * *

Moderate pruning and rather heavy fertilizing will not only maintain or increase the bearing area of the trees but will increase the fruit production.

* * *

On most trees some heading back may be done. Don't "dehorn" the tree but gradually work down the head by cutting back the tallest branches to a good lateral lower down.

Mrs. James A. McClintock's Appeal For Her Child

"My little girl, 2½ years old, has trouble with her stomach and bowels. She runs a fever and her passages are green—just acts like a bilious attack. I am thinking of giving her Milks Emulsion, Please send me special directions for children. March 22, 1023."

—LATER—

"My little girl has not had any more of those attacks since I started giving her Milks Emulsion, and she didn't have but one cold all last winter and played out every day.

"She is 3½ years old now and just getting along fine. Emulsion has built her up in every way, and I want to thank you for your advice. I will always talk for Milks Emulsion whenever I can." Yours truly, Mrs. Jas. A. McClintock, May 0, 1924. 1330 N. Beville Ave., Indianapolis, Ind.

Guaranteed by all druggists to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Many Will Consider Tramp's Logic Sound

Dr. John H. Latane, professor of history at Johns Hopkins, said in a Y. M. C. A. address in Baltimore:

"Parents complain that nowadays they're not respected by their children. Well, the answer to that is that parents never were and never will be respected by their children unless they deserve respect.

"It's like the case of the tramp who held up the benevolent-looking gentleman with white whiskers and asked for alms.

"But the old gentleman fixed his kindly eyes on the tramp's red nose and said:

"'My friend, I have no money, but I can give you some excellent advice.'

"'Aw, rats,' snarled the tramp, as he snapped a pair of dirty fingers in the old gentleman's face. 'If ye ain't got no money it stands to reason that yer advice ain't worth listenin' to.'"

Cold Need Cause No Inconvenience

Singers can't always keep from catching cold, but they can get the best of any cold in a few hours—and so can you. Get Pape's Cold Compound that comes in pleasant-tasting tablets, one of which will break up a cold so quickly you'll be astonished.—Adv.

Day Dreamers

"The reason some folks never wake up to find themselves rich," says a local philosopher, "is because they never wake up."—Atchison Globe.

Psychologists says a man never craves a smoke so much as when he is reduced to his last match.

If Kidneys Act Bad Take Salts

Says Backache Often Means You Have Not Been Drinking Enough Water

When you wake up with backache and dull misery in the kidney region it may mean you have been eating foods which create acids, says a well-known authority. An excess of such acids overworks the kidneys in their effort to filter it from the blood and they become sort of paralyzed and loggy. When your kidneys get sluggish and clog you must relieve them, like you relieve your bowels, removing all the body's urinous waste, else you have backache, sick headache, dizzy spells; your stomach sours, tongue is coated and when the weather is bad you have rheumatic twinges. The urine is cloudy, full of sediment, channels often get sore, water scalds and you are obliged to seek relief two or three times during the night.

Either consult a good, reliable physician at once or get from your pharmacist about four ounces of Jad Salts; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys may then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to help clean and stimulate sluggish kidneys, also to neutralize acids in the system, so they no longer irritate, thus often relieving bladder weakness.

Jad Salts is inexpensive, cannot injure and makes a delightful, effervescent lithia-water drink. Drink lots of good water.

Remember all the things people used to do for headaches? Today, the accepted treatment is Bayer Aspirin. It gets action! Quick, complete relief—and no harm done. No after effects; no effect on the heart; nothing in a Bayer tablet could hurt anyone. (Your doctor will verify this.) For any sort of headache, neuralgic pains, rheumatism just try Bayer Aspirin. Taken soon enough, it can head-off the pain altogether; even those pains many women have thought must be endured. At all druggists.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

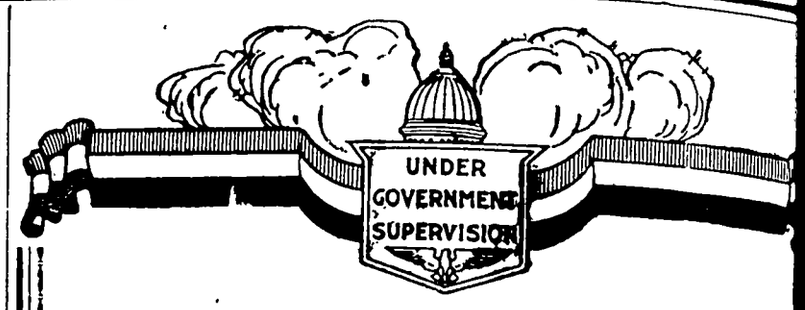
Mr and Mrs Emil Kraus and daughter Arlene, and Mr. and Mrs. C J. Kraus took quite a jaunt over the week end. They left Saturday morning in Emil's car and headed for Eastern Iowa to visit relatives and friends. They made stops at Colesburg, Elkader, McGregor, and in fact most of Delaware county. C J. Kraus has three brothers in eastern Iowa and many friends.

For the third time we are running the state of condition of the First National Bank. This is not ordinarily required. In this case the "boner" has been the fault of the Times Office The first time it was run we neglected to change the date. We corrected that and ran it last week. Lo! and Behold! We discover we again made an error of some 300 berries in one figure and the balance did not jibe. Therefore we run it again after careful checking up. This is only the second error we have made in a bank statement in twelve years, not a bad record.



Save--

For Yourself

Big businesses have adopted the time payment method of selling because they know that MOST men—when they have agreed to make a certain payment each month—will meet the obligation. If you can do this for someone else, why not do it for yourself. Start an account at this bank. Obligate yourself to yourself to deposit a definite amount each month and watch your bank roll grow.

DINGS AT SCHOOL THIS PAST WEEK

RENT TEACHERS TO MEET NEXT TUESDAY EVE

blic Invited To Visit Our School All Of Next Week

Our November program of the rent-Teacher Association will be ren on next Tuesday night, Nov. t. The program will be approxiately as follows:-

ng by the High School Girls Glee Club, Mr Lewis, Director.

cussion by Mr. Wellemeyer, subject, "Our Schools Yesterday And Today."

per by Mrs. R. A. Jorgeson, subject, "Diet of School children as related to school progress

Piano Solo by Gracka Quandt

lk by Mr Henry Ludeke, subject, "Are our schools worth the Cost?"

Business meeting and free lunch will follow.

We believe this program will interest parents and friends of our hool and we urge all to come

Visit School All Next Week

Next week we extend an invitation to all interested to visit us at ur work in either high school or grades. Come and get acquainted ith your children's teachers and confer with them about problems of mutual interest. Perhaps the home an help the school and the school the home. Both should work together and understand each other t is only by personal meteing and understanding that the maximum an be done for our youth.

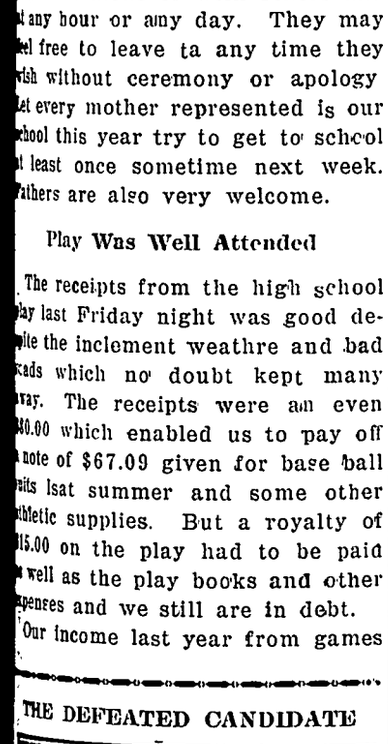
Each room will be placarded and visitors may enter without knocking and occupy seats of chairs which will be provided at convenient places in each room. Parents may come alone or with others and at any hour or any day. They may feel free to leave ta any time they wish without ceremony or apology Let every mother represented is our school this year try to get to school at least once sometime next week. Fathers are also very welcome.

Play Was Well Attended

The receipts from the high school play last Friday night was good despite the inclement weathre and bad roads which no doubt kept many away. The receipts were an even $40.00 which enabled us to pay off a note of $67.09 given for base ball suits lsat summer and some other athletic supplies. But a royalty of $15.00 on the play had to be paid as well as the play books and other expenses and we still are in debt.

Our income last year from games

THE DEFEATED CANDIDATE



Gov. Alfred E. Smith

was less than usual, both at home and from the two tournaments participated in and our expenses were slightly more, hence the deficit.

Athletics "Go In The Hole"

Our receipts during last school year in athletics department were as follows

On contract from other schools	$73 00
Door receipts from games at home	$168 74
Tournaments, Mason City, and Britt	$53 02
Total receipts for year	$294 76
EXPENSES	
Transportation	$90 00
Paid on contract to other schools	$79 00
Suits and Supplies	$99 94
For Officials	$74 00
State A A dues	$5 50
Meals and Lunches	$22 55
Total expenses	$370 99

Excess of expenses over income $370 99 - $294 76 or $76 23

Paid from receipts of play $65 09 (note and interest)

Balance unpaid, and due the Superintendent, $11.14

Basket Ball Prospect Good

Mr Herden reports good interest in basket ball and good prospects from the standpoint of material Many of our last year's players are back with increased size and weight and Klemme should have this season a good team

Other Items From Our School

After electing Hoover and supporting the 100 million dollar bond issue for roads in Iowa last Tuesday our school has settled down to normal again

The Juniors have begun work on a program to be presented between now and the Holidays to secure money for the annual banquet they are expected to put on for our Seniors

Miss McGinnis reports good work and interest in her Freshman sewing class.

Once again remember the P T A program next Tuesday evening and that we are urging everyone to visit school sometime next week, any day, any our Walk right in and take a chair and observe your children study or recite By coming you let your children and their teacher know you are interested in their efforts here. Let's get acquainted and all pull together for a better manhood and womanhood

FORMER KLEMME GIRL IS WIFE OF MINNESOTA MAN

Miss Iva Hubbard, daughter of Mr and Mrs. A. F. Hubbard, former Klemme residents, and a granddaughter of Mrs. Amanda Kirkwood, was married Monday, Oct 22, to Mr Edwin Egge, of Jackson, Minn The ceremony was performed at Mason City.

Mr. Egge, we understand is employed at the Decker packing plant. The couple will make their home in Mason City.

Our Next President!

Hoover--Choice of Forty States!

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Since Armistice Day falls on Sunday this year we do well to give it some special attention in our churches It is a day that not only recalls to our minds the tragedies of war, but also the delights of peace The world today is tired of war We are all after peace between nations The chief point of disagreement seems to be in the method of securing it As follower of Christ our chief concern should be, to know His mind in the matter What does the Prince of Peace have to say in this regard The sermon Sunday morning Nov 11 will deel with this thught

A special invitation is extended to the American Legion and exservice men of the community We also extend the invitation to the Auxiliary and to the local troop of the Boy Scouts We should be pleased to have these organizations attend in body as our special guests

This is indeed a service in which not only every true American should be interested, but liekwise every citizen of the Kingdom of God The church is dedicated to the promotion of peace ideals. We invite you to come

The theme for the evening sermon will be, "Conditions of a deepening acquaintance with God" This is number two in a series of three on the subject You will get most out of them by following them all thru although each one is more or less complete in itself.

KLEMME FARMERS ON FOX HUNT SATURDAY

Herman Barz and Bill Hampel have qualified as big game hunters Saturday they set out in pursuit of a red fox and after considerable scouting around brought Mr. Fox at bay and killed him with a shot gun. Ordinarily big game hunters use a high powered rifle, but not so with these experts. After bringing down the game Herman and Bill went to their homes to study maps. We expect to hear of them next going to Africa to shoot wild elephants

SALE OF SCHOOL HOUSES

On Saturday, November 17th, at 10 00 o'clock a. m at the Center School, the Avery township school board will sell at Public Auction to the highest bidder for cash, the following property. The old school houses in Districts 2, 6 and 8, some desks, stoves, etc It is understood that buildings in District6 and 8 aer not to be removed until new houses are completed and occupied. 3tc

KLEMME MEN ATTEND SCOUT TRAINING SCHOOL

First Session Of Six Weeks Course Held At Belmond Monday

The first district training course for Scout Leaders was held at Belmond Monday evening The North Iowa Council has divided the large eight county area into four training districts and the one at Belmond on Monday evening was the first ever to be held in North Iowa Twenty six men from the southwest part of the area attended this first training course meeting. The course at this time extends over a six weeks period and is held one night each week Next week the meeting will be held at Clarion, and on following weeks at Hampton and Sheffield.

Those who attended from here were John N Day, C G. Waterman, Calvin Grosshuesch, D. P. Anderson and R A. Jorgensen.

The training course is conducted in such a way that the men are all formed into a regular scout troop Field Executive Lyman Ossam, of Mason City being the Scoutmaster. Mr Ransom, of Hampton Senior Patrol Leader, and Mr. Bente of Clarion, and R. A. Jorgenson, Patrol Leaders, and Mr Williams, of Sheffield, troop Scribe. These men are the officers of the trop and the Instructors.

The purpose of the training course is to interest a large number of men in Scouting and to train them in troop management and leadership.

Responds to Cheers

Herbert Hoover At His Home At Palo Alto, Cal.

HOOVER, HAMMILL, BOND ISSUE CARRY IN IOWA ELECTION

HANCOCK COUNTY WENT FOR HOOVER AND CURTIS

Bond Issue Meets Defeat In County; Amendment Also Lost Here

Now that the election is all over we can settle back and take it easy for another four years

In Hancock County Hoover carried by a comfortable margin; for Governor Hamill won out over Mr. Housel by 800 or 900 votes. The 100 million dollar bond issue was defeated approximately 2 to 1 in this county, as well as the amendment Wright county likewise frowned on the bond isue.

Hoover made an unexpected slash into the "solid south" by carrying Virginia, North Carolina, Texas, Tennessee and Kentucky He lost only Rhode Island and Massachusetts out of the rest.

How Ell Township Voted

There were 349 ballots cast in Ell township and only three were listed as "spoiled." This is a fine record and shows that people know how to vote. Out of this number Hoover received 206 votes, Smith 135. For Governor Hammill received 182 votes and Housel 131 The bond isue met defeat here by 193 against and 113 for vote. The amendment attracted less attention and was defeated, 129 against and 2 for

Hoover Carried 40 States With A Total Of 444 Electoral Votes

The following table sums up the Tuesday election and shows the states carried by Hoover and Smith and the value of the electoral vote in each state.

State	Elec. Vote	Hoover	Smith
Alabama	12		12
Arizona	3	3	
Arkansas	9		9
California	13	13	
Colorado	6	6

NEWS REVIEW OF CURRENT EVENTS

Graf Zeppelin Arrives in Germany, Completing Its Remarkable Tour.

By EDWARD W. PICKARD

PILOTED with admirable skill by Dr. Hugo Eckener, the Graf Zeppelin, huge German dirigible, arrived at Friedrichshafen, Germany, 68 hours and 56 minutes after its start from Lakehurst, N. J., and two hours later was at rest on the land. Thus was completed the first round trip commercial transatlantic flight of a lighter than air machine. The time made on the homeward journey of 4,003 miles established a record for machines of that class. Paying passengers, mail and freight were carried on both legs of the trip.

Taking the northern route on its eastward flight, the Graf Zeppelin passed over the southern point of Newfoundland and then dodged and flew high to avoid the storms of wind and rain. The region of squalls being left behind, she turned to the south and flew low and fast across the Bay of Biscay and over France direct to her home hangar. As she was drawn to the ground the passengers crowded at the windows of the cabin. The bands at the airdrome played the German national anthem and "The Star Spangled Banner." The crowd on the ground, which had been held in check by a cordon of police, broke through and shouted their greetings to the passengers. When the door of the cabin was opened Mrs. Clara Adams of Tannersville, Pa., the only woman aboard, was standing at it. She was greeted with loud cheers.

The most interesting figure among those who crossed on the airship was Clarence Terhune, nineteen-year-old caddy of the Rye (N. Y.) Golf club, whose home is in St. Louis. He was a stowaway looking for adventure and when discovered was put to work washing dishes. But his feat excited such universal admiration that on landing he was treated with the utmost consideration, and John H. Kehl, American consul at Stuttgart, was on hand to look after his interests since he had no passport. The lad's near future seemed assured, for he received numerous lucrative offers. Earl Carroll, New York theatrical producer, cabled that he would pay Clarence's passage on the Zeppelin and his expenses back to the United States. A German movie company offered Terhune $2,500 for his appearance in one picture; the proprietor of a big Berlin dancing palace offered him the same sum if he would appear there one evening as a guest; a hotel keeper in Heidelberg offered a fortnight's hospitality free, and the Hagenback circus sought to engage the boy as a lion tamer. Until it was decided what he would do, the stowaway was taken in charge by Countess von Brandenberg-Zeppelin, daughter of the late inventor of the airship.

The Graf Zeppelin carried 101,683 pieces of mail back to Germany, for which the German postal administration was credited with $75,713 by the American postal service. The mail, weighing about one ton, consisted of 49,745 letters, and 51,938 postcards, most of which were dispatched from the New York post office.

DISTRICT ATTORNEY ASA KEYES, one of the most famous prosecutors of the Pacific coast, is in trouble. The Los Angeles county grand jury has returned an indictment charging him with "willful and corrupt misconduct in office" and has filed an "accusation" for his removal from office.

The indictment charged Keyes with conspiring with E. H. Rosenberg, Jack Rosenberg, and Jacob Berman, alias Jack Bennett, to effect their acquittal in the recent Julian Petroleum corporation stock overissue trials. In the Julian trial the trio, who were officials of the concern, and S. C. Lewis, president, and several others, were charged with conspiring to violate the state corporate securities act by overissuing the stock. Jack Bennett, shortly before the indictments in the Julian case were returned, fled to Europe. Later he returned and surrendered himself in San Francisco to Keyes, who went there to meet him. Bennett, Lewis, and their codefendants were acquitted on the conspiracy charges after a trial that lasted five months.

BECAUSE he was running for the governorship of New York, Alanson B. Houghton sent in his resignation as American ambassador to Great Britain, and it was accepted by President Coolidge in a letter that gave high praise to Mr. Houghton for his services in London and previously in Berlin. There was a report in Washington that his successor might be William Butler, former Republican national chairman and a close friend of Mr. Coolidge. Mr. Houghton became ambassador to Germany in 1922 and was transferred to England in April, 1925.

PROTESTS filed by Canadian officials have led the State department at Washington to warn American coast guard, prohibition and other armed government officers not to fire across the Canadian border in the Detroit-Windsor region. Canadian lives and property had been repeatedly endangered, said the protests, and investigation showed this was true. It was found that bullets fired by American officers had struck in three different places in Windsor and Sandwich, Ont.

Louis Cicco, who was a dry raider at Lorain, Ohio, was found guilty of assault and battery in connection with the shooting of Miss Betty Heywood of Elyria when she was riding in an automobile at which Cicco fired because he suspected it of carrying liquor.

Two prohibition agents in Georgia were acquitted by a jury in Valdosta of charges of murdering a man whom they killed while pursuing his automobile. The defense pleaded with the jurors to "strengthen the hands of the prohibition officers," and they complied.

Remotely connected with the subject of prohibition was the marriage in St. Paul, Minn., of Miss Laura Volstead, daughter of the "father of the dry law," to Carl J. Lomen of Nome, Alaska, known as the "reindeer king." The matron of honor at the wedding was Miss Mabel Willebrandt, assistant attorney general in charge of prohibition enforcement.

PRESIDENT COOLIDGE'S emergency board, named to consider the wage dispute between Western railroads and their employees, has recommended an increase of 6½ per cent in wages without changes in operating rules, or an increase of 7½ per cent and the elimination of the double header and tonnage limitations. The board further advised that, whichever of these two alternatives is accepted by the trainmen and the railroads, should be put in effect as of May 1, 1928, at which time the increase in wages for engineers and firemen went into effect.

Under the law neither side to the controversy can change the status quo until 30 days after the report of the emergency board is made public. The trainmen cannot strike or the roads declare a lockout in that period. It is the view in Washington that the alternative recommendations offer a compromise which will be accepted and that a strike that has threatened for months in Western territory is averted.

TWENTY-SIX strikers, who were found guilty of contempt in violating a Federal court injunction against picketing the Allen-A hosiery mills at Kenosha, Wis., refused to pay their fines of $100 each and last week were sent to the house of correction in Milwaukee to serve indefinite sentences. The industrial fight in Kenosha is bitter and of long standing.

GERMANY faced a grave industrial crisis, for all the iron works were closed down through a decision by the employers' federation and nearly 250,000 men were thrown out of work. The dispute arose from the men's demands for slight wage increases, which the employers turned down. The minister of labor intervened and decided in favor of an increase of 4 per cent in wages, making the employers other allowances which brought the average increased cost down to 2 per cent. The men accepted the arbitrator's decree, but the employers refused. The government declared the arbitration decree compulsory. This means that the parties refusing to abide by it are held legally responsible for all damages claimed.

AFTER five weeks of investigation the grand jury in Pittsburgh, Pa., indicted more than 250 persons as political grafters and vice concessionaires. Among the accused are two aldermen, the head of the children's service bureau, one police lieutenant and three women.

The special grand jury that has been probing crime conditions in Philadelphia presented recommendations that 21 police captains and inspectors be dismissed. Mayor Harry Mackey left a sick bed to suspend the accused men and promised a complete reorganization of the police bureau.

ONE of the extraordinary criminal cases of the time is that of George Harsh and Richard Gallogly, young students at Oglethorpe university, Georgia, who are accused of the murder of two clerks during holdups. The police said Harsh admitted firing the shots that killed the victims and said Gallogly drove the automobile used to flee the scene of the robberies. Harsh said the holdups were committed to get a "thrill," and that he shot the clerks because he wanted a "bigger kick."

UNCLE SAM'S only railroad, up in Alaska, still fails to make both ends meet. The Interior department has compiled figures which show that the road's operating deficit for the fiscal year that ended June 30 amounted to $799,095. This was just a little less than in the previous fiscal year. Total operating deficits since the government began the operation of the railroad amount to $11,224,803. Congress between 1914 and 1928 appropriated a grand total of $66,690,180 for the railroad. Problems involving the railroad will come up for discussion again at this winter's session of congress. There has been agitation for the abandonment of part of the road and the curtailment of its operation to a point which will reduce the government's losses.

ROBERT LANSING, who was secretary of state in President Wilson's cabinet during the period of American participation in the World war and during the Paris peace conference, died last week at his home in Washington at the age of sixty-four years. Since leaving the cabinet in 1920 Mr. Lansing had been engaged in the practice of international law. He entered the State department as its counselor and became secretary when William J. Bryan resigned in June, 1915. His conduct of the office met with high approval and after the war he went to France with the American peace commission. But he was never consulted by President Wilson on the subject of the League of Nations and other important matters and he disapproved of the treaty of Versailles, which fact brought about his dismissal from office.

Other deaths worthy of mention include those of Rev. R. A. Torrey, for many years a famous evangelist; Brig. Gen. J. R. Quigg, former national commander of the American Legion, and Richard Hudnut, millionaire American perfumery manufacturer, who died in France.

ELECTRIFICATION of the entire train service, passenger and freight, of the Pennsylvania railroad between New York and Wilmington, Del., has been authorized by the board of directors and announced by President Atterbury. The project as announced covers service on 325 miles of line and 1,300 miles of track, beginning at Hell Gate bridge, New York, where connection is made with New England, and extending west and south to Wilmington, west from Philadelphia on the main line in the direction of Harrisburg as far as Atglen, Pa., and the low grade freight lines which join at Columbia, Pa., and connect New York, Philadelphia and Wilmington with the West. It is estimated that the cost of this electrification will be approximately $100,000,000, to be spent during the next seven or eight years at the rate of about $15,000,000 a year.

Cattle Industry Now Recovering

Stimulus to Increased Production Seen in Increased Feed Crops.

(Prepared by the United States Department of Agriculture.)

A stimulus to increased production of hogs, cattle and dairy animals is seen by the bureau of agricultural economics, United States Department of Agriculture, in the increased feed crops this year.

Live stock producers, including dairymen, cattlemen, hog and sheep raisers, says the bureau in a report on the agricultural situation, are in relatively good shape, with the presumption that live stock prices and the prospective feed situation may stimulate increased production of animals.

Cattlemen already are beginning to enlarge their herds, the bureau reports, but some time is required to produce and raise steers, and to get heifer calves grown into milk cows. Meantime there is more or less widespread complaint among consumers over the increased prices of meat, particularly beef and veal.

Meat Price Situation.

The current meat price situation "is inevitable," says the bureau. "For six years, beginning in 1920, the cattle industry was flat on its back, with western cattlemen going bankrupt on all sides and their stock almost without market value. It is doubtful if this country ever witnessed a more acute case of distress in its agricultural industries than this depression in cattle.

"Slowly and painfully the cattle industry liquidated its surplus, reduced its breeding herds, and is recovering from its financial wounds. The consuming community was told again and again that the outcome would surely be a period of cattle scarcity and high prices. Now we are up against that period."

Abundant Feed Crops.

Discussing the crop situation, the bureau says:

"The feed crops are abundant, grain being decidedly more so than last year. Moreover, in spite of its late planting it made such rapid progress during the summer as to be fairly well matured before the first frosts. The eastern corn belt, which had almost a failure of the crop last season, has ample corn this time, whereas the southern states are estimated to have about 14 per cent less corn than last year.

"Oats are a decidedly heavier crop this season than last, the September 1 estimate indicating nearly 300,000,000 bushels more. This abundance of feed grains, coupled with a hay crop of about average size, will tend to strengthen the position of the live stock industries during the coming year."

Some recession in purchasing power of farm products in terms of other commodities is reported by the bureau, the index for August being placed at 89 as compared with 93 in June and July, the five-year period, 1909-14, being used as a base of 100.

Clean Ground

There is another side to the clean ground proposition. In order to avoid disease, farmers are putting hogs out on pasture and are thereby in some cases giving their pigs a better balanced and a better growing ration than they have had before. Forage crops of various kinds are being substituted for the sort of blue grass pasture that dries up and is of no particular benefit to the pigs in late summer.

Around the Farm

A cow must have three quarts of water for every quart of milk she produces.

* * *

The good live stock farmer shelters properly his family and his animals. Both should be comfortable at all times.

* * *

More beef breeding herds on corn belt farms, will result in a more profitable and permanent type of agriculture than is now found.

* * *

A thorough cleaning of the house and its interior fixtures is essential. Some good coal tar dip can be used effectively in this connection.

* * *

No matter whether hog cholera is known to exist or not, the farmer who raises hogs must always presume that there is a possibility of an outbreak.

* * *

The construction of expensive, elaborate poultry houses is not encouraged, but on the other hand, no farmer should construct a poultry house that is not durable and comfortable.

* * *

Light and ventilation are two essentials for contented hens and high egg production. There should be plenty of window space in the front of the house, so that the sunlight will strike all corners of the floor.

* * *

Prior to lambing the ewe should be placed in a small pen and left there until the lamb is quite strong. On the other hand, if they are allowed to lamb with the flock it is almost impossible to give them the necessary attention and serious losses will often result.

Book Farming Gives Most Satisfaction

Tells Story of Year's Work in Dollars and Cents.

We used to have a good deal of fun at the expense of the book farmer. Some book farmers have the laugh on the rest of us, however. The boys who at the end of the year can turn to their farm account books and show the figures, black and white, which tell the financial story of the year's work, accomplishments, profits and losses, are the ones who really know "where they are at." The keeping of adequate farm accounts requires but a few hours' work during the year. It is not half such a chore as it might seem. No piece of work during the year will give you so much return in satisfaction, in real information about your own business, in checks and balances on what you are doing with your time and energy, as a simple but complete story in figures, in dollars and cents, in hours of work and yields of acres found in your farm account book, says the Illinois Farmer.

January is the best time to open such a book, if you do not already keep one. Farmers who do not are in the majority. Now you have time to take a simple inventory of what you have and what you owe, and to make the start toward farm bookkeeping. You don't need to operate a set of double entry books to have an adequate farm accounting system but you do need a better information file than your memory. Our state college of agriculture will give you all sorts of helpful suggestions for the asking, and most anyone can follow the simple rules laid down in any good farm account book. Once started, you will find a lot of interest in keeping up the entries and balancing your business at the end of the year. No other business but farming would even try to get along without an accounting system, and, in fact, the farming business has not done so very well without it.

Prune Gooseberry Bush for Health and Yield

Too little pruning done during the dormant season last fall was responsible for the poor yields from healthy gooseberry bushes, about which considerable complaint was made this past season, according to Dr. A. S Colby of the University of Illinois. Growers therefore should not hesitate to prune heavily in their small fruit plantations this fall, removing the oldest canes of currants and gooseberries and some of the strong as well as all of the weak canes of the brambles. The laterals also should be cut back about one-half on raspberry and blackberry bushes, he added.

"This is the best time to prepare the bush fruits and brambles for the winter. Pruning small fruits in the dormant season is generally recommended, partly because of the time available when other work is not so pressing. The earlier it is done the better, because insects, such as tree crickets and cane borers, and diseases, like anthracnose, crown gall and cane blight, are controlled more satisfactorily by early removal of infested wood.

Fall Fertilizing Best Practice for Hay Land

Why not apply a top dressing of phosphate or potash mixtures to hay lands this fall?

Many farmers are finding it a practice that pays.

New seedlings respond well to fall application of these mixtures, although in a general soil building program it is usually considered best to apply them in the spring at seeding, according to C. J. Chapman, of the soils department at the Wisconsin College of Agriculture.

Chapman points out that this late application, which may be made any time between harvest and frost, has two distinct advantages. It stimulates fall growth and, at the same time, becomes more thoroughly incorporated with the surface soil in advance of the growing season.

Animals Susceptible to Anthrax Disease

All farm animals, with the exception of poultry, are susceptible to anthrax and man himself is not exempt. There are districts where the germ is in the soil, and there always is danger. For reasons unknown, anthrax may be more prevalent one year than another.

The germs are present in enormous numbers in all parts of the body of animals dying with the disease. All carcasses should be destroyed by burning or should be buried deeply without cutting into them. Sudden deaths among live stock in anthrax districts always should prompt the suspicion that this disease was the cause. Vaccination usually is a successful means of prevention.

Increased Production

The recent wheat harvest has well illustrated the fact that lower costs of production are secured where higher yields are obtained. Investigational data collected in many states over a number of years show conclusively that the most important factor affecting the cost per bushel is the yield per acre, and within reasonable limits, the higher the yield per acre the lower the cost per bushel. As a consequence, those practices are of outstanding significance.

A Modern "Magnificent Adventure"

EUGENE WRIGHT

UP BARITO RIVER INTO PYGMYLAND

USING THE DEADLY BLOW PIPE

BORNEO HEAD HUNTERS

By ELMO SCOTT WATSON

NCE upon a time two young Americans—William Clark and Meriwether Lewis were their names—set out upon an expedition into the wilderness of the Great West. After being gone nearly two years, during which they had traveled more than 4,000 miles over a country unmapped, unknown, and a land filled with many ks, they returned to thrill a nation which had but given them up for lost. And of that edition a famous American writer wrote a el which he called "The Magnificent Adven-

ewis and Clark's "magnificent adventure" took e more than a hundred years ago. Since that e the American wilderness has been conquered there remains in it few, if any, spots which white man has not trod. What is true of erica is almost equally true of the rest of the ld for the restlessness and adventure-seeking irit of the Caucasian has driven him on and on il there are few places on earth into which has not penetrated. This does not mean, how-r, that, even in this modern day when it would m that our so-called civilization has spread ywhere, there are no bits of terra incognita ich lie far from the beaten paths and which offer chances for dangerous adventure to e afflicted with the "itching foot." Witness case of a young American, the lone hero of odern "magnificent adventure," who has told romantic story of his wanderings "out back beyond" in a new book, "The Great Horn on," published recently by the Bobbs-Merrill mpany.

ugene Wright is his name, twenty-four years age, and he was a student at Columbia uni-sity until one day when

The odors of cinnamon and cloves from Ceylon ted from a musty doorway; farther on, the ong aroma of Brazilian coffee filled my nostrils. e tumbling, reckless life and rich smells of the ter-front mingled with the clank and thunder trucks and drays in one strenuous cheer of roval of my search for a ship that would carry away

crossed one side street, leaped across another. e smelly clothes of the Jewish wholesalers shed my shoulders and the rollicking bodies of roes, horse-playing with their work, lurched eat me like trees in a flood. Along these streets, ewer, were shipping bureaus—little one-room ms in the second stories of warehouses with ckboards set out in front. Once I had seen ed an ad for a pearl-diver; and several times I noticed seamen's jobs on coastwise schooners. ad never been to sea as a sailor, but I had ted to travel that way since childhood and felt t I could do anything aboard a ship. Ah, if I ld only find an ordinary seaman's job on an a-bound cargo steamer!

already had a seaman's passport. One Satur-when I thought I could stand college no er, I had slipped down to the Battery and one out. And now the time had come to go. left college, birds were flying north, ships alling east and the whole wide world was g me to come and see. I wanted to go to . . . Borneo . . . Persia . . . to the lands whose names I knew so well, to all eas that washed their shores. I had to get r immediately, for I felt that if I stayed in York another day I would turn into stone.

he got away. By a combination of good and the magnificent type of sheer bluff char-atic of young Americans he secured an B. ticket" (certificate of able seamanship) got a berth on the S. S. Hyacinth bound for

venture beckoned over the horizon, but when pproached close to it, it welcomed him with nace breath.

r five days and five nights the Red sea held us ing with its heat. The day men, working be-th awnings, shook themselves like wet dogs, the sweat sizzled on the deck. I wore a huge of shoes insulated inside with newspapers, I could not stand on one spot very long with-extreme discomfort. The heat waves arose the decks in a haze, making the entire for-d part of the ship look as if I were seeing it gh a pane of cheap glass.

riving at Ceylon, the bos'n issued the edict "No shore leave for nobody!" whereupon t, watching his chance, got overboard, hired ive boatman paddling nearby to take him ore and he spent two gorgeous days in the bazaars of Colombo and amid the exquisite al beauties of Kandy, where once Sinbad d. But he paid for his holiday, for the furi-bos'n piled work on him until he all but ed from exhaustion. Although he had ed to take French leave at some Indian port was a crooked idea, but if anything's fair in and war it was justifiable; for life on the inth was both!") he was relieved of the lty for doing that by a stroke of luck. An received in the line of duty resulted in being paid off and left in a hospital in Cal-. After 16 days in the hospital, he read in a paper of a man-eating tiger that had been olizing the countryside near Diamond Harbor, 60 miles from Calcutta. So the young Amer-immediately hied himself for Diamond Har-where he hired a dhow and a crew of two and set off up the Hugli river in search of a eating tiger. More than that, he found one, this youth of twenty-four years who had before hunted one of the most dangerous animals in the world. One night when the dhow was tied up to the shore, Wright sat watching with his rifle across his knee.

Suddenly the moon came out and I saw the head and shoulders of an enormous tiger crouched at the water's edge. I was chilled with fright. The gun seemed no larger and of no more use than a burned match; the eighteen-odd feet between me and that massive head shrank to a face-to-face meeting; and the eyes, which now glowed in ever-enlarging circles, held a hypnotism that turned me into an agony of rigid flesh. I might have awakened Mohammed. I might have cut the mooring rope and pushed out into the lagoon; but I was too frightened to release a muscle; frightened lest the tiger, in one tremendous leap, should fall upon the the dhow and rip me to pieces.

It seemed hours before my courage returned. My fingers tightened upon the gun, my forefinger felt the trigger. Suddenly I became as cool and steady as if I were about to shoot a rabbit. I cocked both hammers noiselessly, drew a bead and fired between the two eyes.

A tremendous roar and splash stunned me. Automatically I had reloaded, and I again emptied both barrels into the frenzied mass of boiling water and roaring tiger. You have no idea of the terror in a tiger's roar. It drags the blood from one's veins by the quart, and seems to dislocate every bone in one's body. It is volcanic, immense and utterly devastating to all that lives. It was the roar of a tiger, I am convinced, that announced the creation of hell. Before I could reload a third time he had disappeared into the darkness with long crashing bounds and I was left quivering with hair-trigger excitement.

And the next day they took up the trail of the tiger and deep in the jungle found him dead. Then with the praises of the natives for having delivered them from this terror ringing in his ears, the young American returned to Calcutta, there to get mixed up in a lively little religious riot between the fanatic Moslems and the equally fanatic Hindus. Escaping with his life from that, he investigated the swarming streets of Calcutta in the blazing sun until a sudden and unexpected collapse sent him to the hospital for nine days with the dengue fever. During the heat wave that had struck him down, fever and disease ran riot through the city and four hundred natives died every week. But some Providence pulled the young American through and as soon as he was able to stagger away from the hospital, he took ship for Rangoon, where he "wandered around the Chinese quarter looking for trouble," and, failing to find it, went on to Singapore, "city of blood and pearls."

All afternoon I honeycombed the town, running into weddings, quarrels, gaudy funerals, and all manner of activities typical of Chinese life. One beautiful funeral stretched through the winding streets for blocks. Some of the men were dressed in stiff collars and straw hats, all were having a wonderful holiday and a discordant brass band played "There'll Be a Hot Time in the Old Town Tonight." I followed the procession for an hour, but it went around and around the town, getting nowhere.

But though he nearly died of exposure and fever on the beautiful island of Flores, the big thrill of his life was still ahead. That came when he arrived in Borneo, "the darkest jungle on the face of the earth." There, with the aid of the Dutch governor, he outfitted an expedition, which was to take him past Poeroek-Tjahoe, the most remote outpost in Borneo, up the Barito river into the land of the Poonyaboong, who "eat snakes, drink blood for strength and take heads for strength," the "last of the wild men of Borneo." En route to this forbidden land he visited a demented chief who possessed fabulous wealth in diamonds that he had got from the whirlpools of the Barito and he saw those diamonds—a dozen or more, "round, perfectly smooth—ground smooth by thousands of years of swirling in the whirlpool pots at the bottom of the river. The largest of them was the size of a dime; it was invisible when dropped into a cup of water."

After a series of adventures in which his life was in constant danger from the rapids in the river, from crocodiles and a dozen other forms of deadly animal, reptile and insect life in the jungle, the party reached the territory of the fierce and head-hunting Undaoems. As they penetrated deeper into the jungle, the booming of witch drums told them that they had been discovered and they were about to be attacked. After a nerve-racking period of suspense, the attack came—poisoned darts shot at them from blow-guns which laid one of the party low. But though three sang close to the young American, by some miracle he escaped unharmed and his followers beat off the attack and continued on to their goal.

At last they arrived in a Poonyaboong village and the young adventurer was successful in making friends with these head-hunting pygmies, who honored him by allowing him to attend one of their blood-chilling war dances and as a final honor invited him and his party into a long room, from the rafters of which hung nine human heads. There they sat silently for hours while Wright's party squirmed uneasily, not knowing whether their silence meant good or ill.

Then a thought, vague at first, took shape within my brain. I knew that I had solved the mystery of the silence: the Poonyaboongs believed that each of the heads above them was giving out the strength of a man and they were gathered together in the long room to absorb that strength. As a sign of friendliness, the greatest honor and compliment he could bestow, the chief had asked me and my men to sit within his long room and become stronger. I, squatting within the long room of the Poonyaboong chief, absorbing the departing strength of nine heads! I, a white man, sharing the strange superstition which prompted the taking of those nine heads! It was almost unbelievable! It was the weirdest experience that I had ever undergone, and I sat quietly, tingling with excitement until long after midnight, when the chief arose, and we trooped silently out of the hut.

That, combined with other experiences among the Poonyaboongs, was undoubtedly the high point of the thrills which Wright experienced in his travels, although the rest of his stay in the Orient was far from being a life of ennui. Off the coast of India a fierce man-eating shark attacked the dhow in which he was riding and, gripping the keel in its teeth, almost upset the heavily laden boat. On the Gulf of Oman, a simal (sand storm), blowing off the Arabian desert, struck Wright and his boatmen and almost smothered them, finally filling the craft so full of sand that it began to sink. Fortunately they were near the shore and were able to wade to land, but soon afterwards they were captured by a party of Arabs and carried away to the sheik's lair far into the desert. After twelve days' captivity, Wright overpowered his guard and escaped on his horse.

There were other and more amusing adventures in the ancient city of Lar in Persia, in Shiraz, in Persepolis, in Kazerun and in Bagdad. Babylon and the Golden Domes of Kadhimein lured him, but

I could not bring myself to visit them. All that I had had so far, I had won. Borneo I had won, Oman I had won. Flores, Persia and the Cave of Shapur I had won. They were mine forever; and no matter how many people saw them hereafter, they would always be mine; for I had suffered with them, I had given myself to them. Each hardship, each pain, had bound them up with the vitality of life.

So he took ship for home. The modern "magnificent adventure" was ended.

It's only the brilliant sayings of the first baby that go on record.

The Damage Suit

"How did you feel when the court awarded you $50,000 for your injuries?"

"I was so happy I threw away my crutches."

Indian Superstitions

Many Indian tribes held that animals and plants were animated by spirits. They regarded certain of these spirits as powerful and active. Among their elemental gods were the sun, fire and water. The buffalo, eagle and rattlesnake were worshiped. Among plants, cedar, cottonwood, corn and tobacco were venerated.

Make More Money This Easy Way

A Few Cents Invested in "Dandelion Butter Color" Will Put Dollars in Your Pocket.

Top prices for your butter are possible the year 'round with the help of "Dandelion Butter Color." Put in just a half-teaspoonful for each gallon of cream before churning and out comes butter of that Golden June Shade. It's purely vegetable, wholesome and meets all State and National Food Laws. All large creameries use it to keep their product uniform. It's tasteless and doesn't color buttermilk. Large bottles cost only 35 cents at all drug or grocery stores. Write for FREE SAMPLE. Wells and Richardson Co., Inc., Burlington, Vermont.

Easy Come—Easy Go

She—Lucius, I cannot be betrothed to you any longer.

He (with a superior manner)—Well, there are others.

She—Yes, I know. I've just become engaged to one of the others.

The Easiest Way to Keep in Style

By MAE MARTIN

No woman would wear dresses, or blouses, or stockings of a color that's decidedly out of style or faded, if all of us knew how easy it is to make things fresh, crisp and stylish by the quick magic of home tinting or dyeing.

Anybody can tint or dye successfully with true, fadeless Diamond Dyes. Tinting with them is as easy as bluing, and dyeing takes just a little longer. New, stylish colors appear like magic, right over the old, faded colors. Diamond Dyes never spot, streak or run. They are real dyes, like those used when the cloth was made. Insist on them and save disappointment.

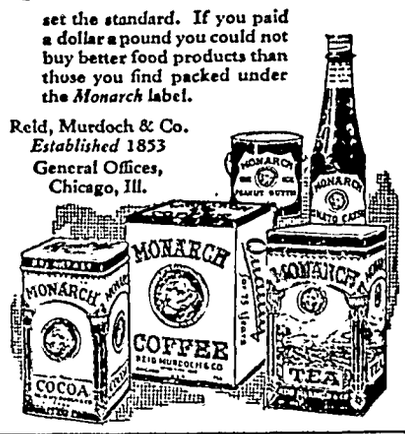
My new 64-page illustrated book, "Color Craft," gives hundreds of money-saving hints for renewing clothes and draperies. It's Free. Write for it now, to Mae Martin, Dept. D-143, Diamond Dyes, Burlington, Vermont.

If some men felt as bad as they really are, it would be useless to call in a doctor.

MONARCH
QUALITY FOOD PRODUCTS

set the standard. If you paid a dollar a pound you could not buy better food products than those you find packed under the *Monarch* label.

Reid, Murdoch & Co.
Established 1853
General Offices,
Chicago, Ill.



Seeking publicity means that you may have to accept some pretty rough stuff.

Experience is a dear teacher, but inexperience is a dearer.

A Sour Stomach

In the same time it takes a dose of soda to bring a little temporary relief of gas and sour stomach, Phillips Milk of Magnesia has acidity completely checked, and the digestive organs all tranquilized. Once you have tried this form of relief you will cease to worry about your diet and experience a new freedom in eating.

This pleasant preparation is just as good for children, too. Use it whenever coated tongue or fetid breath signals need of a sweetener. Physicians will tell you that every spoonful of Phillips Milk of Magnesia neutralizes many times its volume in acid. Get the genuine, the name Phillips is important. Imitations do not act the same!

PHILLIPS Milk of Magnesia

IF MOTHERS ONLY KNEW

During these days how many children are complaining of Headache, Feverishness, Stomach Troubles and Irregular Bowels and take cold easily. If mothers only knew what Mother Gray's Sweet Powders would do for their children, no family would ever be without them for use when needed. These powders are so easy and pleasant to take and so effective in their action that mothers who once use them gladly tell others about them. Save yourself a night of worry, by getting a package at your druggist today. Trial Package sent FREE. Address Mother Gray Co., Le Roy, N. Y.

Bees are not so wise; they almost invariably sting without reason.

SCHOOLGIRLS NEED HEALTH

Daughter of Mrs. Catherine Lamuth
Box 72, Mohawk, Michigan

"After my daughter grew into womanhood she began to feel rundown and weak and a friend asked me to get her your medicine. She took Lydia E. Pinkham's Vegetable Compound and Lydia E. Pinkham's Herb Medicine. Her nerves are better, her appetite is good, she is in good spirits and able to work every day. We recommend the Vegetable Compound to other girls and to their mothers."—*Mrs. Catherine Lamuth.*

Daughter of Mrs. Eva Wood Howe
1006 South H. Street, Danville, Ill.

"I praise Lydia E. Pinkham's Vegetable Compound for what it has done for my fourteen-year-old daughter as well as for me. It has helped her growth and her nerves and she has a good appetite now and sleeps well. She has gone to school every day since beginning the medicine. I will continue to give it to her at regular intervals and will recommend it to other mothers who have daughters with similar troubles."—*Mrs. Eva Wood Howe.*

Lydia E. Pinkham's Vegetable Compound

Lydia E. Pinkham Medicine Co., Lynn, Mass.

New models and THE OPEN MIND

THE public, with its healthy desire for the new and the better, insists upon continuous improvement, and will withdraw its patronage from any product or service which stands still.

Nowhere is this more true than in the automobile industry. The car is more than a utility. It is a *personal* thing, involving your convenience, your comfort, your safety, your sense of beauty and color, your pride of ownership, your complete environment for many hours of your life. Customs and habits of living change fast; and the past holds many warnings of how quickly your favor can shift when an automobile, for even a single year, fails to show progress.

So continuous improvement is more than a policy with General Motors. It is a vital necessity.

THE PUBLIC DEMANDS NEW MODELS

And the public is right. Out of that demand have come electric starting and lighting, the closed body, Duco finish, four-wheel brakes and hundreds of refinements, big and little. Improvements that might have taken a generation have been born within a few years because people want greater performance, beauty and comfort.

Equipped with the largest research laboratories, proving ground and body building plants, and guided by an Open Mind which is ready to revise its thinking in response to new facts, General Motors believes that it is peculiarly fitted not only to sense but to anticipate public demand and to give the people better automobiles at better values year after year.

As evidence of that faith we presented some months ago the New Chevrolet, the New Pontiac, the New Oldsmobile And now we offer, with equal pride, the New Buick, the New Cadillac, the New LaSalle and the New Oakland.

CHEVROLET. 7 Bigger and Better models, $495 to $715. 4-wheel brakes. More powerful engine. Luxurious Fisher Bodies. New colors. *Also* Light Delivery Truck chassis; $375; Utility Truck chassis with 4 speeds forward, $520.

PONTIAC. 7 models, $745 to $875. Lowest priced General Motors Six—now offers more power, greater economy—more speed, greater acceleration. Arresting beauty of bodies by Fisher expresses the vogue of the hour.

OLDSMOBILE. 7 models, $925 to $1085. Also 5 DeLuxe models, $1145 to $1235. "The fine Car at Low Price." Completely redesigned and improved by General Motors. More powerful. 4-wheel brakes. Longer, roomier Fisher Bodies.

OAKLAND. 7 models of the new All American Six, recently announced, $1145 to $1375. Distinctively new original appearance. Splendid new performance. Luxurious appointments, in new bodies by Fisher. A car you'll be proud to own.

BUICK. 18 Silver Anniversary models on 3 wheel-bases. $1195 to $2145. Lightning flash getaway. Masterpiece Bodies by Fisher. Comfort and luxury in every mile. Power for the steepest hill and the longest run.

LASALLE. 13 new models, $2295 to $2875. Attractive car of Continental lines. Companion car to Cadillac. 90 degree V-type 8-cylinder engine. Beautiful Bodies by Fisher. Striking Duco color combinations.

CADILLAC. 26 models, $3295 to $7000. Standard of the world. Famous 90 degree V-type 8 cylinder engine. Luxurious Bodies by Fisher and Fleetwood. An extensive range of color and upholstery combinations.

Again we find some new name son this list of High Cream Checks. That's fi lets have more new names on the next big list we publish. Keep it up fellows!

Dairying is the main stay of this country, it produces greater profits, keeps yo land in a high state of cultivation and is the means of enabling you to meet your c rent bills promptly (as we issue cream checks every other week) and enables you to aside the money received from the sale of your hogs or cattle to either reduce your debtedness or build up a bank account. But that's only one of the many good featu of dairying, and selling your product to a good up to date creamery.

A creamery in your community keeps up the prices on your dairy products. A the farmer who lives in a comunity which does not have a creamery and ask him wh he gets for crema. Therefore, isn't it thebest policy, and good business, to patroni your home creamery? Build up the institution that enables you to receive the ve top prices for your dairy products rather than some corporation in which you have interest. We thank you for your loyal co-operation and patronage, farmers!

Firestone's Announcement--

Tire Prices Reduced!

New LOW PRICE Now Effective

The Firestone Tire & Rubber Co., pioneers in the Rubber Industry have done much to bring about lower prices on rubber. Effective November 1st the English Government removed the Stevenson Restriction Act and immediately there occurred a sudden drop in the crude rubber market. Immediately the Firestone Tire & Rubber Co. reduced prices on Tires and Tubes and you can now take advantage of these new, low prices at our garage. These new prices will give yougreater values by comparison and more miles per dollar than you have ever before received. These new, low prices are effective on the entire line of Firestone Tires and we want you to come in and see the most wonderful tire values ever before offered. When you buy a FIRESTONE you buy the "most miles per dollar." If you need new tires, now is the time to buy.

NEARBY AND YONDER

By T. T. Maxey

Pier Six

PIER SIX, at the Bush Terminal, in Brooklyn, New York, is said to be the largest pier in the world—being 210 feet wide, 1,250 feet long and double-decked. It has fourteen acres of floor space and a carrying capacity of 500 pounds to the square foot or considerably more than 1,000,000 tons—the equivalent of upwards of 5,000 freight cars of 40,000 pounds capacity each.

A portion of this record-breaking pier rests on land, but the outer end juts out over the waters of the Bay of New York. This latter section rests on piling which were driven down to bed rock which at this point is 70 feet below the surface of the water or 30 feet below the bottom of the bay. This pier was constructed in 1909 and would cost, to reproduce today, about $2,500,000.

Six steamships, each of 14,000 tons displacement, can berth and discharge their inbound or take on their outbound cargoes at one and the same time without crowding this pier, while freight arriving at the pier for outbound shipment, by truck, by rail or by lighter also can be accommodated at the same time.

The interior of this enormous freight warehouse somewhat resembles a giant curiosity shop, since its holdings may include anything and everything from hair nets and needles to elephants and portable houses that ocean-going steamships may be called upon to transport from one world port to another.

* * *

St. Marks in-the-Bouwerie

ST. MARKS in-the-Bouwerie is, undeniably, one of the outstanding land-marks of early New York city. It also is one of the few old-time churches remaining in that city which still occupies the site originally selected and dedicated for worship, while the site is said to be the oldest now so occupied. The church is unique. So is its history.

Petros Stuyvesant, the last of the seven Dutch governors, was a picturesque character in early New York history. He had a bouwerie—suburban home with a garden. Bowery village was laid out on his ground. In it he built a chapel. He died in 1672. His wife gave it to the Dutch church. Subsequently Trinity church became interested. Now it appears to be a Dutch church with an Episcopal service—a decidedly unusual religious combination.

The present structure quaintly reminds one of ancient days. The cornerstone was put down in 1795. Stuyvesant's tomb forms one of the foundation stones. Its venerable walls are overhung with ivy and aged trees spread their branches over the graves in the side yards. An old-fashioned scraper for removing mud from the boots of worshipers attracts attention as one enters. The interior is restful to an extreme, rich in colorful windows and memorial tablets. A high iron fence separates the church from the adjoining thoroughfares.

The co-operation of the clergy with enlightened physicians has brought about a neighboring soul-and-body clinic where ills of many sorts are treated through a sympathetic blending of science and religion.

* * *

A Block of Sorrow

DOWN in "Little Old New York" there are many triangular-shaped blocks of varying sizes. Most of them never amounted to very much. That is to say, history-making episodes usually occurred elsewhere. A few, however, have felt the gesture of the magic wand of Fate and played prominent or peculiar roles in the drama of time.

Among the latter is that small, three-cornered block bounded by Sixth avenue, Tenth street and Greenwich street. Its roll has been to act as home base for the Jefferson Market police court and the Jefferson Market jail—the "Twin Houses of Sorrow," for the past six decades.

Here it was, in 1907, that the first night court in America convened to act on a docket covering nothing but vile acts of human beings. Here it was too this night court became the first court to deal exclusively with infractions of law committed by women. Here it was also that this night court was transformed into a day court for women.

These innovations in court practice attracted world-wide attention. Students of crime and reform, educators and others flocked in from every point of the compass to observe the proceedings and study the results. Many notable criminals have heard their sentences pronounced here. As many as five hundred "rough customers" are said to have been arraigned on a single night.

Thus it came to pass that this particular little block has been privileged to be the scene of that which, in its day has the reputation of being the most colorful court in the world.

How They Welcomed Peace

Ten years ago, November 11, most of the civilized world forgot all other emotion except an unbounded joy at the news that an armistice had been declared in the World war. Photograph shows an informal parade gotten up by members of an American division at Bar-le-Duc, France, with the aid of the inhabitants of the town, upon receipt of the news.

Armistice day, a veteran of the World war relates, found my division in rest billets at Bar-le-Duc, with my regiment in a little village in the Vosage mountains, south of Verdun, which went under the magnificent name of Grand.

First official news that the armistice had been signed was received by the mayor of this little French village and the news was quickly spread, so that all the inhabitants, consisting particularly of women and old men, were on the village streets within a few minutes.

The men of my regiment were quickly notified and almost mobbed by the happy French people, the women, in particular, expressing their joy by hugging and kissing the American soldiers. Our own regimental band played the French and American national anthems and the French people danced and sang up and down the streets waving French and American flags which they secured from some unknown place.

The mayor of the village invited the officers of my regiment to drink to victory with him and all of us adjourned to the ever-present cafe, where he set up champagne in an inexhaustible supply, to which the American soldiers did full credit. The celebration continued long into the night and really lasted for several days thereafter.

A member of the division took the snapshot of the scene reproduced here.

Ten Years Ago at the Front

A decade ago Second division troops of the A. E. F. left a French rest camp for the Belleau wood battlefront to help resist a German offensive.

The former doughboys and leathernecks in that World war outfit held their annual reunion festivities at St. Louis last June.

Led by Col. Hanford McNider, presiden of the Second Division association, a half-dozen generals, 100 or so colonels and majors and several thousand "top kicks," "second looles," corporals and privates, were present or accounted for when the operation got under way.

Much can be obliterated from memory in ten years, but it is doubtful if any of the Second division will have forgotten that daybreak a decade ago when the long convoy chugged out of the rest area near Chaumont-en-Vexin with themselves aboard.

Few but the officers who had seen the orders knew whither they were headed. Vague reports of the German success at Chemin-des-Dames had been heard, but the officers and men did not comprehend the gravity of the situation. For the second time in four years the German high command was throwing its gray-clad troops toward Paris, and all the Allied strength had been unable to stop them.

The Second division started out in gay fashion. The men cheered, sang and yelled. Then the convoy came closer to the front. They passed a long line of refugees and the singing and cheering stopped. The spectacle of those thousands of terrified people, fleeing desperately from their homes, gave the men their first profound understanding of the horrors of war.

Inferno of War.

At Meaux the confusion was terrific. The city was choked with refugees, wounded men, troops and trains of every description.

North of Meaux the troops were debussed. The Ninth infantry started immediately on a forced march to the line and the other regiments bivouacked for the night. German bombing planes made frequent visits over the camp and there was little sleep. At daybreak, June 1, the infantry and marine regiments marched toward Montreuil-aux-Lions, reaching positions in the rear of the line through Boneuil Vaux, Boresches and Belleau woods that night, with nothing but a thin line of heroic French soldiers between them and the enemy.

Road to Paris Blocked.

June 1 the infantry began to block the Paris highway, and the next day all the infantry of the division was in line, with the Ninth on the right and the Marine brigade in the center. The Third infantry, one battalion of marines and the Fifth machine-gun battalion had been thrown along the line through Veuilly, Premont and Coulombs to re-establish liaison between two French corps which were resisting the Germans at this point.

Scattered French units still were holding the line. They had been engaged for six days, with little rest and no rest. The nights of June 1 they were relieved and passed through the American lines.

June 4 the Second division was holding a 12-kilometer front, with its reserves between it and the Marne. It had crushed one enemy attack near Veuilly.

The first of a series of small, but difficult advances began June 6. From then until June 25 the fighting, particularly on the front of the Marine brigade, was most desperate. Division after division was thrown into the line by the German command in an effort to shatter the American lines between Vaux and Torchy. The marines ground their way slowly but steadily through the Bois-de-Belleau, and June 25, in a final brilliant dash, killed and captured the last Germans in the region. In recognition of the marines' heroic work the French changed the name of the woods to Bois de la Brigade Marine.

Morale Unshaken.

In the meantime the Third brigade had been holding its part of the line, its morale unshaken by the constant and terrific shelling to which it was subjected. This outfit, like the marines, had no other cover than the shallow "fox holes" dug in the early part of June, and no food except "monkey meat" and the one cooked meal of the day which came up at midnight. By July 1 the brigade had captured Vaux and the Bois de la Roche.

July 9 the division was relieved by the Twenty-sixth, taking up a reserve position along the line Montreuil-

A Hot Corner in the Woods.

Aulde. It had been in the line 40 days. In that time ten German divisions had been faced, from which had been captured 1,680 prisoners. Not only had the Second stopped the German drive on Paris in that sector, but it had advanced to an average depth of two kilometers on a front of eight kilometers. The losses totaled 9,13[illegible] but the Second division had demonstrated to the world that the American soldier had "arrived."

Remembrance

The hour has struck; the smoking guns
  Are sullen, still. We dully wonder
Why the ensuing silence stuns
  Our ears, long used to battle thunder.
We see charred splinters that were trees
  In ravaged, shell-torn earth, blood-spattered
And know that we are kin to these—
  Our lives, our hopes, our bodies shattered.

. . . . .

Ten years have passed; the scars of war,
  Though cruel, deep, are slowly healing;
Grain ripens where it did before,
  New furrows gun-plowed earth concealing.
Men follow little gods, nor crave
  Fine frenzy, high emprise, devotion;
Perhaps forget the boys who gave
  Their all; who sleep beyond the ocean.

Thank God, this day is set aside
  For reverent commemoration;
For us to know a grateful pride
  And find a deeper consecration.
Our comrades of those gallant days
  Who shared the conflict, grim and gory,
Need not our homage nor our praise—
  They are, themselves, the greater glory!

Strong Ones of Earth

There are the strong ones of the earth, the mighty food for good or evil—those who knew how to keep silence when it is a pain and a grief to them; those who give time to their own souls to wax strong against temptation, or to the powers of wrath to stamp upon them their withering passage.—Emerson.

...DERAL BUREAU ...IDS MOTORISTS

...re Efficient Fuels and Less Expensive Engines Being Studied.

...otorists throughout the entire ...ld are daily beneficiaries of the ...rvelous automotive laboratories of ...de Sam's great bureau of standards ... Washington, according to Charles ... Hayes, president of the Chicago ...tor club, who has just received a ...ent digest of the bureau's activities ... behalf of motordom through na...al headquarters of the American ...tomobile association.

"Take fuels, for example," points ... Mr. Hayes. "Here is a field of re...arch of tremendous importance to ...ery user of an automobile. Through ...ars of experimentation, the bureau's ...entists have built up a body of ...owledge which has proved of ines...mable value to the petroleum in...stry, and, consequently to the mo...rist. More efficient fuels, and more ...onomical engines, are just single in...nces of the great constructive work ...nstantly being pushed forward at ...e bureau."

Examining into the details of the ...reau's accomplishments during the ...t few years, Mr. Hayes declares ...is governmental agency has made ...onumental contributions to the cause ... safer motoring."

Most Exhaustive Tests.

"It has done this," he points out, "by conducting tests which have proved ...st methods in braking, of brake ma...rials, and of general construction." ...ese tests, he shows, have been of a ...st exhaustive character. "Nothing," ... declares, "has been allowed to ...nd in the way of their successful ...mpletion.

"In every direction, and in every ...ceivable phase of motor engineer...ing, the bureau has interested itself to ...ing about improvement. Naturally, ... this work the bureau has had the ...llest co operation of the automotive ...dustry itself and of organized mo...rdom as represented in the American ...tomobile association, of which we ...e proud to be a part.

"For that reason, the bureau has ...eant increasingly much to all those ...ho own or drive motor cars."

...rade Crossing Warning Issued by Detroit Club

"Owing to the increase of the num...er of automobiles in use, the hazard ...om grade crossings is annually be...oming greater," says C. B. Van Du...n, president of the Detroit Automo...le club.

"In 1926 there were 5,021 highway ...rade-crossing accidents in which 3,...2 persons were killed and 1,300 in...red by driving into the sides of ...rains at grade crossings.

"Only through the co-operation of ...e public and the railroads," says Mr. ...an Dusen, "can a reduction in such ...cidents be brought about, in view of ...e fact that the complete elimination ...f highway grade crossings is almost ...mpossible."

He urges all motorists to make sure ...at the way is clear before driving ...to a railroad track.

...en Different Kinds of Trouble in Weak Spark

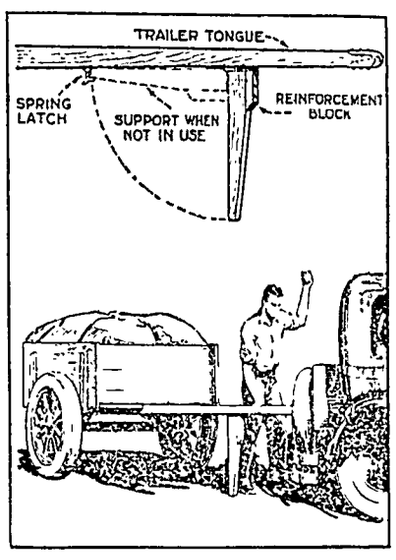
A weak spark or defective coil is ...e cause of at least ten different ...inds of trouble: (1) fouling of ...ark plugs; (2) lazy engines; (3) ...low getaway; (4) loss of power; (5) ...ccumulation of carbon in cylinders ...d valves; (6) slow combustion, re...ulting in loss of mileage and over...eating of engine; (7) hard-starting ...gines; (8) burning of valves and ...arping of valve-stems; (9) engine ...lissing on hard pulls, and cutting ...t at high speeds; (10) incomplete ...mbustion, the gas getting into the ...rank case and diluting the oil, with ...cessive wear and depreciation of ...istons, cylinder walls and bearings.

Study Danger of Gas

For the purpose of furnishing the ...ublic with authentic information con...erning the subject of automobile ex...aust gases and the danger or lack ...f danger resulting from the pollution ...f the atmosphere with such gases, a ...oint committee has been formed to ...ncourage research and investigation ...oward the reduction of the amount ...f carbon monoxide formed in auto...obile operation and to attempt to ...liminate this entirely if possible

Support Necessary for Tongue of Trailer Car

Any motorist who occasionally makes use of a two-wheeled trailer has undoubtedly experienced difficulty in handling it, owing to the necessity of dropping the trailer tongue on the ground, or finding some support for it, which is not always available. Here is a good solution for the difficulty. Simply make a support from a length of 2 by 4-inch hardwood and a small reinforcement block of the same stock.



Hardwood Support for the Trailer Tongue Is a Help to the Motorist.

Hinge the support to the tongue with a strap hinge placed on the side toward the trailer, as shown, so that, when not in use, the support can be swung back and held in place by a spring latch. There is little or no danger of the support falling down when the trailer is towed, but even if it should, no damage would be done, as it would swing back and drag.—Popular Science Magazine.

Greater Steering Ease Has Been Made Gradually

"Greater steering ease," is an expression often heard in connection with modern motor cars. The fact that the approach to this improvement has been gradual suggests that there are limitations upon progress in this direction. Oscar Coolican, a Washington automobile dealer, declares that if the engineer's problem was merely to make turning the front wheels effortless, it would be simple in the extreme. "But," says Mr. Coolican, "the problem is rather to make steering as nearly effortless as possible without making the front end of the car so sensitive to road and other variations as to make the driver expend more energy to keep it going straight ahead than he now does in turning.

AUTOMOBILE ITEMS

Frequent inspection of spark plugs means infrequent engine knocks.

* * *

"Wait for the Wagon," will not be a popular song with the speeders any more.

* * *

Avoid sudden stops, quick starts, jerks and skidding. They are hard on the springs and tires.

* * *

Education in safety and accident prevention is called an essential course in all schools.

* * *

If it is true that a mule was bumped off the road by an automobile, it would appear to have been a head-on collision.

* * *

A car whose direction cannot be controlled is dangerous. Make frequent inspections of the steering mechanism.

* * *

One homelike touch, says a returned motor camper, was that the family could use the rumble seat for a breakfast nook.

* * *

A lot of drivers seem to proceed on the principal that the brakes on the car can be looked after while the driver is in the hospital.

* * *

"That farm of mine ought to be going up in value," asserted a far-sighted optimist the other evening. "It is now on a main detour to town."

* * *

Taxes paid by the automotive industry in the United States are greater than the total paid by both the railroad and the electric railways industry.

* * *

Many people in England who walk in quiet lanes and byways at night wear small red glass disks over their shoulders to warn auto drivers that a pedestrian is ahead.

DAIRY FACTS

COW SHOULD PAY $192 FOR KEEP

With cows, as with automobiles, it isn't the first cost, it's the upkeep.

For proof of that statement rural economists at the Ohio State university offer records kept for five years by twenty Medina county dairymen, their herds totaling 183 cows. The net cost, not subtracting the credit of $9.05 for manure and $6.83 for a calf, averages $208.35.

Feed is the big item. It totals, including a charge for pasture, $107.92. The grain and other concentrates necessary to keep a cow in production throughout the year cost an average of $50.14. The roughage including the silage, hay, stover, pasture, cost $57.78.

Labor, the next biggest item, costs an average of $43.36 per cow. The other costs, to make up the gross cost of $208.35, include straw bedding, taxes, insurance, depreciation, etc.

In order to let her owner break even at prevailing milk prices, this average cow should produce at least 7,000 pounds of milk a year. The average cow among the 183 Medina county cows just about did, producing 7,386 pounds of milk a year, worth about $197.21, giving her owner a profit of not quite $5.

The cows that make for profit, the economists point out, are those that produce at least nine or ten thousand pounds of milk a year.

Reduce Cost Production and Other Dairy Losses

Analyzing the reasons for the relatively good organization and management of the dairy industry, Dr. A. F. Woods of the United States Department of Agriculture finds the following three of particular importance:

(1) Fertility largely goes back to the land through the manure. Feeds purchased in part probably add more fertility than is sold in dairy products; (2) the monthly milk check is useful if not entirely remunerative; (3) everybody on the dairy farm works the year round. Though the pay may be small it gradually accumulates.

"The dairy farm and the dairy family," said Doctor Woods in addressing a group of Ohio dairymen recently, "gradually become richer—not too rich nor perhaps rich enough, but improving all the time. This is true even though modern bookkeeping methods show a paper loss, based on going wages and sale values. These economic studies of the dairy industry have pointed out ways to reduce costs of production and other sources of loss and thus increase the margin of net profit."

Off-Flavored Milk Due to Lack of Air and Sun

Guard against off-flavors in milk during the cold weather when barns are closed and conditions congested, warns R. G. Connelly, extension specialist in dairying at the New Jersey State Agricultural college.

Milk has the absorbing qualities of a sponge, so that wherever foreign odors exist near milk, it will have an off-flavor highly distasteful to the consumer.

Such defects may be traced usually to one of three sources. First, faulty barn ventilation which may allow gases and odors to accumulate. Then there is the matter of feeding. Good hay and grain ordinarily do not produce abnormal flavors in milk, but turnips, cabbages, potatoes, and certain weeds will make milk very repulsive to some consumers. The best plan is to feed after milking rather than before. Finally milk becomes contaminated from foreign odors when it is stored or handled in places where fruits, vegetables, oil, gasoline, or other materials emitting strong odors, are stored. Proper ventilation and exposure to sunlight will help, but it is better to remove the offending object.

Dairy Notes

Never mix warm and cold cream. Cool the warm cream before mixing.

* * *

Wash the separator after each separation. A separator that is not clean will not skim clean.

* * *

It's the last few pints of milk, bushels of grain, or other units of production, which are the most profitable.

* * *

Variety and irregularity are two very different things. Variety in the ration may be helpful. The cow may relish a little change but irregularity in the time of feeding is all wrong.

* * *

If you are observing, you have noticed that the cows milk better on a sunny day in any but the excessively hot months.

* * *

If she produces less than 300 pounds of butterfat a year, a cow is not producing as much profit for her owner as she should or would if better fed.

* * *

Poor producing cows should be eliminated from the dairy herd by careful culling. The best method of doing this is to join a cow testing association.

Cole's Carbolisalve Quickly Relieves and heals burning, itching and torturing skin diseases. It instantly stops the pain of burns. Heals without scars. 30c and 60c. Ask your druggist, or send 30c to The J. W. Cole Co., Rockford, Ill., for a package.—Advertisement.

"Lucile is the Happiest Girl"

So many mothers nowadays talk about giving their children fruit juices, as if this were a new discovery. As a matter of fact, for over fifty years, mothers have been accomplishing results far surpassing anything you can secure from home prepared fruit juices, by using pure, wholesome California Fig Syrup, which is prepared under the most exacting laboratory supervision from ripe California Figs, richest of all fruits in laxative and nourishing properties.

It's marvelous to see how bilious, weak, feverish, sallow, constipated, under-nourished children respond to its gentle influence; how their breath clears up, color flames in their cheeks, and they become sturdy, playful, energetic again. A Western mother, Mrs. H. J. Stoll, Valley P. O., Nebraska, says: "My little daughter, Roma Lucile, was constipated from babyhood. I became worried about her and decided to give her some California Fig Syrup. It stopped her constipation quick; and the way it improved her color and made her pick up made me realize how run-down she had been. She is so sturdy and well now, and always in such good humor that neighbors say she's the happiest girl in the West."

Like all good things, California Fig Syrup is imitated, but you can always get the genuine by looking for the name "California" on the carton.

An enemy despised is the most dangerous of all enemies.—Publius Syrus.

Curiosity is the thirst of the soul.—Doctor Johnson.

Height of Realism

"Daughter, there's a spot on your stocking."

"But I haven't any on, mother."

Loosen Up That Cold With Musterole

Have Musterole handy when a cold starts. It has all of the advantages of grandmother's mustard plaster without the burn. You feel a warm tingle as the healing ointment penetrates the pores, then a soothing, cooling sensation and quick relief.

Made of pure oil of mustard and other simple ingredients, Musterole is recommended by many nurses and doctors. Try Musterole for bronchitis, sore throat, stiff neck, pleurisy, rheumatism, lumbago, croup, asthma, neuralgia, congestion, pains and aches of the back or joints, sore muscles, sprains, bruises, chilblains, frosted feet, colds of the chest. It may prevent pneumonia and "flu."

Jars & Tubes

MUSTEROLE — WON'T NOT BLISTER

Better than a mustard plaster

Persons who prefer old houses to new ones ought to have no trouble finding what they want.

This Doctor's advice to mothers is invaluable

He says

"Two tablespoonfuls of Karo in a glass of milk improves its flavor and doubles its food value."

"SERVE plenty of Karo to the kiddies", advises one of America's greatest Child specialists, "serve Karo especially to underweight children, in milk, on cereals, on sliced bread. Watch their weight increase!"

Karo gives muscular energy immediately—there's no tax on the digestive organs.

Karo contains 120 calories to the ounce—almost twice the energy value of eggs and lean meat, weight for weight.

Children *naturally* like Karo—its delicious sweetness and flavor satisfies their youthful craving for sweets.

To know that children like the food that's so good for them, a food that leading doctors highly endorse and recommend, is, indeed, *good* news to every mother.

ECONOMY

Compare the price of Karo per pound with other foods. Karo is unusually economical.

EXERCISE

CELEBRATED THEIR 25TH ANNIVERSARY

MR. AND MRS. A. G. KOERNER CELEBRATED SUNDAY

Have Been Residents Of Kleme All These Years

Sunday was the twenty-fifth anniversary of the wedding of Mr. and Mrs Albert G Koerner To make the event a more happy one they planned a celebration and a wedding dinner to which were invited a number of relatives. The gathering at the dinner table numoered 40 persons.

Twenty five years ago this happy couple were married in Klemme, in the house which is still occupied by Mrs. Henry Lau, mother of Mrs. A. G Koerner Mr and Mrs Koerner figured in the business developement of the town and about that time launched into the elephone exchange business, having heir office upstairs in the State Bank Building later removing it to their present home and jus a couple of years ago reiring from business and selling their large telephone business to the Iowa Union Company

Five children were born to Mr. and Mrs Koerner: Dolores, now Mrs Levi Ridder, of Manly, Gerald, Kermit, Valeria and Nova.

The conversation of the day was most interesting and all entered into describing scenes of 25 years ago, how things had changed since then and the wonderful improvements which had been made

Mr and Mrs Koerner were given a shower of miscellaneous gifts of silver and a substantial purse of silver coin.

Those present who helped Mr and Mrs. Koerner celebrate their wedding anniversary and who had dinner with them were: Mr. and Mrs. J E Stille and daughter, Marie, Mr and Mrs. Will Stile, Elvira and Donald, Mr. and Mrs. Lester Stille and Ruth, August Lau and family of Mason City, Will Lau and family of Garner, Elmer Arnold and family, Mrs. Martha Bredbenner and Nova, Mr. and Mrs. Fred Ridder, Mr. and Mrs Levi Ridder, of Manly, and Wes Schuldt and family.

The Times joins in with the many friends of Mr. and Mrs. Koerner in extending congratulations.

Wasted Effort

One of the darkies on the "Uncle Tom's Cabin" set was very sleepy. He yawned and yawned, to the great delight of little Mona Ray, playing the part of Topsy Finally she approached the man and managing to get his attention said:

"Mister man you is de mos' good natured somebody I evah did see!"

"How come, little one, is you kiddin me?"

"No, I'se not kiddin'. How come you-all open yo' mouth so wide an' don't swallow nobody?"—Los Angeles Times.

DOINGS AT SCHOOL THIS PAST WEEK

LARGE CROWD ATTENDED P. T. A. MEETING TUES. EVE.

First Basketball Game Will Be Here Next Friday Evening

The P. T A. program on Tuesday evening was one of our best ones and it was well attended Our girls sang well, Byrnes and Gracka played well, and our speakers gave us some interesting facts on early school days in both Germany and our own state and related them to us something worth while Mr Wellemeyer gave us some interesting facts on early schools in both Germany and our own state and related them to our own day He had on exhibition several very old texts that many in the audience enjoyed thumbing through Mr Henry Ludeke discussed the subject, "Are our schools worth the cost?" He pointed out the difficulty of measuring the value of education for as he said, "It means more than the power to earn money, and cannot be measured in money" He enlivened his talk by a story which illustrated his point negatively Mrs Jorgenson's paper, we feel, is worthy of being read by all who are rearing children, many of whom could not be present Tuesday evening and we have asked that it be included in this issue of the Klemme Times It is our conviction that many of the ills that keep children from doing good school work and even from regular attendance at school are the result of eating improper foods The emphasis placed on milk for children, green vegetables fruit, as ripe bananas, oranges and less meat, but wholesome breakfast foods may well be heeded

The ladies responsible for the appetizing lunch served are due some credit They were Mrs A G Koerner, Mrs C. G. Waterman, and Miss Lenora Wheatman We understand they suffered a little embarrassment over the prospects of not having enough provision for the numbers unanticipated, but it happened they served all

Swaledale To Play First Basketball Game Here Next Friday

Our first basket ball game of the season will be on our own floor on Friday night of next week November 23. Swaledale High School boys will be our opponents

After having been defeated by them in base ball our boys are determined to win in basket ball

As this is school visitation week we are glad to report the following guests have honored our school to date this week Rev and Mrs Calvin Grosshuesch, Mesdames R A Jorgenson, John Etchen, Clarence Kluckhohn, C. G Waterman, M O Barr Harold Leitzinger Paul Grange, Lynn Drake, J E Stille Walter Lau, Arthur Wellemeyer We hope many more mothers and some of the fathers may find time to call.

Junior Red Cross At School

Our school has been contributing these few days to the Junior Red Cross fund. Each room has given its fifty cents and will receive the promised publications of the Society and most or many children will give one cent a week or at this rate for several weeks of the school year They should be encouraged to give this amount from their own personal accounts and not ask it of their parents We have not urged children to give more than 25 cents each for the school year, although some will or have promised to give more

Faculty Were Entertained

The superintendent was entertained last Sunday at the Otto Lemke home along with other guests. Others of he faculty helped celebrate Clarence's birthday at the same home on Wednesday eve where a dinner was prepared in his honor. We all voted it a good place to be invited to.

Unfavorable Weather Means More Tardiness

We regret the unfavorable weather that has forced so much absence on the part of high school students Our farmers cannot be blamed for being anxious to get their corn crop harvested before winter sets in in earnest Coming to school two or three days each week during this season of corn husking may mean a semester grade saved by students who must help at the task We shall regret to see any lose any credits

We Thank You, Folks!

This is acknowledgment is a bit tardy but due T Mr Wellemeyer we were indebted for stage furniture and possibly some other materials used in our high school play staged recently Mrs G K Gluckhohn also loaned us furniture for the occasion We appreciate this courtesy on the part of both Mr Wellemeyer and Mrs Kluckhohn

RED CROSS DRIVE ON IN EAST HALF OF COUNTY

Four Klemme Ladies In Charge Of Drive For Ell Township

The Red Cross drive for funds is on at the present time for the east half of Hancock County The drive is on at Klemme at this time so be ready with your $1 for a membership when you are called upon

Rev T Walsh of Garner who is the chairman for the east half of our county was in Klemme Wednesday afternoon to organize the work here He met with Mrs C M Bredbenner Mrs Lena Schroeder, Mrs Emil Pater and Mrs Karl Kraus who have volunteered to conduct the work for Klemme which includes the immediate territory surrounding Klemme After the ladies had been given instructions and given supplies they went right to work enthusiastically The quota for Klemme we understand, is but $75 00 The ladies hope to easily raise this amount and are anxious to have Klemme go over the top

Be ready to subscribe when the ladies call on you If for some reason they should not happen to see you then either send them your dollar or hand it to them.

This is a drive that everyone in the U S should contribute to

PARENTS HAVE BIRTHDAY PARTY FOR THEIR SON

Allan Klotzbach Celebrated 18th Last Friday Evening

Mr and Mrs Levi Klotzbach, in honor of their son Allan's eighteenth birthday planned a party for him Friday evening A number of young folks were present and enjoyed the evening playing games after which Mrs Klotzbach served dainty refreshments All present report a very good time

Mr and Mrs C G Waterman and daughter Marian took quite a trip last week end They drove to Cedar Rapids early Friday morning At that place they were guests at noon at a banquet given by the Cedar Rapids Life Insurance Co of which Mr Waterman has the agency for here From Cedar Rapids they drove to Iowa City for a visit with Mrs Mary Waterman and Sunday morning they drove to Traer and had dinner with W C Keraus and family, returning to Klemme Sunday evening

H L. Suckow informs us that he received a letter from Lawrence Schaefer who has been ill in a Milwaukee hospital for some time This letter carries the good news that Mr Schaefer is making good recovery at this time and is no longer in the hospital Mrs. Schaefer is a daughter of Mr. and Mrs H L. Suckow

MR. AND MRS GIMER ATTEND CONVENTION AT AMES

Association Held Meeting In New Dairy Industries Building

Mr and Mrs A D Gimer drove to Ames Tuesday afternoon to be in attendance at the 19th Annual Convention of the Iowa Creamery Buttermakers & Managers Association

In connection with the convention and a prominent part of the program was the dedication of the new Iowa Dairy Industries Building which cost $500 000 00 This took place Wednesday afternoon

All of the meetings of the Association were held in this fine new building on the Iowa State College campus

Another big feature of the meeting was the big banquet held Wednesday evening in the new Memorial Union Building recently completed and one of the finest buildings of its kind and also located on the campus

Mr and Mrs A D Gimer returned to Klemme today reporting a fine time and one of the best meetings ever held

Mr Gimer is a live-wire and believes in keeping up with the times He says a lot of valuable information can be gathered at these meetings where creamery men from all over this part of the U S meet and discuss important topics concerning the industry

MARRIAGE LICENSES ISSUED THE PAST WEEK

Business Again Picking Up In Toe County Clerk's Office

Chris Johansen genial county clerk is again smiling as business in the marriage license department is again picking up Chris was sad the past few weeks when his license banks were unused However, the business is again booming and Chris is busy dishing out permits

Leo Swab Osage, Iowa and Catherine Frankforth were issued a license to wed

Cyril Taylor Mason City and Dorothy Schriver same place were evidently attracted to Hancock Co by the pretty blanks they can procure from Chris and secured one

Marinus Martensen Clear Lake and Elvine Paulson Forest City also invaded Chris office for a license to wed and live happily ever after

Claude Patton and Vivian Dahlstrom both of Mason City also came to Hancock County to get a marriage license

Now if the bachelors of the county would look around no doubt a partner could be found Chris is anxious to drum up more business in his office

KLEMME FOOD MARKET HAS A BIRTHDAY SALE

Grocery Department Been Operated For One Year Now

C A Larsen, proprietor of the Klemme Food Market, put in a fine grocery department a year ago.

This week end and next week he is having a big anniversary sale of Monarch Food Products. In announcing this event he is using a full page advertisement in The Times this week. If our readers will turn to this special page they will find that Mr Larsen is offering some mighty good values for the money Special representatives will be at his store during part of the sale to conduct special demonstrations

TORNADOES DO MUCH DAMAGE NEAR CEDAR RAPIDS

Heavy Winds Felt Here Last Night In Late Season Storm

Tornadoes usually confine their period of destruction to spring and summer and sometimes late fall

Destructive tornadoes yesterday and last night visited southeastern Iowa and southern Minnesota, causing at least one death a number of injuries and much property damage

High winds were felt in Klemme late last night which at times even rocked houses they were so strong

It's rather late for cyclones and wind storms and the tornado was not looked for

METHODIST CHURCH NOTES

H. E. Whyte, Pastor

Next Sunday, Nov 18th is White Cross Enrollment Day in our church Many of you no doubt have maintained a paying interest in the White Cross work for many years and look upon it as a blessed ministry in which you are glad to have part It is indeed one way of putting the spirit and teachings of Jesus into practice in a very real and vital way; for as you know the returns of the White Cross enrollment are used to minister to the sick and needy in our Methodist hospital at Sioux City who are unable to pay for such service The sermon Sunday morning will deal with Christ's attitude towards this type of service

The sermon for the evening will be "Conditions of a deepening acquaintance with God," the theme that was announced for a week ago

Mrs Paul Grange, Mrs Benn Coobs and Mis Leona Lau attended an Auxiliary meeting at Corwith today

Mr and Mrs Joe Horecka, of Garner visited with Mr and Mrs. C F Keraus this afternoon

Joe Miller is spending a couple of weeks visiting at Estherville.

Mrs Frank Kluckhohn has been ill with pneumonia this week

Miss Gladys Wilson, who is a student at Drake University, Des Moines came home last Thursday for a short visit at home

AMERICA LEADING IN RADIO COMMUNICATION

The opening of a new, direct radio channel between New York and Lisbon, Portugal, for the transmission and reception of Radiograms was recently announced by the Radio Corporation of America. The inauguration of this radio circut adds another link to the world-wide communication system which has New York as its hub and radiates directly to England, France Germany, Italy, Holland Belgium, Sweden, Norway, Poland, Turkey, Argentina, Brazil, Colombia, Venezuela, Porto Rico, the Dutch West Indies, and Dutch Guiana. From San Francisco other direct radio circuits join the United States to Hawaii, Japan, the Philippines, Hong Kong and Shanghai, China, the Dutch East Indies and French Indo China To further insure the continued supremacy of the United States in transoceanic radio communication the RCA is planning additional circuits for the near future to countries as near as Canada and Cuba, and as distant as Spain, Czecho-Slovakia, Chile and Siberia.

1—Voters and American sailor guards at a polling place in Managua, Nicaragua, during the election that resulted in the choice of Moncada for the Presidency. 2—Cottage at Silver Springs, Md., offered to Mrs. Coolidge by her schoolmate, Miss Stella Stewart. 3—Senor Gonzalo Zaldumbide, the newly arrived minister from Ecuador to the United States.

NEWS REVIEW OF CURRENT EVENTS

Implications and Incidents of the Great Victory of Hoover Over Smith.

By EDWARD W. PICKARD

OVERWHELMING victory for the Republican party in the national election is old stuff by this time, but some of the surprising, not to say startling, features of that victory will remain fruitful topics for conversation for a long while. To say that Hoover captured forty states with 444 electoral votes, while Smith carried only eight states with 87 electoral votes, tells only the record-breaking triumph of Hoover. On the other hand Smith received a total popular vote in excess of that given any successful candidate for the Presidency in former elections. This is accounted for by the tremendous total vote brought out by the unprecedented interest in the election and by the fact that Smith materially reduced the normal Republican majorities in many states though he could not win those states. Despite this, the Democrats as a party had little of which to boast, for Hoover smashed the solid South by winning Texas, Virginia, North Carolina and Florida, while Smith carried only two Northern states—Massachusetts and Rhode Island, in both of which there is a huge foreign-born and Catholic population. The case of Virginia is interesting. The Democrats of that state never forgave Tammany for knifing the Davis-Roosevelt ticket in 1924, and this year they quietly went out to get revenge.

Smith was supposed by the wiseacres to be the popular candidate of the "urban" Americans, yet Hoover carried eight of the country's fourteen largest cities, including Chicago. The farmers of the Middle West were alleged by various prophets to be in revolt against the Republican party and led to Smith by the bolting of Senator Norris and others. But Hoover carried every state in that region without difficulty.

The prohibition and religion issues, the former declared bunk by Charles Evans Hughes and the latter ostensibly disowned by both parties, cut both ways, as was long ago predicted, but each candidate profited by one or other of these issues in certain states. It does appear to be demonstrated that the American people do not wish, at this time, to have a President who is wet and a Catholic. Sober analysis of the vote shows, above all, that Americans realize they are the most prosperous nation on the globe and believe the continuance of their prosperity is best assured by continuance of Republican rule. That prohibition as a national issue must now disappear is the view of many. Others see the prospect of a new alignment of the electorate, wet and dry, in the not far distant future since the vital differences between the Republican and Democratic parties are fast fading into nothingness

Republican control of the next congress is assured. The party gained seven seats in the senate and made a net gain of 28 seats in the lower house. Unofficial returns give this as the complexion of the two houses:

Senate—Republicans, 56 (including vacant Vare seat in Pennsylvania); Democrats, 39; Farmer-Labor, 1. Republican majority, 16.

House—Republicans, 265; Democrats, 168; Farmer-Labor, 2. Republican majority, 95.

Many states elected governors last week, and often the result was not in accord with the state's vote on the Presidency. An outstanding instance of this was the victory of Franklin Roosevelt, who carried New York with ease though Al Smith lost it to Hoover by nearly 100,000 votes.

HERBERT HOOVER was amazed by the magnitude of his victory but displayed no unseemly exultation. In a statement to the press he said he felt there had been imposed on him a sense of solemn responsibility of the future and of complete dependence upon divine guidance for the task which the greatest electoral office in the world imposes. "That task is to give the best within me to interpret the common sense and the ideals of the American people," said Hoover. "I can only succeed in my part by the co-operation and unity of spirit of the leaders of opinion and of action, for the common service of our country."

While the President-elect has decided upon no details of specific plans for the future, he has stated emphatically that his induction into office will be attended by a simplicity equal to that of any inauguration that has been held. He expects to remain in California for several weeks and to spend the Christmas holidays in Washington.

Speculation now turns on the make-up of Hoover's cabinet. He has told the public nothing about this yet, but it is believed Mellon will continue as secretary of the treasury if he so desires. Secretary of State Kellogg is said to wish to retire and Ambassador Dwight Morrow is most frequently mentioned for that portfolio, though some believe it may be offered to Senator Borah.

Gov. Al Smith took defeat with a smile and promptly wired his congratulations to Mr. Hoover, receiving an appreciative message in reply. The governor told the reporters that he was all through with running for public office but is undecided as to his future business or professional activities. The New York Herald Tribune said he was to be offered the chairmanship of the board of directors of a new $55,000,000 Wall street bank when he retires from the governorship on January 1.

VOTERS of Arkansas had something else to decide on besides candidates for office. The so-called "ape law" was on the ballot for acceptance or disapproval, and unofficial returns show that it was accepted by a considerable majority. Thus the fundamentalists score another victory, for the law makes illegal the teaching of the theory of evolution in schools supported by public taxes. The act will affect textbooks now in use in the various high schools as well as in the state colleges and the university. It will cause revision of the university textbooks in biology, geology, zoology, psychology, and possibly English.

CABINET crises occurred in several countries last week. In France Premier Poincare and his ministry resigned when the Radical Socialist party adopted a resolution condemning his finance bill and especially its religious articles which provide for the return of Roman Catholic monastic orders in France. Financial circles were dismayed and confusion reigned in parliament. Poincare resisted the demand that he form another ministry, and it was considered probable that, if he persisted, Foreign Minister Briand would be made premier. Vintila Bratiano, premier of Rumania, and his cabinet, were forced out at the demand of the regency council, which insisted that the National Peasant party should participate freely in the celebrations of Rumania's annexation of Transylvania. Juliu Maniu, the famous peasant leader, was believed the natural successor to Bratiano and the peasants of the country prepared to become its real rulers, but complications that are difficult of explanation prevented this consummation for the present. The South African government of Premier Hertzog resigned to get rid of one member and a new ministry was at once formed by Hertzog. In Portugal the cabinet gave up office and its president, Col. Vincente Freitas, formed a new government.

KING GEORGE in his address opening parliament expressed his great satisfaction with the signing of the Kellogg pact to renounce war. In opening the debate on the address Ramsay MacDonald, Labor party leader, strongly criticized the government's action with regard to the now discredited Anglo-French naval compromise, charging it with hampering the activities of the League of Nations and putting obstacles in the way of disarament. Next day this attack was resumed by others and drew from Lord Cushendun, acting foreign secretary, a vigorous defense of the compromise.

TORAL, the confessed assassin of President-elect Obregon of Mexico, was sentenced to death by a firing squad. Mother Maria Concepcion, the nun accused of being the "intellectual author" of the crime, was sentenced to 20 years in prison. The verdicts were appealed.

UNDER the supervision of an American commission headed by General McCoy, the election in Nicaragua passed off quietly and Gen. Jose Maria Moncada, Liberal, was chosen President, defeating Adolfo Benard, Conservative, by about 20,000 votes. The polls were guarded by American marines and bluejackets commanded by Gen. Logan Feland and there was no serious disorder anywhere. Each voter was required to dip his finger in a chemical stain as he cast his ballot, to prevent repeating, and in submitting to this regulation President Diaz, other high officials and the two candidates led the way.

MT. ETNA is in violent eruption again, and while it is furnishing a magnificent spectacle for tourists to Sicily, it is bringing destruction and terror to the inhabitants of cities and villages on the slopes of the volcano. Before the end of the week two or three towns had been almost completely wiped out by the rivers of molten lava flowing from the crater and the entire zone was isolated from the outside world. Volcanologists said this eruption was likely to be long continued.

HIROHITO, the 124th emperor of Japan, in an unbroken lineage older than that of any other reigning family, was formally enthroned on November 10 in Kyoto, the ancient capital of the island empire. His progress from Tokyo to Kyoto, consuming several days, and the ceremonies of enthronement were accomplished with solemn rites so ancient that no one knows what they originally meant, and all the festivals were picturesque in the extreme. The emperor and his empress and all the dignitaries connected with the affair were attired in the old traditional costumes. Thousands of Japanese and a great throng of foreigners gathered in Kyoto to see all they could of the ceremonies and to shout "Banzai" as Hirohito mounted the throne of his ancestors.

AN ALLEGED embezzlement of $25,000 of the funds of the Loyal Order of Moose school at Mooseheart, Ill., was disclosed when warrants were issued for the arrest of Hugo Doebler, controller of the school, and Harold Cook, his assistant. E. N. Roselle, superintendent, said an audit of the books might raise the amount charged in the warrants to $100,000. Cook was arrested but Doebler is in Germany visiting his wife. The school is the national children's home of the Order of Moose, and those who know of the excellent work done there will be sorry to learn of its financial loss.

DR. FRANK CRANE, one of the best-known "inspirational" writers of the United States and formerly a prominent pastor in Chicago, died in Nice, Italy, of cerebral hemorrhage. With Mrs. Crane and a party of friends he was on a tour of the world. Doctor Crane's syndicated writings reached an estimated audience of 5,000,000. He was also editor of Current Opinion and the author of a number of books. Another author who died last week was Eliza Scidmore, who gained fame by her books on the Far East.

TRAGIC death overtook Capt. C. B. Collyer, pilot, and Harry Tucker passenger-owner of the monoplane "Yankee Doodle" in which they had made two record-breaking flights across the continent. While en route from Los Angeles to New York the aviators were caught in a rain and fog in the Bradshaw mountains of Arizona and struck the wall of Crook canyon 23 miles south of Prescott. The heavy load of gasoline apparently exploded with the impact and the plane was blown to bits.

The Whimsical Max.

Paul Jones of the family of the University of Pennsylvania, said on his recent return from Europe:

"I have a great admiration for Max Beerbohm, and in August I visited him in his villa at Rapallo on the Italian Riviera.

"I had visited him before, and had told him a story about James Joyce; but I forgot this on my second visit, and retold the Joyce story.

"The whimsical Max, when I finished, said:

"'That's a good story, but, really, if you tell it to me again I shall have to tell it to you.'"

Mother Tells How Milks Emulsion Saved Her Son's Life

"In November, 1918, I wrote you in reference to my son's condition at that time. He had just gotten over the flu and double pneumonia and it looked as if he would never be a well boy again. His lungs were very weak and he had an awful cough. We thought he was going into consumption. He had pneumonia four times. This had taken all of his vitality and left his lungs in a very bad shape.

"I saw Milks Emulsion advertised in the Birmingham News, got a large bottle and gave it to my son. It did him so much good that I kept on giving him Milks Emulsion until he had taken 125 bottles and now I am very proud to tell you that my boy is a well, strong young man, 18 years old, and in excellent health. I give Milks Emulsion the credit and praise for having saved his life.

"You can publish this letter if you like, as I am very grateful to you for what your Emulsion did for my son. MRS. J. A. BRADLEY, 1927½ Avenue D, Apt. A, Birmingham, Ala."

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Gulls Liked Strawberries.

Strange picnic guests were entertained at a clambake on the shore at Belfast, Maine, when a flock of seagulls, after circling about, swooped down and made an attack on a plate of strawberry tarts, although they left the apple tarts on the plate. Only one of the birds succeeded in getting away with one of the tidbits of dessert, and he was followed for some distance by the others trying to get a bite.

Numismatic Treasure.

A pot of gold was found near Sant Malo, France, the other day in demolishing a building used as a hiding place by the Templars when Philippe le Bel sought to confiscate the wealth of the order. Most of the coins, worth a fortune to numismatics, bore the effigy of King Louis X.

It is always safe to give a Bayer tablet; there is not the slightest harm in genuine Aspirin. You have the doctor's assurance that it doesn't affect the heart. And you probably know from experience that Bayer Aspirin does banish all sorts of pain in short order. Instant relief for headaches; neuralgia, neuritis. Rheumatism, too. Nothing like it for breaking up a cold. At all druggists, with proven directions enclosed.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Sample each free. Address: "Cuticura," Dept. B5, Malden, Mass.

Cuticura Talcum is Soothing and Cooling.

Ancient Garb.

Gilbert K. Chesterton was defending women's apparel. "To say the least, they have not stood still. They are forever striving for added attractiveness, added comfort, added utility. But look at the men!

"The most irrational fantasies often become the most lasting. Two such examples are what are commonly called a pair of trousers and a top hat."

Treasure for America?

California may soon gain the alta from the famous Stoke Poges church It was in the churchyard of th church that Gray wrote his "Elegy i a Country Churchyard." If the sug gestion now before the local church council receives the final approval o the chancellor of the diocese, the alta will soon cross the Atlantic to adorn the "Church of the Little Flowers," near Los Angeles.

SUCCESS IN GROWING CATTLE

ccess in growing cattle for mar- epends to a large extent upon the which is given the calves. This, from the calf's breeding, is bly the most important consider- In straight beef production a small quantity of feed in addi- to milk is needed for the calves o weaning time, but nevertheless should be taught to eat grain and so that the change during weau- will not result in loss of flesh. hen calves are intended for baby they should be started on some n when between four and six ks old. A mixture of equal parts, eight, of shelled corn, whole oats, wheat bran is satisfactory. The and oats may be fed ground ll the calves become accustomed to ing; then they may be fed whole. en fed whole they are less likely ause scours. The grain allowance ould be increased gradually up to aning time so that the lack of milk l not hinder growth and fattening. alves from cows that are milked ould be taught also to eat supple- ted feeds within a few weeks er birth. The quantity of grain hay consumed at first necessarily l be limited, but should be increased dually until the calf can do without k when from six to eight months . Fall calves that are fed skim lk and other feeds during the win- months put on very good gains on sture the following summer.

After weaning, alfalfa or clover hay d silage may form the greater part the roughage and one-half to three- rths of a pound of cottonseed meal linseed meal given in addition to ain. The grain ration may be in- eased gradually until the calves are ceiving a fattening ration.

Calves that are to be finished on sture may be handled in about the me way as those to be fattened in e dry lot. The grain allowance may e smaller at first but after the calves e turned on pasture it should be in- eased as they become able to utilize eater quantities of grain.

Calves that are to be "fed out" as ng yearlings or two-year-olds or sold s stockers and feeders may be fed nsiderably more cheaply during the rst winter. The winter ration may nsist principally of silage and cheap oughages, but some concentrates hould be used to keep the calves rowing in a thrifty condition. They hould be run on pasture the following ummer and sold in the fall as feed- rs or fattened out the following win- er as long yearlings. If it is desired o keep them longer, the cattle may e "roughed" through a second winter nd fattened the next year.

Salt Fed Regularly to Hogs Ideal Plan

Salt fed regularly to hogs will pay n added pounds of pork. Without t they cannot make the fastest and most economical gains nor remain in the healthiest condition. Hogs do not need as much salt as cows, but they must have some in order to carry on the digestive functions properly. Salt is used chiefly in making the hydrochloric acid of the digestive juice.

Salt may be fed free choice style to hogs. However, if they have been without it for a long time there is danger in feeding it that way until they become accustomed to it. A pig getting too much salt will die of salt poisoning. There is little danger if it is fed in the form of large hard chunks or bricks.

If hogs are used to salt it may be fed in flaked form in boxes or self feeders. It is well to mix the salt with the feed. A pound of salt to 100 pounds of feed mixture is sufficient. Salt may also be added to the mineral mixture.

Colt Needs Attention During Winter Season

A colt should be fed rolled oats or coarse ground oats three parts and one part coarse bran. Begin feeding it as soon as it is a month old, using about one-half pint of this mixture, and increasing it according to the breed and size of the colt until at six months old it is receiving four quarts daily on good pasture and good hay. If the foal's dam is working, wean it at four months of age; otherwise at five to six months of age. If milk is obtainable, begin at weaning time feeding the colt one quart three times a day. This will produce bone and tone up the coat. Above everything else, remember to have the colt out in the sun every day that it shines. Keep it out of rainstorms and snowstorms after the winter coat begins to grow. Brush the coat often.

Garbage-Fed Hogs

There still is a great difference of opinion among producers of garbage-fed hogs as to whether the hog raised on garbage from the beginning is better than if on the market at about 100 pounds weight. As a rule the hog accustomed to garbage early in his life should be more successful, since this feed is bulky and a greater stomach capacity is necessary. The hog raised on garbage is started as a garbage-fed pig and his stomach is capable of being distended.

Fertilizers Pay Well on Pastures

Cows Carried Nine Days Longer During Season on Treated Soil.

Permanent pastures that receive regular fertilizer treatments carry cows nine days longer during the season than do untreated pastures, according to a recent survey covering all the important dairy sections of New Jersey, made by the agricultural experiment station in co-operation with the bureau of statistics and inspection of the state department of agriculture. It was found that while the feed units per day yielded by the treated and untreated pastures were alike, because of the longer season each acre of the fertilized pasture yielded 86, or 5.4 per cent, more feed units than did an acre of untreated pastures.

Of the 264 pastures surveyed, which were chiefly in Salem, Cumberland, Burlington, Mercer, Hunterdon, Somerset, Warren, and Sussex counties, only about 80 were receiving fairly definite or regular fertilizer treatments. A study of 55 of the treated pastures compared with 32 untreated pastures on similar soils, showed that a considerable number of the pastures received more than one kind of treatment. Thirty-three of the treated pastures received lime; 21 commercial fertilizer, and 40 manure. The principal commercial fertilizers used were superphosphate (acid phosphate), bone meal, ammonium sulphate, and sodium nitrate.

The survey showed further that about 77 per cent of all farm land in New Jersey is occupied by permanent pastures. This is about one-third as much as there is in all crops combined. The feed obtained from this permanent pasture land furnishes practically all the roughage and takes the place of a small amount of concentrates in the dairy cow's summer ration.

Guineas Eat Quantities of Bugs and Weed Seed

We have had a small flock of guineas for years. The hens are great layers from March till August, and produce an astonishing number of eggs, says a writer in the Farm Journal. These must be removed from the nests before the birds think of sitting.

Guineas are very prolific; a female will often lay a nestful of 30 eggs before she thinks of sitting on them. A guinea egg is a little smaller than a good-sized hen's egg.

Guineas are hardier than hens and can take care of themselves pretty well from babyhood. The young birds, as soon as they weigh about three-fourths of a pound, make fine "fries."

The guinea fowls are great insect eaters. They travel far afield in an entirely different area from that chosen by the ordinary fowls. All season these ramblers and their numerous progeny gorge themselves with insect pests and weed seeds and great quantities of green food, all of which help to give a fine yellow color to the yolk of the egg.

Grain for Calves

Suckling calves intended for baby beef will begin eating grain when they are four or five weeks old. Experience has shown that a mixture of shelled corn and oats with bran added in some cases puts cheap gains on the calves and makes them easier to wean. Grain can be fed most conveniently in self-feeders placed inside a small pen or creep with openings large enough to admit the calves but too small for the cows to pass through.

Farm Notes

Feed for animals without intelligent care is feed thrown away.

* * *

Corn should be stored in well-ventilated places, where rats and mice cannot get at it.

* * *

Late fall cutting of alfalfa is like killing the goose that lays the golden egg. The chances are that the field will be ruined.

* * *

In preparation for the lambing season small pens about four feet square, or large enough for the ewe and her young, should be made.

* * *

When prices are high, it may pay to keep hens that lay only 100 eggs a year, but with the present prospects of the egg market it is folly to expect such birds to show a profit.

* * *

Production of fruits and vegetables as a whole has more than trebled per capita in the past 20 years, and it takes real merchandising methods to get a profit for the grower in the present day.

* * *

Remember, a properly ventilated building is not a drafty place. It is a room where air changes go on frequently enough to keep the air as pure as it is outdoors and free from excessive moisture.

* * *

A beef breeding herd on the corn belt farms for the production of market cattle is a sound method of beef production and does away with the greater speculative element that goes with the fattening of cattle when the feeders are purchased on the market.

Drugs Excite the Kidneys, Drink Water

Take Salts at First Sign of Bladder Irritation or Backache

The American men and women must guard constantly against kidney trouble because we often eat too much rich food. Our blood is filled with acids which the kidneys strive to filter out; they weaken from overwork, become sluggish, the eliminative tissues clog and the result is kidney trouble, bladder weakness and a general decline in health.

When your kidneys feel like lumps of lead; your back hurts or the urine is cloudy, full of sediment, or you are obliged to seek relief two or three times during the night; if you suffer with sick headache or dizzy, nervous spells, acid stomach, or if you have rheumatism when the weather is bad, begin drinking lots of good soft water and get from your pharmacist about four ounces of Jad Salts. Take a tablespoonful in a glass of water before breakfast for a few days and your kidneys may then act fine.

This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to help flush and stimulate clogged kidneys, to neutralize the acids in the system so they no longer are a source of irritation, thus often relieving bladder disorders.

Jad Salts is inexpensive, cannot injure, makes a delightful effervescent lithia-water drink and belongs in every home, because nobody can make a mistake by having a good kidney flushing any time.

Longest Roadway.

The Lincoln highway is the longest road in the world. It has a length of 3,331 miles.

Burning Skin Diseases quickly relieved and healed by Cole's Carbolisalve. Leaves no scars. No medicine chest complete without it. 30c and 60c at druggists, or J. W. Cole Co., Rockford, Ill.—Advertisement.

How Vulgar!

Betty—"They say she plays golf like a man." Beryl—"Goodness gracious! I'd love to hear her!"—Answers.

We can tell science that we don't care half as much where we came from as where we're going to.

Denver Boy is a Winner

Every mother realizes how important it is to teach children good habits of conduct but many of them fall to realize the importance of teaching their children good bowel habits until the poisons from decaying waste held too long in the system have begun to affect the child's health.

Watch your child and at the first sign of constipation, give him a little California Fig Syrup. Children love its rich, fruity taste and it quickly drives away those distressing ailments, such as headaches, bad breath, coated tongue, biliousness, feverishness, fretfulness, etc. It gives them a hearty appetite, regulates their stomach and bowels and gives tone and strength to these organs so they continue to act normally, of their own accord. For over fifty years, leading physicians have prescribed it for half-sick, bilious, constipated children. More than 4 million bottles used a year shows how mothers depend on it.

Mrs. C. G. Wilcox, 3855½ Wolff St., Denver, Colorado, says: "My son, Jackie, is a prize winner for health, now, but we had a lot of trouble with him before we found his trouble was constipation and began giving him California Fig Syrup. It fixed him up quick, gave him a good appetite, made him sleep fine and he's been gaining in weight right along since the first few days, taking it."

To avoid inferior imitations of California Fig Syrup, always look for the word "California" on the carton.

Sleep Bullets for Beasts.

Bullets carrying sleeping potions have been invented by Captain Harris, director of the Harris zoological expedition to South Africa. The nose of the bullet carries a hypodermic needle, which on impact discharges a powerful drug. The animal is unconscious an hour.

Talking of Jokes.

He had just proposed. She had just refused him.

"You are just a joke," she said.

"Well, can't you take a joke?" he asked.

We all bow down to statistics; but they're tricky.

Cutting Critique.

Robert Saint-Hubert, professor of painting at the Fontainebleau school, was shown over a very blatant new apartment house the other day by its owner, a New York builder.

"Yes," the man said, at the end of the visit of inspection, "I guess there ain't an apartment house like this in the world. Twenty-four stories, 7 elevators, 3,000 rooms, 800 bathrooms, and best of all"—here he paused impressively—"best of all, sir, the place is fireproof, absolutely fireproof, throughout."

"Oh, what a pity!" said Mr. Saint-Hubert.

A Treat in Store.

Clare Sheridan, the sculptor of half-American and half-English blood, is coming back to lecture again. She said the other day to London correspondent:

"My other American lectures failed because they were too heavy. My new lectures will be light and airy—full of epigrams, you know. My lecture on love, for example, will begin:

"Love-making consists in a man running after you till you land him."—Rehoboth Sunday Herald.

Had To.

Old Man—Yes, sir, I've smoked for 20 years and then all of a sudden I quit.

Young Man—What brought about the change after so many years?

Old Man—Went to work in a gasoline plant.

Supply and Demand.

"There are more suckers than there ever were."

"Yes, there has to be—there are so many more things to sell suckers."—Cincinnati Enquirer.

Attend the Party In Spite of Cold!

Don't despair some day your social calendar is full, and you awake with a miserable cold. Be rid of it by noon! You can, if you know the secret: Pape's Cold Compound soon settles any cold, yes, even one that has reached deep in the throat or lungs.—Adv.

Memory of Animals.

It is said that the memories of certain animals are longer and more trustworthy than those of humans.—Woman's Home Companion.

The Griddle-Cake Girl

By JANE OSBORN

(Copyright.)

NELLIE OTIS, looking very trim and pretty in a new street frock for which she had paid ten dollars and seventy-five cents and a hat which she had bought at a sale for a dollar and a half, boarded the morning train out of Gregton and waved farewell to her sister-in-law who stood watching on the platform. No tears shed, that was a blessing. It was a lot harder to leave home for the girls who had mothers and real sisters to make a fuss about them. And Nellie had never said much about her plans for leaving Gregton. She had given up her cashier's job at the store without saying what she had intended to do. With two hundred dollars to draw on she would be in no immediate want in the city.

Nellie opened her purse to get out her ticket—so it would be convenient when the conductor came along—and as she did so she also took out a little clipping that had really served as a send-off for her migration for the city. It told of a girl about Nellie's age—from a country place probably very much like Gregton—who had gone to the city to seek her fortune. Having been unable to find work in store or office she had gone to work in a quick restaurant, where she had been set to making griddle cakes in a front window. Passing by the window a famous producer had seen her, noted the perfections of her face and figure and straightway gone within to arrange an interview. And now this girl was being educated at this producer's expense for the stage—language lessons, dancing lessons, music, singing—everything that a girl might want.

Nellie was reflecting. Of course she never would consent to make a spectacle of herself in a restaurant window. And she had no desire to go on the stage. Precisely what she wanted to do she didn't know—she had saved the clipping just because it showed her that girls who went to the city sometimes succeeded in good positions.

And as she thought, the little clipping fluttered to the floor and the young man who, unseen by Nellie, had taken the seat behind her saw it and reached to get it. A little later, holding it between thumb and first finger, he quietly stepped into Nellie's compartment.

"I picked this up, Nellie," he said.

Nellie looked up into the eyes of Bob Leonard, with whom her brother had gone to school and who had recently come home after the completion of his medical studies. People said he had come to take the place of his father, old Doctor Leonard, who assuredly needed a rest after long years of devotion to a strenuous country practice.

"Where are you going?" asked Nellie.

"Same place you're going," laughed Bob.

"Why, Bob Leonard," said Nellie, the color coming to her cheeks. "You don't mean that you aren't going to stay and practice in Gregton? Your father can't keep up with that country practice forever and there isn't another doctor that side of the river for miles and miles and I've been reading about how important it is to have good doctors for the country practice.

"You seem to know quite a lot about the situation," said Bob, with a smile. And then, "How about your plans? You going up to apply for a job as flap jack turner? I read the clipping. Do you know, I've heard that there is a waiting list yards long now in all the quick lunch counters where they have girls turning flap jacks in the windows."

"Don't be so silly," said Nellie. "I just saved that because it was amusing. But I am going to the city to work, all the same."

"I wouldn't," said Bob dryly. "After all, you owe something to Gregton as much as I do."

They talked of other things for a time, lunched together in the dining car and by two or three in the afternoon found interests in common and sympathies that they had never discovered in all the years they had known each other in Gregton.

"Tell you what I'll do," said Bob, when they were within a half-hour of the city. "I'll go back if you will. No one knows but you that I was thinking of leaving for good and I don't believe anyone knows you were, either. Frankly, the reason the Gregton proposition didn't appeal to me was because I needed some one to share the experince with. I didn't see a girl there that appealed to me, and I still thought of you as a child."

"I don't see how you intend to have me share it with you," said Nellie slowly.

"I mean I want to marry you," said Bob. "If you're willing we'll just get married in the city, send word to the folks, spend a week or two on a sort of wedding trip and then go back."

Then they sat making plans, even starting to make a list of the things they would need to buy in the city, kitchen equipment and instruments that Bob felt he would need as an up-to-date practitioner.

"You see what a silly little girl you were to run away to the city," said Bob, holding her arm as they walked behind their porter along the station platform in the city.

"Not at all," defended Nellie. "I came to seek my fortune, and I found it before I'd even got here. I did even better than the griddle cake girl."

Mr. and Mrs. Ben Reimer visited at the Fred Gaets home Sunday, going in to see Mrs Gates who has been very sick.

Ernest Pringnitz had the misfortune to get one of his fingers badly crushed in the corn elevator Tuesday evening.

The Misses Edna and Mable Bredlow and George White were Sunday evening callers at the Emil Beier home.

Mr. and Mrs. Frank Shendelar and family have moved on the Herman Bridges farm. Two of the children are entering the Center school.

Little Miss Mildred Blumer has been staying with her grandparents, Mr. and Mrs. Will Krause at Garner several days while her mother helped with the corn.

Miss Francis Tanner spent the week end in town at the F. Gates home where she assisted with the work as Mrs. Gates is still confined to her bed.

The Misses Hilda and Doris Schaefer were guests at the Beier home Monday evening for supper. They came over from Marble Rock to help their brother, Emery pick corn for a week.

Mr. and Mrs. Otto Lemke entertained the Klemme teachers at a 5:30 dinner Wednesday, the occasion being Clarence's 15th birthday Clare West was also a guest.

A basket social was held at No. 9 Liberty Tuesday evening. The receipts were not as large as they would have been if the roads had been in better condition. They cleared around $28 00.

Makes Life Sweeter

Next time a coated tongue, fetid breath, or acrid skin gives evidence of sour stomach—try Phillips Milk of Magnesia!

Get acquainted with this perfect anti-acid that helps the system keep sound and sweet. That every stomach needs at times. Take it whenever a hearty meal brings any discomfort.

Phillips Milk of Magnesia has won medical endorsement. And convinced millions of men and women they didn't have "indigestion." Don't diet, and don't suffer; just remember Phillips. Pleasant to take, and always effective.

The name Phillips is important; it identifies the genuine product. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875

PHILLIPS Milk of Magnesia

Some Revised Opinion About the Red-Haired

Scientists have discovered all kinds of odd facts about humanity.

For instance, an expert recently stated that he had never seen a bald-headed lunatic!

Now comes the even more peculiar disclosure that red-headed girls may be bow-legged, but brunettes are, as a rule, knock-kneed. These facts are based on data supplied by a certain artists' club which has been collecting statistics respecting its models.

Another interesting point is that red-haired women suffer less from serious diseases than their darker sisters. This is due to the fact that their skin throws off poison more rapidly than a dark person's.

Also, red hair, which a generation ago was jeered at, nowadays is admired, as it should be. The red-haired girl has proved that she is not hot-tempered, but, as a rule, much better balanced mentally than a brunette. —Exchange.

Guard Against "Flu" With Musterole

Influenza, Grippe and Pneumonia usually start with a cold. The moment you get those warning aches rub on good old Musterole.

Musterole relieves the congestion and stimulates circulation. It has all the good qualities of the old-fashioned mustard plaster without the blister.

First you feel a warm tingle as the healing ointment penetrates the pores, then a soothing, cooling sensation and quick relief. Have Musterole handy for emergency use. It may prevent serious illness.

To Mothers: **Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.**

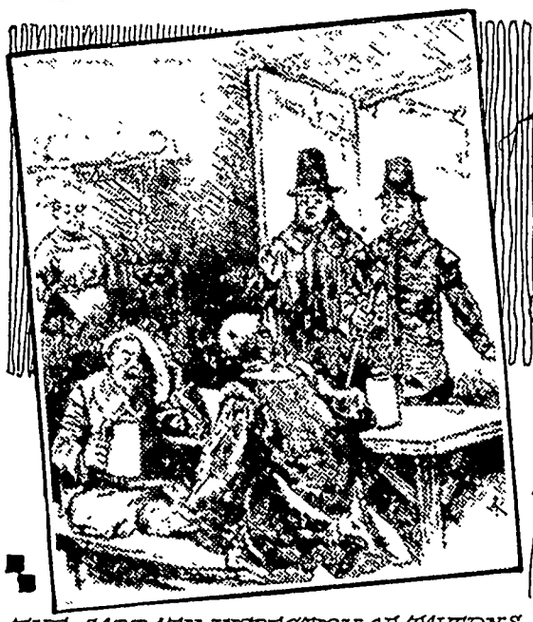
The "Not-Quite Puritans" Who Started Thanksgiving



THE SABBATH INSPECTION OF TAVERNS
Courtesy of Little, Brown & Co.

By ELMO SCOTT WATSON

AS THANKSGIVING time approaches and our minds turn back to the origin of that holiday—that is, if Twentieth century minds, accustomed to making it a day for consuming roast turkey, cranberry sauce, pumpkin pie, cider and other eatables and drinkables to a painful degree, football games and for innumerable other forms of celebration far removed from the original purpose of the day, can be easily turned back for a consideration of historic origins—it would be interesting for each of us to make a mental inventory and try to determine if we know much more about the people who gave us this holiday than we seem to know about observing it in the spirit in which it was conceived.

Thanksgiving, of course, brings up a mental picture (which is usually a reproduction of some painting—or cartoon—that we have seen) of a group of sober-faced men and women walking through the woods to a little log church. The outstanding features of the sober costume of the men are the tall-crowned hats, the big shoe buckles and the clumsy-looking guns, with their bell-shaped muzzles, over their shoulders; of the women—the white Dutch caps on their heads and the dark capes hanging from their shoulders. If it is the cartoonist, rather than the painter, who gives us our mental picture of the Puritan inventors of Thanksgiving day, we're pretty sure to see a man holding a turkey by the neck in one hand and his gun in the other, while an Indian arrow decorates the tall crown of his hat. Or the arrow (an Indian arrow is by now an almost indispensable symbol of Thanksgiving) may be flying through the window of a log cabin home and plunking into the turkey on the table, much to the consternation of the Puritan family, all ready to eat the "noble bird" when the unexpected garnish arrives. Or if we are asked to characterize the Puritans in a few words, those words are pretty likely to be "stern" or "noble" or "godly" or "pious" or "well—well—puritanical—you know what I mean."

But aside from the ideas, as given by these mental and word pictures, how much do we actually know about the Puritan fathers and mothers? Do they exist in our minds as "people," as "human beings" or as images recreated from myths? Were they all, and always, "pious" or "godly" or "stern," or did they have their lighter moments when they were "people" or "human beings," as we know such individuals today.

Let the author of a book, recently published in Boston, the home of the Puritans, by Little, Brown and company, answer that question. The name of the book is "The Not-Quite Puritans," which in itself is something of an answer. But lest it be thought that it is the work of an iconoclast, intent upon shattering some more idols, an outsider who wishes only to poke irreverent fun at a people and tradition near and dear to most Americans, let it be said that the author of the book is Henry W. Lawrence, a native New Englander and a professor of history at Connecticut college, who has only to examine his family history to know whereof he speaks. For two of his ancestors among many others have "records" in that they were haled into court for deeds which were "not-quite puritan." In the introduction to his book Professor Lawrence says:

Nothing new could possibly be uttered about the austerity of the Puritan, but there is still much to be said concerning his frivolity. During more than a century, tireless orators have stupefied their reverent hearers with undiscriminating praise of the stern virtues that were the glory of early New England, and when the image breakers of our own irreverent times have risen to reply, they have usually seen and smitten only a figure of unhuman sternness, made awful by his worshipers. It is high time that justice be done to the humanity, the frailty, and the frivolity of our formidable ancestors. For example, all we loyal New Englanders have known from our youth up of Cotton Mather's views on witchcraft and his discussion of the "nature, number, and operations of the devils"; but why have we not been as freely informed of how ho narrowly escaped a breach-of-promise suit while courting his second wife? We shall not love them less, these forefathers of ours, if we see them gay as well as grave; and we may cease to think of them as largely the creatures of a moralized and provincial mythology

New England in the Seventeenth century was probably no more wholesome than it is in the Twentieth. Then, as now, a few great and good men and women tried in vain to "sell" godliness to the multitude, but there were few buyers, though at that time everybody was compelled to attend the sale. Judging by the acts of the vast majority, rather than by the words of a very small number, these early New Englanders were spiritually akin to our present generation. Some few of them were saints; a few more were hypocrites; but most of them were neither. Their amount of true holiness was, per capita, about the same as ours, but it took a different form, and they talked about it more than we do Their normal-human cantankerousness was often so camouflaged in pious phrases that it was, and still is, mistaken for godliness. Probably they were as bewildered as we are about how life should be lived. Certainly they were often discouraged with their efforts to regulate it, and they had many private doubts as to whether the method of sitting on the lid was, after all, the best way to deal with human feelings.

The Seventeenth century specialized in repression. We of the Twentieth have a right to demand that history tell us the truth about how the repressionism of Puritan New England really worked among the masses of the people. It seems to have been no more than indifferently successful even in that age of lean adversity. A large fraction of the population submitted to, rather than shared in, the religious and moral fervor which has made the period notorious. They hardly qualified as belonging in the company of the saints. They were "the not-quite Puritans."

That these "not-quite Puritans" were very much like the people of today in their faults and frailties, Professor Lawrence then proceeds to demonstrate in his book by quoting from contemporary records. Then, as now, the elders had the "flaming youth" problem on their hands. For the boys and girls of Massachusetts Bay and other New England colonies DID pet, they DID go in for "new and immodest fashions" and wicked apparell," there WERE "flappers," or their equivalent, who bobbed their hair, or the equivalent, the college students of those days WERE addicted to riotous night life and there WERE breach-of-promise suits, family rows, back-fence quarrels, fights, intoxication and any number of other offenses which brought them, young and old, into court.

These are not merely opinions. They are facts taken from court and other records and here is evidence of the truth of the above statements, in the order presented, as given in Professor Lawrence's book:

Young men there were forbidden "to inveigle or draw the affections of any maid" without the proper permission, and the law enumerates the current prohibited methods: "whether it be by speech, writing, message, company-keeping, unnecessary familiarity, disorderly night-meetings, sinful dalliance, gifts."

In 1660, Jacob Minline and Sarah Tuttle of New Haven were haled to court for violating the law, and the record shows that the purpose of their unlawful meetings had by no means been prayer and fasting

"They sat down together," says the testimony "his arm being about her, and her arm upon his shoulder or about his neck; and he kissed her, and she kissed him, or they kissed one another, continuing in this posture about half an hour" Moreover, Sarah denied that Jacob had "inveigled her affections," whereupon the court fined her instead of him, and called her a "bould virgin."

As early as 1634, "some new and immodest fashions" alarmed the authorities of Massachusetts into ordering "that no person, either man or woman, shall hereafter make or buy an apparel, either woolen, silk, or linen, with any lace on it, silver, gold, silk, or thread."

A prohibition was likewise laid on "slashed clothes, other than one slash in each sleeve, and another in the back"; also on "all gold or silver girdles, hat bands, belts, ruffs, beaver hats."

With due regard for the avoidance of waste, however, the law allowed the present possessors "to wear out such apparel as they are now provided of, except the immoderate great sleeves, slashed apparel, immoderate great rails, long wings, etc."

The remote ancestress of the present day flapper was also dealt with in the clause which prescribed "short sleeves, whereby the nakedness of the arm may be discovered in the wearing thereof."

When a girl bobbed her hair, or otherwise deformed it to meet the latest Seventeenth century fashion, she had to expect not merely father's wrath and mother's tears, but also some public comment from the minister on the Lord's Day, and a personal visit from the local magistrate. Sometimes they were haled into court, after indictment by the grand jury along with murderers thieves, and others who, like themselves, were dangerous to the community. Thus, the records of the Essex County Quarterly courts show that, during the session held at Ipswich in 1682, several such perilous females were dealt with:

"Warrant, dated April 14, 1682, for the appearance of those presented by the grand jury on Mar. 28 for folding their hair, frizzling and knots, and for wearing silk scarfs, Martha Rogers, Mary Brownexx and Elizabeth Browne, the glazier's daughters, Abagaill Metcalfe, Elizabeth Perkins, wife of Luke Perkins, Martha Watton, John Webster's daughter who lives with Mr. John Rogers and Pricilla Carrell, Capt. Appleton's maid."

By 1713, disorderly night life in Boston seems to have been well started, to the extreme annoyance of the Rev. Cotton Mather, who comments on it thus in his diary:

"There are knotts of riotous Young Men in the Town. On purpose to insult Piety, they will come under my Window in the Middle of the Night, and sing profane and filthy Songs. The last Night they did so, and fell upon People with Clubs, taken off my Wood Pile 'Tis hightime to call in the Help of the Government of the Place, for the punishing and suppressing of these Disorders."

Efforts of the early New England fathers to stop wickedness by means of strict laws met with indifferent success. They were more ready to admit this than some of their modern descendants have been.

Thus are the "not-quite Puritans" revealed in a book written by one of the descendants in which for once, at least, they are presented to Americans of today as "people" and "human beings." But in turning our thoughts back to them as the time for the holiday which they have given us approaches, we need not hold them in any the less esteem or reverence because of these revelations about them. The concluding chapter of Professor Lawrence's book is an illuminating exposition of that fact. He says:

There is a belief, widely prevalent today, that history should be the cringing slave of public policy, rather than its trustworthy guide. According to this belief the facts which history presents should be determined, not by the historians, but by those who are supposed to understand better than they what the public welfare requires of the historic record. In particular, there are a great number of persons, grouped in powerful organizations, who are now insisting, even to the point of coercion, that no present-day explorer of our national or colonial history shall bring to light, and certainly to no widespread public notice, any facts which seem to discredit the traditional and popular view of our heroic and glorious past. The authenticity of the facts is rarely questioned. The propriety of presenting them to the public, or at least of giving them so much prominence, is often sharply challenged

In anticipation of such a challenge to the facts presented in this little book, a further word beyond what has been said in the preface seems appropriate. First, as to the belief that Clio should be a slave rather than a guide, and that her utterances should be determined, not by her faithful disciples, but by the self-appointed guardians of public welfare. This willingness to substitute mythology for history, and to cling fondly to that which is known to be untrue, is shared by so many admirable people today that the historians of this country have issued a formal, public protest and warning against it. This warning is in the form of a set of resolutions adopted by the American Historical association, the national society which includes in its membership practically all the leading writers and teachers of history in the United States.

Second, as to the damage, if any, done to the Puritan tradition by the facts presented in this book, or by the manner of their presentation, the author's own profound admiration for many of the leaders in early New England has not been lessened in the slightest degree because of the facts he has discovered and related about them. Rather, he has felt reassured to find that behind the myths of impossible, intolerable, unhuman goody-goodlness there really were men and women of heroic character and achievement, so abundantly equipped with noble qualities and noble deeds that laudatory lying about them was at best superfluous. Their fame shines all the brighter when the darkness which surrounded them is more adequately revealed. The policy of trying to conceal or to minimize their faults and limitations seems far more likely to produce, in the mind of the present-day schoolboy or citizen, a cautious but cynical skepticism than the desired patriotic reverence, and to deepen the suspicion of many that all national history is a set of half-truths, more conducive to jingoistic patriotism than to intellectual honesty.

However distressing "The Not-Quite Puritans" may be to those who insist on regarding the early New Englander as a fleshless demigod and a haloed ascetic, it may find a welcome with the followers of that eminent son of New England, Oliver Wendell Holmes, in his world-wise remark that "we must have a weak spot or two in a character before we can love it much"

OLD FOLKS SAY DR. CALDWELL WAS RIGHT

The basis of treating sickness has n changed since Dr. Caldwell left Medic College in 1875, nor since he placed the market the laxative prescription had used in his practice.

He treated constipation, biliousne headaches, mental depression, indigestio sour stomach and other indisposition entirely by means of simple vegetab laxatives, herbs and roots. These a still the basis of Dr. Caldwell's Syr Pepsin, a combination of senna a other mild herbs, with pepsin.

The simpler the remedy for constip tion, the safer for the child and for yo And as you can get results in a mi and safe way by using Dr. Caldwel Syrup Pepsin, why take chances wi strong drugs?

A bottle will last several months, a all can use it. It is pleasant to t taste, gentle in action, and free fro narcotics. Elderly people find it ide All drug stores have the generous bottl or write "Syrup Pepsin," Dept. B Monticello, Illinois, for free trial bott

ROSSING DEATHS 20,427 IN DECADE

eriously Injured Number 57,625 on Major Steam Railroads.

During the past ten years 20,427 ersons have been killed and 57,625 seiously injured in highway grade rossing accidents on major steam ailroads. The figures do not include rade crossing accidents occurring on maller steam railroads or on electric and oil lines.

These figures were made public re- ently by the American Road Builders' ssociation as part of its national ighway safety campaign. The asso- iation points out that while the num- er of fatalities has increased steadily ince 1918, the comparative number of eaths has been decreased. In 1918 a otal of 1,852 persons were killed in hese accidents, as compared with 2,571 in 1927. In 1927 there were .94 persons killed per 10,000 motor ve- icles, as compared with 1.84 persons in 1918.

Education Helps.

The decrease in highway grade cross- ng fatalities has been the result of ducational measures taken by rail- oads and co-operating organizations. he American Road Builers' associa- ion declares. "A continued reduction s dependent upon the practice of cau- ion on the part of motor vehicle driv- rs. Courtesy and caution are the wo fundamentals which will eventual- y bring a noteworthy decrease in all ypes of highway accidents.

"The two major factors which will ontribute toward better conditions at he railroad grade crossings are cross- ng elimination and individual educa- ion. There are approximately 207,000 n- protected grade crossings on major team railroads alone. It is econom- cally impossible for the complete limination of these crossings within he very near future. It is possible, owever, to eliminate the more dan- erous crossings and at the same time ontinue the education of the motor- ng public in the value of courtesy and aution when approaching these haz- rds."

Urge Elimination.

The association urged highway de- artments and railroads to continue he elimination of grade crossings as ast as economic conditions permit.

In summarizing grade crossing con- itions on major steam railroads the American Road Builders' association tated that at the beginning of 1927 here were 206,533 unprotected cross- ngs in the United States; 6,148 cross- ings were protected by gates, 7,760 were guarded by watchmen, 6,421 had both audible and visible signals, 5,308 were guarded by audible signals only, and 2,204 had visible signals only. Of the 235,138 grade crossings in the United States only 27,747 had any kind of protection.

The above figures do not include crossings located on electric, gas or oil railroads, or on steam railroads of sec- ond, third and fourth grades.

Motion of Auto Will Tighten Up the Brakes

As long as driving with the emer- gency brake set is common, it might be of interest to explain why it is that most people who make this mis- take manage to get about a half a block from their starting point before discovering their error.

A woman who recently started in this forgetful fashion said that the car seemed to run as usual in first and second. When she shifted to high, however, the machine com- menced to slow down rapidly. It puzzled her to know why the brake did not assert its authority from the very start.

There were two reasons. One is that the engine is more powerful in the lower gears. The other is con- cerned with the brake itself. As the car moves the drum of the holding brake expands, thus making the brake hold firmer.

Club Proclaims Driver Shall Keep Hands Free

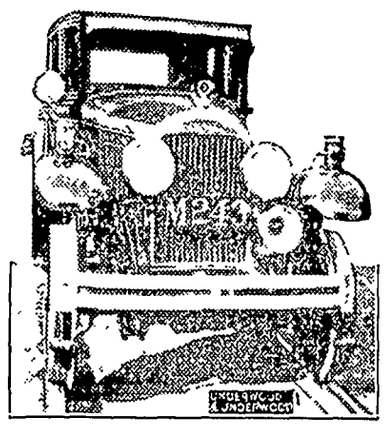
In Skidmore, Mo., the town coun- cil recently enacted a new ordinance that is likely to meet with some dis- approval on the part of our Twenti- eth century lovers . . . you know, the fellows that keep one arm en- twined around that of his fair com- panion with the other arm free for driving.

The new law, according to a bulle- tin issued by the Automobile Club of Illinois, proclaims that "the driver shall not place an arm around the person of another, but shall keep both hands free . . . Nor shall any person place an arm or arms around the person of the driver."

"Anything that makes for safer and saner driving, should be accepted as worthy of such action, and the step taken by the Missourians in the passage of the ordinance will likely be followed by other municipalities," declared Sl. Mayer, president of the club.

Novel Automobile Used by Canadian Railroad

A novel car used by the engineer- ing department of the Canadian Pacific railroad for tours of inspection. The car is equipped with three braking systems: the ordinary foot brake oper- ating on the rear flanged wheels; the emergency brake, and a special



Handy Car for Railroading.

brake applied by turning the steer- ing wheel acting through brake-shoes on the front wheels. It is driven by a single gear with a ratio of 4 to 1. The lighting system has been altered to conform with railway regulations. Note the small lamps mounted on front fenders.

Spain Making Shoes of Discarded Auto Tires

The discarded tires of the Ameri- can motorists are rapidly becoming one of the principal sources of shoes for the peasants of Europe, according to the Keystone Motorist, one of the official publications of the American Motorists' association.

Complete figures are not available, the publication states, but figures just published by the Department of Com- merce show that in Spain alone last year $1,330,000 worth of old tires were imported from America and made into footwear. The pneumatic casings are used in the making of alpargata soles, for use among the middle classes.

Old solid tires are converted into rubber heels and inner tubes are man- ufactured into the making of soles for cheap canvas footwear.

AUTOMOBILE HINTS

A car that can make 75 miles an hour shouldn't.

* * *

You may have the right of way, but the fool doesn't know it.

* * *

Time flies, and what we call a de- tour used to be some county's pride.

* * *

Do not allow mud to stand on cars for any length of time. A car can be washed in a half-hour.

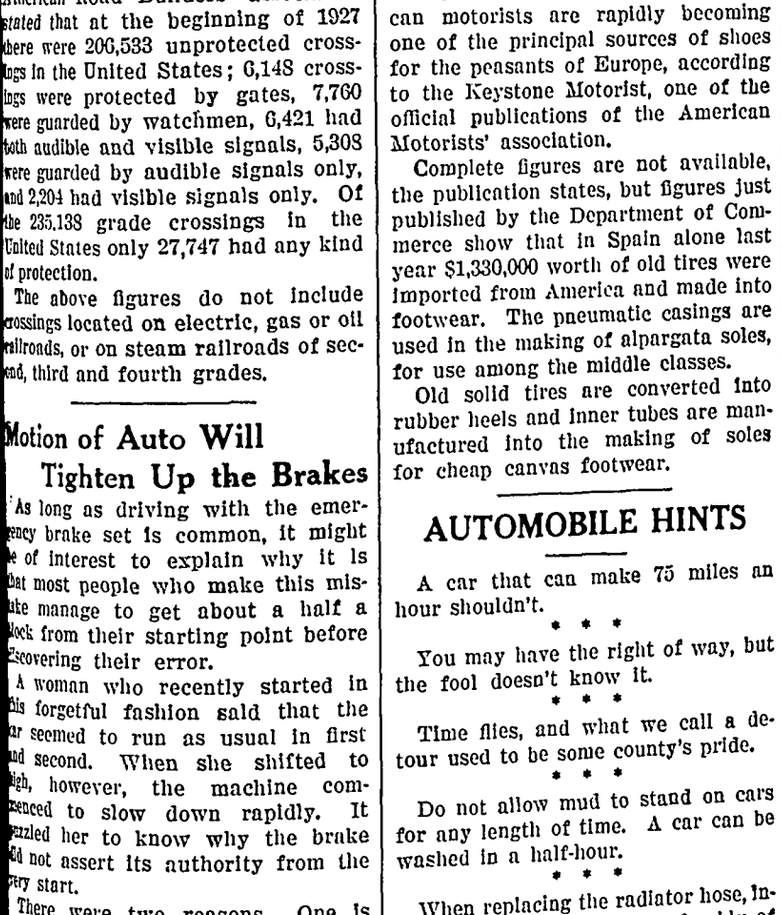
* * *

When replacing the radiator hose, in- stall a good steam hose, preferably of three or four-ply thickness.

* * *

Keep small parts, such as nuts, screws, bolts, washers, cotter pins, etc., in empty tin tobacco or soap cans.

MOTORLESS CAR PROPELLED BY FOOT POWER



The new motorless car (left) folded up so that one can bring it right through the house door, and (right) the machine on the streets of London. It has bicycle wheels and is propelled by foot power and three gears. It can travel at a speed of 20 to 30 miles an hour without much effort to the motor- ist. It has hand and foot brakes, and side screens. Since the new device is motorless—being motorless—it is destined to become very popular.

Letters "Relayed" in Early Colonial Days

In the English colonies in America before 1639 such postal facilities as existed were supplied by private en- terprise. In 1639 the General court of Massachusetts took the first step to- ward the establishment of a govern- ment postal system. In Virginia each planter was required to convey the dispatches, as they arrived, to the next plantation, and so on. In 1072 the government of New York estab- lished a monthly mail to Boston, and this practice was followed in other colonies. Benjamin Franklin was iden- tified with the early interests of the colonial post office. In 1737 he was appointed postmaster of Philadelphia. In 1753 the delivery of letters by penny post was begun. In 1775 the colonies combined to establish their own post office and to pay the neces- sary officials. The Continental con- gress appointed a committee to devise a postal system, which went into ef- fect July 26, 1775. Benjamin Franklin was unanimously appointed postmas- ter general.

No Time Just Then to Think About Fairness

Valentin Garfias, the millionaire oil man, said in New York the other day that there is a great overproduction and consequent waste of oil.

"Nevertheless," Mr. Garfias went on, "there are men who snatch oil prop- erties as unfairly as—well, it's like the story.

"A chap, wild with hunger, rushed up to a railway station lunch counter. The counter was crowded, and he only had a minute to catch his train. Must he go without food? It looked like it.

"Two beautiful sandwiches had just been set before two gentlemen, and the chap grabbed one of them up.

"'Here,' its owner snarled. 'Here, that ain't your sandwich!'

"'Ain't it?' said the chap, as he slipped it in his pocket. 'Then I guess this must be mine.'

"And he grabbed up the other gentleman's sandwich, and galloped off and caught his train just as it was moving from the station."

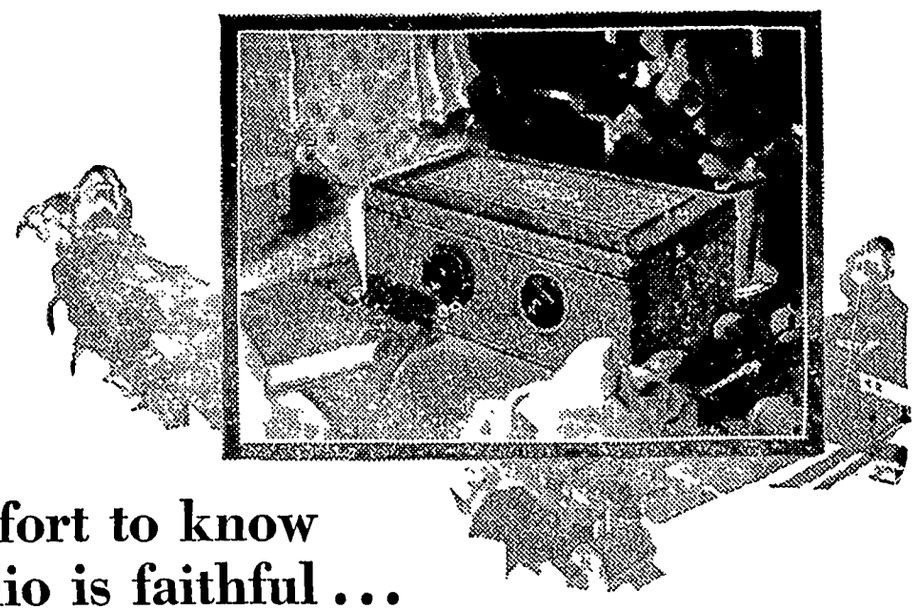
Jazz Has a Place.

Nothing has done so much good for music in its way, says an authority on music in the Woman's Home Com- panion, as good jazz because it has stirred up a rhythmic vitality and removed a cloying sentimentality which threatened to enshroud music at the end of the last century.

Fifty-Fifty Laws.

A division of labor makes for a happy race. Legislators pass the speed laws and the motorists pass them up. —Farm and Fireside.

ATWATER KENT RADIO



MODEL 40
ELECTRIC, $77

For 110-120 volt, 50-60 cycle alternating current. Requires six A. C. tubes and one rectifying tube, $77 (without tubes). Also Model 42 with automatic voltage regulator, $86, and Model 44, an extra-powerful "distance" set, $106 (without tubes).

For direct current, Model 41, $87 (without tubes).

What a comfort to know your radio is faithful . . .

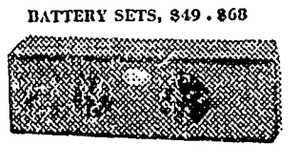
"MARY, turn on the radio and see what the weather man says. Then let's see if there isn't a good male quartette somewhere, or a brass band—"

What a satisfaction it is to *know* your radio will do its duty.

Good, reliable Atwater Kent Radio! What a host of friends its dependability has made! "You can always count on an Atwater Kent"—wherever radio is known, that's what they say.

This quality of steadfast- ness is built in, and doubly assured by 222 factory tests or inspections. Hence the com- mon remark, "If Atwater Kent makes it, it's right."

BATTERY SETS, $49 . $68



Solid mahogany cabinets. Panels satin-finished in gold. Model 48, $49; Model 49, extra-powerful, $68. Prices do not in- clude tubes or batteries.

From the house current

The 1929 Atwater Kent all-electric set is powered wholly from the house lighting circuit. You snap a switch to turn the current on and off, just as you do with an electric light. Always ready to operate. Current costs only a fraction of a cent an hour.

—or from batteries

The 1929 battery set also has clear tone, selectivity, great range and plenty of volume, plus beauty and compactness.

—at a money-saving price

You cannot buy the all-round satisfaction that Atwater Kent Radio gives, for less than the fig- ures quoted here. You can pay a great deal more without getting more.

"Radio's Truest Voice"
Atwater Kent Radio Speakers: Models E, E-2, E-3, same qual- ity, different in size. Each $20.

City Gets Unique Table.

Edinburgh, Scotland, has been pre- sented a table composed of the differ- ent kinds of wood grown in Australia. It was the gift of the delegation of Scotchmen who recently traveled from Australia to visit their old country. The principal panels of the top of the table are finely grained, and show an interesting variety of colorings and markings. The design, with the square legs strengthened by crosspieces, is in- dividual. The gift has been placed in the city hall.

By use of a new device constructed at the United States bureau of stand- ards the pickup of an automobile en- gine can be calculated.

The Unpardonable Crime.

New Arrival—Here, here! What's the trouble?

Bystander—They're running Jones out of town; he was caught minding his own business.

Different Education.

Too few of us have the courage to use what education we have, unless some one has given us a diploma cer- tifying our right to it.—American Magazine.

Falling.

Vanquished Hopes.

Mother—Junior, do you know where the new candy shop is on Main street?

Junior (expectantly)—Yes!

Mother—Well, I want you to go into the grocery next door and get me a pound of onions.

A bird in the bush is worth two in the cat's mouth.

eliminates chains !!

cleated tires *that grip like a cleated shoe*

CHAINS this winter? NO! Yet, safety all the time—not just when chains are on! And quietness all the time—not just when chains are off!

Cleated tires are the tire industry's answer to winter's most an- noying problem. What an innovation!

The picture tells the story. Cleated tires . . . grip wet roads . . . bite into snow . . . are sure-footed in slush and mud . . . respond effectively to the demands of four-wheel brakes.

AND THEN, after the trying conditions of winter have worn down the cleats, comes into play the standard long mileage Dunlop non-skid balloon tread . . . ready when spring comes to take over the changed road demands brought about by the difference be- tween winter and spring road conditions.

The winter mileage provided by the cleats themselves is *entirely additional to the standard tread mileage.*

Dunlop considers this winterized tire one of the greatest of its many inventions for the safety and comfort of motorists.

To Dunlop dealers: If the Dunlop representative has not had time to reach you, wire your orders to the nearest Dunlop warehouse.

INGS AT SCHOOL THIS PAST WEEK

NY PEOPLE VISITED SCHOOL DURING PAST WEEK

e High School Plays To Be Put On In Near Future

We are glad for the interest so y of our parents and friends e shown in our work at the ol house as evidenced by the y who accepted our invitation visit us at work last week. In dition to those mentioned in last k's notes the following visited the latter par of the week: Lena Schroeder, Mrs. Emil Pa- Mrs. Croner, Mrs. Schuldt, Mrs. ner Trumbell, Mrs. A. Welle- er, Mrs. Griesemer, Mrs. Emil us, Mrs. Will Kraus, Mrs. L. O. l, Mrs. Moulton, Mrs. Nettie e, Mrs. Pavey, Mrs. Fred Kluck n, Mrs. John Stille, and Mrs. A. kensderfer. We desire all those called any time last week to they are welcome to call any e they wish in the future. There a welcome for all and we hope who came will come again.

Miss McGinnis is one of our busi t tecahers these days for with her ular school work each day she s a sewing class which meets one ht each week and besides that group of high school student are eting two nights each week prac- ing one act plays. These plays ll be given sometime soon at least ior to the Christmas vacation, and l of them the same evening. The e will make a full evening's ogram and we believe the public ill enjoy it The proceeds will be ed by the Juniors to defray the penses of the annual Junior-Sen- banquet.

Class And Teachers Entertained

Most of our high school faculty ere guests at the home of Mabel huldt, one of our Senior students, ho entertained her class and did well. She and her parents know w to make their guests feel at me. We all had a delightful e and the hour for departure me before we were aware of it e was Friday evening, Nov. 16

Another Six Weeks Finished

This week concludes another six eks period of work this semester veral of our students have found rather difficult to help in the n field and maintain their class dings at the same time and not be blamed for a slightly in- orable showing if this should be ed on the report cards going next week.

Callers From Hayfield School

Two young men of the Hayfield ulty dropped in on us for a brief on Tuesday evening, of this k. One of them, a Mr. Whitmore a class mate of Mr. Lewis of own high school faculty. They ort favorable conditions at Hay- d.

New Basket Ball Suits

The new basket ball suits ordered our team are now eagerly look- cr. We hope they may be here ime for our game on Friday ev- of this week. If they arrive ime our boys will look good en- to win and we believe will do utmost to justify their looks.

Come To The First Game

e hope everybody within a e of five miles comes to this opening game and that the sea- may open with a bang. We an- ie the same generous support our athletics heretofore and be surprised if the house is not ded when we go on the court st Swaledale at 8 o'clock, on y evening. Admission as us- 15c and 25c.

r. and Mrs. Elmer Arnold drove ason City Wednesday for a vis- the Dr. Tice home. Mr. Arnold ined over night to have treat- for his rheumatism.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Next Sunday morning, November 25th we will have with us Dr W H Lease our District Superintendent, who will preach for us at the egular hour of worship both in Klemme and Liberty No comment upon Dr Lease's preaching ability is necessary in this community I know that you will wish to hear him

We have been having a fairly good attendance at our evening services but it should be larger If those of you who have been attending in the evening have found these services helpful tell others about them and invite them to come. The sermon Sunday evening will be the third and last of the series on the theme "Conditions of a deepening acquaintance with God"

A special invitation is also extended to the young people of our constituency who are of League age to attend the devotional meeting each Sunday evening at 6.45 There has been a good interest shown in these meetings and I am sure that they have been profitable to all who have been present Come and join with this fine group You cannot afford to miss them

MARTIN BARZ GOES IN FOR WILD GOOSE SHOOTING

Gets Two Fine Specimens With But One Shot

Martin Barz, Son of Herman Barz who live northeast of Klemme can without a doubt claim the honor for shooting the first geese in this vicinity this fall And furhermore, Martin wins the feather-lined brass medal for marksmanship as he got both geese with one shot.

Martin discovered the pair of honkers last Thursday on a pond on his father's land and proceeded to stalk his game He thought he was a little long on range but said he took a chance shot and when the smoke of battle had cleared away both geese were deader than door nails, and all from one shell loaded with nothing larger than No 4 shot

BERT AUCHAMPACH TO HAVE FIRST SALE OF SEASON

Has A Fine List Of Farm Machines And Large List of Stock

The first public sale of the season in this vicinity will be at the old Braund farm, 3 miles north and 3 miles east of Klemme on Thursday, December 6th, when Bert Auchampach will sell his eight head of horses, 18 head of cattle, 12 head of hogs and a long list of farm machinery, poultry, hay and other articles.

Bert is one of the good farmers of this community and his many neighbors and friends will regret having the family move away However they rejoice in the fact that they will be near, as Mr. and Mrs Auchampach own a house at Ventura where they will live after retiring from the farm.

The full size sale bill will appear in the Times next week

FIRE ALARM SOUNDED HERE SUNDAY EVENING

Gasoline Stove Caught Fire At The Rev. Grosshuesch Home

At about 6:30 o'clock Sunday evening the fire siren sounded an alarm when Rev. Grosshuesch turned in a call for held.

A gasoline stove at the Grosshuesch home was the cause of the excitement. Evidently a shut-off valve had not been entirely closed when the stove was last used and a small quantity of gasoline had dripped about the stove When Miss Adella Kuhlman, sister of Mrs Grosshuesch lit the stove the surplus gaoline ignited and flared up However the blaze died down as soon as the gasoline had been consumed and the danger was over before the fire department arrived on the scene.

Total damages amounted to nothing more than a good scare.

CAMP FIRE GIRLS ELECT OFFICERS

CAMP FIRE GIRLS ELECT NEW OFFICERS FOR YEAR

Valeria And Nova Koerner Hold Perfect Attendance Record

On November 19th the Ta-Ta-Pochan Camp Fire Girls held their first meeting in the new rooms which are located above the State Savings Bank building

New officers were elected as follows:

President, Clarice Wellemeyer
Vice-Pres Blanche Gimer
Secretary, Valeria Koerner
Treasurer, Nova Koerner.
Chaplain, Thelma Kluckhohn
Sergeant-at-Arms, Hilda Keeper
Publicity Officer, Gracka Quandt
Entertainment Committee: Irene Johnson, Blanche Gimer, Lucille Kraus.

Refreshment Committee: Reva Elder, Ethel Barz, Clarice Wellemeyer

Invitation Committee, Nova Koerner, Valeria Koerner

Gracka Quandt and Thelma Kluckhohn were appointed to call on the sick

Hold Attendance Record

During the three years of Camp Fire, Nova and Valeria Koerner were not absent from any of the meetings.

Thelma Kluckhohn was absent only once Gracka Quandt and Irene Johnson four times; Reva Elder, five, Clarice Wellemeyer, and Lucille Keraus six, Ethel Barz, twelve

Out of one year Hilda Keeper has been absent but once.

Miss Adella Kuhlmann has joined as our assistant guardian.

Before giving our play we had $10 42 in the treasury After depositing $53 07 made by giving the Camp Fire play, "The Call of Wohelo," we had a total of $63.49.

After paying our bills we have $50 74 in the treasury

At our meeting we planned a party to be given to mysterious (?) guests

Our next meeting, a ceremonial meeting to be held Dec. 3. Honor beads will be awarded.

The Royal Neighbors Bake Sale held Saturday was a great success. The only trouble was that the ladies did not have enough to supply the demand Have another, ladies!

NOTICE OF PROBATE OF WILL

STATE OF IOWA,

Hancock County, ss.

To All Whom It May Concern:

YOU ARE HEREBY NOTIFIED, That an instrument of writing purporting to be the last Will and Testament of Valentine Josten, deceased, dated Aug 30, 1928, having been this day filed, opened and read, Mon., the 10th day of December 1928 is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 10:00 o'clock A. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated andallowde as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, Oct. 18, 1928.

CHRIS J. JOHANSEN,
Clerk of District Court.
(Oct. 25, Nov. 1-8, 1928).

PUBLIC NOTICE

The Town of Klemme has an Ordinance that requires that the snow shall be removed from the sidewalks in a reasonable length of time which Ordinance may be found at either the Mayor's or Clerk's Office, and it is sincerely hoped by the Council that you will not be the one against whom this Ordinance will be enforced. 2tc

KLEMME GOES OVER THE TOP

RED CROSS DRIVE WENT OVER THE TOP IN KLEMME

Goal Was Set At $75.00; Ladies Collected $83.00

Klemme has done her part in the Annual Red Cross drive, thanks to the good work of the four Klemme ladies who conducted the drive They are Mrs Martha Bredbenner and Mrs Emil Patet, as one team who collected $51 00; and Mrs. Karl Kraus and Lena Schroeder, the other team who garnered in $32.00

Klemme's quota was set at $75 and the ladies are to be complimented in conducting the drive and going over the top.

The ladies may have missed some but the drive is stillo pen for any who want to contribute to the Red Cross Send or bring your money (any amount) to the Times and we will forward you a receipt and a Red Cross button. This will be added to the fund.

Part Of Money Remains Here

Half of the money colected will remain in Klemme to be used in any immergency should it be required All of the Junior Red Cross money, except fifty cents for enrollment and a magazine for each room, remains in Klemme for any work the Juniors desire to do.

The balance of the funds collected in this drive go to National Red Cross work.

LADIES AID BAZAR TO BE HELD TUESDAY, DECEMBER 4

Methodist Ladies Will Also Serve Supper In The Evening

The Methodist Ladies Aid Bazar will be held Tuesday, December 4, 1928, at the Parish House and the bazar will be open to buyers at 2:30 p.m. The supper will be served at 5:00 p. m. until all have been served.

Everybody is invited to both the Bazar and super. The ladies will all have tickets and they will be out next week selling tickets for the supper. Adults can procure a supper ticket for 40c, and children under high school age may have one for 25c. Buy a ticket, whether you can come or not as the proceeds of the supper and bazar will go to the one thousand dollar building fund for a new church in Klemme some day.

Will Ask For Contributions

Each member or friend of the church will receive a card about next Tuesday, asking them for a donation (a chicken, pie or something) and the ladies are going to depend on you furnishing same. The ladies have never tried this way of soliciting but many other places do it. The Aid members are furnishing for the supper, bazar, candy booth, fish pond and do ALL the work. So they expect you to help and furnish what the committee asks of you. The ladies want all to work together for a good cause..

The time and place of bringing the articles will be on the card you receive and instructions for letting the ladies know whether or not you can furnish what is asked of you.

Tell you frineds to come to the Aid supper and bazar, Dec. 4th.

GOODELL NEWS ITEMS

Lew Rierson was a Belmond caller Saturday.

Mr. Brummond of Kanawha was a Goodell caller one day last week.

Mr. Papousek of Belmond was a caller in this vicinity Monday.

Mr and Mrs. A. C. Carpenter were Mason City shoppers Thursday.

Mr. and Mrs. Henry Wilde of Belmond spent Sunday at the home of their daughter, Mrs. Ivan Baker.

Rev. and Mrs. Percy have been entertaining their daughter and family the past week.

Wayne Bachman helped husk corn at the W. L. Sherwood farm last week.

Mrs. Casey Blank of Reinbeck spent Thursday at the home of her parents, Mr. and Mrs. Dan Miller.

Wemkie and Anna Trampel were callers at the Geo. Griggs home one day last week.

Mrs. Harry Newgarrd and baby and her father S. S. Matson were Mason City shoppers Monday.

The U. B. Ladies have changed the date of their bazar and chicken supper. It will be December 8th.

Ed. Buentenbach of Klemme delivered a cow to Mrs. Geo. Griggs Monday. He also bought a pair of colts of Geo. Griggs.

A picnic dinner was held at the U. B. Church Sunday. On account of the roads and weather not very many were present.

An Auction Sale for the old school houses in Districts 2, 6 and 8 was held at the Avery Center school house Saturday.

We are sorry to learn that Miss Merle Ramer has resigned her position as demonstrator for the county Club Work. She has decided to take up art work at New York City.

Mr. N. C. Scholty, the veterinarian who was testing cattle for T. B. in this vicinity Monday, seemed to be having his share of trouble getting stuck in the mud with his car. Different parties were called upon to pull him out with horses.

IOWA UNION TEL. HAS NEW OWNER

CHICAGO COMPANY NEW OWNER OF NINE EXCHANGES

Deal Was Closed Tuesday By The Lawrence Regan Company

We have just received notice from Mr. L. O. Deal, local manager of the Iowa Union Telephone Company that Lawrence Regan & Company of Chicago recently purchased the property of the Iowa Union Telephone Company from the G. N. Clark estate. This company owned eight exchanges outside of our local exchange here at Klemme; the others being Hartley, Forest City, Emmetsburg, Swea City; and St. Ansgar, in Iowa, and Lyle, Leroy and Adams, Minnesota.

We are pleased to be informed by our local manager, Mr. Deal, that the same employees who have always given us very efficient service, will be retained. Mr. L. O. Deal, who has been a resident of Klemme for the past year, coming here from Mason City, will continue to manage the affairs of the Company here. Mrs. Walter F. Lau, who has had charge of the central since the Company purchased the exchange from A. G. Koerner, will likewise continue in the employ of the Regan Co. with Miss Adella Kuhlmann as assistant operator.

The new owners intend to put forth every effort to add a substantial list of new subscribers within the next sixty or ninety days, and to make such improvements as are required.

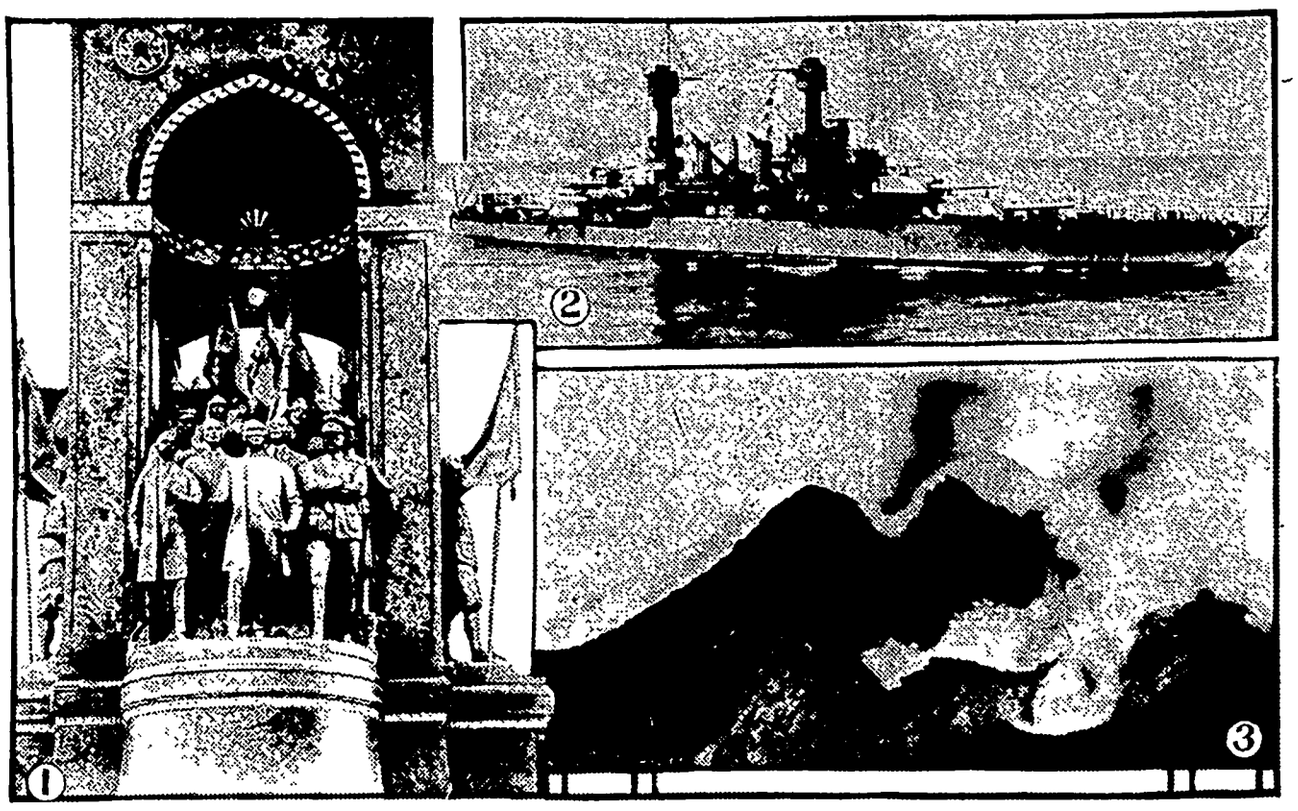
NOVEMBER DISTRICT COURT IN SESSION MONDAY

Jury Not Called For Duty Until Next Week Tuesday

Last week The Times gave a list of the new cases filed for the November term stating that Judge M. H. Kepler would convene court Monday, which he did. However, the petit jury has been notified that their services are not required until next Tuesday morning, when hat body will appear for duty should their services be required.

Friday of this week has been set as naturalization day and about six or seven Hancock County residents will receive their papers.

Unless something turns up the November term will passa long in a rather quiet manner, acording to court house officials.



1—New Victory monument in Constantinople, first ever erected by Turks, with group of President Kemal and his staff. 2—Battleship Maryland, carrying President-Elect Hoover on first part of his Latin-American tour. 3—View of Mount Etna during its latest destructive eruption.

NEWS REVIEW OF CURRENT EVENTS

Ship and Crew Blamed for the Loss of Life in the Vestris Disaster.

By EDWARD W. PICKARD

ONE hundred and eleven persons, of whom forty-three were women and children, perished when the Lampert & Holt liner Vestris sank about 250 miles off the Virginia capes. The rescued were 215 in number and were picked up by vessels summoned by the S O S call of the radio operator on the Vestris. Who, if anybody, was to blame for the terrible loss of life was to be determined by official investigation. Many of the survivors were certain that the captain, William Carey, was responsible for it. He went down with his vessel and cannot defend himself. The stories told by the rescued passengers agree that the ship was in evident peril Sunday night and that Captain Carey delayed the sending of calls for help until ten o'clock Monday morning, presumably hoping to save salvage fees, which are heavy. Though the Vestris was inspected at New York on November 7 it is asserted she sailed with some of her life boats and lowering davits in poor condition and that none of the boats were sufficiently equipped with oars, provisions, etc. Before she got far from port a heavy list developed, and the cargo shifted when heavy seas broke through one of the coaling ports.

When the captain finally did send out the S. O S call it was answered immediately by several vessels, including the American Shipper, the French tanker Myriam and the North German Lloyd liner Berlin. The battleship Wyoming and five coast guard vessels also were rushed to the scene. But hours before the first of these arrived the Vestris had rolled over and gone to the bottom. Almost at the last minute the passengers and crew took to the boats, but some of these boats were smashed, and others upset. The old rule of the sea, women and children first, was observed, but only ten of the thirty-three women survived and all of the twenty children perished. Twenty-one bodies of the dead were recovered. Captain Carey was said at the London offices of the steamship company to have been an experienced seaman with an excellent record. Staying with the ship and dying with the captain was M. J. O'Loughlin, the radio operator.

SIX members of the flying school squadron at San Antonio, Texas, were killed when an army transport plane crashed. The right wing and tail piece of the plane broke off at at an altitude of 3,000 feet and it plunged into a tail spin. The men killed were all in the cabin of the plane and had no chance. The pilot and another man, who were in the front seat, were thrown out and landed with parachutes.

MOUNT ETNA calmed down toward the end of the week and it was believed the eruption was nearing its end. The river of molten lava was beginning to solidify and its advance was much slower, but it still was menacing several towns. Officials of the Fascist government were most efficient in evacuating and assisting the refugees, all of whom were provided with shelter and food. Ample funds were voted by the council of ministers. The work of reconstruction already is being planned, among the first things being the building of new transportation routes around the fresh lava deposits. The total damage is estimated at $9,000,000. Three towns were ruined, two railroads cut and partly submerged and many hundreds of acres of lemon groves and vineyards destroyed. Very few lives were lost for the inhabitants had ample warning.

PRESIDENT-ELECT HERBERT HOOVER is on his way southward aboard the battleship Maryland, and all of Latin-America is getting ready to welcome him on his good-will tour. It was decided that the first port of call should be Corinto, Nicaragua, where he would be met by President Diaz and would have an opportunity to indicate the policy his administration will pursue in dealing with situations similar to that which arose in Nicaragua and which resulted in the policing of the country by American marines. From there on the tentative program calls for stops at Balboa, Canal Zone; Callao, Peru, and Valparaiso, Chile. The governments of Colombia, Ecuador and Bolivia also asked that Mr. Hoover visit those countries.

The President-elect is accompanied on his tour by Mrs. Hoover and their son, Allan. The others in the official party are Henry P. Fletcher, American ambassador to Rome, representing the State department; George Akerson, secretary to Mr. Hoover; George Barr Baker of New York, a personal friend; Commander Augustin T. Beauregard, United States naval aid to the President-elect, and a force of four clerks and interpreters.

Before leaving Palo Alto, Mr. Hoover made it known that he had not discussed his cabinet appointments with anyone and would do nothing in that matter until his return in January. William J. Donovan, assistant attorney general of the United States, spent several days at the Hoover home and at once it was rumored that he would be given the post of attorney general.

In a letter written for the Manufacturers' Record, Mr. Hoover expressed his profound appreciation of the heavy vote given him by the Southern states, and promised that he would give that section of the country all the help he could in the way of flood control and development of an intercoastal canal system and hydro-electric power.

PRESIDENT COOLIDGE'S Armistice day address, delivered at the American Legion exercises in Washington, aroused a lot of comment, mostly favorable in this country. He made an earnest appeal for the construction of additional cruisers for our navy, and then passed to a review of American relations since the war, giving Europe notice of changes in our foreign policy. He took America's former allies to task for their criticism of this country, announced a tightening of American purse strings on loans to Europe, placed the blame for the failure of the Geneva three-power conference and the efforts to attain cruiser limitation squarely upon the selfishness of England and other European nations.

The French press didn't especially like the President's remarks; and in London Lord Birkenhead in a banquet speech said: "My answers to the President of the United States would be that we ask nothing from them except good will. When we discuss questions of naval construction we do not invite lectures as to whether we are pacific or not. When America claimed the right to build a certain number of cruisers our answer was: 'We agree. Let them build as many as they like.' There is one thing no English government ever will do. They will not surrender the right to build a sufficient number of light cruisers to protect the empire for which they are responsible trustees."

GOV. AL SMITH went down to Biloxi with a party of close friends to rest and play golf, but before departing from New York he issued a cheerful radio address to his fellow Democrats. Admitting his disappointment with the outcome of the election, he yet refused to admit that the defeat had crushed the Democratic party and declared that it must carry on its political fight along the lines and upon the principles it always has stood for and that it should be a constructive rather than a destructive force. Those principles, he asserted, are as great in defeat as they would have been in victory. Citing the large popular vote he received, he said: "We have the assurance from the election returns that the Democratic party is a live, a vigorous and a forceful major minority party. The existence of such a party is necessary under our system of government."

The governor reminded his hearers that Mr. Hoover would be the President, not of the Republican party, but of the United States—of all the people—and as such "is entitled to all the co-operation of every citizen in the development of a program calculated to promote the welfare and the best interests of this country."

LOUIS J. TABER, master of the National Grange, in addressing the opening session of the annual convention in Washington, urged that congress call a halt on the expenditure of public funds for new reclamation projects. "The government should act with caution in the development of new lands for agricultural production during this period of depression and surplus," Mr. Tabor said. "The grange must fight against appropriations for new irrigation and reclamation projects until there is evidence of need for the land for food purposes, or until agriculture again prospers."

The grange is in favor of the export plan of farm relief in preference to the McNary-Haugen bill, which it considers dead.

HIGHWAY officials from nearly every state, in annual convention in Chicago, expressed the belief that there would be an unprecedented expansion and development of improved roads during the Hoover administration, because of the encouragement he gave the movement in his St. Louis speech, and the association asked for a largely increased federal aid appropriation.

STATISTICS made public by the internal revenue bureau show that 52 individuals entered the $1,000,000 or more income class in 1927 and that the total number in that group was thus brought up to 283. The report shows a marked decrease in the number of persons having incomes up to $10,000 a year and a considerable increase in those reporting higher incomes, as compared with the figures for 1926. There was a big decrease in the gross incomes of corporations.

JULIU MANIU, leader of the Rumanian peasant party, was summoned by the regency council to form a ministry for that disturbed country, and undertook the job, to the great joy of the peasants and workmen. He made up a cabinet and began work by dismissing a lot of lesser officials in different parts of the country, saying he wished to clean "Rumania's Augean stable of its corrupt and dishonest incumbents before the new elections are held so that the Liberals with their huge political machine cannot falsify the returns." All the opposition parties have combined to fight to the death against the Maniu government. This combination is backed by the big corporate interests and says it will spend money freely in the national elections early in December.

Raymond Poincare yielded to persuasion and formed a new ministry for France with himself as premier without portfolio. But he had to leave out the Radical Socialists because they refused to co-operate with him, and thus his parliamentary strength is considerably decreased. He also omitted M. Louis Marin, leading opponent of the war debt agreement ratification.

DISTRICT ATTORNEY ASA KEYES of Los Angeles pleaded not guilty to charges of bribery and will go on trial, with seven others, on December 5. An interesting feature of this case is the possibility that the Aimee Semple McPherson kidnaping conspiracy matter may be reopened. Witnesses before the grand jury submitted documentary evidence said to have supported allegations that about $800,000 was used in the defense of the evangelist before the district attorney dismissed the charges of conspiracy which were made against her. Over in England, where Almee has been evangelizing, she denied this story with scornful satire.

MME. SIGRID UNDSET of Norway has been given the 1928 Nobel prize in literature, and Henry Bergson, French philosopher, that for 1927 held over from last year. The Nobel awards for chemistry, for both years were carried off by Germans, Prof Heinrichs Wieland of Munich and Prof. Adolf Windaus of Goettingen. The peace prize for 1928 will be awarded by a committee of five in Oslo.

"In the Shadow"

Contemplation of the approach of the great day may account for the dejected attitude of the bird which plays so large a part in the national feast.

Domestic Appeal of the Festival Season

Tradition says that there were athletic contests on the first Thanksgiving day. Bradford mentions in his journal that the Pilgrims played pitch-the-bar. Our modern Thanksgiving is quite in the spirit of the original.

It is pleasant to feel that there has never been a trace of dourness or morbid introspection in the holiday which began at Plymouth Rock, which the Puritans adopted, which New England cherished and which since the Civil war has won a national observance as whole hearted as a set occasion for rejoicing could well attain. No day is more signally marked by charitable deeds and the good offices of friendship. The very heart of its appeal is domestic. Above all it is a day of family reunion, "gathering in the shattered sheaves of home and kin."

Summing Up Blessings

Neither wealth nor poverty is a blessing—both may be curses. Epictetus regarded them as among the things which he classed as "indifferent." It is wrong, therefore, to think very much of them in connection with the attempt to sum up our blessings. They may have no significance at all, one way or the other. In this connection, a study of the Greek philosophers would by many be found extremely helpful. "Life is more than meat, and body than raiment," a truth which it seems highly important to bring strongly home to the consciousness of men—especially of those who, whenever the skies are dark, see only a mockery in Thanksgiving day. That is a thoroughly anti-Christian, and, as is believed, anti-commonsense attitude.—Indianapolis News.

Few Ungrateful

Although there may be many in America today who have no feeling, no thought, and even no word, of gratitude, there is no doubt that on the whole this country has a deep sense of thankfulness for the many and bountiful blessings that have been bestowed upon it. Surely no nation ever had such abundant reason for gratitude and in the same degree no nation ever had such an obligation laid upon it.

Thanksgiving

Grateful for the harvest
Gathered from the field,
Fruits of plain and valley
In overflowing yield;
Thankful for the beauty
Seen upon each way,
For the many simple joys
That came with every day;
Grateful for the favors
Given to our land,
For the progress and the work
Seen on every hand;
Thankful for the striving
That will not let us be,
The restless urge that leads us
To new discovery;
Grateful beyond telling
For home and kin and friend—
When we count our blessings,
There seems to be no end.
—Katherine Edelman.

Turkey Production

The most important sections of turkey production are the Middle Western and Southwestern states. In these states large numbers of small flocks are raised annually on the grain farms and there are also many large commercial flocks. The census of 1920 shows the six leading states in production of turkeys to be Texas, Missouri, Oklahoma, California, Kentucky and Virginia. Formerly large numbers were raised in New England, but in recent years there has been a decided decrease.

Goodness and Gratitude

Cicero called gratitude the mother of virtues. He regarded "grateful" and "good" as synonymous terms, in as much as to be grateful is to be good, he said, and to be good is to be grateful. Gratitude, that is to say, is a measure of goodness; one is good in the degree that one is grateful, and one cannot be good who is ungrateful. Indeed, if they are not one and the same thing there is an intimate relation between them.

MUST NOT BE ONLY DAY OF PLEASURE

Thanksgiving Also Time of Cheer and Inspiration.

Men have little of the Thanksgiving spirit in them who see nothing in life for which to be grateful when they themselves happen to be stricken or afflicted. They do well to be sorrowful and sad, do well to mourn—they would be less than human if they did not. But it is again a mistake to rebel at what is the common lot, or to indict God for the inevitable. One with a truly thankful spirit can be thankful even though the tears flow and the heart seems broken. One can be thankful with a thankfulness shown in their "lives by an humble, holy and obedient walking before" God all the rest of their life. The important thing ever to bear in mind is that we are dealing with a spiritual relation, and with life as a spiritual experience, which relation no one can break but ourselves, an experience of which no one but ourselves can rob us. Looked at in some such way as this Thanksgiving day may be a blessing to all, and a great and wonderful teacher. So we should each year approach it with a determination to make the most of it, and to get out of it all the benefits which it is so capable of yielding. It ought to be a day of blessing, a day of cheer and inspiration. Perhaps we have gone too far in thinking of it mostly as a day of feasting, and of material pleasure. It would be well to view it in its profounder and more sacred aspect—we must view it in this way if we would make it a blessing to the soul. The thankful spirit—what a great thing it is! Its antithesis is a jealous and grudging spirit, and perhaps the choice is between them. There can be no question as to which a right-thinking man would choose for himself. As a rule the most thankful people are those who have little. For those who have much generally take what they have as a matter of course—as only their due—and therefore as calling for no expression of gratitude. We should wish one another a spiritually profitable Thanksgiving day as we wish one another a Merry Christmas.

"I've Got Him!"

Washington's Thanks

I do recommend and assign Thursday, the twenty-sixth day of November next (1789), to be devoted by the people of these states to the service of that great and glorious Being, who is the Beneficent Author of all the good that was, that is, or that will be; that we may then all unite in rendering unto Him our sincere and humble thanks for His providence in the course and conclusion of the late war; for the great degree of tranquillity, union, and plenty, which we have since enjoyed; for the peaceable and rational manner in which we have been enabled to establish constitutions of government for our safety and happiness, and particularly the national one now lately instituted; for the civil and religious liberty with which we are blessed.—George Washington.

Turkey Supreme

Whether the various monarchs occupying their several thrones recognize the turkey as the bird par excellence for all notable gastronomic occasions is a question of minor importance. He is so recognized here in America and is the crowning glory of the White House table on the greatest of great feast days; and since the President of the United States, be he Republican or Democrat, is more powerful than any sceptered ruler, the turkey's claims to pre-eminence among the food birds of the world may be regarded as established.—American Legion Monthly.

Thanksgiving

The roar of the world is in my ears.
Thank God for the roar of the world!
Thank God for the mighty tide of fears
Against me always hurled!
Thank God for the bitter and ceaseless strife,
And the sting of his chastening rod!
Thank God for the stress and pain of life,
And oh, thank God for God!

Joyce Kilmer.

"BENJAMIN FRANKLIN discovered electricity. They call him 'Poor Richard' because he didn't know what to do with it."

Thus runs the composition of an eighth-grade student, expressing in eighteen words an economic aphorism about which beetle-browed professors have written forbidding volumes.

Franklin did cage the lightning; but it took men like Edison, Steinmetz and Atwater Kent to convert it into light and power and music. Franklin's memory enjoys the perspective of years. But the kaleidoscope of current history revolves so rapidly as to obscure, temporarily at least, the great accomplishments of modern times.

Franklin was skilled as a press agent. He published a magazine, outstanding in its time, that the world might know of Franklin and his ideas.

Present-day disciples of Franklin do little to advertise themselves out of personal obscurity. Cloistered within walls of intensive effort, they apparently prefer to exist as forces rather than individuals.

Charles P. Steinmetz, wizard of the electric current, was accustomed to bury himself for long periods in his laboratories, deaf to all calls except that of his work.

Thomas A. Edison grinds away ceaselessly at his tasks, aloof from the world except for occasional sallies to project a bit of time-silvered homely philosophy.

A. Atwater Kent, genius in the field of radio, is another of these prodigious workers. To his laboratories in the great plant at Philadelphia, where Atwater Kent radios are produced, he is a living, breathing person—a dynamo of creative energy. But to the rest of the country he is apparently content to be known only by his works.

In the field of radio development, however, the newest and most amazing field of electrical progress, Kent has gone even beyond Steinmetz and Edison in carrying through the application of scientific inventions and discoveries and making them a definite force in the homes and lives of the people. To a greater extent than perhaps any other inventor in the field of electricity, he has delivered the results of his research and experiment outside the laboratory walls, has supervised the manufacturing processes that have made it possible at once accurate and precise production on a mass scale and then has personally created the merchandising setup that has made his product the recognized standard in radio achievement. But all this has been done behind the veil of personal anonymity. The result is that while Atwater Kent products are known the world over, Kent himself, the man, is a virtual stranger—almost a fiction—to the public at large.

He is a slender, keen-faced man he is, of medium height, now in his early fifties. Thinning sandy-colored hair, with a glint of red in it. Eyes that flash and dance as he busies himself with dials and meters and gadgets in the laboratory. Mouth that curve pleasantly in a natural half-smile. Direct in action, he does not experiment blindly, but knows exactly what he is trying to do and why. And usually he finds it.

Soft spoken, but short spoken, he is a man of ideas rather than words. His stenographer has a sinecure, since he seldom writes letters. Often, his correspondence will run less than half a dozen letters a week.

His department heads have no such snap. They must get the full scope of his orders, in a few words, and translate them into accomplishment. Their reports must be oral, not written, with the last word in brevity. He doesn't want explanations or elaborations. Either a thing is done or it is not done. Report the facts. If a thing is done—good! If not—why! When will it be done?

This directness and simplicity, which enables Mr. Kent himself to be the directing nerve center of the world's greatest radio industry—from laboratory to sales room—is reflected in the product. Efficiency, simplicity, compactness. These are three controlling factors by which every model is measured before it is placed in production. Efficiency first. Then the maximum simplicity possible without impairing efficiency. And this, the compact coordination of parts to make possible the least waste of space or materials. Only by such methods, he holds, can the interest of the buyer be served, which interest is to get the most radio service, in the neatest package for the least money.

From the standpoint of practical accomplishment, Atwater Kent differs from Benjamin Franklin in this: Franklin discovered electricity, but, as the school boy said, "he didn't know what to do with it."

Atwater Kent didn't discover radio, but he has known what to do with it. As a result, he is known today not only as a radio inventor and designer of first rank, and as the man who has produced more radio receiving sets than any other manufacturer, but also as a leader in the presentation of radio programs of the highest class and a man who is building radio artists for the future as well as advancing radio art for the present.

This many-sided character of Atwater Kent is perhaps due to his varied training as a young man. After attending Worcester Polytechnic Institute, he worked for a while in a factory near Lebanon, New Hampshire, making electric motors and watch tools. Here he learned lessons of accuracy and precision in factory production that have been invaluable in his radio work. A year "on the road" as salesman for an electrical concern gave him an understanding of the buyer's viewpoint—of the necessity of not merely making a product that will sell but one that will work.

In 1902 young Kent struck out for himself. First he designed and manufactured electrical novelties. Then intercommunicating house telephones. An early model automobile, which grew balky every time the vibrator on the ignition stuck, turned his attention to need for more dependable automobile ignition. He solved it, and his "Trigger Ignition" became standard equipment on the better makes of cars.

Meanwhile, from two small rooms on the second floor of an old building on a side street in Philadelphia, the Atwater Kent Manufacturing Company had expanded into one of Philadelphia's big industries. Then, after the war, during which time the government had utilized his plant and equipment in making delicate shell fuses, came radio.

Today, Kent's two plants devoted to radio cover more than seventeen acres. This year alone he will produce more than one million radio receivers, production during the peak of the season running 8,000 sets a day—or one every three seconds for an eight-hour day.

During this period radio has progressed from the old headphone sets of limited radius, with wet batteries and dry cells, a tangle of wires, numberless switches and dials, to the simple, compact, self-contained house current set of today, with a single full vision dial and a volume control, connecting directly to a light socket for power. In all this development, Kent has held the leadership in radio. But, buried in the background himself, the individuality, the personality, of Atwater Kent is little known. While the name "Atwater Kent" has become a household word, to the public at large it doesn't mean a man. It means radio.

That Kent's part in radio evolution will be a permanent one, shaping not merely the present but the future, is insured by the fact that he has been a leader in its cultural as well as its material development. As the first sponsor of a continuing series of musical concerts by leading artists, he led the way in giving the American people generally an appreciation of the best in music. Through the National Radio Audition he has opened the door of opportunity for young singers to gain recognition and training to become the artists of the future.

It is to the pioneering of men like Franklin, Edison and Steinmetz, and the translation of their theories and discoveries into practical working appliances by men like Kent, that America owes not merely its industrial leadership but its leadership in those labor saving devices and household conveniences that make the American home a model of efficiency and comfort. It is primarily due to their wizardry that our homes are today not only lighted, warmed, cleaned and refrigerated by electricity but provided with the best and most varied entertainment any people has ever known.

Through radio and unit power plants, these advantages are not confined to homes in towns and cities. They are enjoyed by farm families as well as city dwellers, by the moderately well-to-do as well as by the rich and prosperous.

Electricity sweeps our carpets and polishes our floors. It washes our dishes and our clothes. Its incandescence turns physical darkness into day and, by radio, it banishes the mental darkness that follows prolonged loneliness and monotony. It brings to our homes ease and the means to enjoy it. It gives us the debates of statesmen and the arguments of politicians; the lilt of dance tunes and the "high C's" of grand opera prima donnas. It brings us the latest news bulletins on important world events. It has in reality, turned darkness and drudgery into light and play.

Benjamin Franklin, as wise and foreseeing as he was, could not imagine even a small part of the magic that his discovery was to bring to the world when, in June 1752, he flew a kite up into a storm cloud and, by means of a string and a key, drew down charges of electricity.

This famous experiment, proving lightning to be an electrical phenomenon, was one of the great steps in establishing the early theories of electrical energy. The first invention to grow from this experiment was the lightning rod, designed to conduct charges of electricity from housetops to the ground without damage. This was long known as "Franklin's rod," and won for its inventor international recognition. Balzac, in writing of Franklin, described him as the "man who invented the lightning rod and the republic." And in 1753 the Copley medal of the Royal society was voted to Franklin because of his valuable research into electrical phenomena.

Another invention by Franklin, paving the way for the work of Edison on storage batteries and of Steinmetz on the electric arc, was his development of the Leyden jar by introducing the use of lead for the inner armatures.

Great as Franklin was in his other lines of endeavor—as statesman, diplomat, author, publisher—it is by his experiment with kite and key that he is known to most people. And it is through that experiment that the Twentieth century is benefiting most by his labors.

Steinmetz, in spite of physical weakness and deformity, won a place of leadership in the scientific world through his development of the mathematics of electricity. Through his work we are able to tame and measure electric power with mathematical exactness. His early work along this line was in establishing his theory for the calculation of the alternating current, and his later work, as consulting engineer for the General Electric Company, gave the electrical world a new understanding of electrical discharges, waves and impulses.

A socialist, working for the love of his work and the good of his fellow man, Steinmetz would accept no salary for his employment. All he wanted was his living—a drawing account from which he could provide for his own simple needs and which would give him freedom to buy the supplies and equipment he required for his experiments. With no desire for riches or material gain, he was mentally free to submerge himself in his studies. He died in October, 1923, a poor man. But his legacy to science has been beyond computation.

Edison, as everyone knows, gave us the incandescent light, the phonograph and the large-unit storage battery. For 50 years his name has been synonymous, in America, with electricity and its uses.

At 15, he was a telegraph operator. Before he was 21 he had developed the "automatic repeater," by which a message could be transferred from one wire to another. An invention for duplex telegraphy, which he sold for $40,000, gave him a fund with which to retire from the key, establish a laboratory of his own and devote himself to inventive research. The carbon telephone transmitter was his next invention. Then followed the long line of inventions and refinements of inventions with which Edison has held the leadership in his field.

To a greater extent than either Franklin or Steinmetz, Edison followed his discoveries and inventions through to their practical development and their establishment in American homes. But even he has not carried out this practice to the extent followed by Kent. Perhaps this is but another step in our scientific and industrial evolution, just as radio itself is a step ahead of the electric light and the phonograph.

Franklin, Steinmetz, Edison and Kent—those four lives span the whole period of electrical development. They, above all others, stand out in the popular mind as the "Wizards of Electricity."

FARM STOCK

MANAGEMENT OF ANY BEEF HERD

Profitable beef production commercially depends upon the grade-cow herd and the use of a good, pure-bred bull, managed so that each generation of cows selected is an improvement upon the preceding one. In order that this may be true the best heifer calves should be kept each year to take the place of barren or shy-breeding cows. All other calves produced may be sold either as weanling calves at six to eight months old, as stockers or feeders at one or two years, or finished as baby beef at from sixteen to twenty months, or as fat steers at an older age.

Small farms in a high state of cultivation and where large quantities of feed are produced may be stocked with breeding cows to their greatest carrying capacity and the calves disposed of at weaning time or fattened as baby beef to advantage. In that way practically no cattle other than the breeding herd are maintained, whereas if the calves were carried over as stockers and feeders to older ages more feed and pasture would be required. This practice is often found to be very profitable. If, on the other hand, a limited quantity of feed is produced on a farm of this kind it would be more profitable to sell the calves at weaning time to men who make a specialty of feeding that kind of cattle for the market.

Breeders who operate large holdings where extensive pastures are available and feed enough is grown to carry the calves through winter as stockers often find it more profitable to carry them to an older age and get more weight per head.

If in either case a certain method for disposing of calves is adopted, more than likely it will become necessary to vary from that method occasionally on account of changes in conditions. Unfavorable years for growing feed may make it necessary to sell the calves at weaning time. Also, on farms where it is intended to carry the calves over as stockers, pastures and winter feed crops may be cut short by drought or some other unforseen condition, making it necessary to dispose of the calf crop earlier than usual.

Minerals for Range Cattle Are Required

A shortage of phosphorus in the ration often causes cattle to have depraved appetites and even to become lame and emaciated. This trouble may be remedied cheaply and quickly by the use of sterile bonemeal, spent bone-black mixed with equal parts of fine salt and kept before the cattle at all times. A daily feeding of one to two parts cottonseed meal or cottonseed cake also proves effective in the ration of cows.

A fatal disease known as "loin" disease was found by Dr. H. Schmidt of the Texas experiment station to be caused by a filterable virus the cattle get from chewing putrid bones on the range. Bonemeal and salt cured the craving for bones and practically eliminated the disease.

Lessen Danger of Flu Infection Among Hogs

Roomy sheds, open to the south, especially when they are deep enough so the hogs need not lie close to the opening, when properly bedded, are about as satisfactory as anything that can be supplied for hogs in the way of cheap shelter. Colony houses, if they are available, may be used to good advantage for brood sows and other hogs during the winter months. The point is, that when hogs are supplied with good shelter where they can keep dry and not be subjected to drafts and where plenty of bedding can be supplied, there will be much less danger of flu infection than where little or no attention is paid to the housing problem.

Live Stock Hints

A good winter ration for fall pigs is one which supplies not only the essentials of a balanced ration, but also the elements which are obtained from direct sunlight and succulent pasture during the summer.

* * *

Wintering fall pigs successfully is a real art. Keeping them well bedded and comfortable so that none of them will be overlaid on cold nights and keeping them free from mange seems to be the most important part.

* * *

Plenty of fresh water at all times, and heated artificially if possible, will do much to simplify getting a good growth on the fall pig.

* * *

Cattle feeders have learned that great weight and a frame capable of putting on great weight are not wanted by the buyers of steers.

* * *

If one is so located with regard to neighboring farms that he can allow the fall pigs the free run of the place he is pretty sure to have a good lot of pigs when spring comes.

Kill Rats Without Danger

A New Exterminator that is Wonderfully Effective yet Safe to Use!

K-R-O is relatively harmless to human beings, livestock, dogs, cats, poultry, yet is guaranteed to kill rats and mice every time.

Avoid Dangerous Poisons

K-R-O does not contain arsenic, phosphorus, barium carbonate or any other deadly poison. Its active ingredient is squill as recommended by the U. S. Dept. of Agriculture in their latest bulletin on "Rat Control."

Many letters testify to the great merit of K-R-O.

"Have tested K-R-O on two rats and two chickens. Rats were dead following morning and chickens were looking for their regular morning feed—K-R-O is sure all right—Roscoe Drug Co., Roscoe, S. D."

SOLD ON MONEY-BACK GUARANTEE. 75c at your druggist or direct from us at $1.00 delivered. Large size (four times as much) $2.00. The K-R-O Company, Springfield, Ohio.

K-R-O
KILLS-RATS-ONLY

Don't Let That Cold Turn Into "Flu"

That cold may turn into "Flu," Grippe or, even worse, Pneumonia, unless you take care of it at once.

Rub Musterole on the congested parts and see how quickly it brings relief as effectively as the messy old mustard plaster.

Musterole, made from pure oil of mustard, camphor, menthol and other simple ingredients, is a counter-irritant which stimulates circulation and helps break up the cold.

You will feel a warm tingle as it enters the pores, then a cooling sensation that brings welcome relief.

Jars & Tubes

MUSTEROLE
WILL NOT BLISTER

Better than a mustard plaster

When Children Complain

Children are naturally happy and playful and when they complain of headache or dizziness, are cross and feverish, restless at night, have bad dreams and no "pep" for play, it is a sure sign of an upset stomach that can be quickly remedied if you give them

MOTHER GRAY'S SWEET POWDERS

They act quickly and gently on the bowels, relieve constipation, cleanse the stomach and sweeten the feverish breath. They break up colds and act as a tonic to the whole system. Children like to take them. This safe and pleasant remedy has been used by mothers for over 30 years. Mother Gray's Sweet Powders are sold by all druggists; accept no substitute.

Famous Royal House.

Orange is a small town near Avignon in the south of France, once the capital of a small independent principality of the same name. In 1531 the principality passed by marriage to the younger branch of the ducal house of Nassau. The head of this house became known as prince of Orange. One was leader of the party in Holland of civil and religious liberty, and a later prince of Orange became King William III of Great Britain.

Anyway, Adam Bit.

"I wonder what kind of apple it was Eve gave Adam?"

"I'm not sure, but I'll bet it was a pippin."

Baiting the Fish.

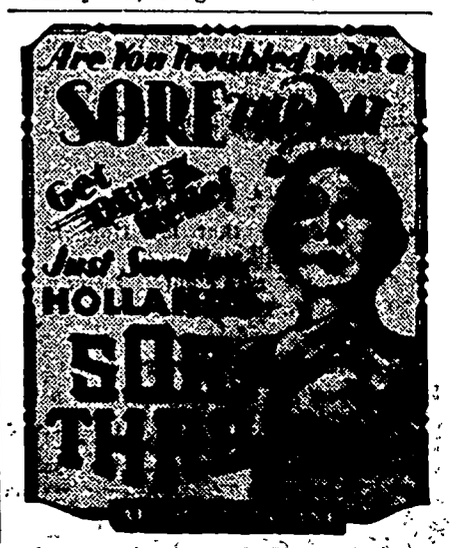
Motorcycle Cop (having stopped girl speeder)—"What's your name?

The Girl—Mabel—what's yours?—Judge.

"AS NECESSARY AS BREAD"

Mrs. Skahan's Opinion of Pinkham's Compound

Saugus Centre, Mass.—"I have taken 10 bottles of Lydia E. Pinkham's Vegetable Compound and would no more be without a bottle in the house than I would be without bread. It has made a new woman of me. I used to be so cross with my husband when I was suffering that I don't know how he stood me. Now I am cheerful and strong and feel younger than I did ten years ago when my troubles began."—Mrs. John Skahan, 20 Emory St., Saugus Centre, Mass.



GENERALITIES

Curiosity is the thirst of the soul.—Doctor Johnson.

If a man boards at a hotel he is subject to inn-digestion.'

Be sure you are right and then go ahead—unless it is too late.

A woman's idea of making a name for herself is to marry well.

There are quarrels and quarrels, but family quarrels are the worst.

You can't make hay while the sun shines in good old winter time.

We can remember when golf was fashionable. Now it's vocational.

A malicious enemy is better than a clumsy friend —Mme. Swetching.

If money makes some men genial and generous, don't belittle money.

Seeking publicity means that you may have to accept some pretty rough stuff.

It is easy for a rich old man to say that youth is enough for a young man.

It is a fact that when grandma pets the grandchildren it doesn't spoil them.

It is admirable, the dignity with which some men maintain a bare existence.

Sometimes it happens that a man can repair a pantry shelf better than he can fill it.

If the house stays empty long enough, the rent will come down. It is the only way.

The man who "won't submit to an insult" ought to be careful not to get in the way of one.

Thoughtful Boy Saw Limit About Reached

Buddy was saying his prayers. On his knees at the bedside with folded hands in his mother's lap, he earnestly asked for an Indian suit and a bicycle ("if it wasn't too much trouble") and a baseball bat.

Then, becoming very serious, he prayed God to make him a good boy, after which request he continued: "And God bless mamma and daddy and sister and Aunt Alice and Uncle John and the dog."

Here he paused for just a moment as if impressed by the number of things for which he was praying, and then finished: "And that's about all one fellow can do. Amen."—New York Sun.

Failure and Bad Temper

Rev Marna Poulson, superintendent for New Jersey of the Anti-Saloon league, was recently exonerated of a of criminal libel, and in an interview in Newark he said:

"The men who failed in their attack on me are rather nasty now Well when you fail you are apt to be nasty and abusive.

"It's like the case of the medico. The medico was dashing along at a good pace when his horse pulled up before a certain house. The medico scowled as black as a thunder cloud and gave the horse a nasty, cruel cut with the whip.

"'Go on!' he hissed. 'Go on you fool! He's dead.'"—Detroit Free Press.

Dark Truth

William Lord Wright, the serial king, had been taken to task for turning down an applicant for a position. Bill maintained that the fellow didn't have any pep.

"I think that's where you're wrong," declared Karl Krusada, "he had black eyes and aggressive people are said to usually have black eyes."

"You mean they generally get them," amended Bill, closing the argument

Monster Bean

J. H. Bollinger, a farmer living near Raceland, La., recently decided to grow beans on his farm and how well he succeeded was demonstrated when he took one bean, a sample of his production, to New Orleans. The bean measured just four and one-half feet long and tipped the scales at nine pounds.

Economy

"You have nine children! They must cost a lot to bring up."

"Yes, but at least we save on a maid."

"How is that?"

"Do you think any maid will come where there are nine children?"

Easy Come—Easy Go

She—Lucius, I cannot be betrothed to you any longer.

He (with a superior manner)—Well, there are others.

She—Yes I know. I've just become engaged to one of the others.

Her Singing Heart

"So Mabel kept a diary throughout her vacation."

"She calls it that, but there's so much in it about the nice boys she met, I call it a Him Book."

Heard and Not Seen

"I hear your neighbors have a new olarium in their house."

"Goodness, maybe that's the awful thing we hear 'em playing on."—Philadelphia Bulletin.

A Quick Talker

Howell—I figure that my time is worth a dollar a minute.

Powell—That's all right. I only want 50 cents' forth of it.

Unusual Volume

"I don't see why you call this a rare volume."

"It came back after I had lent it."—The Bookman.

Mistake That Causes Rift in Marital Life

That the clinging vine type of woman is more likely to lose the love of her husband or at least bore him to distraction, is the answer given by Anne Byrne McCall to a woman who has written for advice to the Woman's Home Companion.

"It is the growing reluctance of a husband to express his affection in words, caused by persistent demands that he do so, that causes the rift," says the writer. "Silence in affection is not advocated in that statement. Every woman not only wants to be loved, but she wants to be told that she is loved. But it is a pity for her to force or twist the issue so that it becomes not a question of how a man may or can express his affection, but it becomes rather almost a question of how he may defend himself or preserve his independence.

"It should not be forgotten that there are many ways of expressing love and that one man's silence might express more of his affection than the constant declarations of a different type.

"The demand by a wife for constant reassurance that a husband loves her when she knows perfectly well that he does, is not the way to keep a deep and large and self-forgetting love."

Good Health Matter of Correct Posture

Not only gracefulness, but also our health and the prevention of excessive fatigue, depend a great deal upon posture—the way we stand, sit and walk warns a health expert in the Farm Journal. That is why it is most important that the person who has much work to do, and yet wants to have energy left to enjoy life and to give pleasure to others, should guard against habits of incorrect posture.

Consider first the standing position. The weight should be on the balls of the feet, the chest up, the chin slightly back but in line with the chest, the feet exactly parallel, the arms dropped easily at the sides. To see that your body is in perfect balance when you are standing, rise on your toes and sink down again. When you stand with your chest drooping, your stomach out and your spine curved, you appear at a disadvantage; and what is worse, this position causes your vital organs to be displaced

In walking, the first thing is to start right with the correct standing position. The toes should point straight to the front or be turned in the fraction of an inch. To stand or walk with the toes pointing out produces awkwardness and often lends to foot troubles, such as fallen arches.

Lax Justice

The way rich transgressors manage to keep out of jail led Governor Martineau of Arkansas to say in Little Rock:

"It reminds me of a story. A man was traveling in New Mexico, and in a little town embowered in palms and flowers the mayor seemed to be quite a character He held all the offices—judge, coroner, police captain and so forth—and whatever turned up to be done, he was there to do it.

"After lunch, as he and his guest sat smoking in the garden, he turned to his clerk and said:

"'Higginson, by the way, sneak over to the roulette parlor and tell Don Juan Sereda I want to try him for that murder case.'"

Blue Baboon

A grotesque but humane method of repulsing wild animals is being practiced in Kenya colony, Africa. Elephants, hipppopotami, bushpigs and baboons were surprised recently when they found among their number a queer animal resembling a baboon, except that it had all its hair shaved off and wore a coat of bright blue.

They were so startled that they no longer return to raid the colonists, and the idea is recommended by the official who captured the baboon and released it after transforming its appearance with a razor and paint brush

Mimics

A Londoner was hurrying along the embankment to keep an appointment for which he was already late. He was stopped by a party of Americans one of whom asked courteously if he would point out Cleopatra's Needle

"Why, certainly," responded the Londoner; "it's just here."

He indicated the famous obelisk and at the same time removed his hat to wipe his brow Whereupon the Americans also uncovered and gazed at the needle with reverence.

Biology Omits This

A Chicago boy was visiting on a farm in Indiana for the first time He was particularly interested in the animals and fowls of the barnyard, although his knowledge of them was scant.

Seeing some ducks and geese in a mixed flock, he inquired:

"How long does it take ducks to become geese?"

One Way

Mrs. G. was busy making jelly, in between the ringings of the phone and the doorbell.

With her patience worn just a little thin, she opened the door to the fifth salesman.

"Are you the lady of the house?" she was asked.

"No. I just work here," she answered, closing the door on the hurriedly retreating figure.

One Good Trait That Village Bad Man Had

The late Chauncey M. Depew was reproving a young critic one day for a harsh criticism.

"I'd like to see more of the Kin Kincaid spirt in your work, my boy. the great man said.

"Kin Kincaid, you know, was noted for his charity and loving kindness. Never a slanderous word passed his lips.

"Well, the bad man of the village died in due course, and they all roasted him at the general store the afternoon of the funeral. They roasted him hard. They pointed out that he was a drunkard and a miser, a wife beater and a liar, a thief and a scandal-monger, a coward, a usurer and a rake

"Kin Kincaid listened to all that talk with a little smile of disapproval, and finally the general storekeeper said to him:

"'Now, Kin, don't you look so hurt Ain't everything wot's been said about that old cuss true? Can you name one meritorious trait, jest one, that he ever showed?'

"'Well,' said Kin, 'you boys'll have to admit that he certainly had a good appetite.'"

English Bank Holds Relic of Washington

In the archives of Barclay's bank in London is a draft for 5 pounds sterling drawn October 2, 1720, on "James Barclay, banker, of Lombard street and remitted for the account of one Patrick Barclay in Jamaica. It bears on its back the signature of George Washington as part of an indorsement. The draft is in fairly good state of preservation. Was it the Father of His Country who put that indorsement there?

Not long ago Robert L. Barclay made inquiries in the United States from which it appeared that the great George Washington's signature when he was eighteen years old (this age to the date of the draft) was not materially different from this one. It is not improbable that the draft was sent to Virginia or Carolina, which in those days were in close commercial touch with Jamaica.

Barclay's bank was not aware until a year or so ago of its precious possession. The draft was discovered by two girl students from Philadelphia when inspecting some old portfolios in the bank.

What Are Vermin?

Just what is meant by the term "vermin" is usually a matter of considerable doubt in most peoples' minds According to Forest and Stream Magazine the word applies to any wild animal that preys on other game. Vermin, it says, may be undesirable in some parts of the country and beneficial in others. In Connecticut, for instance, the following animals and birds are vermin to the authorities: Cooper hawks, sharp-skinned hawks, goshawks, great horned owls, barred owls, starlings, crows, red squirrels, house cats, bobcats, lynx, weasels foxes, mink, European hares, raccoon and skunk.

The Professor's Precaution

The rather absent-minded professor had called on a friend, and on leaving was horrified to discover that his car had disappeared.

A policeman listened to his tale of woe and made copious notes in a little black book.

"Did you take any precautions against the car being stolen?" he asked presently.

"Well," returned the scholarly one "I padlocked the wheel."

"Ah," said the officer, "but which wheel?"

Light dawned on the professor.

"My stars!" he gasped. "It was the spare wheel!"

A Danish Relic

Place names in New York are so predominantly Dutch and English, after the nationalities of the city's early overlords, that the contributions of folk of other countries are seldom brought to mind. Yet one of the city's biggest areas bears a name acquired not from the Dutch nor from the English, but from a Danish pioneer He was Jonas Bronck, who settled on the mainland north of Manhattan island with a party of settlers from Denmark in 1639, and his colony, known first as Bronck's land, is now the Borough of the Bronx.

True Pessimist!

"The real pessimist is he who thinks everything is as good as it can be," says a prominent man of science It is interesting to make a surmise as to the mental processes which brought the scientist to such a conclusion Perhaps he was thinking what our condition would be today, were it not for the hopeful men who labored to improve upon the past for the benefit of all mankind. No wonder he declares that 'the real pessimist is he who thinks everything is as good as it can be.

Hard Chewing Beneficial

Only a complete change of environment and diet can save most people from the advisability of three or four dental cleansings daily. If we lived on hard foods we might have molars and bicuspids that were naturally clean and resistant. The more apples and crusts we eat, the more closely we approach this happy state And the harder and longer we chew on something we can grind up fine, the better for gums and jaws.—Eileen Bourne in Liberty Magazine.

AVERY TWIN LAKE NEWS

Fred Wessels spent Saturday afternoon at the William Wenz home.

Ewin Thieman spent one evening last week iwth Verner Priebe.

Robert Greiman spent Sunday at the Fred Etchen home.

Arlene Wille spent one day last week with Mrs. Herman Priebe.

Frank Sandrey was a Belmond caller last Monday morning.

Edwin Josten was a Goodell caller recently.

Doc Ander on was a business caller in this vicinity last Friday.

Mr. and Mrs. Herman Priebe were Garner callers Saturday.

Carrie Swalve is staying at the Ben Swalve home during the cold weather.

Mr. and Mrs. Owen Neuhring entertained a friend for several days la t week.

Mr. and Mrs. Henry Buseman spent Sunday afternoon at the D. Swalve home.

Ewalt and August Josten spent Sunday afternoon with Albert and Verner Priebe.

Adolph Cramer was a Sunday afternoon visitor at the Fred Etchen home

Mr. and Mrs. Fred Etchen spent last Thursday at the Rhine Schlawin home.

Mr and Mrs. Henry Buseman and family were Garner callers one day last week.

Mr and Mrs. Fred Etchen accompanied Mr. and Mrs. Rhine Schlawin to Mason City one day the past week.

Carl Wille, accompanied by Ben Goll, Cornelius Wille and Herman Priebe drove to Ames last Thursday to take in a big day there.

Mr. and Mrs. Will Wenz spent Sunday with relatives. It will be remembreed that some time ago Mr. Wenz fell and broke some bones in one leg.

The children of Twin Lake Dist. No. 1 school are busy practicing dialogs, plays, etc. for a social to be held November 27th. Miss Nolan is the teacher.

John Wessels is spending a few weeks at the home of his parents, the Lippo Wessels near Ventura. He ha been working for Edwin Josten the past season.

Mr and Mrs. Ed Schlei and Mr. and Mrs. Ed. Weisbrod and family of Fenton, visited at the Edwin Josten home on Sunday. Mr. Schlei and Mrs. Weisbrod are brother and sister of Mrs. Edwin Josten

AVERY TOWNSHIP NEWS

Bonnie Bachman was absent form school Monday due to a bad cold.

Frederick and Willie Groh pent Sunday at the Alec Groh home.

Dave Ross of Garner spent a few days at his farm southeast of town.

Wayne Bachman assisted with the corn picking at the Leon Sherwood farm for a few days.

Will Bachman did some carpenter work at the John Bachman home Friday.

Frederick Groh was visiting with his parents, Mr. and Mrs. Alec Groh Thursday afternoon.

Mrs. John Bachman and daughter, Gladys, assisted Mrs. H. Beek cook for shredders Tuesday.

Mrs. Jule Cook and Mrs. Leon Sherwood were shopping in Klemme Tuesday afternoon.

Grandma Bell was visiting during the last week at the Will Lassahn home.

D. A. Marshall and sons Herb and Gilman were business callers at the Leon Sherwood home Saturday.

Herb and Gilman Marshall were business callers at Garner Saturday morning.

Mr. and Mrs. Tom Nelson Jr. visited at the Verner Nelson home Sunday.

Charley Papousek of Belmond was a business caller at the Leon Sherwood home Monday afternoon.

Ardella Jean Nelson was visiting at the home of her grandparents, Mr. and Mrs. Tom Nelson, Thursday

Mrs. Art Gimer is helping care for the new daughter at the Clarence Johnson home.

Mrs. Tom Roths and sons assisted Mrs. Frank Roths cook for shredders Monday.

Wayne and Fred Bachman assisted with shredding at the Rob Roths farm Tuesday.

Maxine Bachman spent a few days during the last week at the home of her grandparents, Mr. and Mrs. Will Bachman.

Will Bachman and daughter, Lela took Maxine Bachman home Sunday after she had spent a few days with them in Klemme.

Bennie Beek who is picking corn for Clarence Bachman, assisted with the shredding at the Hamo Beek farm Tuesday.

The Prairie Queen school, where Miss Alvina Buss is teacher only had a few days of school last week as nearly all the children were sick with the flu.

REAL NICE APPLES

We have a nice stock of Apples, either for cooking or eating, in bushels baskets or by the pound, at very reasonable prices.

Now is a good time to buy apples.

Kluckhohn & Sons

Biddy's Lucky Day

A roaring express train whistled for the grade crossing near Port Credit, Ont., but this failed to have any effect on a hen which was walking in the track bed. A crossing watchman in a tower nearby saw Biddy go under the engine, and after the train had passed went down to pick up the few feathers he thought he would find. But when he arrived at the track the hen was nonchalantly crossing the tracks, and to prove her complacency laid the usual egg on the following day.

Study Sugar Refining

The Sugar Institute has appointed a committee to consider a plan for chemical research as applied to the refining of raw sugar, under direction of an experienced chemist. Reduction of costs chiefly is sought, but efforts will be made to find means of increasing the yield and substitutes for costly materials now used in the refining process.

Indian Superstitions

Many Indian tribes held that animals and plants were animated by spirits. They regarded certain of these spirits as powerful and active. Among their elemental gods were the sun, fire and water. The buffalo, eagle and rattlesnake were worshiped. Among plants, cedar, cottonwood, corn and tobacco were venerated.

A Telltale Evidence

If a person is simple and fine within, his house cannot be anything else, regardless of its cost; if his aim is to impress the world or to lead it to believe him something that he is not his house will bear the evidence of it, subtle evidence, perhaps, but it will be there.—Woman's Home Companion

Delayed Climax

"We wouldn't never have no choice gossip," says Old Man Moody, "if not for 'Confidential' Charlie Banks. Charlie's the greatest feller in the world to keep a secret"—here the old man bit off a fresh piece of cut plug—"in circulation."—Farm and Fireside

Purely Indian Diet

American Indians, before the advent of the white man, cultivated eight native vegetables. These included beans, corn, peppers, pumpkins, squash, tomato and sweet potato.—Farm and Fireside.

Last Resort

Homebody—So you must catch the 11:40 train west? Is it important?

Homeless—It's vital My doctor says I must have my regular sleep, and a berth on that train is the only lodging I can find for tonight.

The Unexpected Happens

By CLARISSA MACKIE

(Copyright)

THE gray road-tape had covered mile after mile of the fine mountain roads before it took a wrong turn that brought it suddenly to a sandy road through deep woods. So narrow was the track that Melton Bush kept steadily on his way, hoping for a chance that further along there would be a place to turn around.

When he did stop, it was to gaze at a tea room at the side of this out-of-the-way mountain road—such a gay little cottage, all pine boards and yellow paint and scarlet geraniums in green boxes, that Melton stopped the roadster with a definite jerk that brought a trim-skirted girl to the tiny front porch.

"Oh!" she uttered surprisedly.

Mr. Bush's leveled eyes surveyed her critically. 'May I have something to eat?" he inquired.

She stared, and then lifted a young, scared voice.

"Soo-san!"

"Yes?" came a lovely feminine voice out of the air above the roadster, and when Melton Bush looked up he saw a charming girl stepping down from a seat built high among the hemlock branches.

As the branches swung back from her passing, the young city man was aware of the spicy fragrance of hemlock, and then, the girl was pausing beside the car.

"Would'nt you like something to eat out of doors, here under the trees?" And when he heartily agreed, she showed him where he might wash his hands at a bench.

When he returned to the front of the cottage a small yellow table had been laid with a square of white linen and a bunch of yellow poppies in a yellow pottery jar. On thick yellow pottery plates were large baked potatoes, a puffy omelet, fresh tomato salad, a blackberry tart, a small pitcher of thick cream, and a cup of delicious coffee.

"How did you evolve this magic?" inquired Melton Bush of the smaller girl, who stood uneasily near by.

"Miss Susan fixed—prepared—it," she said primly.

In a moment the charming Susan appeared at the door.

"Do you wish for anything more?" she inquired in her lilting voice.

"Nothing more, thank you," he said, rising. "It has been a delicious meal, and I can only wonder how you can do business on this lonely by-road."

She regarded him seriously. "To tell you the truth—we have been here for six weeks and you are our first customer!"

"Six weeks! Why didn't you close up and go back to town?"

She smiled sadly. "There was so little money to invest—and now that it is almost gone we cannot get back to town. My father, who was quite ill when we came here, has been so much benefited by the air."

"Who did you buy this place from?" he interrupted.

"Wilbert Higgins. He led us to believe that it was on the motor highway—and the owner is that very rich Melton Bush, who owns so much land that only his agents know how much he has. You would think, wouldn't you that he was rich enough without cheating a woman out of her very livelihood?" She looked indignantly at Melton Bush, as if she really knew his name as well as she seemed to know his reputation.

As for the rich Mr. Bush, he merely paid his modest little bill, and declared he would stop the next time he came that way and have a meal.

A few days later he went to see Mr. Higgins. The agent took his turn at blushing when confronted with the yellow bungalow deal.

"You told us to get rid of all extra holdings, Mr. Bush," he explained, "and if the lady had advertised she might have attracted people—"

"Buy it back from her now! Give her one thousand dollars more (for her trouble and inconvenience) than she paid you for it—and get her town address for me—see?"

"Yes, sir," said Mr. Higgins quite meekly, and went to work on the property transfer at once.

Weeks afterward, Melton Bush went to the Chester Square address that William Higgins had given him. He rang the shining brass doorbell and was shown into the presence of Susan Raymond.

"Why—Mr. Bush," the girl stammered, glancing at his card. "How could I know that it was you who came to the tea room that day—and I should never have talked so foolishly, but, really, I was discouraged, then."

"It was the happiest day of my life," said young Mr. Bush. "Your experience at the hands of my agent has changed all my plans—hereafter, I shall be my own agent, and at least earn my living. How is your father, Miss Raymond?"

So Melton Bush made the acquaintance of Colonel Raymond, and it was not long before he was a friend of the family, and then Susan's accepted suitor.

Their honeymoon was spent in the tiny cottage in the woods, and one day Melton said to his wife: "Susan, darling, what were you doing in the hemlock tree the first time I ever saw you?"

"I was crying," she confessed, and then her husband swore that she should never weep again. And, so far, he has kept his word.

FEW VACATIONS FOR CREATURES OF WILD

There is no five-day week, no eight-hour day, no Sunday even, in the wilderness, declares F. W. Schmoe, Mount Baker National park naturalist.

"If you don't work you don't eat," is the slogan in the woods. Many birds fly 30 to 40 miles to collect one meal. Cougars and lynx travel long distances over the roughest land and in the dense timber for every kill they make.

A bear spends all day digging roots or eating berries. He works for every dessert, and if he takes a day off he does not eat.

"Some of the wild things, like few humans, work hard in summer and store up a surplus of food, then rest for a season, while a few animals hibernate in winter and do not eat. Others not in affluent condition and not given to hibernation work even hardest in winter, for there is less food to be found," added Mr. Schmoe.

Part Played by Table in Uplift of Mankind

There was a time when not a table existed in the whole wide world. But one day primitive man, weary of sprawling on the ground, rose and ate his first meal from a broad hewn slab laid on bowlders, and from that day his upward climb to civilization began.

Today we do not stop to think how much we depend upon tables, but what a dull and inconvenient place a house would be without them. Not only are they at our elbow everywhere to keep things within reach, but how they delight the eye—their lovely designs and beautiful woods.

They minister to our comforts, and please our senses with their grace and charm. Each year they increase in variety and cleverness, and each year, because of them, our homes grow more attractive.

Ben Ridder made a pleasant call at th Times Office Saturday and deposited with us the shekels for two more year's subscription to the Times. Ben informed us that h brother and farm pardner, Harold is getting along fine at the Mason City hospital but will probably be there for a couple of three weeks more. Walter, another brother, is working for Ben and Harold. They still have a number of acres of corn to pick.

Wm. Becker & Sons	49.29		

There are some mighty fine cream checks on the above list for the two weeks. Try to get your name on this "honor list" if you have not already done so—it pays!

OUR LITTLE SERMON FOR this week.—"There may be times when the duties of the dairyman become a little tiresome—when he would like to get away from the duties of milking twice a day, but when all is said and done—there is nothing on the farm like a dairy herd to add to the bank account and keep the gray hairs and wrinkles of worry down to a minimum. Once in a decade the grain farmer may have the long end of the argument but not more often than that..

There is considerable satisfaction in knowing that you have a twice-a-month cream check to rely on to tide you over the financial riffles."

Klemme Co-op. Creamery Company

Thanksgiving Day!

One of the greatest days of the season—THANKSGIVING—will be here next week, so it is high time for you to lay in your stock of groceries for the great Thanksgiving Feast. Below are some of the things we will have on hand for you to select from

FRESH VEGETABLES such as Celery, Cabbage and Lettuce.

FRESH FRUITS, Oranges, Bananas, Cranberries, Apples, Grape Fruit, and nice Grapes. Also a fine line of Nuts, Dates, Figs and Candies to top out the Dinner.

Come in or call 72 at your convenience and we will reserve your order for you.

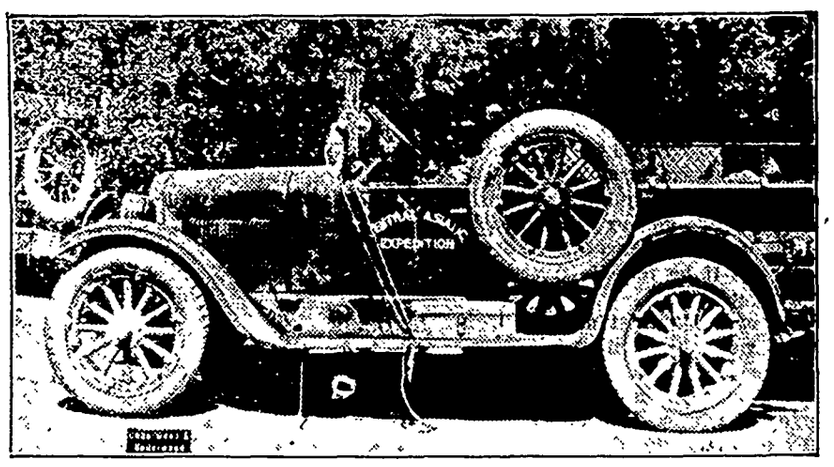
TRUCK HELPED CARRY ASIATIC SPECIMENS



One of the open trucks which helped carry specimens of the third Asiatic expedition back from Mongolia. The expedition was headed by Dr. Roy Chapman Andrews.

BUS AND TRUCK SERVICE POINT

Spark Plugs Do Not Always Function Properly With Motor in Use.

A loaded truck or bus traveling at 20 miles an hour employs in proportion approximately as much power as does an automobile traveling 50 or 60 miles an hour. This is, of course, due to the weight of the vehicle, according to an engineering news bulletin, which gives some interesting information concerning trucks and busses.

"A bus or truck," the bulletin says, "gives the same service as an automobile in proportion to the ton miles and is just as efficient.

Hard on Spark Plugs.

"In many cases the bus or truck engine labors more in a month than an automobile will in several years. This is why heavy duty vehicles need frequent servicing, and why they are harder on spark plugs.

"While the average bus or truck operator may not be aware of it, abnormal driving conditions, such as constant operation in a hilly country, affect spark plugs to such an extent that for the best engine performance it is necessary to use an entirely different size plug than that ordinarily recommended for the particular engine concerned.

Developed Preignition.

"One truck which had been delivering heavy loads in neighboring towns located in a level country, recently was switched to a different route where practically all of the highway was through a hilly terrain. This created an abnormal driving condition for the spark plugs, and they developed preignition. The difficulty was immediately corrected when the proper type plugs were installed to fit the abnormal condition. The same type spark plug will not meet all driving conditions satisfactorily any more than summer oil will function efficiently in the winter. All reputable manufacturers include in their line different types of spark plugs to meet different driving conditions. Some bus and truck operators go so far as to study their driving conditions in order to obtain the plug best suited for their conditions, and which enables them to get maximum efficiency at the least cost. This is information that should benefit all bus and truck drivers."

Annoying Engine Sound Is Quite Easy to Cure

An annoying clicking sound in an engine, most pronounced during idling or low speeds, is very apt to be the result of too strong a spring on the breaker arm in the distributor. At higher speeds the spring is weakened by the rapidity of its movement, and also because the noise it makes is drowned out by the hissing of the carburetor.

With the eight-cylinder cars coming to use two breaker arms and two springs there is a double chance of noise at this point. Any good mechanic can relieve the tension on one of these springs if it annoys you.

This clicking sound from the distributor is often wrongly diagnosed as the snapping of the spark as it jumps to the various contact points.

Sure Way to Increase Mileage of Car Tires

A sure way to increase tire mileage is to have the wheel alignment inspected at least twice a year. A car may steer fairly well, even with the wheels distinctly out of alignment, but the punishment on the tires, the enormously increased wear and tear, and the expense for replacement are serious.

Axles, steering mechanism and brakes all have a direct effect, also, on tire wear, if not in proper adjustment. When having the wheel alignment inspected it is apt to save money if these other items are also inspected at the same time.

Life of Brakes Increased

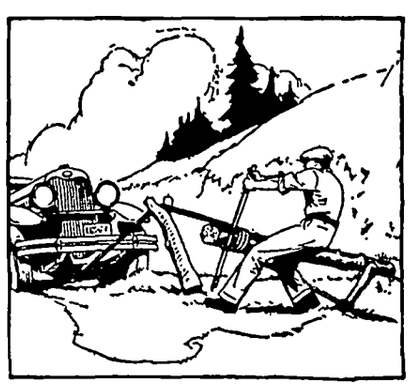
Standard tests for brake linings, now used by manufacturers, has resulted in the life of the average lining being increased four times, with a saving to the nation of $15,000,000 a year.

The automobile brake performance has been studied for several years, and a short time ago the bureau of standards made recommendations that were incorporated in the standard brake safety code published by the Society of Automotive Engineers.

Emergency Lever Used to Pull Car Out of Mud

One man can pull a car out of a bad mud hole with a rope, a stake driven into the ground, and a wooden pole such as a fence post or a limb of a tree. The illustration shows how it is done. The forked stick which translates the pull into upward motion is not absolutely necessary, but will help a good deal.

Tie one end of the rope to the car axle and tie the other end to the stake, leaving plenty of slack. Now



How an Emergency Lever Can Be Improvised to Enable One Man to Pull a Car Out of the Mud.

pass the rope loosely around the pole a couple of turns, insert a stout stick under the part of the rope leading to the car, and pass one end of the stick back to the pole. The stick forms a lever that will multiply your pulling force many times. The smaller the pole the greater the leverage.—Popular Science Monthly.

All Roads and Bridges in New Mexico Are Free

All roads and bridges in New Mexico are free, according to the organ of the New Mexico highway department, the New Mexico Highway Journal, published at Sante Fe, N. M.

"The highway department frequently receives inquiries from out-of-state tourist agencies, asking about toll roads and bridges," the Highway Journal states. There have been no such "rented" transportation facilities in New Mexico for 12 years. All roads and bridges in the state are free of charge to the traveling public.

"The road mileage under maintenance is 5,300, every mile of which is free, with the added feature of free service to travelers in difficulty by maintenance men. Changing tires and cleaning spark plugs is not included in the latter, but a car in the ditch, a dead car which has to be towed in, women tourists in difficulty, and all similar incidents elicit service by highway department employees."

AUTOMOBILE NOTES

Warm up the engine properly before attempting to adjust the carburetor.

* * *

Also, how does the weather man know you have just had your car washed?

* * *

Well balanced and good gripping brakes are the first points of safety in driving.

* * *

Four hundred and seventy thousand school children are transported to school daily by 20,000 motor busses.

* * *

Lack of oil will cause piston rings to cut the cylinder walls, causing a leak which, in time, is apt to break the rings.

* * *

"Stop me if you've heard this," remarked the wild motorist as he pulled into the crossing simultaneously with the fast freight.

* * *

The loon often makes his outcry unnecessarily, because he is a loon, and the habitual honker honks for the same reason.

* * *

Only one little thing is needed for aviation and that is to provide a system of filling stations as reliable as that enjoyed by the automobile.

* * *

Weekly some manufacturer advertises a lower price of its automobiles. The downward tendency of pedestrians keeps pace with the cars.

* * *

With a new rubber bumper it is said that a motor car running 30 miles an hour may strike a tree without damage, which, of course, indicates that it could kill a pedestrian without jarring the driver.

* * *

One of the most serious of the recent forest fires in California was caused by careless motorists and spilled gasoline. Some folks can't set the world on fire, but they come as near to it as possible.

POULTRY

COMMON WINTER POULTRY ERRORS

In looking over the average poultry house in winter, the most common defects are as follows: Bare, damp floor, upon which the fowls stand and sometimes get rheumatism; broken windows, letting cold air blow upon the roosts or upon the fowls in daytime. Both the above will check laying, and are common causes of roup. Damp droppings left for weeks to heap under the roosts; lack of supply of water, obliging the hens to eat snow, thus stopping the eggs; lack of plenty of good, sharp grit, which alone is a sufficient cause of failure; lack of fresh meat and cut bone fed twice a week; overfeeding, overcrowding, and no inducement to scratch for a living. These are the most common and important mistakes, and those who wonder why their hens do not lay, will do well to go over the list.

See that your house is tight, so that on cold windy nights the fowls will not suffer any more than can be helped. A good plan is to keep a barrel in the building, and the coldest nights put in the birds that are liable to have their combs freeze, and cover the barrel. Above all, do not crowd the fowls. During the long winter months, when they cannot exercise out of doors, they will need at least seven or eight feet square per fowl. Scatter some hay around and throw the grain into it. This will make them exercise and will be what they need, and the eggs will hatch better in the spring. Avoid feeding stimulants to fowls you are going to breed from, and do not give them any more food than they will eat up clean. The rest is very apt to be left and become filthy.

Another thing is, pure, fresh water; do not fail in this. You may think snow will answer, but is is not good for poultry and will make them poor. Warm the water on cold days. Fowls are always thirsty, and a great deal of roup is brought on by allowing them to drink impure water.

Breeders Retain About Half of Old Chickens

According to a study of the Missouri demonstration farm flocks, the farmers retained 55 per cent of their hens from one year to the next. Breeders of light breeds retained 58.4 per cent as compared to 52 per cent for the breeders of heavy breeds. It is thus seen that nearly one-half of the flock is replaced by pullets. This is good management practice, for early developed pullets will lay more eggs, especially during the winter periods, than will the old hens. In the case of the light breeds one would probably cull one-half each year. Thus if one starts with a flock of 100 pullets, he will retain 50 as one-year-olds, 25 as two-year-olds, 12 as three-year-olds, and possibly 6 as four-year-olds. This means that with breeds such as Leghorns, one can well retain them regardless of age, so long as they show signs of having been productive in the past. However, with the heavier breeds practically all should be disposed of at the end of the second laying season, and a higher percentage will be removed at the end of the first.

Poultry Facts

The best remedy for lice on scrub chickens is to get rid of the chickens.

* * *

If a farmer keeps chickens at all, he can afford to house them comfortably.

* * *

Don't make your hens pick a hole in the ice to get a little drinking water.

* * *

The old poultry house may be remodeled and made more comfortable at very little expense.

* * *

It is best to repair all leaks in the roof and sidewalls before winter, as dampness and drafts lead to colds and roup.

* * *

No similar amount of money can buy as much as a few dollars will buy in pure-blooded poultry.

* * *

Broiler chickens that are regarded in many quarters as a delicacy, are sent to market in too many cases in an unfinished condition.

* * *

A warmer, better ventilated poultry house can be had if a straw loft is used. Poles or boards may be laid across the plates and covered with straw, hay or corn stalks.

* * *

Geese sholud not be used for breeding purposes until they are two years old. A gander may be used the first season.

* * *

Winter egg production is largely obtained from pullets that are well grown, properly fed, and carry a surplus of flesh.

* * *

Hens will be healthier if they are not subjected to too much heat. There is rarely any need of a stove in a henhouse if the building is properly constructed.

Girl at the Top in Health Test

Millions of boys and girls all over the world, thousands of them right here in the West are being restored to health and strength by the purely vegetable tonic and laxative known as California Fig Syrup and endorsed by physicians for over 50 years.

Children need no urging to take it. They love its rich, fruity flavor. Nothing can compete with it as a gentle, but certain laxative, and it goes further than this. It gives tone and strength to the stomach and bowels so these organs continue to act normally, of their own accord. It stimulates the appetite, helps digestion.

A Kansas mother, Mrs. Dana Allgire, 610 Monroe St., Topeka, says: "Bonnie B. is absolutely the picture of health, now, with her ruddy cheeks, bright eyes and plump but graceful little body and she stands at the top in every health test.

Much of the credit for her perfect condition is due to California Fig Syrup. We have used it since babyhood to keep her bowels active during colds or any children's ailments and she has always had an easy time with them. She always responds to its gentle urging and is quickly back to normal."

Ask your druggist for California Fig Syrup and look for the word "California" on the carton so you'll always get the genuine.

War's Evil Results.

As long as nations meet on the fields of war—as long as they sustain the relations of savages to each other—as long as they put the laurel and the oak on the brows of those who kill—just so long will citizens resort to violence, and the quarrels be settled by dagger and revolver.—Robert G. Ingersoll.

Worth Knowing When Winter Cold Comes!

Did you ever hear of a five-hour remedy for colds? There is one, and it really does bring you out of it completely. Even if it's grippe, this method works, only takes longer. Pape's Cold Compound is in tablet form. Pleasant-tasting, but it surely has the "authority!"—Adv.

The worst beating a bully ever gets is from some man who doesn't want to fight.

And what is fame in life but half dis-fame, and counter-changed with darkness?—Tennyson.

Mother Appreciates What Milks Emulsion Did for Her Boy

"I am writing you in regard to our son, who is fifteen years old. I want to tell you how we have appreciated what Milks Emulsion has done for him. He hadn't been strong since he was nine years old, when he had whooping cough and scarlet fever at the same time, ending up with Bright's Disease.

"By doctoring with specialists he finally got rid of Bright's Disease, but he was bothered terribly with constipation. The only thing that would give relief was injections of warm water, and finally we used olive oil injections.

"Last August a lady told us to try Milks Emulsion. This we did, and after taking three bottles of Milks Emulsion he hasn't to this day had to have another injection. He goes to school every day, eats his Emulsion right along, and is gaining and doing fine.

"I felt that I must write and tell you what a grand medicine Milks Emulsion is and what it did for our boy, hoping some other boy or girl will know what a great medicine it is. There isn't too much praise I can say for it. Just refer anybody to us." MR. AND MRS. JIM WILLIAMS, Kellerton, Iowa, R. R. No. 3.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Sparrows Ware on Guard.

Throughout a day a Philadelphia man concerned himself with the worries of two sparrows. He had heard their cries and upon looking up at the eaves of his house had seen the two birds apparently wedged helplessly in a hole there. He had no ladder long enough to reach them, nor did he care to shoot them. So he waited trying to think of a method of rescuing them. At sundown he was surprised to see the sparrows emerge from the hole with no difficulty. Then it dawned upon him that he had seen a large black bird with a long sharp beak hovering about the house, and that the sparrows were stationed in the hole to guard their nest from the invader.

Don't Be Disfigured.

Keep Cole's Carbolisalve in the house. It stops pain from burn or cut quickly and heals without scars. At all good druggists, 30c and 60c, or J. W. Cole Co., Rockford, Ill.—Advertisement.

When wives and widows speak of their late husbands their meaning is quite different.

Anything that is disagreeable seems to be called "personality."

A curtain speech—"Pull down the shades."

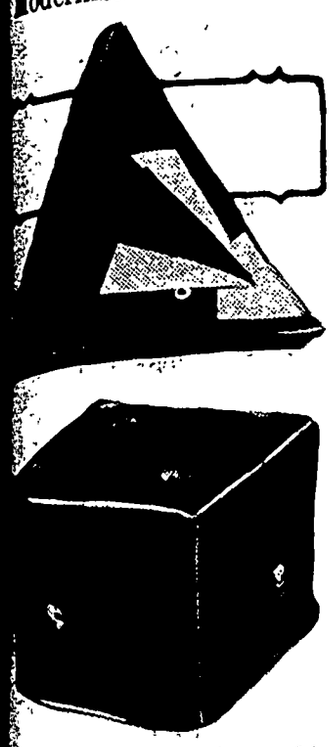
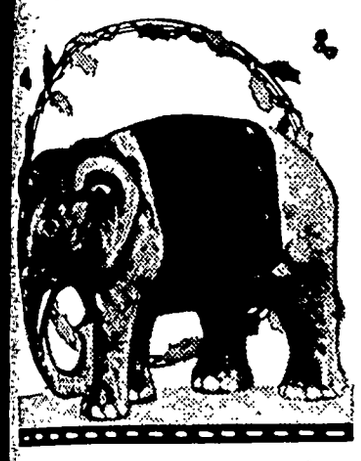
RISTMAS THINGS TO BUY OR MAKE AT HOME

Modernistic Cushions



Of course if you are giving cushions at Christmas, they must bespeak the modernistic, for modernistic is the word for things decorative this season. The two in the picture are the last word" in cushloudom. The top one is of felt with appliques of felt for a vivid splash of color. The other hand-embroidered black satin square shape is a floor cushion and provides an inviting resting place for daddy's dainty slippered foot.

Clever Door Stop



This elephant on guard any door is varranted not to slam shut. Yes, it's a door-stop and a very unique one at that. Some folks place them on the mantel or the living room table for ornament or on individual pedestals. The interesting thing about this elephant is, you buy the papier-mache animal forms at places where materials for making paper flowers and favors are to be had. You paint them with sealing wax dissolved in alcohol. To make them heavy enough for door-stops pour a quantity of leaden shot into the hollow forms. Excellent idea for Christmas gift making.

Sealing Wax Artcraft

The decorative tree pictured is an exponent of the new sealing wax art which women everywhere are taking up with much enthusiasm. Each leaf is formed first of paper and wire, being cut in pattern. Then each is painted over with dissolved amber sealing wax which gives it a beautiful enamel surface. Gilt sealing wax is piled up for the base which holds the gold-covered trunk of the tree. Electric light bulbs are concealed under clusters of handmade date palms.

Chair Pin Cushion

Mayb this dainty little bisque dapper will come to dwell in your home. She is ornamental enough to win welcome in any boudoir and on any dressing table. Her 'over-stuffed" hair looks massive. It really measures only about five inches. Santa will distribute ever so many of these cushions this Christmas.

Soil Favorable for Fertilizer

Quite Important That Conditions Be as Near Ideal as Possible.

In using fertilizers that cost $30 or $40 a ton it is important that general soil conditions should be as favorable as possible, points out A. W. Blair, soil chemist at the New Jersey agricultural experiment station.

A soil that is strongly acid may limit the growth of certain crops to such an extent that the fertilizer can have little effect. It is a waste of money to use fertilizer on such land. When the acidity of the soil is eliminated by the use of lime, good results may be expected from the fertilizer

Fertilizer for Vegetables.

Vegetable crops that grow rapidly require a fertilizer that has a large percentage of its nitrogen in rapidly available materials. Such a fertilizer furnishes soluble nitrogen as fast as the plants need it.

The soil chemist advises that concentrated fertilizers should be mixed thoroughly with the soil or else put on in two separate applications. If fertilizers of this type are put in close contact with the seed there is danger of injury through burning.

Drainage Is Important.

Sometimes the land is so wet that crops can make only very poor growth, fertilizer or no fertilizer. Until satisfactory drainage is provided it is a waste of money to use high-priced fertilizer on this kind of land.

On land that is very sandy and poorly supplied with organic material growth of crops is often limited by the water supply. Heavy applications of fertilizer cannot produce good crops under these difficulties. First of all, organic material must be added to the soil; then the fertilizer application may profitably be gradually increased.

Rat Is Most Filthy and Destructive Farm Pest

No agricultural pest in existence affects a greater number of people than the rat, says the United States Department of Agriculture, and no other pest is so closely associated with both the business and domestic sides of farm life. Yet losses by rats have been sustained for so long that commonly they have been taken for granted as the forces of nature. But in the present day of rigid accounting and efficiency, even losses from the elements are insured against, and the time is rapily approaching when the constant drain through rat depredations will no longer be tolerated.

The uncanny elusiveness of rats necessitates a matching of wits if one is to be successful in destroying them. In the war on rats one is not confronted with a stupid insect that requires only the employment of a routine control procedure for wholesale destruction, but with a wary animal that has instincts closely akin to human intelligence.

To be rid of rats would be worth a thousand times what it might cost. It is to the interest of every home, high and low, rich and poor, to co-operate earnestly in furthering a sentiment of intolerance against this filthy and destructive pest.

Much Manure Is Wasted by Improper Handling

The Purdue university agricultural experiment station estimates that one-third of all manure is wasted by improper handling. This indicates the importance of a manure pit on the farm.

The walls of a manure pit may be made of concrete in which 6½ gallons of water are used to the sack of cement. If the sand and pebbles are damp, only five gallons of water are used, since the other 1½ gallons are contained in the aggregates. With wet aggregates, use only 4¼ gallons.

In most cases a satisfactory concrete can be made by using 2½ cubic feet of sand and 3½ cubic feet of pebbles to the sack of cement. These proportions may, however, require slight variations. Under no circumstances vary the relation of water to cement.

Agricultural Notes

A successful sailor studies his compass and a successful farmer studies market conditions.

* * *

It's the wise farmer who knows what insects destroys his crops and takes measures against them.

* * *

The best results may be expected from oats when the crop is seeded as early in the spring as climatic conditions will permit.

* * *

Many farmers are putting ventilating systems in their dairy stables now, as fresh air of the right temperature is necessary for healthy stock.

* * *

Hollow fruit trees can be repaired by cleaning out the decayed wood, either working from the top down or also cutting an opening in below to facilitate the work.

* * *

Good farm machinery means an up-to-date farmer; well-cared-for machinery means a thrifty farmer. Machines give longer wear if they are not left out in the weather

NEARBY AND YONDER

By T. T. Maxey

The Cabildo

PERHAPS no building in New Orleans holds more interest for the stranger than the Cabildo—that solid, dignified structure of unquestioned ancient origin, built of adobe and shell lime, two stories high with a mansard roof.

The guide informs us that it was so named from the municipal council which sat here under Spanish rule when it was the government house or palace of justice and that it was "put up" in 1795.

A tablet explains that here in 1803 the formal transfer of the Province of Louisiana from Spain to France, also from France to the United States, took place; that the Marquis de Lafayette resided her in 1825 as a guest of the city, also that later the main room on the second floor was used by the Supreme Court of Louisiana. In this same room, it is said, was held the first Protestant church service conducted in the state of Louisiana.

The courtyard was used as a prison yard for more than a century. The remains of the old pillory may be seen as well as the bullet holes in the walls—executions having occurred here as late as 1836.

This historic building also played a prominent role in more recent days. Here a reception was given to President McKinley in 1901, and the centennial celebration of the Louisiana purchase was held in 1903.

Still well preserved, this old building now houses the state museum—a collection of intensely interesting relics of early days, including the death mask of the great Napoleon.

"Sunshine at Night"

FOR generations of time that noted spot where a mighty river spreads its waters over the broad, sharp edge of a rocky cliff and jumps off into space with a thundering roar, only to be clothed in mist and caught up in a basin 160 feet below, has been one of the great sights of America.

The stupendous cataract of Niagara has its moods and until one has seen it glorified as the sun announces a new day, as the setting sun burnishes its waters with gold, when its dancing waters glisten in the moon's silvery rays, during high water when its flow is prodigious and when the icy hand of winter has stiffened its liquid form into a fairyland of ice, he has not really seen it—in the broader sense.

Remarkable as the contributions of Nature's benefactors have made it, man's ingenuity has added another rare beauty to its charms—one entirely beyond the conception of those who have not yet beheld it, termed "Sunshine at Night."

A battery of superpowerful searchlights, trained from across the river on both the crest and fall, resurrects their forms from their nightly darkness and causes them to blaze forth in a veritable dream picture. Nor is that all. Through the manipulation of numerous colored screens, these trembling waters can be transformed into a kaleidoscope of color, unequaled elsewhere in this world—a scene which once beheld cannot be completely forgotten.

* * *

Wall Street

WALL street came by its name from the fact that along about 1652, as a protection against possible attack from hostile Indians or colonists, the adjoining Dutch settlement (the original New York) constructed a palisade (or wall) immediately to the north of the city, near the present location of this now world-famous street.

As time went on houses appeared and a new street, which naturally was named Wall, was ushered into existence. This newcomer in streetdom gradually became a "high hat" residential thoroughfare and remained so until along about the close of the Revolutionary war.

Buildings having to do with governmental affairs also stood here. Among them the Colonial city hall which, remodeled, became Federal hall and served as the first capitol building of the United States of America. Here it was that George Washington was inaugurated President.

The presence of the government buildings acted as a magnet to the financial institutions of the day and the centering in this area of the banks of the town gradually got under way, finally culminating in the concentration here of the present-day unrivaled and powerful group of concerns which have made it the great financial center of the nation and one of the most-talked-about streets in all the world.

Despite its outstanding prominence and strange as it may seem, Wall street has a graveyard (Trinity) at its head and a river (East) at its foot, is very narrow and only about one-fourth of a mile in length.

The Cost of Peace

Somebody has said that courage is the price we must pay for peace of mind. If we are afraid of anything—no matter what—we can not be at peace with ourselves and with our world. But if we have sufficient courage to cast out fear, we can have peace.

Are Your Children Underweight?

ONE of America's greatest Child specialists states: "Karo Syrup is the *ideal* food for the underweight child. Karo can be added to the diet without spoiling the appetite for other foods—and *Karo improves the taste for milk.*

"Two tablespoonfuls of Karo in a glass of milk *doubles* its food value."

Karo is one of the oustanding energy giving foods for children, because it's so easy to digest and—

There's 120 calories to the ounce of Karo—almost twice the energy value of eggs and lean meat, weight for weight.

Serve the children plenty of Karo daily in milk, on cereals and sliced bread.

Watch their weight improve!

Rain Marred Record.

A record of 55 consecutive wedding anniversary celebrations under sunny skies was broken for Mr. and Mrs. Newton D. Crossman of Amherst, Mass., when rain fell to mar their fifty-sixth wedding day. Mr. and Mrs. Crossman were married in Shuteshury on a bright April day in 1872. Each succeeding anniversary was an ideal one from a weather standpoint until the last one.

Any Woman Can Look Stylish

By MAE MARTIN

Most stylish-looking women are just "good managers." They know simple ways to make last season's things conform to this season's styles.

Thousands of them have learned how easily they can transform a dress or blouse, or coat by the quick magic of home tinting or dyeing. Anyone can do this successfully with true, fadeless Diamond Dyes. The "know-how" is in the dyes. They don't streak or spot like inferior dyes. New, fashionable tints appear like magic right over the out-of-style or faded colors. Only Diamond Dyes produce perfect results. Insist on them and save disappointment.

My new 64-page illustrated book, "Color Craft," gives hundreds of money-saving hints for renewing clothes and draperies. It's Free. Write for it now, to Mae Martin, Dept. E-143, Diamond Dyes, Burlington, Vermont.

Electric Song Writing.

With the aid of a recently invented machine, you can type off a popular song as easily as a letter—if your mind runs that way. Maestro Ferretto of Milan has devised a novel form of typewriting that turns a blank sheet of paper into a complete musical score. An electric motor operates the machine.

Because of the housing shortage in Germany nearly 300,000 young married couples are living with their parents-in-law.

Plenty of men can be found who envy a man who has time to attend the matinee.

Wife's Need Something Peleg Could Not Buy

Alfred P. Sloan, Jr., of automobile fame, was praising a rival automobile manufacturer who had just spent a hundred millions in improving his plants.

"There!" said Mr. Sloan. "There we have the reason why America forges ahead so fast. Besides the American method the methods of Europe evoke the image of old Peleg Cloce.

"Old Peleg Cloce's wife sat reading, and as she had outgrown, or rather out-aged her spectacles, she had to hold the paper at arm's length in order to see the print.

"'Father,' she said, with a sigh, 'I do wish, the next time you go in to town, you'd buy me a pair of stronger specs.'

"'Huh,' growled old Peleg Cloce, 'It ain't stronger specs ye need; it's longer arms.'"

Wireless Appeal Wins.

More than $100,000 has been received by the London hospital authorities as the result of Lord Knutsford's wireless appeal, lasting only a few minutes.

It ought to be some consolation to a widow to know that history repeats itself.

Fooling the Boy.

"This story begins 'Pandemonium reigned.' Who was Pandemonium, pa?"

"Well, if Pandemonium rained, I guess he must be the clerk of the weather."

BAD LEGS

Have You Varicose or Swollen Veins and Bunches Near Ankle or Knee?

To stop the misery, pain or soreness, help reduce the dangerous, swollen veins and strengthen the legs, use Moone's Emerald Oil. This clean, powerful, penetrating yet safe antiseptic healing oil is obtainable at all first-class drug stores.

Mrs. Arthur Kudje aud children nd Mrs. Joe Johnson were at Garner Tuesday afternoon.

E. J. Arnold has been laid up the ast week with rheumatism. He s much beter at this time and was ble to come to town Wednesday.

The men who are taking in the out Leader's training course atended the meeting at Hampton last onday nigh. The next meeing is Sheffield.

Mr. Paul Grange, Mrs. Benn obbs and Mis Leona Lau attended he Legion Auxiliary Convention at Britt Tuesday afternoon and evening.

Mr. and Mrs. Hermau Schuldt entertained the Seniors and the H. S. Faculty last Friday evening. Following the evening's entertainment efreshments were served.

Miss Wilma Trumbell entertained he play cast at the Henry Freie ome last Thursday evening. Games were enjoyed after which delightful efre hments were served.

Barbara Jean Johnson is the official name of the new little girl t the Clarence Johnson home. Mrs. A. D. Gimer, her grandmother, s helping care for her.

Miss Viloa Freie was at Britt on Tuesday evening where she played in the orchestra for a Legion and Auxiliary banquet. After the banquet the orchestra provided music for a dance.

G. W. Kluckhohn & Sons store has been greatly improved by the addition of a storm vestibule built at the rear door. This will keep out a lot of cold air during the winter months.

Mrs. Henry Griffen received a letter from her daughter, Madeline, at the Iowa City Hospital, iu which she said she was making a good recovery and would probably be home by Christmas. C. G. Waterman and family called on her while they were in Iowa City.

Dr. R. W Specht, Dentist, Garner, Iowa adv

FOR SALE—P. B. Chester White boars of the smooth and stretchy ype, with good bone; cholera immune; new blood lines for old customers.—Erith Cook, 3 3-4 mi. n. w. Kanawha, R.F.D. No. 2. 18-25c

A birthday party was held for Mrs. Henry Wille Thursday afternoon, which had been planned by her daughters. A number of elderly ladies were invited and all enjoyed a good time.

Mr. and Mrs. Herman Bridges and daughters, Irene and Gladys, visited with Mr. and Mrs. Paul Stille and family Sunday. Virginia Stille was nine years old on that date and enjoyed a fine birthday dinner.

Dr. Lease of Algona, Dist. Supt. of the M. E. Church, came Friday and took in teh oyster supper out at the Liberty Church. About forty were present. A large crowd would have attended if the roads had been good.

Mr. and Mrs. A. D. Gimer returned last Thursday from Ames where they spent a couple of days at a Dairymen's convention. They were enthusiastic over the meeting held or creamery managers and butterakrs.

Mr. and Mrs. T. F. Mitchell drove down from Swea City, Sunday to eat a duck dinner at the C. F. Kerns home. C. G. Waterman and family were also gathered around he banquet board and enjoyed the duck dinner.

Mrs. John Johnson received a ablegram from her two brothers in Sweden, sending her birthday greetings Her birthday is today nd she said no gift had ever pleased her more than the message from ir brothers so far away.

Mr. and Mrs. Tom Blank and daughter, Marie, Milvern Lau and Tracka Quandt, Mr. and Mrs. Tony Ahrenkeil and son Taalkeus, of Rodell, and Mr. and Mrs. Casey Blank of Reinbeck, all enjoyed a Sunday dinner at the home of Mr. and Mrs. Worthy Usher at Rowan.

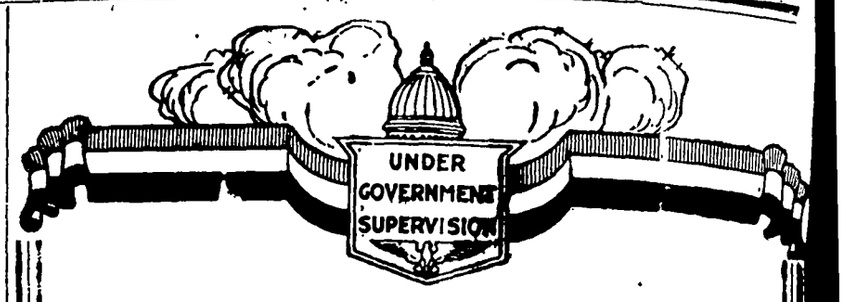
Mr. and Mrs. Wm. Stille moved Wednesday into the house they recently purchased, the house formerly owned by Albert Yahnke, and in which Happy Johnson and family have been living. The Johnson family moved into the Arnold house, across the street south of Mrs. G. W. Kluckhohn's home.

A surprise party was staged on Charles Ax last Monday evening, it being his birthday. Those present who brought with them well filled baskets of good things to eat were Mr. and Mrs. Henry Stromer and family, Howard Spitler and family, Mr. and Mrs. Walter Bredlow and family. Charles was further surprised most pleasantly when he was handed a gold watch as a gift.

This vicinity has again had more rain than needed the past week. Wednesday the weather man again smiled and today the sun is shining part of the time. A couple of nice weeks would be appreciated by the farmers who still have some corn in the field. Country roads are in bad shape, and the gravel highways re rough here.

Sunday was another get together family gathering when Mr. and Mrs. Henry Ludeke had a number of relatives for dinner. Those who were present were Elmer Ludeke family of Garuer; the Wm. Ax family of Swaledale; Art Schoenwetter and family, Mrs. Elmer Weisbrod and son of Fenton; Geo. Schoenwetter and family; Carl Suckow and family of Garner; Ralph Ludeke and family, and Fred Schlichting and family. Elmer Ludeke was unable to be present Sunday. All enjoyed a good time.

Buster Jorgenson was 8 years old Saturday, November 17th. In honor of the event his mother planned a birthday dinner for him on Sunday to which were invited Dorance Day, Byrness Missman, Dr. and Mrs. Missman and Miss Ely. Dorance brought over a nice cake baked by his mother. The cake was a rich chocolate cake, Buster's favorite and was nicely decorated with his mame, and eight candles. The inscription on the cake read, "How old is Buster? Count the candles." He received some fine gifts and says he would not mind having birthdays come oftener.



STOWING THE HARVEST OF A LIFE WORK—

A successful man of our country recently said: "In the language of the farmer, luck is a volunteeer crop of life. It is welcome but it is not dependable. The real crop must be sown and reaped by the sweat of one's brow.".. Select a strong bank in which to store this crop sown and reaped in difficulty and toil. This institution possesses the confidence of men who have had the great persistence to acumulate fair-sized fortunes. It is the right bank for all ambitious folks.

DOINGS AT SCHOOL THIS PAST WEEK

SCHOOL WILL ENJOY TWO DAY VACATION THIS WEEK

Report Cards For Second Period Sent Out This Week

As usual our schools will be closed two days this week, both Thursday and Friday, for the Thanksgiving holidays. This will permit the teachers who choose to go home for a turkey dinner, to get there and return for work the following week. Many high chool students will gain a day or two while husking corn and will be the better off for work in school thereafter.

Win First Basket Ball Game

Our boys won their initial game of basket ball with Swaledale last Friday night but by no large score. Swaledale always goes strong and our lads had to extend themselves to win, 24 to 23.

Report Cards Are Out Again

Report cards are going to the parents this week and for the benefit of those who may have recently moved into our comunity we shall again explain that pupils are given letters in each subject to indicate their ranking with other members of the class. A pupil receiving an A in any subject indicates that his work has been superior to that of near all others of his class in that subject. "B" indicates beter than average work, which possibly the highest one fourth of the class has done. 'C" plus indicates a high average and 'C' minus indicates low average. "D" showst hat his work is below average and if posible it should be improved. "D" minus is almost a failure and unless the quality of work is improved upon there is very grave danger that the work will med be repeated.

Home Study Is Beneficial

We hope conditions at home can be provided for more lesson preparation there, and that pupils in the uper grades and high school will be encouraged to devote from one to two hours each day to subjects they are weak in. The boy or girl who has a warm room in which to study unmolested has a decided advantage overt hose who have to study where all others of the family are talking. Most of our students employ their time well at school, but some cannot get their work done in the same time others can, ned more time, and unless iti s provided them elsewhere they get farther behind each day, or the class is held back because of them. We desire that pupils of average or more ability be permited to make reasonable progress.

In conclusion let us again say that we shall welcome parents any time who wish to cousel us about their children.

If their progress as revealed by the report cards is not satisfactory and we can aid toward beter work, we shall be glad to know of it. Whether a semester's grade is earned will be determined in not a few cases by the improvement shown during the next five weks. Let us all work together to avoid school failures. They are disappointing and costly and many times can be averted.

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

Thanksgiving Day Services will be held at 10:00 a. m., Nov. 29th. This will be a German-English service. Offering for Indian School.

Services for Sunday, December 1, are as follows:

10:00 a. m. English service.

11:00 a. m. Sunday school.

8:00 p. m. Tuesday Young peoples Bible Class.

The Confirmation Class meets every Tuesday and Saturday.

Junior Choir at 8:00 o'clock n Saturday evening.

WILLIAM GAUGER IS MAKING GOOD AT HOLSTEIN H. S.

Has Piled Up Enough Quarters To Win Football Letter

The many friends of William Gauger, former Klemme student, who moved with his parents to Holstein several weeks ago, will be glad to learn that he is making good in that school.

It appears that when William landed in school the football coach there was pleased with Bill's general athletic appearance and at once got him into a football uniform for a few practices before a game, in which a big bozo stepped on Bill's nose and nearly ruined the handsome contour of that member. That was Bill's beginning and since then has placed sixteen quarters, averaging about three to each game. Twelve quarters are required to earn a letter, so Bill has made enough extra for good measure and prospects to pile upseveral more in William has some boys and men the games left to play. Bill says, in his letter to the Editor that Holstein has won three games sraigh; now have won four, tied one and lost three, with two more to play. The last victory was over Odeboldt, Holstein winning 13 to 0.

interested in Scouting and says a troop will probably be organized in a short time. Bill says they will have a good sized troop by present indications. Fine stuff!

About basket ball, he states they will play the first game in three weeks, with out two weeks for practice after football closes Holstein last year had the sectional champions.

William gives us another intersting item regarding the school's band of30 pieces, which won second place in the state contest last year, asd hopes to make first this year. The band is directd by a Grman who has been there 12 years. He studied music in Germany. The band is uniformd, a turkish cap, a black sash and white shirt and trousrs.

Bill says he grabs the Times a soon as it arrives to see what the Scouts are doing, and to read about the doings at school.

STATE OF IOWA
Executive Department

A Proclamation

TO THE PEOPLE OF IOWA:

WHEREAS, it is the duty of all nations to acknowledge the providence of Almighty God, to obey His will, to be grateful for His benefits and humbly to implore His protection and favor; and

WHEREAS, the President of the United States has designated Thursday, November 29th, as our annual Thanksgiving Day, the time has come to look over the year and acknowledge with grateful hearts the many and signal favors of Almighty God. Business, industry and commerce should pause a moment so that the voices of praise and thanksgiving may be heard.

We ought to be thankful for the peaceable and rational manner in which we have been able to maintain a government for safety ad happiness. We ought to be thankful for the civil and religious liberties with which we are blessed, and the means we have of acquiring and diffusing useful knowledge; and, in general for all the great and various favors which He has been pleased to confer upon us. We ought to be thankful because every good cause is making progress. Vice is being lessened in the nation and right is strengthening its position in the world. We ought to be thankful because the public conscience has been awakened and here is sweeping over the land a demand for honesty, for respect for law and order, for the enforcement of the law, for the highest ideals in private lie and for strict fidlity in public place.

THEREFORE, I, JOHN HAMMILL, Governor of the State of Iowa, in compliance with the action of the President, do hereby proclaim Thursday, the 29th day of the present month as

Thanksgiving Day

and I earnestly recommend to the people of the Commonwealth a day to be devoted to the service of that great and glorious being who is the beneficient author of all the good that was, that is and that will be; that we may then all unite in rendering unto Him our sincere and humble thanks for His kind care and protection.

IN TESTIMONY WHEREOF, I have hereunto set my hand and caused to be affixed the Great Seal of the State of Iowa.

Done at Des Moines, this 1st day of November, A. D. 1928.

By the Governor:

JOHN HAMMILL, Governor. E.M. SMITH, Sec. of State

(Great Seal Of Iowa)

NOTICE OF PROBATE OF WILL

STATE OF IOWA,
Hancock County, ss.

To All Whom It May Concern:

YOU ARE HEREBY NOTIFIED, That an instrument of writing purporting to be the last Will and Testament of Valentine Josten, deceased, dated Aug. 30, 1928, having been this day filed, opened and read, Mon., the 10th day of December 1928 is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 10:00 o'clock A. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated andallowde as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, Oct. 18, 1928.

CHRIS J. JOHANSEN,
Clerk of District Court.

(Oct. 25, Nov. 1-8, 1928).

IOWA'S GOLD MINE—CORN!

Iowa's 1928 record breaking corn crop, which is estimated at 493,611,000 bushels, has an approximate value of $300,000,000, based on the December 1st future price. Figures compiled by the Iowa Department of Agriculture show that it is worth:-

As much as all the gold annually mined in the world.

More than twice as much as all the silver mined annually in the world.

Nearly three times as much as all the gold and silver mined annually in the United States.

More than the average spring wheat crop of the United States.

$35,000,000 more than the farm value of all tobacco raised in the United States in 1927.

Nearly as much as all the apples peaches, pears and grapes raised in the United States in 1927.

Six times as much as all the oranges raised in California and Florida in 1927.

IOWA! THAT'S WHERE THE TALL CORN GROWS!

K. H. S. WINS OPENER FROM SWALEDALE BY POINT

Game Was Close From Start To Finish And Was Nobody's

The first basket ball of the season Friday might last, held plenty of thrills for the fans and was too close for comfort for either side. It was the first game for both the local team and Swaledale and at no time was there more than a three point lead. The score most of the game stood with Klemme leading by only one and two points.

Tanner, West, Lange, Lemke and Gibson started on the locals, and Carr, Penny, Bender, Albers and Bonner played the opener for the visitors. Substitutes on both the teams saw service when regulars were forced out on fouls.

For the first game of the year both teams showed up fairly well, and weak places on the teams were displayed. A few rough edges are to be knocked off to bring them up to par.

The game started with Swaledale loping the first basket, with Klemme right back with another to tie and an extra for a lead. Thus the game see-sawed with the locals having a 10 to 9 score at the first frame. The half ended with Klemme 13, Swaledale 12. After the intermission both teams came back in strong for another equal combat, ending the quarter with Klemme's greatest lead so far during the game with 22 points against 19 for the visitors. When the final gun cracked the game stood Klemme, 24 and Swaledale 22. However a foul had been comitted just as the gun cracked, giving Swaledale au extra try, which they made good, making the game Klemme 24, Swaledale 23.

Klemme regulars who saw service last year, Lemke, Lange and Gibson, all showed up good and improvement was noted. Tanner and West, new men on the string both played a good game for begimners. Substitutes who went in for Klemme came through in good shape. Taken all together, Klemme should have a pretty fair team this year. A few rough spots need to be knocked off, and as a spectator we thought the team needs considerable work in basket shooting, as they appeared rather uncertain and weak in this phase of the game. Floor work and team co-operation was well displayed in the game.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Due to the fact that the pastor has been delegated to attend he Young Peoples Counel at St. Paul on Friday, Saturday and Sunday to lay plans and promote the Epworth League and Sunday school work of our District and adjoining territory it was necessary to make other rrangements for the pulpt Sunday.

Professor A. R. Mounce of Garner will therefore take charge of the morning service and speak at that time both in town and at Liberty.

Mrs. Whyte will be in charge of the evening service, at which time we will have lantern slides accompanied by a very interesting story of the home missionary work in the logging camps of the west.

You will do well to hear Prof-Mounce and also see these slides.

CAMP FIRE GIRLS STAGE PARTY FOR TROOP 56

Last Thursday evening the Camp Fire Girls and their directors were the jolly hostesses of a party given to the Boy Scouts and leaders of Troop 56. The party was held in the basement of the First National Bank, which had been decorated for the occasion.

Group games and stunts were played and at the proper time the girls and boys were let in on the real big feature of the evening, the delicious lunch which had been prepared by the girls, who by the way, are good cooks. The lunch consisted of potato salad, hot meat sandwiches, pickles, hot chocolate with marsh mallow, three kinds of cake, jello and whipped cream.

Did the Scouts enjoy the party? How! How!

Needless to say, all enjoyed a fine time, and the Scouts voted that the Camp Fire Girls are fine entertainers and excellent cooks.

THEY GAVE TO RED CROSS DRIVE

HERE'S LIST OF RED CROSS MEMBERS FOR KLEMME

Klemme Went "Over the Top" In The Rcent Red Cross Drive

Last week The Times gave a summary of the work done by Mrs. K Kraus, Lena Schroeder, Mrs. Emil Patet and Martha Bredbennor, who conducted the drive for funds for the annual Red Cross Drive.

The ladies made a fine effort and exceeded the quota, $75.00, for this place. Since then $2 more has been turned in.

The drive is still on and any one who has not contributed may still do so. Just hand your money to any of the above ladies or deposit it in the Red Cros Fund at the First National Bank.

Following is the list of members who contributed $1.00 each:

Miss Lena B. McGinnis, Mrs. C. Larsen, Dr. Zinn, Carl E. Heidcn, Phyllis E. Root, Mr. Frank Gruetzmacher, Mrs. H. Wille, Miss Wilma E. Trumbell, M. F. Penrod, Mrs. Clara Schaper, Mrs. S. Trumbell, Miss M. Wheatman, Miss L. Wheatman, R. A. Jorgenson, Rev. Grosshuesch, Ed. Schaefer, Arthur Wellemeyer, Frank Kluckhohn, A. J. Kudje, Mrs. Emma Gibbs, Mr. F. A. Arnold, Geo. Carson, Henry Lewis, N. G. Moberly, L. Deal, Mrs. W. Kirkwood, Mrs. Ben Coobs, Mrs. Ernest Schuldt, Mrs. John Sucko, Mr. Paul Mueller, Edith Haupt, Dr. Missman, Mrs. J. E. Stille, Mrs. Harry Smith, Mrs. E. H. Patet, Mrs. R. A. Jorgenson, Milvern Lau, Mrs. A. Wellemeyer, Miss Marie Blank, Fred Schlichting, Mart Bachman, Mrs. Emil Krause, Mrs. Paul Grange, Mr. Paul Grange, Benn J. Coobs, M. O. Barr, B. G. Smid, Mr. M. C. Gram, Mr. U. G. Smid, M. E. F. Jacobs, Mrs H F Jost, Mr C A Larsen, Alvina Griffen, Mrs. C. G. Waterman, Mrs. P. M. Wilson, Mrs. Einar Salling, Mrs. Best, Mr. James Thomas, Mrs. Conrad Quandt, Mr. John Pritchard, L. G. Gimer, Fred Gates, Mrs. P. W. Johnson, Shirley Johnson, Barbara Johnson, Rev. H. E. Whyte, Mrs. H. E Whyte, Clarence Kluckhohn, Mrs E. J. Arnold, Mr. A. D. Gimer, D. P. Anderson, Lloyd Lau, George Lawhorn.

Red Cross Donations

Following is the list of those who donated various amounts to the Red Cross Drive:

Mr. Joe E. Johnson, Mr. Wm. X. Smith, Mr. George Platt, Mrs. Louisa Rosendahl, Orville Bridges, Mrs. G. Goll, Mrs. J. E. Stooldryer, Mrs. Hans Hanson, Mrs. Philip Bock, Mrs. Wm. Stille, Mrs. Walter Lau, Adella Kuhlmann, C. F. Keraus, Mrs. Geo. Kluckhohn, Mrs. Daisy Lemke, A. S. Moulton, Mrs. Will Straatman, W. F. Pavey, Mrs. Will Schlawin, Mrs. John Josten, Mrs. G. Moberly, Miss Mabel Smith, Mr. Faye Smock, Grandma Schlawin.

The Junior Red Cross

Reports we gather from school is that the Junior Red Cross is coming along fine and that the children have taken a great interest in their work.

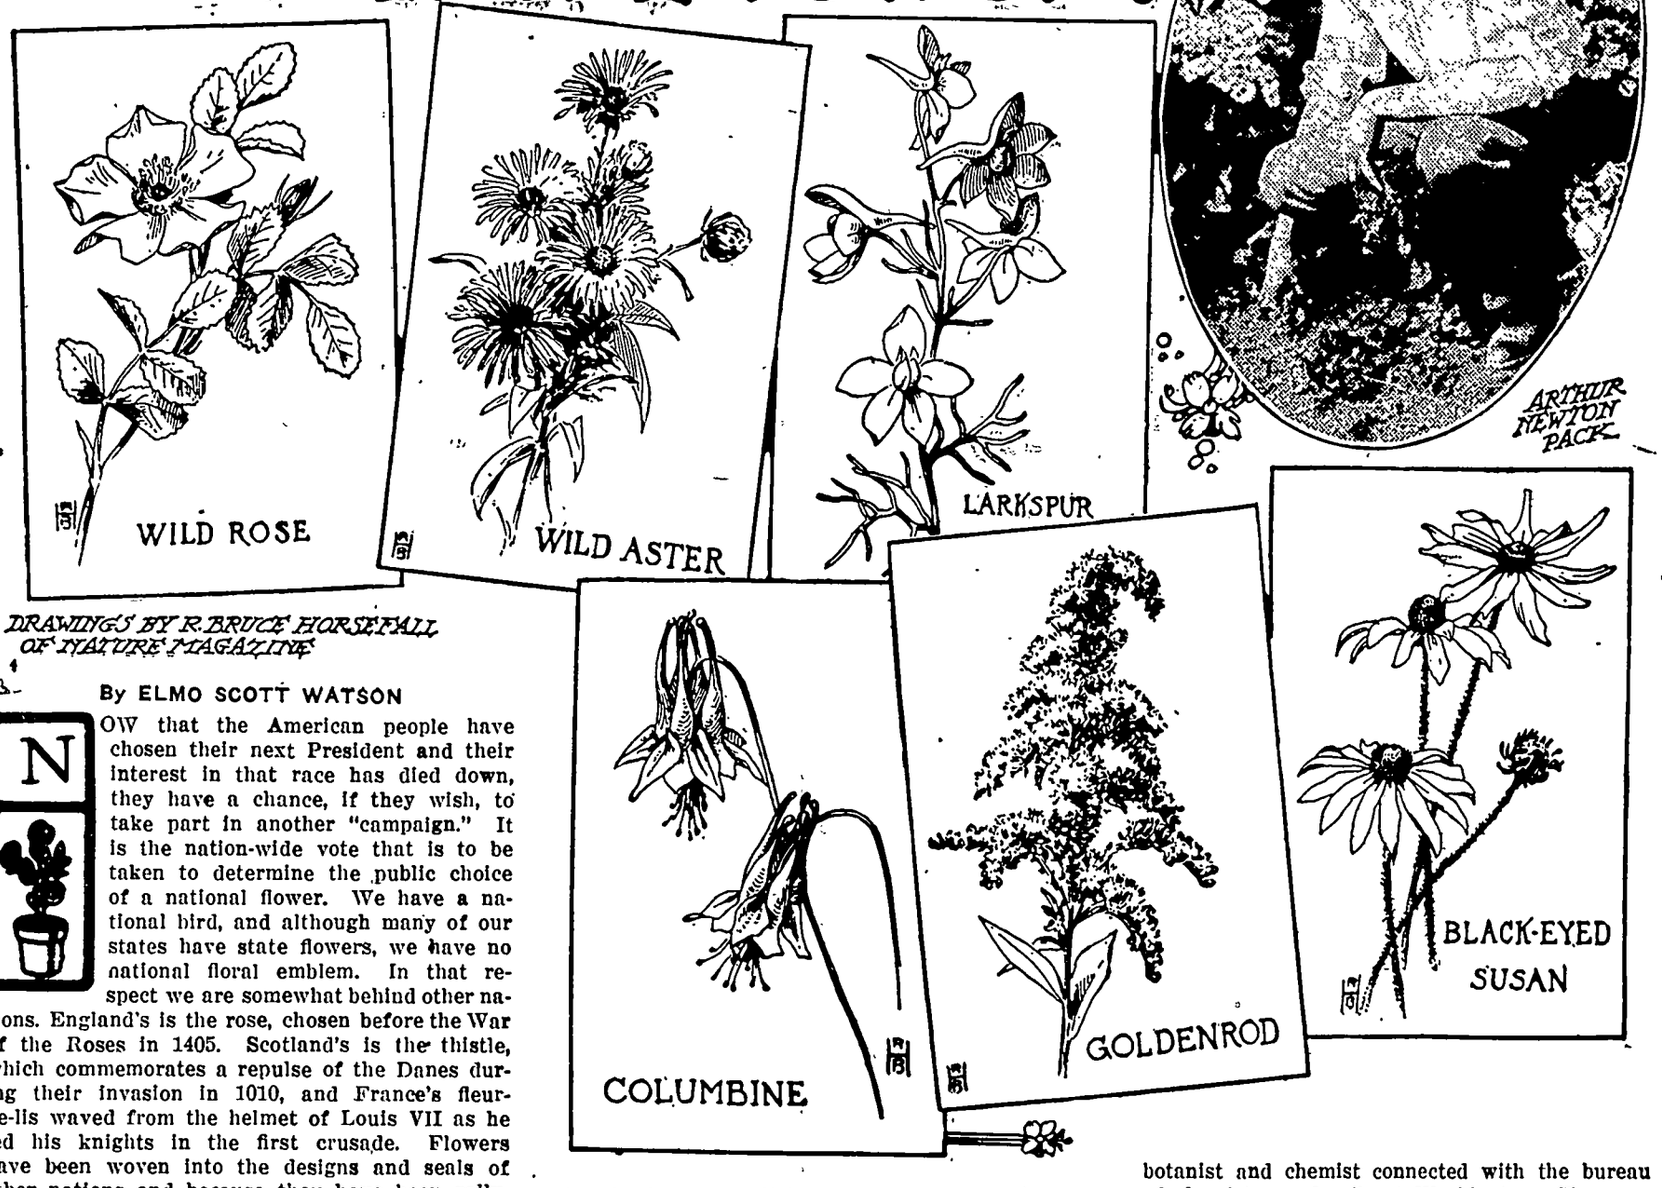
Altogether, Klemme people have responded in a fine way to the Red Cross appeal for funds.

The Chairman wishes to take this opportunity to thank all who assisted in the Drive and who gave of both their time and money. The chairman wishes to thank all who contributed to the Drive.

Any contributions which come in will be placed on the list for next week. The Tims trusts that none who contributed have been left off the above list. Any such errors will be gladly corrected.

Mrs. Fred Yahnke has a novel quilt on display at Wellemeyer's store which is made up of 2,480 pieces and required 12 spools of thread. The quilt is entirely hand made and is very beautiful.

What Shall Be Our National Flower?



DRAWINGS BY R. BRUCE HORSFALL OF NATURE MAGAZINE

By ELMO SCOTT WATSON

NOW that the American people have chosen their next President and their interest in that race has died down, they have a chance, if they wish, to take part in another "campaign." It is the nation-wide vote that is to be taken to determine the public choice of a national flower. We have a national bird, and although many of our states have state flowers, we have no national floral emblem. In that respect we are somewhat behind other nations. England's is the rose, chosen before the War of the Roses in 1405. Scotland's is the thistle, which commemorates a repulse of the Danes during their invasion in 1010, and France's fleur-de-lis waved from the helmet of Louis VII as he led his knights in the first crusade. Flowers have been woven into the designs and seals of other nations and because they have been rallying points for national sentiment and patriotism throughout all ages and among all races of civilized men, it is the belief of many Americans that the United States should have a national flower.

So the American Nature association, headed by its president, Arthur Newton Pack, is sponsoring a movement to choose a national flower by a popular referendum. Once the vote of the people has been recorded, congress will be asked to make official that popular choice. Then the national flower will be used decoratively on public occasions along with the national ensign and it will spread its symbolism over national holidays, adding another link to the chain of national unity.

The present movement to choose a national flower is not the first one that has ever been made. Previous attempts, however, to choose one either by legislation or popular vote have failed to be effective. The goldenrod, now the floral emblem of five states, was chosen indecisively in 1889 as a national floral emblem but it was never widely accepted as such. In 1920 a bill was introduced into congress to make the daisy the national flower but this flower was more or less laughed out of its claim for preferment. "What! That pesky weed!" exclaimed many farmers when they heard of the proposed choice and both it and the goldenrod have been looked upon rather too disdainfully as "weeds" to allow either to be taken seriously by a majority of people.

In starting the movement for the selection of a national flower, its sponsors state that there is a "floral constitution," unwritten but understood by all, which deals with the ideal qualifications for the king of American flowers as follows: "It must bloom in all parts of the United States. It must be available at all times of the year. It must be popular with all and symbolic of the nation. It must be suitable for emblems and designs. It must radiate tradition and history through its past associations with the creators and the developers of the land."

Although a number of "candidates" are already in the field for the honor of being chosen the national flower, two of them, the goldenrod and the phlox, seem to be in the lead. It is interesting to note that a "whispering campaign" is being carried on in this, as in the race which ended November 6, and proponents of the goldenrod claim their favorite is being treated unfairly. Here are some of the "whispers" that are being used against it:

Its pollen is supposed to cause hay fever.
It is not strictly native to this continent.
It has a weedy tendency, and thus is lacking in dignity befitting the national flower.
It is the color of gold and if chosen will give Europeans another chance to taunt us on being "gold-diggers" and "money-worshipers."
It does not have our national colors.
It has already been selected by several states as a state flower.
It blooms only in the fall of the year.

To refute some of these charges, this "candidate" has issued the following statement from "campaign headquarters" (the office of the Nature Magazine, official publication of the American Nature association):

I am still the king. Any other is an usurper. I cannot be exterminated, I am too strong. My waving sheaf of gold is known everywhere, and gives beautiful mass effects. Though a violent whispering campaign to the effect that I cause hay-fever has long worked against me, the intelligent electorate knows that the ragweed is to blame. Five states have proved their wisdom by choosing me—why not forty-eight?

Advocates for the selection of the phlox have brought forth the following argument for their "candidate":

It is 100 per-cent American.
It is not yet a state flower.
It grows wild in nearly every state in the Union.
It is a handsome and showy flower.
It grows in our national colors—red, white and blue.
It has one variety in which the flowers are shaped like five-pointed stars.
It blooms over the Fourth of July.
It is a hardy perennial.

And this "candidate" has also announced its "platform" as follows:

If elected by these voters in the United States, I will promise to continue to grow in the national colors, red, white and blue. I will continue to be hardy and faithful in reproduction, so that my line will always rule.

Other "candidates" which have been mentioned for the honor are listed by the American Nature association as follows (the letters P, B and A stand for perennial, biennial and annual, and the rest of the classification provides an idea of what the plants are like in color and height and when they may be expected to bloom as part of the garden color scheme):

Alyssum A, white, six inches, June-October; Anemone, P, white, pink, two to three feet, September; Aster, A, all colors, two to four feet, September-October.

Candytuft, A, white, pink, 12 inches, June; Candytuft, P, white, nine inches, May-June; Canterbury Bells, P, blue, white, pink, three feet, June-August; Columbine, P, all colors, two to three feet, May-June; Coreopsis, P, yellow, two to three feet, June-October.

Daisy (English), B, white, pink, six inches, May; Gaillardia, A, yellow, three feet, June-October; Gladiolus, A, all colors, three to five feet, July-October; Marigolds, A, yellow, brown, one-half to three feet, July-October.

Nasturtium, A, yellow, orange, twelve inches, June-October; Roses, P, all colors, one to five feet, monthly; Spireas, P, pink, white, yellow, two to ten feet, May-September.

Sweet Pea, A, all colors, twelve inches, April-October; Sweet William, B, all colors, two to three feet, June-September; Zinnias, A, all colors, two to four feet, July-October.

And here are the "statements" of some of those "candidates":

The Dogwood: "What flower could hope to represent the American people as well as I? As a roadside decoration, I represent the plus ultra in beauty. I grace the indoors as well, and speaking of floral designs, what couldn't the imagination do with my four and five-petaled blossoms? As for my history—I am the state flower of Virginia."

Mountain Laurel: "There is deep significance to my star-like flowers. I grow in the thirteen original states. The pioneers loved me. I am the state flower of Connecticut. None could surpass the beauty of the designs I would make. While I must stay east of the Father of Waters, I have a cousin, a mountain laurel, that might represent me in the mountains of the West."

Wild Rose: "I stand on my record. I make wonderful decorative designs. I am an aristocrat—my ancestors came from Babylon, Persia and Nineveh. I have many names, such as Liberty, Columbia, General Pershing and President Wilson, that give me national standing. Who can point with pride any better than I?"

Columbine: "I am the people's candidate. I stand for unlimited looking at my flowers, and for moderate picking. You must see my thirteen-leaf lobes, and notice that when reversed, my spurs resemble the talons of the American Eagle. I bloom on three national holidays—Decoration day, Flag day and the Fourth of July. My name is derived from Columbia, meaning dove, and associated with Columbus, who found this land of peace and plenty. As for mass effects and for symbolic emblems, I can say with all modesty—I stand on the brink of perfection; there is none to surpass me."

One of the chief campaigners for the phlox is Dr. Edgar T. Wherry, a well-known government botanist and chemist connected with the bureau of chemistry and soils at Washington. However, he has some interesting things to say about the other contenders for the honor, as follows:

Phlox and goldenrod are not precisely the only two flowers in the competition, though they apparently are the candidates most under discussion. But there are also columbine, mountain laurel and the daisy as proposed candidates. As a matter of fact, mountain laurel has powerful backing and is sure to get a lot of votes. It is the selection of the Daughters of the American Revolution. Its backers argue that it is an American plant, and favor it because it grows in the 13 original states. They say that the flowers are starlike and that it is available for decoration at all seasons of the year. Connecticut and Pennsylvania have mountain laurel as their state flowers. But the argument against mountain laurel is that it does not grow and cannot be grown in the western half of the country, and we should not choose a national flower that is sectional.

Indiana, on the other hand, had the carnation as its state flower for a long time. It was selected by the school children and had no relation whatever to the state. It is a European flower particularly popular with Latins. For 20 years the state forester tried to change it. Now Indiana has the tulip-tree flower, but Ohio still has the carnation as its emblem.

While I personally favor phlox, I wouldn't be particularly disappointed if it were defeated and some equally attractive and appropriate flower selected. I am primarily interested in having a suitable and beautiful flower selected for the official national flower of the United States. A number of proposals of individual plants have been made, but some of the plants selected have been too restricted in range to be regarded as typifying the country as a whole.

Others, again, are not limited to nor characteristic of the United States. They are not 100 per cent American. Take the columbines (Aquilegia species) and the goldenrods (Solidago species), for instance. Least satisfactory of all are those plants which are not native to this country, in particular that troublesome weed, the oxeye daisy, or, still worse, the English daisy, which once was specified in a bill submitted to congress. The columbine was also proposed in a joint resolution submitted to congress a year or two ago by a member from Florida, but nothing was ever done about it.

The one genus, however, which has apparently never been given consideration until now, but which has many points in its favor, is the phlox. This charming flower is typically North American, only a single member (Phlox sibirica) occurring native to any other continent, and this one being common to Alaska and Siberia. One or more species of phlox grow wild in every state in the Union except Maine and perhops one or two other New England states, and at least two species have become more or less naturalized in that region.

It is a handsome and showy flower, and many species are so popular that they have been brought into cultivation, and most of them have proved easy to grow, which lessens the danger of extermination of individual species which might result from the public interest sure to be attracted to a national flower.

Most important, too, phlox comes in our national colors, red, white and blue, and some of the varieties are five-pointed stars. It blooms over the Fourth of July. It is a beautiful, showy flower, a hardy perennial, and this essentially all-American flower is familiar to every one. It grows in old-fashioned gardens and in modern ones.

In justice to goldenrod, which has long been considered our national flower, but which also has been unpopular because of its association with the hay-fever curse, we wrought to absolve it from this charge.

Of course, on the other hand, goldenrod grows in every state, so it has that advantage. It does not come in our national colors, however. Goldenrod is also a European plant and grows in Germany, Scandinavia and other countries, so it is not 100 per cent America, a fact that should not be overlooked.

Goldenrod does not grow except in the late summer and fall. You couldn't get it to bloom in spring, on the Fourth of July or Commencement day, just the important times in the year for a national flower, it seems to me. Goldenrod is more or less of a weed, and a flower to hold so high a place as a national emblem ought to be of finer origin. A weed hasn't the necessary dignity.

The phlox has a delicate and faint fragrance. Not the heavy, pungent odor of many flowers, but a pleasing and charming scent. And as the fact remains that at present we have no national flower and as phlox seems to fill the bill in an all-around fashion, here's hoping that it will be selected and that our next President will declare the fact of its choice by proclamation in the not distant future!

Every one—man or woman, boy or girl—is entitled to a vote in selecting the national flower and is invited to send in a ballot. Women's clubs and schools are asked to express an opinion, and it is suggested that the project would make an interesting study for the fall term. The Camp Fire girls are making their study project flowers for the winter of 1928-1929 and in connection with this work will take a national poll on the national flower and report to the American Nature association

Vote for a National Flower

CHRISTMAS SEAL SALE IS NOW ON

Using Christmas Seals Saves Human Lives.

Des Moines, Iowa.—Twenty-five Million Christmas Seals are being offered for sale in every county, town and school district in Iowa during the annual campaign which extends from Thanksgiving to Christmas.

This quota if placed end to end would make a design of the emblematic double-barred cross reaching from Rock Rapids to Keokuk with arms extending from Onawa to Algona and from Council Bluffs to Mason City.

The proceeds of the seal sale are used by the local associations in various forms of child health work, nursing, weighing and measuring, health education, fresh air camps, clinics, dental inspection, school health supplies such as scales, first aid kits, thermometers, posters, books, etc., and a portion by the State Tuberculosis Association in the prevention of tuberculosis both in humans and animals, in the discovery and prevention of heart disease, and in general health work.

IOWA CHAIRMEN JUDGES OF ART

Vote 1928 Christmas Seal Best In History.

The 1928 design for the annual Christmas Seal sale was voted the most beautiful of all the twenty-one emblems of the national tuberculosis movement since its beginning in 1907, according to the result of a poll of the opinion of county chairmen, taken by the Iowa Tuberculosis Association.

A viking ship with swelling sails bearing the international emblem, the double barred cross, speeds through a foam-capped sea. On the blue background are the words "Christmas Greeting 1928."

The color scheme is red, gold, green and blue. The sails of the ship are white and gold, the hull red and gold, the waves green and white. The color of the sky is a happy shade of blue which is deep and rich and at the same time vivid.

The National Tuberculosis Association has adopted the following motto for this year's advertising:

"Her cargo full of countless wealth
Of joy and hope and human health."

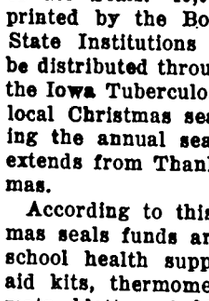
The design signifies the hope and joy that has been and will be brought to thousands of sufferers through restoration to health.

WHERE CHRISTMAS SEAL MONEY GOES.

The question, "What becomes of the money paid for Christmas seals?" is answered in an eight-page illustrated pamphlet entitled The Service of the Seals. 40,000 copies of this, printed by the Board of Control of State Institutions at Anamosa, will be distributed throughout the state by the Iowa Tuberculosis Association and local Christmas seal committees during the annual seal campaign which extends from Thanksgiving to Christmas.

According to this pamphlet Christmas seals funds are used locally for school health supplies such as first aid kits, thermometers, scales, doormats, blotters, book covers, drinking cups, paper towels, tooth brushes, height and weight cards, weight tags, measuring charts, songs, plays, pageants, stories, pamphlets, magazines, posters, chore pictures, exhibit material, books for teachers and school library such as "Health Training in Schools"; nurses' supplies such as record and inspection forms, tongue blades, eye charts, clinical and first aid material; school health projects such as essay, speaking and poster contests, Modern Health Crusade for teaching health habits, hot lunches, milk, nutrition classes, nursing inspections, dental surveys; public meetings, moving pictures, exhibits at fairs, health parades, health Sunday; county tuberculosis and heart clinics, children's clinics open air schools, preventoria (fresh air camps), relief in tuberculosis cases, promotion of local regulations such as milk ordinances, publicity for periodic examination and other health projects such as anti-spitting, fly, open-window, clean-up and safety campaigns.

361,405 school children formed good health habits through Modern Health Crusale. 22,403 teachers conducted it. Iowa won sixth time in seven years national cup for leadership in health education; "Health Training in Schools", 402 pages, a handbook of practical teaching methods, placed in 5,200 schools; State Association helped secure passage of many important health measures by legislature; wrote the physical education law; distributed 1,200,000 pieces of health literature; loaned films to farm bureaus, etc.; helped fight animal tuberculosis through film "Out of the Shadows" and in other ways; edited monthly health magazine, "The Campaign", printed by Board of Control of State Institutions.



WHAT DR. CALDWELL LEARNED IN 47 YEARS PRACTICE

A physician watched the results of constipation for 47 years, and believes that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation, known as Dr. Caldwell's Syrup Pepsin, is a mild vegetable compound. It can not harm the system and is not habit forming. Syrup Pepsin is pleasant tasting, and youngsters love it.

Dr. Caldwell did not approve of drastic physics and purges. He did not believe they were good for anybody's system. In a practice of 47 years he never saw any reason for their use when Syrup Pepsin will empty the bowels just as promptly.

Do not let a day go by without a bowel movement. Do not sit and hope but go to the nearest druggist and get one of the generous bottles of Dr Caldwell's Syrup Pepsin, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois for free trial bottle.

PARKER'S HAIR BALSAM
Removes Dandruff—Stops Hair Falling
Restores Color and Beauty to Gray and Faded Hair
60c. and $1.00 at Druggists.
Hiscox Chem. Wks. Patchogue, N. Y.

FLORESTON SHAMPOO—Ideal for use in connection with Parker's Hair Balsam. Makes the hair soft and fluffy. 50 cents by mail or at druggists. Hiscox Chemical Works, Patchogue, N. Y.

Just Himself

Rudyard Kipling never was celebrated for a mild and amiable temperament. He never suffered fools gladly and now he hates them more than ever. An American lady is said to have once looked long upon him "a small man dressed to match his old pipe," she described him and then said to him disappointedly: "Mr. Kipling, I thought you would be different."

"Oh, I am!" said Kipling tartly, "but this is my day off."

HUSBAND DISTRIBUTES BOOKLETS

Wife Tries Compound

Every year the Pinkham Medicine Company distributes about 30,000,000 booklets from house to house. Mr. Ted Hinzman does this work in Lodi, California. His wife writes: "It was in these little books that I read about so many women being helped by the medicine. I thought I would give it a trial and I can truly say that it has done me good. My neighbors and friends ask me what I am doing to make me look so much better. I tell them that I am taking Lydia E. Pinkham's Vegetable Compound."

Precept From Sydney

As in geometry the oblique must be known as well as the right, and in arithmetic the odd as well as the even so in actions of life whoever seeth not the filthiness of evil wanteth a great understanding to perceive the beauty of virtue.—Sir Philip Sydney.

If you ask favors you should do obligations.

A Raw, Sore Throat

eases quickly when you apply a little Musterole. It penetrates to the sore spot with a gentle tingle, loosens the congestion and draws out the soreness and pain.

Musterole brings quick relief from sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds on the chest.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

Jars & Tubes

MUSTEROLE
DOES NOT BLISTER

Better than a mustard plaster

APPETITE IMPROVED . . . QUICKLY

Carter's Little Liver Pills
Purely Vegetable Laxative
move the bowels free from pain and unpleasant after effects. They relieve the system of constipation poisons which dull the desire for food. Remember they are a doctor's prescription and can be taken by the entire family. All Druggists 25c and 75c Red Packages.

CARTER'S LITTLE LIVER PILLS

LIVE STOCK NEWS

EED POTATOES TO LIVE STOCK

Potatoes have been successfully d in fattening rations for both ttle and lambs and may also be d in limited quantities to h gs and rses. Farmers who have a surplus potatoes this year may find it profble to feed them to live stock.

In the tests that were conducted at the Colorado agricultural experient station, potatoes proved to be rticularly valuable fed with grain nd alfalfa to fattening lambs. A ration consisting of grain, alfalfa and wo pounds daily of chopped raw potatoes showed a feed replacement alue of $8.54 per ton for the potatoes used. Fed to fattening beef alves at the rate of nine pounds per head daily, the raw potatoes had a feed replacement value of $5 per ton. Potato silage made by cutting the potatoes into a silo with a 2 per cent addition of cornmeal gave practically the same net results. The only advantage gained in ensiling the potatoes was the ability to store the ensilage for an indefinite period.

Starch is the chief constituent of the dry matter of potatoes and there is very little crude protein present, consequently a good protein feed is necessary to properly balance any ration where potatoes are used.

Raw potaties may be safely fed to live stock if the daily ration is not too large and the feeding period not too extensive, according to E. J. Maynard of the Colorado experiment station. They are best not fed, however, to pregnant stock on account of their acrid taste and tendency to increase the flow of digestive juices 'n the stomach and intestine.

Raw potatoes should be gradually introduced into the ration and if taken away, this should be done by degrees.

Feeds, such as beet molasses and beet tops which tend to irritate the digestive tract, should not be fed at the same time. Although potatoes should be chopped up, they may also be fed whole. If fed whole, it has been found worth while to feed them to cattle in low bunk under a pole or beam. This method tends to prevent choking.

A low-priced root cutter, either hand or motor driven, is available, which has given good success at the experiment station.

Cattle are least sensitive to raw potatoes. Large quantities have been fed in fattening rations with no bad effects. It is safest, however, not to feed too great an amount.

Sheep also do well on raw potatoes. It is best to feed lambs not over two pounds per head daily.

Horses are more easily affected by raw potatoes but small quantities, three to five pounds per head per day, may be used.

It is usually better to cook or steam potatoes for pigs. Experiments show that about 420 pounds of cooked potatoes equal 100 pounds of corn in feeding value if fed in a properly balanced ration. Raw potatoes proved to be only two-thirds as valuable when fed to pigs. If cooked the potatoes should be salted and the water in which they are cooked should be thrown away.

Blood Separators for Cholera Serum Useful

Production of clear anti-hog cholera serum for use in preventing the disease which has cost American farmers $30,000,000 annually for the past 40 years has recently been materially cheapened by the use of centrifugal blood separators. Not only do these separators reduce the cost of the product, but they also increase the percentage of recovery of serum and eliminates waste.

After the hyper-immunized pig has been bled, one separator removes the heavy corpuscles from the blood and another takes out the light, fatty substances. It is necessary to remove both the heavy and light material to produce a clear, colorless serum.

The blood separators used are similar to the ordinary centrifugal cream separator. Similar separators are also used to clean and reclaim used oil from automobile and tractor crankcases.

Lambs Neglected

Lambs are often considered the main source of income from the farm flock, but they are frequently undervalued and little attention given from the time of birth until they are sold. If they have done well and made fair gains the seller is satisfied. When lambs are thus thought of as the main income from the flock it is evident that extra care and thought must be given to them if greater returns are to be received.

Good Beef Calves

Mating an Aberdeen-Angus bull with Holstein cows would result in a very good grade of beef calves. The Wisconsin experiment station has conducted two trials in which they have used groups of steers, representing high-grade Aberdeen-Angus and cross-bred Aberdeen-Angus-Holstein. The results have shown quite favorably for the cross-bred steers. Prof. J. G. Fuller at Madison, Wis., would be happy to send you a copy of these reports.

Irish Cobblers Win in Tests

Beat Early Ohios by From 25 to 50 Per Cent in Southern Ohio.

In a series of ten demonstrations in southern Ohio Irish Cobbler potatoes have this year outyielded the Early Ohio variety, from 25 to 50 per cent, according to data collected and tabulated by E. R. Lancashire, extension specialist in vegetable gardening at the Ohio State university. Demonstration plots were managed this year at Portsmouth, Urbana, Dayton, Zanesville, Pomeroy, and other points. Irish Cobblers and Early Ohios in these plots were given precisely the same treatment in all regards.

Cobbler Yield Highest.

On a plot near Urbana belonging to M. Sturdevant and Edward Taylor, the Cobblers yielded 345 bushels to the acre as compared with 188 bushels from the Early Ohios. Near Portsmouth, on a farm belonging to W. J. Boyton, the Cobbler yield was 283 bushels to the acre as compared with 202 bushels of Early Ohios. In a composite report on several fields near Pomeroy, in Meigs county, the Cobbler yield ranged from 25 per cent to 50 per cent greater than the yield of Early Ohios, grown under the same conditions.

"In spite of the fact that Cobblers are equal, in all ways to Early Ohios, there are certain markets which demand the Early Ohios," says Lancashire. "Part of this may be due to the fact that the Cobblers familiar to the buyers may have been shipped in from northern states. Such shipped-in potatoes have not reached maturity when they are harvested, and therefore are not of as good quality as the Ohio-grown potatoes. However, Cobblers which are grown in Ohio and do reach maturity before they are harvested, are the equals, in all respects, of the Early Ohios. It is true that the Early Ohios will mature a few days before the Cobblers, in Ohio, and the man who grows them will be able to catch the market a few days earlier than he can catch it with Cobblers. But the advantage of that few days doesn't make up for the loss in yield.

Make Change Gradually.

"It is quite possible for the grower who has customers demanding the Early Ohios, to change gradually, growing only enough of them to fill his demands. If he is anxious to make the early market, he can grow a few Early Ohios for that purpose, and have the bulk of his fields in Cobblers which will yield heavily a little later in the season. In our opinion the grower of Early Ohios will profit by changing over, gradually or otherwise, to the Cobblers, for the sake of getting one-fourth or one-half as many potatoes more than he has been getting from the Early Ohios."

Smuttox Wins in Control of Oats Smut in Tests

Smuttox wins hands down over formaldehyde in controlling oats smut, tests by farmers in several Ohio counties during summer indicate.

D. T. Herrman, extension agent in Auglaize county reports: "On the two demonstrations where Mr. Pierstorff treated the seed with smuttox we found only one smutted head. The formaldehyde-treated plots showed 0.6 per cent infection at Clyde Copeland's and 1.2 per cent at Edward Knierim's. Untreated plots on the same farms showed 5.4 and 0 per cent respectively. At the William Glass farm the untreated plot showed 14 per cent infection; only one smutted head was found in the four acres treated with smuttox."

In three demonstrations in Wayne county, according to County Agent G. A. Dustman, the dry smuttox treatment gave almost perfect control. Farmers preferred that to the wet formaldehyde treatment. These tests were arranged by Mr. Dustman in co-operation with Mr. Pierstorff and Dr. H. C. Young of the experiment station.

Agricultural Hints

Neither scrub live stock nor low-grade machines are profitable.

* * *

At present the most active subject of agricultural research in the United States is that of vitamines.

* * *

To make your poultry house more comfortable for winter put in a straw loft overhead.

* * *

Kill the corn borers by putting the corn in the silo. If the insect escapes the knives of the cutter, it will die of suffocation.

* * *

Two important ways farmers are lowering the cost of production are by securing high yields and by keeping operating costs at a low figure.

* * *

Machinery left standing outdoors increases the farmer's expenses. One way to get practical farm relief is to carefully clean, store, and protect all implements when not in use.

* * *

Farm accounts should be started January 1. In keeping these accounts, simple books are usually best. If the books are secured and plans made to start the accounts on January 1, the actual starting of the books will not be difficult.

STARTING MOTOR DURING WINTER

Main Trouble Is That Gasoline Does Not Vaporize Readily Enough.

Of course the principal difficulty in starting a car when it is cold is that the gasoline does not vaporize readily and combine with air into a combustible mixture. Understanding this, do not wear out the storage battery with the starter or your patience with the crank handle in a fruitless endeavor to start something. Use your head instead of your arms. It will start easier, for neither headstrong nor armstrong starters are worth while.

Open Choking Device.

As soon as the engine starts it is very important that the choking device be opened partially, depending upon the temperature until the engine heats up, and then fully opened Otherwise the excess of gasoline will cause the engine to run sluggishly. Indeed, it may load up the cylinders with such a mixture that the engine may stop again. This in turn will make it harder to start the engine than before. Do not close the choker again if the engine stops from this cause. Get as much air in as possible while you crank the engine and thus approximate a correct mixture.

If using of the choker device fails to start the engine the only thing left to do is to apply heat to the intake manifold. You may pour a little hot water over the manifold. The intake will get warm enough this way in a little while. But a surer way is to wrap a cloth about the manifold and empty the teakettle slowly upon it. Extreme care must be taken not to get any water on the high tension ignition terminals or in the float chamber of the carburetor. Water will not pass through the spray nozzle and a tiny globule will stick there and hold back the gasoline.

Warming Device.

Practically all modern carburetors have some sort of warming device to heat the gasoline and air entering the mixing chamber. Some get air from a stove or hot-air furnace attached to the exhaust pipe and some depend on hot water from the cooling system. Neither of these will get into action, however, until after the engine has been running some time and will not help the cold morning troubles of the owner. If there is a hot water jacket on the carburetor, persons who drain the cooling system on cold nights will aid starting materially if they fill the radiator with hot water in the morning just before it is time to start the engine. This warms the entire engine, so that condensation is not likely to occur.

It Is Not Necessary to Prime Gas Tank by Hand

The idea that when one runs out of gas and the vacuum tank has run dry, it is necessary to prime it by hand, is erroneous, according to a factory authority. A knowledge of how to refill the tank without leaving the driver's sent will save time and effort. Here's how: Turn off the ignition and throttle down, then step on the starter and turn the engine over a dozen times.

This creates sufficient vacuum to draw gas from the gas tank to the vacuum tank, and fills it up, ready to go as soon as the ignition and gas are turned on again.

Millions of Spark Plugs Are Now Used Every Year

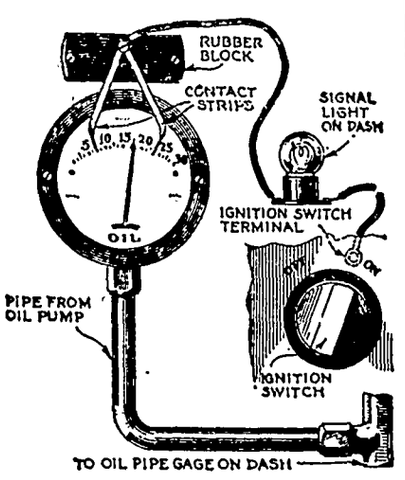
The 22,000,000 cars in operation in the United States travel approximately 220,000,000,000 miles annually based on an estimate of 10,000 miles per car per year. These cars use 65,000,000 spark plugs a year. This means that one plug is used for every 3,384 miles a car travels.

Warning Signal Light Attached to Oil Gauge

While the oil gauge on the dash indicates plugged oil pipes by registering excessive pressure, or oil-pump failure by a low pressure reading, you may not happen to look at the gauge. The illustration shows how to install an electric indicator lamp that will immediately call your attention to any oil failure in case you do not notice the warning of the oil gauge.

Procure an extra oil gauge and mount it on the back of the dash. Remove the glass. Mount a fiber or rubber block just above the gauge and on it fit a couple of light brass fingers arranged to make contact with the gauge pointer. The proper settings will, of course, depend on the characteristics of your particular car.

Wire a dash indicator lamp as shown. When the ignition is turned on the bulb will light until the starting of the motor runs the oil pressure



A Warning Signal Light, Wired as Shown in This Diagram, May Save Damage to Your Motor.

up to the regular running point. If anything goes wrong with the oiling system, the gauge pointer will touch one of the fingers and the light will flash a warning.—Popular Science Monthly.

Auto Stopped Instantly With Original Device

A device which the inventor holds will save human life by stopping an automobile almost instantly has been perfected and a patent for it has been sought by Pasquale Strano.

The mechanism, the inventor says, can be applied to any car. It stops the vehicle, he declares, by dropping under the rear wheels a chock, or shoe, the sole of which is fitted with a cork pad to prevent skidding. The shoes, which weigh about eight pounds, are fastened on a pair of rocker arms integral with the chassis. They are wedge shaped, and the points pass under the wheels. The wheels cannot pass over the chocks, Strano asserts, because the top surfaces of the shoes are fitted with rollers on which the wheels revolve if power is applied before the chocks are pulled up.

AUTOMOBILE ITEMS

On the highways and in politics, detours are the order of the day.

* * *

If the accidents caused by road hogs injured only road hogs, it wouldn't be so bad.

* * *

Another good way to acquire a vocabulary is to try making the old tires last through the winter.

* * *

Now that gear shifting is to be made easy, perhaps the automotive engineers will devise a silencer for brakes.

* * *

German railway car manufacturers who turned to making automobiles to save their profits have found the venture a failure.

* * *

A partially clogged fuel line will permit the car to run up to certain speeds, then a popping noise starts in the carburetor.

GEARLESS CAR ON DISPLAY IN ENGLAND

A godsend to the motorist—the "gedriess" car—being displayed at the Olympia motor show at Olympia, England. Its speed is adjusted by a small "control" on the steering wheel, being operated by Miss Kitty Brunnell.

POULTRY

LIGHTS KEEP HENS LAYING IN WINTER

Winter means nothing nowadays to the hens that produce New York's 6,000,000 eggs daily.

It used to be that the season of short, dark days was vacation time for the pullet. If she laid an egg every three or four days, she had done her duty. But now modern efficiency methods have taken her in hand. Winter days are made as long as summer ones by electric lighting of the chicken houses, and the thousands of suburban poultrymen of New York, New Jersey and Connecticut are ringing up profits at the season when prices are highest.

Just how the artificial lighting fools the hen into believing that winter never comes is explained in the Farm Journal by Leslie M. Black, poultry expert of the New Jersey Agricultural college, who reports on a six-month test made with 100 flocks of pullets.

Oddly enough, Mr. Black found that one method of lighting worked better than others and produced 10.7 more eggs per bird over the period of the test than when no lights were used.

"Three systems of lighting are most generally used," he explains. "The first is the 'evening lunch' system, when the houses are lighted for an hour at night, usually between 8 and 9, or 9 and 10. The second, or morning lights, plan consists of turning on the lights before dawn. The third plan is to use the lights both morning and evening so that the length of the day is made to equal absolutely the length of night.

"This last system seems to have given the best results. Under it the pullets averaged 83.6 eggs per bird for the period. It produced 10.7 more eggs per pullet than when no lights were used, 6.5 more than under the 'evening lunch' plan, and 1.3 more than the morning lights system."

Size of Male Is One-Half of the Turkey Flock

Like begets like, and there is an old saying that the male is one-half the flock, and he is easier to produce over standard in size than the female. But don't expect the male to overcome all the faults of undersized hens or poor matings. Again, do not mistake coarse bone for size. Avoid the long-legged crane-like specimen with no breasts. This is caused by breeding for size only and not properly mating. During the last few years, as conditions have improved, the price of turkeys has advanced with an increased demand. There seems to be a tendency to want extra large toms, and some breeders have put too much stress on size only, when improperly mated, resulting in off-shaped birds which place them in the No. 2 class on the market.

Of course, size is a very important item and some of our best breeders have been able to attain weights up to 45 pounds in a yearling. Again many injure their birds for breeders by excessive fattening to attain weight to meet that demand for size.

Cater to Fancies

Notwithstanding that some of the whims and fancies of the market may seem ridiculous, it is the wise poultryman who caters to them. In making sales, appearance is a factor. A plump, neatly-dressed carcass, free from pin feathers, will attract the eye of the buyer. While quality of flesh is not necessarily guaranteed by yellow legs and yellow skin, the American market calls for it and should have it. He who quarrels with the demand of the market, or tries to reform it is working in his own light.

Good Green Feed

Alfalfa hay, preferably of the last cutting, provides winter green feed for poultry on the farm of P. D. Eames, Pottawatamie county, Iowa. Mr. Eames makes winter egg production a specialty.

"I have raised stock beets for my hens," said Mr. Eames, "but I saw no noticeable improvement in egg production. The hens seemed to produce just as well on green alfalfa as when the beets were used."

Poultry Breeds

There are a great many different breeds of chickens suited to various poultry raising conditions. In general the breeds are divided into four classes—American, Asiatic, English and Mediterranean. All birds of the American class, which includes the Plymouth Rock, Rhode Island Red, Rhode Island White, Wyandotte and Jersey Black Giant, have qualities which make them good producers of eggs and meat. However, the strain and breeder is most important.

Egg-Eating Habit

The egg-eating habit is started by birds getting a taste of eggs that have been broken. It usually starts when hens are not getting enough minerals and are laying soft-shelled eggs. Offenders usually can be picked out because they have egg yolk on their beak. These should be sold, eaten, or isolated from the flock. Oyster shell should be kept before the birds to supply lime. Darkened nests with plenty of straw will decrease the chances of eggs being broken

Makes Life Sweeter

Children's stomachs sour, and need an anti-acid. Keep their systems sweet with Phillips Milk of Magnesia!

When tongue or breath tells of acid condition—correct it with a spoonful of Phillips. Most men and women have been comforted by this universal sweetener—more mothers should invoke its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose. No household should be without it.

Phillips is the genuine, prescriptional product physicians endorse for general use; the name is important. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

PHILLIPS Milk of Magnesia

Hanford's Balsam of Myrrh
Since 1846 Has Healed Wounds and Sores on Man and Beast
Money back for first bottle if not suited. All dealers.

Nothing in Belief

There is nothing whatever to support the idea that as the direction of the wind is on March 20-22 so it will be prevailingly during the next six months, except perhaps in trade-wind regions, where the direction of the wind is pretty much the same all the time. And in such places one day is as good as another as a guide, since all are much alike.

Cold Need Cause No Inconvenience

Singers can't always keep from catching cold, but they can get the best of any cold in a few hours—and so can you. Get Pape's Cold Compound that comes in pleasant-tasting tablets, one of which will break up a cold so quickly you'll be astonished.—Adv.

Biddy's Joke

"My husband is in the dumps most of the time."

"Is it wan of thim pessimists he is?"

"Nah, he's a garbage and junk collector."—Montreal Star.

The Muttonheads

BAD LEGS

Have You Varicose or Swollen Veins and Bunches Near Ankle or Knee?

To stop the misery, pain or soreness, help reduce the dangerous swollen veins and strengthen the legs, use Moone's Emerald Oil. This clean, powerful, penetrating yet safe antiseptic healing oil is obtainable at all first-class drug stores.

In hundreds of cases Moone's Emerald Oil has given blessed relief. Splendid for Ulcers, Old Sores, Broken Veins and Troublesome Cases of Eczema.

MOONE'S EMERALD OIL

MANY SCHOOL CHILDREN ARE SICKLY

Mothers, for your own comfort and the welfare of your children, you should never be without a box of Mother Gray's Sweet Powders for children for use throughout the season. They Break up Colds, Regulate the Bowels, Relieve Feverishness, Constipation, Teething Disorders, Headache and Stomach Troubles.

TRADE MARK DON'T ACCEPT ANY SUBSTITUTE

Used by Mothers for over 30 years. At pleasant to take—children like them. All Drug stores. Don't accept any substitute. Trial package Free. Address MOTHER GRAY CO., Le Roy, N. Y.

"A car for every purse and purpose"

No matter what you plan to pay for your next car, you can have General Motors' quality and value. General Motors makes a car for every purse and purpose; it offers a choice of suitable models in every price class; and each General Motors car—whether its price is a few hundreds or thousands of dollars—has shared in General Motors' purchasing economies, has benefited from its Research Laboratories and Proving Ground, and is equipped with a strong and luxurious Fisher body.

See what General Motors offers for the price you want to pay, and remember that the model you want can be purchased conveniently on the low cost GMAC Payment Plan.

—$525 to $725—

Seven models of the Outstanding Chevrolet of Chevrolet History. A "six" in the price range of the "four". Powerful new 6-cylinder valve-in-head engine. Beautiful new Fisher Bodies. New colors. New 4-wheel brakes. *Also:* Delivery sedan; Light delivery chassis. 1½-ton chassis and 1½-ton chassis with cab, both with four speeds forward.

—$745 to $875—

Seven models of today's PONTIAC—Further improved from radiator to tail-light. More powerful 6-cylinder engine. Greater operating economy. Quicker acceleration. The striking Bodies by Fisher express the vogue of the hour.

—$925 to $1,085—

Seven models of the New OLDSMOBILE—"The Fine Car at Low Price." Completely redesigned and improved by General Motors. More powerful. 4-wheel brakes. Longer, roomier Fisher Bodies. *Also* five De Luxe models, $1,145 to $1,235.

—$1,145 to $1,375—

Seven models of the new Oakland All American Six, recently announced. Distinctively new original appearance. Splendid new performance. Luxurious appointments, in new bodies by Fisher. A car you'll be proud to own.

—$1,195 to $2,145—

Eighteen models of the BUICK—The Silver Anniversary Buick, recently presented. 3 wheel-bases. Lightning flash getaway. Masterpiece bodies by Fisher. Comfort and luxury in every mile. Power for the steepest hill and the longest run.

—$2,295 to $2,875—

Thirteen models of the LASALLE—Companion car to Cadillac. Smart Continental lines. 90-degree V-type 8 cylinder engine. Beautiful bodies by Fisher. Striking color combinations.

—$3,295 to $7,000—

Twenty-six models of the CADILLAC—The standard of the world. Famous 90-degree V-type 8 cylinder engine. Luxurious bodies by Fisher and Fleetwood. An extensive range of color and upholstery combinations.

(ALL PRICES FOB FACTORIES)

ALSO

FRIGIDAIRE—The Automatic Refrigerator. General Motors has applied the processes which have made the automobile available to every family, to the production of electric refrigerators. Frigidaire is the world's largest selling refrigerator.

DELCO-LIGHT Electric Plants and Water Systems. Provide the conveniences and labor-saving devices of the city for the farm. Electric light and power plants, water pumps, etc. Used in more than a quarter million homes.

Daphne Accepted Good Advice

By DOROTHY DOUGLAS

(Copyright.)

DAPHNE'S hand paused for just a moment before closing her studio door. Certainly her soul paused, hesitated before taking that final step which would close forever the door of her loved studio and her girlhood freedom.

But love, in the form of Dick Trevor, was waiting her, and love, when one is but eighteen, seems a very wonderful kingdom for any girl to be entering.

And as she went slowly down the stairs from her floor to the next she heard the door of the studio below her own open. The little old lady who lived there came out, and it was obvious she wanted Daphne to halt for conversation.

She smiled very sweetly into the young girl's eyes and asked wistfully, "My dear, could you spare just five minutes to have a little chat with me—before you leave?"

"Why—yes," hesitated Daphne. "But—how did you know I was leaving?"

"I was listening at the door last night, my dear, and I heard all your plans for running off with this poor young artist. And because I think you are making a very grave mistake I am thrusting my advice on you because—my dear, I made the same mistake fifty years ago."

Daphne caught a swift breath and gazed eagerly into the kindly face of the little old lady. "But you have been so wonderfully successful, Madame Vane," she gasped. "Surely love must have helped."

"Love did," replied Madame softly "when it came. The real love didn't come until I had been through the fires of suffering and disillusion. Love, dear child—the right kind of love—doesn't ask so great a sacrifice as your young artist lover is asking of you. Real love would not permit it. Your voice is not only beautiful—it is grand."

Daphne flushed hotly and the tears leaped into her big eyes. "Oh, Madame Vane—those words coming from you make me feel quite weak—I feel all wobbly. It is too wonderful—too altogether unexpected."

"My dear, I have known it these many months when I have heard you practicing and it is this great voice that you are throwing away for a young man who is letting you do it. He knows you are neither strong enough nor is he wealthy enough to see you safely through marriage with all its hardships and worries and at the same time allow you to study and do your voice the justice due it. Your father will cut off your splendid allowance—I heard you tell your sweetheart that you had promised your father not to marry for at least three years. Your parents are wise, too, child—they know that love in a poor artist's studio and the hard work necessary to place the foundation under your musical career are not possible."

"I had tried to think it all out," said Daphne, "and somehow Dick always talked me into the glory of love and the ambition it instills into one and I began to feel I was being weak in not giving in to love."

"You can still give into love three years later," said the little old lady, "and if you wait until you have stepped into fame and have all the love of a musical world—then and only then will you know what a glorious thing real love can be. You are far too young to realize that the right kind of a man for you is the one who will put you and your interests before his own. This young artist is quite willing you should give up all your own ambitions and simply become a servant in his studio."

Daphne was weeping softly now and her head had found a most happy resting place among the laces and lavender of the little old lady's breast. "I'm so glad you stopped me and have taken me into your life," she said; "my own people are way out West and I've had no one here to ask advice from."

Madame Vane smoothed back the golden hair from Daphne's wide forehead and in her far-seeing eyes was the vision of the great concert hall packed with music lovers and Daphne whose head was cradled on her breast, was stepping out on the platform—full of courage and ready to burst forth into glorious song.

And ten years later Daphne again sat beside her on the same Chesterfield on which they had chatted that night when Daphne would have run off to marry Dick Trevor and her golden head again rested against Madame's shoulder.

There was a soft smile playing about Daphne's lips and her eyes were gloriously alight. Her breath came a bit fitfully, for one who was quite used to facing an audience of hundreds quite calmly.

"He's a wee bit late—isn't he, dearie," said Madame.

"Five minutes," said Daphne, "and—and you do—love him, too—don't you, dear—I couldn't bear to think you didn't love him and want me to marry him."

"He is the one man in all the world I would have chosen for my songbird," said the little old lady; "you are each worthy of the great love that has claimed you and together there are no heights you cannot reach. I talk from experience, my dearie, and I am only too happy to have passed on my knowledge to you. There—run along, child—I hear his footsteps on the stairs."

LIBERTY TOWNSHIP NEWS

Mr. and Mrs. Art Schoenweter were Garner callers Thursday.

The W. F. M. S. will meet at the church Wednesday.

Mr. and Mrs. John Lemke were Mason City visitors Friday.

Louie Knoke hauled two loads of hogs to Mason City Thursday for Alvin Stokesbary.

Mr. and Mrs. Roy Schaefer and children were Mason City shoppers Friday.

Mrs. Emil Beier visited with her parents Mr. aud Mrs. Albert Reimer Monday at Garner.

Mr. and Mrs. Ralph Ludeke and children were Sunday calers at the Lester Stille home.

Mr. and Mrs. Ed. Buentenbach and children were entertained at the Martin Jensen home Sunday.

Luther Tanner helped with corn picking at the Henry Schlei farm last week.

The Rev. H. E. Whyte was making pastorial calls in this neighborhood Tuesday.

Mr. and Mrs. Clyde Marshall and children were pleasantly entertained as dinner guests at the Henry Lewis home Sunday.

Mr. and Mrs. Herman Gast and children were entertained at the Will Bredlow home in Garner Sunday.

Mrs. Straatman is visiting at the R. R. Lemke home, having come out Sunday to spend the winter with herd aughter.

Mr. and Mrs. Wm. Lemke and children visited with Mrs. Lemke's mother, Mrs. Whitney in Britt Sunday.

Mr. and Mrs. Jake Ter Hart and daughter of near Lake Cornelia visited with her parents, Mr. and Mrs. Albert Carolus, Sunday.

Miss Dorothy Marshall is working at the Albert Hippen home, helping care for the new son who arrived there a few days ago.

Mrs. John Velau was operated on at the hospital at Cherokee one day last wek. The family drove down one day to see her.

Mr. and Mrs. John Lemke and Mr. and Mrs. Will Lemke visited at the R. R. Lemke home Sunday v-ening.

Miss Bernice Tanner is the new teacher at Dist. 2, Twin Lake twp, known as the Tanner school. She began teaching Monday.

Mr. and Mrs. Emil Blumer and daughters and Ben Reimer drove to Jewell and Webster City Saturday on business.

Mr. and Mrs. Elmer Schaefer and children and Miss Mabel Schaefer drove to Mason City Thursday evening to visit Harold Ridder and to try out the new Ford sedan that they received Thursday.

CLINIC

9:00 A. M. TO 9:00 P. M.
DECEMBER 6th, 7th, 8th

VARICOSE VEINS AND ULCERS

Enlarged Veins And Sores Of The Legs.

Varicose Veins and Ulcers successfully treated by the new non-surgical method and without confining you to house or bed.

No surgery or elastic bandage or elastic stockings are needed. The veins, no mater how large, all disappear and get well in a short time and the ulcers heal permanently and without return.

This Clinic will be conducted by Dr. W. H. Gilmore of Minneapolis, who has used this treatment very successfully for several years. This is the second clinic which Dr. Gillmore has held in GARNER.

Make An Extra Room

Out of the Open Porch For Winter

For a small amount you can make your open porch into an Extra Room for the Winter—a place where you may lay up articles that you do not want to get wet and covered with snow. If you have the porch enclosed leave the screen on and get some of our "KRAFT PAPER" and put it right over the screens—the saving in coal alone will easily pay for the Paper. This paper is inexpensive. Take out a roll, use what you want andb ring back the rest. It will last for several years. It's water-proof and very tough.

A WORD TO THE PROSPECTIVE BUILDER FOR 1929—

While we are still in 1928 we feel that the year of 1929 will be beter in all ways and do not hesitate in saying to thos who figure on building early next spring, to get busy during the very early part of the new year and if possible, make their buys. IT WILL PAY YOU. We all know about our hard surfaced roads in the spring! Why wait until you are thinking of getting into the fields, get the material outt; we can make arrangements if you want to do this whereby you will not have to pay for the material until you owuld and are actually using. Tell us what you want and we will see that plans and bills of material are made out and if bought from us this service will cost you nothing.

And, ANOTHER POINT, we are in a position at all times to help you get men to do this work for you.

Klemme people will be interested to learn of the promotion of a former Klemme girl. We speak of Miss Hulda Johnson, daughter of Mr. and Mrs. Joe Johnson, who for several years has been employed in a large store in Los Angeles. She is now the buying manager for two of Los Angeles' largest stores for ladies ready to wear, such as dresses, coat, hats, etc. Miss Johnson makes trip to New York three times a year to buy ladies ready o wear for the stores she represents. Her position is a responsible one. Her many friends here congratulate her on her good fortune. On her trips to New York, Miss Johnson will arrange to spend a day or two in this city.

Mr. and Mrs. Thompson, of Waterloo spent the day Tuesday visiting with their nephew, Max Barz, at the home of Lena Schroeder.

Thanksgiving Day will find many re-unions here and there and some will go to other towns to enjoy the day or the week end. Supt. M. F. Penrod plans to drive to his farm near Sabeka, Minn., if the weather permits; Miss McGinnis plans to be at Swaledale overt he week end; Miss Trumbell will be a ther home in Belmond; Carl Heiden will go to his home at Dennison; the Misses Mildred and Lenora Wheatman will remain in Klemme, and Miss Root wil spend the week end with her parents at Dows. Mr. Donald Lewis does not state where he will eat turkey, but we just surmise that he will have Thanksgiving dinner on a farm near Dows..

Send in your news items or call us on the phone. We want the news and are glad to have your co-operation Times Office.

Phone 1-2 Klemme when you go away, have company or get a new car—that's news!

AVERY TOWNSHIP NEWS

John Bachman was a caller at the Fred Bachman home Sunday.

Clarence Bachman was a caller at the Will Bachman home Sunday.

Harmen Trampel was visiting at the Beek home Sunday afternoon.

Clarence Trampel has been absent from school for a few days due to a bad cold.

Johnnie Trampel asisted, with shredding corn, at Will Johnson's for a few days the past week.

Tom Nelson Jr. was a business caller at the Verner Nelson home Saturday.

Mr. and Mrs. Jake Bachman of Goodell were visiting at the Will Bachman home Sunday.

Mrs. Will Bachman and daughter were Mason Cit yvisitors Saturday morning.

Harlow Helps assisted with some work at the Verner Nelson farm on Monday.

Dolores Cok and Lavone Sherwood were visiting at the Clarence Bachman home Sunday.

Roy Waddingham and Dwight Helps are assisting with corn picking at the Chris Anderson farm.

Clarice Johnson was absent from hers chool duties from Wednesday until Friday, assisting with work at home.

Miss Wava Bachman of Mason City was visiting with her sister, Mrs. Robt. Roths and husband Saturday afternoon and Sunday. Mrs. Fred Bachman and son, Wayne were also visiting there Sunday.

The King's Heralds and Standard Bearers will hold their meeting on Sunday afternoon. They suggest all bring theird inners.

WITH THE JESTERS

The Kind Most Men Fear

Blinks—Are you afraid of storms?
Jinks—Only when they are domestic.

Not to Be Expected

"Has she any natural charms?"
"Yes, but naturally they're not all natural."

Always Coming In

"Who was Bildad, pa?"
"And dad is a bill dad, my son."—Detroit News.

That's Not So Good

She—Isn't nature grand?
He—Yes, except when it's human.—Cincinnati Enquirer.

Keeping It Moving

The Waiter—What's this, sir?
The Guest—Your tip. It's a trouser button I found in my stew.

Another Profiteer

Customer—"How do you sell these furs; by measure?" Merchant—"No, we sell them by the hair now."

Hurying Them Up

Sub—"How did your tulip bulbs come up?" Burb—"With the assistance of the neighbor's airedale."

Call for Explanation

Bassler—"I see that Ouderkirk has a new siren for his car." Myers—"What happened to the blonde?"

Height of Realism

"Daughter, there's a spot on your stocking."
"But I haven't any on, mother."

It All Depends

Husband—How long will it take you to dress?
Wife—How much time have you?

Entire Attention Required

"Why are you taking that mirror off your car?"
"My wife is going to drive now."

The Wrong Word

He—"As a matter of fact, you are the only girl I ever kissed." She—"You mean, as a matter of fiction."

New Dam-Building Idea

Apropos of some recent failures of dam construction for storage and power purposes, something new in this line is being tried out in France. The new dam to be built at Marege, in the Haute-Dordogne, is to have five thin curved shells of reinforced concrete placed one behind the other and each shell lower than the one directly back of it. In this way the desired head of water will be obtained in five stages. The idea is that when the reservoir is filled, the water in the intervening spaces will help to support the walls. Incidentally, this construction is said to result in an economy of about 25 per cent in building material alone.

On the Trail of Glennon

By JANET BROWN

(Copyright.)

"WHAT do you think of Mr. Brown?" Dorothy True asked with an effort to appear casual in her interest. Dorothy was the younger of the two pretty True girls.

"Oh, I think he is tallish and broad shouldered, with a taste for gray tweed and green neckties and—" answered Alicia.

"Piffle," ejaculated Dorothy, and then, "What's the use!"

With that the younger sister took a folded paper that she had been sitting on from its hiding place, and threw it in the fire.

Mr. Brown was the young man whom they had recently met at a dance in town, and who had been coming out from the city to the True home with considerable frequency ever since.

In the paper that was now blazing up the chimney was an account of a culprit whose real name was Glennon, but who went by a half dozen or so aliases. The paper had described Glennon as a professional heart-breaker. He was now wanted by the police for having made way with $500 that he had "borrowed" from a young woman in the city.

"The young man is fairly tall, well built and of singularly fascinating appearance and manner—or at least this is the opinion of the young women who will appear against him." That is what the puper said.

The night after Dorothy's discovery she lay awake for many hours making plans that were deep and full of concern for Alicia. The important thing was not only to protect Alicia from falling deeply in love with the culprit—if this were possible—but to get sufficient evidence against him to make it possible to aid in securing his arrest.

This could be done, Dorothy decided, by getting him to transfer his attentions from Alicia to herself. If Alicia felt that it was Dorothy instead of herself for whom he cared she was not the sort of sister who would interfere. So Dorothy decided to make it appear that Glennon, alias for the time John Brown, was really her admirer.

Mr. Brown called the next evening. It appeared that Alicia or Mrs. True had asked him to dinner. Unfortunately for her plans, thought Dorothy, she had not been told of Mr. Bown's expected presence or she would have changed into her most becoming home-evening frock. As it was, she came in from the country club after he had arrived and had to appear at dinner still in her boyish sports clothes. She determined, however, to let her charm and sprightliness of manner make up for the lack of winsome dinner clothes.

Dorothy realized that she was in a measure succeeding even before dinner was over. When the evening in the True drawing room was half spent Dorothy was a little surprised when the fascinating Mr. Brown made his way to her side and said, sotto voce, "Suppose you come out for a little run in the country. I brought my car tonight—there's a fine moon. Do you think your mother would have any objection?"

It was easily arranged with Mrs. True, and Dorothy went to her room for her cape. "Alicia," Dorothy heard the alleged Mr. Brown say as she was going upstairs, "I want to ask a favor of you. I'm sorry, but could you let me have a five-spot till tomorrow? I left my wallet in the office and I may run out of gasoline. Don't let Dorothy know I'm such a piker."

Assuredly the plot was thickening. Dorothy seized her cape in her room and paused just long enough to take an old revolver from its hiding place in her dressing table drawer. To be sure it was unloaded, and it was of ancient make. She had found it in the attic. Two blocks away from the True house the alleged Mr. Brown took a hand from the wheel, groped for one of Dorothy's and found it.

"Dorothy, dear," the villain said, "I have felt sure until tonight that you hadn't given me a thought. But tonight you have seemed just a little kinder. Dorothy, dear—" The car stopped under the shade of an old elm, and Dorothy felt two strong arms about her. She turned her face away, but she felt a kiss.

Then a car showed its searchlights ahead. "I think we'd better go to the garage, if you don't object," he said. "I'm almost out of gas."

"To the garage!" Dorothy mocked, feeling for her funny old revolver and then flourishing it. "To the police station, you mean."

Mr. Brown seemed not in the least afraid. For he backed his car to the shade of the elm tree again, waited till the car was behind them and then crushing Dorothy and her poor old revolver in his arms, demanded an explanation. He had never even heard of Glennon.

Then they went to the garage and then back to the True house. Twenty minutes before, when they had just left the house Mr. True had commented to Mrs. True: "Seems as if our little Dorothy is rather shining up to Brown."

"Yes, I know Dorothy is interested in him," smiled Alicia. "Poor child, she thinks he is quite fascinating. Love surely is blind."

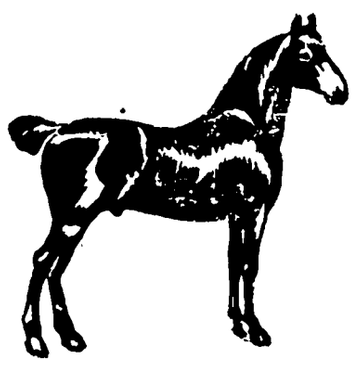
So no one was very much surprised when Dorothy and John Brown returned, asking the family's blessing on their plighted troth.

PUBLIC SALE

As I am going to quit farming and move away I will hold a Closing Out Sale on the farm known as the Old Braund Place, located 3 miles north and 3 miles east of Klemme; 3 miles south and 3 miles east of Garner; and 5 miles south and 3 miles west of Ventura, on—

THURSDAY, DECEMBER 6th

SALE WILL BEGIN PROMPTLY AT 12:30 P. M. FREE, HOT LUNCH WILL BE SERVED AT 11:30 A. M.



8 Head Of Horses 8

1 SORREL TEAM, GELDINGS, 8 and 9 Years Old, Weight 3,000 lbs.
1 BAY MARE, 5 Years Old, Weight 1,400 lbs.
1 BLACK MARE, 9 Years Old, Weight 1,400 lbs.
1 BLACK GELDING, 4 Years Old, Weight 1,400 lbs.
1 GRAY GELDING, 9 Years Old, Weight 1,600 lbs.
1 BAY GELDING, 12 Years Old, Weight 1,300 lbs.
1 COLT, 1 Year Old.

18 Head Of Cattle 18

9 HEAD OF MILK COWS—6 are milking, and 3 will be fresh soon
2 HEIFERS, 1 Year Old.
1 STEER, 1 Year Old
6 FALL CALVES

12 HEAD OF HOGS 12

12 POLAND CHINA BROOD SOWS
(Cholera Immune)

Full Line Of Farm Machinery

1 McCormick Binder, 8 ft. cut
1 John Deere Mower, 6-ft.
1 Hay Rake
1 2-Row John Deere Corn Plow
2 Single Row Corn Plows
1 Hayes Corn Planter, complete with 100 rods of Wire
1 I. H. C. Corn Planter, with Drill
1 Endgate Seeder and Cart
1 Rock Island Disc, 8-ft.
1 Spader
1 4-section Harrow
1 John Deere Gang Plow, 13-inch
1 Sulky Plow, 16-inch

1 John Deere Elevator, 40-ft.
1 Litchfield Manure Spreader
1 High-wheel wagon with triple box
1 Wide-tire Wagon with hay rack
2 Iron Wheel Wagons with boxes
1 Bob Sled
1 Sweep Feed Grinder
3 Sets of Work Harnesses
Some Horse Collars
1 Gas Engine Pump Jack
Tank Heater
Buggy Runners
Hog Waterer
Hog Troughs Self Feeder

00 Rods of Woven Wire
1 Woven Wire Fence Stretcher
40 Steel Posts
Hay Slings Hay Block
2 Seed Corn Racks
4 Steel Oil Barrels
1 De Laval Cream Separator
Cream Cans
2 5-Barrel Steel Tanks
Washing Machine
Blacksmith Forge

The Story of Thanksgiving Day

Thanksgiving day is the oldest of American national festivities. Independence day, though coeval with and commemorative of our national natal day, boasts only a respectable antiquity of a century and a half, but another century and a half must be added to carry us backward to the historical origin of the day that we have nationally dedicated to prayer and thanksgiving—to the days of bluff Governor Bradford and to the first struggling colony of heroic pilgrims. It was in this cradle of our commonwealth that the observance of a day of thanks was first nurtured on our soil, though its inspiration was brought from lands across the seas and probably threaded human history back to the plains of Palestine when the psalmists of Israel praised the Lord in song for the bounties of earth.

First Thanksgiving.

Benjamin Franklin tells us that, in a time of great despondency among the first settlers of New England, it was proposed in one of their public meetings to proclaim a fast. An aged farmer arose and spoke of their provoking Heaven with their compliments and of the many mercies they had already received and of the many causes they had for thanksgiving. He then made a motion that instead of appointing a day of fasting, they should appoint a day of thanksgiving. To this the assembly agreed.

The first Thanksgiving day was kept amid circumstances most unpropitious and with gaunt famine hovering over the rude and cheerless dwellings of that little colony. The summer of 1621, following the landing at Plymouth, yielded but a scanty harvest and unless speedy supplies came from Europe the sturdy Colonists foresaw that they would be reduced to the point of starvation. Yet, amid such surroundings as these, we learn from the old chronicles that Governor Bradford, "the harvest being gotten in, sent four men out on fowling, so that we might, after a more special manner, rejoice together after we had gathered the fruits of our labors." And thus,

While sickness lurked and death assailed
And foes beset on every hand,

the first governor of New England instituted the American Harvest Home and celebrated the first New England Thanksgiving day.

Many "Thankful" Days.

The old Colonial records also tell of the appointment of Thanksgiving days, for various causes, in the Massachusetts Bay colony, in the years 1633, 1634, 1637, 1638 and 1639. In Plymouth colony similar publicly declared observances took place in 1651, 1668, and in 1680, when the tenor of the proclamation seems to indicate that it had then become a settled yearly custom.

The Massachusetts Bay colony was the first to appoint an annual Thanksgiving day by the proclamation of the English governor. During the Revolution, Thanksgiving day became a national American institution, being annually recommended by congress, but after the general thanksgiving for peace, in 1784, there was no national appointment until 1789, when Washington, by request of congress, recommended a day of thanksgiving for the adoption of the Constitution. Washington issued a second proclamation of thanksgiving in 1795, on account of the suppression of insurrection. President Madison, by request of congress, recommended a thanksgiving for peace in 1815, at the conclusion of the War of 1812. But the official recommendation of a day for the giving of thanks was mainly confined to New England, until 1817, after which date it was regularly appointed also by the governor of New York. The Dutch governors of the New Netherlands had proclaimed thanksgiving days in 1644, 1645, 1655 and 1664 and in 1755 and 1760 a day was similarly designated by the English governor of New York.

Annual Proclamations.

During the Civil war, in 1863 and 1864, President Lincoln issued proclamations recommending annual thanksgivings and since then a proclamation has been issued annually by the President of the United States as well as by the governors of the several states and the mayors of American cities.

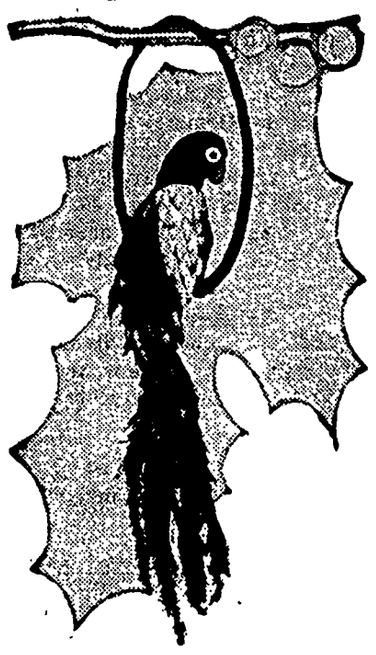
Custom has fixed the time for Thanksgiving day as the last Thursday in November, but up to 1864 there was no uniformity as to the date of the observance and Presidents and governors followed no fixed rules in setting a day apart, each state deciding its own Thanksgiving day. Thanksgiving day was long in settling down to its present fixity of day and season. It is on record that one prudent municipality of the old time once postponed the celebration of the day for a week, "in order to get molasses with which to sweeten the pumpkin pies."—Kansas City Times.

Canadian Thanksgiving

Thanksgiving is proclaimed annually in Canada by the governor general. The day is Monday of the week of November 11.

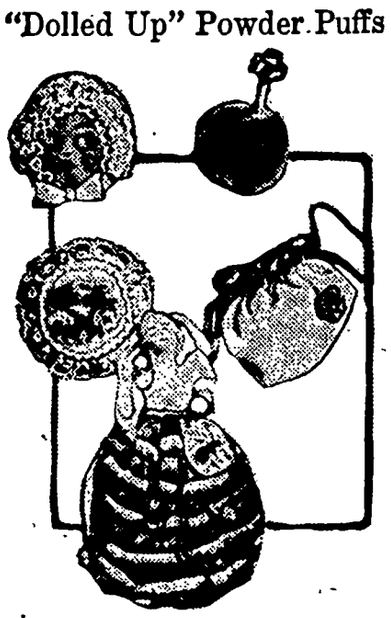
GIFT SUGGESTIONS FOR CHRISTMAS SHOPPERS

A Crepe Paper "Polly"



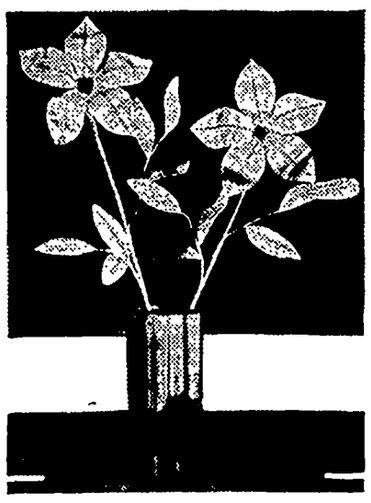
No, this one never says naughty words and does not "want a cracker" because it is only a papier mache parrot with plumage of bright green, yellow and red crepe paper. It looks, however, lifelike enough to talk. A "Polly" like this makes a most unique Christmas gift and a very acceptable one for it is really an ornament in the home, bringing as it does a vivid note of color into the scheme of things. The papier mache forms are very inexpensive as of course is the crepe paper and wire required for making.

"Dolled Up" Powder Puffs



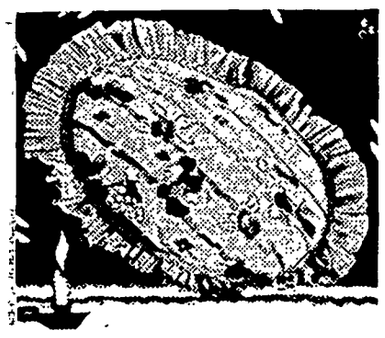
Even a simple little powder puff can carry a heap of goodwill and affection with it, if it comes with "A Merry Christmas" card attached to it. Some of the newest puffs are "all dolled up" ready for holiday season. Note the clever ones in the picture.

Vogue for Metal Flowers



Interior decorators "say it with flowers" nowadays in every available niche of the home. The latest for decoration is metal flowers. Handsome ones of real metal are shown at the best gift shops and their more substantial beauty competes with the fragile loveliness of the popular crystal flowers. The ones photographed here, however, while to all appearance of genuine metal, are really made of heavy silver paper through a most ingenious method. First thin wire is bent to form the petals and leaves. Then the heavy silver or gold paper which comes for the purpose is pasted thereon. Each petal is lined with a tinted paper. These metal paper flowers make charming gifts for Christmas.

Crepe Paper Cushion



This cushion looks as if it is made of cretonne or some other flowery fable, but looks are deceiving for this is a pillow made of fancy crepe tissue paper. They are really quite durable and they add a fine color note to any sun parlor. For an inexpensive Christmas gift, which can be made at home, they are among the prettiest.

Neal's Mother Has Right Idea

Within a few months there will be no more feverish, bilious, headachy, constipated, pale and puny children. That prophecy would surely come true if every mother could see for herself how quickly, easily, and harmlessly the bowels of babies and children are cleansed, regulated, given tone and strength by a product which has proved its merit and reliability to do what is claimed for it to millions of mothers in over fifty years of steadily increasing use.

As mothers find out from using it how children respond to the gentle influence of California Fig Syrup by growing stronger, sturdier and more active daily they simply have to tell other mothers about it. That's one of the reasons for its overwhelming sales of over four million bottles a year.

A Western mother, Mrs. Neal M. Todd, 1701 West 27th St., Oklahoma City, Okla., says: "When my son, Neal, was three years old he began having constipation. I decided to give him California Fig Syrup and in a few days he was all right and looked fine again. This pleased me so much that I have used Fig Syrup ever since for all his colds or little upset spells. It always stops his trouble quick, strengthens him, makes him eat."

Always ask for California Fig Syrup by the full name and see that the carton bears the word "California." Then you'll get the genuine.

"Magician's" Good Work

When a magician in a Corning (Calif.) playhouse told a woman that her stolen articles would be returned to her in 24 hours, his prediction came true the next day. All-Din answered Mrs. Marie Hibbard's question, "Who stole my beaded handbag?" with the assertion that the guilty person was in the audience and he would divulge the name if the goods were not returned. They were found hanging on Mrs. Hibbard's garage door the next day.

Why Suffer Pain

from a cut or burn? Cole's Carbolisalve stops pain instantly and heals quickly without a scar. Keep it handy. All druggists, 30c and 60c, or J. W. Cole Co., Rockford, Ill.—Advertisement.

The Effect

"Did her singing have any after effect?" "Rather, I felt like going after a shotgun."

Some people are down on smoking, even up.

Something Unusual in Line of Merit Award

Eliel Lofgren, Sweden's minister of foreign affairs, has a reputation for absent-mindedness, and a new incident to illustrate his failing was brought out in the recent electoral campaign. When holding the post of minister of justice in a previous cabinet, he was commissioned to bestow a decoration upon a contractor of a small city in southern Sweden. At a formal dinner Lorgren made a speech and at the end presented the guest of honor with a small leather case. The recipient opened it but hurriedly closed the lid and put the box in his pocket, thereby earning the esteem of his fellow-guests as an extremely modest man. The next morning, when the cabinet member started his shave, he was surprised to find instead of a razor in his shaving kit, a bright and shining star of gold and enamel which he thought he had presented to the contractor the night before.

Mrs. Margaret Washington Tells

How to Get Rid of a Severe Cold

"Last August I took a very severe cold and it seemed that I couldn't break it up. I got so bad that I was confined to my bed for five weeks, doctoring all the time without getting any relief. I had no appetite, naturally lost flesh. In fact, I had given up all hopes of ever getting any better.

"A friend recommended Milks Emulsion and I commenced its use. When able to leave my bed I weighed 111 pounds. Now, after taking Milks Emulsion five weeks, I weigh 125 pounds, feel better than I have felt in two years, can eat anything, have no effects of the cold and work every day. I thank God and Milks Emulsion for restoring my health." MRS. MARGARET WASHINGTON, 1699 E. 14th St., Winston-Salem, N. C.

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Amazing Feats

These are surprising days. Young girls and twelve-year-old boys are doing amazing feats of mountain climbing. But more surprising than this is something a guide at Grindelwald told a correspondent to the London Daily Chronicle a short time ago. "Tomorrow," he said, "I take an English lady to the top of the Eiger. She is seventy-two, and a few years ago she climbed the Schreckhorn."

A desire for talking is not necessarily based on having anything to say.

When a man has no faith in humanity, humanity has no faith in him.

A woman's idea of strategy is to spend a dime in an effort to save a nickel.

Listen to a gossip if you like, but better not say much.

Thanksgiving

Our harvest being gotten in, our governor sent four men on fowling, that so we might after a special manner, rejoice together after we had gathered the fruit of our labors. They four in one day killed as many fowl as, with a little help beside, served the company almost a week, at which time, amongst other recreations, we exercised our arms, many of the Indians coming amongst us, and among the rest their greatest king, Massasoit, with some ninety men, whom for three days we entertained and feasted, and they went out and killed five deer, which they brought to the plantation, and bestowed on our governor, and on the captain and the others.

"And although it is not always so plentiful as it was at this time with us, yet by the goodness of God we are so far from want that we wish you partakers of our plenty."

Edward Winslow

Birds Outclassed

Factory-made wings have eclipsed the feathered species. Lindbergh's nonstop flight was 3,010 miles. The distance flown by Chamberlain and Levine is estimated from 3,900 to 4,400 miles. The longest nonstop flights of birds have been those of Alaskan plovers from the Aleutian islands to Hawaii, a distance of 2,400 miles and the annual migration of golden plovers from Newfoundland and Nova Scotia to the Leeward islands at the northeastern coast of South America, a distance of 1,700 to 2,200 miles.

Need for Friendship

And let no one make the mistake of believing that friendship is appreciated only by those who are broken in body and in fortune. Many are envied for their wealth or position who at the same time hunger for human sympathy. One may be as lonely in a Rolls-Royce as in a Ford.—Judge Charles Forrest Moore.

EWS REVIEW OF CURRENT EVENTS

preme Court Scores Klan; Hoover's Plan for Big Construction Reserve.

By EDWARD W. PICKARD

PHOLDING a New York state law aimed especially at the Ku Klux lan, the Supreme court of the United ates last week declared in effect at the organization named is undeirable and a foe of public welfare. he opinion was written by Justice an Deventer, and Justice McReynolds ssented on the ground that the Sureme court lacked jurisdiction in the se. It is believed the court's deision will end the klan's existence New York.

The anti-klan bill was enacted by e New York state legislature in 1923. provides that an organization which equires an oath as a prerequisite or condition of membership, "other than labor union or a benevolent order, entioned in the benevolent orders w," shall file with the secretary of tate a sworn copy of its constitution, by-laws, rules, regulations, and oath of membership, together with a roster of its members for the current year. Any person who becomes a member of such an organization or attends a meeting thereof, with knowledge that it has failed to comply with the law, shall be guilty of a misdemeanor, the statute says.

In the case which was carried to the Supreme court it was contended that the law discriminated between different associations, relieving such secret organizations as the Masons, the Odd Fellows, and others from compliance while being directed especially against the Ku Klux Klan.

Justice Van Deventer, in the court's decision, held that the discrimination between associations was justified by a difference between the two classes of associations shown by experience. The difference consisted, he said, "in a manifest tendency on the part of one class to make the secrecy surrounding its purposes and membership a cloak for acts and conduct inimical to personal rights and public welfare, and in the absence of such a tendency on the part of the other class."

HERBERT HOOVER'S itinerary on his Latin-American tour has been speeded up as arranged by Ambassador Fletcher, who accompanies the party as representative of the State department. The President-Elect now expects to be back in the United States the first week in January. Brief stops at Ampala, Honduras and La Union, Salvador, were made on Sunday, with a call at Corinto, Nicaragua, on the list for next day; but the visits to Panama, Colombia and Bolivia were abandoned because of the devious route necessary to get there.

Wireless dispatches from the Maryland said Mr. Hoover was enjoying the trip immensely. When the battleship arrived off Cape San Lucas at the entrance to the Gulf of California she came to anchor for several hours and the President-Elect went fishing in the hope of landing a swordfish, tarpon or barracuda. All he caught was a fifteen-found dolphin and a Spanish mackerel.

It was stated at the Navy department in Washington that Mr. Hoover's tour will cost the government little more than the regular maintenance and operating expenses of about $400,000 for the battleships Maryland and Utah. Mr. Hoover is President Coolidge's guest on the trip, and the other members of the party are paying about $1.50 a day for food and laundry, as do other persons using government transport.

GREAT BRITAIN expressed disapproval of American methods of investigating the Vestris tragedy, but the inquiry at New York seemed to bring out much of the truth concerning the circumstances surrounding the sinking of the vessel. Most significant, perhaps, was the testimony of Chief Officer Frank Johnson. This, summarized, was that on the day the ship foundered the officers wouldn't go to their stations and that not a lifeboat set out properly manned or properly filled; that there was no general call to lifeboats; that the iron chains on a number of lifeboats broke, and the patent releasing gear failed to work; that at 4 a. m. the day the Vestris sank Captain Carey was unable to give "any helpful suggestions." Johnson said if he had been in the captain's place he would have waited just as long to send out an S O S, and that the storm was never severe enough to endanger a sound vessel.

After seven days of investigation, the federal officers said they had not yet found out how a thousand tons or more of water had got into the ship. The complete saturation of the coal bunkers, they thought, explained the sinking of the vessel.

HOOVER foresees the time when there will be an ebb in the tide of prosperity, and he has devised a program to meet that situation which was presented to the conference of state governors in New Orleans. In brief, he suggests the creation of a three-billion-dollar state and federal construction reserve that shall do for labor and industry what the federal reserve has done for finance. The plan, as outlined by Governor Brewster of Maine at the request of Mr. Hoover, provides for the co-operation of federal and state governments in controlling construction work for the public good "so that a reserve may be prudently accumulated in time of plenty against the lean year that is to come."

Governor Brewster told the governors that no infringement of legislative prerogatives was contemplated, because no project could be carried out except as the legislatures might direct, although the rapidity of the construction program, within defined limits, could be accelerated or retarded to synchronize with national and local needs.

The Hoover proposal was placed before the American Federation of Labor, also in session in New Orleans, by John Fry, secretary of the metal trades department, who declared that it was "a complete indorsement of our basis for wages, adopted in Atlantic City in 1925. President William Green also said the plan is an unqualified indorsement of labor's program.

ROBERT W. STEWART, chairman of the Standard Oil company of Indiana, was acquitted of perjury before the senate Teapot Dome investigating committee by the District of Columbia jury that heard the case. The verdict was virtually directed by Justice Bailey, who told the jurors Stewart could not be held guilty of perjury if it was found that a quorum of the senate committee was not present when the oil man appeared to testify. The government did not contend in the trial that more than five senators were present at any one time during Stewart's entire testimony and it was admitted that a quorum was established by counting senators, who, never physically present, allowed their names, in accordance with the senate custom, to be used for the purpose.

LUFTHANSA, the great German airplane concern, has made arrangements with the Russian soviet government under which Germany and Russia will join in developing the northern Asiatic air routes, over which the new combination will have a practical monopoly. The soviet government will pay half the operating costs but will leave to Germany the handling of negotiations in quarters where the Russians are not liked. All the services will carry passengers, mail and light freight.

PRESIDENT COOLIDGE told congress last year that the Boulder dam project, on the basis of a cost of $125,000,000, would not be in conflict with his financial program. But the Sibert commission of engineers and geologists has reported to the President that the cost estimates are too low by perhaps $40,000,000, and there is speculation whether this will cause a change in the position of the administration. The commission holds that construction of a dam 550 feet high is feasible from an engineering standpoint, but proposes modifications in the plans with a view to obtaining greater safety. The report does not deal at all with many questions of policy that figure in the controversy over the pending legislation.

GOVERNMENT agents, assisted by police and Scotland Yard, have uncovered a big jewelry smuggling conspiracy involving millions of dollars. The first results of their work were the arrests of Morris Landau, New York jeweler, and his daughter; William Ballyn of England, chief steward on the Cunard liner Berengaria, and Patrolman J. T. McIntyre of the New York traffic squad, whose post for many years has been the Cunard pier. The authorities allege that Ballyn received packages of jewelry from a confederate in Southampton, England, and handed them to McIntyre on the steamer when it reached New York, he in turn passing them on to Landau. The jeweler's daughter is said to have acted as a messenger.

HEAVY rains caused serious and widespread floods in Kansas, Missouri, Kentucky, Oklahoma and Illinois, the overflowing rivers doing vast damage to property. Many towns were inundated, and the losses of farmers were severe. In the five states about a score of persons were drowned.

GREAT BRITAIN, France and Germany agreed on a conference of experts, to be held probably in December in Paris, to plan revision of the Dawes reparations plan and evacuation of the Rhineland. But Foreign Minister Stresemann, appearing before the reichstag after his long illness, made a speech that the French press said would scare away the dove of peace, for he had harsh words concerning the continued occupation of German soil by the allies, and he does not consent to the connection of reparations with war debts. Stresemann also attacked Seymour Gilbert Parker, asserting that he misrepresented conditions in central Europe.

DISPATCHES from Vienna said Ivan Michailoff, Macedonian revolutionary leader, was threatening to march on Sofia, capital of Bulgaria, on short notice, and that the population of that city was panic stricken. The public buildings were occupied by troops and the streets were deserted in the evening. The Bulgarian cabinet was summoned, but its problem was serious for it was believed a majority of the troops and officials were siding with Michailoff.

AMONG those whom death claimed during the week was George H. Jones, chairman of the board of the Standard Oil company of New Jersey. He had been with the corporation for thirty-five years and was known as "the man who never played."

Dr. George T. Harding, father of the late President Harding, died in California of a paralytic stroke at the age of eighty-four years. Another notable person who passed away was Representative William A. Oldfield of Arkansas, Democratic whip in the house. He was completing his twentieth year of service in congress and was considered one of the most important and active members of the Democratic delegation in the house.

DR. W. W. CUMBERLAND, the American expert who has made a survey of the financial and economic conditions of Nicaragua at the request of President Diaz, has submitted a new plan for the rehabilitation of that republic, the salient feature of which is a recommendation for more extensive American participation in the administration of Nicaraguan finances. He urges, as vital for the stabilization of Nicaragua, the maintenance of a strong national constabulary under American officers. The principal financial features of the plan provide for:

Control of the collection and expenditure of Nicaraguan public funds by an American collector general and an American auditor general.

Control of the Nicaraguan budget by a high commission controlled by Americans.

Sale to an American fiancial group of the majority interest in the National Bank of Nicaragua.

Refunding of the Nicaraguan national debt.

Negotiation of a new loan of $12,000,000 by Nicaraguan officials.

Not only delicious

but there's lots of energy in KARO

FROM the calories in food we get energy to work hard.

Karo is not only a delicious food—but it has great energy value.

There are 120 calories per ounce in Karo.

Karo immediately supplies muscular energy.

No digestive effort is required as in the case of many other staple foods.

Karo has almost twice the *energy value* of eggs, lean beef, weight for weight—and it costs less money, too.

Serve lots of delicious Karo to the entire family—especially for the children.

Keep them all strong, healthy and happy.

DELICIOUS ON PANCAKES

Church Divided Into Orthodox and Catholic

Many a word in its origin is a screen concealing an interesting shelf of history. "Orthodox," from Greek words meaning true opinion, is an example. The first occasion of its use seems to have been by Clement of Alexandria in the Second century.

It was used to describe the whole church in very ancient times, but after the great division, when the church became divided between Greek and Roman, the former church seems to have appreciated the word "orthodox" as describing itself and the latter the word "catholic." The division of the church into Roman Catholic and Greek Orthodox was one of the results of the division of the Roman empire, which, for a time, had two capitals, Constantinople and Rome. But "orthodox" was early and generally used as a kind of official description of the eastern church. The division came around A. D. 313.—Detroit News.

Large, Generous Sample of Old Time Remedy Sent Free to Every Reader of This Article

More than forty years ago, in a small way, good old Pastor Koenig began the manufacture of Pastor Koenig's Nervine, a remedy recommended for the relief of nervousness, epilepsy, sleeplessness and kindred ailments. The remedy was made after the formula of old German doctors. The sales were small at first, but soon increased, and another factory was added to meet the increasing demand. Today there are Koenig factories in the old world, and Pastor Koenig's Nervine is not only sold throughout the United States, but in every land and clime.

The manufacturers want every reader of this free offer to try the old remedy at their expense. They will send a large, generous sample to every one who mentions this article.

Try it and be convinced. It will only cost you a postal to write for the large, generous sample.

Address: Koenig Medicine Co., 1045 North Wells street, Chicago, Illinois. Kindly mention your local paper.

Confusion in Languages

There are 149 vernaculars spoken in India. As the natives cannot understand any but their own, the English language is the common means of communication.

No, Indeed!

All light-headed people are not necessarily blonds.—Atchison Globe.

You can't fix a man up to appear very much better looking than he actually is.

Helping Father

Father—No, sir, I won't have my daughter tied for life to a stupid fool.

Suitor—Then don't you think you'd better let me take her off your hands?—Pathfinder Magazine.

Children have "temperament" and get spanked for it.

Curiosity is seldom idle.

Stormy Beginning

She—And that scar, major. Did you get it during an engagement?

He (absently)—No; the first week of our honeymoon!

The rolling wheel gathers the punctures.

Some talk so much that it can't all be truth.

10 minutes ago-

How many people you know end their colds with Bayer Aspirin? And how often you've heard of its prompt relief of sore throat or tonsilitis. No wonder millions take it for colds, neuralgia, rheumatism; and the aches and pains that go with them. The wonder is that anyone still worries through a winter without these tablets! They relieve quickly, yet have no effect whatever on the heart. Friends have told you Bayer Aspirin is marvelous; doctors have declared it harmless. Every druggist has it, with proven directions. Why not put it to the test?

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

DON'T FORGET. Ladies Aid Bazaar and Supper next Tuesday, Dec. 4, 1928. Everybody come!

Dr. R. W. Specht, Dentist, Garner, Iowa. adv

DON'T FORGET. Ladies Aid Bazaar and Supper next Tuesday, Dec. 4, 1928. Everybody come!

Mr. and Mrs. Fred Musfelt, of Clarion were calling on Klemme friends and relatives Saturday. They were entertained for dinner at the home of Mrs. Aug. Lau.

If you have not yet handed in your Bazaar articles please take them to Mrs. J. N. Day, as the committee in charge will be marking them one of these days.

The Epworth League of the Klemme Methodist Church will give a party at the Parish House Friday evening, November 30th, beginning at 7:30 o'clock. Young people of Klemme and Liberty are invited.

Dr. Lease, district superintendent of the Methodist church, whose residence is Algona, preached at both the Klemme and Liberty Methodist churches Sunday. His sermon was greatly enjoyed.

Miss Gladys Wilson came home this Wednesday afternoon from the Drake University, Des Moines, to be at the home of her parents, Mr. and Mrs. P. M. Wilson, for Thanksgiving and the week end.

Mrs. C. A. Arnold, Mrs. E. J. Arnold, Mrs. Martha Bredbenner, Mrs. H. E. Whyte and Miss Mildred Johnson made up a party and took in a Missionary Meeting at Renwick last Thursday afternoon. The ladies report an enjoyable time and a fine meeting.

The Klemme men who are taking the Scout Leaders Training Course all drove to Sheffield Monday evening. The next session will be at Clarion and will wind up with an afternoon hike at Belmond Woods, with a supper and a council fire in the evening. This will complete the first six weeks of the course.

W. C. Keraus and family of Traer, spent Sunday visiting with relatives and friends here. They were entertained to dinner at the C. F. Keraus home, as were also C. G. Waterman and family. "Bill" reports that business is good at Traer. He is in the grocery business at that place.

The river bridge south of town was the scene of an automobile collision Sunday evening when a Dodge and a Buick collided, causing a lot of damage to the cars but no one being injured. The parties in the accident were strangers to this neighborhood. The damaged cars were towed to Garner for repairs.

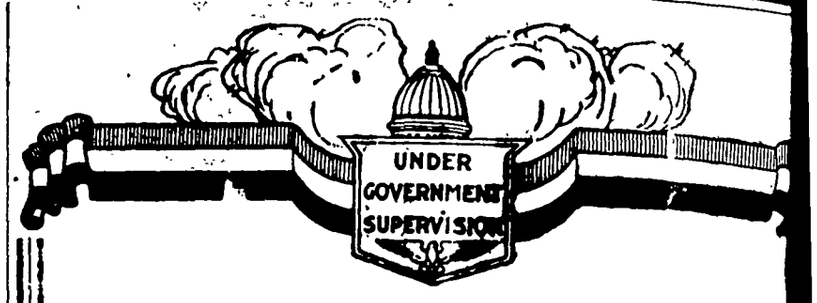
The Ladies Aid Bazaar is next Tuesday, starting at 2:30 p. m. Supper at 5 o'clock until all are served. Supper 40c. Under high school age, 25c. A good chicken supper and all the trimmings for 40c and 25c. Everybody come! Only once a year! Hum-m-m, I'll be there!

The Standard filling station have had a couple of visible gas pumps installed the past week. This is a fine improvement to their station.

Don't forget the M. E. Ladies Aid Bazaar and supper on Tuesday, December 4th. Bazaar selling begins at 2:30 p. m., and the supper will be server beginning at 5:00 p. m. The bazaar and supper will be held at the Parish House.

Quite a number of people enjoyed the card party given by the Royal Neighbors at their hall on last Thursday evening. There were 8 tables of players. Following the games delicious refreshments were served by the ladies. High scores were won by Mrs. Clifford Schwratz and Wm. Kirkwood. Consolation prizes went to Mrs. Fred Kluckhohn and Harry Gram. All report they had a fine time.

Fred Arnold and Wm. Bachman started out for Clay County Monday on business. Mr. Arnold felt ill when he reached Mason City and consulted Dr. Tice, and then they drove on again and completed their business in the eastern part of the state. On the return journey home Mr. Arnold again became ill and on reaching Mason City Dr. Tice advised him to go to the hospital until he recovers. We are advised that Mr. Arnold's condition is not serious, however.



The Real Reason

The size of your salary does not decide whether you are rich or poor. The important factor is whether you are living within or above what you earn. Every man and woman is poor who spends more than he earns. Progress, success, security and independence lie before those who spend less than they earn. Save the difference here—

INGS AT SCHOOL THIS PAST WEEK

GAME WITH CORWITH THIS WEEK END

P. T. A. Meeting Next Week; Will Be Held Later

We thought we had a basket ball e with Corwith this coming Fri- night at Corwith, but after ding the contracts sent them for me time they caled us only this ek and stated other dates must set. This leaves us without a e this wek end. We feel cer- n of the game here next week as field has submitted us a con- t for the same and such a con- ct cannot be violated without alty except for a very good rea-

P. T. Meeting Set For Dec. 18

Owing to the fact we have but e school auditorium and gymnasi- and it is needed these days by so ny different groups or organiza- ons, as orchestra, basket ball am, physical training classes, and ay casts, it has seemed impossible have P. T. A. on next Tuesday ening. With the approval of the ficers we are pushing the date for at meeting one week later to De- mber 18 and asking the grade achers to furnish the program. It ll be well worth attending and we ggest the date be marked by par- ts on their calendar, lest they iss the pleasure. No admision will charged, altho the program will well worth charging for.

Three One Act Plays Coming

We would not have anyone over- ok the program next week, Thurs- y evening, December 13. Three y interesting one-act plays will staged at our school gymnasium that date for which an admission ill be charged. Proceeds will go ward defraying the expenses of e Junior-Senior banquet.

Below we are submitting names the three plays, excerpts from d coments on each as given by embers of the casts.

A Case Of Suspension

If you were a young man and had pposed to six girls and they had accepted you, what would you ? Come and see how one of our homore boys extricate himself. t he's a slippery one. You have him perform on the basket court. He's an expert dodger!

Those wno wisht o reserve seats this program will be able to do at the Wilson Pharmacy, our l drug store, any time after next day morning. Price of reserved ts has been fixed this time at and 30 cents. Admission at door 25 and 35 cents. Remember the e and place, School Gym, Thurs- evening, Decemebr 13th.

Christmas Seal Sale Now On

Our grades 7 and 8 aret his wek ing to raise through the sale of ristmas Seal Stamps Klemme's re of the public contribution ed for by the Iowa Tuberculosis ociation? The money thus coll- ed is used to promote health ough the purchase of school health supplies, nurse supplies, ed- ucating and aiding through school health projects, teaching health habits, heart clinics, health surveys promoting health legislation, nu- trition work in schools, furnishing information thru films and litera- ture. Ouv State Association is a branch of a National Tuberculosis Association which began its pro- gram in 1905. At that time deaths from T. B. were over 202 per 100,000 and the expectancy of human life was 50 years. Today, or last year, life expectancy was 55 years and deaths from T. B. were but 86 per 100,000.

It was through this Iowa Associa- tion that our Public School nurse was secured a few years ago. Most ofo ur city schools employ such nurses regularly and feel they can- not well dispense with their ser- vices. Possibly we should not. Sta- tisticians tell us that over 4,000 children of school age die each year in our nation from T. B., that 140,- 000 children die annaually before the age of one year, that 2,000 die daily of preventable diseases, that 2 percent of our population are sick abed all of the time and that half of this sickness is preventable. Ex- cept during a busy season as corn husking by far the most of our ab- sences from school are caused by illness.

Last year our grades 5 and 6 sold in Klemme some over $20.00 worth of these stamps. It was sent to Mrs. Schneider of near Goodell who returned to us for our own school health needs almost half of the amount. Those who buy the stamps can feel they are supporting a good cause and are at the same time helping promote health in our own community through supplies bot for our school as books on health, physical training records for our victrola, health magazines, etc , etc.

Short Vacation Was Enjoyed

After our Thanksgiving vacation teachers andm ost all ofo ur stu- dents are again at work the better for the rest and change given. We are glad to see back a few students who have been assisting in gather- ing in ears from Iowa's tall corn.

POSTMISTRESS GIBBS HAS NEW TITLE NOW—GRANDMA

Mrs. Ema Gibbs, our congenial postmistress is now grand mother!

A fine baby boy was born to Mr and Mrs. Charles Gibbs at a Mason City hospital last Friday Had the young son postponed his arrival by one day he could have celebrated his birthday with his father, Who has his birthday December 1st each year However, Charles is well pleased with his birthday gift. The young man has not as yet received his official name, but we hope to report next week. Mother and son are doing nicely. "Grandma" Gibbs has more smiles than ever as she waits on the patrons at the Post Office. Congratulations.

MARRIAGE LICENSES ISSUED IN HANCOCK COUNTY

Past Two Weeks Business Better In Johansen's Office

Folowing are the marriage licen- ses which have been issued in this county the past two weeks:

Nov. 20, Henry Van Gerpen, Buff- alo Center, and Alice Burma, same address.

Nov. 21, Christ Hogard, Buffalo Center, and Gerda V. Peterson, of Britt.

Nov. 24, Victor E. Payne, Mason City, and Goldie Quante, Mason City.

Theodor Seifert, Britt, and Anna Mae Baker, Britt, Nov. 27.

GRIEMAN HUNTERS START THE FOX SEASON

Henry, Aaron and Rueben Grei- mann have opened up on Mr. Fox oy shooting a fine specimen the fore part of the week. We under- stand they shot the fox east of this place.

13 CARS OF LIVE STOCK SHIPPED

STOCK SHIPMENTS HIT HIGH THUS FAR THIS SEASON

Early Shipping Indication Of Heavy Run Again This Winter

Live stock shipments are begin- ning to move here with a stride that indicates the enormous shipments wekly of last winter will again be duplicated and perhaps exceeded.

Saturday thirteen cars of live stock were shiped out of the Klem- me Yards, twelve being billed for the U S Yards, Chicago, and one car load being set off at owa Falls.

For the past few years Klemme has gained a state-wide reputation as being one of the largest live stock shiping centers along the R. I. line.

The shipment Saturday was divid- ed as follows:

C. A. Larsen 1 car hogs to Iowa Falls; 1 car cattle and 1 car cattle and hogs, U. S. Yards.

J. G. Lindon, 5 cars catle to U. S Yards, Chicago.

The Klemme Shiping Association shipped 4 cars of hogs and 1 car cattle and hogs to U. S Yards.

ERWIN V. YAHNKE MARRIED ON TURKEY DAY

Minnesota Bride And Groom Visited In Klemme Over Week End

Erwin V. Yahnke, son of Mr. and Mrs. H P. Yahnke of Good Thun- der, Minnesota, and Miss Evelyn Mountain, also of that place were married Thanksgiving morning at 8:00 o'clock at Good Thunder.

Following the ceremony they got in their car and drove to Klemme and had Thanksgiving dinner with Irwin's grandparents, Mr. and Mrs. Lew Lewis. They spent the week end visiting relatives in Klemme.

Mr. Yahnke is employed at the Creamery at Good Thunder. Both of the young people are poular with the younger set at Good Thunder, and are from the best of families.

Friday noon Mr. and Mrs. R. W. Elder gave a dinner in honor of the newlyweds.

The Times joins in extending con- gratulations.

PRISCILLA SCHAFER. 1tc

Mr. Henry Freie and daughter, Viola, George Lawhorn and Eunice Braund all spent Thanksgiving day at the Lou Davis home at Mason City. John Braund and family f Williams were also gustes at the Davis home.

FOUR SCOUTS GET MERIT BADGES

KLEMME BOYS TO BE AWARD- ED AT COURT OF HONOR

Four Boys In Troop 56 Will Get Cycling Merit Badge

Troop 56, Klemme, Scout Leaders and Troop Comitteemen plan to in- yade Belmond Court of Honor 100 percent strong tonight, when four Klemme Scouts will apear there to each receive a merit badge for Cy- cling.

The Mason City Chamber of Com- merce has put pu as a prize a cup to be given the Troop which is 100 percent in attendance at a Court of Honor. Klemme wants that cup if possible.

The next Court of Honor will be held in about six weeks from now and at that time Trop 56 hopes to have several advancements aud sev- eral more merit badges.

WE WONDER WHO HAD A HAND IN THE COLOR SCHEME?

An Irish Contractor Must Have Made Our Auto Plates

How do you like 'em? We mean those new 1929 auto plates.

They are about as ugly a com- bination of pigments as anyone could devise. Take the colors sep- arately and they don't look so bad. Put them side by side and they are terrible. That particular shade of green must be highly pleasing to our Irish friends. But even a Irish man would not be humorous enough to mix such colors.

Anyway we will have to tolerate the combination for a year.

As they say, "It's the latest, and they will all wear them this year."

The new auto plates are very hard to read over a short distance, and with a little dust on them hey will be invisable, as far as numbers are concerned.

WEATHER HITS LOW MARK FOR THIS WINTER

Wednesday morning the ther- mometers in Klemme registered a- round 6 and 7 degrees below zero, hitting the bottom for cold weather so far this winter.

The weather bureau at Mason City reported the lowest tempera- ture as being 1 degree below zero.

A light snow fell here Sunday evening which helped to lower the temperature considerably.

Today the weather is again much milder and prospects look good for fine weather.

SUGAR BEET COMPANY TO EX- HIBIT CAR HERE

The American Beet Sugar Com- pany of Mason City and Belmond, will have an exhibit car on track in Klemme from 8.07 a. m. Jan. 22 to 8:07 a. m. January 23rd. The com- pany extends an invitaton to every- one to come early and stay as long as they wish viewing the interest- ing exhibits in this special car.

R. A. Jorgenson and family drove to Lincoln, Nebraska Thanksgiving Day to spend the week end visiting with Mrs. Jorgenson's father, sister and two boys. The going was bad as it sleeted all day and the Editor and family wound up the day by driving thru the Nebraska blizzard. There were several wrecked cars between Omaha and Lincoln and a large number in the ditch. They returned to Klemme Sunday even- ing, encountering sleet again Sun- day afternoon and a snow storm to- ward evening.

Rev. and Mrs. A W. Gauger and two small sons drove in from Hol- stein Monday evening and called on Klemme friends for a short time. They were on their way to Rudd to see Mr. Gauger's brother who is ill. They report that they like it very well at Holstein.

LEGION MEN MAKE DRIVE FOR NEW MEMBERS

Klemme Legion Post Now Has 37 Members On Roll

The local Legion Post has just completed a successful drive for memberships. The Post was divid- ed into two divisions and final in- structions were that the side which brought in the least number of names would be required to furnish the winners with a banquet. The drive is over and thirty seven names are now on the roster. This was a real boost in membership and the Post feels well paid for the effort put forth.

Now comes the Auxiliary and they are going to put on a drive. Like- wise the losing side will give the winners a banquet.

In putting on the banquet the Legion and Auxiliary have decided to join hands and make it a joint affair, and so at a later date the winners of both the Legion and the Auxiliary will enjoy a banquet at the expense of the losing sides.

Watch their smoke!

BILL HOUDEK HAS SUCCESSFUL DEER HUNT IN MINNESOTA

Returned Home With Four Year Old Buck

Bill Houdek returned to Garner Sunday after a hunting trip in the deer country of northern Minnesota where he succeeded in killing a big four year old buck the second day he was out. When dresed the ani- mal weighed 190 pounds.

Bill did hish unting in Beltrami County, Minnesota, near the town of Agency—up where men are men, and women sleep with their shoes on, as they say.

Bill is pardnership with Elmer Ludeke in the Overland and Willys- Knight car sales at Garner. He is lucky in being able to banquet his friends on venison as very few of the many hunters had any luck this year. Bill saw but two deer while up there, and bagged the first one.

Mr. and Mrs. Lew Newberger en- tertained a lot of company over the week end. Mrs. Newberger's broth- er-in-law, Mr. John Schachterle and children of Ackley came Saturday and spent Sunday; Mr. Wont Loeg- er, of Goldfield spent Sunday at the Newberger home; Mr. Clarence El- drige, of Cherokee came Saturday to help pick corn, and then spent Sunday at the Newberger home; and Mr. and Mrs Charles Fritzell were also Sunday guests at the Newberger home.

Milvern Ell, of Albert Lea, Wava Yahnke and a friend of Good Thun- der, Minn., spent Thanksgiving day at the Lew Lewis home where they enjoyed a fine dinner. They visited at the R. W. Elder home in the af- ternoon.

Mrs. H. A. Smith and son Aubrey of Spencer came Saturday and re- mained until Sunday visiting at the home of the daughter and sister, Mrs. P. W. Johnson, husband and daughters.

NOTICE OF PROBATE OF WILL

STATE OF IOWA,
Hancock County, ss.

To All Whom It May Concern:

YOU ARE HEREBY NOTIFIED, That an instrument of writing pur- porting to be the last Will and Test- ament of Valentine Josten, decease- ed, dated Aug. 30, 1928, having been this day filed, opened and read, Mon., the 10th day of December 1928 is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 10:00 o'clock A. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instru- ment should not be probated andallowde as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, Oct. 18, 1928.

CHRIS J. JOHANSEN,
Clerk of District Court.
(Oct. 25, Nov. 1-8. 1928).

LADIES AID $1,000 GOAL IS REACHED

HAVE $1,000.00 ON INTEREST AT FIRST NATIONAL BANK

Money Will Be Used When Needed For New Church In Klemme

The Ladies Aid of the Methodist Church have reached the goal they set a few years ago to have $1 000 on deposit, this fund to be used a some future time when a new church would be built in Klemme.

The Bazaar, supper, and auction held by the ladies Tuesday at the Parish House brought in $156.57. or more than enough to complete the $1,000 fund. The balance is to be used in paying a few small bills, and needed equipment will be pur- chased. Meanwhile the $1,000 is at work at the First National draw- ing interest. The ladies have all worked hard to reach their goal and are to be congratulated on the fine showing they have made in doing their part to build a new church in Klemme when ever such a project will be launched.

Committee Tells Story

"At the Bazaar Tuesday, includ- ing everything, we took in $156 57. We wish to take this opportunity of thanking each and everyone who as- sisted by donating, waiting on the tables, those who responded so fi- ly, others who were not asked but gave, the orchestra, pianoist, and for the use of extra chiars, and to all the farmers who made a sacri- fice in geting the food to us over bad roads, and all who purchased articles, and each aid member who worked so faithfully several weeks in preparation. We are sorry that some did not receive their cards, but they were mailed to each one. All dishes that were not called for have been washed and taken to the J. N. Day Store, where you may call and claim same. Many Thanks to ALL! Committee in Charge."

THREE DOGS DIE OF POISONING IN KLEMME

If someone is purposely settin out poison for dogs, these low down fiends have accomplished their de- ire, for three dogs in Klemme have died of poison within the past few days. M. O. Barr's dog died of poisoning, as did Harry Gram's, and Wednesday George Lau's dog was another victim.

To poison animals, especially pet dogs, is a cowardly thing to do. It is about as cruel a way to do away with an animal as the devil himself could devise, as the dog suffers un- told agony before death relieves him of his intense suffering.

One owner, especially, is endeav- oring to find out who is doing this dirty work, and if caught—well it will be just too bad, when the law falls on him.

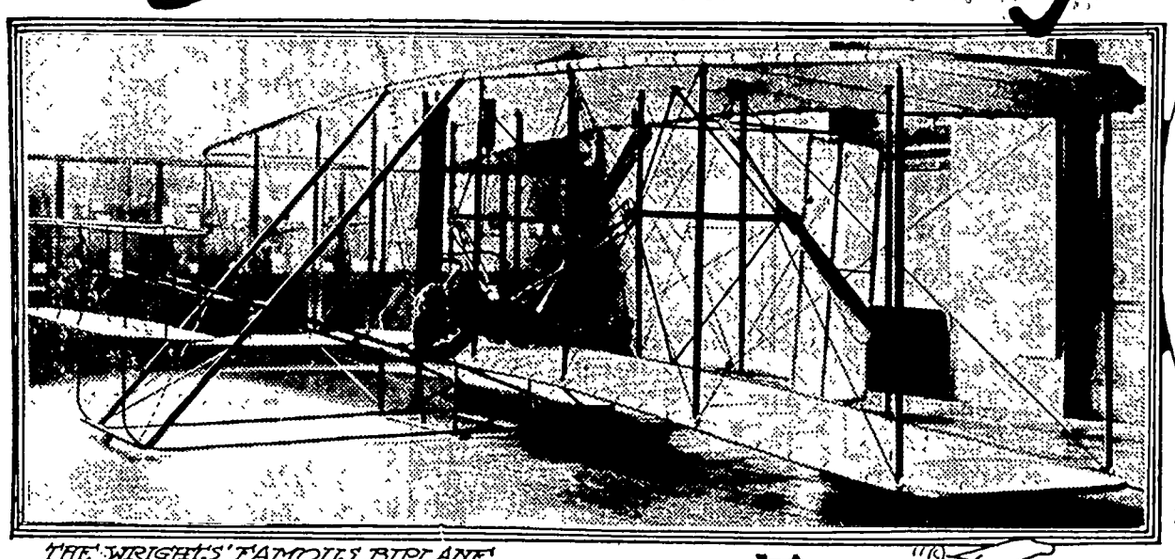
Meanwhile, we would advise that those who value their pet dogs to watch them closely and if possible keep them home until this thing blows over, as no doubt poison has been scatered around and the dog may get it.

Ralph Ludeke and family spent Sunday at the Elmer Ludeke home at Garner where they enjoyed a very rare treat, a venison dinner. Mr. Houdek, Elmer's side-kick, was the provider. He had just returned from a sucessful hunting trip in Minnesota's deer country.

Harold Ridder returned home Wednesday afternoon from the hos- pital at Mason City, where he has been the past five weeks recuper- ating from a serious accident. Har- old is getting along fine now.

Martin Barz is the new clerk be- hind the grocery counter at the Klemme Food Market. We are in- deed gladt o welcome this fine young man into our business circle. Mar- tin began his new work Friday.

Aviation Celebrates Its 25th Birthday



THE WRIGHTS' FAMOUS BIPLANE

WILBUR WRIGHT

A MODERN AIR MAIL PLANE.
(Photo, American Air Transport Association)

By ELMO SCOTT WATSON

THE seventeenth of December of this year marks the twenty-fifth anniversary of one of the most important dates in the history of mankind, for it is the anniversary of the first successful flight in a power-operated airplane. In recognition of the importance of this event the United States government has sponsored an International Civil Aeronautics conference in Washington to which Uncle Sam has invited representatives of 55 nations to come and help him honor one of his sons of whom he is justly proud—Wilbur Wright, the pioneer of American aviation.

This "silver jubilee" celebration which Uncle Sam has arranged for this month recalls the epochal achievement of two young Ohio brothers who realized the dream of mankind for centuries and startled the world with the news that on December 17, 1903, at Kitty Hawk, N. C., they had made a successful flight in a power-driven airplane. What if the flight lasted only twelve seconds and the distance covered was only 120 feet? The fact remained that they accomplished what others had failed to do and there and then they laid the foundations for a development in a new activity by man which, in the comparatively short time of twenty-five years, has become one of the greatest of modern miracles.

To understand the importance of the achievement of Wilbur and Orville Wright, it will be helpful to go far back into history. Early stories of flights belong in the realm of pure legend. There is the fiction of Deadalus, who was said to have flown from Crete where he had been in prison for revealing the secrets of the Labyrinth. It has been pointed out that his was probably the first attempt to adopt sails in Greek waters, and the astonished Cretans mistook for wings the first sails which they beheld. But a flying model in imitation of a dove made of wood and made to fly by regulated mechanics is said to have been constructed prior to 360 B. C. and the satires of Samostathenes published in 120 B. C. ridiculed the various means which had been suggested to enable men and ships to soar through the air, which shows that the idea of flying was fairly common then. During the reign of Emperor Nero the scientists endeavored to build some machine which would conquer the air.

In 1670 Francisco Lana, an Italian Jesuit, published a study on the physical properties of air, far in advance of the general knowledge of his time. He proposed a vessel suspended from four hollow copper globes, from which the air was to be evacuated by filling them with water and then allowing water to run out through a pipe 34 feet long, but concluded "That God shall never allow such a machine to be successful in practice," and added "for who does not see that no city would be secure from surprise, as a ship could descend at any hour from the very most places and from it issue men intent on ruin."

What appears to be the first authentic record of an aerial trip was that of 1783 when a Frenchman named Rosier took a trip in a balloon built by two friends, the Montgolfiers. They filled a large cloth bag with hot air and attached to it a fire pot to keep a continuous supply of air in the balloon and sent it up with animals as the first passengers. When the animals came down alive Rosier enthusiastically offered himself as the first human passenger. He finally did succeed in getting up and is reputed to be the first man who ever took a trip into the air. That was the beginning of what is now known as lighter than air craft.

One of the first recorded attempts to build a heavier than air flying machine which would lift itself without the use of gas was made in 1500 by the artist, Leonardo da Vinci. He made several small models and is reputed to have gotten some of them in the air. In 1842 two Englishmen named Springfellow and Hanson built a model that resembled closely some of our aerial monoplanes; it was driven by a one cylinder steam engine and succeeded in getting into the air. Because of lack of money the Englishmen never got farther than this.

After this little progress was made for a long time until the Wrights and Langley in America, Lilienthal in Germany and one or two Frenchmen started their experiments with gliders and it was from these glider experiments that the practical airplane evolved. These experiments developed principles which made it possible to control an airplane in flight, that is to keep it stable. During this period a power-driven machine was developed by Dr. Samuel P. Langley in 1891. He made several models for which power was furnished by rubber bands. He finally succeeded in constructing a power plant big enough to drive a full size plane, but the machine crashed into the Potomac river during its test in September, 1903. Langley was ridiculed for the crash of his flying machine which has since been proved to have been capable of flight. People scorned him and he died a failure, only to be granted his recognition in another decade.

On December 17, 1903, a queer-looking contraption called a flying machine and made by two "unknowns," Orville and Wilbur Wright, was pushed onto a runway at Kitty Hawk, N. C.

The Wright brothers had been experimenting with aeronautics for years, and the flights of their glider in 1902 convinced them of the efficiency of their system of maintaining equilibrium. Before they left their camp at Kitty Hawk in 1902 they were at work on the general design of a new machine which they proposed to operate with engine-driven propellers. Unable to get the type of engine they wanted they built their own. Finally the engine and the airplane were assembled. Endless difficulties ensued.

When it came time for the first trial the brothers tossed a coin to see who would fly the plane. Wilbur won. The first flight ended when the airplane climbed a few feet, stalled and then settled to the ground, slightly damaged. The plane was repaired for the second attempt which proved to be the first successful flight of a man in a heavier-than-air machine.

Wilbur, having used his chance in the unsuccessful attempt on the fourteenth, the right to the next trial belonged to Orville. The engine was heated up and the wire that held the machine to the track was released. The machine started forward into the wind. Wilbur ran at the side, holding the wing to balance it on the track. The craft faced a 27-mile wind. The machine lifted from the ground after a 40-foot run, and the course of the first flight was erratic, due to irregularity of the air and partly to lack of experience in handling this machine.

The control of the front elevator was difficult on account of its being balanced too near the center. This gave it a tendency to turn itself when started, so that it turned too far on one side, and then too far on the other. As a result the machine would rise suddenly to about ten feet, and then as suddenly dart for the ground. A sudden dart when a little over a hundred feet from the end of the track, or a little over 120 feet from the point at which it rose into the air, ended the flight. As the velocity of wind was over 35 feet per second and the speed of the machine over the ground against this wind 10 feet per second, the speed of the machine relative to the air was over 45 feet per second, and the length of the flight was equivalent to a flight of 540 feet made in calm air. This flight lasted only twelve seconds but it was, nevertheless, the first in the history of the world in which a machine, carrying a man, had raised itself by its own power into the air in full flight, had sailed forward without reduction of speed, and had finally landed at a point as high as that from which it started.

That was twenty-five years ago. Aviation developed slowly despite the pioneers who saw its possibilities. Unless a world war had developed it is probable that aviation today would be in the doldrums. Previous to 1914 when the Europeans at war were striving to develop the airplane as a weapon of destruction the aviation enthusiasts were few. The war forced the airplane to the front, after it had hibernated for eleven years, following the historic flight of the Wright plane. The aircraft of 1913 was but little different from that of 1903. In 1910 the American navy had only one airplane under the charge of a lieutenant who was the army's air force, pilot, ground squad and mechanic.

But the World war showed the possibilities of the airplane and when peace came the airplane began to be developed as an instrument of peace and commerce. The effect of the World conflict on the development of civil aviation in the United States was profound. Many new aircraft factories had been built, hundreds of aeronautical engineers and designers were given an opportunity to demonstrate their skill, 10,000 pilots were taught to fly; nearly 17,000 planes were manufactured, scores of thousands of artisans became skilled in aircraft production; all of which created a personnel and material out of which was to develop the post-war aviation which differs so widely from European civil development. With peace, no inconsiderable percentage of those who had been engaged in the manufacture of aircraft or trained as pilots became actively interested in the civil possibilities.

As a result America today is doing a prodigious amount of civil flying. A great transcontinental system of air mail, express, and passenger service, rapidly growing, has been in actual operation for two years; air service operators are flourishing in hundreds of cities; executives are flying their own airplanes in the conduct of daily business; more than a thousand airports are in existence and the manufacturing industry is behind on its orders.

While the public is best familiar with the airplane as a mail, express and passenger carrier, it is used in a wide variety of pursuits such as aerial photography, airplane dusting of crops, forest patrol work, scientific studies, aerial advertising, geographical study, spotting schools of fish, observing traffic congestion, searching for lost persons, surveying, map making, representation of properties, engineering surveys, carrying supplies to inaccessible regions, first aid to devastated cities, and in many other ways.

There are now 17 air mail companies operating 25 lines with important additional routes scheduled for early operation. The mail planes are flying now at the rate of more than 9,000,000 miles a year and in 1929 will fly more than 10,000,000 miles a year. The mail planes are flying 94 per cent of the total mileage scheduled and that record includes night flying in both directions over 8,000 miles of lighted airways. The air mail planes now traverse 37 states with 102 scheduled stops. Planes flying United States mail this year will fly more than half as much as the total mileage flown by mail, express and passenger planes in Europe.

The Post Office department predicts:

That within two years every city of 50,000 will be on an air mail and transport route.

That soon mail planes will carry 5,000 pounds of mail daily.

That 1,000 pounds of air mail will be a rural load.

That within five years all first-class mail between cities will be carried by airplane.

That the planes will carry mail clerks who will sort the mail while the plane is in transit.

Others point out that the air mail lines will soon be extended to South America. Already we have foreign lines to British Columbia, eastern Canada, Mexico City and a contract has been let for a route to the Panama Canal zone, with a possible extension to Dutch Guiana. United States Department of Commerce scouts are now working on air lines to Latin America, knowing that this speedy transportation will give America a real trade advantage over Europe.

In addition to the air mail mileage the air passenger services have expanded rapidly in recent months. The Pacific coast area with its great distances between cities took the lead in providing daily air passenger service. Some of the important, strictly-passenger lines now in operation include those from San Francisco to Los Angeles which makes the trip in three hours, Los Angeles to San Diego in 70 minutes, Los Angeles to Phoenix, Ariz., in three hours, Los Angeles to Salt Lake in six hours, while there is a regular passenger service from Los Angeles to Seattle, a distance negotiated in 14 hours.

In the Middle West regular daily passenger service is provided between the Twin Cities and Chicago, Fargo and the Twin Cities, Chicago, and Cleveland, Chicago and St. Louis, and Chicago-Detroit-Cleveland, and Chicago to Omaha. Tri-motored, 12-passenger planes are now operating from San Francisco to Chicago, a flight of 20 hours. By June, 1929, it will be possible to fly in large, tri-motored planes equipped with pullman berths from New York to the Pacific coast.

Such is the record to which this lusty youth, American Aviation, can point on its twenty fifth birthday. And all of this amazing development grew out of a 12-second, 120-foot flight by Orville and Wilbur Wright at Kitty Hawk, N. C., on December 17, 1903!

Plan Well Now for Home Garden

Plot Devoted to Vegetables Will Greatly Lower Living Costs.

A farm vegetable garden, well planned in advance, will lower farm living expenses to a surprising extent.

In making selections of vegetable seeds for the home garden, R. A. McGinty, associate horticulturist at Colorado Agricultural college, recommends standard varieties rather than highly advertised new introductions or novelties described generally in the front pages of seed catalogues with superlatives.

Varieties of Seed.

There are a few new or noteworthy varieties of vegetables for the home gardener to consider under Colorado conditions, McGinty says. Mary Washington asparagus is a rust-resistant variety that develops large-sized spears. Golden-Acre is a very early, small-headed cabbage of particular merit, while Coreless carrots are an early, high-quality variety. Golden Plume celery, the earliest variety grown, is one that is readily blanched. Mignonette lettuce, a small-headed type, has a desirable feature in its resistance to hot weather. Although this variety has a reddish color outside, it is of good quality. The Laxtonian pea is an early, wrinkle-seeded, dwarf-vined variety that is highly productive of good quality peas. A high-quality squash that may be baked whole is the Des Moines, sometimes called "Table Queen" or "Acorn." This squash is not attacked by the squash bug. The Marglobe tomato, a variety that matures fairly early, has red globe-shaped fruits that are of high quality. A cantaloupe variety of much quality and promise is the Edwards Perfecto. It has an orange-colored flesh and small seed cavity.

Avoid Substitutions.

Farmers and gardeners who send early for seed catalogues, make up a list of the vegetables desired, and order them will likely avoid variety substitutions that are often made on late orders.

Home Grown Dairy Feeds Found Most Economical

It is usually found that a dairy herd can be fed more economically where a large proportion of the feeds can be raised on the farm where they are consumed. In this case the value of the feed is the market price less the cost of marketing. The saving of this expense of marketing is in itself a large item, says the Missouri Farmer. Where all feeds must be purchased and hauled a distance of several miles to the farm in addition to the expense incurred, great inconvenience is often experienced in getting such work done during rush seasons and bad weather.

Missouri is especially adapted to the growing of corn and alfalfa and a large surplus of these crops is usually produced. The prices of these feeds are considerably less than on the central markets of the East, the difference being largely that of transportation. As far as these two crops, which constitute a large part of dairy rations, are concerned, milk production costs less in Missouri than in the eastern states.

Nectarines Favored for Many Roadside Stands

A nectarine is a peach without the fuzz. In Europe they have long been popular, and in many localities of this country they are also popular.

Perhaps one of the most favorable outlets for nectarines will be the roadside stands, for many people object to eating peaches on account of the fuzz; at least they object to eating them until they have been peeled. This objection does not hold true with the nectarine.

If nectarines increase in popularity, as some of their boosters claim they will, no doubt additional varieties of highest quality will be available. The number of varieties available as yet is of course far more limited than in the case of peaches, and that is one of the difficulties against which the nectarine must contend in any popularity contest.

Around the Farm

Sweet clover has no equal as a combined soil-building, weed-fighting pasture, and hay crop.

* * *

The real test of a poultry house is whether it is so built that egg production can be maintained during the coldest weather.

* * *

Use of acid phosphate on fertilizer plots has brought about some outstanding results in Minnesota, according to county agents.

* * *

Only by careful sterilization of all utensils and by strict sanitation throughout, can clean milk be produced where bacteria is present.

* * *

The dairy cow is of threefold value: She produces a constant income, she produces a valuable offspring, and she improves the quality of the farm.

* * *

If stored fruits or vegetables wilt or shrivel, the air is too dry. Moisture should be provided by sprinkling the floor daily or placing pans of water near by.

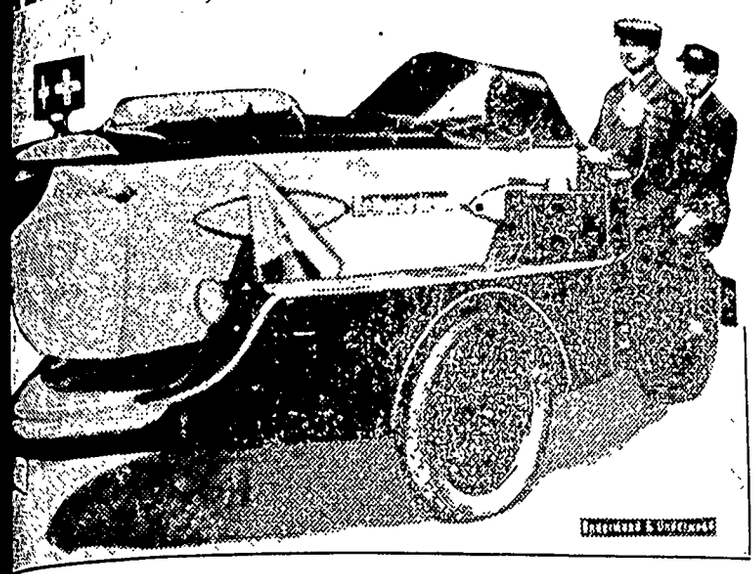
FIRST AMPHIBIAN AMBULANCE IS SEEN



The new ambulance, which travels either on land or water, the first of its kind ever built, which was on exhibition at the Berlin international air show. The ambulance is made in the form of a boat and is mounted on a motor-driven platform which enables it to be used both ways.

MY SPARK PLUGS SHOULD BE CLEAN

Must Be Kept Free of Excess Carbon and Oil to Function Properly.

Spark plugs to function properly must be kept free of excess carbon and oil formations.

Cleaning is easily done. Simply fill the lower part of the plug with alcohol, use any liquid metal polish, and allow to stand for a few seconds; take a piece of wire covered with one thickness of cloth and rub the carbon from the insulator; then wipe clean and dry thoroughly before replacing in the engine.

Use Cloth or Knife.

In cleaning the sparking points use emery cloth or a knife.

In cases where the electrode is badly worn away cleaning with emery cloth is of no avail; likewise when the insulator is coated heavily the best and most economical remedy is a change plugs since the coating cannot be cleaned off readily.

When spark plugs are severely worn loss of power is often evident and

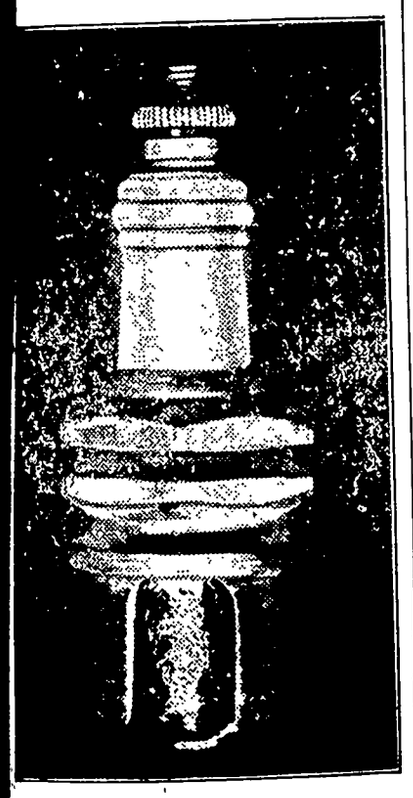


Illustration Shows Interior Carbon Accumulation.

eventually missing of the engine will occur which in turn produces the following major troubles:

1. Oil pumping, causing formation of carbon and sticky valves.
2. Poor starting and excessive drain on the battery.
3. Poor running; loss of power especially on hills.
4. Higher gasoline consumption.
5. Larger engine repair expense.
6. Poor driving satisfaction.

Spark plugs as a rule should be changed every 10,000 miles.

Truck Equipment Is a Matter for Specialist

When you have trouble with your eyes you go to a specialist. He makes a careful examination and then recommends the kind of lens you need in order to get best results.

Why not exercise the same care when you are buying tires for your truck?

"Properly equipping a truck is a matter for a tire specialist. Each truck has its own special problems of cushion, tractor and mileage, which are affected by the load, road, distance of haul, speed and other factors. The tire that is the best for one truck may be very inefficient on another.

Explain Spark Plug in Very Simple Language

There's a simple way to picture the spark plug that makes it altogether more understandable for the average motorist. It is, simply, to look upon the porcelain as a continuation of the insulation and the electrode as a projection of the wire leading from the distributor. It makes no difference what make of plug in question, this principle maintains throughout the field. A cracked porcelain, the cause of much plug failure, is identical with a break in the insulation of the wire leading to the plug.

Motor Receipts Take Big Jump in Pennsylvania

Approximately $1,000,000 more has been paid to the Pennsylvania state treasury by motorists this year than during the same period of 1927 and drivers have paid 631 per cent more in fines than last year.

The total receipts of the highway department up to October 1 amounted to $25,760,620.08, as compared with $24,707,880.75 for nine months of 1927. These collections were on 1,396,969 motor cars this year and 1,340,742 last year, 216,720 commercial motor vehicles in 1928 and 210,376 in 1927. The total registrations this year have been 1,672,900 and in 1927, 1,609,915, while the total licenses are 1,945,710 for 1928 and 1,834,476 in 1927.

There has been a great increase in reckless driving and in ignoring the motor laws. The motor patrol and the state police during September shattered all records for enforcing the road laws. During the first nine months of 1927 collections from motor-law fines aggregated $7,770.35. During the same period this year the total was $56,847.70, a gain of $45,077.35.

Washing Always Makes Automobile Ride Easy

Observing motorists often notice that their cars ride easier after a wash, but seldom come to know the reason why. The period of easy riding is, true enough, temporary, but it is long enough to be noticed.

The truth of the matter is the springs get pretty well watered during a wash, especially if a high pressure system is used so that water is forced between the spring leaves. Under such circumstances water acts as a temporary lubricant.

Just as exposed brakes will slip after a washing until they dry out so the spring leaves slip as though oil had been forced between when they are thoroughly wet.

The motorist who continues to drive with springs uncovered, however, must suffer the penalty of the rust that follows as well as many other troubles that develop where springs are not protected.

AUTOMOBILE NOTES

Motor vehicles in Germany are required to have tail lights of orange color.

* * *

The lion which bit into an inflated auto casing let out as great a roar as the man who owned the car.

* * *

No manufacturer has had the temerity to introduce a radiator cap emblem designed like a ball and chain.

* * *

Whatever became of the old-fashioned ad for the automobile that climbed Pikes peak in 11 minutes flat?

* * *

The poet must have had the automobile in mind when he wrote the couplet, "Nowhere to go but On, nowhere to fall but Off."

* * *

What other people can't understand is why the screech of automobile brakes doesn't annoy the people who are driving the cars.

* * *

As to private roads for motorists, nearly any motorist can name a few who act as if they owned at least 80 per cent of every road they travel.

* * *

American cars were prominent among the 350 shown at the "Rand show" conducted by the agricultural society at Johannesburg, South Africa, this year.

* * *

Doctor Dublin finds that 65 per cent of automobile fatalities occurred to pedestrians, which will surprise those of us who didn't suppose there were that many pedestrians.

* * *

An engineer in England has perfected a "clutchless car," which does not do away, however, with the one around the neck when the earnest young lovers borrow the coupe.

* * *

The Ducal Automobile club of Brunswick, Germany, is erecting a system of signs with skull and crossbones, black on a white ground, for dangerous points on automobile roads.

* * *

Census reports show there are 2,000,000 extra women in England representing a tremendous amount of potential back-seat geid. nce

Orchard Information

RISKY TO PLANT TREES IN FALL

Reasonably Safe if Plants Are Properly Cared For.

Fruit trees are sometimes set in spring or in fall, but it is more risky to plant them in the fall, say fruit men at the State College of Agriculture at Ithaca, N. Y. They also say, however, that whether planting is done in spring or fall, trees should be ordered in the fall, for by ordering them for spring delivery, fruit growers are more likely to get from nurserymen the exact varieties and ages of trees desired.

Fall planting may be practiced and is reasonably safe if the plants are well cared for and are mulched during the winter. Once in a while, however, weather conditions are unfavorable and many trees or berries that are planted in the fall die. For this reason spring planting under New York conditions is to be preferred year in and year out for all fruits.

One point that favors fall planting is that the air gets cool in autumn while the soil stays comparatively warm. This favors callus formation in the roots and helps the tree or plant get firmly seated in the soil.

Two drawbacks sometimes have to be reckoned; one is too much rain and the other is too little. If the soil is too wet, the trees may heave in the soil and break their roots. Heaving is worse on heavy, clay soils.

If there is too little water, the trees may die. These, of course, are chances every grower must take if he practices fall planting.

Start Deciduous Trees With Green Manure Crop

In general practice, it is a good plan to start the deciduous orchard by growing a good green manure crop on the land the year previous to planting. This should then be followed by at least one such crop between the rows of trees every year thereafter, particularly while the orchard is young and the trees occupy less space. If this practice is followed, the fertility of the soil often can be maintained without resorting to the use of other fertilizers. The kind of crop used for this purpose and the season when it is grown depend a great deal upon the location and soil. Preference should be given leguminous crops, since they furnish both nitrogen and organic matter, unless, by the rank growth of the trees, it is seen that the continuous use of legumes is supplying too much nitrogen. This is sometimes possible in growing peaches in certain soils, and a change to rye or oats for a season is necessary. Cowpeas and tepary beans have been found most satisfactory as summer legumes, planted after the weather becomes warm. However, white sweet clover is gaining favor as a cover crop in our valley districts where a shade crop is desired through a part or all of the summer. Planted early in the spring, it makes a very rank growth by the middle of summer, when it should be cut or disked. In addition to furnishing a large quantity of vegetable matter, it is deep-rooted and, consequently, is a good crop for soils in general. It makes heavy soils more open and friable, and gives lighter soils greater water-holding capacity.

Orchardists Find That It Pays to Fertilize

Sulphate of ammonia will increase fruit yields, Wisconsin farmers are finding. According to C. L. Kuehner, fruit crop specialist of the Wisconsin Agricultural college, 29 Milwaukee county orchardists used last spring from 5 to 700 pounds of sulphate of ammonia on their fruit trees, having learned from past experience that in terms of increased yields the application is worth the time and expense of applying it.

The number of trees fertilized in each of these Milwaukee county fruit groves varies from 5 to 400. It is interesting to note, Kuehner says, that those who used the fertilizer in 1927, have increased the amount this season.

Spray ring outfits are also increasing rapidly among Wisconsin fruit growers. A spray ring is a group of orchardists who are co-operatively associated in the ownership of a fruit tree spraying machine, which is taken from one farm to another throughout a neighborhood, to fortify the trees against insect and other parasitic pests which destroy fruit and reduce its quality. There were 17 new spray ring organizations formed in Wisconsin last spring, bringing the total number now in operation up to 144.

Codling Moth Date

Apple growers will insure themselves against probable loss from wormy fruit during the coming season if they will keep in close touch with their state experiment stations to determine the actual date of codling moth emergence. The grower can establish breeding cages in his own orchard and determine the proper time to spray. When the date is actually known, the regular series of high-pressure sprays applied at the customary intervals will insure a crop of worm-free apples.

World War Veteran Regains His Health

"I don't want you to think me impertinent, but tell me why you do not advertise Milks Emulsion in Maine. Milks Emulsion is not one of the best, but the very best in the world for bronchial troubles. I can safely say so, because it saved my live.

"A couple of years ago I came under the Government's care, being a disabled soldier, and I reckon I have taken pretty near all the medicine that there is on the market. Finally, the examining physician of my district told me I wouldn't live six months if I stayed in that climate. So I got scared and started west to find a dry climate, but as far west as I got was Indianapolis and Milks Emulsion.

"I gained 14 pounds on the first four bottles of your Emulsion. I do not give Indiana any credit for this, because it is as damp there as it is in Maine, but I do give Milks Emulsion the credit for saving my life. In addition to building up my flesh and strength, it soon relieved the serious cough that I had, and I improved so fast that it was not long until I was able to return to my home in Portland, Maine.

"Now I am feeling fine. I feed Milks Emulsion to both of my babies and they are as fat as little pigs, but it is hard to get here, as we have to send to New York for it. Yours truly, T. EDGAR DIGHTON, 20 Pine St., Portland, Maine."

Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Like a Vehicle

Mrs. Hoyle—It is a wonder that she never gets weary watching to see what her neighbors are doing.

Mrs. Doyle—Yes, I should think she would be rubber tired.

Will Cold Worry You This Winter?

Some men throw-off a cold within a few hours of contracting it. Anyone can do it with the aid of a simple compound which comes in tablet form, and is no trouble to take or to always have about you. Don't "dope" yourself when you catch cold; use Pape's Cold Compound. Men and women everywhere rely on this amazing little tablet.—Adv.

Had No Proof of It

"Is he a finished piano player?"

"Couldn't say. I didn't stay till the last number."

Stop the Pain.

The hurt of a burn or a cut stops when Cole's Carbolisalve is applied. It heals quickly without scars. 30c and 60c by all druggists, or send 30c to The J. W. Cole Co., Rockford, Ill.—Advertisement.

The beauty doctor is on to all the new wrinkles.

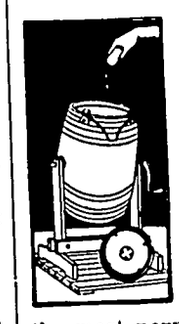
Of Perfect Type, but Is Not Real "Colleen"

Say nothing about it in Ireland, but the secret has leaked out that "the typical Irish colleen" whose face figures on the new Irish Free State bank notes is an American girl.

The colleen, which is merely Irish for girl, maiden, has been such a popular theme in song and poetry (due partly to the ease with which the word can be rhymed) that it was natural for the gallant officials to wish to immortalize her by stamping her features on the new paper currency. Sir John Lavery, a painter, was commissioned to paint the figure. He did so, and the result was a thing of beauty which was hailed with delight. All Ireland was not only satisfied but highly pleased. Later Sir John admitted that in looking for a model he selected his own wife, formerly Hazel Martyn of Chicago, and that it is her features the Irish so admire.—Pathfinder Magazine.

Butter Brings Higher Prices

Biggest Creameries Say Few Cents Worth of "Dandelion Butter Color" Is Best Investment.



Dairymen everywhere are making bigger profits from their butter, nowadays. They're keeping their product that Golden June Color, which brings top prices the year 'round, by using "Dandelion Butter Color." It takes just half a teaspoonful to the gallon of cream. It's the most permenting butter color and therefore the most economical. It colors uniformly and never streaks. It's purely vegetable, wholesome and tasteless, and doesn't color buttermilk. It meets all State and National Food Laws. Large bottles are 35¢ at all drug and grocery stores. Write for FREE SAMPLE to Wells and Richardson Co., Inc., Burlington, Vermont.

Time's Change

In the time of Henry VIII the well-dressed women wore a costume that weighed 35 pounds. In contrast to this costume, we have the modern apparel, weighing three pounds or less, shoes and all.

False modesty is far preferable to none.

The poorest actress may play her part well in the divorce court.

The race is to the swift . . . to sturdy youngsters who thrive on wholesome meals of delicious *Monarch* Cocoa and Teenie Weenie Peanut Butter sandwiches.

Romance and Beauty

By AD SCHUSTER

(Copyright.)

LUELLA CROSS had beauty and she worshiped it. She was certain she had no need to be clever and was content to leave the qualities of thoughtfulness and modesty to her less fortunate sisters. "Let them cultivate manners," thought Luella if she thought at all, "and I will cultivate looks." And it may be said the results recorded in her mirror and the admiring gaze of Parkerville were both startling and effective.

When the celebrated beauty contest was broached, Parkerville to a man nominated Luella who smiled her thanks and made plans for the spending of the award. The contest was to be held in Parkerville and was open to the state. As the day approached there came stories of promising entrants from one place and another. Luella looked upon their photographed features and smiled. It seemed too easy. There was not a one, she told herself and with some justification, who could match her pink and white complexion.

Two weeks before the conest, the tall Maxwell Boom came to town and because he was the most distinguished looking man she ever saw Luella was given something besides the contest to occupy her thoughts. Maxwell Boom was no longer a youth but he carried himself like a soldier and had that iron- gray hair which sometimes can be so romantic. Before twenty-four hours passed every girl in Parkerville had speculated concerning this handsome stranger and wondered at the hidden sorrow which had tinged his hair and given him that look of dignity and reserve which, they agreed, was most becoming.

Maxwell met Luella and, strange enough, did not seem impressed. It was a new experience for the girl and one which stirred her to new efforts. She donned one of the dresses she had planned to wear during the conest week and contrived to meet him again. And Maxwell wont just a small way toward surrendering. He asked her to dinner and the theater.

This older man appealed to the girl who felt every eye in the restaurant upon them and glowed all the prettier in her pride. With a husband like Maxwell, she thought, a girl's looks could be accented to the best advantage. And that was as close as Luella ever came to falling in love with anyone save herself

Maxwell was constant. He had an invitation for every evening and there were rides in the afternoon. Luella, used to attention, had never been singled out from so many by one man in so short a time. This one must be serious. Luella thought of the other girls and how envious they must be. After she had won Maxwell and the beauty contest there would be no one to dispute her sway.

"It's my complexion," she told herself; "all the time he looks at my cheeks." And the complexion she reasoned would win the contest.

The day of the contest brought the girl her first faint misgivings. Something had gone wrong, just a little wrong, with the prized complexion. Perhaps she should not have gone out so many evenings, eaten so many late dinners. She rubbed her cheeks to give them color.

"At that," she decided, "one does not have to be one's very best to win from these others."

The contest was close. After an hour the judges had eliminated all save Luella and a brunette from Middleton. Luella wished she could pinch color into her cheeks for she knew her rival was a worthy one.

"They can't pick her—a brunette—when they have a blonde like me," she tried to convince herself and yet the judges gave no sign. Suddenly there was an agreement. The prize went to the stranger. Parkerville lost and Middleton won, and because Luella lacked the coloring of the other the beautiful girl, tasting her first defeat, sought consolation in the romance. Maxwell Boom would tell her she was better looking than this black-haired girl. She would find Maxwell. Some one spoke to her. It was one of the judges.

"It was very close, Miss Cross, and our task was a hard one. Have you met Miss Boom, the winner?"

"Miss Boom?" For once the girl was thinking hard Maxwell Boom; he was her father! And those lobster suppers, late hours were all in the plot against her pink cheeks There was no prize now and no romance; only a firm conviction in the duplicity of men.

The Old Frank Leslie's

"We don't have such reading matter nowadays as we did when I was a boy," grumbled old Roswell Rasp. "I don't mean the Rollo books, the works of T. S. Arthur, and so on, that were only good for little old maids ot both sexes. I am referring to Frank Leslie's Boys' and Girls' Weekly, of which we now and then get a copy on the sly and read in the same way. There were in it the Jack Harkaway stories, which I believe were the most interesting romances ever penned—if we could have discovered how they came out. But we never could. Something always happened to the paper—our parents destroyed it, or the house caught fire and burned it up, or something of the sort, and we never learned what happened to the hero. But I think yet they were the most interesting stories ever written."—Kansas City Times.

Mr. and Mrs. Chas. Priebe and family came the fore part of last week and spent the week visiting relatives and friends.

Mr. and Mrs. Dick Swalve and family and Mr. and Mrs. Emery Schaefer and son were entertained to a delicious goose dinner at the U. G. Smid home Thanksgiving day.

Mrs. Frank Rosendahl and daughters, Della and Louise, and Mrs. Rosendahl's father were entertained at the Gilbert Schaper home on Thanksgiving Day.

Carrie Swalve, who attends the Klemme high school, has been staying at the Gilbert Schaper home during the cold weather.

Rev. H. E. Whyte attended a convention at Minneapolis during the week end. He returned to Klemme Monday afternoon.

C. A. Larsen and John Larson went to Chicago Saturday night to take in the Live Stock Show. They returned to Klemme Wednesday.

Paul Grange and family spent Thanksgiving day with relatives at Ruthven. Paul's father, Mr. S. S. Grange, returned to Klemme with them for a visit.

Dick Swalve and family had their Thanksgiving dinner at the home of Mr. and Mrs. U. G. Smid. Mr. and Mrs Emery Schaefer were also dinner guests at the Smid home.

The Pretty Girl Upstairs

By LILLIAN MOORE

(Copyright.)

THE State Bank of Remington had just installed a machine which obviated human adding and substracting—one which totaled a column of figures in neat little typewritten letters, much to the astonishment of the elder men of the village, who declared that "it can't be done." The company who made the machine suggested that they send some one up to their school for two or three weeks to learn how to operate the machine efficiently. And, of course, there was no one but Ed Collins to go. Ed Collins was the only one who worked in the bank except the president.

Ed Collins was delighted at the prospect of going. He rushed right down Main street as fast as he could to tell Anna about it. He felt confident that she would be quite as delighted as he. But she wasn't. She was sweeping the front porch, which was already speckless. Her crisp blue apron had a perky bow of white lawn holding it together at the back and her cheeks were pink from the exercise of sweeping. Altogether she was a pretty sight—pink and blue and creamy skin topped by golden hair. She was not beautiful. There were at least half a dozen girls prettier in Remington than she, but Anna and Ed had always "gone together," as the folks in Remington said.

Ed was thinking about all of this as he sat in the living room of his aunt's tiny flat on the next Saturday morning. He had applied himself to the work at the school and had learned all that he needed to know for the bank work and was ready to start home again. When his aunt had suggested staying in the city until Sunday night he had eagerly accepted the invitation, for he wanted to look about a little. He had been dumfounded when he had first seen the vast numbers of pretty girls that lived in the city. He had heard vaguely that city girls were "lookers," as the Remington boys said, but these girls in the neighborhood were absolutely stunning.

There was one upstairs that he had seen several times in his short stay and he had wished that his aunt would introduce them. This girl was a pretty blonde, whose hair was always waved and dressed in the latest way. Her skin was marvelous—a pink and white punctuated by soft red lips. She had never looked at him directly but he had felt that she knew he was there. She was a fairly young girl, probably not more than seventeen That she was yet in high school he knew, for he saw her carrying books in and out in a dainty fashion.

"Ed, there's the postman. Run down and get the mail for me," called his aunt from the back of the flat.

Ed felt annoyed at her use of the third person. It made him seem such a kid. Couldn't women ever realize that a fellow was a man by the time he was working and earning a living? He rose and moved toward the front door. There was another little tinkle of the bell as he opened the front door and looking down he saw a girl's figure wrapped in a dressing gown of blue velvet ahead of him He was about to step back and wait until she had returned to her apartment, but the postman's call, "Registered letter to sign for," made him continue his descent.

He saw now by the golden hair that it was the girl from upstairs who wore the blue gown. She was trailing down slowly. Her mother's voice from above came:

"Belle, was that the post?"

Belle! What a wonderful name! How fitting Ed had had enough French in the Remington high school to recall that Belle translates into the English word pretty. He ambled downstairs a little quicker. The idea flashed into his mind that Belle was a far more attractive name than was Anna.

"There's two cents due on this letter, miss," said the postman, with his eyes on the pile of letters in his hand.

"Well, by gosh!" came the high voice of the girl, who seemed to be angry from her tone, "why didn't you say so before I leaped 'way down here?"

Ed grinned as he thought of the languorous descent which she characterized as "leaping." Small towns might be slow, but—Belle had turned to go back for the required two cents.

Her front hair was done up in some remarkable way in metal wavers. Cold cream had been lavishly smeared on her face and still lay there waiting to be rubbed or washed off. No vestige of color marked her face, neither the lips, which were a mere pale pink in color, nor the cheeks, which were undeniably white.

"Guess I'll go back tonight," he said to his aunt as he handed her the mail.

"Well, just as you like," said his aunt. "Belle, stop in when you're dressed. I want you to meet my nephew." She dropped her voice as the door closed. "She's such a pretty girl," she said to Ed.

Ed looked at her sharply, but there was no smile on her lips. She had seen only the back of Belle. And then Ed grinned.

We're All Guilty

The circus must always remember that it caters to spectators and that some of the spectators apparently leave their brains at home when they go to a circus.—Farm and Fireside.

Announcing—

The Outstanding Chevrolet of Chevrolet History

—a Six in the price range of the four!

The Chevrolet Motor Company announces The Outstanding Chevrolet of Chevrolet History . . . a Six in the price range of the four!

Spectacular as Chevrolet's achievements have been in the past . . . notable as its engineering triumphs have proved themselves to be—this remarkable new car dwarfs every previous Chevrolet accomplishment. Not only does it introduce into the low-priced field an entirely new measure of performance, comfort, beauty and style—but it is sold at prices so low as to alter every previous conception of motor car value.

The new six-cylinder valve-in-head engine—developed from more than a hundred motors designed especially for this sensational car—stands out as an engineering masterpiece. With a power increase of approximately 32% over the previous Chevrolet motor, with sensationally greater speed and faster acceleration—it offers a type of performance that is literally astounding. And it affords an economy averaging *better than 20 miles to the gallon of gasoline!*

In appearance, this Outstanding Chevrolet is destined to become an automotive sensation—so smart, so stylish and so distinctively appointed that it rivals the costliest custom creations! The marvelous new Fisher bodies are longer, lower and roomier with adjustable driver's seat in all closed models—and reveal the matchless artistry of Fisher designers. With their modish new colors, their smart dual mouldings and their distinctive concave pillars, they achieve a degree of original beauty that has seldom been equalled in motor car design.

You are cordially invited to visit our showroom and secure complete detailed information about this sensational new car which will be ready for delivery beginning January 1st.

The Roadster	$525
The Phaeton	$525
The Coach	$595
The Coupe	$595
The Sedan	$675
The Sport Cabriolet	$695
The Convertible Landau	$725
Light Delivery Chassis	$400
1½ Ton Chassis	$545
1½ Ton with Cab	$650
Sedan Delivery	$595

All prices f. o. b. Flint, Mich.

Advance Showings

The Outstanding Chevrolet of Chevrolet History will be displayed in a series of advance showings in the cities listed below:

New York, Nov. 24-29, Waldorf Astoria Hotel and Chevrolet Retail Store, Broadway at 57th . . . Detroit, Nov. 24-29, General Motors Bldg. . . . Washington, Dec. 1-4, Mayflower Hotel . . . Chicago, Dec. 1-6, Pure Oil Bldg., Wacker Dr. and Wabash Ave. . . . Los Angeles, Dec. 1-6, Ambassador Hotel Auditorium . . . San Francisco, Dec. 8-13, Civic Auditorium, Larkin Hall . . . Cincinnati, Dec. 8-14, Hotel Sinton . . . St. Louis Dec. 8-14, Arcadia Ballroom, 3515 Olive Street . . . Atlanta, Dec. 18-22, Auditorium—Armory . . . Dallas, Dec. 18-22, Adolphus Hotel, Junior Ballroom . . . Portland, Ore., Dec. 18-22, Public Auditorium.

NEARBY AND YONDER

By T. T. Maxey

Central Park

CENTRAL PARK, in the very heart of New York City, is Manhattan's chief and most-spacious breathing space, and the most valuable parked area in the United States.

About two and one-half miles long (north by south) and approximately one-half mile wide, it comprises about 840 acres of which one-half are wooded, and 286 in lakes and reservoirs. It has nine miles of drives, 30 miles of walks and seats for about 10,000 visitors. The present-day value of the land is almost incomputable. It has numerous gates which have admitted as many as 200,000 persons on a single afternoon.

There is a mall or spacious, shaded promenade, lined with statues, where travelers from many climes have shown themselves, but for the most part it presents a rugged, pastoral and refreshingly natural effect—some 40,000 shrubs, 10,000 trees and 50,000 smaller perennials having been recently added. Although the park is looked upon from all sides by great hotels, clubs, apartment buildings and homes of the wealthy, it has sections into which one can disappear and imagine himself amidst a far-away forest wilderness.

Outstanding among its many attractions are two reservoirs, the largest covering 96 acres and holding a billion gallons of water, a natural cave, several charming lakes, a menagerie, the Metropolitan Museum of Art, an obelisk — Cleopatra's Needle — which was erected at Heliopolis, Egypt, about 1500 B. C., and which long stood before the Temple of the Sun, and several hundred cherry trees, presented to the City of New York by the government of Japan.

* * *

Wholesale Housekeeping Awheel

KEEPING house on wheels and in a wholesale manner is a peculiar business, yet one company in America makes a special business of it. It owns and operates several thousand of what might be called hotels, but are known as sleeping cars. Each car accommodates about thirty persons and provides sleeping accommodations by night and sitting room by day. These cars are attached to through trains on important railroads in all parts of the country and save the public millions of hours of valuable time by enabling it to sleep while it travels.

The endless and tireless supervision and labor necessary to assure cleanliness—some 4,000 cleaners in some 375 yards are kept busy—the item of laundry alone totals approximately 250,000,000 pieces annually, and convenience, to say nothing about the proper distribution of these cars to meet the varying demands of the public in all parts of the country, is both a monumental and a costly job.

The immense quantities of supplies required astounds the unacquainted. Some 7,000,000 pieces of linen—including sheets enough, placed end to end, to span the Atlantic—are ordinarily carried in stock, half on cars and half in storerooms scattered all over the nation. In one year, 3,000,000 paper bags to protect women's hats from dust, 3,500,000 boxes of matches for smokers, 4,000,000 cakes and over 126,000 gallons of liquid soap and 84,000,000 paper drinking cups were among the supplies purchased.

Thirty-six million persons have taken advantage of the service provided in one year, during which time each car operated traveled an average of 154,000 miles.

Octagon House

THAT "The luxury and display of a past generation become the beauty and pride of the present" has come to pass in the case of Octagon house in the city of Washington, where once was held elaborate entertainments that were the talk of the town and today, by virtue of its simple charm and ancient origin, has become one of the prized and much-visited mansions in this nation.

Construction of this relic was started 130 years ago. It was the fine home of Colonel Tayloe, of Virginia, a prince of entertainers who possessed great wealth for his day, who resided here for many years, during which time diplomats, men distinguished in affairs of state, war and peace were welcome within its walls.

But Octagon had been marked by Fate to play another role. Along came the British in 1814 and burned the White House. Octagon became the temporary White House and home of President James and Mrs. Dolly Madison. In it the celebrated Treaty of Ghent, binding England and America in peace, was signed by President Madison and Mrs. Madison presided over gorgeous parties that set the tongues of the nation to wagging.

Subsequently, Octagon functioned as a home for a girl's school, housed a government department and became a tenement house. Finally it became and incidentally still is the official home of the American Institute of Architects. Realizing what a treasure it was, they set out to restore the venerable place in all its pristine loveliness, and their love for it seems destined to insure its preservation for generations to come.

1—John W. Pole of Ohio, formerly chief of national bank examiners, who has been appointed comptroller of the currency. 2—Huge passenger plane "Columbus," first of a fleet to be delivered to the Transcontinental Air Transport company of which Colonel Lindbergh is an official. 3—Sergt. Maj Charles R. Francis, retired, with the beautiful trophy which he will present to the Royal Marines of the British navy, as a gift from the American soldiers.

NEWS REVIEW OF CURRENT EVENTS

Hoover's Good Will Message Delivered to People of Central America.

By EDWARD W. PICKARD

HERBERT HOOVER began delivering his message of friendship and good will to the Latin Americans when, after plowing through a gale and rough seas, the battleship Maryland entered the Gulf of Fonseca and landed its distinguished passenger first at Ampala, Honduras. There, at the foot of an old volcano, were assembled President-Elect Vincente Colindres and his cabinet and several thousands of his countrymen, and to them Mr. Hoover extended the friendly greeting of the United States and urged a closer relationship among the republics of the Western world. Crossing the bay after luncheon, he was met in La Union by high officials of Salvador, and again told of the desire of North Americans for amicable relations and mutual understanding with their Latin American neighbors.

Corinto, Nicaragua, was the next port of call and it was reached at 11 next morning. The little city was gay with bunting and flags and thronged with people in holiday attire. President Adolfo Diaz, President-Elect Moncada and former President Chamorro all were there to welcome the visitor. The cabinet was there, too, and so were leaders of the factions that have quarreled so desperately over the rule of Nicaragua, except naturally the Sandino rebels. Everything seemed peaceful and lovely. The American marines from Managua had joined those stationed in Corinto and, commanded by Gen. Logan Feland, they made a brave parade. Incidentally, 85 of those marines were taken aboard the Maryland to serve as escort to Mr. Hoover thenceforward. In greeting Mr. Hoover as he stepped ashore, Moncada, Diaz and Chamorro all declared their confidence that he would be a real friend to their country at this time which is so critical. The visitor responded only informally, but after the colorful demonstration in the town he took the most prominent of the Nicaraguans aboard the Maryland for luncheon and then spoke more at length. Diaz and Moncada both strongly advocated the building of the Nicaraguan canal, declaring its construction would be economically advantageous and also a bulwark to the liberty of the American republics. To the correspondents General Moncada said the American marine forces in Nicaragua should be reduced gradually to about 1,000, but that it was necessary to keep that many there while the national guard was being formed and trained. Altogether, it was an auspicious day for Nicaragua.

Next day the Maryland reached Punta Arenas, Costa Rica. All ships in the harbor were dressed, the shore batteries exchanged salutes with the battleship, the bands played and the inhabitants cheered. The Hoover party left almost immediately for San Jose, the capital, where it was received by President Cleto Viquez and most of the other distinguished Costa Ricans and all the natives that could make their way to the city.

CONFIRMED pacifists will not like the annual report of Maj. Gen. C. P. Summerall, chief of staff of the army. It says that the regular army is unfit for immediate action in the event of war, because of the skeletonizing of units in past years. The general efficiency of the army, says the general, is unusually high, but he gives warning that the country must face the fact that the regular army and National Guard divisions are incomplete fighting organizations, and that considerable time must elapse, in event of a national emergency, before they can be completed and trained for satisfactory operations on the battle field.

Included in the report was the announcement that the War department has adopted a new plan designed to speed up mobilization.

KING GEORGE'S illness, developing from a cold into inflammation of the lungs, caused grave alarm throughout the British empire and was watched with sympathetic interest by the whole world. His majesty was making a brave and cheerful fight for his life but the seriousness of his condition was not concealed by his physicians. The prince of Wales and his brother, the duke of Gloucester, were hunting in East Africa and the prince, who was in daily communication with London, decided that they should return as speedily as possible to England. Wales hastened to Dodoma with only one companion, leaving his party far behind in the bush, and took train to Dar-es-Salaam, to which port a fast cruiser was sent which was to carry him home. It was said in official circles in London that the prince was not recalled but acted on his own initiative. The duke of York was at his father's beside daily. The king's youngest son, Prince George, was in the West Indies.

Business men in London, especially department store owners and stock brokers, insured themselves heavily against the king's death, for that calamity would be serious for them, more particularly as the Christmas season was approaching. They paid rates of 21 per cent for last week and 31½ per cent for the ensuing month.

PRESIDENT AND MRS COOLIDGE spent their Thanksgiving holidays in Virginia, making their headquarters for several days at the Swannanoa Country club, a short distance from Waynesboro. On Thursday they attended Thanksgiving services in Charlottesville, afterward being the guests at luncheon of President Alderman of the University of Virginia. Their Thanksgiving dinner was at the country club. They made no social engagements for the remainder of the week, and returned to Washington Sunday.

CONGRESSMAN FRED BRITTEN of Chicago pushed himself onto the front page when, in his capacity of chairman of the house committee on naval affairs, he cabled to Prime Minister Baldwin of Great Britain a suggestion that Mr. Britten's committee and a select committee of parliament meet in a conference in Canada next March to discuss the application of the 5-5-3 Washington treaty ratio to all classes of fighting vessels. The committees would then report their recommendations, if any, to their respective governments, after the fashion of the inter-parliamentary union, to which all members of the house naval committee belong. Mr. Britten said to the press that the failure of past limitations conferences had been attributed to military men and that, while he personally did not think they were responsible, he would prefer to see both committees composed of non-military men. He declared that this country's naval policy had never been competitive but had always been defensive.

FATHER NEPTUNE has been in a horrible temper of late and has stirred up terrific storms on the Atlantic and other waters. The worst effects were felt on the coasts of Europe and on the Black sea. Many vessels were sunk or driven ashore and the loss of life undoubtedly was considerable. The gales did not stop at the coasts but swept over the land, being especially severe in England and France. On the other side of the world, a great typhoon devastated part of the Philippine islands and it was believed at least 200 lives were lost. The damage to property was up in the millions. Red Cross workers and relief supplies were sent from Manila on warships.

To be classed among minor disasters is the influenza outbreak in and about Los Angeles. Several thousand cases were reported, with about two score deaths. The motion picture colony in Hollywood was especially hard hit. The veteran actor Edward Connelly and Mrs. Sadie Miller, mother of Patsy Ruth Miller, were among the dead there, and many of the stars and directors were on the sick list. Many of the public schools in the region were closed.

EXTRADITION of H. M. Blackmer, the missing-Teapot Dome witness wanted on an indictment for making false returns at Denver, has been refused by France. Blackmer's attorney made a fervent plea in the Paris court and that tribunal decided there was no reason why, under the French law, the request for extradition should be granted. The defendant was given complete liberty and the case was closed so far as France is concerned.

ONE of those odd tales of imposture that crop up in Europe every once in a while came to its climax when a dairy maid on the farm of the former crown prince of Germany was sentenced in Berlin to two years in prison. For months she had posed as "Princess Margarete of Prussia," morganatic wife of the ex-crown prince, and many gullible persons, making no investigation, loaded her with hospitality, money and other gifts. "I was forced to act the part, for I looked so distinguished when I was dressed up everybody insisted I was a princess in disguise," the forty-year-old and rather unattractive dairy maid pleaded.

SIGRID UNDSET, the Norwegian novelist who was awarded the Nobel prize of $42,000 for literature, announces that she will devote the entire sum to charity. Already she has given $20,000 of it to provide for parents who are obliged to maintain mentally deficient children in their homes.

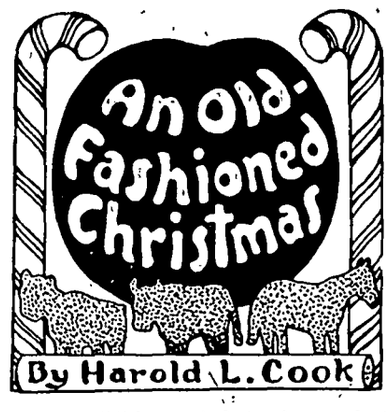
REOPENING of the question of American adherence to the World court has been practically decided on by the Coolidge administration. The President told a group of senators who breakfasted at the White House that he hoped the difference between the United States and other nations, on the reservations added by the senate in voting for adherence, could be reconciled and the reservations made acceptable. While Mr. Coolidge did not so state, the impression was gained that negotiations already were in progress. Before going to Virginia for the holiday, the President conferred with Secretary of State Kellogg on the method of procedure to be followed. Mr. Kellogg refused to state whether developments had occurred within the last few weeks which indicated that the chances of American entrance into the court were any better than they were at the time the nations rejected the senate reservations.

WILLIAM R. DAWES, Chicago financier, was elected president of the Mississippi Valley association at its tenth convention in St. Louis. He succeeds James E. Smith of St. Louis who resigned after 20 years of activity in the inland waterway movement. The association adopted a resolution asking congress for the early completion of the Mississippi valley waterway system, pointing out that $452,270,217 already had been expended or allotted for completion of various waterway projects and calling on congress to make available annually whatever money is needed to complete the projects.

The association held that the system should be standardized as to channel depths, locks, terminals and floating equipment, and that the main trunk lines should have channels nine feet deep. The main trunk lines were specified as the Mississippi, Missouri, and Ohio rivers, the Illinois waterway and the intracoastal canal in Louisiana and Texas.

The right to divert water from Lake Michigan for the Illinois waterway was upheld. The association praised the Denison barge line bill, and requested congress to appropriate $10,000,000 for added equipment and barges for the Inland Waterway corporation. The sum already has been authorized.

CHANNING Tripp of Flint, Mich., thirty-seven years old, was sentenced in that city to life imprisonment following his conviction of a fourth violation of the prohibition law. Sentence was pronounced by Circuit Judge Fred W. Brennan under the new state criminal code which makes a life sentence mandatory for a fourth felony conviction and which classes violations of the dry law as felonies. Another opportunity for vigorous comment by the foes of the Eighteenth amendment.



MR. BEES settled back comfortably in the new easy chair which his daughter-in-law had given him for Christmas. His feet were resting on a little footstool from his granddaughter; in his mouth was a briar pipe from his grandson, and on his lap a first edition of Tom Sawyer from his son. He was clad in a velvet lounging robe from one of his daughters, and under his white beard could be seen a new Christmas tie and the edges of a new silk shirt. Comfortable looking slippers adorned his feet, and a new reading glass was in his hand. A box of Havana cigars, a dozen books, ties, socks, and a fountain pen were on a table at his side.

Mr. Bees was smoking and gazing into the fire. The strains of a New York orchestra playing "Holy Night" came to his ears from the mahogany radio in the corner. The seventy-five electric bulbs on a beautifully ornamented Christmas tree furnished the only light in the room except that from the fire. The music of laughter came from an adjoining room.

But Mr. Bees was not conscious of his surroundings. As he was gazing into the fire his thoughts were traveling through the mysterious flame into a distant past. He was living over again the first, and perhaps the happiest Christmas day that he could remember, a Christmas day some seventy-five years before.

In a tiny house in what was then called Canada West, now known as Ontario, a poor family was struggling against the elements for its very existence on the frontier of civilization.

"Oh, Marvel of Marvels—a Big Red Apple!"

Mr. Bees must have been four or five years old at the time. His mother and father were in their early twenties. The one-room house was practically buried in a drift of snow that Christmas eve.

Mr. Bees, then only Ted, was busy admiring the pictures painted by Jack Frost on the one window of the little home. Such hoar frost! Was there ever the like of it before or since! It was a veritable forest of ferns and trees and bushes, snowy white, more beautiful even than the green ones that grew so thickly in summer along the little stream in back of the house—and more impenetrable. Stars and planets and comets were in this frosty forest, too, and here and there the outline of a palace, at least for the imagination of little Ted. It was the most beautiful thing that he had ever seen, or probably ever would see, in this world at least. He could see it now, in memory, as plainly as he saw it then.

His mother was at the stove preparing supper. Soon she called him from his reverie, and he sat down by the soap box with her and with his father. A pan of warm milk was on the box—and in the milk were hunks of bread—a feast for a king. Each of the little family took a spoon and ate from the brimming pan. How good it tasted! Would he could taste it now.

While his mother swept up the crumbs Ted hung his stocking near the stove. Then his mother pulled out the trundle bed, and in two minutes Ted was in the land of dreams.

How cold the house was that Christmas morning when at five o'clock he jumped from his trundle bed and ran to the stove to get his stocking! He took it quickly back to bed, and dug his hand way down into the toe to see what Santa had left for him. Oh, marvel of marvels, a big red apple! And four little animal cookies! But last and best of all, a stick of peppermint candy striped with red. What more could any child desire?

"Your after-dinner coffee, sir," said a white be-capped maid at his elbow.

As he drank the coffee, and looked into the fire, and listened to the music, Mr. Bees heard only the pan of milk simmering on the stove, saw only the hoar frost forest, and tasted only the stick of peppermint candy, his happiest memories in life, perhaps.

(©, 1928, Western Newspaper Union.)

The Older the Better

Christmas should always be old-fashioned. You may be sure that in 1828 and 1728 and so on back they deplored the rush and uproar of their Christmas and sighed for the good old holiday of 75 years before.—Woman's Home Companion.

John's Mother Praises Doctor

There isn't a mother living who won't agree that no half-sick child should be the subject for an experiment with medicines of uncertain merit. When your child is bilious, headachy, half-sick, feverish, restless with coated tongue, bad breath, no appetite or energy, you know that nine times out of ten it's a sign his little stomach and bowels need purging. And when you know that for over fifty years leading physicians have endorsed one preparation for this condition, there doesn't seem to be any reason for "trying" things.

Rich, fruity California Fig Syrup clears the little stomach and bowels gently, harmlessly and in a hurry. It regulates the bowels, gives tone and strength to them and to the stomach; and helps to give your child new strength, energy and vitality. Thousands of Western mothers praise it. Mrs. Joseph W. Hill, 4306 Bedford Ave., Omaha, Nebraska, says: "I'll never forget the doctor who got me to give my baby boy, John, California Fig Syrup. Nothing else seemed to help his weak bowels. That was when he was just a baby. He suffered a good deal before I gave him Fig Syrup, but it stopped his trouble quick. I have used it with him for colds and little upset spells ever since. I consider him a Fig Syrup boy."

Insist on the genuine article. See that the carton bears the word "California." Over four million bottles used a year.

A Veteran

Henrietta—Do you think that Doris is fitted for the battle of life?

Charlotte—Well, she ought to be; she's been in four engagements already.—Answers.

If you know more than another man, he knows it without your telling him.

SAME PRESCRIPTION HE WROTE IN 1892

When Dr. Caldwell started to practice medicine, back in 1875, the needs for a laxative were not as great as today. People lived normal lives, ate plain, wholesome food, and got plenty of fresh air. But even that early there were drastic physics and purges for the relief of constipation which Dr. Caldwell did not believe were good for human beings.

The prescription for constipation that he used early in his practice, and which he put in drug stores in 1892 under the name of Dr. Caldwell's Syrup Pepsin, is a liquid vegetable remedy, intended for women, children and elderly people, and they need just such a mild, safe bowel stimulant.

This prescription has proven its worth and is now the largest selling liquid laxative. It has won the confidence of people who needed it to get relief from headaches, biliousness, flatulence, indigestion, loss of appetite and sleep, bad breath, dyspepsia, colds, fevers. At your druggist, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.

Look prosperous if you want prosperity to come your way.

Grandmother Knew

there was nothing so good for congestion and colds as mustard. But the old-fashioned mustard plaster burned and blistered.

Musterole gives the relief and help that mustard plasters gave, without the plaster and without the blister. Gently rub it in. See how quickly the pain disappears.

Try Musterole for sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds of the chest (it may prevent pneumonia).

PERFECT WEIGHT FOR MARKET HOG

Ask the packer and he'll probably say that around 200 pounds is the ideal weight for a market hog.

J. W. Wulchet, extension specialist in animal husbandry at the Ohio state university, reports this in a new 32-page bulletin, "Pork Production in Ohio," recently off the press at Columbus, and available for distribution.

"A survey of Ohio packers has shown that almost 54 per cent of the hogs desired ranged in weight from 200 to 240 pounds, and more than 40 per cent are wanted between the weight of 180 and 220 pounds. This would indicate that the most desirable weight from the packers' standpoint is the hog weighing close to 200 pounds. This is probably the most desirable weight at which to market, from the standpoint of the producer as well as the packer.

"Hogs marketed at weights much less than 200 pounds have in most cases more per pound of gain because of the higher priced feeds necessary for the early development, so that the cost of bringing the pig up to weaning is distributed over a less number of pounds. On the other hand, to carry them much above 200 pounds will increase the cost per pound of gain, because as the hog gets larger and particularly as he approaches maturity, it requires more feed to put on each additional pound of gain.

"Complaint is sometimes made that the packers do not seem to buy many of the hogs from the territory adjacent to the packing house, but prefer to buy them elsewhere. The answer almost invariably is that the hogs being produced in that territory are not of the kind the packer can use to best advantage, and he is, therefore, forced to seek elsewhere for his supply.

"A little inquiry or study on the part of the producer to ascertain the demands of the local packer, and then meet them, will generally result in a more satisfactory sale and purchase of hogs locally. To make a long story short, produce what the market wants and there will be little trouble in finding a satisfactory market."

No Big Advantage in Warm Water for Hogs

The Missouri experiment station has conducted trials to determine the value of heating the drinking water for hogs which are on winter feed. These experiments were with fall pigs fed during the winter. There were a large number of different combinations such as warm drinking water and warm feed, cold drinking water and warm feed, cold feed and cold water, cold water and cooked feed, cold feed and warm water, etc. These experiments did not show any advantage for warming either water or feed or for cooking feed. It is of course important that fattening hogs, or hogs of any kind, have all the water which they need to drink. Sometimes the warming of water might help in this respect, but if a reasonable amount of care is taken to see that the hogs have a chance to drink cold water (not ice) we believe that ordinarily it will not pay to go to the trouble to heat the water.

Soy Beans Fed Cattle Take Place of Oilmeal

Soy beans will take the place of oilmeal in the ration for steers in the feed lot. From two to three pounds of soy beans can be fed to a 1,000-pound steer per day. Soy beans are very laxative and if the bowels become too loose the amount of soy beans fed should be reduced. In feeding experiments it has been found that steers will become tired of soy beans quicker than of oilmeal.

On account of the hard nature of soy beans they should always be ground when fed to steers. You could mix just enough corn with soy beans so that you can readily grind them. The oily nature of the beans makes it difficult to grind them alone.

Live Stock Notes

One of the important advantages of well-bred animals is the rapidity with which they gain and the earliness with which they are ready for market; production costs are lowered both ways.

* * *

Where a farmer feeds much stock about the lots and barns in the winter, there is nothing that will serve to clean up the odds and ends and prevent the waste of feed than a bunch of hungry fall pigs.

* * *

Hogs contract avian tuberculosis through eating dead hens and feed contaminated by droppings of tuberculous birds.

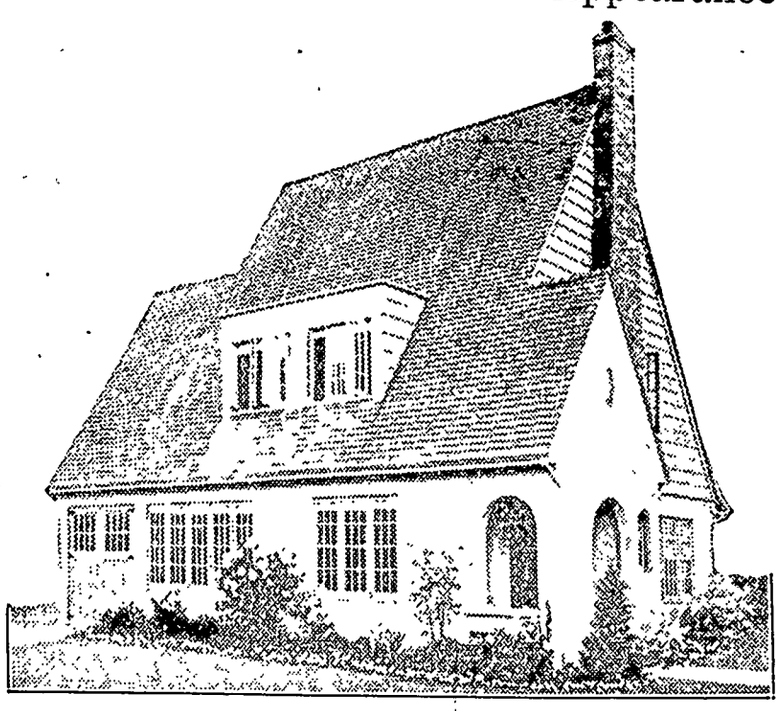
* * *

Steers fed at South Dakota State college have made larger gains on a corn silage plus alfalfa ration than on corn silage alone.

* * *

Do not select breeding stock from sows which have produced one or more inguinally herniated pigs. The same reasons apply here as in the case of the male.

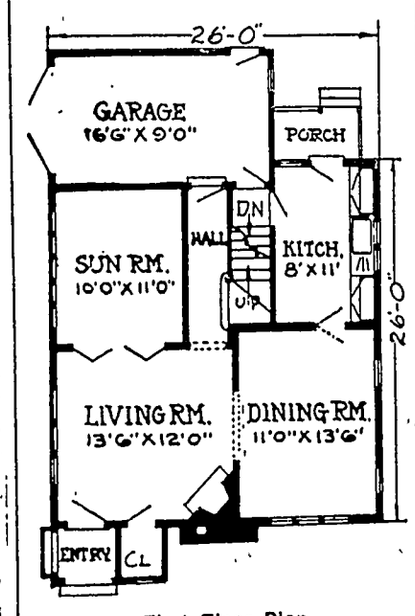
Small Home With Attached Garage Has an Attractive Appearance



By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The automobile has become so nearly universally used by American families that a garage can really be considered an essential part of any home building program. There are many advantages in having a garage which



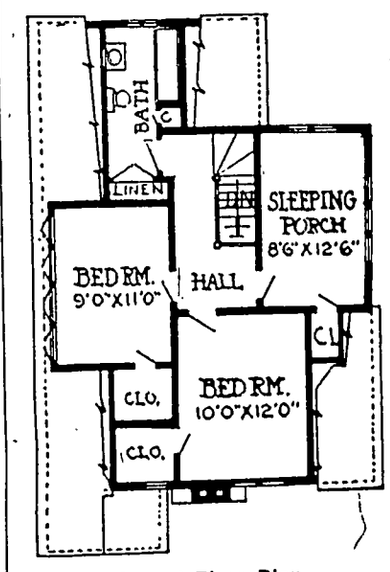
First Floor Plan.

is built into the house as an integral part of it and many people are demanding homes of this type. The home shown in the accompanying illustration is of this type and at the same time is a small home, economical to build.

This house, exclusive of the garage portion, measures but 26 feet deep and 26 feet wide yet provides six good-sized rooms as well as a large sun room off of the living room. The second story is placed up under the roof, reducing the cost of construction to a considerable degree and, because of the steep-pitched roof, adding to the general effectiveness of the design.

Though the second-story rooms are under the roof, this does not detract from their desirability. The one at the side where the roof comes down cutting into the room space has a large dormer which affords full height clear across the room and makes an unusually light and airy bedroom. The roof slope makes possible unusually large closets for each of the three bedrooms so that the lack of an attic should not be felt.

The front entrance of this house opens into one corner of the living room. Just beside it is a closet, and in the adjacent corner of the room the fireplace. The room is almost square, 13½ by 12 feet, but the sun room is, practically, just an extension of the room cut off by wide french doors. It would be simply the end of the room so separated except that space is taken off one side of it for a hallway leading back to the garage. This makes the sun room just 10 feet wide instead of 13½ feet like the living room. This rather unusual arrangement should prove quite satisfactory, giving what amounts to either one large living room or two smaller rooms, as desired.



Second Floor Plan.

As already suggested the garage can be entered from the inside hallway, a great convenience in cold or rainy weather, and one of the principal points in favor of this type of garage. Another is the ease with which the garage can be heated in winter.

Color in House Roofs Gains in Popularity

Many miles away, as one approaches a town, we note how conspicuous are the roofs and church spires against an almost solid blue-green background.

Most of us recall the days when these roofs were hardly without exception of natural blue-gray slate, suggestive of the ruggedness our forefathers observed when designing and building their homes. These roofs endured years with no attention whatsoever. When once applied they were entirely forgotten.

These houses were built in a period of good, sound construction and these very buildings are standing today with their original roofs, beautiful in their quaint stanchness.

In some communities vivid penetrating color later found its way both in natural slate and in manufactured roofing materials. A choice of every known shade became available to appease the public taste, often with the result that the less scrupulous builder was tempted to give color, but unfortunately, disregard quality.

However, the fallacy of such practice is now being felt. The annoyance and expense of upkeep has injected much seriousness in the thoughts of the home owner or buyer.

Thus we are back where we started—and a bit wiser. Color is desirable, it is true, but if durability must be sacrificed to attain it, it is scarcely worth while. After all, the great strength and sturdiness of a roof imparts a keen sense of subtle beauty.

Put on a roof that does its duty—sheds water, and stays where it is put without further attention, and add color if obtainable economically.

Built-In Units

Wall surfaces, built-in equipment and decorative details made of tile are desirable in the home from many standpoints.

Their ease of cleaning and permanence is particularly appropriate in the efficient houses of today, which combine a multitude of utilities that eliminate drudgery.

Insulation in Homes Saves on Cost of Fuel

Would you believe that a wind of fifteen miles an hour, which isn't much of a winter wind, could blow right through a "solid" brick wall, fifteen inches thick?

It can, and the amount of air that this same wind can pass through the ordinary wooden outside wall, if collected from an area 5 feet by 10 feet, and blown through a round hole two inches in diameter, will put out a match held two feet from the hole.

"But," you will say, "an insulated house will cost a lot more than the other, even if it may enable the owner to save coal. Suppose that I can't afford such an expensive house?"

The answer is that you are wrong; the insulated house itself does cost more to build, but you need put into it only about half of the radiators that you have in the other one, and the boiler can be that much smaller, the piping will be smaller, and there will be less of it. The fact is that the amount saved in the heating plant will almost entirely pay for insulating.

This is not a theory, it has been tried out in Chicago, and a great many records taken on recording instruments kept track of temperatures, and all that, so the facts can be shown to anyone, and they prove themselves. The house was actually lived in by the owner and his family, and, as gas was used for heating, the exact cost was known, not guessed at.

Roofing Tile

While considering material for the roof of your new home give attention to roofing tile. If your house is in the Spanish or mission style there is the half-round tile, with its range of shades in reds and browns. For the house of French or English style there is the flat tile in green or red.

Hall Is Important

The personality of the home is first felt in the hall. This atmosphere should express not only a cheery welcome to the members of the family as they return from their occupations, but also it should offer to strangers a cordial hospitality.

The DAIRY

FAVOR SOY BEANS FOR DAIRY COW

Equal to Linseed Oilmeal as Protein Supplement.

Soy beans provide an excellent protein supplement for use in the grain ration for dairy cattle. Numerous experiments conducted by some of the leading experiment stations have proved ground soy beans to be equal to linseed oilmeal as a protein supplement in the dairy ration. Usually high protein feeds such as linseed oilmeal, cottonseed meal and corn gluten feed are high in price and if dairymen would grow more soy beans it would make them more independent of these high-priced protein feeds and insure a greater dairy income.

In feeding trials conducted at the Purdue university agricultural experiment station in 1923 comparing ground soy beans with linseed oilmeal, soy beans proved to be equal to linseed oilmeal as a protein supplement for dairy cattle when fed in the grain ration of corn and oats.

Experiments conducted at the Purdue and South Dakota stations comparing soy bean hay with alfalfa hay, soy bean hay was found to be practically equal to alfalfa hay when fed to dairy cattle.

Trials conducted at the Iowa station in 1922 in comparing ground soy beans with linseed oilmeal, as a protein supplement for the dairy ration, the ground soy beans proved to be worth $60 per ton when old process linseed oilmeal was selling for $45 per ton. In other words, the ground soy beans fed as a protein supplement to the basal grain ration of corn and oats were worth one-third more than the linseed oilmeal.

As a roughage for general herd feeding, good quality soy bean hay has proved to be just as good as alfalfa hay in the Purdue dairy herd the last winter. In fact we think so much of the bean hay that this year we will have 75 tons for winter feeding.—J. H. Hilton, Purdue university.

Figures Tell Story of Dairy Herd Improvement

Figures from more than 100,000 individual yearly records from cows on test in dairy herd improvement associations in the United States indicate that, on the average, cows producing 100 pounds of butterfat a year returned but $14 over the cost of feed.

Cows that produced 200 pounds of butterfat returned $54 above feed costs; those producing 300 pounds returned $96; the 400-pound producers returned $138; and the cows of 500 pounds butterfat production returned $178 above feed costs. Thus the man milking a 500-pound producer would have more net return than if he milked a dozen cows producing only 100 pounds of butterfat. This would take no account of the added labor of milking and caring for the larger herd or of the much greater expense of providing stable room for a herd instead of a single animal.

The production figures used in this calculation were obtained by the United States Department of Agriculture from the cow-testing associations of the country and the returns from butterfat are based on farm prices reported from all parts of the country.

Dairy Hints

Milk, especially when warm, absorbs odors rapidly.

* * *

It will pay to grind oats at 20 cents per 100 pounds when it is fed to dairy cows.

* * *

The "cowey" taste of market milk is due to mixture of cow manure and absorbed impurities.

* * *

Warm water offered in a sheltered place will be a comfort bossie will readily appreciate.

* * *

Free access to water or watering cows at least twice daily will increase the profits from winter dairying.

* * *

Comfortably warm, well lighted, well ventilated stables insure health and good work on the part of the cows.

* * *

It is always cheaper to sell a hard milking cow to the butcher and buy another cow than it is to try to cure the case.

* * *

Don't let the cows shiver. Cold cows don't turn in much cold cash. They cannot fight cold and make milk with the same feed.

* * *

It seems that lice prefer the less thrifty calves and on these they multiply and feed until the calf stops growing, loses weight and has very little resistance left.

* * *

It should be clear that after giving a cow the first half of a full ration necessary to keep her alive, and after giving her barn room, running the risk of her dying, and doing chores for her the year around, it is the poorest possible economy not to give her the second half of a full ration, which she will use in producing milk.

That Million-Dollar Feeling

"Bill, I sure wish I had your appetite. How d'ya get like that?"

"Just take NR before you hit the hay. Makes you feel like a million!"

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

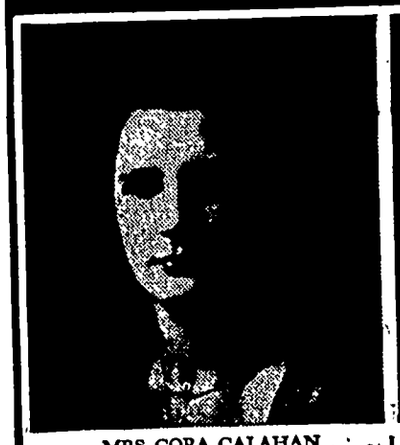
HELPED AT CHANGE OF LIFE



MRS. CORA CALAHAN
216 E. Ashton Ave., Grand Island, Nebr.

"I am going through the Change of Life. At times I would cry for hours. I got tired of going to the doctor so I tried Lydia E. Pinkham's Vegetable Compound. Before I had taken the first bottle I began to get better. I have taken eight bottles now. I feel that it has saved my life, also doctor's bills. I work for a family of six, washing, cooking and do all my own work. People say I look like 25."—Mrs. Cora Calahan.

MRS. F. C. HELMING
822 E. Harrison St., Portland, Ore.

"Lydia E. Pinkham did for me what doctors failed to do. When the Change of Life began I was very poorly. Now at 55 I do all my own work, attend two dances a week and it is hard to make people believe I am over 40. I never see a woman in ill health but I advocate your medicine because I know its value. Every woman should take it, not just for a month or two but until they have passed the critical period."—Mrs. F. C. Helming.

Mor-Gain

--Laying Mash--

A Hen uses three-fourths of her feed for body maintenance and if the feed is not balanced properly she wastes the other one-fourth. A feed can be three-fourths right and yet all wrong for egg production. Grain and MOR-GAIN Laying Mash are the right combination that makes the eggs without any loss of feed. Give the whole flock all they want of grain and MOR-GAIN Laying Mash. It hastens maturity and makes the hens and pullets lay more eggs while eggs are a good price.

—TESTIMONIALS—

Mrs. Albert Andrews of Mason City raised 142 brown leghorn pullets on MOR-GAIN Feeds. These pullets commenced laying at four months and four days of age. They are laying now 90 to 135 eggs a day. Their average has been above 50 percent since they were six months old.

C. A. White of Mason City has 280 pullets that are laying 50 percent. May hatched.

Giles Frye of Mason City has 180 pullets, April hatched, that are laying 60 percent.

THE RIGHT KIND OF BIRDS WITH THE RIGHT KIND OF FEED AND CARE WILL PRODUCE EGGS AT A PROFIT. USE MOR-GAIN FEEDS FOR PROFITS—

DOINGS AT SCHOOL THIS PAST WEEK

DECEMBER MEETING OF P. T. A. TO BE HELD TUESDAY

Grade Children Will Put On Xmas Program At This Meeting

On Tuesday evening of next week the P. T. A. will rely upon our grade children, coached by the Misses Wheatman and Miss Root to give the program. It will be a Christmas program an as there is to be no admission fee many should be there to enjoy it. In addition Miss Trumbell will present the problem of book selection for the home. This should interest fathres and mothers who expect to purchase books for Christmas as some are unfamiliar with books and authors to the extent they are unable to make a wise choice of gift books. Miss Trumbell offers to submit names of books worth while for children if asked. Some parents already have been obliged with this proffered aid.

Hayfield Plays Basket Ball Here This Friday Evening

On Friday evening of this week our basket ball team will go on our own court against Hayfield. Hayfield always causes us uneasiness in basket ball and will this year. We may not defeat them but sshould and we believe our boys will. A close game is assured. Our grade boys will play Hayfield grade team, as an opener. First game we hope to be ready to start at 7:30. Doors will be opened at 7:00. We wish none would urge us to admit them before 7:00.

For the two games we must charge more than for a single one, as expenses for officiating and the transportation are greater Adult admission has been fixed at 35c and for children 20c. Our high school boys will wear their new suits and will present a nifty appearance.

Shamrocks Will Play Britt On Next Wednesday Night

On Wednesday night of next week our team goes to Britt for a game and they are due to play the Crystal Lake team there on Friday night. We are trying to get another date for the latter game as it delays our getting home early for the Christmas vacation which will start the end of next week and continue for two weeks. School work will beresumed on Jan. 7th.

Christmas Seal Stamp Sale Netted Neat Sum Of $19.00

A few cents over $19 worth of Christmas Seal Stamps were sold by our Grammar Grades who were inpired to solicit sales through a promise of an hour or two of vacation from school which the eighth graders won. Leon Lemke won the first prize for the greatest number sold. Leon sold $2.50, Hilda $2.44 and La Vohn $1.00.

We desire to thank those who bought stamps. Almost half of the amount received from the sales will remaiu to the credit of our School Health Fund kept at our local bank, and will be spent to a good purpose in the interests of our school.

"J. C." SAVED BY SCOUT QUICK THINKING

Sout Executive J. C. Underwood, and Scoutmaster Joel Hanes, both of Mason City, were skating on Clear Lake Sunday when "J. C." skated into an air hole covered with thin ice and went through. Here's the place where scout training showed up. "J. C." kept a cool head, broke the ice until he could grasp a hold. Joel Hanes, using scout methods of rescuing, laid down on the ice (to distribute his weight) slid along until "J. C." could catch a hold of his hand and ease himself out of his precarious position to a safer place.

Mr. and Mrs. Chris Gram were at Mason City Sunday afternoon.

SCOUT LEADERS TRAINING SCHOOL CLOSED MONDAY

Four Klemme Men Complete Entire Six Weeks Course

The Scout Leaders Training Course in District Three, closed on Monday after running for six weeks. The final meeting was an afternoon hike at Tyrell Woods near Belmond at which time and place Second Tests in fire building, cooking, pace, tracking, compass work and other details were taken up under the direction of Patrol Leaders, Bente of Clarion and Jorgenson of Klemme.

All men present at the final meeting were required to pass tests and prepare a meal without the use of cooking utensils. Steaks were nicely prepared by broiling on an Indian "snow-shoe" broiler make with a forked stick, with small sticks interwoven acros the bent ends. Other preferred a "kabob" to finish a steak Potatoes were baked by wrapping in mud and leaves and placed beside or buried in the hot coals of an open fire. Coffee and dougnuts completed the menu for most. Practical demonstrations were given by patrol leaders and the assistants in various kinds of fires including the 4-point demonstration of a second class scout fire, Trapper's fire and trapper's oven, hunter's fire, criss-cross fire, council fire, automatic stew-pot fire; scout pace, scout tracking, compass readings and locating bearings, use in map work, etc.

A fine log cabin for the Belmond Scotus was enjoyed for the evening council when talks were given and scout songs enjoyed.

Klemme men who completed all of the course were J N Day, Rev Grosshuesch, C G. Waterman and R. A. Jorgenson. C G Waterman also acted as Scribe for the Troop. Dr. Anderson and Dr Missman attended all sessions except two.

All agreed that the session at the woods was the most outstanding of all the meetings and the men had a fine time. All Klemme men were present except Dr. Anderson, who was unable to attend.

Approximately twenty-six men in this district (Franklin and Wright counties, and the Klemme men of Hancock Counties) were enrolled A few less than twenty completed all work without missing a session or being tardy at a meeting. The group took in bankers, merchants, several ministers, several school men, several doctors, a publisher, a printer, retired farmers, in fact, every walk of life All these men were good sports, fine men and all feel that the training course was one of the best things they have ever come in contact with.

ATTRACTIVE BOOKLET ISSUED MONTHLY BY LOCAL FIRM

Eight Page Rotogravure Is Full Of Practical Ideas For Builder

Many flattering comments have come to the office of the Northern Lumber Co., on their monthly home biulding magazine' 'Artistic Homes" which they issue each month.

"Artistic Homes" is printed in Rotogravure and contains reproductions from photographs of many practical and artistic homes each month as well as clever ideas that will be of great interest to those who plan to build.

According to Paul Grange of the Northern, "Artistic Homes" is published by them for free distribution as part of their service to rospective builders and includes advice on any phase of the many problems that confront prospective builders.

TROOP 56 WINS C. OF C. SILVER CUP

TROOP 56 WINS SILVER CUP AT COURT OF HONOR

Troop Attended One Hundred Per Cent At Belmond Last Week

Troop 56 is the winner of the silver project cup offered by the Mason City Chamber of Commerce to the Troop in the North Iowa Council which attended a Court of Honor one hundred per cent, including all scouts, Scoutmaster, Asst. Scoutmaster and all Troop Committeemen on the roll.

The winner of the cup will hold it for one year, when it goes back to the C. O C. to again be used for another project.

In the case of Klemme Troop 56, they will have to share honors with three other troops in this Area who also attended 100 per cent. In this case the cup will be held by Klemme for three months and then passed on to the next 100 per cent troop.

At present the cup is being engraved and Klemme Troop 56 will appear thereon. As soon as the cup arrives in Klemme it will be put on display, perhaps first at the Troop Committeemen's stores and then passed around to the other stores to be displayed.

Much of the credit for winning of the cup should go to the Troop Committee, who are a bunch of live wires and who are just as much interested in the local troop as the scouts themselves. Few troops are backed by a better group of men than we have at Klemme Troop 56 is one of the youngest in the entire Area but has already gained a reputation as being one of the very livliest.

Troop 56 at the present time consists of 14 registered Scouts, with a majority second class scouts and several ecnd clas merit badge boy; five Troop Committeemen: Dr W. F. Missman, Chairman, J. N. Day, Rev Calvin Grosshuesch, C. G. Waterman and E F Jacobs; Scoutmaster, D P. Anderson, Asst. S M., R. A Jorgenson

At the present time Troop 56 is also holding second place in the Council-wide Inter-Troop Contest, with Crystal Lake leading. Both Klemme and Crystal Lake have held their positions at the top of the list thru-out the contest. "Doc" West's troop at Clear Lake is coming up and crowding Troop 56 hard for second place, railing only about a hundred points at the last report.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

—Schedule of Services—

Morning worship and Preaching service at 10:00 a. m. Subject for Sunday, December 16th, "The waiting World."

Sunday School at 11:00 a. m.

Epworth League at 6:45 p. m. Miss Mabel Schaefer, leader. A fine interest is being shown in the devotional meetings of our league, and the membership roll has been growing every Sunday We invite other young folks of the community to come.

Evening Worshp and Praise Service at 7:30. There were about 45 present for the evening service last Sunday and we are hoping that this number might be increased.

PIE AND BASKET SOCIAL

Don't miss the pie and basket social to be given Friday night, December 14th at the Louis Weaver School, 3 miles south, ¼ mile east of Garner Everyone welcome! Mildred I. Hampel, teacher. 1tc

As advertised in the Times last week the old Schafer Building would be sold at auction to the highest bidder. Fred Etchen bought both the old store and barn which he and Wm. Greiman will raze and use the lumber on their farms for new buildings.

RUNGES CELEBRATE 25TH ANNIVERSARY

WAS ALSO 50th BIRTHDAY OF MRS. HENRY RUNGE

Relatives And Friends Stage Big Surprise Dinner Sunday

Sunday, December 9th was the Silver Anniversary of Mr. and Mrs. Henry Runge's wedding, and also on that date was Mrs. Henry Runge's fiftieth birthday anniversary.

In honor of this double event the many friends and relatives of Mr. and Mrs. Runge planned a big surprise dinner which they successfully carried out and which was attended by eighty-seven people.

A feature of the celebration was the fine goose dinner which had been prepared by Mrs. Charles Griffen and Alvina Griffen. Others brought sandwiches, cakes, and various articles of food for the dinner

Those who gathered for the event had made up a purse of silver which they presented Mr. and Mrs. Runge as a gift for their twenty-fifth wedding anniversary.

Following is a list of those who were present. The number placed in front of each name represents the number present from that particular family:

2 Alvina Griffen, Klemme; 4 John Griffen, Garner; 5 Henry Griffen Klemme; 5 Louis Griffen, Klemme 8 Charles Griffen, Garner; 3 Ed Schlei, Fenton; 3 Ed. Weisbrod Fenton; 3 Elmer Schlei, Klemme. 7 B F. Greimann, Garner; 2 Edwin Josten, Klemme; 3 Arlena Ruthmerlyn Upmeyer, Garner; 4 Henry Schlei, Klemme; 3 Wm. Bachman, Klemme; 3 Fred Klinge, Garner; 7 Adam Thomas, Clear Lake; 2 Fred Yahnke, Klemme; 6 Rev. Calvin Grosshuesch,, Klemme; 1 Adella Kuhlman, Klemme; 1 Mrs. Knoke Buechle, Garner; 3 John Terhufen. Britt; and 1 Ray Brouwer, Klemme

Needless to say that all enjoyed a very good time and all hoped to again unte in a celebration of the Golden Wedding of Mr. and Mrs. Runge twenty-five years from now.

The Times wishes to join with the friends, neighbors and relatives of Mr. and Mrs. Runge in extending congratulations and best wishes.

The weather today looks more like spring than winter. Plenty of rain is falling and with the thaw of the past few days is certainly raising Old Ned witho ur country highways, which are now resembling a sea of mud and not enough boat to go around. The kind of farm relief we want now is a system whereby the farmers can haul their hogs and other products to town without having to use an airplane.

Walt Kurtz and Mike Haskins of the Central States were putting in new and heavier wires to the City Hall the past few days. New wires and cross arms were run from the transformer at the Farmers Elevator to carry the juice for the new electric pumping system to be installed at the water plan.

John Christians Sr. was a Garner caller Thursday morning.

WILL DEDICATE NEW SCHOOL HOUSES IN AVERY

School Children Will Give Play As Part Of Program

The formal opening and the dedication of the new school houses in Avery Township, District No. 6, Hancock County, will be held Monday evening, December 17th.

Following the dedicatory services a playlet will be given by the school children A basket social will conclude the program. The proceeds to be used to pay for equipment for the new school house. The baskets will be sold in three classes: little girls, young ladies and married women.

"Me Gangster," is the title of the picture at the Idle Hour Saturday night and is one of the very latest pictures out. In fact it will not be shown at Mason City until next week This is a Fox production The Auxiliary Ladies, who are running the picture show in Klemme are doing there best to bring new and attractive pictures to our town. Help them by attending the picture show every Saurday night.

Mr. and Mrs. Harlod Leitzinger and children were entertained at the Arthur Moulton home Sunday in honor of Mr. Moulton's birthday A delicious dinner was served by Mrs. Moulton and the table was appropriately decorated by a large pink and white birthday cake.

Herman Kuhlman, who has been here the past two years working on a farm, left last week for his home at Meno, South Dakota, where he will work for his brother in a store. Herman will at least spend the winter there and may come back to this place in the spring.

M. F. Penrod gave his Sunday School class a party at the Parish House Tuesday evening. After a social time had been enjoyed refreshments were served, consisting of oyster stew, coffee, pickles and crackers. All enjoyed a fine time.

A number of members from Klemme are going to Garner tonight to attend the Blue Lodge as an election of officers will be held. Dr. D. P. Anderson had the honor of being Master for the past year, the first time Klemme has been represented in that office.

ELL TOWNSHIP FARM BUREAU HAS FINE MEETING

County Supt J. R. Baggs Gave Ttalk And Short Plays Enjoyed

A Farm Bureau meeting was held last Thursday evening, December 6th at the Ell Center school. Mr. J. R. Baggs was present and gave a splendid talk. Other features on the program were short plays, the title of one being "When The Circus Comes To Town." A number of talks were also given. Those who attended report a fiue time was enjoyed.

FARM BUREAUS HAD FINE MEETING

LIBERTY AND ELL F. B. LADIES FINISH CLOTHING COURSE

Miss Merle Ramer Gives Last Demonstration In This County

The Liberty and Ell township Farm Bureau Ladies enjoyed a very successful meeting at the home of Mrs. Harvey Goll, Thursday, December 6th. This was an all day meeting, and as it was a nice day a fine crowd was in attendance.

The project taken up was Tailored Finishes Miss Ramer the Home Demonstration Agent gave some very interesting facts about Pressing, Mitered Corners and Neck Finishes. This was the last lesson of the 3rd Year Clohting Course and was also the last lesson which Miss Merle Ramer will demonstrate. The ladies are very sorry to olse her as they have had many pleasant meetings with her.

The meeting adjourned at 4:00 o'clock and after the ladies had expressed their good wishes to Miss Ramer and bade her good-bye, all departed for home feeling that they had spent a most profitable day, as well as years with Miss Ramer.

AVERY FARM BUREAU HELD REGULAR MEETING

Election Of Officers Held; Barger President For Coming Year

The regular monthly meeting of the Avery Township Farm Bureau was held at the home of F. J. Lemke on Friday evening, December 7th. The results of the annual election of officers were: Howard Barger, President; Virgil Cock, Director; Mrs. C. A. Arnold, Chairman of Women's Work; William Prolipp, Secretary and Treasurer. Guessing games and a short program furnished the evening's entertainment. Mr L. B. Hulsebus donated the coffee for the refreshments.

ANNUAL MEETING OF FARM BUREAU TO BE HELD DEC. 20

Charles Hearst, President, Will Be Principal Speaker

Plans are being made for the annual meeting of the Hancock County Farm Bureau to be held in the Odd Fellows Hall at Britt on Dec. 20, next Thursday.

Mr. Charles Hearst, president of the Iowa Farm Bureau Federation will be the principal speaker. Mrs. Van Bloom, District Chairman of Women's Work, will also be on the program.

The annual election of officers will be held and reports of the various departments will be given.

This will be an all day meeting. A picnic lunch will be served at noon. Every farmer in Hancock County has a special invitation to attend.

FARM BUREAU LADIES HAVE INTERESTING MEETING

Study Methods Of Tailored Finishes And Ways Of Pressing

The Co-operators of the Avery Township Farm Bureau Ladies held their meeting at the home of Mrs. L. H. Wilson Friday, December 7.

The Co-operators present were Mrs. C. A. Arnold, Mrs. Gealow and Mrs. Thada, and visitors were Mrs. Kelly of Britt, Mrs. Finn of Klemme and Mrs. Gobeli of Meservey.

The lesson was on Tailored Finishes, Shrinking Material, Pressing Wool and Silk, making the tailor's Cushion and the Sleeve Board, and Seam Finishes Hems, Neck Finishes and Fashenings.

At the close of the meeting delicious refreshments were served.

The Auxiliary Ladies will again have a Bake Sale Saturday morning beginning at 10:00 o'clock. at the J. N. Day store. 1tc

NEARBY AND YONDER

By T. T. Maxey

The Majestic Columbia

BORN a Canadian, in a mountain lake formed by the melting snows which trickle down from the Purcell mountains in British Columbia, the great waterway of our Pacific northwest—the majestic Columbia—starts off in a northerly direction, changes its mind suddenly, makes a great U-shaped bend, flows south across the international boundary line and becomes an American. Winding its way south, thence swerving west, it accommodatingly acts as a separating line between Washington and Oregon and, 1,400 miles from its source, near the little city of Astoria, which claims to have been the first American settlement on our Pacific coast, loses itself in the Pacific ocean, carrying with it the drainage of an empire comprising a quarter of a million square miles.

Indian tribes are said to have suspected the existence of a great stream coming down off the continental divide towards the Pacific in this northern region, but apparently it remained for the captain of a Boston trading vessel to discover it in 1790.

It obligingly provides moisture which has transformed barren lands into blossoming orchards of renown and near Wallula meets up with the Oregon trail over which rumbled the covered wagons of the pioneers.

The outstanding feature which has made this river far famed, however, is its spectacular 50-mile-long gorge, where it flows down a mighty corridor between a row of oddly-shaped peaks on one side and a palisaded, basaltic wall, over which massive water falls drape their filmy forms on the other, producing one of the most strengely-beautiful passageways ever sculptured by the hand of nature.

* * *

Roving Ice Boxes

WISE old Nature so arranged matters that every section of the country has a natural harvesting season for its particular crop. The plan worked fine and everybody was happy for many centuries. Then it was discovered that owing to different climatic conditions home products were grown elsewhere at other seasons, hut that they could not be satisfactorily transported and marketed before spoilage set in.

To tell American genius that it can't have a thing acts as a signal to set to work to find a way to obtain it. And so, inventive genius got into action, solved the vexing problem and contributed the railroad refrigerator car, which is nothing more or less than a huge ice box on wheels, for the welfare of the nation. Nowadays it is selom indeed that one sees a long freight train which does not contain one or more of these lowly refrigerators. And so it is that we have fresh fruits and vegetables whenever we want them, no matter where we live—oranges from Florida, apples from Washington, peaches from Georgia, garden truck from Texas, meats from Packingtown, and so on.

An army of many thousands of these roaming ice boxes is on duty, day and night, year in and year out, maintaining a national distribution of table delicacies, providing a service which it would be well nigh impossible to do without and which has been the means of creating untold happiness and increasing public health.

The Marine Band

PRESIDENT JOHN ADAMS, in 1798, approved a bill which created the Marine corps. This corps included a musical division which has since developed into what we now know as the United States Marine band—often referred to as "The President's Own" band.

Philadelphia was the original headquarters of the corps, because that city was the capital of the nation at that time. The capital and the band were moved to Washington in 1800, ever since which this most ancient of military bands has played an enviable role in the life of our national capital.

This band has played at the White House reception every New Year's day since 1801; it played at the first inaugural ball on March 4, 1809, and at practically every inaugural ball since that time; it played at the White House on September 6, 1825, when General Lafayette was the nation's guest and was present when Lincoln made his historic Gettysburg speech; it played at the first egg-rolling contest on the White House lawn, at the White House weddings of Nellie Grant and Alice Roosevelt and at the funerals of Presidents Taylor, Lincoln, McKinley and Harding. Every President save Washington has heard its music.

The versatility of this world-famous organization is unusual At a grand concert in 1924, it appeared as a symphony orchestra in the first part and as a military band in the second part.

That "the music of a nation expresses its soul," it "interprets its history, its religion, its patriotism and its social customs, as do few single mediums," has been most aptly illustrated by our Marine band.

NEWS REVIEW OF CURRENT EVENTS

Congress Meets and Hears the President's Message—Hoover's Progress.

By EDWARD W. PICKARD

CONGRESS assembled Monday for the short session and both houses adjourned almost immediately in respect for members who had died. Next day they got down to business and received the President's message. In this, which was by way of being his valedictory, Mr. Coolidge reviewed the progress of the nation during the five and one-half years that he has been Chief Executive, and painted an entrancing picture of the present prosperous condition of the American people. But he put forth a warning that while we are enjoying unprecedented peace and prosperity, "it is too easy under their influence for a nation to become selfish and degenerate."

Of his recommendations to congress these are the more important:

A system of farm relief consisting of a federal farm board and stabilization corporations to handle crop surpluses, financed in the beginning by a government revolving fund.

Passage of the bill providing for fifteen additional cruisers and one airplane carrier, but without the requirement for laying them down in three years.

Ratification of the Kellogg multilateral treaty for the renunciation of war as an instrument of national policy.

A more effective law to promote the consolidation of the railroads into a few great systems.

On Wednesday President Coolidge sent in his annual budget message, and in it he asked that all proposals for new expenditures of a substantial character be rejected in order that a threatened deficit in both the current and the next fiscal years may be avoided. The budget for the fiscal year 1930 calls for expenditures of $3,780,719,647, leaving the treasury with an estimated surplus of $60,576,182. The President said that while this surplus would be small, nevertheless it was satisfactory inasmuch as it points to a balanced budget. He said there are no immediate prospects of further reduction in tax rates.

President Coolidge referred to the fact that bonds of the French government aggregating more than 400 millions, given in payment of surplus American war supplies, will mature in the latter part of 1929. In case the French government fails to ratify the war debt funding agreement which merges the war supplies debt with its other obligations to the United States, the President suggested that the amount due should be applied to the retirement of our war debts instead of being available for current expenditures.

SECRETARY of the Treasury Mellon in his annual report set forth the prosperous conditions in industry and finance. Figures of industrial production show a decrease of 8 per cent for the fiscal year owing to a decline in activity during the latter part of the calendar year 1927, but a recovery took place in the early part of the calendar year 1928 and has continued.

In Attorney General Sargent's yearly report the most interesting portion was that concerning prohibition enforcement, prepared by Mrs. Willebrandt. This admitted frankly that the government's efforts to check the smuggling of liquor across the Canadian border have been of little avail and that the traffic is increasing.

EXCEPT for the necessary supply bills, congress is not expected to pass much legislation of major importance at this session. But members of both houses were quick to get their pet schemes to the front. In the senate the Boulder dam bill was unfinished business and Senator Johnson of California was permitted to get it in a favorable parliamentary position, the original senate bill being substituted for everything in the bill passed by the house last session after the enacting clause. It was believed the debate on the measure and numerous pending amendments would take two weeks. In his message the President indicated his dissatisfaction with this legislation and intimated he might veto it unless it were made to comply with certain conditions.

Senator McNary of Oregon introduced a new farm relief bill which in general follows the lines of the much vetoed McNary-Haugen bill, but omits the equalization fee. It includes a provision for a stabilization corporation such as was recommended by Mr. Hoover. While McNary and some other senators hope to get action on this bill during the present session, it is the general opinion in congress that nothing in that line will be accomplished until the special session which Mr. Hoover promised to call.

REPRESENTATIVE BRITTEN'S attempt to bring about an interparliamentary conference with the British on naval limitation was given the approval of the house naval affairs committee, of which he is chairman, after he had energetically defended his action in addressing Prime Minister Baldwin directly instead of through the Department of State. Mr. Baldwin's reply, which was sent first to Ambassador Sir Esme Howard and which Secretary Kellogg declined to receive, was later transmitted to Mr. Britten. In it the prime minister said that the congressman's suggestion was interesting but that he could say or do nothing more about it because the United States government had not been consulted.

MR. AND MRS. HOOVER and their party made their first South American stop at Guayaquil, Ecuador. To reach the port they were transferred to the cruiser Cleveland and sailed for seven hours up the Guayas river. President Ayora and other officials met them at the pier and the army and school children paraded through the gaily decorated and thronged streets. At a banquet the President and Mr. Hoover made appropriate speeches, and next day the party, laden with gifts from the Ecuadoreans, was on its way to Peru, escorted by a Peruvian cruiser. As Mr. Hoover stepper ashore in Callao Wednesday nine airplanes swooped above the harbor and thousands of citizens joined the officials in greeting him. Troops escorted him along the concrete road to Lima, where he called formally on President Leguia, visited the famous cathedral in which is the tomb of Pizarro, and was entertained at a feast. In his address Mr. Hoover said that commercial airplane service between North and South America is the key to new understanding and friendship and he predicted that such a service will be realized within another twelve months. On the way from Peru southward the Maryland made a brief stop at Antofogasta, Chile, where an official party from landlocked Bolivia was on hand to meet the President-Elect. Valparaiso was the next port reached. There and at Santiago the Chileans extended themselves in their welcome to their distinguished guests.

SOUTHERN Chile experienced a terrific earthquake that killed more than two hundred persons and wrecked the town of Talca and its port, Constitucion. The temblor broke a big dame at Barahona and forty were drowned in the rush of released waters. Fifty more were killed in a copper mine. The government was quick to send adequate relief forces and guards to the scene of the disaster.

SKILLFUL physicians and his own brave spirit enabled King George of England about to hold his own against the attack of inflammation of the lungs, but his heart was rather weak and the doctors did not conceal the fact that he was still in danger. Tuesday the king signed an order creating a royal commission to perform his duties during his illness. He named Queen Mary as its head, the other members being the prince of Wales, the duke of York, the archbishop of Canterbury, Lord Chancellor Hailsham and Prime Minister Baldwin. This is not a regency but a council of state with limited powers to exercise some functions of royalty, chiefly the signing of documents, commissions and acts of parliament. The prince of Wales was conveyed by the fast cruiser Enterprise from Dar-es-Salaam and reached Suez Friday night. He planned to land at Brindisi and the Italian government offered a special train to carry him from there to Calais by the shortest route. The duke of Gloucester went from Bulawayo to Capetown and sailed from there on the steamship Balmoral Castle Friday.

FIELD MARSHAL SIR WILLIAM ROBERTSON took a nasty slap at the United States when addressing a meeting of the League of Nations union conference in London. "Distrust and jealousy still prevail and nations seem to learn little or nothing from the experience of ten years ago," he said. "I still fail to see how war can ever be the means of bringing lasting peace. France and Italy still consider the maintenance of large armies a national necessity. Russia continues to keep formidable military forces. Germany is fretting over what it considers its defenseless position. America, influenced by imperialistic tendencies, apparently means, whatever happens, to continue increasing its navy, and official utterances on the question bear close resemblance to those claims we were accustomed to hear made in Germany previous to the tragedy of 1914-18."

The same day Ambassador Houghton, at the annual dinner of the Pilgrims society in London, assured Great Britain and Europe that Americans and other peoples of the western hemisphere are really lovers of peace, and he pointed out that the 5,000 miles of unfortified and unguarded American-Canadian frontier are proof sufficient to the world that two peoples can live side by side not armed against each other.

ONE of the frequent peasant uprisings against the Soviet government of Russia has just been suppressed in the Minsk district by the cheka punitive detachments and sixty of the insurgents had been executed at last accounts. Before they were routed the rebels had interrupted railroad communications with Poland, burned Soviet model farms, murdered Communist village officials and ambushed the tax collectors. The Russian grain collections for November are said to have been only a third of the anticipated amounts and the government is alarmed by the decrease in Siberia, the Urals and Caucasus.

NEARLY a score of officials of Canadian distilleries were indicted by a federal grand jury in Buffalo, N. Y., as a step in fresh efforts to stop the liquor smuggling across the border. Thirty true bills were returned charging conspiracy to smuggle whisky and other intoxicants into the United States. In Detroit the government is uncovering a $2,000,000 river liquor conspiracy that involves the wholesale bribery of customs border patrol inspectors and guards by the booze runners. Already twenty or more of the inspectors have been arrested and startling confessions have been obtained.

ANOTHER big bank merger in Chicago has been arranged. The First National and its subsidiary, the First Trust and Savings, are to be merged with the Union Trust company. This consolidation will give Chicago two of the largest banks in the United States. Total assets of the First National-Union Trust combination will approach $600,000,000, total deposits will be nearly $500,000,000 and capitalization will be about $70,000,000. It will be second only to the recently announced Continental-Illinois Merchants merger.

STRIKING metal workers and their employers of the Ruhr district in Germany agreed, under pressure of the government, to abide by the arbitration of Minister of the Interior Severing, and the plants have been reopened on the previous wage scale pending his decision.

EZRA MEEKER, the last survivor of the Oregon Trail pioneers and a most picturesque figure, died last week in Seattle at the age of ninety-seven years. He took his wife and infant child over the trail in 1852.

ORCHARD GLEANINGS

WINTER DAMAGE TO RASPBERRIES

Canes Are Wholly or Partially Killed in Fall.

Winter injury on raspberries consists of the canes being partially or wholly killed some time after the plants have stopped growth in the fall. The tips of the canes are usually affected first, because this portion of the cane is the youngest wood. The extent of the winter injury is probably dependent on two factors: first, the state of maturity of the canes, and second, the degree of the fluctuation of the temperature. If the plants go into winter with a large amount of soft young wood the amount of injury is much greater than where the wood has had time to mature. Since the wood that is designed to bear the fruit is nearest the tip of the cane, it frequently is responsible for crop failures.

Such dead or injured wood affords a splendid point of entrance for wood parasites which continue the destruction of the living wood. Thus we often find the disease called cane blight, Coniothyrium fucelli, which occurs as a follower of winter injury.

The most practical way of preventing winter injury that has been observed is to lay down the canes in the fall and cover them with dirt. This may be done with a spade or by throwing two furrows together, thus burying the canes in a ridge just over the crowns of the plants. This practice has been observed to effectively prevent winter injury. If this practice cannot be followed, then every effort should be made to bring the plants into the winter condition with the minimum amount of immature wood.

Winter Pruning Points From New Hampshire

The New Hampshire station gives the following advice:

The swivel saw is becoming most popular for ordinary pruning work. Whatever implements are used, they should be kept sharp and make a clean cut, without leaving a stub.

In pruning old trees, care should be taken to thin out the small wood in the outside of the tree in order to admit more light. Thinning out the tree is a valuable help in scab control, and also keeps the tree more thrifty and productive. By pruning trees in winter fruit growers can help avoid a rush in the spring work, and December is ordinarily a time when the job can be done to advantage.

If any trees are affected by canker, all tools should be disinfected after cutting with a solution made of one 7.3 grain tablet of bichloride of mercury in a pint of water.

Control Scale Insects by Use of Lime-Sulphur

The common material used in control of all scale insects is lime-sulphur. This is a combination of stone lime and flowers of sulphur in water which, when applied to scale insects, cuts off the air supply and smothers them. Spraying for control of scale must be done at this time of year, as the material is highly caustic and will burn the foliage if applied when the plant is in leaf.

The formula is one gallon of commercial liquid lime-sulphur to eight gallons of water. Dry lime-sulphur may be substituted for the liquid where only small quantities of spray are needed. Use it at the rate of 12 or 15 pounds to 50 gallons of water. These quantities, both liquid and dry, may be increased or decreased in proportion to the amount of material needed.

Horticultural Notes

Make sharp clean cuts. Don't leave stubs.

* * *

Cut out all dead, diseased or insect-infested wood and burn it.

* * *

Do not allow fallen fruit to remain under the trees to harbor insect pests.

* * *

The first thing to learn about the red raspberry and the point to keep in mind all the time is that it suckers, like quack grass.

* * *

There is an old saying, "Prune when the knife is sharp," meaning of course that any old time is the time to prune. Fruit men know better nowadays, and confine their pruning work largely to the winter season.

* * *

The scale infests plums, peaches, cherries, apples, pears, raspberries, blackberries, gooseberries, currants, roses, lilacs and other shrubbery of like nature, also most of the shade trees.

* * *

Spraying for the control of scale must be done before the buds have opened as the solution is very caustic and will sear or burn the foliage if in leaf. It is also very hard on hands, and heavy leather gloves should be used, else the hands will soon begin to bleed

Something Reminded Her of Her Duty

"Today I am reminded of a that I have neglected, and that I let you know how wonderful been the results I obtained from use of Milks Emulsion. Nothing c have been more beneficial to me your Emulsion.

"In the winter of 1917 and 19 had a severe case of pneumonia, in the spring of 1919 I took a co I was doing some summer wor prepare myself for a college, bu the time school opened I was to to attend. I finally went to bed the rest cure. I gained a littl strength and got up by Christ but my cough never left me, a caught cold very easily and it w take a month to get over it.

"Finally, in September, 1920, I a bottle of Milks Emulsion and w you for instructions, to which you plied promptly and for which I t you. I followed the instructions c fully and soon my cough began disappear. I was able to sleep be than ever before and my appetite fierce. I could not eat enough gained in weight slowly but su but continued the use of Milks E sion, until I am a well girl today

"I went through the entire sea without a cold or a cough, and I c back into the society circle and pla all the big affairs without any ill fects. About a month ago I negle myself and took a dreadful sum cold and, being at a house part could not care for myself prope But as soon as I reached home I in on my old standby, Milks Emuls and within a week I was well.

"I have recommended it to m and if at any time I can be of help to your company by telling w it did for me, let me know. cerely, MISS KATY WALLER, Argyle Ave., San Antonio, Tex."

Sold by all druggists under a g antee to give satisfaction or mo refunded. The Milks Emulsion Terre Haute, Ind.—Adv.

Film Laboratory in Air

To expedite the delivery of n pictures, motion picture films photographs are now developed printed in a flying laboratory while route to various cities. The plane ries all laboratory equipment ne sary for developing, printing, cutt splicing and titling movie film finishing many still photographs. sides the pilot, the plane carrie staff of three.

Christmas in the Nation's Capital

The President and Mrs. Coolidge Beside a Living Christmas Tree

Chief Justice Taft

By ELMO SCOTT WATSON

HAVE you ever wondered how the leaders in our land observe Christmas, whether our President and the other high officials of our government forget for that one day in the year the cares of state and, like you and me and the friends we know, become just "plain folks," filled with the Yuletide spirit? If we have, perhaps the following news story which appeared in the press dispatches just before Christmas last year may answer the question in your mind:

Washington.—Mrs. Coolidge is planning an old-fashioned New England Christmas dinner "with all the fixings" for her family. All the details of the dinner have been planned by the first lady herself. Although she probably will not go into the White House kitchen to do any of the cooking with her own hands, she will personally arrange the dinner instead of leaving it, as she might an ordinary party dinner, to the housekeeper. The dinner will be a typical New England repast in all ways save one: the turkey will be a "tame" instead of a wild one.

The President and his family will celebrate the holiday alone. No guests are expected at the Executive Mansion. Even the Stearnses will not be present, as they were last year. John Coolidge returned from Amherst, December 20, without guests.

The White House will boast a Christmas tree all its own. Whether it will be kept exclusively for family admiration or placed in the East Room, where all White House visitors may see it, has not been decided.

Mrs. Coolidge will not give any young people's parties for her son, home on his holiday vacation, but as usual, young John will be the most popular man in the capital. He has already been besieged with invitations to parties, and the usual crop of pretty debutantes is waiting anxiously to see which he will accept.

Mrs. Coolidge has done much of the Christmas shopping for her menfolk, especially for her eminent spouse. She is the delight of the shopkeepers. She has started her shopping at 9 or 9:30 in the morning when the stores opened, made no special demand for attention, so that often clerks or fellow shoppers did not know they were literally rubbing elbows with the mistress of the White House. She usually stops later when the crowds become thick.

Following an annual custom, Mrs. Coolidge will aid in the distribution of the Salvation army's 750 baskets of food.

On Christmas eve President Coolidge will press a button that will light the capital's living community Christmas tree. He and his family will listen to carol singers before lighting the tree which has 500 lights.

It is interesting to note that phrase "an old-fashioned New England Christmas," because, surprising as it may sound, there was a time when Christmas celebrations were forbidden in the very section of the country from which President Coolidge came. For the Puritans who settled New England brought with them all their prejudices against the Yuletide celebrations, such as they had known in "Merrie England" during the reigns of Charles I and II. In regard to their first Christmas in the New world, the journal of John Bradford has this entry:

"And ye 25 day (Dec.) begane to erect ye first house for comone use to receive them and their goods."

Notice that, "Ye 25 day (Dec.)" is not even called Christmas!

On the following Christmas the governor issued a special order that everybody should keep at work on the feast day and there should be no celebration.

Thirty-nine years after the landing of the Pilgrims the General Court of Massachusetts enacted this law: "That whosoever shall be found observing any such day as Christmas or the like, either by forebearing of labor, feasting or any other way . . . shall be subject to a fine of five shillings."

The first Christmas celebration in Massachusetts was held by a royal governor, who, with all the churches shut against him, used the town house for religious services, and went with an escort of soldiers to protect him against the wrath of the citizens.

Yet in New England, as elsewhere, the jolly spirit of Christmas finally prevailed, although it was only in 1856 that Christmas was finally made a legal holiday in Massachusetts.

However, these Puritanical prejudices failed to extend to the nation's capital, which early in our history was established in a region where the old English idea of a Christmas observance of joy and good cheer prevailed so that almost from the beginning the day has been appropriately observed in the home of the Chief Executive, in a manner very similar to that in other American homes. How the successive Presidents have observed Christmas is told by Alice Rogers Hager, in an article written for the Washington Star, from which the following extracts are taken:

Jefferson's loss of his deeply-loved wife before his election and his liking for extreme simplicity made his holiday seasons quiet ones, except when some of his grandchildren came on a visit. His two daughters were far too occupied with their own families to be much in the White House (Martha Jefferson Randolph was the mother of twelve children), and it fell to the lot of the wife of the secretary of state to arrange such parties as were given. But "Dolly" Madison was equal to those occasions quite as much as to later ones.

An incident of Christmas eve, 1815, is told in the letters of Mrs. Benjamin W. Crowninshield, wife of the secretary of the navy in Madison's cabinet. "Last eve," she writes on Christmas day, "we passed at the President's—took the girls with us. Found several gentlemen there and a lady from Kentucky who is come to make a visit there. She had the parrot brought in for the girls, and he ran after Mary to catch her feet. She screamed and jumped into a chair and caught hold of Mrs. Madison. We had quite a frolic there, returning soon after 8 o'clock. Tea was brought in after we went."

Monroe, the Episcopalian, began his Christmases with service at old St. John's, and in 1819 there was great rejoicing in the restoration of the Mansion. It becomes now the White House both in name and in fact, its ugly war scars having been healed with paint, which is annually renewed. Mrs. Monroe, with her great love of punctilio and her familiarity with foreign lands, brings the formality of the court to the New Year reception, when in 1820, the House is again opened to the public.

The Christmas carols of today hark back in their popularity to the John Quincy Adams regime, when Mrs. Adams, American born and bred, but familiar also with life abroad through her association with her husband's diplomatic years, made Christmas a time of merrymaking. Bands of negroes went about the still muddy streets, singing before the great houses. Many of the old English customs were revived along with the carols. Yule logs crackled and blazed on hearths, from the White House to the lowliest cabins, and the first assembly of the season graced the week following Christmas day.

Now, the scene shifts with force and rapidity, and the frontier crosses the threshold of the south portico in the person of "Old Hickory." Despite his grief for his misjudged and sorely treated wife, dead of her indignities just three months before his inauguration, he buried his personal feelings and carried on his rough-shod way with the fortitude of the great soldier that he was.

Among his most human characteristics, his love of children was outstanding, and his grandchildren the Donelsons, and the children of Francis Preston Blair, his friend, were called in to help fill the aching void. The most enchanting tales are spun of "the General" and this juvenile group, with their tumultuous celebrations of the festive seasons

The Tylers had not only a twelve-year-old daughter, Alice, and a son, Tazewell, but also younger cousins, nephews and nieces, and again the mansion resounded to the ring of children's voices

Mrs. Coolidge Plays Santa Claus

around Kris Kringle's pleasure-laden tree. President Tyler himself directed one fancy-dress Christmas party for his tiny granddaughter Mary Fairlie Tyler, where daughter Alice, a born leader, dressed as Titania, presided from a throne specially set up for her.

Then there were Presidential Christmases for twenty years, but no children except those imported when Mrs. Pierce entertained her Sunday school with a Christmas tree. An article from the Star of December 27, 1853, gives further indication of the Pierces' holiday habits: "On Christmas day a very eloquent discourse was delivered at the Presbyterian church on Four-and-a-Half street by the pastor, Rev. Mr. Sunderland. The congregation was very large, and among those present we observed the President and his lady, both of whom were looking extremely well."

The Lincoln boys were not too old to put boyish enthusiasm into their holidays. Probably the one Christmas story that has gone round the globe from the White House is the one about Tad's indignant democracy. He found, one Christmas day, a small mob of street urchins playing rather forlornly outside the executive grounds. They looked cold and hungry to the well-fed President's son, and from the depths of a generous heart he asked them in to dinner.

Followed a battle royal with the cook, who absolutely refused to have anything to do with such "trash," Master Tad or no Master Tad! But the boy was clever as well as generous, and, like a budding lawyer, appealed his case to the Supreme court of the household. Lincoln smiled and said, "Of course, let them come," and Tad, victorious, led the gaping youngsters in to a feast such as they had never dreamed existed.

In 1868, the Patterson children, Andy Stover and Andy Jackson, Jr., had a fine ball given in their honor at Christmas time, the East Room being opened for dancing, and 400 of the youthful elite of the capital being bidden as guests. And then Jesse Grant, a few years later, had a party, though not such an elaborate one, but his master of ceremonies was none other than his uncle, General Sherman.

No special stories are extant concerning the Garfield or the Arthur children, but Cleveland brought a veritable fairyland into the old Mansion. Marrying there, three of his children were born during his incumbency, and gifts from practically every civilized nation in the world came pouring in to the feet of the little White House princesses from Santa's best diplomatic pouches. So many came, in fact, that children who had less hope of wonder in their lives benefited materially from the overflow.

The quiet of the McKinley regime went out in the scurry of the incoming Roosevelts. Christmas became a gorgeous event, along with the 364 other gorgeous days of each year. Once more Santa was hugely welcomed; stockings were "hung by the chimney with care," and a special room set aside for the presents, to which only Mrs. Roosevelt and one maid had access. The one fly in the ointment, however, for a Christmas or two, was that the President, in keeping with his conservation policy, didn't quite approve the tree idea, and the boys were keenly disappointed. Then a new Christmas came, and there was much secrecy on the part of Archie and Quentin. When the general presents had all been given out, their impatience could no longer be overlooked, and the secret came out. Leading the way to a certain closet, Archie threw open the door and disclosed his and Quentin's own private tree, which they had smuggled in and decorated by themselves. That tree became an institution, and each year thereafter, as long as the family remained in the White House, was held in Archie's room.

Some delightful tales are told on "Big Bill Taft" and his Christmas adventures when his turn came as head of the nation. On the morning of Christmas eve, 1910, Mr. Taft gave 102 fine turkeys to the married members of the White House staff, and to the single men who had no hungry mouths to feed other suitable gifts.

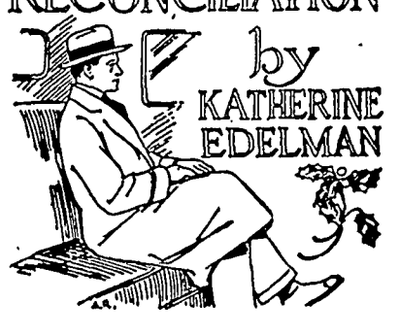
But the best moment of the day came when Christmas had just turned the corner. At the stroke of midnight a little band of singers debouched on the White House grounds, with trombone and hymn books in true "wait" fashion, and began the march up the curving walk to the north portico. A startled policeman ran hastily out to turn them back, but, seeing who they were and what they were about to do, changed his mind, and joined them instead.

Lifting their voices in the lovely chant of "Adeste Fideles," they progressed musically to the porch and there stationed themselves for a full service. In a few moments a window above their heads was raised, and the President, attired broadly in a blue bathrobe, leaned out and shouted "Merry Christmas." The window didn't stay up long, because a cold wind was blowing, but the object of the serenade stayed behind it through the entire program, and raised it again at the end long enough to call. "Merry Christmas to you, boys, and thank you very much."

"Merry Christmas, Mr. President," the singers called back as they gathered up their possessions and went away into the darkness.

The Wilson Christmases were, so many of them, war-shadowed, or very quiet because of the long illness that ended them. But when it was possible intimate friends were entertained as house guests. The custom of giving turkeys to the staff was continued, but the war made other gestures, except to the fighting men, of small moment.

A CHRISTMAS RECONCILIATION



by KATHERINE EDELMAN

PHILIP MANION pulled down the curtains of his car with an angry jerk. Then his voice snapped out a sharp command to his chauffeur: "Get off this crowded street, Jenkins; this Christmas crowd is most annoying, rushing around like insane people!"

Jenkins gave a quiet assent and soon the big car slid quietly into the wide smoothness of the boulevard. But the traffic condition of this thoroughfare was no less pleasing to Philip Manion than the rush and hurry of the business section. It seemed as if every car in town must be there.

He grew more irritated each moment, so much so that even the well trained chauffeur felt its influence. For the first time in his life Jenkins sacrificed safety to speed as he tried to get his master away from the thing that irritated him so. And the result was, as it so often is in such cases—a crash. It all happened so quickly both master and man were dumb with surprise and fright for a moment.

The after-accident crowd that comes from no one knows where had quickly assembled. Ugly threats were passed around. The driver of the twisted taxi was hurling hot words at the white-faced Jenkins. Both drivers were unhurt.

But Philip Manion was unmindful of them all. He was bending over the unconscious form of a woman who lay inside the cab. Blood was streaming from a gash on her forehead and to all appearances she lay dead.

"Oh, Clare, Clare!" Manion was crying brokenly. "It is I—Philip. Won't you speak to me? You—you won't go and leave me to live on and know I killed you?"

But no answer came to his pleas; the white lips seemed to be stilled forever. Manion covered his face with his hands and sobbed bitterly. Then some one pulled him back from the cab—a doctor had come. And in a few minutes they were hurrying to the nearest hospital.

For an hour that seemed like an eternity Manion waited for the doctor's verdict. Gone was all the bitterness and hostility toward all that had possessed him in the past two years; in their place tenderness and sympathy had come back again. He knew now the cause for the way he had been acting: he had just been trying to crush out and stifle the crying of his heart. It was the need of Clare, the stifling of his love for her, that had turned him into a hard and bitter man.

A Door That Held a Message of Life or Death.

"Oh, God! let her live?" he cried over and over. "Let her live to know that I am not the cur that she thinks I am. Let her live to know that it was stubborness and pride only that kept me away. Oh, if I had only given in and told her the truth."

A door that held a message of life or death opened very softly and a smiling doctor motioned him in. A great surge of joy filled his heart; he knew Clare was going to live. As he entered there came from the street below the voices of carol singers, clear and sweet upon the evening air:

God rest ye little children; let nothing you affright;
For Jesus Christ, your Savior, was born upon this night;
Along the hills of Galilee the white flocks sleeping lay,
When Christ, the child of Nazareth, was born on Christmas day.

As if at the sound, Clare Manion stirred softly, then her eyes opened very slowly and took in the outlines of the unfamiliar room. They fell upon the man, standing with bowed head in the doorway.

"Philip, Oh, Philip! Is—is it really you, or am I dreaming? The joy in the weak voice was unmistakable.

"Yes, it is I, Clare." Manion's voice was broken and hoarse as he sank down upon his knees by the bed. "Can—can you ever forgive me for what I have done? All I ask is a chance to atone—to show you that I can be all that you once thought me."

Next day, when the Christmas bells were pealing out their message of peace on earth and good will toward all men, no two persons felt the joy of the age-old tidings in a greater measure than they, for their hearts had opened to new understanding and faith in each other.

(©, 1923, Western Newspaper Union.)

This Mother Had Problem

As a rule, milk is about the best food for children, but there are times when they are much better off without it. It should always be left off when children show by feverish, fretful or cross spells, by bad breath, coated tongue, sallow skin, indigestion, biliousness, etc., that their stomach and bowels are out of order.

In cases like this, California Fig Syrup never fails to work wonders, by the quick and gentle way it removes all the souring waste which is causing the trouble, regulates the stomach and bowels and gives these organs tone and strength so they continue to act normally of their own accord. Children love its rich, fruity flavor and it's purely vegetable and harmless, even for babies.

Millions of mothers have proved its merit and reliability in over 50 years of steadily increasing use. A Western mother, Mrs. May Snavely, Montrose, California, says: "My little girl, Edna's, tendency to constipation was a problem to me until I began giving her California Fig Syrup. It helped her right away and soon her stomach and bowels were acting perfectly. Since then I've never had to have any advice about her bowels. I have also used California Fig Syrup with my little boy, with equal success."

To be sure of getting the genuine, which physicians endorse, always ask for California Fig Syrup by the full name.

Natural Wealth Wasted

Cuba has turned much of its former forest land over to the growing of sugar cane, says the American Tree association. The coast line of Santo Domingo, and the lowlands of Porto Rico, are dotted with plantations of cocoa, coconut and cane.

But a great deal more land has been cleared of tree growth than is ever going to be used for agriculture in the islands of the West Indies. Much of it is a wasting asset today. Porto Rico and Trinidad have depleted their once widespread forest to a pitiful fraction. The republic of Haiti has hardly a stick of accessible commercial timber.

Lucky

"Did he see the point to the joke when you put a tack on his chair?"

"No, he missed the point, he sat down on another chair."

Cole's Carbolisalve Quickly Relieves and heals burning, itching and torturing skin diseases. It instantly stops the pain of burns. Heals without scars. 30c and 60c. Ask your druggist, or send 30c to The J. W. Cole Co., Rockford, Ill., for a package.—Advertisement.

There are always firearms at hand, It seems, for those suddenly moved to kill.

Mothers—Try Mild Children's Musterole

Of course, you know good old Musterole; how quickly, how easily it relieves chest colds, sore throat, rheumatic and neuralgic pain, sore joints and muscles, stiff neck and lumbago.

We also want you to know CHILDREN'S MUSTEROLE—Musterole in milder form. Unexcelled for relief of croupy coughs and colds; it penetrates, soothes and relieves without the blister of the old-fashioned mustard plaster. Keep a jar handy. It comes ready to apply instantly, without fuss or bother.

CHILDREN'S MUSTEROLE WILL NOT BLISTER MILD

Better than a mustard plaster

AMERICA LEADS IN LIST OF DISASTERS

The things in which America leads the world include disasters. That fact was developed by the bureau of the League of Nations, which keeps a record of all disasters and aids to stricken peoples.

The disasters of record are those legally termed "acts of God," including: Earthquakes, volcanic eruptions, landslides, floods, cyclones, tornadoes, hurricanes, typhoons, droughts, tidal waves, famines, fires, avalanches, plagues of grasshoppers, locusts and the like.

The league's statistics cover the years 1924-1927, inclusive, and show the following number of disasters for the leading nations: United States, 76; Italy, 66; Japan, 57; Spain, 48; Germany, 37; France, 34; Serbia, 30; Russia, 28, and England 25.

CRITIC OF MODERN MAID SEES LIGHT

We knock and criticize her; we scold, apostrophize her, we wish that she was wiser, more dainty and refined; her path we're always stalking to criticize her talking, her clothes, her way of walking, her manners and her mind.

We say, "Oh, highty-tighty! she is frivolous and flighty and all her ways are mighty undignified to see; she joy-rides, flirts and chatters, our old-time rules she shatters and laughs at serious matters with unabated glee!"

We chide and we correct her, we shadow and detect her, we study and dissect her with all her smiles and tears, and find on looking o'er her (and learning to adore her) she's just like girls before her for several thousand years.—Boston Transcript.

Legend of Old Town Is Common Property

The Ville d'Ys (Town of Ys) derives its name from a well-known legend in Brittany. Ys is supposed to have been a great city in Brittany, built by a powerful king, Gralon, and given to his daughter. The town was protected by huge dams, and these dams, one night, as a punishment for the wickedness of the queen and the inhabitants, were stricken by lightning and destroyed. King Gralon tried to save his daughter on horseback, but was overtaken by the flood until she fell. There the tidal wave stopped and he made good his escape. The location is in the "Baie des Trepasses" (south of Brest) and it has been a common belief among fishermen till lately that on tempestuous nights the bells of the ill-fated town were to be heard. This legend of flooded towns can be found in the folklore of nearly every nation.

New Source of Power

During his research work in the invention of a new compass, Herr Karl Kolditz of Berlin made discoveries which may make it possible to use earth magnetism as a source of power. This was announced by Kolditz when introducing the compass, for which remarkable claims are made. The instrument shows immediately and exactly any deviation from a vessel's course, and at any moment displays mechanically the exact position without the need of other instruments.

Different Destinations

Great Aunt Ann had been ill for a long time and having one of her "bad spells." She remarked that she "was soon going to die, wasn't going to be here long." Little four-year-old Gene hearing this remark, asked her where she was going. She replied she was "going to heaven." Gene said: "I'm not. I'm going to Stilesville." His parents had been planning to make a trip to Stilesville.

Valued That Dime

When James Taylor was asked by Judge Joseph McCarthy, of Chicago why he had been carrying a revolver, Taylor replied that it was to protect his money. "How much money was he carrying?" the judge asked the policeman who had made the arrest. "Ten cents," replied the policeman.

Worth the Price

Science has discovered that the white of an egg contains ovomucin, ovoglobulin, ovalbumin, conalbumin and ovomucoid. Just remember that when you are stowing it away with the breakfast bacon, and be satisfied that you are getting your money's worth.—Indianapolis News.

Discovering Something

The Waitress—That, there, on the table? That's custard pie. Have some?

The Foreigner—Custard pie? And you really eat it? My word! And I always thought it was nothing but a cinema comedian's stage prop.

Is It Love?

Mable—Do you think Clarice really likes Bobby?

Alice—She doesn't know yet. She's going to that famous Vienna psychiatrist to find out.

Just a Stall

Central—What number, please?

Man in Booth—Any number will do. I just dropped in here to duck a creditor.—Judge.

No Introduction

Bill—Has he any trouble in meeting his bills?

Ed—None at all. Says he is well acquainted with them.

LIBERTY TOWNSHIP NEWS

Mr. and Mrs. Art Schoenwetter were Garner callers Monday.

Mr. and Mrs. Emil Beier were at Garner Tuesday.

Supt. Baggs was visiting schools in this locality Tuesday.

Mrs. Emil Beier visited her sister, Mrs. Emil Blumer Monday afternoon.

Mr. and Mrs. Clarence Cook visited at the Bub Haefner home Monday.

Mr. and Mrs. Chris Blumer were Sunday evening callers at the J J Lemke home.

Miss Dorothy Duesenberg of Garner spent the week end visiting at the Lew Abele home.

Mrs. Wilbur Haefner drove to Britt Saturday for the Teacher Meeting held there.

Mr. and Mrs. Emil Blumer and children were Sunday dinner guest at the John Lemke home.

Mr. and Mrs. Art Schoenwetter and Ethel were Sunday evening guests at the Will Lemke home.

Mr and Mrs. Walter Blumer and children were visiting at the Albert Hippen home Sunday.

Louie Knoke hauled hogs to Mason City Monday for Art Schoenwetter and Will Lemke.

Aug. Kroppe has been a busy man this fall, as they have been remodeling their house, adding a furnace and an electric light system.

Mrs. Ralph Upmeyer underwent a major operation at the Mercy hospital at Mason City Friday morning.

Billie Velau is the owner of a new Ford Sedan since Monday. He purchased it at the Garner Auto Co. at Klemme.

Mr. and Mrs. Carl Suckow and sons, Warren and Dean, of Garner were dinner guests at the Art Schoenwetter home Sunday.

Mr. and Mrs. Ed. Schoenwetter and children were entertained at the O. E. Carlson home Sunday for dinner.

Henry Schlei is the owner of a new Ford Coupe, buying it for his son Kermit to use to drive back and forth to school.

Earl Kahler sold a bunch of ho at Mason City Saturday, coming back with a Dodge Sedan which will surely be appreciated by the family these cold winter days.

The children of the Liberty twp Church will practice at the church next Sunday afternoon for the Xma program which will be given Xmas eve.

Quite a delegation from the Liberty Church attended the Methodist Brotherhood Banquet at Garner on last Thursday evening. Those present were Roy Schaefer, Emil Beier, Albert Lange, Herman Gast, Emil Blumer, Howard Spitler, Lew Abele, and Frank Bredlow.

Will Kirkwood had the misfortune to slip off the grade Tuesday out west of town with his oil truck. It required lots of labor and horse muscle employed to get his truck on the road and navigating again.

Mrs. Art Knoke had a major operation performed at the Mercy hospital Tuesday morning. She has been in poor health for some time and an operation her only relief. Her mother is staying at her home with the children.

Miss Lydia Beier and Grandma Beier visited Monday in Klemme at the Aug. Ridder home, going in to see Harold, who is there now, coming home from the hospital last Wednesday. It was quite an occasion for Grandma Beier as she is seldom able to get to Klemme being in her eighty-sixth year.

The ladies of the M. E. Church would like it known to the general public that they will serve a dinner on New Year's Day in the church basement. It is to be a community affair, everyone being invited. The modest sum of 25 cents will be charged per plate, but no charge for small children. All plan on attending as a social time is anticipated.

Goodell News

(By Special Correspondent)

Mr. and Mrs. J. Griggs were Garner callers Friday.

Harry Carpenter has been quite ill the past week with the flu.

Mr. and Mrs. Mike Kearney and family spent Sunday at Williams.

Mrs. Della Christie who has been ill is improving.

Evangelistic meetings are being held in the U. B. Church.

Mr. and Mrs. W. L. Sherwood were Mason City shoppers Monday.

Wm. Johnson and family spent Sunday at the H. Busse home.

A number of teachers attended a Study Center in Britt Saturday.

Mrs. Lew Wilson is staying at the White home during Mayme's illness.

The Farm Bureau Meeting was held at the Ferdinand Lemke home Friday night.

Mr. and Mrs. Allaben left Tuesday for Sunny California to spend the winter in the land of flowers.

Mrs. Harry Newgaard and Miss Beulah Smith were Mason City callers Monday.

Mrs. Zoa Christensen and daughter, Vogel, spent a few days visiting in Waterloo.

Mr. and Mrs. R. McNutt attended the Masquerade dance at Belmond Saturday night.

Mr. and Mrs. Bill Johnson and family were entertained at Henry Busse's Sunday.

Mayme Whyte is still quite ill, which her friends are quite sorry to hear.

Eslinger and Stork of Sheffield bought calves from M. J. Kearney Saturday.

Mike Kearney and son Leo, and Fernon Griggs were Mason City callers Saturday.

Mr. and Mrs. David Beckman and daughter, Mildred, of Forest City, spent Sunday at the Jay Griggs home.

The Ladies Aid held a very successful Bazaar and Chicken Supper last Saturday night They made a nice sum of money.

Mr. and Mrs. Fred Busse returned to their home in St. Cloud, Minnesota, after a few day's visit with relatives here.

Arlene Kraus was ten years old Tuesday and in honor of the event her mother treated the school children in her room, and had some of them in for dinner that evening.

Both the Klemme Reformed and the Methodist Churches in town, and Liberty church in the country will have programs Christmas eve. The young people are busy practicing.

Rev. and Mrs. Calvin Grosshuesch entertained the Misses Lenora and Mildred Wheatman last Thursday evening for dinner in honor of little Gertrude Grosshuesch who was on that day five years old.

F. A. Arnold came home Friday evening after spending a week or more at the hospital and at Dr. C. B. Tice's home. Fred is feeling fine again and is back at the bank.

L. G. Gimer is enjoying his annual vacation from his duties as manager of the Farmers Elevator and is spending some of his time in Missouri. Joe Johnson is assisting at the elevator durng L. G.' vacation.

Hot Dog! Now comes the Auxiliary ladies with the glad message that in appreciation of the fine support given them, they are going to give the public a free moving picture show some time before Xmas.

Jeff Bell, acompanied by his grandmother, drove to Illinois last Friday. Mrs. Bell had been visiting here for several weeks with relatives and friends but is now back at her own home.

R. A. Jorgenson and family and C. G. Waterman and family drove to Goodell Saturday evening and enjoyed a chicken supper at the U. B. Church. The ladies aid of that church held a bazar that day and a chicken supper. They took in about $120.00.

AVERY TWIN LAKE NEWS

Carl Wille was a caller at Garner one day recently.

Fred Wessels was a caller at the Edwin Josten home Monday last.

Edwin Thiemann spent Sunday with his friend, Verner Priebe.

John Wessels was a Belmond caller one evening last week.

Herman Priebe shipped cattle on Saturday night.

Dick Swalve was a Garner caller one day recently.

Dick Swalve was a Garner caller one day recently.

Herman Priebe was at the Henry Josten home Thursday.

Mr. and Mrs. Henry Thieman and family and Mr. and Mrs. George Thieman and family were entertained at the Herman Priebe home Sunday.

Edith Haupt called at the home of her sister, Mrs. Elmer Schlei one day recently.

Mr. and Mrs. Henry Buseman were business callers at Garner on Monday morning.

Arlene, daughter of Mr. and Mrs. Carl Wille, has been ill the past week with a cold and flu.

Many farmers attended the Bert Auchampach sale held last Thursday.

Mr and Mrs. George Buseman were visiting at the George Buseman home Thursday of last week.

Mr. and Mrs. Henry Buseman were visiting at the George Buseman home Thursday of lsat week.

Mrs Lubbe Albers and Mrs. Elko Buss visited at the Ben Swalve home Thursday of last week

C. J. Wille assisted with work at the Carl Wille home Monday of last week.

Mrs. David Schwichtenberg and Mi s Berdice Schwichtenberg were Garner shoppers one day last week.

Mr and Mrs. Paul Goll visited at at the Carl Wille home Sunday afternoon.

Edwin Josten and wife attended the Silver Wedding Anniversary of Mr. and Mrs. Henry Runge Sunday.

Mr. and Mrs. Dick Swalve and family visited at the Carl Wille home Sunday evening

Mr. and Mrs. Henry Buseman and two daughters were Mason City visitors one day last week.

Adolph Cramen accompanied friends to Mason City Wednesday of last week.

Ronald Tandy came from Ames Sunday morning and spent the day at the Emil Lau home, where he had been working the past summer.

Esther Buseman spent Saturday evening and Sunday at the home of her aunt and uncle, the Geo. Buseman family.

Mr. and Mrs. Ben Swalve, Mr. and Mrs. Peter Trampel and family, all spent Sunday afternoon at the Dick Swalve home.

A Delco Light Plant has recently been installed at the farm home of Mr. and Mrs. Dick Swalve. Some time ago they remodeled their home and with the addition of the light plant Mr. and Mrs Swalve have a very comfortable home

(Special Times Reporter)

Miss Minnie Beek spent Saturday with Mrs. Verner Nelson.

Kenneth Bell and Willo Groh started to school Tuesday morning after being absent for corn picking for some time.

Miss Vera Bachman assisted Mrs. Clarence Bachman with some work Wednesday.

John Bachman and son were callers at the Chris Anderson home on Tuesday forenoon.

John Trampel helped Fred Bachman haul some lumber from town for his new hog house, Friday.

Henry and John Beek are assisting with the corn picking at the Walter Reed place for a few days.

Mr. W. L. Mitchell is making his yearly calls for the Des Moines Tribune-Capital in this community.

Mrs. Fred Bachman was a business caller at Garner Friday morning.

Miss Irene has been absent from er school duties all ths week due to a bad cold.

Will Bachman was a caller at the Clarence Bachman home Tuesday forenoon.

Jule Cook was a business caller at the Rob Roths home Friday afternoon.

Dorothy and Robert Marshall spent Friday at the D. A. and Herb Marshall home.

Rob and Tom Roths did some shredding for Jule Cook Saturday and for Clarence Bachman Monday.

Mrs. Tom Roths and sons spent Friday at the home of Mrs. Frnak Roths.

Julius Groh assisted with the shredding at the Ted Dutheridge farm one day last week.

Mr Will Bachman and daughter, Lela, were business callers at Mason City Saturday

The Will Bell family have been enjoying a visit from Zeph Hitts and daughter, Etta, of Clinton, Ill Mr. Hitts is a brother in law to Mrs Bell.

Mr. and Mrs, Herbert Marshall and daughter Irene were visiting at the Clyde Marshall home Sunday.

Mrs. Will Bachman and Miss Minnie Beek assisted with some work at the Clarence Bachman home Monday.

Quite a few from this vicinity attended the public sale of Bert Auchampach's that was held last week Thursday, as advertised in the Klemme Times.

Mrs. Tom Roths and sons were visiting with Mrs. Ernest Helps on Thursday, while Tom attended the public sale held that day.

Mr. and Mrs. Peter Trampel and family and Mr. and Mrs. Ben Swalve Sr. were visiting at the Dick Swalve home Sunday afternoon.

Peter Trampel and son John were business callers at the home of Sicus Trampel Jr. of Williams, Monday.

Tom Nelson Jr., Henry Helps and son, Dwight and Verner Nelson were business callers at the Peter Trampel farm Friday.

Henry Helps and son, Harlow shelled corn for Dave Ross Saturday. The hauling was done by trucks.

Some of these who helepd Verner Nelson haul hogs Saturday were Dwight Helps, Peter Trampel and son, John, and Johnnie Trampel.

Corn picking is in full swing again for those who have not yet finished, as the snow is mostly all gone out of the fields.

Mr. and Mrs. Watermiller and sons of near Meservey were visiting at the Peter Trampel home Monday evening.

Mrs. Henry Buseman and daughter, Leona, and Mrs. Geo. Buseman assisted Mrs. Frank Roths cook for shredders Friday.

The children in Avery No. 2 did not have school last Monday because the carpenter from Garner had some work to do on the new school house yet.

The Damage Suit

"How did you feel when the court awarded you $50,000 for your injuries?"
"I was so happy I threw away my crutches."

There were a lot of people in our town Saturday night and merchants reported a brisk business. Now is the time to do your Xmas shopping, not many days are left.

Roy Bachman of Goodell is busy putting up a nice big hog house for his uncle, Fred Bachman.

The Power of the Christmas Seal

In 1927 millions of Christmas seals were sold in this country to control and prevent tuberculosis, but in 1904 they originated in a small way to give shelter and a chance for health to a group of tuberculous children in a foreign country.

At that time a children's hospital was needed in Copenhagen, Denmark. Einar Holboell, a postal clerk in that city, heard of this and decided that stamps designed to decorate Christmas letters and packages could be made to finance the cost of the building. He won the endorsement of the Danish royal family, and the first Christmas seal was designed and placed on sale in the post office.

MISS EMILY P. BISSELL

Jacob Riis, a pioneer in social service in America, received a letter bearing one of the little stamps and inquired about its purpose. Impressed by its possibilities, he wrote an article that was published in the "Outlook" in which he described what the stamp had achieved in Denmark. In that article, Miss Emily P. Bissell, of Wilmington, Delaware, found the solution to her own problem; namely, how to raise $3,000 for a tuberculosis pavilion in her state.

As a result of this first successful sale held in December, 1907, Miss Bissell was able to induce the authorities of the American Red Cross to undertake a nation-wide sale of tuberculosis Christmas stamps in 1908.

1907 SEAL

1928 SEAL

To strengthen the work of the National Tuberculosis Association, then a young organization, the American Red Cross joined forces with it for the purpose of conducting the Christmas seal sale jointly.

The partnership between the American Red Cross and the National Tuberculosis Association lastod for ten years. During that time only the scarlet emblem of the American Red Cross appeared on the annual issues of Christmas seals. In 1919, however, the double-barred cross, international emblem of the anti-tuberculosis campaign and trade mark of the National Tuberculosis Association was also embodied in the seal. In 1920 the relationship between the two great organizations was finally dissolved and since then only the double-barred cross has appeared on Christmas seals. The new arrangement was made because the American Red Cross desired to continue its annual Roll Call, begun in the years of the Great War, and because it did not wish to appeal to the public for funds twice a year. Since 1920 the seals have been known as "Tuberculosis Christmas seals." There is no longer in the United States any "Red Cross seal."

Through the power of the Christmas seal, state after state has been organized to attack tuberculosis with a scientific program. Together, led by the national body, they have brought into existence nearly all of the present-day community machinery that combats tuberculosis.

As the money raised by the Christmas seal is not sufficient to build and conduct hospitals, clinics, open air schools and other necessary measures, the tuberculosis association's program consists largely of preventive work and of arousing public opinion to the need for institutions that can be maintained by official agencies, state, county, municipal or federal. Through the Christmas seal, health laws have been passed and are being enforced; tuberculosis specialists and nurses reach the most remote country districts; printed matter on disease prevention is circulated in schools, homes and factories.

The Christmas seal has become an annual institution. The little stamps help to pay for our own and our families' health protection. They help to control the sources of infection especially to children, to teach health habits and to prevent economic loss due to the death of producers. Surely, the power of the Christmas seal penetrates deeply into human life and happiness.

LIVE STOCK

LAMBS PICK UP FAST ON MIXED BARLEY

Mixture Can Be Used to Produce Efficient Gains.

Barley is a good feed for fattening lambs, and with the present spread in price between barley and corn it can be used to produce cheap and efficient gains on lambs. This is the announcement of E. J. Maynard, associate animal husbandman of the Colorado Agricultural college.

"A ration of barley and alfalfa hay, however, does not give as good results as when some other feeds are included," Maynard adds. "Cut corn fodder, wet beet pulp, corn silage and beet molasses were supplementary feeds which showed up to good advantage with barley and alfalfa in a recent fattening test at the Colorado experiment station."

In the experiment the increase in gains secured by feeding lambs the different supplementary feeds, and especially beet by-products along with alfalfa and barley, were particularly noticeable.

The addition of a pound daily of ground, dried corn fodder reduced the alfalfa consumption 50 per cent and at the same time increased the gain per lamb 20 per cent.

Five and one-half pounds of wet beet pulp per day, fed with barley and alfalfa, produced a 40.2 pounds average gain in 106 days, shortening the fattening period by three weeks. Corn silage fed at the rate of two pounds daily improved the barley and alfalfa combination and saved considerable hay, while a cut mixture of barley, beet molasses, cottonseed meal and alfalfa produced much larger gains than where barley and alfalfa were fed alone.

An improved strain of barley was shown to be about 10 per cent more efficient than a common barley for lamb fattening. Comparison of whole and steam-rolled barley showed that while there was a slight advantage in the fattening qualities of the steam-rolled, this advantage amounted to only 30 cents a ton, and the cost of rolling the barley was $2 a ton.

"These results bear out the general contention that 'sheep with good teeth can grind their own grain," Maynard points out.

"Marketing grains and roughages through live stock has proved to be the most advisable plan for the farmer. If feeding operations are based on home-grown roughages and an adequate value figured for the manure produced, the element of speculation is largely eliminated.

"Barley production is increasing in Colorado, and the grower should be able to secure the highest total value for this crop by feeding it on his place in a well-balanced ration."

Fattening Hogs for Home Meat Supply Pays Well

The majority of hogs that are fattened in Arkansas are fed for home slaughter. Many of them have been cheaply raised on pasture and general waste from the farm. The last 100 pounds in weight, however, usually must come from high-priced feeds, declares M. W. Muldrow, University of Arkansas college of agriculture extension service. As a rule very little attention is paid to the cost of producing the gains made on these hogs. Only a few to the farm are fed, and if the cost of production runs higher than would be profitable if the hogs were to be sold, there is no apparent loss, but in reality the owners have used up unnecessary feed which must be replaced or which could have been sold. Particular reference is made to those hogs which are fattened on corn alone or corn and shorts alone. Gains possible from cull sweet potatoes, or such crops, could be increased by a judicious combination with other feeds.

Poisonous Effect of Sweet Clover Hay

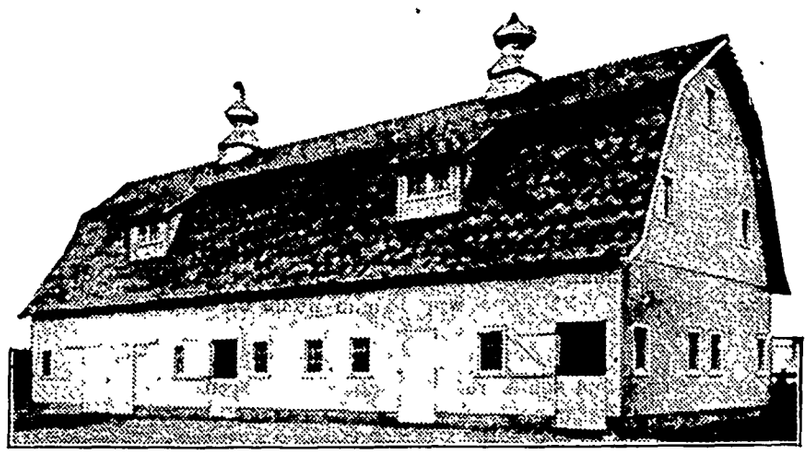
Sweet clover hay cut and cured from the second year's growth is not always a safe feed for cattle. During the last few years since this crop has come into quite general use and farmers have put up hay from the second year crop many unfavorable results have been reported. Under certain conditions the clover has an effect upon the blood that prevents it from clotting. For example, quite a number of cattle that have been fed heavily on sweet clover hay have bled to death after dehorning, castration or other surgical operations because the blood failed to clot.

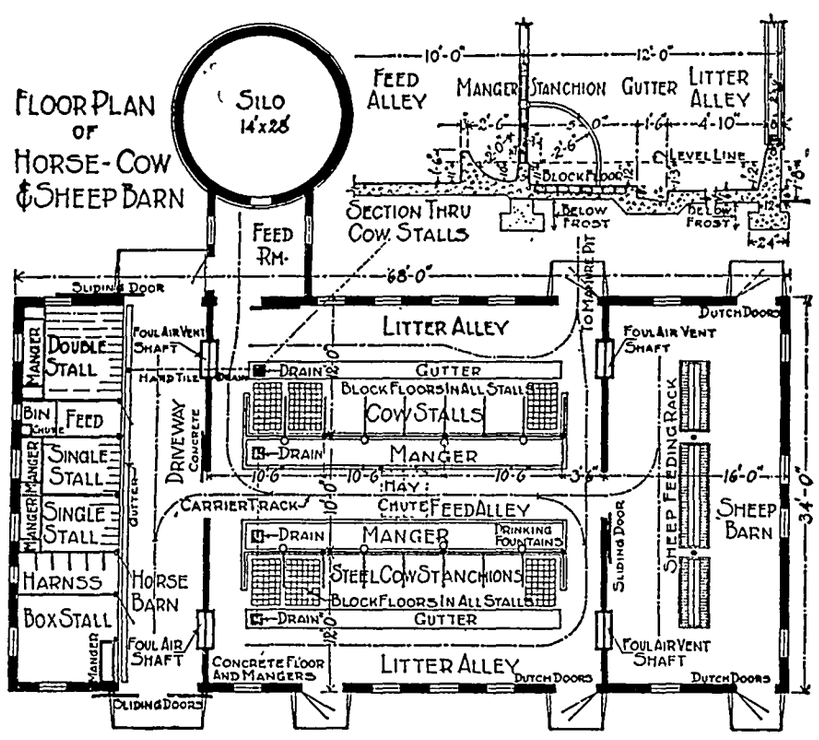
Hogs Refuse Barley

Inferior quality of barley is the reason hogs will not eat it readily, according to Rex Beresford of Iowa State college, who has been working on the problem since numerous reports came in that hogs refuse to eat this year's crop.

Much of it is not fit to feed, but where it is not too inferior it is safe to feed, and hogs may be induced to eat it by mixing it with oats, tankage, molasses or some other palatable feed.

Combination Dairy, Horse and Sheep Barn Is Good Investment





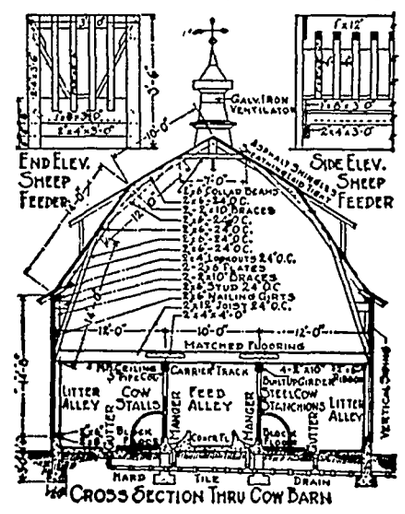
By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

This combination barn is 34 feet wide and 68 feet long and provides complete housing for dairy cows, horses and sheep. The horse barn is at one end of the building, the sheep barn at the other end and the dairy barn in the central portion. While the dairy barn is entirely separated from the horse and sheep barns by partition walls, the equipment is so designed that it can be used to lighten the work of caring for the other live stock as well as the cows.

The plan, section and detail drawings show not only the general layout of this building but also the type of construction and equipment, which are thoroughly modern in every detail. The cow stalls range along either side of a central feed alley and are equipped with block floors, steel stanchions and concrete mangers and gutters. The feed alley is equipped with an overhead track carrier as are also the litter alleys at the back of each row of stalls. These tracks are carried on through the partition doors into the horse and sheep barns to be used in tending the other stock.

There are water cups at the stall heads in the dairy barn so that each cow may have a clean, fresh supply of water. The building is well lighted by windows along the full length



CROSS SECTION THRU COW BARN

of the side walls so that, if properly placed in relation to directions, the stock will get full benefit of the sunshine. There is a modern system of ventilation to carry off the odors and provide clean fresh air too for all parts of the building.

Under the roof there is a big loft for hay and feed and at one side, and connected with the dairy barn by a feed room, there is a silo to serve the needs of feeding the dairy stock.

Heat Regulator Keeps Temperature Healthful

Experiments by noted public health authorities have confirmed the conclusion that we catch cold chiefly because we live in a dry, overheated atmosphere during the winter months. These authorities say that overheating weakens the tissues of the nose and throat so they cannot stand the shock of sudden temperature change when we leave a heated room and go outdoors.

Certain it is that in many homes the start of the heating season means one cold after another. Summer bloom leaves the cheeks of the children, and the entire family seems to "slow up." It is not too much cold outdoors, but too much heat in the home that causes the trouble.

Overheating may be prevented if the home heating plant is equipped with an automatic heat regulator. This device maintains a steady, even temperature without the need of anyone touching dampers or drafts. A clock control rouses the fire early in the morning so rooms are warmed when it is time to dress. The heat regulator almost always brings fuel savings that within a short time pay for it. Like many other permanent improvements for the home, this equipment may be purchased on a budget plan.

Linoleum Can Be Painted Like Wood

Linoleum floors are generally subject to great wear and tear and for this reason it is often a problem to keep them fresh and attractive. But linoleum (except the kind that has originally been "waxed" by the manufacturer) can be successfully painted and in this way given new life and color. If varnish is applied after the paint is dry the finish will be even better. Varnish is equally valuable for new linoleum, as it always protects the surface and simplifies cleaning.

Window Frames

If your window frames are not accurately made, your home will be uncomfortable. Unless each part fits exactly the frame permits cold air to enter the house.

Here's Way to Get Dead Black on Iron

The question is often asked, how can I produce a dead black on iron work?

The answer is, the iron work should first be primed with a suitable primer; for example, 100 pounds of red lead and two and one-half gallons linseed oil. If boiled oil is obtainable, the use of one-third boiled and two-thirds raw is advised. If not, raw oil may be used. In this event, a sufficient amount of dryer should be added.

Second or body coat should next be applied after the primer has thoroughly dried. A suitable formula for this would be 100 pounds red lead, twelve ounces lampblack (ground in oil), and two and five-eighths gallons linseed oil.

After the body coat has thoroughly dried, apply a coat of superfine lampblack thinned with turpentine to which a very small amount of varnish has been added to form a good bond. The result will be a flat black. If the black is to be used as gloss for exterior, the addition of a suitable amount of exterior varnish would be advisable.

Concrete Can Be Used for Floor in Home

When a fireproof residence of masonry construction is erected it is customary to construct the floors of either portland cement or gypsum concrete.

This same construction is largely used in light occupancy commercial buildings, schools, hospitals and buildings of similar character.

Such floor and roof slats are formed by simply pouring the concrete to the specified depth over a ribbed metal lath, which is attached to metal joists. The surface then is finished off in one of many possible ways—with wood, linoleum, composition flooring, etc.

Both portland cement concrete and gypsum concrete are incombustible. However, the latter is the lighter by about 50 per cent, and if a floor or roof-slab of gypsum concrete is specified while the plans for the structure are being drawn, it often makes possible a considerable saving on steel.

DAIRY FACTS

EXPERIMENTS IN CATTLE FEEDING

Need Mineral Supplements With Poor Roughage.

When poor roughage is fed to dairy cows mineral supplements are shown to be necessary in a recent publication of the Wisconsin experiment station. Three cows fed on timothy hay, corn silage and a grain mixture were poor producers of milk. In addition they were slow to breed and when bred they tended to dry up from six weeks to two months earlier than three cows fed on alfalfa hay.

Another test on minerals showed that cows producing from 50 to 60 pounds of milk daily without direct exposure to sunlight were unable to maintain a calcium balance in their bodies even though the ration was otherwise adequate. When the cows were exposed to sunlight for six hours daily they decreased the loss of calcium from their bodies by 25 per cent.

In a comparison of soy bean hay versus alfalfa hay the cows produced approximately the same amount of butterfat and milk but the cows on soy bean hay gained only half as much body weight and wasted more of their hay. The results of this test, which does not check with tests run at some other stations, shows that soy bean hay was calculated to be worth 73 per cent as much as alfalfa hay.

In this connection it is interesting to note some experiments that were conducted in chopping alfalfa and soy bean hay. No advantage was noted in chopping alfalfa, but the cows wasted less of the soy bean hay. This caused the chopping to improve the value of soy bean hay by 23 per cent. These figures indicate that it may prove profitable to chop soy bean hay when used for feeding dairy cattle.

Modern Dairy Barn Must Have Good Ventilation

It must not be forgotten that each cow in the stable actually gives off from her breath alone about ten pounds of carbondioxide per day and over two gallons of water. Hence, it is perfectly obvious that in the modern dairy stable there must be some system whereby this used, moist, foul air may be regularly taken out of the stable and replaced by fresh air. During the winter months, the occasional opening of doors and windows will help but how often is this done during winter months, and needless to say it is never done during the night.

King and other authorities on stable ventilation have estimated that there should be a continual air flow through the stable at the rate of about 3,600 cubic feet per cow per hour. In other words, in a cow stable 36 feet by 50 feet with an 8-foot ceiling, there should be a sufficient flow of air so that one-quarter of the air would be replaced every hour or that the air be completely changed in the stable six times per day. If this were done by the opening of doors and windows, the resulting changes of temperatures, chills to the animals, etc., would obviously be courting disaster. Hence, a regular system whereby such a change of air will go on continuously and still allow the maintenance of uniform heat conditions, should be the ambition of every one installing a ventilation system.

Well Bred Calves Most Valuable Dairy Asset

Calves from low producing stock are worth little more than their value for veal, but those from high producing strains must be assigned much greater valuation, as they command excellent prices as breeding stock.

In the keeping of high producing animals there are, of course, added expenses such as increased depreciation and risk, increased labor in caring for the animals, and expenses of advertising and selling; but it will generally be found that the value of the calves produced from such stock will more than offset the added expense of raising them over and above that involved in the keeping of common stock.

Cold Hampers Cow

A high producing dairy cow cannot continue normal production if she is exposed to severe weather. It is, therefore, important if good yields are expected to hold up through the cold months, that all discomforts be eliminated. A comfortable cow will more than repay for added labor for her protection. Milk is 87 per cent water, and a large part of this gets into the animal's system from the water trough.

Quarters for Cows

In addition to proper feeding, dairy cows will need good quarters if they are to produce maximum returns for their owners. Dairy cows do not have long hair or surplus fat to protect them from cold weather. They are more sensitive to cold winds, drafts and poor quarters than any other kind of farm live stock, unless it is the poultry. Warmth, comfort, ventilation and sanitation should receive consideration in fixing up the dairy barns or sheds for the winter months.

That Million-Dollar Feeling

"Gee, Estelle, I went to three dances this week. I sure am all in."

"Take NR tonight, Marie. You'll feel like a million in the morning."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT TOMORROW ALRIGHT

MAKE THE TEST TONIGHT

BE WELL and HAPPY

Get Relief. *Drive Out the Poisons*

Auto-intoxication, Constipation, Biliousness, are caused by defective elimination. For over thirty years Nature's Remedy (NR Tablets) has proven the safe, dependable relief for these conditions.

GET A 25¢ BOX — SOLD BY YOUR DRUGGIST

Hardest Known Metal Is American Product

A new metal so hard that it will bore smooth holes in concrete, or cut screw threads in a glass rod, was exhibited for the first time at the recent convention of the American Society for Steel Treating at Philadelphia. With present-day tools such feats are difficult or even impossible. The new material, known as carboloy, and consisting of tungsten carbide, a compound of tungsten and carbon, and cobalt, a metal like nickel, is the invention of Dr. Samuel L. Hoyt of the research laboratory of the General Electric company. It is so hard that it will cut glass like a diamond, and will even scratch a sapphire, which is next below the diamond in the scale of hardness. Ordinary steel tools are quickly worn down when held against an emery wheel, but the new metal itself wears down the wheel.

Men forgive behavior in a man who is drunk that otherwise would make them his enemy for life.

One who is a poor judge of horse racing shouldn't bet other people's money on it.

Turning Pest Into Profit

For years we have heard of the enormous damage rabbits do in Australia. Women have, however, transformed this pest into a national asset.

Five years ago there was not a machine in Australia to convert rabbit skin into what is known as "coney." Today a hundred concerns employ about fifteen hundred persons and $2,500,000 capital in the production of fur goods, creating a new local industry that is worth millions.

The fur garment in Australia has now been made a popular article instead of a costly luxury.

Turf Item

Friend—Did you get your husband to see a specialist, as I advised?

Sporting Wife—Yes, and he said John's system was all wrong, which, of course, was no news to me—John never backed a winner all last season!

It is dangerous to pause anywhere in life and ask yourself, "What is all this for?"

Usually, no one is interested in the dialect in a novel if he isn't familiar with that dialect.

The nurse tells you to take Bayer Aspirin because she knows it's *safe*. Doctors have told her so. It has no effect on the heart, so take it to stop a headache or check a cold. For almost instant relief of neuralgia, neuritis, rheumatism; even lumbago. But be sure it's Bayer—the *genuine* Aspirin. At druggists, with proven directions for its many uses.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

y Eight States Have Tak- en Action to Protect Car Owners.

though motorists spent $2,350,- 0 for gasoline and oil in 1927, ight states have taken action to et car owners from short meas- Charles M. Hayes, president of Chicago Motor club announces. recent survey by the American obile association revealed that otoring public is fleeced of ap- imately $20,000,000 a year through t sales' of motor fuels," Mr. s pointed out. "It is deplorable so few states have made provi- for checking the sales of 317,000 stations and 604,000 pumps that in operation last year.

States Check Sales.

The eight states that check these are California, Indiana, Massa- etts, Michigan, New Jersey, New and Ohio. Illinois is one of twen- e commonwealths which have ed protective legislation but are out sufficient appropriations with ch to enforce those laws.

The states in need of such legisla- are: Arkansas, Colorado, Dela- e, Florida, Georgia, Idaho, Iowa, tucky, Louisiana, Missouri, Mon- , Nebraska, Nevada, New Mexico North Dakota. Thomas P. Henry, ident of the American Automobile ociation, urged in a bulletin ad- ssed to 1,065 motor clubs affiliated h the A. A. A., that a program be ched immediately to check the es sustained by motorists in pur- ing gasoline and oil.

Recommendations Made.

The principal recommendations of e national motoring body are, first, mediate adoption of new legislation weights and measures by those tates wherein there is no law of this rt or the existing legislation is in- dequate; secondly, the creation of tate and local enforcement organiza- ions with an efficient personnel; thirdly, sufficient appropriations by the legislatures to enable the organi- ations to operate efficiently every day of the year.

"It is expected that the National Conference on Weights and Measures, the United States bureau of standards, and responsible gas and oil companies and filling station owners, will lend their maximum co-operation in a de- termined drive to rid the highways of dishonest proprietors and pilfering pump attendants."

Painting Often Causes Trouble to Automobile

The idea of having a mechanical trouble following the painting of the car does not occur to the average mo torist, yet such trouble frequently de- velops.

This is because the painters must remove certain trimmings of the car, particularly the lights. This means disturbing electrical wiring.

Batteries may run down and oc- casion starting and ignition trouble if the painters have been careless. Sometimes paint gets into places for which it was not intended.

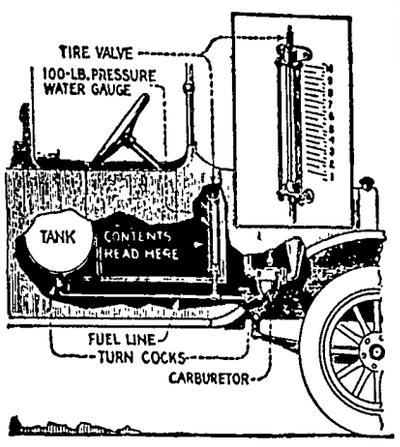
Since the popular method of re- finishing cars today is by spraying on lacquer, it is customary to strip a car even to the point of taking off the door lock. Speed being the big asset of this process, it is apt to be carried too far and to the point of giving the motorist some mechanical or electrical troubles when the job is completed.

Adjust Steering Column to Suit Whole Family

New cars that have the advantage of adjustable steering columns are fall- ing into the hands of thousands of au- tomobile buyers at this season. If more than one member of the family is to drive the car, it is an excellent idea to have the steering wheel set at an average adjustment, usually the middle position of the three available. Here it will be found to be approxi- mately right for the smallest as well as the tallest member of the family driving force.

Gauge for Gravity-Feed Type of Gasoline Supply

A number of automotive vehicles are fitted with gravity systems for fuel supply, particularly trucks and cars used for commercial purposes. The drawing shows an installation which provides the driver with a gas gauge on the instrument board, and a clean-out pipe to enable clearing the fuel line in case it is clogged. A T-fitting is inserted at the point indicated, and a 100-pound pressure water gauge is attached here so that its bottom is level with that of the gasoline tank and the gas in both will reach the same height. Turn cocks are provided at the tank and at the carburetor. A tire valve is fit- ted to the top of the gauge, which



Gasoline Gauge for Gravity-Feed Type of Gas Supply Installed on Instrument Board.

is graduated in gallons by starting with an empty tank and adding one gallon at a time until the tank is full. A file can be used to make the marks on the gauge. To clean out the fuel line, attach the pump above the gauge and alternately open and close the turn cocks. The air pressure sup- plied will then force out the obstruc- tion.—Popular Mechancis Magazine.

Billions Spent Yearly for Automobile Service

Motorists of the nation spend over $5,000,000,000 annually with service sta- tions and repair shops, according to Richard Harfst, manager of the De- troit Automobile club.

Mr. Harfst bases his statement on figures furnished by the research de- partment of the American Automobile association, which show that in 1927 more than $5,250,000,000 was spent with service stations and repair shops by automobile owners.

"This staggering sum," Mr. Harfst points out, "was divided as follows: Parts and service supplies, $950,000,- 000; tires for replacement, $925,000,- 000; fuels and lubricants, $2,350,000; and service labor, $1,092,000,000. In 1919 the total amount spent was $2,- 125,000,000, while in 1926 it had in- creased to $4,815,000,000."

AUTOMOBILE HINTS

Automobile production is now France's greatest industry.

* * *

Does anyone know a centenarian who attributes the fact to insisting on the right of way?

* * *

Since motorization, the old-fashioned sign "Look Out for the Cars" has tak- en on considerable territory.

* * *

Cars today cost 29 per cent less than before the war. Commodities in general cost 67 per cent more.

* * *

The automoblie industry ranks first among all United States manufactures, rated according to wholesale value of production.

* * *

"Well," said the motorist, as he parked the car at the home place, "I haven't killed anybody today—that is, not that I know of."

* * *

The reckless auto speeders are more careful now at the railroad crossings. They've transferred the most of the tragedies to the city streets.

* * *

Honey can be used in the auto radi- ator as an anti-freeze mixture. Mix with an equal volume of water, boil half an hour, and skim. It is safe down to 25 below zero.

MOTOR CYCLE WITH COMFORTS OF AN AUTO

Mr. A. V. Roe, the famous airplane designer and pilot, seated in his unique motor cycle which has all the comforts of an automobile. It has a three- horse-power Villiers engine, is shaft driven and can attain a speed of 60 miles per hour. The steering is similar to that of an automobile and the driver sits on an upholstered seat and back.

Certain Legumes Improve Soils

Cowpeas and Soy Beans as Effective Fertilizer as Manure.

Anyone having a field which he is not going to use for producing a mar- ket crop this year might find it a good plan to improve the soil by sow- ing cowpeas or soy beans, suggests H. R. Cox, specialist in farm crops at the New Jersey State College of Agriculture, New Brunswick. It is cheaper to grow these crops than to use ten tons of manure to the acre, and they are considered as being prac- tically as effective as this amount of manure if the right kind of fertilizer is used on the market crops of the following year.

Soy Beans Cheaper.

Soy beans are cheaper than cow- peas by about 50 or 75 cents a bushel. Soy beans are, therefore, a better crop to use for this purpose. In the case of soy beans it is desirable to inoculate if the field has never raised them before. One may buy commer- cial inoculants or he may use the "seed and soil" method. This method consists in mixing a bushel of slightly moistened seed with a quart of soil taken from a field which has raised soy beans successfully in recent years.

Drill or Broadcast.

Soy beans or cowpeas should be drilled, but if a drill is not available, broadcasting by hand and harrowing will do. Five pecks to the acre drilled or six pecks broadcast by hand is a good rate of seeding. An appli- cation of a complete fertilizer high in phosphoric acid and potash and low in nitrogen may well be made at the rate of 300 to 400 pounds per acre. When the crop is beginning to mature, plow it under or disk it in and sow rye or rye and vetch as a winter cov- er crop. A surprising improvement in the fertility of the field will result.

Labor Cost Is Big Item in Production of Milk

In large herds labor is usually the second most important item in the cost of milk production. From the keeping of cost accounts in many sec- tions of the country the amount of la- bor required in caring for a cow has been found to range from 100 to 175 hours per year. Under average condi- tions the care of a cow for a year may be considered equivalent to about 15 days' work.

On general farms where only a few cows are kept no additional labor is hired for their care. The work is per- formed either by the farmer at the time of day when it does not inter- fere with the field operations or the cows are cared for largely by the chil- dern of the family before and after school hours. Thus the keeping of a few cows provides employment for un- paid labor, contributes a considerable proportion of the family living and adds to the farm income. The amount of labor expended depends upon sev- eral factors, among which the size of the herd, convenience of barn and milk house, distance from market, and cleanliness of milk produced, are im- portant.

Sell Cream to Creamery Before It Is Real Sour

Allowing cream to become real sour before delivering it to the creamery houses lowers the grade of butter made from the cream and makes the taking of an accurate sample for de- termining the butterfat content of the cream more difficult.

Cream is not pure butterfat. It con- tains moisture even when the test runs high. When the cream is exposed to a temperature of 70 degrees Fahren- heit or above, some of this moisture evaporates. This lessens the weight and volume of the original sample of cream. It does not increase the orig- inal amount of butterfat which was in the container. When a can is filled with cream which has thus parted with some of the water, it naturally brings a larger income than a similar amount kept at lower temperatures.

Allowing the cream to become real sour may induce more variation in test than if it is cooled after each separa- tion before adding to other cream. There is nothing to be gained from selling very sour cream.—G. A. Will- iams, Purdue university.

Agricultural Hints

Most wheat growers who use com- mercial fertilizers commonly drill the fertilizer directly with the wheat.

* * *

Calves are like human babies. Some are so husky no abuse could kill them, while others must be handled like soft- shelled eggs.

* * *

A good time to lime the soil that needs it is when preparing for the corn crop. Plow down the clover and before disking spread the lime.

* * *

An eight-year-old Holstein cow at a farm near Petersboro, Ont., estab- lished a record by producing 19,609 pounds of milk and 819 pounds of but- terfat in 305 days.

* * *

Where alfalfa has winter-killed soy beans can be grown as a sub stitute for the year, say authorities at the Minnesota Agricultural Experi ment station. Soy beans increase but terfat in the milk.

ATWATER KENT RADIO

WHEN another Christmas rolls around—and another—and another—your family will still be enjoying this beautiful and sensible gift.

2,000,000 families have Atwater Kent Radio. Many of them made their purchases last Christmas. "We felt this was the thing that would please the whole household—now we *know*," they say.

You, too, want entertainment without trouble. You want to hear good music and good talks—you always get what you want from "the radio that keeps on working."

All-electric

If you have electricity from a central station, there are several Atwater Kent models you can operate right from a lamp socket. If you prefer an all-in-one cabinet set, with receiver and speaker combined, the dealer will let you try the wonderfully compact Model 52. They're all made wholly by Atwater Kent in the world's largest radio factory—as big as a 15-acre field!

Modern battery sets, too

"We haven't electricity, but we want good up-to-date radio just the same." Of course—and no reason why you shouldn't have it! Atwater Kent battery sets have the 1929 refinements. You'll recognise them when you listen. Your choice of two mod- els—one for average conditions, one for unusual "distance."

Either kind—all-electric or battery—gives you the best in radio at a moderate price. See an Atwater Kent dealer about that Christmas radio—Now!

"Radio's Truest Voice" Atwater Kent Radio Speak- ers: Models E, E-2, E-3, same quality, different in size. Each $20.

Battery Sets, $49—$68

Solid mahogany cabinets. Panels satin-finished in gold. FULL-VISION Dial. Model 48, $49; Model 49, extra-powerful, $68. Prices do not include tubes or batteries.

MODEL 40

For 110-120 volt, 50-60 cycle alternating current. Requires six A. C. tubes and one rectifying tube, $77 (without tubes). Model 41 D. C. set, $87 (without tubes).

On the air—every Sunday night—Atwater Kent Radio Hour—listen in!
Prices slightly higher west of the Rockies.

Too High for Them

"I wonder why the girls don't like Bill? He's always so full of lofty thoughts."

"That's just it. Whenever he goes to a show, all he can think of is gal- lery seats."—Stray Stories.

Give Her a Chance

Hubby—My, but this egg's bad!

Wifey—Well, dear, perhaps it's one by a young hen without much expe- rience.—Pathfinder Magazine.

A girl seldoms disagrees with a man just before Christmas.

Provision in season makes a good house.

Meteorite Causes Worship

That the fall of the meteorite near the village of Kanth, India, which killed two men and injured a third, is a sign of divine wrath, is believed by natives of that country. As a result many devotional ceremonies are being held. The meteor is reported to have made a hole in the ground 10 feet in diameter and 20 feet deep. The sound of the fall was heard for 20 miles. The government is investigating.

A young man of twenty-three who has saved $1,000 has really performed an unusual feat.

Possession is eleven points of the law.

To Bring Back Forests

The West Indies do not cover much of the earth's surface, and with the possible exception of Santo Domingo are not going to be important export- ers of timber, says the American Tree association. But they have an inter- est, because spread out like the pages of a book are the results of past cen- turies of devastation. They are inter- esting, too, because of what the vari- ous nations are trying to do to bring back this almost totally destroyed forest resource.

Natural Question

"Yes, bridge is his favorite topic."

"What is he—an engineer, dentist or card shark?"

Klemme Co-Operative Grain Co.

News of Klemme and Vicinity

Mr. and Mrs. John Spitler of Belmond were Klemme callers Monday.

Ben Swalve was at Garner Monday having dental work done.

Ruth Johnson returned to work at Mason City Sunday.

Wayne Lemke, of Mason City, pent Sunday at ohme.

Jim Gilbert of Algoha was in Klemme Monday.

Wm. Schlawin went to Des Moins Wednesday evening.

Dave Ross of Garner was a Klemme caller Thursday.

Dr. Zinn was at Garner Wednesday on business.

Donald Lewis and the Misses Wilma Trumbell and Phillys Root were Mason City visitors Saturday.

Mr. and Mrs. Herman Merkel and Belle Waddingham were Garner callers Monday.

Mrs. Nels Bach returned Friday from a visit with her father and other relatives at Blairsburg.

Carl Heiden and the Misses Lenra and Mildred Wheatman visited Corwith Sunday afternoon.

Mr and Mrs. Jim Thomas and Irene Harm were Mason City visitors Monday afternoon.

The Farm Bureau Ladies met at the home of Mrs. C. J. Wille last Wednesday.

Miss Alma Nelson is assisting with the work at the Jim Thomas home for a few days.

Several relatives and friends had a surprise on Mrs. Lloyd Ulrich on Tuesday afternoon.

Mrs. R. W. Elder was confined to her bed last week but at this time is again reported as better.

Donald Lewis and Miss Root were callers at the R. A. Jorgenson home Sunday evening.

Dr W F. Missman was at Mason City on a professional call Tuesday morning.

Mrs. Art Knoke underwent an operation at Mercy hospital Tuesday morning.

Earl Finn has finished his atsk of corn picking and is again back in Iowa.

Isaac Sweigard, of Garner, was a business caller here Wednesday morning.

Mrs. W. F. Missman and Miss Gertrude Ely were at Chicago over the week end.

R. A. Jorgenson and family enjoyed a Sunday dinner at the J. Jorgenson home at Garner.

E. C. Ford, of Iowa Falls was in Klemme and vicinity the fore part of the week writing insurance.

Mr. M. F. Penrod spent Sunday evening visiting at the J. N. Day home.

Byrnes Missman was entertained for dinner by Dorance Day Saturday noon.

Harold Leitzinger and Pete Moulton were business callers at Mason City Saturday

Mr. and Mrs. John Lass were at Des Moines Friday to see a sister of Mr. Lass who is in a hospital there.

Mrs. Tom Burgess and Kate Costello of Goodell were shopping in Klemme last Thursday.

The Misses Mildred and Irene Johnson played in the Orchestra at Crystal Lake Wednesday evening.

The Larkin Club was entertained at the home of Mrs. Pete Moulton Thursday afternoon.

Mr. and Mrs. Paul Grange and son Dorance, and Mr. S. S. Grange were Mason City visitors Sunday afternoon.

Mr. and Mrs. Alvin Stokesbary and children visited with Mrs. Stokesbary's father, Albert Yahnke and family at Garden City, Minn., over the week end.

Dr R. W. Specht, Dentist, Garner, Iowa. adv

Mrs. John Johnson was called to Mason City Wednesday afternoon as her daughter Ruth had tonsilitis.

Mrs. Nels Bach and Marcele and Mrs. Frank Hoyt visited at Blairstown from Monday to Saturday last week.

After removing whiskers at Mason City for a few weeks as relief man, Louie Suckow is again back at the Thomas barber shop.

Mrs. Lester Gobeli, Mrs. Earl Finn and children and Miss Alma Nelson attended a farm bureau meeting at Goodell Friday

Dr. L. R. Parsons and family and Miss Waugh, of Belmond called on the Dr. Missman family Sunday evening.

Grandma Schroeder had a new radio installed the fore part of the week which was purchased of the Garner Auto Co. here.

The Alumni of K. H. S. plan to have their annual banquet on Friday evening, December 27th at the school gym.

Shirley Rae, daughter of Mr. and Mrs. P. W. Johnson went to bed yesterday as she has an attack of flu or grippe.

Fred Bell had several days vacation the past days. However his vacation was not a pleasant one as he was off duty due to a bad cold.

The M. E. Ladies Aid have decided that the regular January meeting hall be the next, and to cut out the December meeting.

Mr. John Christians, Sr. was given a most welcome surprise Wednesday evening when all of his children came in and surprised him on his birthday anniversary.

Mr. and Mrs. Walter Beatty, of Chicago, are here for a visit with the latter's parents, Mr. and Mrs. F. H. Ridder and other relatives and friends.

Mrs. Schafer, who is now eighty-two years old and Mr. and Mrs. E. P. Dow, of Forest City, were here Saturday to sell Mrs. Schafer's store building.

The Garner and Klemme high school cage teams had a practice scrimmage at the local gymn last Friday evening which resulted in a 24 to 10 score for Klemme.

Happy Johnson was not so happy the latter part of the week. He was forced to stay at home a few days to recuperate from an attack of he flu.

Mr. and Mrs. Charles Lenz, were here last week a few days. They live at Spooner, Wis. and came to see Mrs. Lenz's father, Mr. Louis Sampson who had been ill.

AROCKS PLAYNG A LOSING ATTLE IN BASKET BALL

"Clean Up" On Plays Staged Last Week

r boys basket ball team have the last two games played, the here against Hayfield last Fri- night by but one point, score g 30 to 29, and the one to Britt Wednesday night of this week a much larger score, 36 to 12. e of our team were in poor con- ion due to colds and other rea- s. Playing on small floors and sed to the roomy floor at Britt no doubt a lot to do with the -sided score there.

Juniors Made Neat Sum

Our Juniors did very well in their rts to raise a fund for the Juni- Senior Banquet, and are grate- to those who, in spite of inclem- weather and muddy roads, at- d their program of plays last day night. The proceeds from play amounted to better than 0. There were some expenses et but when met there was an adequate sum for the ban- t. ll in the play did well, some sually well. Miss McGinnis de- es credit for coaching them so ll. It meant a lot of work for h her and the caste, which in- ded besides the Juniors several our Sophomores. Mr. Wellemeyer in furnished the furniture which ays adds much to the appear- e of the stage and scenes.

County B. B. Tournament

The Superintendent met in con- ence the rest of the school sup- intendents of Hancock County at e home of Supt. Thompson at rwith on Wednesday evening of s week to complete arrangements the county basket ball tourney ich will be held at Britt as usual. th the grades and high school ms will participate and the tour- ment will begin on Washington's rthday, Friday, Feb. 22.

Grade Teachers Attend Party

Our grade teachers were invited the home of June, daughter of r. and Mrs. Ralph Ludeke, on Wed sday evening of this week to a rthday party in honor of June. ey report a delightful time.

Christmas Vacation!

On Friday evening of this week r schools will close for two weeks. e hope no epidemic, as the flu, erferes with the maximum en- ment of the Holiday season, and t all may be back on the job nday, January 7th.

As far as we know all of the fac- y will spend Christmas at the ental homes. Its to be expected me will roam around a bit the t two weeks and who knows but me may get together again before e two weeks are up.

Merry Christmas to all!

Times want ads pay! That fact e again proven when a bundle of thes had been lost and a twenty- e cent ad put them back in the nds of the owner. Gus O'Krueg Goodell found the clothing and tified The Times Office. About a ar ago Mr. O Krueg lost a tire, m, tail lamp and the whole works om his car. An ad in the Times ought results and Gus had his e returned to him ih a few days.

Quite a number of people from Klemme and vicinity drove to Belmond Sunday to see the damage caused by fire at the Belmond Sugar Beet Factory Fire destroyed the warehouse Friday night and over a million dollars worth of sugar was destroyed.

P. T. A. PROGRAM WELL ATTENDED

SPECIAL PROGRAM WAS PUT ON BY GARDERS

Miss Trumbell Gave Excellent Advice On Book Selection

No doubt the P. T. A. meeting held Tuesday night at the high school gym was the star program of the year. The Holiday spirit was carried out and a special Christmas program was given by the pupils of grades 1 to 6 inclusive.

The program given by the children consisted of songs, folk dances and a playlet showing Santa's toy shop with brownies at work Other scenes followed showing the toys, wax dolls, rag dolls, paper dolls, a jumping jack, jack-in-the-box, tin soldier and others. Another scene showed the children capturing old Chris and promising him to keep their toys in the best of condition All scenes were acted out with songs and dances A scene from Holland and a wooden shoe dance proved a big hit. As special mention Franklyn Kluckh ha gave a humorous reading depicting the sad state of affairs a fat boy gets into at Christmas time trying to wear the clothes sent him as gifts. Cecil Leitzinger of the first grade gave a curtain riser speech of welcome and Merry Christmas All pupils in their various parts showed excellent training and did their parts well.

The teachers of the lower grades, the Misses Lenora and Mildred Wheatman and Miss Root deserve the lion's share of credit for they spent much time in making the program a success.

Following the program by the children Mr. Wellemeyer, president of the P T. A, called the meeting to order to take up matters of business Miss Trumbell gave some valuable hints and suggestions on the selection of proper books and magazines for the home and invited any who might be interested to call on her at any time for information regarding desirable books and magazines for the home and the children.

Mr. Wellemeyer announced that the next meeting would be held about the middle of January.

KLEMME BARBER SHOPS ARE GIVEN HIGH RATING

State Inspector Brands Them A-Class "A" Barber Shops

George Carson and Jim Thomas proprietors of our two barber shops are rather chesty these days, or since the state inspector called on them a short time ago and after careful going over and examination of their shops, opened up his brief case and pulled out a blue card. The cards were handed to our local men who were pleased to note that their shops had been rated as class "A" the highest rating as to sanitation, neatness and equipment.

We understand the Garner shops were not honored with such a high rating by the inspector who handed them a "B" card.

John Pritchard, acompanied by his brother, Harry, of Garner, drove to Chicago Sunday where they met their brother "Bud" who attends a military training school at Lexington They started for home Tuesday and made the trip in about nine hours.

FREE MOVIES TO SHOWN THIS WEEK

AUXILIARY LADIES WILL PLAY SANTA CLAUS

Will Treat People Of Community To Free Picture Show This Week

Who said there wasn't any Santa Claus? Sure there is—It's the Legion Auxiliary ladies of Klemme who manage the Idle Hour theatre They will play Santa Claus Friday and Saturday nights of this week to the people of Klemme and vicinity when they will put on free moving picture shows for old and young.

The admission charge will be only a pleasant smile as your money is "no good" at the door of the Idle Hour this week.

Two shows will be run each of the two nights.

Community Xmas Tree

The ladies had planned a community Christmas tree and a big time for the kiddies, but this plan had to be abandoned this year, but they hope to carry it out next year, so the free shows will take the place of a community Christmas tree this year.

NOTICE

IN THE DISTRICT COURT OF THE STATE OF IOWA IN AND FOR HANCOCK COUNTY.

IN THE MATTER OF THE RECEIVERSHIP OF THE STATE SAVINGS BANK OF KLEMME, IOWA.

TO WHOM IT MAY CONCERN:

You and each of you are hereby notified that there is now on file in the office of the Clerk of the District Court of Hancock County, Iowa, the Tenth and Final Report of L. A. Andrew, Receiver of the State Savings Bank of Klemme, Iowa, showing all receipts and disbursements and final disposition of remaining asstes made therein since the date of the last report. Accompanying said Report is the petition of said Receiver and Examiner in Charge asking that they be discharged as such respectively and their bondsmen exonerated from all liability therewith.

You are further notified that an Order has been made and entered by this Court fixing the hearing on said Report to be held at the Court House in Garner, Iowa, on the 29th day of December, 1928, at 2 o'clock P M., and that unless you appear thereto at said time and place and show cause, if there be any, why said report should not be approved and said Receiver and Examiner in Charge discharged therewith, that an Order will be made and entered as prayed in the application filed herein.

(Signed) L. A. ANDREW, Receiver of the State Savings Bank of Klemme, Iowa.

(Pub. Dec 20, 1928.)

BASKET BALL GAME TONIGHT KLEMME VS. MANLY

The Klemme Independents basket ball team played Kep's Cigars Five at Mason City last Thursday evening in a tight game which ended in favor of the Mason City five, 20-17. Tonight, Thursday, the local Independents will play Manly on the Klemme floor. The local team is made up up Gibbs, Tanner, Stokesbary, Knutson, Moulton and Brogan.

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

All members and friends of our congregation are heartily invited to come and enjoy these services with us.

Calvin Grosshuesch

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

The Christmas season is a busy time as well as a joyous time. There is a danger however that we become so absorbed in the preparations for Christmas that we loose sight of its real significance, and that we have no room in our lives for the Christ whose birthday we honor. We invite you to join us in the Christmas worship service Sunday morning Special Christmas music will be given by the choir, and the sermon will be in keeping with the soason.

There will also be the regular preaching service at 7:30 in the evening.

The Christmas Tree and Sunday School Program will be at the school house on Monday eve, Dec. 24th. All are invited to attend.

KLEMME MAN ELECTED OFFICE IN GARNER LODGE

Blue And Star Lodges Plan Joint Installation Services

The Masonic Lodge at Garner held their annual election of officers last week Thursday at which time N. E. Brear was elected Master; Ferd Tompkins, Senior Warden, and C. G. Waterman, of Klemme, Junior Warden. H. V. Reed was re-elected Secretary and Isaac Sweigard was re-elected Treasurer. The balance of the offices will be appoint ed by the Master.

The Masons and the Eastern Stars plan to have a joint installation of offices either January 10th of 17th.

Dr. D. P. Anderson, of Klemme is the retirnig Master. N. E. Brear formerly was Senior Warden and Frank Miller performed in the South.

KLEMME CREAMERY SPREADS CHRISTMAS CHEER

They Wrap Their Butter In Special Colored Wrappers

The Klemme Creamery is entering into the Christmas spirit again this year and every pound of butter they put out is a reminder of the happy holiday season.

They are wrapping their butter in special holilay wrappers which carries a mesage of greeting to every one.

We compliment them on their progressiveness.

SCOUTS ASK FOR OLD CLOTHES, TO[illegible]

TROOP 56 WILL PACK BARR[illegible] FOR CHIRSTMAS GIFT

Will Alsa Pack Basket For Local Needy Person

Scouts of Troop 56, Klemme wish to do a good turn for Christmas. They could think of no better way to spread good cheer than to pa a barrel of old clothing to be sent to the Salvation Army for distribution in this district.

Want People To Help

The barrel will be packed Saturday and the Scouts are asking people of Klemme and vicinity bring discarded clothing, shoes, overshoe, hats, stockings, underw and other articles of clothing, bo and toys to the back door of the First National Bank on Saturday afternoon, Dec. 22nd where Scouts will receive the same.

All kinds of old clothing will d If it needs patching, new buttons repairing the Salvation Army has department in which they can that work. Shoes, which perhaps need re-soling, or patching, are als wanted. These can be repaired and someone will appreciate them

Food Is Also Wanted

A needy person in Klemme needs help! For a special Christmas basket those who want to help can also bring articles of food, preferably canned fruit and vegetables, potatoes, fresh vegetables, and other articles for food.

Any of these articles can be handed to the Sout in chargo at the rear door of the First National Bank.

Some property has changed hands here the past week. Mrs. Chas. Medaus has purchased the Griewe property and Emil Patet has purchased the Knadler property in Morning side.

Mr. Henry Jost has purchased the Thiemann place in north Klemme.

L. O. Deal dare not crack a smile because he has cracked ribs. All because of a telephone pole breaking and caused him to fall. L. O. is getting along fine but has to keep a straight face.

Get in on the 25 Red Tops. The Northern Lumber Co 1tc

The Christmas Seal

MULTUM IN PARVO

A Christmas Seal is but a mite
When view'd as only one,
But as an army it can fight
With triumphs match'd by none.
Combining with its million mates
They utilize their wealth
To open wide a thousand gates
That lead thro' Hope to Health.
Enlisting also in their aid,
All help that Science knows,
The Great White Plague is met and stay'd,
Conclusive record shows.
As you exchange your cash for Seals,
So they, when promptly sold,
Transmute our annual appeals
To gifts worth more than gold!

JAMES D. LAW,
The Scottish-American Poet-Laureate,

NEWS REVIEW OF CURRENT EVENTS

Varied Efforts to Prevent War Between Bolivia and Paraguay.

By EDWARD W. PICKARD

WAR between Bolivia and Paraguay seemed probable last week until near the close of the period, when it was reported that the Bolivian government might consent to arbitrate the quarrel. Both nations claim the Gran Chaco region and the present trouble was precipitated by a clash between their border troops. The Bolivians considered, and still consider, that their national honor was grossly insulted and they have been eagerly clamoring for hostilities. The government resigned so that a new one, composed of the leaders of all parties, could be formed; the general staff called to the colors the class of 1929; defense committees were formed, and men, women and children in the cities paraded with flags and shouts for war. President Siles told his people that he did not wish war and would do all he could to avoid it, but that if Bolivians were forced to go to war to defend their national honor, he would go with them.

Paraguay, which would not be able long to carry on warfare, was taking what steps she could to face the situation. A non-partisan board of national defense was formed and President Guggiari called on all the political chiefs for collaboration.

Meanwhile various agencies were trying earnestly to avert the threatened hostilities. The council of the League of Nations, to which Paraguay had appealed, urged that the quarrel be settled peaceably; and in Washington the international conference of American states on conciliation and arbitration, which began its sessions Monday, immediately took up the matter, pleading with the two belligerent republics to arrange their differences "pacifically and in a spirit of justice, concord, and of fraternity." Argentina and Chile both offered their services in arbitrating the dispute. At first the Bolivian delegation in the Pan-American conference, headed by Diez de Medina, minister to Washington, announced it had been instructed to take no part in the sessions until the trouble with Paraguay had been settled; but on Wednesday, after Secretary of State Kellogg had communicated with the government at La Paz, the Bolivians were told to resume their seats. This was taken as an indication that general warfare between the two republics would be averted. Mr. Kellogg, as chairman of the conference, named a conciliation committee of five, the United States being represented by Charles Evans Hughes, and the gathering of data on the conflict began at once.

TRAVELING 6,450 miles from the African jungle to London in nine days and twelve hours, the prince of Wales reached the bedside of his sick father Tuesday night and from the moment of their meeting the condition of King George seemed to grow better. The danger of the monarch's death did not pass entirely, however, and the British people and all the world continued to watch the bulletins with anxiety. The king's physicians, immediately after the arrival of the prince of Wales, pepared to take the more radical measures they believed necessary to save the king's life, and on Wednesday they performed two operations to remove the purulent fluid at the base of the right lung. The bulletins of the doctors said the operations were successful and that the condition of the king was satisfactory. The fact that the king was strong enough to undergo the operations gave increased hope of his ultimate recovery.

HERBERT HOOVER'S Latin American tour may yet be enlivened by some exciting incidents, though the authorities of the countries he visits are so alert that this seems improbable. Last week, just before the President-Elect started on the railway journey across the Andes, the police of Buenos Aires, Argentina, uncovered a plot of anarchists to blow up Mr. Hoover's train in the outskirts of the city. Raiding a house, the police seized dynamite bombs, hand grenades, pistols and ammunition and arrested two young men. In the house was found a detailed map of the railway system. One of the prisoners was said to have made a full confession of the plot to destroy the Hoover special train.

Mr. Hoover's two days' visit in Chile was pleasant and colorful. Though he had cabled a request for simplicity, his reception in Santiago was most elaborate. President Carlos Ibanez, the dictator of the republic, met him dressed in a general's uniform and the parade through the streets was a grand military display. The chief guests rode in carriages drawn by four horses, with gorgeous outriders and footmen. At a banquet given by the government Mr. Hoover announced his policy for the encouragement of government and private loans in Latin America for reproductive works only, such as public works and transportation. When the receptions and sightseeing were over the Hoover party started across the Andes to Argentina on a special train, making brief stops at many little towns. Buenos Aires was reached late Thursday afternoon and President Irigoyen was on hand to receive the guests. The usual round of ceremonial affairs followed. Sunday morning Mr. Hoover and his party went on an Argentine warship to Montevideo, Uruguay, where the U. S. S. Utah met them to convey them to Rio de Janeiro.

LIEUT. COL. U. S. GRANT, THIRD, U. S. A., has been given charge of all the arrangements for the inauguration of Hoover on March 4, and Maj. Gen. Charles P. Summerall, chief of staff, has accepted the post of grand marshal for the occasion and will manage the parade. This appointment follows precedent. The President-Elect has asked that the ceremony be as simple as possible.

SIX weeks of negiotiations, culminating in a conference of Sir Austen Chamberlain, Aristide Briand and Gustav Stresemann in Lugano, resulted in an agreement of the allies and Germany that the committee of experts should assemble in Paris about the end of December and finally fix the total amount of reparations Germany must pay and the method of payment. France, however, stipulates that the decisions of the experts "are not necessarily binding on the governments," so it is not certain that the great problem will be definitely solved. It is specified that the American experts "have no official mandate and shall be merely American citizens chosen for their competence by the reparations commission." Germany carried its contention that the reparations parley be absolutely independent of considerations either of the Rhineland evacuation or of the war debts of the allies.

RUMANIA held its first free parliamentary election Wednesday and it passed off quietly throughout the kingdom. As had been predicted, the Peasant party headed by Premier Juliu Maniu scored an overwhelming victory. On incomplete returns the minister of the interior estimated that the Peasants had got a full 85 per cent of all the ballots cast. Some 8 or 10 per cent went to the Liberals headed by Bratiano and the remainder to the Hungarian minority. It appears that the two extremist groups, the Anti-Semites and the Communists, will not have a single seat out of 376 seats. Maniu himself, though an Albanian, chose to stand for election in Bucharest and received 65 per cent of the vote there.

IN THE fiftieth anniversary edition of the St. Louis Post-Dispatch appeared an article written by President Coolidge telling of the demands on the time of the President and suggesting that the government provide a country White House, a modest place in the hills, near Washington to which the Chief Executive might go for brief periods of rest. The idea was seized upon by Representative C. A. Woodrum, Democrat, of Virginia, and he introduced a resolution for the establishment of a temporary White House in Virginia. The measure he offered directs the public buildings commission—a joint commission of the house and senate—to select a tentative site and report as soon as practicable the approximate cost of erecting a suitable mansion.

BOULDER dam was the subject of protracted debate in the senate and a lot of log rolling, and finally California and Arizona reached a compromise on the diversion of water from the Colorado river. The bill was amended so that California's allotment shall be 4,400,000 acre feet annually out of 7,500,000 acre feet assigned to California, Arizona and Nevada. Senators Ashurst and Hayden of Arizona abandoned their filibuster and it appeared likely that the measure, with further amendments, would be adopted by the senate.

To avert a threatened filibuster in the house the leaders of that body promised that a congressional reapportionment bill would be brought to the floor soon after the holiday recess. The census committee, under pressure, reported favorably a pending measure which proposes a redistribution of seats in the house on the basis of the 1930 census.

HOOVER'S proposed farm relief plan now has the support of the American Farm Bureau federation. Frank O. Lowden, in a letter read at the federation's closing session in Chicago, urged the farmers to support the legislative proposal of the President-Elect, and a resolution to that effect was adopted. The federation announced that at the beginning of the new year a nation-wide co-operative marketing service would be instituted by it. Through this department live stock, grain, and other markets will be analyzed to serve the commercial interests of 30,000,000 farmers. Frank Evans, the federation's general counsel and head of its marketing department, explained that two years had been spent in preparing for the operation of the service department.

DELEGATES from forty nations, some of them distinguished aviators, held a three-day International Civil Aeronautics conference in Washington, invited thereto by President Coolidge. The time was chosen as the twenty-fifth anniversary of the first heavier than air flight of the Wright brothers, and Orville Wright was present as a member of the American delegation and also as the guest of honor of the conference. Mr. Coolidge in his speech of welcome spoke of the present and future of the aeronautic science and industry, and Assistant Secretary of Commerce MacCracken, who presided, reviewed the history of aviation and told of its progress in America.

C. R. O. M., otherwise the Mexican Federation of Labor, which has been a power in the government of our neighbor republic for years and stirred up much of the trouble with the United States, is crumbling in ruin. As a political party it has been blacklisted by the Obregonistas and its own ranks are split wide open. State governors that support it are to be boycotted. Many of the unions, led by the union of newspaper editors and reporters of the federal district, have seceded from the federation.

MICHIGAN has another of those life imprisonment cases that stir up the foes of prohibition—and a great many other people. This time it is a woman, the mother of ten children, who was found guilty in Lansing of a fourth violation of the liquor law. It is possible, the woman, Mrs. Etta Mae Miller, may escape the life sentence through appeal to the Supreme court.

INFLUENZA became epidemic over a large port of the country and federal and local health organizations worked hard to combat it. A number of colleges and schools were closed until after the holidays. The epidemic started on the Pacific coast and swept eastward. Fortunately the cases are milder than in 1918, the proportion of deaths being much smaller.

JAMES A. PATTEN, Chicago financier and philanthropist, formerly known as the "wheat king," died in his suburban home at the age of seventy-six. He had acquired great riches but had expended vast sums for the benefit of mankind, so he was sincerely mourned.

BIG IMPORTANCE OF TIRE FLAP

Correctly Designed It Will Protect Inner Tube From Injury.

There is probably no part of a pneumatic tire as little understood or appreciated as the flap, and yet its importance can be hardly overestimated.

The use of a correctly designed flap, properly applied in the casing, will insure full and satisfactory service from the tube, while an incorrectly designed flap or improper application of the correct flap is certain to result in damage to tubes, casings and dispositions.

Function of Flap.

The function of a flap is to protect the inner tube from injury by the bead toes and by the rim. This it does by forming a continuation of the smooth inner surface of the casing, against which the inner tube inflates from a point above the bead, down across the rim and up to a corresponding height on the opposite bead.

In straightside tires for passenger cars the flap is supplied separately, since it has been found that "cemented in" flaps such as are furnished in motorcycle tires, soon work loose, on account of the heat generated by these larger tires, and become dislocated to such an extent as to cause tube pinching. The "floating" flaps supplied in most makes of tires of straightside type represent the highest development of this product. They are made of several plies of rubberized fabric, and in some makes are covered on the tube side with a layer of canton flannel, which is turned back over each edge and permanently vulcanized to the main body of the flap. The flaps are vulcanized into the concave shape they assume when mounted in the casing and are provided with a round hole in one end and a slot in the other to allow for proper length adjustment. Their edges are "featured" and cannot chafe the tube.

Flap Properly Fitted.

To fit properly, the flap must reach to a point on the inside of the casing, approximately even with the top of the rim flanges. If the flap is so wide that the edges come above this point, the flap edges have been known to cut into the casing, the tube following, resulting in a ruined tire. On the other hand, if the flap is too narrow, there is great danger of one or both of these edges being folded under, when the tire is mounted on the rim. This will quickly lead to tube pinching.

In applying the flap, the end having the round hole must in every instance be placed over the valve first and the slotted end last, thus permitting the flap to adjust itself circumferentially. Failure to observe this procedure is almost certain to result in damage to the tube.

AUTOMOBILE NOTES

When buying spark plugs, be sure to mention the make of the car and its particular model.

* * *

It amounts to this then: The more patience in traffic, the fewer traffic patients.

* * *

By and by kindly snow will come and cover up the debris left at the tourist camps by the tourists.

* * *

Spare inner tubes should be wrapped in cloth or soft bags, and not hung over a nail in the garage or cellar.

* * *

Automobilists of Finland have welcomed the balloon tire for use on highways where solid and cushion tired vehicles were banned as detrimental to the road.

* * *

Radiator glycerin mixed with a little lampblack makes an excellent dressing for spare tires. This combination answers all of the preservative needs of paint or varnish.

* * *

It is reported that new life insurance is being taken out at the rate of close to a billion dollars a month. Which shows the public has been closely reading the automobile casualty lists.

Mirrors Required on Cars in Many States

Thirty-one states and the District of Columbia require the use of mirrors on motor vehicles in order to give operators a rear vision, according to the research department of the American Automobile association. The states requiring mirrors on motor vehicles are Arizona, California, Connecticut, District of Columbia, Idaho, Illinois, Indiana, Kentucky, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Oregon, Pennsylvania, Rhole Island, Texas, Vermont, Virginia, Washington, Wisconsin and Wyoming.

Good Points to Watch in Polishing Finish of Car

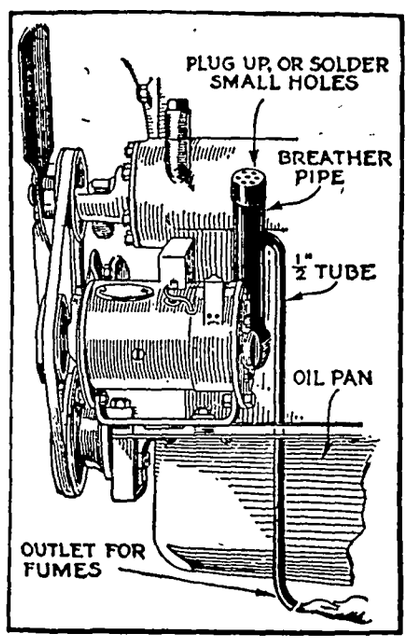
While it's all right to polish the car generously in an effort to prolong the life of the finish, there are a few points to watch if the plan is to be a success.

Generally speaking, the idea is to avoid too much rubbing of the finish at these points on the body where there are sharp edges, corners or joints. The rounded body has been a great factor in preventing finish from chipping, but if your car features sharp lines you can compensate for this by a little more care in its treatment.

The front window sills are apt to get a good deal of rubbing from elbows parked on them by the driver and his front seat passenger, so avoid overdoing it here. Another point to watch is the striping on the body and hood. You can brighten up these lines best by leaving them alone. They are put on top of the general lacquer and cannot be expected to withstand constant rubbing.

Get Rid of Annoying Fumes From Crank Case

If your car lacks a device to carry off fumes from the crank case and prevent their entering the body of the



A Half-Inch Pipe, Fastened Into the Side of the Oil Filler Pipe and Brought Downward, Carries Off Crank Case Fumes.

machine, you can fit such a device as shown in the illustration. A half-inch pipe is brazed or soldered into the side of the oil filler pipe and the end of it brought down below the motor. The holes in the cover are plugged.—Popular Science Monthly.

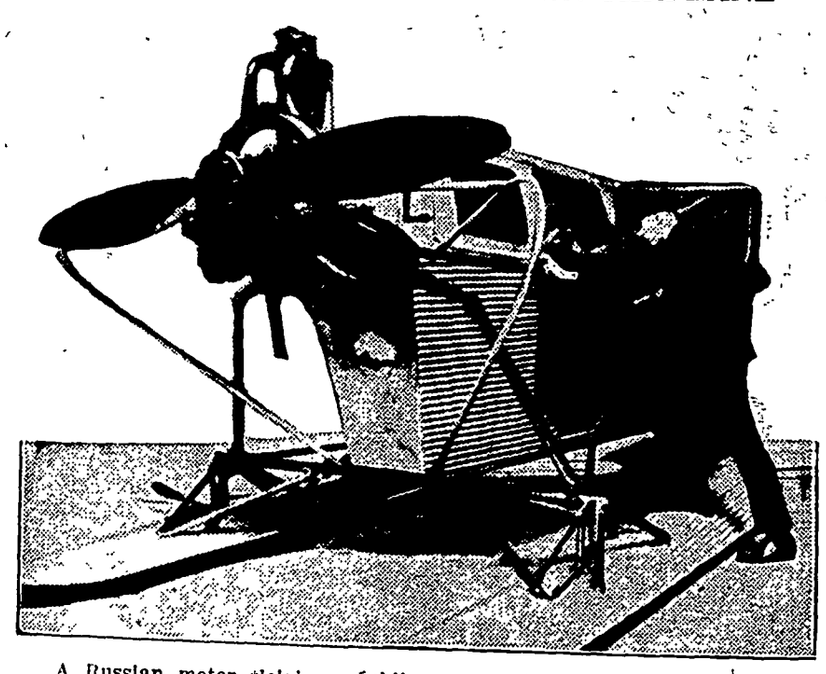
Judge Holds Dad Must Keep Watch on Junior

Fathers who forbid their sons and daughters to drive the family automobile are liable for damages if the children disobey the parent, take the car and have an accident.

A case of that character was disposed of by Justice Charles Brown of Buffalo, who refused to set aside a verdict of $2,000 for the plaintiff who was struck and injured.

Merely refusing children permission is not enough, Justice Brown declared, but it must be enforced by the parent making every possible effort to keep the car away from them.

MOTOR SLEIGH RESEMBLES AN AIRPLANE



A Russian motor sleigh resembling an airplane, equipped with searchlights, airplane propeller and motor, which was shown at the Second International Air exhibition held in Berlin.

Gramercy Park

WHEN, in 1831, a former mayo New York set aside a plot ground, had it enclosed by fence given to the owners of the surrou ing property, he started what undo edly as one of the first attempts city planning in this country.

The name Gramercy, it seems, c down from Kromworsscki, mean "crooked little swamp"—from a cr which meandered through this sect when the Dutch occupied the Island Manhattan. This park is privileg therefore, to boast of antiquity as of its charms.

Rich indeed is this seclusive spot Nineteenth street and Lexington a nue, New York, in extraordinary as ciations. Many outstanding men their times lived around it. Hist records that the plan to link Amer and Europe by cable was first cussed in an abutting mansion; S uel J. Tilden, governor of New Y and who almost became President the United States brought polit distinction to it; the late Presid Roosevelt was born just around corner from it.

A little city within a big one, so speak, the residents have experien unensiness many times lest their elusiveness be disturbed as the ma of commerce advanced upon it—erection of a hotel, the threats run a car line through it and a s way under it; during the turmoil the Civil war negroes were stru from lamp posts nearby.

Although now walled in by towerl structures and invaded by family tels and clubs, this historically famo and cherished neighborhood contin to retain an exclusive residential ch acter of noticeable and distinct charm.

Christmas cheer not forgotten

By MARTHA BANNING THOMAS

FOR mercy sakes, do come along and don't drag so!" Mrs. Casey jerked at the arm of her reluctant son who was craning his neck to look into three shop windows at once. "We have only half an hour before the boat leaves, and I've got a lot of errands to do yet."

"There's a man waving at you, mamma," said the small boy. "He's comin' down the street. He wants to speak to you."

"Don't pay any attention to him, Joe! I haven't time to be bothered with him. Just some one who wants me to take a message over to his folks across the bay, probably."

But the man was coming rapidly nearer. His face was alight with smiles. His hand was out before he was within five yards of Mrs. Casey.

"Mamma!" Joe hissed, "You'll have to stop!"

And indeed the man had no intention of letting her pass him.

"How do you do!" he called. "I recognized you three blocks away."

He was quite close now and his hand was still out. "My, it does my heart good to see you again, Mrs. Casey."

The woman frowned. Who was this man? Why did he bother her when she was in such a hurry? There would be no other chance for Christmas shopping after today. She had come across the bay in a small motor boat; it would be leaving for the return trip in twenty-five minutes.

"You don't remember me?" smiled the man. He looked down eagerly at the puzzled woman. "It was twenty years ago on Christmas that I first saw you. And I'll never forget it as long as I live."

Mrs. Casey clutched her shopping bag more closely to her breast and stared.

"I had a brother," said the man, his face aglow with memory. "He was younger than I . . . a little shaver when you saw him. You gave us our first real Christmas, and I'll never forget it as long as I live."

Mrs. Casey blinked rapidly several times. Part of a smile began to flicker around her lips. She peered up into the man's face.

"You sent your husband down to the little shack where we lived," continued the man," and he wrapped us up warm in mufflers and coats he had brought. He drove us in a sleigh to your house. Our mother had died a few months before and we were lonely and miserable. We had moved to the village just that week and knew no one. Our father had no work and we were terribly neglected and unhappy."

"Yes . . . yes!" laughed the woman, "I know you now. My land, how big you've grown!"

"And you gave us a fine big dinner, turkey, cranberry sauce, mince pie," said the man. His voice was softened and his eyes misty with tears. "It was the greatest day of my life. I have never forgotten it. You gave us a memory of happiness that has lasted all these years and will go on forever. It was the true spirit of Christmas cheer, and my brother and I have tried to spread it around as far as we can ever since. You see what you started. God bless you!" He bent swiftly and kissed her cheek. He tweaked Joe's ear. With a smile, he strode off again and was lost in the crowd.

"Gracious sakes!" gasped Mrs. Casey. "Well, if that don't beat all! My, my, my! Those two little boys men grown now!"

With beaming face she tugged at Joe's sleeve. "Hurry up now! We must catch that boat."

"Aw, mamma . . . let me just peek into that window . . ." But Mrs. Casey was thinking of that long ago Christmas, and the man who had reminded her of it.

(©, 1928, Western Newspaper Union.)

Greetings by Air and Wire

A world-wide Christmas custom, which originated in this country, is the sending of greetings by radio, telegraph and cable.

Their Message To Santa

A Different Kind of CHRISTMAS

By PATIENCE EDEN

PERHAPS she was a little bit selfish. Just a trifle. Anyhow, she was extremely bored. Parties where there was no one she cared about! Bridge prizes she loathed and gave to the cook next morning! Late hours at night, and nothing to do when she got up at noon but decide which of the seven dance invitations she would accept! Tons of flowers she never wore, and seldom took the trouble to arrange even in vases about the house. And at Christmas it was worse than ever. She seriously considered running away. She'd like a new set of experiences. Something more rugged, nearer the true vitality of living. She would come back with a lot of amusing stories to regale the crowd with.

Two days before Christmas Cynthia Norris told her maid and cook they could have a vacation. "Lock up the apartment. I'll let you know when I am coming back. I'm going away for the holidays."

She scurried into a taxi with a new feeling of excitement, the best part of the whole thing being a sense of something entirely untried. She had no idea where she was going. She'd select some queer person in the crowd at the terminal, follow her to the

ticket window and buy a ticket for the same place. Then Cynthia refused to think further.

But she did not select a woman to follow. She saw a rather thin man with a nice smile who was burdened with bundles. They bulged in every pocket, and he had difficulty in doing anything at all competent with them while he was buying a ticket. In fact three fell to the floor and a fourth hit a child on the head during the process. Cynthia watched this young man with growing interest. Why in the world was he permitting himself all this trouble? Surely it wasn't necessary. The man apologized to the child, gathered up his fallen packages and went undisturbed towards his train.

Cynthia impulsively bought a ticket for the town he had mentioned to the man behind the window and followed.

She was excited already. She had no idea where she was going and she didn't care. That was the fun of it.

She sat in the common coach and was obliged to share her seat with a woman who wore a shawl over her head and had a sad, foreign-looking face. The man was three seats ahead of her, completely buried under his bundles. It was a four-hour ride. People came and went. Cynthia tried to remember how funny they all were. She would imitate the way they talked, and entertain the "gang" later. This was the way to get a kick out of living—do something different.

At Hawbridge the young man leaped from his seat, jammed on his hat and plunged out of the door. Cynthia stumbled over the feet of the woman with the shawl and jumped down from the train steps just two seconds before it began moving again.

A dreary, wooden station with a faint flicker of a lantern hanging from a hook. A few snowflakes began falling. There was no one about. For a moment Cynthia suffered a pang of loneliness. But even this was a new sensation, so she accepted it. However, she could not stay here all night, and she had a bag. She heard the explosions of a car about to start. Hurriedly she ran in the direction of the noise. She could dimly see a machine with a driver.

"Could you tell me if there is a hotel here where I could stay?" asked Cynthia a little breathlessly.

"I'm afraid Hawbridge is a bit shy on hotels," replied a man's voice. "But if you'll jump in I'll take you to one possible boarding house."

Cynthia flung in her bag and climbed eagerly to the seat. The car gave a deafening roar and shot off

without warning into darkness. It was a rough road and the driver paid little attention either to ruts or his companion. Cynthia ventured a question or two about the village and was answered with polite brevity. This was not the way in which she was accustomed to being treated, and it piqued her.

"I live at this boarding house," finally admitted the driver. "I'm a printer on a newspaper in the next town. I could live where my work is, but I like this little village. Know a lot of kids here and have a great time at Christmas. Got a lot of stuff for them today."

"Oh," said Cynthia and smiled in the dark, "I noticed you were having some difficulty parking your packages while you bought your ticket."

This gave her companion something to think about, but he said nothing.

The girl made a sudden decision. She would relate in full her exit from New York and why.

This she proceeded to do. The man chuckled once or twice but made no comment. He was a very self-possessed young man. Finally after a long silence he said casually: "Good Lord, I chucked the whole works three years ago! Couldn't stand it. Too darn boring. Same old faces.

Same old crowd. Same old parties. I bolted. Got a job on this newspaper. Keen about it. Get nearer the marrow of things someway. I feel free as a bird and don't give a hoot what anyone thinks. It's great."

"Oh," said Cynthia again.

"Want to come round with me Christmas eve?" demanded the extraordinary man. "Looks as if we might have snow. I take a sleigh, dress up in a silly Santa Claus costume, waggle a white beard and deliver gifts to the kids in town."

"I'd love to!" breathed the girl. "Please let me."

"On one condition. That you won't go back and make vaudeville out of our village."

"I promise," said Cynthia.

A Christmas Eve Accident

By Helen Gaisford

HAPPY tinkling sleigh bells seemed to Marilynne to keep repeating Paul's words—"I love you, love you, love you. We'll be married right away. Jingle, jingle, jingle! Married right away."

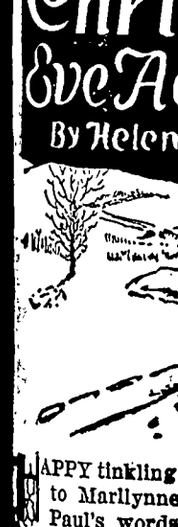
The moonlight cast their moving shadow on the snowy road. The bells continued their lively refrain. Paul heard it, too—"We'll be married right away."

"Marilynne," he said, "this is the most wonderful Christmas eve in my life. I didn't dream I could ever be so happy."

"Just we two forever. I think I must have loved you always."

"Let us be married tonight, dear. There is still time."

"Oh, no, Paul, dear. We should announce it first. Let's wait until right after the holidays."



"Why?"

"Just so that people won't say we were in too big a hurry."

"What do we care what people say? If you had a family it would be different, but we are all alone—"

She smiled at him. "Perhaps if we had to share each other we wouldn't be so happy. We can be so content with just ourselves."

"Dearest—"

"Yes?"

"You do love me?"

They were entering the outskirts of town, within a mile of Marilynne's home. At the sharp bend in the road, one runner caught on a fallen branch and the sleigh toppled to its side.

Paul was up almost before he had stopped tumbling, and was at Marilynne's side, but she lay very still. He spread one of the laprobes on the snow, using the other for a pillow, and lifted her onto it. Then he covered her carefully, loosed the kicking horse from the upset sleigh, and rode into town at a gallop.

"I'll get old Doc Weatherby," he thought. "She can't be seriously hurt; she musn't be." He urged the horse faster. "Ah, here we are."

But Doctor Weatherby was out, and not expected for two hours. "Doctor Thompson lived about two miles farther on," Mrs. Weatherby told him. "Is it anything serious?"

"I don't know. An accident." Paul went back to his horse. "I can't leave Marilynne for so long," he thought, before he had gone far. He looked about for a possible messenger, but there was no one in sight. Before the next house he stopped, intending to ask there for some one to deliver his message. But as he stepped on the porch he noticed a sign: "Dr. J. B. Brown." He rang the bell. A man with graying hair answered it.

"Doctor Brown?"

"Yes."

"Can you come with me right away?"

"Well, I don't know. I'm very busy. Christmas eve, you know. What is it?"

"On the creek road at the bend by the willows. She may be dying. I'll go ahead, and you follow just as quickly as you can—" He was gone.

"But—" said Doctor Brown. He loked after the rapidly disappearing horse and rider. "Well, if I must—"

Marilynne stirred and opened her eyes. "Paul," she said. Then she noticed the blankets and tried to remember. She heard racing hoofbeats and raised her head. In a moment Paul was beside her.

"Are you all right? Marilynne, dear you're not hurt?"

"I'm all right," she answered shakily. "I must have fainted. We turned over, didn't we?"

"My dear, if anything awful had happened—"

A CHRISTMAS GREETING

WISHES old,
Yet ever new,
We send this
Christmastide
To you.

—MARY GRAHAM BONNER

((©, 1928, Western Newspaper Union)

"Tell me you love me."

"A thousand times, I love you. I love you more than life itself; more than anything in the world."

"Not more than I love you."

The moon came out from behind a cloud, and the snow gleamed in its light. A sound of distant chimes broke through the still air. Down the road a man on horseback rapidly approached unnoticed.

"Paul," said Marilynne, "I think that after all, we'll be married right away."

The rider left his horse and ran up to them. "You're the young man who came for me, aren't you?" asked Doctor Brown.

"Yes," replied Paul, "but I don't suppose you will be needed now."

Marilynne reached out her hand. "Why, good evening, Doctor Brown. What on earth did Paul want with you?"

Paul answered her. "I was afraid you might be hurt, and thought I had better call a doctor."

Doctor Brown laughed. So did Marilynne. "Doctor Brown," she explained, "is a minister."

Paul gasped. Then he held out his hand to Doctor Brown. "In that case," he said, "you are needed, after all! Let's right this sleigh, and all drive back to town together."

(©, 1928, Western Newspaper Union.)

Cathedral Made Dear by Old Associations

After Canterbury cathedral had been restored from the great fire of 1174, pious Englishmen so revered the beauty of this stronghold of the Church of England that they came from far and near and even those not so religiously inclined made their "Canterbury pilgrimages." For 300 years this was kept up and many an inn sprang from existence to prosperity in the shadow of the sacred edifice. In time some of these pilgrimages became less of a religious exercise than a favorite summer excursion and their history is shadowed in our word "canter" which is the shortened form of "Canterbury gallop."

Another interesting thing associated with this cathedral is the division of the Bible into two chapters. Stephen Langton, who died in 1228, was cardinal and archbishop of Canterbury besides being a statesman of no mean force. This was the age of the beginnings of organized learning and Cardinal Langton, after distinguishing himself as a teacher, gave his time a standardized text of the Vulgate—there being up until then almost as many versions as there were Bibles. It was in this work that he made the innovation of dividing the lengthy books into chapters, thus making specified passages much easier to find.—Detroit News.

Collector Had Noted Pussy's Rubber Heels

There is a saying to the effect that "Possession is nine points of the law," but in these days of repossession many strange experiences are the lot of the man whose job is to bring back the goods. One such individual tells the story of a case wherein he had repeatedly made calls, but could never find the party at home. At least, the bell ringing was always ignored.

Noticing one day that the threshold of the front doorway was worn quite thin, so that one could look into the hallway some few inches, the collector decided to leave his card, and after noisily walking down the steps returned again very quietly and saw his card being picked up.

He said nothing and when he finally gained admission, later in the week, he remarked to the woman that he had called several days earlier and found no one at home. She replied very sociably that "I knew you must have been here because I found your card. It was in the middle of the hall floor where the cat must have pulled it in and was playing with it."

The collector looked at her very coolly, remarking, "Yes, I know. I saw his rubber heels."

Hopeless

An airplane flew over an Irish asylum, much to the consternation of the inmates. Next day two of the latter were discussing the strange machine. One said:

"Do you know, I dreamt last night I made one of those contrivances and flew to Australia in sixty minutes."

"That's strange," said the other, "for I had a similar dream, only I went to Melbourne in sixty seconds."

"How did you go?"

"Right through the earth."

"Look here, my friend," said the other, " you're not a lunatic—you're a blithering idiot."

Be Charming

In the world there is no duty more important than that of being charming. Without the jeweled presence of the humming bird, how gloomy would be the recesses of the forest! Is it not one of the most delightful duties of life to shed joy around you; to scatter happiness with your every word and movement; to cast a light into the dark corners of our life; to be the gilded cord that leads our destiny, and to be the true spirit of beauty and harmony?—Victor Hugo.

Ancient Roman Art

One of the most beautiful examples of art as practiced by the ancient Romans is known as the Trajan's column.

Situated in Rome, this tower, which consists of twenty-three tiers, soars into the air, an imposing figure, covered with about 25,000 gloriously sculptured figures.

The tower was built to celebrate the victories of the Emperor Trajan, whose remains are buried beneath this beautiful structure.

Times Have Changed

"Ah," sighed the old-time actor, as he came back from a last appearance on the stage, "there was a time when I had the whole audience sobbing every time I recited that pathetic poem. Now they sit there like a lot of mummies!"

"Bo" said the stage hand, "the only way you can make a modern matinee mob turn on the water tanks is to make them peel onions during the recital of your sob stuff or spray 'em with tear gas."—Cincinnati Enquirer

Off They Come!

A particularly stout lady attired in a very tight riding-habit was taking her morning canter in the Row, accompanied by her husband. Suddenly a button unable to stand the great pressure, flew off the lady's coat.

"Dear, dear," said the lady fretfully, "what makes these buttons come off?"

Her escort quivered with excitement, for he had thought of something funny.

"Ahem! Force of habit, my dear," he grinned in reply.—London Answers.

Bottle-Raised Apple Tree Something New

Milk-fed chickens and even milk-fed porkers are no novelty, but did you ever sink your teeth into a milk-fed apple? It seems that a Brockton matron was about to set out a young apple tree and sought the advice of a nearby storekeeper as to how it should be planted.

He advised digging a hole large enough to hold the roots. Then a short section of garden hose should be put in place, reaching from the surface to the roots, before the hole was filled in. Milk, poured down the tubing every day, would give the baby tree nourishment until it got strong enough to take care of itself.

Some time afterward he inquired of the lady how the tree was getting on. "It is doing finely," she replied. "I give it milk every day, as you advised." The storekeeper looked stunned, then raised his hands in despair.

"My Lord!" he gasped. "Didn't you know I was only joking about that?"

The bottle raised-little tree no longer gets its daily ration from contented cows, but maybe when it begins to develop apples they will have a creamy flavor.—Montreal Family Herald.

Remarkable Work of Hindu Stone Carvers

The majestic stone carvings to be found on all ancient buildings in India, gigantic Buddhas, the bulls and the marvelous bas-reliefs are among the wonders of the world. Equally marvelous are the fretted walls of old Mogul palaces, Futtehpore Sikri, and the forts at Agra and Delhi. Wonderful artists and craftsmen have worked on this hard sandstone and left us a world's heritage. We stand amazed at their skill and patience. They do not work like that in this our day.

But the humble craft of stone cutting thrives, says a writer in the Statesman, of Calcutta, wherever stone quarries are found. The red hills of Rajputana send masses of stone to Agra, and these on the outskirts of the city are the factories of the patient toilers who chip and cut by hand, contriving grinding stones and dishes and bowls with the same instruments that cut the stones for the Taj, and carved and fretted the screen in that far-famed tomb and the deserted palaces of the fort.

The Party Line

"I says to May Ellen when her beau an' her fell out, 'Theys lots bigger fish in th' sea than ever was catched, an' she sniffles, 'What good's thet to folks livin' inland?'

"It's flyin' again' providence to be like th' Widow Jones thet throws th' empty tomato cans right under her sign, 'Country Board—Strictly Fresh Vegetables.'

"Kate Ellery was in to ast th' manager of th' Bijou Dream theater not to spray thet perfume in his place no more, because her man allus tells her his coat got smellin' thet way from goin' to th' pitchers, an' she ain't so sure."—Kansas City Star.

Left Gentility in a Safe

Emma Calve, prima donna of Carmen fame, tells this story against herself in her memoirs, "My Life":

"I once had an English maid. She was a thoroughly good girl, truthful honest, obliging, but lacked tact. One day, when on a long train journey, she noticed that a rope of pearls I usually wore were missing, and panic seizing her, exclaimed:

"'Oh, madam, where are your pearls?'

"At home in the safe, I told her, adding that I never wore them when traveling.

"'Oh, what a pity!' she said. 'They make you look like a real lady.'"

At Last!

The two old maids had lived together in apparent harmony for more than forty years, when one, having reached her ninety-eighth birthday, died.

A relative who undertook to break the painful news to the surviving sister was afraid the shock would prove fatal, but it had to be done sooner or later.

However, it turned out that her fears were groundless.

"Ah, well," replied the sister, who was only eighty-nine, brightly, "now I suppose I shall be allowed to have my tea made just as I like it."

The Hustlers

An American was airing his views on the country as he saw it.

"There's nothing much the matter with this little island," he began. "All you want is a little more hustle."

At that moment there was a clamoring noise, and a fire-engine flashed round the corner.

"What's that?" gasped the visitor.

His friend smiled.

"Oh," he replied coolly, "that's only the district window-cleaning company working overtime."—London Answers.

Planting in Memory

The memorial tree idea that has been taken up throughout the country under the leadership of the American Tree association lends itself admirably to the Road of Remembrance plan. This should be kept in mind by every tree planter, for if the tree is a memorial tree or the road is a road of remembrance the planting must be of such character that those for whom the trees are planted would be proud of the new beauty given to the world.

Racial Mark Plainly Seen in Place Names

While most of the states of the Mississippi valley, besides countless rivers and lakes in all parts of the country, bear Indian names, but a small number only of the towns that are the work of the white man have adopted names borrowed from the original owners of the land. Not one in ten, it is claimed, of the 150 large cities has an Indian name, if we except Chicago, and among those that have it is usually an adaption from some neighboring lake or stream.

The early explorers and settlers have left their racial mark. Up the Hudson and Mohawk the trail of the Dutchman is pretty clear. The French influence in northern New York and Vermont and along the line of the Great lakes is familiar in many names. Mississippi has no "saints" in its list, whereas across the river Louisiana, by nine parishes and many towns, rivers and lakes, perpetuates the religious tenets of its early fathers. Kentucky and Tennessee evidence the vocabulary of the hunter and trapper. Montana and Idaho that of the miner. All the region acquired from Mexico, particularly southern California, maintains in its place names the memory of its Spanish explorers and settlers. There are relatively few Indian names on the Pacific coast, strange to say. North of the Spanish belt capes and towns frequently reflect the loyalty of early settlers to the older states of the Union; for example, Portland, Ore., which was named after Portland, Maine. The story is that two settlers to whom the task of selecting a name for the Oregon settlement fell were eastern ers, and that they tossed a coin to determine whether the town should be called Boston or Portland.

Nature's Kindness to People of Green Isle

Among other benefits of being an Irishman there is to be listed, it is asserted, an ability to break one's bones with relative impunity, as compared with Englishmen or persons of other races.

At a recent coroner's inquest at Camberwell, England, Dr. Reginald Larkin, a police surgeon familiar with accident cases, took occasion to report his experience that broken bones of the Irish heal more rapidly and strongly than similar fractures, the victims of which are English; thus justifying, perhaps, the Irishman's traditional preference for the shillalah a plaything relatively harmless to his countryman.

In all animals the repair of broken bones is the duty of millions of tiny living cells which accumulate at the place where the bone is broken and cement the severed ends together with stiff, cartilagelike tissue which then slowly hardens into bone by deposit of compounds of lime.—Baltimore Sun

Of Another Calling

En route to fulfill an engagement in New England once, Sousa got off the train at a station to stretch his legs for a few minutes. Before he could look around an excited woman rushed up to him and frantically demanded:

"Has the nine-three train pulled out?"

"I don't know," he replied.

"Why don't you know?" she shouted. "Why do you stand there like a log? Aren't you a conductor?"

"Yes, I'm a conductor."

"A fine conductor you are," she exclaimed contemptuously.

"Well, you see," he humbly replied, "I'm not the conductor of a railroad train; I'm the conductor of a brass band."

The Brimstone Path

When the revivalist, Torrey, was holding meetings in London, he was annoyed by persons who disapproved of his sermons leaving the hall. Preaching a regular hell and brimstone sermon one night, he told his hearers what a great sorrow it had been to him because he believed one of his aunts had died impenitent. "And she has certainly gone to hell," the evangelist added. A young man could stand no more, and got up and walked out. "Yes, and there goes a young man who will go to hell, too," Torrey shouted. Reaching the door, the young fellow turned around. "Yes, I'm off," he called back. "Ta, ta. Any message for auntie? Or shall I tell her you'll see her later?"—Portland Oregonian.

The Only Girl

Jack had just asked Jill to marry him, and she murmured "Yes."

"Jack, dear," she ventured, after a long silence, "am I the only girl——"

The young man's arms tightened about her.

"Jill," he interrupted fiercely, "don't ask me whether you are the only girl I ever loved. You know it as well as I do."

"That wasn't what I was going to say at all, Jack," she answered. "I was going to ask you if I was the only girl who would have you."

Diagnosis

Little Bettie Easterday of Indianapolis had been visiting her grandmother at Scipio and had contracted a case of mumps from some of her little playmates.

Mumps must have been painful for little Bettie because she diagnosed the pain, when asked how they felt by saying:

"They hurt just like having the tummyache in my neck."—Indianapolis News.

CHRISTENSEN BROS. CLOSING OUT

PUBLIC SALE

We have decided to quit farming and will have a closing out sale on the Frank Meater farm two miles west and four and one-half miles south of Ventura; 4 miles north and 4 miles east of Klemme; 4 miles east and 3½ miles south of Garner, on—

Friday, December 28th

SALE STARTS AT 10:45 A. M. SHARP — BIG FREE HOT LUNCH AT NOON.

All Small Articles Will Be Sold Before Dinner

7 Head Horses 7

1 Horse 6 years old, weight 1,400

1 Black Horse, 9 years old, weight 1,700

1 Brown Horse, 10 years old, weight 1,700

1 Brown team, 8 years old, weight 3,400

1 Bay team, 12 years old, weight 2,000

40 Head Cattle 40

14 Head of Extra Good Cows, consisting of 3 Holsteins, one fresh, two fresh in January; 10 cows of which 7 are fresh, 2 heavy springers, one fresh in spring and one springing heifer.

Rhone Durham Bull, 13 months old, out of high producing cow.

8 Calves: 5 heifers and 3 bulls.

15 HEAD OF HOGS— 10 Brood Sows — 1 Boar — 4 Fall Pigs

Farm Implements

McCormick grain binder; Moline corn binder; Oliver 14-inch gang plow; walking plow; sulky plow; 3 corn plows; wooden lever drag; Moline Corn Planter; endgate seeder; hay rake; 2 wagons with triple box; one low and one high wheel; wagon with hay rack; hay buck; Emerson manure spreader; top buggy; spring wagon; Climax Ensilage cutter; Deering disc, 8 feet; Thomas 6-foot mower; tank heater; cooling tank; feed cooker; hog waterer; self feeder; hog troughs; 2 wheelbarrows; 2 set britchen harness; back pad harness; 120 rods woven wire, 32 inch; De Laval Cream Separator; 11 ten-gallon milk cans; milk pails and cans; washing machine; chicken brooder, 5x20; feed bunk; feed rack; and many other articles too numerous to mention.

50 Rhode Island Red Pullets — 5 tons Mixed Hay in stack — 1,000 bu. White Corn, Good

TERMS OF SALE—Sums of $10 and under cash, sums over $10, make arrangements with Clerk.

A Little Talk On Quality Cream—"If your neighbor was raising a variety of oats that made an average yield of 80 bushels per acre and the kind you were in the habit of raising only went about 50 or 60, you would make a strenuous effort to get a supply of seed from him. Some creameries are able to get a decided premium in the price of butter they ship to the eastern market because of is fine flavor. First class butter can only be made from first class cream and every patron of the Klemme Creamery should take pride in delivering only cream of the highest quality, not only because there is considerable satisfaction in marketing a quality product but because it increases the size of your cream check as well."

However, we are proud of the way the patrons of our Creamery co-operate with us. We are proud of the fine quality butte we are bale to make through this splendid co-operation. Let's keep co-operating for the benefit of all. This is your Creamery —boost for its success!

Klemme Co-op. Creamery Company

Free Movies!
Friday & Sat.

In appreciation for the support and patronage Klemme and this Community has given us during the past year, we in a measure, want to return our good will to you, so we invite the people of Klemme and vicinity to be with us on FRIDAY and SATURDAY evenings of this week at which time we will run FREE moving pictures at the Idle Hour.

TWO SHOWS EVERY NIGHT——FREE!

Misses Emma and Gladys Kothenbeutal remained in Klemme over the week end due to impassible roads.

Long Eyelashes Joy of Poet and Artist

There are two sorts of long eyelashes, those that turn up and those that droop downward. The first sort have the charm that comes from that delicious curl that lends piquancy to the eye, while the others add as much to the eye by shading it and making it seem darker, more mysterious and more luminous.

So whichever sort of long lashes you have you may be satisfied from the point of view of beauty. However, it is said that those that turn up betoken good health, while those that droop are more often possessed by persons of delicate health, and indicate melancholy.

Almost all poets and artists are agreed in praising long lashes. Leonardo, the famous Italian Renaissance writer says "lashes should be long and black as Indian ebony," but on the other hand, another Italian writer on feminine beauty says "the lashes should be thin and not overlong nor would I have them very black, which makes the gaze fierce."

Balzac could also see beauty in short lashes, for of the charming Camille in "Beatrix" he says, "The lashes are short, but as black and thickest as the hair of an ermine's tail."

When Modest Man Had Right to "Limelight"

Brown is a very rich man, but his name is never mentioned in connection with the various banks, factories and other enterprises in which he is interested.

He writes books on economic subjects, and magazine articles on industrial problems, but he never signs them.

He never grants an interview. He avoids photographers. He refuses to speak in public.

He is the unonymous donor of vast sums to charity.

There was but one occasion when he willingly allowed reporters and photographers to approach him. He posed in several positions while the cameras caught him from all angles. He read a prepared statement to the reporters. What's more, he cautioned them to spell his name correctly. He had just won the deciding match for the prize offered by his club to players with a handicap of thirty or over.—Los Angeles Times.

Muckraking Days

The late Chauncey M. Depew was talking one day to a New York reporter about the more tolerant attitude of the public nowadays toward the great financiers.

"You don't remember the old muckraking times, I suppose," said Mr Depew. "In those times it was a crime to be rich. Our muckrakers—how they muckraked!

"John D Rockefeller, I suppose, is the most generous man in the world He has given I don't know how many hundreds of millions for the benefit of his fellow-men. And yet our muckrakers used to say that John D. was mean, yes, meaner than old Scragg, the village miser.

"Old Scragg, you know, used to skim the milk on top and then flop it over and skim it on the bottom."

Sound Bores Holes

Sound waves of a frequency of 200,000 to 500,000 vibrations a second, passed along a tapering glass rod, caused the tip to bore a hole in a piece of wood and a plate of glass, a French experimenter discovered recently. When the waves were communicated to a glass thread about one one-hundreth of an inch thick and more than a yard long, the frictional effect was so intense that the flesh could be burned. Further tests with the "ultar-sonic" waves showed that they accelerated various reactions and produced crystallization.

Need of Sunday

The really laborious man cannot afford to work on Sunday. My Sabbaths gave me my happiest moments, and in a great stretch of years crowded with professional and public cares, they made family life in any responsible sense, a possibility. Literary things, divine things, the significance of life for oneself, for all dear to one; for the great moving world; going to church—why that was but part of the natural homage which one paid to that supreme need which every sensitive soul feels for moral replenishment.—Lord Shaw of Dunfermline.

Lawyer's Advice

He strolled into a club in which he had managed to gain admission as a member. He looked around to see if there were anybody there he knew, and after a while he discovered a well-known lawyer reading by a window

He walked across to the lawyer and held out his hand, palm down On his third finger glittered a diamond he had just bought "What do you think of that?" he demanded.

"Seems to be a fine stone," said the lawyer, "but if I were you I'd sell it and buy a nail brush."

Honoring the Judge

Rufus Choate, "The Wizard of the Law," once began one of his obtruse arguments before Chief Justice Shaw, —says Francis L. Wellman in "The Art of Cross-Examination"—in the following manner:

"In coming into the presence of your honor, I experience the same feeling as the Hindu when he bows before his idol. I realize that you are ugly, but I feel that you are great!"

The Popular Gift Shop

The gifts you choose at this store are sure of appreciative welcome—
It is easy to make a happy selection from such a wide assortment of attractive things.
We have endeavored this season to assemble he most adaptable, beautiful gifts.
Small Gifts at slight cost and important Gifts of lasting beauty and usefulness.
Gifts for all tastes. For all ages. For all purses.
Choose now while assortments are at their best.

For the big holiday dinners you will fnd every item needed in our grocery department.

MULCHING HELPS STRAWBERRY BED

Fruit Specialists Recommend Wheat or Rye Straw.

Mulching the strawberry bed, preferably with clean wheat straw, not only gives protection against alternate freezing and thawing in the winter, but tends to keep the plants from starting growth during unseasonable warm spring weather. It also keeps down weeds and conserves moisture, thus taking the place of cultivation, and helps to keep the fruit clean during the fruiting season, it is pointed out by Frank H. Beach and Clyde S. Holland, fruit specialists in the extension service of the Ohio State university. Serving all these purposes, mulching thoroughly justifies itself as a strawberry producing practice, in the opinion of the specialists.

Wheat or rye straw, clean, are perhaps the most satisfactory materials for mulching. Oat straw packs tightly and sometimes contains unthreshed grains. Manure, mixed with straw, while sometimes used, is likely to harbor weed seeds and insect pests, and is not always good for the soil upon which the strawberries are grown. In small home beds, rakings from the lawn will serve.

The mulch may be applied either before or after the ground is well frozen, since its purpose is to prevent freezing, thawing, and freezing again.

Pruning Currant Bushes by Removing Old Canes

The difficulty in pruning currants is greatly increased by neglect. Systematic annual pruning from planting should be followed. The finest currants are produced at the base of one-year-old shoots and on one-year-old spurs arising from two-year-old wood. Spurs on older wood produce fruit but it is much less in amount and smaller than that produced on younger wood. Canes, therefore, are usually past their best fruiting after their third crop.

The chief item in currant pruning is to remove canes which have passed their best fruiting and to replace them with new canes. A good plan is to remove a definite number of old canes each year and leave an equivalent number of new canes to replace them. When a three-year system is followed, nine canes to a plant makes it easy to keep the balance.

The three-year plan can be operated as follows: At the beginning of the second season leave six strong canes. At the beginning of the third season remove two of these canes and leave five strong new canes. At the beginning of the fourth season, remove one two-year cane, two one-year canes and leave three new canes. Thereafter the oldest canes, those in their fourth year, should be removed and three new canes left to take their place. This will give a plant, at the beginning of the growing season, composed of three canes in their second season, three in their third season and three in their fourth season.

Dwarf Fruit Trees Are Becoming Very Popular

Of recent years the dwarf fruit trees have come into great favor because of their early fruiting qualities. It is claimed the dwarf varieties fruit in at least half the time it takes the standard tree to reach the fruiting point.

Now the dwarf fruit trees are being made to serve an ornamental purpose, as well as a useful one. They can be planted as specimen subjects the same as the ornamental trees, and at blooming time are as beautiful as any flowering shrub or tree.

When grown for their fruit they are economical, as they take up less ground, and therefore more trees can be planted to the same area. Dwarf trees are also much more easily cared for; spraying and pruning are simplified.

Spraying for Scale Is Job for Winter Season

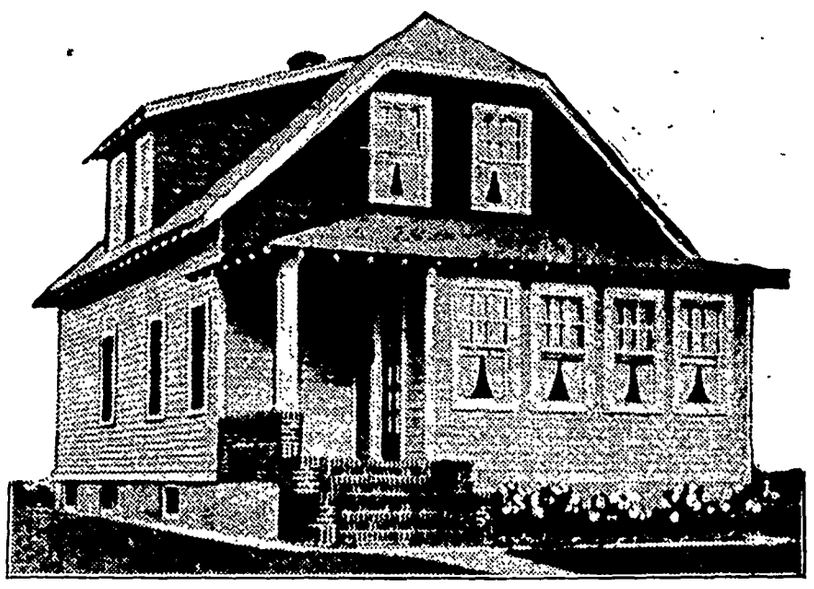
San Jose and other scale insects, including oyster-shell scale, hose scale and scurfy scale make up a group of formidable plant pests. Often their presence is unknown until the plant has succumbed to their attack. They are tiny scale-like insects of varying shapes, which settle themselves on the bark, leaves and fruit of plants to obtain their subsistence by sucking the sap of the plant.

All sucking insects must be controlled by spraying them with a poison which will kill by entering the breathing pores, or with a substance which will smother them.

Blackberry Shoots

The new shoots of blackberries come up from the roots, and in time will form a rather dense clump. The best way to handle this is to take up the thrifty plants, dividing them from the main root underground, and set them where desired. Along a wire fence would be very good, because you could then tie them up to the fence and keep them in convenient shape for handling. This work can be done either in the fall after the leaves drop or very early in the spring.

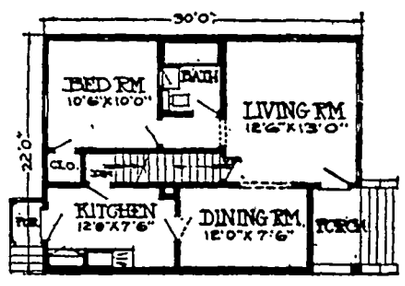
Attractive Story-and-a-Half House Provides Comfort and Ample Space



By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The economy of the story-and-a-half house is well known, but so many story-and-a-half houses are unattractive in appearance that this type of home does not receive the attention it otherwise would from prospective home owners. An unattractive appearance, however, is not a necessary characteristic of the story-and-a-half house as is amply demonstrated by the design shown here. A well designed house of this type may be just as attractive as the two-story house or the bungalow.



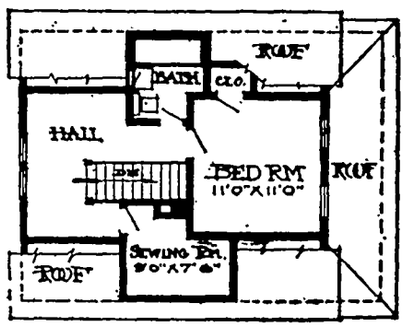
First Floor Plan.

This small home measures just 22 feet wide by 30 feet deep, making it quite suitable for the owner of a narrow lot. It rests on a foundation of solid concrete. The steps and porch are of ornamental brickwork which adds much to the pleasing effect of the design. The side walls are finished with lap siding except for the gables and dormers where shingles have been used and the combined effect is quite distinctive.

The treatment of the roof lines plays a large part in the success of this house for it is most frequently the uninteresting roof which spoils the story-and-a-half house. Here the snubbed gables and dormers break up the roof and produce a pleasing contour.

From the small porch the entrance leads into an almost square living room, directly back of which is a bathroom and beyond a bedroom. To the left of the living room, through an arched opening is the dining room with the kitchen to the rear. The kitchen is compact but so well arranged that its small size is an advantage rather than a disadvantage. It contains the basement stair and there is a rear service entrance.

The stairs to the upper floor ascent directly from the living room into a large upper hallway. On the floor there is another bedroom, a second bathroom, something quite unusual in so small a home but very desirable



Second Floor Plan.

in any home, and a sewing room which might well be used as a bedroom if occasion required.

Checking back this gives us a house of five rooms, two baths and a sewing room, a really surprising number of rooms for such a small house and yet all of the rooms are of a size that will be found entirely satisfactory.

New Product Copies Hand Rived Shakes

In the early days of American home building most houses were roofed with shakes, hand rived from cedar, pine or cypress, according to the locality. These hand shakes were used because they were the material most easily and economically at hand, but the years have shown the lasting quality of the old shake roofs and even more recently we have begun to appreciate the true beauty of their irregular texture and deep shadows.

Now red cedar shakes, hand rived like those of bygone days, are being produced commercially and are rapidly gaining favor among those who seek something informal and distinctive in their homes.

The shakes used in roofing are 24 inches long and come in random widths. They vary in thickness from ¾ inch to 1¼ inches at the butt and when laid with a 7½-inch exposure provide three full laps. When used on side walls, as they often are, they are usually laid with an exposure of 10 to 11½ inches. These shakes are frequently laid in uneven courses, a device which adds a rustic touch suggestive of an older day.

Soap and Water Will Clean Iron Articles

Wrought iron is in vogue. Everything from chairs and benches to lamps and bric-a-brac is being fashioned out of these strips of iron.

Some of the articles are painted or waxed or otherwise finished on the surface and people already are beginning to wonder how to clean them without damaging the finishing.

Dusting with a soft brush is sufficiently effective for every day, but occasionally a more thorough cleaning is desirable. For this, make a good, rich suds of luke-warm water and a good neutral soap.

Apply the suds with a brush, so that it will reach all the corners and crevices. Rinse by dipping the brush in clear water. Dry as thoroughly as possible with a soft cloth and let stand in the open air to dry completely. Polish if desired with wax or furniture polish.

Limestone as Veneer

New methods have been applied to the use as well as to the quarrying of stone. Indiana limestone is now coming into extensive use as a veneer applied to stud-frame walls. Or it may be used as a structural facing over hollow tile or brick. It is secured to the frame with galvanized metal ties, the same as a veneer of brick.

Many Ways of Keeping Maple Floors in Shape

Maple floors are somewhat harder to keep in good shape than oak, probably because maple is such a hard and close-grained wood. On maple the first coat of varnish should be thinned with a liberal quantity of turpentine to hold subsequent coats of heavy bodied floor varnish.

Not less than three coats should be applied to these floors to secure the best results. Refinishing maple floors which are in bad shape is best done by scraping and sandpapering after removing the old varnish.

Many painters prefer to use oil instead of varnish on maple, and if a slight darkening of the wood is not objectionable it is probably the best way to treat these floors. Oiling should be done frequently, as it soon wears away.

Wax is also an excellent finish for maple and may be applied directly to the wood without the previous coat of varnish recommended for oak floors.

Brick Wall Will Keep Floors From Settling

Foundation supports for interior wall bearing partitions are factors of utmost importance to Ralph W. Friend, Cleveland architect. He suggests an inexpensive way to avoid floor settling troubles.

"The common practice among many builders is to support interior wall bearing partitions on a wood beam held in place by the use of iron columns (pipe) set on a small square footing," he says. "The bases of these iron columns rust, the footings settle due to the heavy load on them and throw the floors out of level, frequently causing the bottom of doors to strike the floor when swung open. This practice should be discouraged and the use of an eight-inch tile or brick wall encouraged and advocated.

"The masonry bearing wall affords an even distribution of load which reduces settlement possibilities to a minimum. It is permanent and is a great aid in building a good house."

Roof Permanence

Roof permanence depends as much upon what holds up the roof as it does upon the surface exposed to the elements. A roof frame with 2 by 6 rafters spaced 16 inches apart and not spanning a distance greater than 10 feet, and which are not set at an angle less than 45 degrees, will be strong enough to support heavy roofing such as the tile and slate. If a roof is wider, or if the angle at the peak is greater, rafters should be sturdier.

POULTRY

FEED FOR WINTER EGG PRODUCTION

Maturity and Health Make for Strong Bodied Fowls.

One of the paramount problems at this time is the matter of feeding for maximum egg production through the winter, when egg prices are highest. Some mighty good hints on this question are supplied by R. L. Watkins, extension poultry specialist, Ames, in his bulletin for record flock keepers. His suggestions follow:

"Winter eggs are laid by well-matured pullets and healthy old hens which are comfortably housed and properly fed. Maturity and health make for a strong-bodied egg machine. Pullets, to lay large eggs steadily throughout the winter, must have proper body size and weight. Leghorns or other light breeds may be considered ready for a regular laying ration when three to three and one-fourth pounds in weight. Heavier breeds, such as Reds, Rocks and Wyandottes should weigh four and one-half to five pounds. Immature pullets must not be forced into egg production by feeding them on a regular laying ration.

"Comfort enables the bird to utilize feed in manufacturing eggs instead of using the energy thereby obtained to maintain body warmth. Feeds are the raw materials out of which hens build eggs.

"A well-balanced egg mash containing ground grains or grain by-products, protein concentrates in the form of meat and milk products; minerals in the form of bonemeal, salt and some grit; and often green food in the form of ground alfalfa must be kept available to hens and pullets if they are to lay any number of eggs during the winter months.

"Whole or cracked grains such as corn, oats, wheat and barley should be used in combination with a mash to maintain body weight and comfort. Body weight cannot be maintained during heavy egg production unless sufficient grain feeds are included in the ration. In a ration made up of mash and grain the mash feed contains most of the egg building material while the scratch grain contains most of the fat and heat-building material. Good poultry management requires that the birds consume sufficient mash to maintain their egg production, also that they eat sufficient grains to maintain body weight. Hens losing weight soon stop laying."

Cod Liver Oil Is Most Easily Given in Feed

The value of cod liver oil for poultry is summed up by one hen professor as follows: Stronger and healthier birds, prevention of leg weakness from heavy laying in late winter and spring; better looking egg shells, more and stronger chicks from the eggs hatched, and fewer blood spots in eggs.

Cod liver oil is most easily fed, this professor writes, in semi-solid buttermilk or cottage cheese. Or, he says, you can feed it with the scratch grain—a quart to 100 hens every week.

For a flock that size, his method is to mix about a teacupful of the oil with the scratch grain every other day. Keep this up until spring takes the flock outdoors again.

Guard Against Disease in Feeding Green Bone

Some butcher shops have installed bone grinders and sell ground green bone. This is an excellent feed when fed fresh, but poultry offal must not be ground in because of the danger of transmitting disease to the flock. This is especially true of tuberculosis. Whenever a supply of green bone is purchased it should be spread out thin in a cold room. If left in a paper sack even in a room below freezing the center of the mass will heat and spoil. Green bone cannot be successfully kept in large quantities unless thinly spread.

Poultry Notes

****

A fresh supply of water should be available to the hens at all times.

* * *

During extremely cold weather birds should be given more corn and grain than during mild weather.

* * *

Birds prefer grain feeds. The amount of mash consumed is determined by the amount of grain fed.

* * *

The mash is the egg food and the birds will like it and eat it as long as there is plenty for them in the hoppers.

* * *

Let your breeders out every day regardless of the kind of weather, as it is eggs with good, healthy germs that you are after.

* * *

Only by constant improvement can you hope to get in the A-1 class, and when you do you'll find a waiting market for every egg or baby chick you can produce.

That Million-Dollar Feeling

"Say, you were hitting 45. Think you're a millionaire in a Rolls-Royce?"

"I sure feel like a million, officer. I took NR last night."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT TOMORROW ALRIGHT

MAKE THE TEST TONIGHT

BE WELL HAPPY

Get Relief. Drive Out the Poisons

Auto-intoxication, Constipation, Biliousness, are caused by defective elimination. For over thirty years Nature's Remedy (NR Tablets) has proven the safe, dependable relief for these conditions.

GET A 25¢ BOX — SOLD BY YOUR DRUGGIST

Sable Appears to Be Close to Extinctio:

Sable, the king of all furs, is on the verge of disappearing from the fur world.

So scarce has this fur bearer become in Russia and Siberia that an American importing firm announces it had taken a year to collect enough pelts to make one woman's fur coat. The cost of such a garment will be around $35,000.

Only a decade ago, following the revolt in Russia, sable furs were worn by the common people. Formerly royalty alone could afford the fur. In eight years the sable was hunted to extinction. Only such pelts as have been stored now come out of the great fur country.

Unless the Soviet authorities hasten some conservation work the fur trade will have to fall back on the North American marten, the cousin to the Siberian sable. Marten are now protected and are increasing rapidly in Alaskan forests.

Electricity From Mud

Mud is the latest source of electrical supply. A power station is being erected at Karnay, Germany, which will depend on the mud of the river Ems. This contains a combustible material which, by a new method, will be extracted and dried, and then used as fuel for the works. The heat value is stated to approximate lignite.

The new process is described as of international importance, since there are many rivers in the various coal districts throughout the world where mud could be treated and used in the same manner.

Uncle Jack's War Job

Bobby, corroborating a statement of his brother's to a group of schoolboys, said: "Yes, Uncle Jack was the corporal punisher of the soldiers in France."

Circuses will soon be referred to as in the past tents.

Beauty Hint

Cliff Smith, the famous western director, was rushing a troupe out to location. When all were piled into that the leading lady was missing. "She ain't got a complexion yet," explained the prop boy.

"Tell her to come the way she is," yelled Cliff. "She can use an impromptu complexion."

"What do you mean, an impromptu complexion?" demanded the sulky leading lady as she clambered into the waiting car.

"Oh, you can make it up as you go along," growled Cliff.—Los Angeles Times.

Much Cheese Imported

The United States is the third largest cheese importer among the nations, the Commerce department reports. Great Britain, Germany and the United States buy over three-quarters of the total world's exports of cheese.

Italy, Switzerland and Canada are the largest suppliers of cheese to the United States. The total amount imported in 1927 was more than 79,000,000 pounds, nearly half coming from Italy.

War Disk in Odd Place

While Ole Seebus, cook on the Norwegian freighter Songa, was cutting a cabbage for dinner in Montreal, he found embedded in it a Canadian soldier's identification disk No. 88825. The war record office at Ottawa shows this number was issued to Joseph Latuer of Pittsburgh, Pa., who enlisted in April, 1918.

DAIRY TAE DAIRY

DAIRY INDUSTRY NEEDS OUTLINED

Three Most Important Factors Are Pointed Out.

(Prepared by the United States Department of Agriculture.)

The important factors that need attention in the dairy industry today are: (1) Greater efficiency in production; (2) production of the highest quality in dairy products; and (3) increasing the consumption of dairy products. This is the statement of O. E. Reed, who recently took up his duties as chief of the bureau of dairy industry, United States Department of Agriculture.

"Scientific facts available today in regard to these factors," continued Professor Reed, "are sufficient proof that a program of this kind entered into by the entire dairy industry will stabilize and insure prosperity for those engaged in it.

"The need of more economic and efficient production is quite apparent on every hand," he said. "The dairy farmer must cull out the low producing cows from his herd and build for a greater production for each cow through keeping records of production, by using better sires, and by following the best methods in feeding, breeding and management. The same problems must be considered by the manufacturer and distributor of dairy products.

"The quality of dairy products must be given more consideration. The farmer is responsible for the quality of the product as it comes from the farm. The manufacturer and distributor are responsible from that point on until it reaches the consumer. Dairy products are perishable and the demand for them will depend upon quality.

"The consumption of dairy products has increased to a marked extent during the past few years but in the light of recent investigations, both from the standpoint of the need of milk in the diet and the underconsumption of dairy products in many sections of the country, a considerable increase can yet be made.

"The work of the bureau of dairy industry is designed to add information through research and investigation to help with a program of this kind. The bureau's efforts, together with results of research carried on by all other organizations of the industry will do much to help solve these problems, but this alone is not sufficient to guarantee success in this work. If the entire industry is to reach the highest level of stability and prosperity every branch must cooperate with every other branch in carrying out a program that will meet all needs.

"And no part of the industry," concluded the new chief, "should forget that we need to continue to keep the public informed as to the value of dairy products, the progress being made in the improvement of them and the methods of production. The more we spread information regarding dairying the faster we will improve and the better the market will be."

Feed Dairy Cows Well Balanced Grain Ration

The generally accepted rule for feeding dairy cows is to supply a well balanced grain ration—balanced according to the character of the roughage fed—at the rate of one pound for each four pounds of milk produced by cows yielding milk testing around 3.5 per cent fat, and one pound of grain for each three pounds of milk produced testing close to 4 per cent of fat or more. This general statement should not be considered as a cast-iron rule, but should serve as a guide to definitely ascertain the capacity of each cow and then feed her more or less than these directions call for according to the response made by each individual.

Dairy Notes

Several kinds of lice may be on the same calf but it is the big blue ones that do the damage.

* * *

The numbers of bacteria in milk have little meaning unless the sanitary history of the milk is known.

* * *

The taste of clean milk is sweet and aromatic. The sweetness is due to the milk sugar, while the aromatic taste comes from the fat. Onions, bittersweet, etc., give bad flavors to milk.

* * *

Some calves seem to be free of lice while others in the same pen may be covered. The oily-skinned calves have a natural protection and because of this they fare better than dry-skinned ones.

* * *

One of the most common mistakes made in winter feeding of dairy cows is failure to provide enough feed. The cow may be looked upon as a milk factory, and as in any other manufacturing plant, the cheapest production is possible only when the plant is run nearly to full capacity.

Making War on Pestering Flea

Important Matter to Eliminate Breeding Places of Little Pests.

When fleas become annoying or dangerous to health it is necessary to take steps to alleviate immediate discomfort, but the important thing is to act energetically to eliminate the breeding places of fleas, and so put a check on the supply. This is the advice offered by the bureau of entomology in Bulletin 897-F, "Fleas and Their Control."

F. C. Bishopp, author of the bulletin, says fleas breed in greatest numbers on soil or in dust containing vegetable and animal matter protected from rain, wind and sun, but at the same time furnished with a certain amount of moisture. Spaces under buildings and porches fit these flea requirements, and it is well to prevent all animals and poultry going into such places. The vegetable and animal matter should be cleaned up carefully, the area sprayed with creosote oil, and the ground where the immature fleas are developing covered with salt and thoroughly wet down.

Prevent Infestations.

House infestations may be prevented by eliminating pet animals and applying gasoline to the floors after all rugs have been removed and the floors thoroughly scrubbed with soap and water. Applying derris powder to pet animals or washing them in a comparatively weak solution of saponified creosote or kerosene emulsion will destroy the fleas upon them. The skin of cats is tender and dips and washes must be milder than for dogs.

About 500 species of fleas are known to exist, Mr. Bishopp says, but less than a dozen are of special interest as pests to man and domestic animals. "But any individual of these few species, when bent upon satisfying its appetite, fully occupies the attention of its chosen host." The human flea, dog flea, cat flea, sticktight flea, chicken fleas, and the rat fleas (which carry bubonic plague) are the principal species that annoy man and domestic animals in the United States.

Relieve Bites.

Various cooling applications give relief in case of flea bites. A three per cent solution of carbolic acid in water applied to the bites will be beneficial. Menthol, camphor and carbolated vaseline will help allay irritation. Iodine in the form of a tincture will alleviate irritation, but should not be used by persons afflicted with any form of eczema.

Mr. Bishopp notes that the greatest horizontal distance fleas can jump is about 13 inches, and not more than half this distance vertically. It is possible to prevent them from gaining access to a bed by placing sticky fly paper about 13 inches wide on the floor around the bed, provided fleas are not breeding under it, or by placing the legs of the bed in pans of water covered with a film of kerosene.

Profitable Garden Plan to Prepare Soil Right

Prepare now to have a year-round garden. You will find that a well planned and properly cared for vegetable garden will cut the grocery bill in half. Spend more time in your garden and less time in your car, suggests Prof. C. C. Newman, chief of the horticulture division at Clemson college, who believes that the time spent in the garden will pay handsome returns at harvest time.

In preparing the spring garden bear in mind that thorough preparation of the soil is absolutely necessary—if best results are to be obtained. Plow the land to a depth of eight to ten inches and harrow repeatedly until a perfect seed bed has been formed.

Apply an 8-4-4 fertilizer broadcast at the rate of 1,500 to 2,000 pounds per acre, where vegetables are to be planted in rows 18 inches apart and cultivated by hand, the fertilizer being worked into the first three or four inches of soil. Vegetables planted in three or four-foot rows are best fertilized by applying the fertilizer in the drill and thoroughly mixing with the soil, and then covering with two or four furrows preparatory to planting the seeds.

Farm Notes

Little pigs may be vaccinated against scours, if a veterinarian can be employed.

* * *

Sheep should be protected from cold rains and cold-hearted dogs. They are both dangerous.

* * *

Cull beans fed to hogs should be cooked in water that has a small amount of salt in it.

* * *

You might as well make up your mind that you have got to fight "them bugs" if you get any crop—so arrange to do it as efficiently as possible.

* * *

The use of sweet clover pastures is safe; so is also, in nearly all cases, the first year hay crop and also the second year crop when it is entirely free from mold.

* * *

If the pasture on the other side of the fence always looks greener, as the proverb has it, maybe it's because the man on the other side of the fence uses lime and acid phosphate, with occasional reseeding.

LIVE STOCK

RAISING CALVES FOR BEEF PAYS

No Radical Changes Needed in Farm Operations.

With farm products comparatively cheap and fat cattle and feeder stock selling high, farmers who will raise their own beeves stand an unusually good chance of making a fair profit, according to C. E. Gates, boys' club leader at the University of Illinois.

A demonstration of how corn-belt farmers can raise their own feeder calves without making any radical changes in their farming operations has been carried on at the university for the last nine years by Prof. H. P. Rusk. A herd of ten beef cows has been maintained on 40 acres of land without using anything that would be sold from the farm if an ordinary good system of grain farming was practiced.

The rotation used has been corn, corn, oats seeded to sweet clover and sweet clover. The cows have been pastured on the second-year sweet clover field from spring until early fall. They have been put on the oats stubble which has had a good growth of sweet clover by that time. In the meantime, one field of corn has been cut and made up into stover silage, while the second field of corn has been husked. As soon as the oats stubble has been pastured down the cows have been turned into the second cornfield to graze over the stalks. They have then been taken to their winter quarters where they have been maintained on a rotation of stover silage, oats straw and one pound of cottonseed meal a day. This winter ration has cost about 10 cents a day for each cow.

The calves have run with their dams until weaning time. As soon as big enough they have been put on a grain ration fed in a creep. Under this method, all of the grain produced on the 40 acres has been sold either as a cash crop or marketed through the calves. They have been full fed from the start and sold as baby beeves, a plan which will bring the farmer more profit than if the calves are carried as stockers for a while.

Get Highest Feed Value From Skim Milk for Pigs

Skim milk is such a valuable protein supplement in the swine ration that none of it should be wasted. Some farmers have the notion that feeding pigs all the skim milk they will drink and limiting them on grain is a first class way in which to dispose of the skim milk. A better way to get a higher supplemental value from the skim milk is to feed all the grain pigs will eat and limit them on the skim milk. It is a mistake to supply the energy requirements of pigs from skim milk; it is too bulky for that purpose. Energy value is more cheaply supplied in carbonaceous grains. One should use the protein value of skim milk for all it is worth. To do this, skim milk will bring its highest protein feeding value when fed at a rate of 3 to 3½ pounds for each pound of grain fed.

Good Cross of Hogs

The Tamworth-Duroc cross seems to give very good results. The pigs from the cross gain a little faster than pure-bred Tamworths while they are finer boned, trimmer, and of a little better bacon type than the Durocs. The cross-bred pigs seem to be more resistant to disease and other troubles than either of the parent breeds.

As to whether the Tamworth-Duroc cross gives any better results than the Poland-Hampshire cross we do not know. Both crosses have been used a number of times and are great favorites in certain communities.

Live Stock Items

Sows and litters should be protected against cold and rains.

* * *

A good ration for your pigs will be corn, tankage and oilmeal. It will not be necessary to grind corn for pigs.

* * *

Oats contain a large amount of fiber and on this account limited amounts only should be fed to pigs. When oats are fed to pigs they should be finely ground.

* * *

Like tends to beget like. If our sows are consistently selected from large litters of strong pigs the tendency for them to reproduce in like numbers and kind may be expected.

* * *

A mixture of oats and rape for early spring hog pasture is excellent. If not pastured too closely, this mixture will furnish pasture until midsummer or until dry weather stops the growth of the rape.

* * *

It isn't good business to raise hogs a year at a time. The man who makes money with hogs raises hogs every year. He grows his own grain, provides his hogs with an abundance of pasture, keeps them free of parasites, feeds balanced rations and raises large litters of pigs.

Typewriter or Steel Pen Not for Lowell

Eighty or more years ago when metallic pens were superseding quills, James Russell Lowell was sure literature would suffer in consequence. In a letter to Sidney Howard Gay on June 16, 1846, he wrote:

"The injury to letters from an author's losing that space for meditation, which was formerly afforded him by the wise necessity of mending his pen, is incalculable."

Half a century later Lowell wrote to Mrs. W. K. Clifford, the novelist:

"Typewriters are as bad as postal cards. Both of them are unclean things I have never touched. Typewriting is hard to read. I am sure I could never say what I would if I had to pick out my letters like a learned pig."—Detroit News.

Malade a la Mode

She—Oh, dear, I've got such a nasty cough.

He—Oversmoking or underdressing?—London Chronicle.

Gentleness, simplicity and a sincere regard for the rights of one's companions, are the distinguishing marks of a fine character.

Speaker Just Had to Have His Forty Winks

An important political meeting in a downtown church was called for 9 p. m. At 9:15 the principal speaker had not yet put in an appearance. The audience was a fairly large and restless one.

The committeemen became demoralized and did not even make an effort to amuse the audience. A deputation of politicians arrived to pay their respects to the speaker, and still no speaker could be located.

At 9:30 one of the lesser lights of the meeting went to a Sunday school room in search of a gavel. There, stretched out on a long narrow bench, lay the principal speaker, fast asleep.

"I've been making seven speeches a day," he explained, "and thought I'd lie down for 40 winks. I guess I overslept."

And the audience heard the conventional story about the train being late.—Philadelphia Public Ledger.

Cold in Vermont

Frederick Rasmussen, the well known agriculturist, said at a banquet in Harrisburg:

"Agriculture is carried on in some regions of northern Europe where it is so cold that if you try to describe it people think you are exaggerating.

"Yes, they class you with the farm hand who said:

"'Cold? Yep, it's mighty cold today, but tain't nothin' to what I seen to hum wunst in the Vermont highlands. Why, one day in hog-killin' time up thar it was so cold that we had a kittle o' bilin' water settin' on the stove, and when we took it out in the yard it friz so quick the ice was hot.'"

Cold Valley Donning Red

Residents in the Torne River valley of northern Sweden are busy painting their farmhouses red. The activity is the result of anonymous gift of $1,500 worth of red paint to the Lapland Geographical society with the specification that it be used in the valley, so that the color-dotted landscape may set an example to the dreary Finland homes across the border.

Cured Him Overnight

A Howard (Kan.) man, as the Courant tells it, had been ill at home for several weeks. Able to be up one day when his wife was away, he nosed around among some of her things and found a nice new box of mourning stationery. He went back to work next morning.—Capper's Weekly.

Helping Her Out

She—I've been trying to think of a word for two weeks.

He—How about fortnight?

Garfield Tea
Was Your Grandmother's Remedy

Miss Mildred Johnson entertained her Sunday School class at her home Saturday afternoon. Games were played and a general good time was enjoyed, after which delightful refreshments were served.

Mr. and Mrs. R. C. Ludeke entertained the Misses Lenora and Mildred Wheatman and Phyllis Root to a six o'clock dinner Wednesday evening of this week in honor of June Ludeke's birthday.

UNDER GOVERNMENT SUPERVISION

A Merry Christmas

It is the same old wish
said with just
the same words, but from us to you it
carries the most heartfelt wishes
for happiness, contentment
and prosperity, and with
it, goes our sincere
hope that we
may be
more and more helpful in all things making
for the good of the community—

The First National Bank

Northern Brooder Hog House

We have about completed one of these houses and invite you to come in and look it over. It will house six Brood Sows, and and with a stove in the center you will have no fear of loosing your early litters. Litters coming in during February will be the ones that will be on the market early in the fall while the price is still up. Check back over the last few years and see if the market has not always been good during August September and October, just before the bulk of the spring pigs get on the market.

This Brooder House is not a makeshift building, but one built to stand like any other building, joists every 16" on center, studs doubled, good Car Siding on the sides, something that will hold paint, and a building that will not be hard to look at.

As to price—we will say that it will be in line with any other make of this type house. Come in, look it over, tell us where we might improve on it, if we can make it more handy or better that's what we want to do.

LOCAL MAN GIVES FORECAST ON WEATHER

Will Have An Open, Moderate Winter, Says Wm. Lau

Several months ago the Times printed a temperature forecast by Wm. Lau, resident of Klemme. In following out the forecast we found that it hit pretty accurate.

Now Mr. Lau has supplied this office with another forecast for the next six months. It shows that we can expect a moderate, open winter and warns us to hunt for shade in June. Here's Bill's own forecast as he handed it to the Times:

TEMPERATURE FORECAST
By Wm. Lau, Klemme, Ia.
Average Tomperature For
Six Months
Beginning Jan. 1, 1929 to July 1st.

January: Temperature moderate, not very cold.

February: Temperature moderate and not very cold.

March: Temperature moderate, not very cold.

(These three months indicate a moderate, open winter.)

April: Temperature some warmer.

May: Lower temperature, and colder.

June: Rising temperature, and quite warm.

In this last month we will notice the Never-Sweats and the Argue & Spit Club looking for more shade.

Mr. Lau informs us that the temperatures given above are for the average of the months given.

XMAS PROGRAMS GIVEN IN THREE CHURCHES

Christmas Tree Programs All Well Attended

Three Christmas Tree Programs were given in this community Monday evening and all were well attended.

The Klemme Reformed Church and the Klemme Methodist Church gave their programs beginning at 7:30 o'clock, while Liberty Township M. E. Church started their program at 7:00 o'clock.

As a number of children were ill with colds and grippe the programs were somewhat broken in places but despite this handicap, all were fine and greatly enjoyed.

Christmas treats were passed out at each of the programs.

WEATHER HERE HAS BEEN VERY MILD

The weather the past week has been exceptionally mild and warm for this time of the year and Christmas day was warm and balmy, like spring.

The mild weather has given road men a chance to drag the roads and again smooth them up before they freeze hard.

Flu Is Spreading Fast

Perhaps due to the mild weather the flu is spreading rapidly all over the state and many are ill in this community. At first the disease was mild but local doctors warn that it is becoming worse and those who are attacked should not regard it lightly, but should go to bed and remain there until fully recovered.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

When making up your list of New Years resolutions do not overlook your relationship to he church. Next Sunday morning the New Years thot will we featured in our service. The subject of the sermon will be, "The Clock of Destiny." Let us make a good beginning by filling the house to capacity.

In the evening at the regular hour of service we will have some more lantern slides showing the work of the Methodist church in the Good-will Industries. You will find the story of this work very interesting.

KLEMME SCOUTS PACKED THREE BOXES CLOTHING

People Responded Liberally To Request For Xmas Box

Last week Scouts of Troop 56 sent out a call for old clothing, articles of food, books, toys, shoes, etc. which they would pack as a Christmas gift and a Troop Good Turn for the Salvation Army, to be distributed where most needed.

The Scouts received a very liberal donation of the articles named above and as a result they were able to pack three large paper cartons of clothing, shoes, books, toys etc. which they sent to the Salvation Army at Mason City. Mr. Louie Knoke hauled the boxes over for the Troop.

In addition to the above an appeal was made for food stuffs to be given to a local person. Some good fellows about town had started a contribution fund to buy coal, flour and food stuffs for Ernest Henzie, who resides in a small shack south of the Ford Garage. The Scouts likewise received a large quantity of canned goods, cookies, jam, etc. for this purpose. A load of coal was delivered to Mr. Henzie Monday, and Christmas Eve the Scouts' donation and the balance of the town's contribution was delivered to Mr. Henzie.

The Scouts and Troop Officials wish to thank everyone who contributed toward the Troop Good project.

OLD BUILDING BEING TORN DOWN IN KLEMME

Housed One Of Early Business Places In Klemme

What was once quite a prominent business place in the earlier days of Klemme will soon be a thing of the past and wiped off the map.

We refer to the old Scaefer & Dow Building, across from the Wellemeyer Co. A couple of weeks ago it was sold at public auction to Fred Etchen, who immediately began tearing it down and hauling the lumber to his and the Greimann farm, there to be used in putting up farm buildings.

With a few more days of good weather the building will be entirely torn down.

The location would be a nice place for a ten or twenty story office building.

WHICH IS THE SHORTEST DAY IN THE YEAR?

December 21 Is Generally Thought To Be Shortest; But Is It?

December 21st is generally regarded as the shortest day of the year, and with the passing of that date each day gets just a little bit longer. But how about it? Is it any shorter than any other day, are there more than one day of equal length of sun-light, and which day on the calendar really shows a gain of daylight?

And, while you're at it, find the day of the year which have exactly the same amount of daylight and darkness.

Some evening when you have nothing else to do, look over the old almanac and find out, we are too busy to look it over for you!

Mr. and Mrs. Fred Arnold entertained a lot of company for Christmas dinner, in fact twenty-five enjoyed dinner with them. They are as follows: Asa, of Des Moines, Fred of Ames, Mrs. C. A. Arnold, Miss Minnie Lenz, Mr. and Mrs. E. J. Arnold and family, Dr. C. B. Tice and family of Mason City, Mrs. Emma Gibbs and sons, Frank and Donald, James Carlson, Harry Gibbs and son, Asa. Mrs. Gibbs was unable to be present as Harriet was ill. Grandma Gibbs and daughter, Anna could not leave home. All report a fine time and thoroughly enjoyed the big dinner.

The Hand Shake Of Auld Lang Syne

In the white dawn of each New Year's Day, great-grandfather used to throw the stiffened harness over a pair of stable-sore dobbins, back them up to the big sled, and start a round of the neighbors. It was due them, you see, to favor the omen that a man should cross the family door sill first on New Year's.

The old stable has made way for a two car garage; the pail of oats has passed to make room for a drum of gasoline; the old sled has long since crumbled to its metal parts and those rusted away; and the party line and radio has brought the whole neighborhood to the dining room wall.

Still, once a year human neighborliness calls for the hand shake of "auld lang syne". The world is smaller in a way, but our circle of friendship is ever so much larger than grandfather's. To reach afar we "harness" our press and The Times and our message goes easily and quickly through doorways of our neighbors and friends, in our town the next town and across this vast Uited States.

We wish you a prosperous and happy New Year—The Editor.

C. G. Waterman and family and R. A. Jorgenson and family drove to Mason City Thursday evening. The men attended a banquet given for the men who completed the B. S. A. Leaders Training School. Mr. Waterman and Mr. Jorgenson received Advance Certificates, awarded to men who acted as officers in the course. Waterman was a troop Scribe and Jorgenson a Patrol Leader in District III. Other Klemme men who completed the course were J. N. Day, Rev. C. Grosshuesch and Dr. W. F. Missman. These men receive Minimum Certificates.

Mr. and Mrs. Einar Salling and Mr. and Mrs. Abe Lauritsen spent Christmas at Lehigh, Iowa, with Mrs. Lauritsen's sister. Mr. and Mrs. Lauritsen remained for a few days visit.

The choir at the M. E. Church had some special numbers Sunday morning which were greatly enjoyed. Mr. Earl Josten sang a solo in one of the Christmas Anthems and Mrs. H. E. Whyte acompanied by Mildred Johnson on the violin and Irene Johnson on the piano sang Holy Night.

Mr. and Mrs. Jennings Anderson entertained for dinner Sunday the following: Rep. and Mrs. Chris Nelson, and Mr. and Mrs. Ray Nelson of Garner; and Mr. and Mrs. Elmer Nelson and son of Minnesota. On Christmas Day all were again entertained at the Chris Nelson home at Garner.

Mrs. Lloyd Ulrich was rushed to a Mason City hospital Friday night where it was found necessary to perform a mastoid operation and later she gave birth to a baby boy. Mrs. Ulrich was making a fair recovery when she was stricken with pneumonia and the first of the week her condition was very serious. However we are glad to report that she has passed the critical stage and is at this wriing, slowly improving.

Dora Swanson's School Gives Program For Christmas

Last Friday evening a Christmas Program was given at the Ell No. 8 school, taught by Miss Dora Swanson. The patrons of the school and many friends were present and enjoyed the program.

ELL TOWNSHIP NEWS

District No. 7 School Gives Xmas Program

A Christmas program was given at Ell No. 7 School on Friday afternoon. The program was followed by the exchanging of gifts. Nearly all the parents were present. Miss Stella Bock is the teacher in Ell No. 7.

Other Ell Township News Items

Miss Lydia Bock and William Bock enjoyed Christmas dinner at the Philip Bock home Tuesday.

Mr. and Mrs. Walter Rosendahl were entertained at the Fred Barz home on Christmas day.

Edwin Bock, of Garner, spent Christmas day at the home of his parents, Mr. and Mrs. John Bock.

Misses Alvina and Gail Buss were business callers in Garner on Wednesday afternoon.

Miss Stella Bock spent the week end visiting at the homes of Mr. and Mrs. D. P. Anderson and Miss Edith Haupt.

The Misses Stella Bock and Norma Stromer were entertained at the Rev. Grosshuesch home Sunday for dinner.

Mr. and Mrs. Edd Buentenbach and family spent Christmas Day at the Wm. Rockow home, north of Garner.

Mr. and Mrs. Werner Schlawin and La Vohn have been quite sick with the flu during the past few days. Mrs. Wm. Schlawin has been doing the work there.

Mr. and Mrs. August Ridder entertained the following guests to a big Christmas dinner: Mr. and Mrs. Ben Ridder and son Elwin, and daughter Ruth; and Mr. Walter Ridder, all of Liberty township; Mr. and Mrs. Edw. Schaefer and daughter, Mabel. Those who could not attend the big goose dinner were Mr. and Mrs. Frank Ward and family, who were confined to their home on account of the flu.

KLEMME STUDENTS HOME FROM COLLEGES

All Arrived Home In Time For Christmas Dinners

Everybody is always glad to see the young folks coming home from college, and especially at Christmas time. Klemme is well represented at the various nearby colleges and universities. The young folks began coming home the latter part of the week, some for only a few days at home, and others privilged to remain for nearly two weeks.

Those of our students who are attending college at Ames adn who arrived the latter part of the week are: Vernon Turgasen, Maurice Griemann, Clarence Elder and Fred Arnold.

Two Klemme young people attend the Drake University at Des Moines, Gladys Wilson and Asa Arnold. They came home Friday.

Florence Stokesbary, who is a student in a comercial college at Des Moines, is home.

Frank Gibbs and Harvey Nelson, who attend Morningside at Sioux City, were about the first to arrive last week.

Walter Lemke, of the Iowa University, is spending his vacation at the home of his parents, Mr. and Mrs. R. R. Lemke.

Mr. and Mrs. Adolph Lauritsen are hoem from Upper Iowa University at Fayette.

Andrew Wellemeyer came home Christmas Day from Kanasas City, Kansas where he is attending college this year.

We welcome all of them home and may they all enjoy their vacations to the utmost.

MRS. LLOYD ULRICH DIED THIS MORNING AT HOSPITAL

Contracted Pneumonia Following Serious Operation

The sad news reached Klemme today that Mrs. Lloyd Ulrich had died at this Mercy hospital this morning shortly before noon. This news came as a shock as it had been reported that she was slightly improved and that it was thought the danger pointh ad passed.

Mrs. Ulrich had been ill but a short time. Friday, however she was taken to the Mercy hospital to undergo an operation for mastoids. Following this she gave birth to a baby son and was apparently getting along as well as could be expected, however pneumonia set in and her condition became critical the fore part of the week, and she passed away this morning.

As the Times goes to press no definite funeral arrangements have been made, other than possibly the services will be held Sunday.

The sympathy of the entire community goes out to the bereaved young husband and children and to the parents of Mr. and Mrs. Ulrich.

KLEMME REFORMED CHURCH
Calvin Grosshuesch, Pastor

There will be no services in this church either on Sunday of on New Year's day.

Mr. and Mrs. Tom Roths were shopping in Mason City Thursday. The boys stayed at the home of their grandmother, Mrs. Frank Roths.

PRINCIPLE OF POISON LABEL IS APPLIED

Anita Page, pretty actress, applies the principle of the poison label to her car—with a skull over the stop light. It intensifies the warning to motorists behind when it signals that her foot is on the brake—and literally screams "Caution."

WHY ENGINE OIL MUST BE CLEAN

Important to Be Sure That Filter Is Functioning Properly.

A graphic illustration of the importance of proper automobile lubrication is set forth in the following engineering news article:

"Rub the palms of your hands together briskly for a few minutes, exerting a slight pressure. They soon become too hot for comfort. The heat you feel is the result of friction that works havoc with your automobile.

Use Butter or Grease.

"Now moisten your palms with water—better still, with butter or grease of some kind. Rub together again and note how much longer it takes for them to become hot.

"You have lubricated them, and instead of the rough skin rubbing together, the grease keeps them apart and the rubbing is between the surfaces of the two layers of grease.

"However, you will notice that finally your palms do get hot. The layers of grease have been worn away by the friction and if rubbing were continued, the skin would soon wear away.

Lubrication Necessary.

This, according to engineers, explains why lubrication is so necessary, and why it is important to be sure that the oil filter is functioning properly, thus keeping the oil clean.

The filter, it is explained, functions without attention for 10,000 miles. After this mileage has been driven, the filtering unit becomes filled with foreign matter taken from the oil and it is important that the motorist drive to the service station for servicing it, which can be done in five minutes.

AUTOMOBILE ITEMS

An old-fashioned auto horn was one way it said "Please" instead of "Shake

• • •

The motorist always misses a tack except it be that the pedestrian makes the wrong tack.

• • •

Of course, in the old days large families were the rule, to help put up the one-man tops on early automobiles.

• • •

The space in the hardware store window that used to be devoted to a rack of horsewhips is given over now to accessories.

• • •

One of the hardest things to understand is a motorist who drives out to see the beautiful fall coloring—at the rate of 62 miles an hour.

• • •

A storage battery can deliver an amperage of twice its capacity or more for a fraction of a second, providing it is in good condition.

• • •

An English doctor says that 90 miles an hour in motoring is safer than 45 miles. Maybe that is why so many drivers try to make it.

• • •

The 22,000,000 cars in operation in the United States travel approximately 220,000,000,000 miles annually based on an estimate of 10,000 miles per car per year. These cars use 65,000,000 spark plugs a year.

• • •

The boundaries of Egypt will be patrolled in the future by soldiers in motor cars instead of on camels as soon as the ministry of France approves the expenditure involved in replacing camels by cars.

Traffic Officer Is Heard by Motorist

"Wottdya think this is—a race track?"

"Say—are you color blind?"

"You're from the country—ain't ya?"

"First time you've driven a car?"

"Don't tell me that, brother—I know better."

"Just wot's the idea?"

"Now, don't get funny with me."

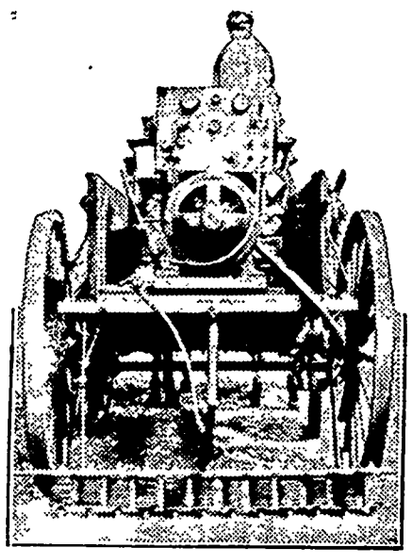
"Well, wot's it this time—going for a doctor?"

"Now, now, now—I drive a car myself."

"The judge is receiving guests tomorrow at 10 a. m. Here's your invitation."

Army Signal Corps Nail Picker Removes Hazards

The United States Army Signal corps nail picker, showing how the magnet is attached to the wagon, and picks up



Government Nail Picker.

nails. Thus the road is freed of hazards to automobile drivers and adds joy to the ride. The magnet picks up nails, pins or any other bits of steel that lurk in the path of tires.

Compressed Air Harmful in Drying Carburetor

Blowing out the gas line or trying to dry out a carburetor with compressed air is not always a success. Compressed air, oddly enough, is wet.

It's best to use a hand pump for blowing out lines. With this you can obtain the necessary pressure and the air that you pump will be dry.

This applies especially to blowing out the air line of a gasoline gauge that operates on the pressure plan, excluding the special type which is connected with the engine vacuum system. This air line must be dry if the gauge is to be accurate.

Compressed air, however, is useful in blowing water from around the spark plugs following a careless wash or if the car has been standing out in a cloudburst.

Hard Starting Is Laid to the Old Spark Plugs

Easier starting can be enjoyed this winter if motorists will make sure that the spark plug gap is adjusted to the correct space, which is between .020 and .025. Adjusting the gap also will save strain on the battery.

In a summer's driving the gap expands to .030 or .040 through wear and service, according to H. Rabezzana, research engineer of the AC Spark Plug company. Such a wide gap, he says, requires an enormous amount of electrical current to jump it. The result is hard starting and extra strain on the battery.

LOCK PROTECTS RAZED HOTEL BAR

Court Refuses to Lift Ban on Famed Inn.

Milwaukee, Wis.—By a peculiar quirk of fate, enforcement of the prohibition laws is preserving the barroom of the Kirby hotel, among the last vestiges of old Milwaukee, and the city's oldest hostelry.

A federal padlock protects the barroom while the remainder of the old structure has been razed to make way for an office building.

The Lincoln hotel barroom also has been preserved by a padlock. Around it, however, an office building is being built. The space occupied by the sealed barroom will be a court. The Federal court refused to lift the padlocks, fastened because of liquor violations.

The Kirby hotel, built in 1844, was a political rendezvous, and many careers began and ended in the councils it housed. Abraham Lincoln, Horace Greeley, Ulysses S. Grant, William T. Sherman, Phil Sheridan, Robert Ingersoll and Roscoe Conklin were among the many famous persons whose names were on its registers.

Abner Kirby, once mayor of Milwaukee, was the early owner. He designated his 136 rooms by names. Faded newspaper clippings tell of his sending newlyweds to "Paradise," the bridal suite, and inebriates to the room called "Hell." He had bellboys walk through the halls regularly sniffing for gas.

Kirby boasted of the comforts of his hotel with the slogan, "Wake me up when Kirby dies," which he had embroidered on napkins and stamped upon menu cards and stationery.

The city council has been no more successful in removing padlocked structures than have private concerns. The city widened Cedar street to relieve downtown traffic. The court refused to lift its order on a closed place so that it could be removed for the street widening.

Church Kissing Cult Is Revealed by Suit

Gallipolis, Ohio.—That kissing is one of the essentials of salvation is the doctrine preached by a cult here, as revealed in a court appeal filed with Probate Judge John G. Evans by an excommunicated member of the church.

The sect has been responsible for breaking up several homes and is now on the verge of shattering another happy family. The pastor of the flock, who is blind, is charged with teaching his flock that promiscuous kissing is hightly desirable and necessary to escape damnation.

Married men kiss other men's wives and married women do not hesitate to kiss other men, it is charged. The man who gave the information to the court said he was "read out" of the church because he refused to kiss the women of the congregation. He also said that he knocked down one member of the church who attempted to kiss his wife.

"Tar Heel" Farmers Do Well With Bees

Raleigh, N. C.—As a farm industry in North Carolina, beekeeping is a $2,500,000 enterprise.

C. L. Sams, state agricultural extension specialist, says the honey alone is valued at that figure. Twelve years ago it was worth only $468,914.16. At that time there were only 20 farmers who had 100 or more colonies, and not a person in the state devoted full time to the industry. A total of 164,956 colonies produced 4,262,856 pounds of honey.

This year there are 214,945 colonies of bees in North Carolina and they produced nearly 14,000,000 pounds of honey. Due to improved conditions the increase of 61,000 colonies boosted production nearly 10,000,000 pounds.

Rich Stone Age Find

Vernon, France.—A Stone-age tomb, discovered in the valley of Epte, France, is proclaimed as one of the richest finds of the kind in recent years. It contained a great quantity of human bones, broken utensils, chipped flints and other articles of historic interest, belonging apparently to the Neolithic period.

Kept on Trying

Newark, N. J.—Joseph C. Braelow is a firm believer in the principle that if you don't succeed try again. Once he got a city job after taking 15 civil-service examinations. He passed them all—in fact, was first eight times, but somebody else was appointed after the first 14 tests. Now he is buying a seat on the New York stock exchange.

Thieves Steal 54 Hens Leave Orders for More

Haverstraw, N. Y.—Louis Hoyt, of Haverstraw, reported to the police that thieves raided his hen coop at daybreak, carried off fifty-six hens, and left a mean note scrawled on a piece of paper saying that they would be back for the young chickens when they had grown up.

"Fatten them up and we will be back later," the note read. Hoyt said the thieves also took two large bags of corn to feed the hens. He said if they came back he would have a shotgun ready and a burglar alarm rigged up in his hen house.

INDUSTRY NOW GIVES WOMEN EQUAL CHANCE

Survey Shows Owners Do Not Discriminate.

New York.—Women have practically equal opportunity of employment with men in manufacturing industries where they are capable of doing the same work as men and doing it as well, in the light of a study of the subject made by the national industrial conference board. This conclusion is based on an analysis of reports of 129 manufacturing companies, 65 of which stated a preference for men, 47, however, preferring women, while 17 expressed no preference. In all the plants reporting the work was of such a nature as could be done equally satisfactorily by either men or women.

Comparatively little objection was found to exist among manufacturers to the employment of married women. Out of a total of 22 companies employing women, only seven will not keep a woman worker after marriage, and one company, requires any woman employee who marries to resign within six months. Six establishments, while not following a rigid rule of discharging married women employees, follow a policy of discouraging them from remaining.

Some Want 'Em Married.

On the other hand, 15 companies encourage woman workers to remain after they marry, while four companies out of the total number adapt their policy to the circumstances in each individual case. One company favors widowed woman employees. The majority of industrial managers, however, evidently do not consider a woman worker's marital status as a pertinent or important factor in determining her desirability as an employee.

But while the opportunity for employment in the manufacturing industries where the work is of such nature as can be done equally well by either men or women is practically the same for women as for men, less equality exists in the matter of wage earnings. Women's hourly earnings in the manufacturing industries range approximately 35 per cent lower than those of men. This, however, the conference board's wage studies disclose, is due to the generally smaller output of women rather than to any unwillingness on part of industrial management to pay them the same as men. The fact that earnings per hour of women working on a piece-work basis where the basic wage is the same as for men, which is the case in many instances, average less than the earnings of the men is cited in evidence. This is also the reason given by many employers for the lower wage rates allowed women where wages are paid on a flat-rate basis.

Women's Pay Boosts Greater.

Women, however, have made a relatively greater economic gain in the general rise of the wage level during and since the war than have men, the average hourly wage earnings of women in the manufacturing industries now being approximately 160 per cent higher than in 1914, while those of men have advanced by only about 140 per cent. It must be taken into consideration, however, that women's hourly earnings in 1914 averaged only 60 per cent of men's earnings.

Women's total earnings over a period of time average less also because women in industry put in less time than men. The average number of hours a week worked by women wage earners during 1927 in 25 manufacturing industries was 43.3 as against 48.2 hours worked by men, with the result that the average weekly earnings of women workers were approximately 40 per cent less than those of the male workers. More frequent absences among women further contribute toward their relatively lower earning capacity in industrial pursuits.

Boy Accused of Firing Home to See Sweetheart

Cumberland, Md.—Arrested after he is said to have made a confession to police, David P. Lewis, eighteen years old, is in jail here on a charge of attempted arson.

Lewis, authorities declared, confessed that he attempted to set fire to the home of Mr. and Mrs. Francis Screen on October 28 in order to scare Bernetta Wilson, his sweetheart, who was in the house, outside, so he could talk to her.

Lewis was arrested on information furnished by Mrs. Eva Wilson, who lives with the Screen family and who reported hearing a noise late on the night of the fire. She went to a window and saw a familiar form hurrying away. The fire had been kindled in the basement and was extinguished before it caused any damage.

Philippines to Carry on Drive Against Rats

Manila.—The Philippines are to be made healthy for humans by becoming unhealthy for rats.

Representatives of the United States army, the public works department, the bureau of health and other organizations have joined in a comprehensive plan framed by Dr. R. W. Hart, chief quarantine officer.

This plan provides for rat proofing port areas and storehouses, a concentrated campaign of trapping and poisoning, laboratory examination of rat carcasses to discover the earliest evidences of bubonic plague, and determination of "the flea index for various ports of the islands."

For Colds—

How many people you know end their colds with Bayer Aspirin! And how often you've heard of its prompt relief of sore throat or tonsilitis. No wonder millions take it for colds, neuralgia, rheumatism; and the aches and pains that go with them. The wonder is that anyone still worries through a winter without these tablets! They relieve quickly, yet have no effect whatever on the heart. Friends have told you Bayer Aspirin is marvelous; doctors have declared it harmless. Every druggist has it, with proven directions. Why not put it to the test?

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

BAYER ASPIRIN

Real Sea Beacon

The lighthouse at Cape Race in the North Atlantic is one of the best-known beacons in the world. It is equipped with a flashlight of 1,100,000 candle power, which has been seen at a distance of 76 miles. The apparatus and inclosing lantern required to produce that result weighs 42 tons and cost $40,000. The fog siren at this lighthouse station has been heard a distance of 45 miles.

Alas, It Is Only a Joke

"That stenographer of yours is remarkably speedy."

"Yes, indeed. If she worked any faster she would have to use a water-cooled typewriter with an asbestos ribbon."

Some men take good care of a motor car; others treat it like one of the family.

Not the Garden Variety

A young Italian not long from the land of Mussolini is a waiter in a downtown restaurant. Recently a customer sat down to dinner and inquired as to the bill of fare.

"Well, Joe, what tonight?"

"We have dock," the waiter replied.

"Dock? You don't mean dock like we used to dig out of the garden?"

"No, dock—like a goose—only dock!"—Indianapolis News.

Nothing Upstairs

"Is she dumb?"

"Well, I heard her ask a dentist what art school he attended to learn how to draw teeth."

If I must die, I will encounter darkness as a bride, and hug it in mine arms.—Shakespeare.

Sin is merely a state of mind.

That Million-Dollar Feeling

"Heard you went home with a cold yesterday, Tom. How are you feeling now?"

"Boss, I feel like a million today. Took NR last night."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NEARBY AND YONDER

By T. T. Maxey

Big Water

THE largest body of fresh water in the world—Lake Superior, is about 380 miles long, 160 miles wide in places, has a maximum depth of a little more than 1,000 feet and is 600 feet above sea level. Some lake!

It receives water from some 200 streams, the largest of which is the St. Louis river and discharges it into the St. Mary's river at the rate of about 75,000 cubic feet per second. The temperature of its water, even in hotest summer, seldom rises above the freezing point and yet this lake never freezes over, even in the coldest weather.

The surrounding country is rich in minerals, especially copper and iron ores, while the northern shore, in particular, is high and wild, rocky and densely forested.

Back and forth across its expansive bosom moves a tremendous commerce during the open season for navigation—mainly grain and flour, east-bound; chiefly coal, for distribution throughout the northwest, west-bound. Meanwhile, from out of its almost bottomless depths comes great quantities of fresh fish—nearly 11,000,000 pounds, largely ciscoes, trout and whitefish, during one recent year.

Originally the running grounds of nomadic Indian tribes, the Lake Superior country was penetrated, some two hundred years ago, by bands of sturdy and picturesque Canadian voyageurs, who brought to the shores of this northland lake a flavor of adventure and romance which was somewhat unlike that brought to any other section of these United States, reflections of which continue to linger in this great northern land.

* * *

Greenwich Village

THAT section of New York city now know as Greenwich village which spreads out fan-wise from the foot of Christopher street was one of the earliest settlements on the island of Manhattan. Prior to 1640 it was an Indian village, known as Sapokanikan. Later a tobacco plantation was started in the neighborhood and the name changed to Bossen Bouwerie (Dutch for farm in the woods). Some twenty-five years later, English colonists came along and christened it Green Wich, which later became Greenwich and finally Greenwich village.

As time passed the great city of New York grew up to, around and beyond this ancient settlement, but, seemingly, this meant nothing to Greenwich village. This city within a city continued to maintain its individuality, in form as well as in spirit.

The dove-tailing of the new with the old city plan during the early part of the Eighteenth century brought about such a jumbling of thoroughfares that Fourth street and Tenth street cross at right angles. More recently, the extension of other streets has left a maze of isolated triangles and odd-shaped blocks. Street cars, the elevated and a boulevard now run through it and the subway burrows under it, but "the village" continues very definitely and complacently in its own way.

Of recent years, Greenwich has become famous as a sort of "Bohemian" section—its quaint, venerable and picturesque houses, with their curious wrought-iron banisters balustrades tending to promote such an atmosphere—a center for authors, journalists, artists and visitors.

* * *

The Last of Its Kind

WHAT undoubtedly is one of the most unique of the many thousands of churches in all America is the Hueguenot (French Protestant) church in Charleston, South Carolnia—said to be the only one of that faith still standing in this country.

The congregation of this church was organized soon after the arrival in South Carolina of the French refugees who departed from that country when the edict of Nantes was revoked in 1685. They constructed a church at the corner of Church and Queen streets in the city of Charleston about 1702, and in that and succeeding structures have since held services on this identical spot.

During the centuries of its existence this church has retained its self-government and identity unchanged, despite the fact that its history has been a hectic one. Its records are known to have been lost in a fire in 1740 and again during the Civil war. In 1796, during a great fire, the church was blown up in an unsuccessful attempt to arrest the flames. In addition, it also has survived flood, invasion and an earthquake, but "by the mercy of God and the earnest, faithful devotion of its founders it yet lives and speaks even though faintly." The present church was built in 1845.

History records that these French refugees were martyrs of conscience—a people of whom "the welfare of all was the care of each." In the genealogy of most of the really old families then was, it is claimed, at least one Hueguenot ancestor.

Uncle Eben

"Nobody denies," said Uncle Eben "dat de women kin work jes as well as de men. But dat ain' no 'scuse foh a loafin' husband."—Washington Star.

Best Treatment for Seed Grain

Copper Carbonate Favored for Preventing Smut of Wheat and Oats.

Copper carbonate is the best fungicide for preventing stinking smut of wheat and the smuts of hulless oats.

Formaldehyde is the best fungicide for preventing smuts of hulled oats and covered smut of barley.

Formaldehyde should not be used for treating wheat. It prevents the covered smut, but it is likely to injure the seed severely, especially if the seed is dried after treatment, or sown in dry soil.

Copper carbonate does not prevent the smuts of hulled oats nor the covered smut of barley. It reduces the amount, but is not as effective as formaldehyde. Formaldehyde does not injure the seed of oats and barley and is therefore recommended.

Patent fungicides are not better than copper carbonate and formaldehyde. There are many patent fungicides now on the market, write E. C. Stakman and H. A. Rodenhiser in the Dakota Farmer.

How to Use Dust.

Get a good grade of fine, fluffy, copper carbonate. This light material is as effective as the more expensive heavier material. Any dust with a 20 per cent copper equivalent or more is satisfactory. Use two ounces of dust per bushel. If the seed is very badly smutted, use three ounces. For small quantities of seed mix the dust with the seed in an old barrel churn or a similar homemade device. Rotate the churn seven or eight times. This is long enough to mix the dust thoroughly. For treating large quantities of seed, it probably would pay to buy a smut machine. Treat the seed any time before sowing. Treat it now.

Marquis wheat seed need not be treated more than once every other year, because Marquis is somewhat resistant to stinking smut.

How to Use Formaldehyde.

There are three general methods—the dip, sprinkle and spray methods. For the first two, use one pint of formaldehyde to 50 gallons of water. Either dip the seed into this solution, or sprinkle the solution onto the seed by means of a sprinkling can, while one person shovels the seed over. In either case, one gallon of the solution will be enough for about 50 bushels of seed. After treatment, the seed should be sown as soon as possible, preferably while it is still moist, for the best results.

The advantage of the spray method is that it does not wet the seed. Mix one pint of formaldehyde with about a gallon of water and spray this onto the seed with a compressed air sprayer—not a sprinkler. Use exactly one pint of formaldehyde to 50 bushels of seed. It can even be used without water. The exact amount of water does not make any difference. It is used merely as a carrier for the formaldehyde to 50 bushels of seed. After treatment cover the seed with sacking or canvas for five rours. Then sow immediately, or spread out to dry.

Various Tools Required for Handy Repair Shop

According to Arkansas College of Agriculture authorities, the farm shop will pay for itself many times in money and time saved. Care, however, should be exercised in choosing the equipment for the shop.

Woodworking tools should be chosen first. The following will make the basis for a good kit; a medium weight claw hammer, a 24-inch framing brace and bits of ¼, ½, ¾ and 1-inch in diameter. The above list of good quality can be bought for from $10 to $15. As needs demand the following tools may be added: 25½ point rip saw, a 24-inch wrecking bar, a 24-inch level, a ½ and ¾-inch wood chisel, and an 8-inch draw knife.

A very satisfactory wood for a bench vise can be made by using a 1-inch by 16-inch screw and using a well seasoned piece of hard wood for the vise face. For metal and pipe work a bench or leg type vise which has a removable set of pipe jaws will come in very handy.

Miscellaneous tools to be included very profitably are: a 14-inch pipe wrench, a 12-inch adjustable wrench, a 10-inch hack saw and a dozen extra blades, two cold chisels, a machine punch, a 2½ pound ball pean hammer, a pair tin snips, and ¼-inch, ⅜-inch and ½-inch drill bits, with square shanks.

Agricultural Hints

With a big crop of beans, farmers will find this crop valuable to use in feeding swine.

* * *

When soy beans are fed to hogs they should be accompanied by a good mineral mixture.

* * *

When there is a creep in the pasture for feeding grain to calves, lambs, or colts, it is a good plan to keep the salt box near the creep.

* * *

When soy beans are used properly as a supplement to corn the danger of soft pork is practically eliminated, according to Purdue specialists.

* * *

Stacking is a very satisfactory way of storing soy bean hay. Soy beans will keep perfectly in the stack if thoroughly cured before being put up.

Around Orchard

PRUNING DONE TO IMPROVE ORCHARD

Simple Directions Are Given to Help Orchardist.

Pruning is the first work of the season in the orchard and is the first step to be taken in improving an old or neglected orchard. It is a waste of time and spray material to spray unpruned trees, as much diseased and insect-infested wood is removed in pruning.

Following are simple directions for pruning:

1. Step away from the tree to get a good look at it, noting its general shape and habit of growth. Keep its form in mind while pruning.

2. Cut out all dead branches.

3. Cut out all branches which are badly diseased, or infested with insects.

4. Remove the poorer of crossed and crowded branches.

5. Go over the entire tree with hand shears removing small branches here and there to admit sunlight and air evenly to all parts of the tree.

6. Remove water sprouts.

Here are a few "don'ts" to keep in mind when pruning:

1. Don't head back. That is, do not cut the end of a limb off the top of the tree in hope of controlling the length or height of its growth.

2. Don't leave stubs when removing branches.

3. Don't use the saw any more than necessary. Shears is the tool with which an inexperienced pruner can do the least damage.

Propagating Grapes by Cutting Is Best Plan

The only method of propagating grapes, to be sure they will come true to name, is by cuttings. Grape varieties, of course, are not pure lines and therefore would not reproduce themselves. For instance, from the Concord grape you might either get a blue, a red, or a white variety. It might be equal to, better, or inferior to the Concord in size and quality. It is not difficult to propagate the grape, however. Cuttings should be taken after the wood is well ripened this fall, making a cut at the base of a bud and allow two to three buds to a cutting. These should then be tied in bundles in a well-drained place until early spring. Or, they can be placed in a box of sawdust or sand and put in a cold, moderately moist place. In the spring the cuttings that have survived should be set out in the garden, leaving only the top bud above the ground. At the end of the first or second year they can be transplanted to their permanent location.

Pruning Trees Good Job for Cold Weather

Pruning of the trees should be looked after right away. It is safe to do so any time from now up to the time the leaves begin to expand. Thinning out the surplus branches will greatly aid one in operating the sprayer when that time comes, and the job of spraying will be much more efficient, because the spray can be more evenly applied to the surface of both foliage and fruit. There will be very little damage to either fruit or tree if a film of the spray covers the surface of both. Naturally old apple trees that have not been pruned cannot be treated as effectively as those that do not carry so much bearing wood. Probably then the greatest gain obtained by pruning is indirect, that is, by making it easier to do a good job of spraying. Good spraying will account for 90 or 95 per cent of the combined gain brought about by both pruning and spraying.

Horticultural Facts

Do not head-in or cut off the tops of twigs or branches.

* * *

Do not try to change the habit of the growth of the tree, nor take out enough wood to greatly alter its shape.

* * *

The scale insects cannot be killed by a poison which will soak into the pores, as they are too well protected by a gummy scale of wax, beneath which the insect operate.

* * *

Healthy trees can be killed, in from two to three years, after they have become incrusted with the scale pests which suck the sap and destroy the vitality of the trees, making them more susceptible to other diseases or insects.

* * *

Cuttings of grapevines should be made in the fall, or at least before there is any starting of sap in spring. When made in fall, there is time for a healing or callusing of the cut ends, so a better stand may be had.

* * *

The number of apples on an overloaded tree may be reduced as much as 25 or even 50 per cent, without reducing the yield. That means that you have just as many bushels of apples, but since the apples will be larger they will be more easily harvested and marketed.

Garfield Tea
Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in even greater favor as a family medicine than in your grandmother's day.

Catch as Catch Can

She—I wonder if Claire will marry the chap she's running with?

He—She probably will if he doesn't speed up.

History of Fire and Light Through Ages

An important English firm engaged in the manufacture of matches are the sponsors of a vastly interesting but little known museum devoted entirely to the story of man's struggles down the ages to preserve to himself those most blessed gifts of the gods—fire and light. In many thousands of exhibits the tale is graphically told, the exhibitors having been at pains to present the collection in strict chronological order and logical array. It is said to be the most complete collection of its kind in the world, a boast that no one who had seen it would deny. For many years a private collector, Mr. Edward Bidwell, now over eighty, industriously assembled most of the exhibits. Others have been added, other collections embraced, until now the detailed catalogue prepared by Mr. Miller Christy, an authority on the history of fire-making appliances, already comprises over 250 pages.

X-Ray Wonders

X-ray cinemas showing a broken bone in the process of knitting and similar subjects heretofore outside the realm of photography are made possible by a new camera developed by Dr. Arthur C. Pillsbury, naturalist and photographer of the University of California.

The first motion picture with the X-ray camera showed the growth in the interior of a rose. It took seventy-two hours to film, taking one picture at a time in intermittent exposures.—Popular Mechanics Magazine.

Irish Genius Wins

An Irishman in the Argentine is making roads of calcined sand which may practically be described as glass.

He is R. H. King, a Dublin civil engineer, who, finding stone almost unobtainable, brought his bottle-making experience in Ireland to bear.

Huge traveling furnaces, blowing terrific heat into the sand, leave in their trail calcined strips that withstand the heaviest traffic.—Nation Magazine.

Like Mother Does

Two little girls were "dressed up" and making visits after the fashion of grown-ups. After a brief visit they left, saying:

"Now you must talk about us after we're gone—that's the way mother does."

If you're in a thoughtful imaginative mood any kind of scenery will do.

If some men felt as bad as they really are, it would be useless to call in a doctor.

Guard Against "Flu" With Musterole

Influenza, Grippe and Pneumonia usually start with a cold. The moment you get those warning aches rub on good old Musterole.

Musterole relieves the congestion and stimulates circulation. It has all the good qualities of the old-fashioned mustard plaster without the blister.

First you feel a warm tingle as the healing ointment penetrates the pores, then a soothing, cooling sensation and quick relief. Have Musterole handy for emergency use. It may prevent serious illness.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

Pigeon Made Time

A pigeon beat a telegram from Hinsdale to Sanford, Maine, in a 100-mile race of the Sanford, Maine, racing Pigeon club. A telegram from Hinsdale stating that the pigeon had started was delivered in Sanford twelve minutes after the first bird had arrived.

First Texan Town

The first town in the county is now the state of Texas was called "Taleta," founded in 1632.

Boys leave the farm for one reason—they don't like farm

The Reason WHY

Genuine

KOPPERS CHICAGO COKE

"Clean as the Sun's Heat"

Is a *Better* Fuel

Koppers CHICAGO Coke is a carefully prepared fuel for use in heating the home. It is made from the best grades of West Virginia and Eastern Kentucky coals. These coals, after being pulverized and mixed in such proportions as to give the best possible results, are put through a coking process which drives off the smoke, soot, and other impurities which are injurious to health and destroy the draperies and other decorations of the home, leaving the fixed carbon which is the heat-producing element. Thus almost a ton and a half of coal is required to produce one ton of coke.

More Heat at Less Cost

Providing more heat than hard coal, yet costing less ton for ton, and with few ashes, Koppers Chicago Coke is the fuel of real economy. A size for every use.

ASK YOUR DEALER to supply you with this superior fuel. Demand the genuine—ask for it by full name.

Guaranteed

We guarantee genuine Koppers Chicago Coke. If a trial order does not convince you that it is to your advantage to heat your home with this fuel, it is removed at our expense and your money refunded.

Mistake That Causes Rift in Marital Life

That the clinging vine type of woman is more likely to lose the love of her husband or at least bore him to distraction, is the answer given by Anne Byrne McCall to a woman who has written for advice to the Woman's Home Companion.

"It is the growing reluctance of a husband to express his affection in words, caused by persistent demands that he do so, that causes the rift," says the writer. "Silence in affection is not advocated in that statement. Every woman not only wants to be loved, but she wants to be told that she is loved. But it is a pity for her to force or twist the issue so that it becomes not a question of how a man may or can express his affection, but it becomes rather almost a question of how he may defend himself, or preserve his independence.

"It should not be forgotten that there are many ways of expressing love and that one man's silence might express more of his affection than the constant declarations of a different type.

"The demand by a wife for constant reassurance that a husband loves her, when she knows perfectly well that he does, is not the way to keep a deep and large and self-forgetting love."

Good Health Matter of Correct Posture

Not only gracefulness, but also our health and the prevention of excessive fatigue, depend a great deal upon posture—the way we stand, sit and walk, says a health expert in the Farm Journal. That is why it is most important that the person who has much work to do, and yet wants to have energy left to enjoy life and to give pleasure to others, should guard against habits of incorrect posture.

Consider first the standing position. The weight should be on the balls of the feet, the chest up, the chin slightly back but in line with the chest, the feet exactly parallel, the arms dropped easily at the sides. To see that your body is in perfect balance when you are standing, rise on your toes and sink down again. When you stand with your chest drooping, your stomach out and your spine curved, you appear at a disadvantage; and what is worse, this position causes your vital organs to be displaced.

In walking, the first thing is to start right with the correct standing position. The toes should point straight to the front or be turned in the fraction of an inch. To stand or walk with the toes pointing out produces awkwardness and often leads to foot troubles, such as fallen arches.

Lax Justice

The way rich transgressors manage to keep out of jail led Governor Marmaduke of Arkansas to say in Little Rock:

"It reminds me of a story. A man was traveling in New Mexico, and in a little town embowered in palms and flowers the mayor seemed to be a man of character. He held all the offices—judge, coroner, police captain and so forth—and whatever turned up by day or night, he was there to do it. He came to lunch, as he and his guest were walking in the garden, he turned to Dix and said:

"'Dickinson, by the way, sneak over to the roulette parlor and tell Don Pedro I want to try him for that murder case.'"

Blue Baboon

A new but humane method of trapping wild animals is being practiced in the foreign mandated colony, Africa. Elephants, hippopotami, bushpigs and other wild animals to the servants surprised recently when they saw among their number a creature resembling a baboon, except that all its hair shaved off and that of bright blue.

The natives were so startled that they no longer dared to raid the colonists, and were commended by the officials.

An old-fashioned barber transforming its appearance with a razor and paint brush.

Mimics

A Londoner was hurrying along the embankment to keep an appointment which he was already late. He was stopped by a party of Americans, one of whom asked courteously if he could point out Cleopatra's Needle.

"Oh, certainly," responded the Londoner; "it's just here."

Then indicated the famous obelisk, and at the same time removed his hat to wipe his brow. Whereupon the Americans also uncovered and gazed at the needle with reverence.

Biology Omits This

A Chicago boy was visiting on a farm in Indiana for the first time. He was particularly interested in the animals and fowls of the barnyard, although his knowledge of them was limited.

Seeing some ducks and geese in a mixed flock, he inquired:

"How long does it take ducks to become geese?"

One Way

Mrs. G. was busy making jelly, in between the ringings of the phone and the doorbell.

With her patience worn just a little thin, she opened the door to the fifth salesman.

"Are you the lady of the house?" he was asked.

"No. I just work here," she answered, closing the door on the hurrying figure.

WINTERTIME RADIO RESULTS OBTAINED DURING SUMMERTIME

No Longer Is There a Dividing Line Between One Season and the Next in the Pursuit of Radio Happiness.

By DR. ALFRED N. GOLDSMITH
Chief Broadcast Engineer, R. C. A.

Radio, unlike canned goods, has no winter or summer season. There are fresh vegetables the year round in the radio garden, so that it is hardly necessary to harvest and can our radio enjoyment during a few months for use in what might be a less fortunate season.

A. N. Goldsmith

If we mentioned wintertime or summertime phonographic music, we might be laughed at, because the phonographic presentation has come to be accepted as a permanent, unchanging, immune form of entertainment, ready to serve in mid-winter or mid-summer alike. And by the same token, when radio programs and radio services are maintained from one end of the year to the other at the same high levels of excellence, with little difference to indicate the passing seasons, it becomes decidedly out of order to speak of seasonable radio.

Today the signal strength of any first-class broadcasting station within its service range is more than ample to ride high above the normal summertime static level. Indeed, it is only when the radio enthusiast insists on going in search of DX or long-distance signals that the static level becomes troublesome, since he has plunged below it.

Important Considerations

Of course the elements of good reception should perhaps be more closely observed in summer than in winter Among the more important considerations are:

1. Selecting the signals from a station of adequate power, located not too far distant. It is well that the station have a repuation for careful maintenance, and be quite free from the criticisms of poor transmitter operation, haphazard monitoring, varying power, serious fading, wave length wobble, and other signs of poor broadcasting. Fading, it goes without saying, is usually a condition beyond the control of the broadcaster, and may just as well be charged up to the location of the listener.

2. Selecting high quality programs and especially features with sufficient "body" to cover up such static background as may exist even with high signal level. It is well to note that signal level is one thing, and sound level is another. Thus a dance orchestra or concert band is a better feature in combatting static interference than a string trio or a violin solo.

3. It is well to be content with reasonable volume. While it is true that the volume control of the radio set increases or decreases everything issuing from the loudspeaker—static as well as signal—proportionately, it is a matter of how much background noise may be present before the listener becomes fully conscious and even irritated by its presence. By being satisfied with reasonable volume during the days of high static, we may reduce the background noise to a minimum. The power of transmitters is not reduced during the summer months Hence in most localities there is ample signal strength from leading stations to ride well above the usual summer static, with the exception of the occasional thunderstorm in the immediate neighborhood. Yet who expects ideal radio conditions every night? Try driving your automobile through a thunderstorm at night, with the dazzling flashes of lightning, the torrential downpour of rain, with the ignition system in difficulties due to moisture, and other troubles! Still we do not speak of summertime automobile handicaps. We are willing to forego motoring during the occasional storm of winter or summer.

Quality Programs

Programs are maintained at the highest standards, although in keeping with seasonable moods and activities of outdoor weather, they may be pleasantly different from those of indoor weather. The skilled program director, in fact, pays close attention to the demands of his summertime audience.

As to the radio listener, there is just as much reason to listen in during the summer as during the winter Music, enlightenment, contact with the world, the thrill of sporting events, participation in history in the making, and other program features form a rich mental background for our summer life.

If anything, radio may truly be enjoyed to better advantage amid the outdoor setting made possible in warm weather. The acoustics are frequently better when windows can be thrown open. Radio is at its best outdoors, on the porch or even on the lawn. Indeed, too little attention has been paid to the stage setting for the radio presentation, and summertime offers us many an opportunity in this direction.

VOICE AND PICTURES NOW SYNCHRONIZE

New Apparatus Made Available for Schools, Churches and Motion Picture Theatres.

Engineers are now at work on a simplified photophone device suitable for use in the home, which will make it possible, it is stated, to reproduce "talking movies" in the home very much as the ordinary radio broadcast programs are now being received in more than eight million homes. This announcement was made by General James G. Harbord, President of the Radio Corporation of America, at the formation of a new company to be known as "R. C. A. Photophone, Incorporated."

Gen J G Harbord

In discussing the formation of the new company, General Harbord pointed out that although the Radio Corporation, General Electric and Westinghouse had been preparing for several years to market apparatus synchronizing voice and music with motion pictures, public introduction of the apparatus had been delayed until the engineers had achieved "complete practicability" so that it would be as simple to operate as a radio set, and, at the same time, highly perfected.

"The Photophone," said General Harbord "is both simple and practical The essential principle is the recording of pictures and sound on one film. While various methods have been devised for 'talking movies,' experience has shown that the most practical is that of recording pictures and sound on the same film. This is the method employed by the Photophone. It is now possible to photograph the President of the United States—voice as well as action—and to distribute films reproducing the event throughout the country.

Uses and Operation

"Easily operated reproducing apparatus for use in theatres, schools and churches will be nationally available. An entire opera, musical comedy or drama can be electrically recorded on the film, just as it is seen and heard, and then reproduced from the same film. Whatever can be seen or heard, whether it is a nightingale singing or an army in battle, can now be recorded and reproduced for both the eye and the ear. Moving picture dramas with complete orchestral accompaniment, or with music and speech, will be available for nation-wide use.

"Standard films without the sound can be used without any change in the machine. The only thing the operator has to do is to close one switch when he is projecting pictures with sound, and open it when he does not want the sound. Any type of 'talking film' can be used in the machine. The type of sound reproducer to be used will vary with the size of the room in which the pictures are to be shown. The reproducer embodies some remarkable new developments in acoustics.

"Sight and hearing have been the two avenues of approach to the human mind for education, religion and entertainment. Now one medium combines the appeal to sight and hearing simultaneously, with universal accessibility and availability. The complete practicability of the new art has already been demonstrated, and there remained only the need for an intelligent and serviceable system of manufacture and distribution.

"One can only guess at the many varied uses of this invention as an instrument for the spread of knowledge, for bringing the people of the world closer together, and for the advancement of civilization."

TIMELY THOUGHTS

If you go to any man for advice, pick out a success.

It is even possible to acquire the habit of being sick.

The man who loved and lost didn't get his presents back.

Give a people enough idleness and they will develop feuds.

Experience is a dear teacher, but inexperience is a dearer.

Peace comes from not being always indignant about something.

It's only the brilliant sayings of the first baby that go on record.

Bees are not so wise; they almost invariably sting without reason.

Every time a man tries to show off something is sure to go wrong.

An enemy despised is the most dangerous of all enemies.—Publius Syrus

Two seasons that invariably wear their welcome out—summer and winter.

To some men a millionium is a pretty good substitute for the millenium.

Mr. and Mrs. Walter Reed and son are enjoying a new Atwater-Kent radio these days.

George Buseman was a caller at the Mrs. Frank Roths home Tuesday morning.

Will Bachman and daughter, Lela were business callers at Garner on Monday afternoon.

Alvin, Jennie and Anna Albers of near Meservey spent Saturday evening in Klemme.

Will Bachman and daughter Lela were visiting at the C A Bachman home Sunday.

Wayne and Bonnie Bachman took their sister, Miss Wava, back to Mason City Tuesday after she spent a couple of days in this community.

Louie Knoke trucked a load of hogs to Mason City for Clarence Bachman one day last week. Clarence went with him.

Mrs. Frank Roths returned home Wednesday from Monia, Iowa at which place she atended the funeral of a relative.

Mr. and Mrs. Peter Trampel, Mr. Henry Wille and Mr. Croupe were visiting at the Ben Swalve home on Sunday afternoon.

Mrs. Fred Bachman and daughter, Bonnie and son Wayne, drove to Mason City Saturday to get Wava who spent a few days at home.

Mrs. Frank Roths has been laid up with the flu for a few days. A number of others in this vicinity are also sick.

Mr. and Mrs. Robt. Roths were entertained Christmas Day at the home of her parents, Mr. and Mrs. Fred Bachman.

Mr. and Mrs. Clyde Marshall and son, Robert and daughter Dorothy were visiting at the D. A. and Herb Marshall home Tuesday.

Mr. and Mrs. Ed. Bachman and sons Earl and Robert and daughter Margie were visiting at the Will Bachman home Tuesday.

The children in District No. 2 where Mrs. Rob. Roths is teacher, exchanged presents and had a grab bag Friday afternoon. They will have a week's vacation.

Mrs. Lubbe Albers and daughters Jennie, Marie, Johanna and Lou'sa and sons John and Harold were visiting at the Herman Schuldt home Sunday.

Mr. Frank Ruth of Marshalltown is visiting at the D. A. and Herb Marshall home for a few days. Mr. Ruth is a brother of Mrs. D. A. Marshall. He returned home Saturday.

Mr. and Mrs. Tom Roths and sons and Mr. and Mrs. Clarence Bachman and daughter and son were entertained to a six o'clock dinner at the Ernest Helpsh ome Sunday.

Harvey Nelson, who is attending the Morningside College at Sioux City, came home one day last week to spend Christmas with his parents, Mr. and Mrs. Tom Nelson, Jr.

Mrs. Chris Hanson of Concord was visiting at the home of her daughter, Mrs. John Bachman and family Sunday. Mrs. Hanson has been visiting for a month at the home of relatives at Waterloo, returning home Thursday.

LIBERTY NEWS ITEMS

Mr. and Mrs. Roy Schaefer and family visited at the Aug. Ridder home Xmas night. Mr. and Mrs. Ben Ridder and children and the Ed. Schaefer family were also there. Harold is able to be up in a wheel chair part of the time now.

Mrs. Lloyd Ulrich is holding her own according to last reports from the hospital at Mason City where she underwent a mastoid operation and gave birth to a son. Pnuemonia set in and for several days she was in a critical condition.

Mr. and Mrs. Wm. Suckow and sons, Mr. and Mrs. Clarence Bredlow, and Mr. and Mrs. Elmer Bredlow of Hayfield, and Lester Bredlow were all dinner guests at the home of their father, Charley Bredlow, Christmas.

Airmen's Echo Test

Even when the ground is obscured by thick fog, a series of explosions like a machine gun's rat-a-tat-tat within a plane's undercarriage tells an airman his exact height, in a new device to be installed on French aircraft.

The echo from the ground is picked up by electric sound detectors which gauge the craft's altitude, and the device is said to give accurate measurement to within one foot from the ground.

Pilot Flies 250,000 Miles

Paul Witte, an air pilot of the German commercial air service, recently completed a total distance of 400,000 kilometers, which is equal to nearly ten times around the world, in scheduled air service. On his arrival at the Hamburg airdrome he was given an official welcome during which he was presented a gold scarf pin and many floral gifts.

Creative Cooking

A creative instinct similar to that which goes into the making of pictures and poems may well be turned into the creating of food and the place where it is consumed, says a culinary authority in the Woman's Home Companion.

Sucessful Failures

Many men have been successful in business but have failed at everything else. They find it difficult to keep good workmen because they never let them forget they are working for them.—American Magazine.

Useless

"You am just like the letter B."

"How come?"

"You am always in debt when they ain't no need of it."—Ladies Home Journal.

Candidates, Attention

First Politician—He took his defeat very easily, didn't he? I wonder what he did with all his placards?

Secoud Politician—Told me he used them in papering his garage.

Essential Lacking

"What's holding up the round-table conference."

"They had to send out for a round table."—Life.

Success in Confidence

If you believe in yourself, you can succeed, even though others do not believe in you.—Norfolk Beacon.

WISE WORDS

Virtue requires exercise.

Won by waiting—the tip.

To forgive may be to save.

Deception is ever dangerous.

Tell the truth and you don't have to remember.

Nothing hurts a conceited man like being ignored.

It is easy to be tyrannical if no one resists you.

Something the restaurants greatly neglect: Fried mush.

If a man is easily discouraged, he will languish in obscurity.

The anatomist ought to be able to furnish inside information.

A silver dollar is so heavy that it is hard for some men to raise.

The average man makes a fool of himself in trying to act smart.

A man's intentions may be good but the grocer often fails to credit them.

When a man's business runs down, the sheriff comes along and winds it up.

Humility is disliked in every one, even in those who are humble to yourself.

Chief reason for not saying what you think is that to say it doesn't do any good.

Offended good taste generally manifests itself in the departure of those offended.

Failure is a kind of automatic thread cutter on the human sewing machine.

If some men felt as bad as they really are, it would be useless to call in a doctor.

Persons who prefer old houses to new ones ought to have no trouble finding what they want.

Lost Gloves Oddly Restored to Owner

A young woman visiting Philadelphia dropped into a moving picture theater on Market street. When she left she found that she had mislaid her gloves, which were of a distinctive style, having been brought from London. She reported her loss and was advised to return the next day after the house had been cleaned. The next afternoon she entered what she thought was the theater and made her inquiry. She was taken inside and suddenly realized that she was not in the showhouse in which she had lost her gloves. Not liking to admit her mistake, she said nothing, and looked over the gloves shown her. To her astonishment she found the gloves she had lost in another theater some two blocks away.

Cougars and Catnip

The cougar is just a great big predatory forest cat, says Chief Jackson of the British Columbia game commission, and catnip means just as much to them as it does to the house cat. We are sprinkling it about the ground where cougar traps are fixed with good results. The big cats like it and we are planning to use so much of it in the future that I am making arrangements to have the herb grown in British Columbia.—Forest and Stream.

Some Man-Made Seas

If the Boulder dam of the Colorado river is ever completed as designed it will have a capacity of 26,000,000 acre-feet of water. Some of the other great constructions of this character created storage as follows: Gatun dam, 4,410,000; Assouan dam, 1,865,000; Elephant Butte dam, 2,368,000, and Almanor dam, 1,318,000.

All Comforts of Home

Mr. Littleflat—Can't you hurry and get through with the bathroom, I want a bath?

His Wife—I have four more waists and six pairs of stockings to wash. If you're in a hurry for a bath you'll have to go down to the laundry.

Pink and Yellow

Child—My mother wants to know what have you in fresh green vegetables?

Grocer—Some carrots or turnips?

Child (looking them over)—Oh, but they're not green.

The Woman Pays

Mildred (icily)—And shall I return the engagement ring?

Frank—Oh, no, don't bother; I'll just have the notice of the next installment sent to you.—Life.

No Car, No Go

He—Do you ever walk in your sleep?

She—No! but any time you see me walking you'll know I am unconscious.—Cincinnati Enquirer.

Bequeathing Sorrow

Parents' own unhappiness, if allowed to show, can affect the ability of their children to make happy marriages.—Woman's Home Companion.

We Wish You A Happy, Profitable 1929

--And we wish to thank our friends and patrons for their liberal patronage during the past year, sincerely

New Year's Celebrations in Many Lands

Photos by Underwood & Underwood

By ELMO SCOTT WATSON

NEW YEAR'S celebrations are so uniformly alike in most sections of the United States that any which deviates from the usual procedure is all the more remarkable. Such a one is that which has persisted in Philadelphia from colonial days. Although the Quakers were proverbially a quiet people, noted for their sober dress and not much given to hilarity of any kind, they forgot some of their prim ways on New Year's day, and seem to have allowed the young ke the mummers of an ancient day, to rough the streets in fanciful and strikmes on this occasion. With the passing the name of "shooters' clubs" was given arious organizations which took part in de. Prizes were awarded by the city for that had the most beautiful and original and the Philadelphia "shooters" have famous as one of the distinctive tradi- the City of Brotherly Love.

of the "Shooters" naturally brings to ther New Year's celebration in which ing of firecrackers is an essential part. known, the use of firecrackers as a r Fourth of July celebration represents that we have "borrowed" from another l another holiday and that is the w Year. "Among all national holidays e New Year is undoubtedly unique," Marks Lowdermilk in the Dearborn dependent, who continues as follows:

t involves gods; ancestors; a payment of all t debts, even though the wherewithal must be rowed at ruinous rates of interest. It means omplete cessation of all industry and a re- al, for at least two weeks, of all that one has doing for the past year. There is a yearly e cleaning with new clothes for every one, washing of old clothes, and a bath for the le family. It is the only true holiday for a th of the human race. . . . .

l debts for the year must be paid before the rises on New Year's morning. The year's busi- is transacted on the basis that one may evade ng one's debts until the New Year. Practically yone in China owes some one else, and it is a Chinese trait to pay a bill until one has requested to do so at least twice. This acits for the frantic haste in which the men here and there, trying to collect debts and ally anxious to avoid creditors until collections made.

one cannot meet his financial obligations, he must secure a new loan from another person, and as there is no law, he may be forced to pay as high as 50 per cent or more per annum. To dun a debtor on New Year's day is not good form; it is not uncommon in parts of China to see an anxious creditor carrying a lantern in broad daylight, seeking to find his debtor, on the assumption that because of his carrying a light, it is still the night before, and he may with propriety extract payment if he can locate the debtor. . . . . .

The night before New Year's finds the house swept and garnished with red mottoes and "happiness" placards and banners and pictures of gods. The members of the family are all dressed in new clothes or clean ones. New gate gods for protection have been pasted on the gate and the door sealed with "good luck." The family very ceremoniously places a new kitchen god above the stove to preside over the household for another year. Though the ensuing feast is to the god, the members of the family noisily and rapidly eat the delicacies.

re are certain very important customs to be Great care must be exercised for, if anyken on this night, a great misfortune e family. Also one may not use scissors or sweep floors for the good luck of the family would be cut off or swept away.

The New Year arrives with a bang. Every one from richest to poorest must set off firecrackers. Tucked under one's covers, one can easily imagine that a decisive battle is raging through the streets of the city. On this day and for at least two weeks nothing in the form of work is done that can be left undone. All industry absolutely ceases. Every shop is closed. There is a complete cessation of all business. Only amusement places are open. . .

All the excitement of a Christmas morning prevails. It is a true family reunion, for custom demands that, unless it is absolutely impossible, every male member of the family must return to the home of his father to perform his obligations to his ancestors and parents. All exchange New Year greetings. The children dance round in gay new clothes and pop firecrackers.

Early in the morning the children perform their filial obligations by bowing to the floor three times before their parents, who give them the proverbial Ya Swei Chien, or good luck money, and usually some words of advice. The male members of the family perform their obligations to their ancestors. It can be truly said that in China the dead rule the living in thought and custom. At Chinese New Year the dead require special attentions. It is thought that at this time the ancestors return again to earth to be at the family reunion and to eat a good home meal. The ancestral tablet is therefore taken out and placed on a table. Incense is kept burning and special food is placed upon the table, as well as plenty of rice wine. Incense must also be placed upon the ancestors' graves, which are usually on or near the family homestead.

After the family obligations are completed, the elder members of the household remain at home to receive guests, while the younger male members, whether father or son, set out to make calls upon all those who position or custom decrees should receive this social token of respect. Two whole weeks are allowed for this round of visits.

The god of wealth celebrates his birthday on the fifth of the first month. At this time he is supposed to be in an unusually magnanimous frame of mind toward people on earth, and, if properly approached, is sure to grant personal requests. Shopkeepers, therefore, give a special birthday dinner to which the clerks are all invited. Incense is burned before the picture or image of the god of wealth, and all are required to bow before him except those whose services are to be dispensed with for the coming year.

This is the time for notifying employees of change. The Chinese have many polite methods of imparting this unpleasant news. If the master serves one a chicken head or invites one to sit in a position of honor, it informs him that his services are no longer needed.

The final celebration is the "Lantern Festival," on the fifteenth of the first month. Innumerable paper lanterns, made in the forms of birds, rabbits, beasts, or fish, are prepared beforehand. When night falls, all shops are bewildering in a maze of waving lanterns. Every pedestrian also carries a lighted lantern as he threads his way through the crowded streets.

The effect is enchanting. A long dragon made of cloth and tinsel and spangles, each section of which is supported by a strong and healthy young man, invisible except from the knees down, writhes and prances its way through the crowds. The children are hilarious; firecrackers are popping here, there, and everywhere.

But as the night advances, the lights begin to flicker and die; the crowds reluctantly disperse, and one-fourth of the human race again settles down to ceaseless toil for seven days a week in a land where vast numbers subsist on one and two meals of coarse food a day.

In Japan the celebration is similar to that in China, but its distinction lies in the scheme of decoration. House portals are enforced with arches built of pines, symbolizing the stalwart age that has resisted the hardships of the year. Bamboos connected by a rope are placed so as to debar all evil and unclean things from crossing the threshold. Within this arch is placed a bright yellow lobster, betokening the back of the aged, bent by the passing years but not yet broken, and also an orange flower of future generations. Seaweed, which once brought victory to the Japanese forces, is much in evidence.

In Ireland there was an unusual ceremonial known as baking the cake. The proud husband invited all his friends to the "gude woman's baking." Amid much jollity, the cake was prepared and put on the fire. When the great cake had been prepared, the oldest boy took it and threw it against the door with all his might. Every one scrambled to pick up the pieces, for the person who secured the first fragment to touch the floor would, according to the superstitution, have a home and a New Year's cake of his of her own before the next year.

Devonshire's quaintest custom was called the "shooting of the apple tree." While the women remained inside preparing their food, the men went into the orchard with blunderbusses. They gathered around the oldest apple tree, and at midnight prayed to the tree that it should bear

Apples enow,
Hats full!
Caps full!
Bushels, bushels, sacks full!
And my pockets full, too!
Huzza! Huzza!

Cider would be passed around and then they would shoot at the tree. On returning to the house they would find the doors locked. Before they could be readmitted to the fireside, one of their number would have to guess what delicacy the women were preparing for their enjoyment. The lucky guesser became "King of the Evening" and ruled over the fun and jollity that followed.

An old custom in Derbyshire was to have prepared on New Year's eve a cold possett, as it is called, made of milk, ale, eggs, currants and spice, and in it placed the wedding ring of the hostess; each of the party takes out a ladleful, and in doing so takes every precaution to fish up the ring, as it is believed that whoever is fortunate enough to "catch" the ring will be married before the new year is out.

In Scotland there was an interesting New Year's custom called "first-footing"—the first person to set foot in the house on New Year's eve. It was usual for the young lady whose hand was being sought by several suitors to ask her favorite suitor in a coy and subtle fashion to be her first-foot on New Year's eve. If he succeeded, it was almost inevitable that the young couple would be married on a subsequent New Year's day.

1. The New Year's celebration in Japan includes the taking of collections for the relief of the poor. In the picture are shown Tokyo school girls "tagging" passersby at the corner of Hibiya park in that city.

2. Preparing for New Year's day in Japan—Japanese sauce (shoyu) comes from the Chiba prefecture to Tokyo and is very often given as a New Year's present. In the picture is shown a boatload of "shoyu."

3. Getting ready for New Year's eve in Germany. The carp is the appropriate article of food for consumption on New Year's eve in Germany and it is estimated that something like 300 tons of this fish are eaten every year on this date in Berlin alone. In the photograph, a market woman is shown selling carp, which are brought alive to the German capital in special cars, chiefly from Silesia.

Note: The two drawings are symbolical figures which are an important part of the Chinese New Year's celebration. The one in the upper right hand corner is the figure of a god, whose picture, pasted on the back gate of a Chinese residence, insures that entrance against intruders. The one shown in the lower center is designed to prevent evil spirits from dropping down from the sky into the courtyard.

What Will We Do With 1929?

COULD anything have been more appropriate or significant than the naming of January, the first month of the year, after the Roman deity Janus—the god of all beginnings—the god with two opposite faces, one looking back into the past and the other facing forward.

Isn't that the cue for you and me and for everyone else as we begin this new year of 1929? Should we not be as Janus, looking backward and looking forward, studying the past for the lessons it will teach, and facing the future with hope, strength, and confidence?

This is a good time to review the past, not only the past year but the past life. What things have we done, what things have we left undone? What have we learned from the things done and from things undone? Based on all that has gone before, what will we do with 1929? What will we do for ourselves, for our families, for mankind?

We have heard the remark, he or she has a past. Who is there who has not a past? One's past, no matter how ignoble, is a valuable part of his life, because from it he can draw a commendable future.

But in reviewing the past make not the mistake of viewing it with regret. Regrets are useless things; they inject hopelessness into the soul, and waste valuable energy.

Most folks learn by making mistakes. If one has to learn to stand on one's feet through having one's feet slip, there is no cause to regret the slip. The child learns to walk by falling down. Man learns to live the same way. Repent—face about—but do not regret.

Do not worry about that water that has gone under the bridge; there is more coming down stream; keep your eye on that.

1929 is another year. We have a brand new chance to begin life all over again; you and I; to mold things afresh with the knowledge gained from all our past experiences to guide us.

Let us not fret about the mistakes we made in 1928, but make sure we do not repeat them in 1929.

—Wickes Wamboldt

HAPPY NEW YEAR

But It Was Cold

By Clara Agee Hays

GRANT BARKER sneaked into his bedroom slippers and bathrobe, slipped on a pair of rubbers at the back door, and shivered out into the gray New Year's dawn. Murder burned in Grant's eyes. He forgot the sprinkle of goose flesh which covered him, the shivers which wrenched him as the frosty air blew up his pajama legs. Viciously, he tossed the revolver onto a bank of snow by the door. Too noisy! Somebody'd hear, and there'd been so much in the papers. He picked up a stick. That would get him. Grant's teeth grated in hate. Stealthily he slipped alley-ward until he neared a large yellow cat. He paused. Better catch him and call the Humane society to kill him. Then, nobody'd know. There'd been such a fuss about killing pets already.

It was like Rolland Watts to have a cat—and let him howl in people's back yards all night. Grant remembered when they had been pals before they had married and tried living side by side. Now, they never spoke. Why should they? Watts was unreasonable. He'd even called the police about Grant's dog! Couldn't prove anything... Teddy's never bitten anybody, let alone the Watts brats. Grant snatched at his yellow enemy. The cat darted through his hands and up the alley.

Barker hesitated, listening to a suspicious crunching of snow near him. Quickly realizing that his yellow hair stood on end, his ankles,

red with the cold, were bare, and his pajamas flapped below his ridiculous bathrobe, he slunk against the garage.

"Sh!" he heard.

"Daddy, did you get Barker's dog?" called a childish voice. Grant bristled angrily. So!

"Sh! Not yet—Go back to bed," a voice stage-whispered near him.

Grant could stand no more. He lunged across a snowdrift toward the sound.

"So!" he said accusingly.

Rolland Watts jumped back in astonishment. He, too, wore a frayed bathrobe. Under it Grant saw a trace of outing nightshirt and bare legs. Watts held a piece of raw meat.

Grant's teeth chattered in the cold. "Trying to poison my dog, huh?" he sneered.

Rolland looked at the meat guiltily; then glared, "What're you doing, yourself, with that stick—after my cat, huh?"

The two men stepped closer, menacingly. A tinkle halted them. Whirling, they saw the milk man eyeing them in amusement. He turned quickly and respectfully. "Happy New Year, gentlemen!" he called. Something like the old boyish twinkle showed slowly in Rolland's eyes.

"Honest, Grant, I didn't know the cat bothered you," he said at last.

"Gosh, we'll shut him up nights after this!"

Grant looked up. The rotund, baldish man with the silly nightshirt and the meat was, after all, old Rolland. He laughed. "I'm going to muzzle Teddy right away," he said and dropped the stick. "Happy New Year, old man! Lord, ain't it cold?"

The Best RESOLUTION

By Katherine Edelman

FOR several days Billy Gibson had been racking his brain to find a rattling good resolution to make for the New Year. He wanted something that would be different, something that, while difficult, would not be at all hard to keep. He counted over and over again the list of resolutions he knew—all of them good enough in their way—but none of them seemed to be just the thing that he wanted. There surely must be some one resolution that would combine in it all that he wanted to do. But on the last night of the old year as he went to sleep he was as far from finding it as ever.

Unconsciously he drifted into sleep, then crashing upon the night came the sounds of welcome to the New Year. Billy was now wide awake and the first thing he thought of was the resolution still unmade. "What would it be?" he asked himself. He must decide on something and at once. Suddenly into Billy's mind there came the thought of a little verse that his mother had taught him in childhood:

"So many kinds, so many creeds,
So many ways that wind and wind,
When just the art of being kind
Is all the old world needs."

Reverently he repeated the four lines to himself, then he jumped up in bed with a start: "Why can't this be my resolution for this year?" he shouted. It is probably much better than that new and unique one that I was seeking, for the world needs kindness more than any one thing."

FARM STOCK

WIDE FIELD FOR COMMUNITY HOUSE

Best Way of Handling Hogs Depends on Conditions.

For brood sows the tendency now seems toward individual houses and the McLean system of sanitation. For early pigs, either a well disinfected community house may be used for farrowing, the sow and pigs being hauled to the individual houses; or a portable farrowing house with five or six pens with provision for heating may be used. Later, pigs may be farrowed right in the individual houses. The best method of handling will depend very largely on the farm conditions, on the type of hogs produced, and on the market to be reached.

But there is still a wide field for the community hog house, and how best to build it is still an important question. So far there seems to be no definite decision as to which type of community hog house is best. The half-monitor type which for several years was so popular now seems to be losing favor, largely because of too much unused headroom, with the difficulty of keeping it properly heated. Probably the Iowa or gable roof type is most popular now, although the gambrel roof also is much liked. Also the shed roof type has many followers, and now the round roof type is making considerable headway. Either of these types seems to give good satisfaction.

The most common width of hog house is either 20 feet, which accommodates two rows of pens each 6 by 8 feet and a 4-foot feeding alley, often with litter carrier and feed carrier track down the center; or 24 feet, which accommodates two rows of 6 by 8-foot pens, with an 8-foot central alley through which the manure spreader can be driven for cleaning or which can be turned into pens if desired. A 6 by 8-foot pen will accommodate a medium-sized sow and litter, but will be too small for a large sow.

Carefully Culling Ewe Flock Important Task

Wool is a very important source of income in the raising of sheep. So also is a large lamb crop. In order to secure both, the ewe flock should be as carefully culled each year as poultry breeders cull their flocks nowadays. Don't leave ewes with unsound udders and broken mouths in the breeding flock. Neither should a ewe with a light fleece nor one that is a poor milk producer be bred. Every ewe that is not up to standard should be fattened and sold.

When wool-lambs are bringing good prices there is a tendency to leave inferior breeders in the flock, hoping that in some way they will do better next year than they did during the one just past. As a rule hopes of that sort do not materialize. The sheepman who insists upon culling out all the ewes that are inferior in one or more characteristics is the man who stands the best chance of securing a reasonably fair profit from his flock. Cull closely this fall and breed to a registered ram of good individuality.

Shelled Corn Useful to Finish the Lambs

Shelled corn supplemented by linseed meal to furnish the needed protein is an excellent ration to fatten lambs. Seven parts shelled corn to one part linseed meal will be about the right proportion to feed.

When you start fattening the lambs it will be necessary to bring them on full feed gradually, otherwise you will be likely to have digestive trouble and lose some of them. It will be better at first to feed oats and shelled corn and then gradually change the oats in the ration to all corn. Begin by feeding a small amount of grain and gradually increase the amount until the lambs are on full feed, but at no time should more grain be fed than will be cleaned up in a few minutes' time. The lambs should be on pasture or be fed clover or alfalfa hay.

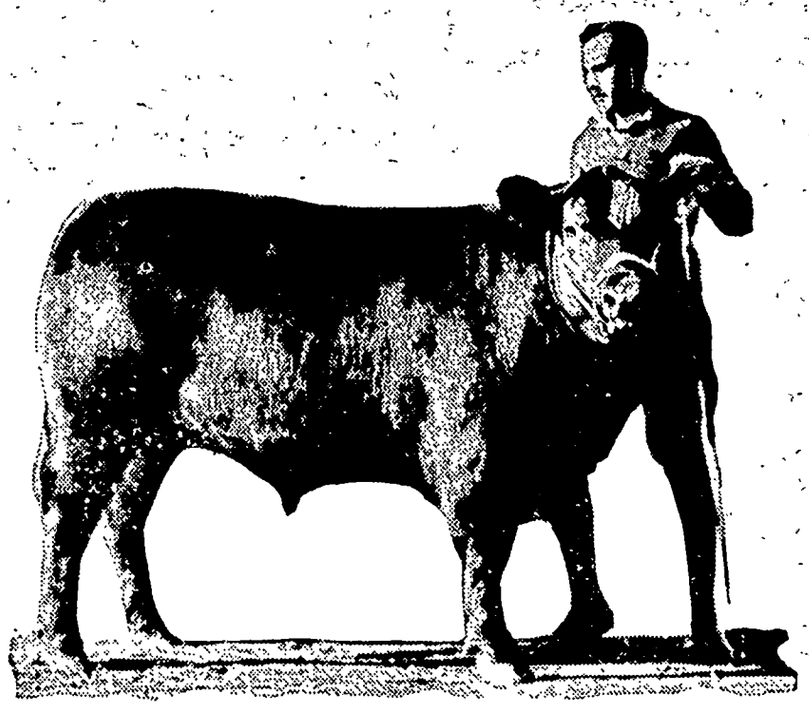
Protein Supplement

A good protein supplement such as skim milk or tankage should be fed with barley to fattening hogs. About one-third pound of tankage per pig daily is the right amount to feed. Barley should be ground for best results. There is little or no advantage to be had from soaking ground barley. There should be no danger from poison if the barley is soaked in steel tank or barrels if barrels are clean.

Feed Young Well

The young growing animal makes gain in weight cheaper than the mature animal. It usually pays to provide plenty of feed for the young stock even though it is necessary to feed grain when pasture is short. Much young stock is stunted, especially after weaning, because it does not get enough feed to maintain the normal growth. Rapid growth is possible only when young animals are supplied with plenty of feed to build bone and muscle.

Highest Price for Beef in Omaha



Howard Hill, seventeen-year-old 4-H club member of Earlham, Iowa, and his $2,200 baby beef. The calf is an Aberdeen Angus and sold at the Ak Sar Ben Stock show in Omaha, November 6, for $2.02½ a pound—the highest price ever paid for beef in Omaha and one of the highest in the country. The calf was bought by H. A. Hanson for the dining car and hotel department of the Union Pacific system.

"Proved" Sire Is Dairy Hope

Necessary to Compare Yearly Records of at Least Five Daughters.

(Prepared by the United States Department of Agriculture.)

A factor of great importance in the building up of a dairy herd is the use of a good proved bull, says O. E. Reed, chief of the bureau of dairy industry, United States Department of Agriculture.

To prove a bull, according to the standards set by the bureau, it is necessary to compare the yearly records of at least his first five daughters with the records of their dams. Such a comparison indicates the probable value of a bull to a herd.

Record of One Sire.

The record of one outstanding sire that was proved in a Vermont dairy-herd improvement association was pointed out by Mr. Reed. The first reports received of this bull included records of 15 daughters and their dams. The dams were, without exception, much better than the average dairy cows of this country. The lowest producer had a record of 314 pounds of butterfat, and the average of all the dams was 386 pounds. The 15 daughters of this sire, however, averaged 545 pounds of butterfat. Here was an average gain of 159 pounds of butterfat, or more than 40 per cent. Even more remarkable, every one of the 15 daughters was a better producer than her dam. The sire is to be credited with most of the improvement.

Last year, according to Mr. Reed, only 200 dairy bulls were proved in 660 dairy-herd improvement associations. It was found that of this number only one in six was still alive at the time he was proved. Some proved bulls should be slaughtered, because their records are bad, but the prepotent bulls which have demonstrated their ability to sire daughters more productive than their dams should be kept as long as they are useful.

Exchange of Bulls.

When the exchange of bulls becomes a regular practice they can be kept until they are proved. This important phase of the work in the dairy industry is not receiving the attention that it should, and much greater effort than is now being expended should be put forth to preserve the lives of meritorious bulls. The general practice of using only good proved bulls, Mr. Reed believes, will result in a material increase in the production of the dairy cows of the country.

Breed Up Grade Animal by Use of Pure Bred

At what rate will a grade animal be "bred up" by the use of a pure bred sire and the resulting offspring of each cross? The offspring from the first cross of a pure bred sire on a grade female will be 50 per cent grade and 50 per cent pure bred. This offspring then bred to a pure bred sire will produce an offspring whose make-up is 25 per cent grade and 75 per cent pure bred. By continuously repeating this operation, the grade blood will theoretically be bred out, though for registration such an animal can never become eligible. In the seventh generation the animal will be 99.219 per cent pure bred.

Lamb Feeding Offers a Means of Marketing

Lamb feeding has been profitable during the past few years and offers a splendid means of marketing feed at a profit. Good western range lambs are generally safer to feed since farm raised native lambs are frequently troubled with stomach worms. Lambs infested with stomach worms will not make good gains in the feed lot and losses are likely to occur. The market prefers fat lambs that do not weigh over 90 pounds and will not pay as high a price per hundred-weight for fat lambs weighing over 90 pounds. Feeder lambs should not weigh over 70 pounds when put into the feed lot.

Tramping of Silage May Be Lost Motion

Farmers Find Untramped Material Is Best.

Silo filling crews are being reduced in number as farmers discover that the tramping of silage is not necessary and that untramped silage is often of higher quality than the forage packed by tramping.

"Untramped silage is of as good or better quality than tramped silage," declares E. J. Delwiche, superintendent of the Ashland and Sturgeon Bay branch (Wisconsin) experiment stations, when summarizing silo filling experiences at the experimental farms. "Since tramping is generally uneven and results in many pockets, there is less mold in the untramped silage.

"To seal the top of the silage, the last few feet should always be carefully leveled and tramped when tramping is not done.

"The ideal arrangement when the silo is filled without tramping would be to have the distributor fixed so that a man could control it without walking on the corn. Such a plan would completely eliminate air pockets resulting from tramping.

First attempted during the war when farm labor was difficult to secure, filling silos without tramping was found to be a surprising success, explains Delwiche, and has since become a common practice on many dairy farms. Instead of keeping the customary crew of two or three men inside the silo, some farmers use but one man or a boy to level off the corn while others remove all but the first two or three sections of the distributor pipe, leaving the corn distribute itself by gravity as it forms a cone shaped pile in the center of the silo.

Lime Compost Is Proper Substitute for Manure

Compost-making is almost a lost art but at one time it flourished vigorously. Some of the farmers of 50 years ago were great adepts in the art. In certain districts compost heaps are still made, and the practice might well become general. The type of compost that has persisted longest is the old "lime" compost, which is made with soft vegetable waste, mold and lime. The demand for stable manure is far in excess of the supply, because of the increased motor transport. The old economic law works, and prices have risen beyond the reach of many. By increasing the supply of manure farmers can in a large measure supply themselves, and do a public service in cheapening the commodity.

If the plant waste is used as decayed manure, there is returned to the ground what the crops have extracted, and what has been breathed in by the plants out of the air. All that woodland receives in the shape of soil feeding is its own fallen foliage and some nitrogen in the rain. Compost material is a complete food, holding nitrogen, potash, phosphate and lime.

Around the Farm

Ewes which are to be bred should be gaining in weight at the time of the breeding season.

* * *

There is absolutely no way of curing pigs from eating chickens when they get the chance.

* * *

Soy beans should not be used to replace corn in fattening hogs, because, fed alone, the beans are likely to make soft pork.

* * *

One of the best ways to feed soy beans with corn to hogs is to grow the two crops together and then hog them off—keeping a self-feeder full of minerals handy.

* * *

Paint will go a long way in making buildings last longer and give better service. Well painted buildings also add to the attractiveness of the farm as a home.

POULTRY FACTS

EARLY HATCHING MEETING FAVOR

Breeders Find Chicks Make Better Winter Layers.

The official results of laying tests recently concluded show that early-hatched chicks of the heavier breeds make the best winter layers. Rhode Island Red pullets which were hatched in March gave a winter egg production of 42.35 eggs. April-hatched pullets gave a winter production of 35.40 eggs and May pullets gave a production of 22.50 eggs.

The profit in producing eggs comes largely from producing them at a season of the year when they are highest in price. This means that we must plan to produce eggs during the winter months. The experiment referred to shows that, with the general-purpose breeds, the early hatched chicks are the ones which mature in time to start laying in the latter part of October and continue throughout the winter.

Many people have failed to raise early chicks for the reason that they have trouble with leg weakness and brooder troubles. The leg weakness can be largely overcome by the ration advocated by the Wisconsin experiment station as the result of their experiments in overcoming this trouble. This was reported at an earlier date but for those who overlooked it we are repeating the formula which they suggest: eighty pounds ground yellow corn, twenty pounds wheat middlings, five pounds ground raw bone, five pounds pearl grit and one pound of common salt. Skim milk is used freely but no water is furnished. Infertile eggs or cod liver oil is added in limited quantities if the chicks do not have access to sunlight.

The first experiment quoted shows that April pullets produced a fairly good quantity of eggs. This is undoubtedly on account of the fact that they were well grown. This is a fact that the producer who has late-hatched chicks should take into account. Oftentimes April-hatched pullets which are well fed will mature before March pullets that are stunted and poorly grown.

Crop-Bound of Fowls Caused by Rough Feed

"Crop-bound" is caused by eating food too large to pass through the gullet from the crop to the proventriculus or true stomach. Chicks become crop-bound if fed whole wheat when too young. The wheat swells and becomes too large to pass out of the crop. Coarse feed with an excess of crude fiber often causes this condition. The paralysis of the muscles of the crop is another cause. This occurs in cases of cholera.

Sometimes the contents can be removed by drenching the fowl, then kneading the crop and holding by the feet head down and working the contents out by the mouth. In severe cases an operation is necessary. Remove the feathers, make a slit through the outer skin, spread apart, then make an incision in the crop and remove the contents; then sew up the crop, then the outer skin. The crop membrane and skin should be sewed separately.

Pullets Require Green Feed When Confined

When the pullets are penned and set to their work task of egg laying, their need for succulent green feed must be met, say the poultry specialists of the Ohio university. Succulent green feed provided for the pullets for the first few weeks after they are housed will keep them in good physical condition. Rape, green clover, and alfalfa are satisfactory for this purpose.

If no succulent green feed is available, the poultrymen recommend a dose of Epsom salts for the birds soon after housing. One pound of the salts for each 100 birds should be dissolved in their drinking water, and no other water should be given until that containing the salts has been consumed.

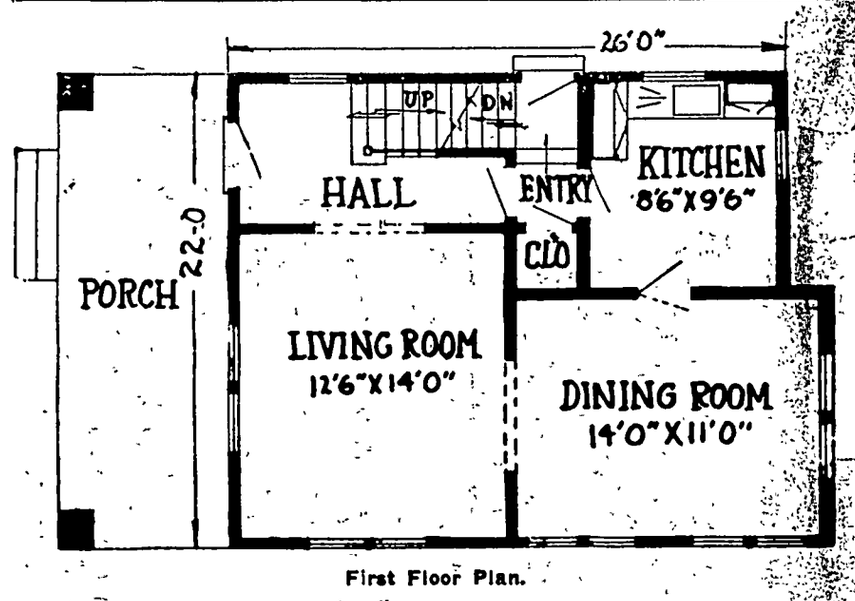
Care of Pullets

Poultrymen who buy pullets at this season should have facilities for properly housing the birds and ranging them separate from old hens. The pullets will be unfamiliar with their new location and possibly changed rations, and every day that they go underfed means a day or more of egg production lost during the winter. It may be possible to learn the ration used by the former owner and make changes gradually to the rations you are using.

Hens Need Mash

Don't get the idea that because it is cold that your hens do not need anything but corn. Corn is all right and has its place in the menu, but if you want eggs, and also to get your hens in good condition for hatching they must have something besides corn. Give them a good egg mash and it will be better if it is fed moist and warm once a day—better still if it is fermented for 24 hours with yeast. Do not feed all they want. Make them clean it up.

Unusual and Attractive Effect in This Six-Room Dutch Colonial

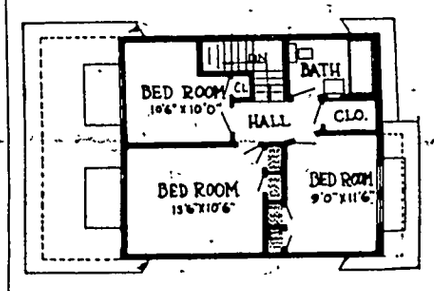


First Floor Plan.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

A rather unusual but highly pleasing effect has been achieved in this design in the treatment of roof lines. The style is Dutch Colonial with the dormer to the front and the roof has been extended, at a greatly reduced pitch, out over the porch, with a corresponding extension at the rear. This gives the front window of the second floor a slightly recessed effect and lends a low solid appearance to the house as a whole.



Second Floor Plan.

The exterior has been finished in stucco, up to the second floor line, with shingles above and the result is thoroughly attractive. The foundation is low, adding to the solid effect and holding the structure well down to the ground. There is very little exterior ornament but the landscaping of the ground has been well handled and adds greatly to the effectiveness of the home.

This is a six room house which, because of its nearly square dimensions is quite roomy in proportion to its size, 22 feet wide by 26 feet deep. The arrangement is convenient throughout, and every room with the exception of the bathroom has windows on both sides affording excellent cross ventilation. A feature particularly worthy of note is the closet arrangement of two of the bedrooms. Each of these has a double closet, in reality two separate closets, equipped with hangers which greatly increase the capacity of the closets and offers the most satisfactory means of caring for clothing.

A design of this type is so thoroughly standard that it assures a permanent resale value for the house. It also lends itself readily to modification to meet particular requirements. For example, many families would feel that a fireplace was an essential feature of the home. While no fireplace is shown in the plan one might easily be added to the living room.

Fan Used in Heating System Gives Results

Discussing the value of a current of air in the home and the use of a fan in connection with the heating system, a writer in Building Age, after asking how valuable is a current of air, says: "By it the life stream is purified, health is restored to sick bodies, and maybe even to sick souls—by it heat is carried from its point of origin to the place where it is wanted; noxious gases are dissipated; the new building is dried out ready for occupancy; the fumes of paint and varnish are driven away.

"Many a man has had the idea that a fan inserted somewhere in his heating system would change it from sluggishness into activity and give him better results for his fuel money. Some have tried it in a home-made way and secured results commensurate with the degree of care given to the installation. Then commercially-minded men set to work on the problem in a larger way and developed means for securing forced draft in the ordinary house-heating system to be controlled at will.

"Heating experts have found by experiment that fan-driven air in the furnace not only obtains more efficient combustion of fuel but gives better ventilation by circulating the air in all rooms and breaking up cold areas. These results can be secured, too, with the use of cheaper grades of fuel than would otherwise be required where only natural draft is used.

"The University of Michigan, which has been carrying on extensive tests in household heating under the leadership of Prof. J. E. Enswiler, has found that the fan blower is an important part of any modern heating system.

"While we cannot yet announce final results," said Professor Enswiler, "it is clear that one effect of the fan is to overcome the inertia and back-pressure of cold air in extra long ducts and leaders. Hence the equipment may be installed with heat pipes of much greater length than have been used in the past. This means that three-story houses are within the scope of this kind of warm-air heating plant, that it will heat a house of as many as 15 rooms comfortably and that it will keep even the more remote rooms of an ordinary dwelling at a pleasant temperature."

Dry Fillers Improve Walls of Old Home

Nearly all builders of new homes are now installing some one of the many materials which will insulate their homes against excessive heat and cold. They are doing this both to make their homes more comfortable in summer and winter, and to cut down fuel bills.

In these homes which are being built the types of insulators that can be used vary from the rigid or semi-rigid boards of cane-waste, wood fiber, cork or gypsum rock to the dry fillers of wood, mineral wool, cork or gypsum. But for the owner of the home already built who wants to install a material which will give him as much protection from weather as his neighbor who is building a new home, one of the dry fillers is the most practical material.

The standing house can be insulated by pouring a dry filler between the side walls. And if the rooms in the roof are used for living quarters by installing an insulative material between the roof-rafters. If, however, the attic is used for storage space the living quarters can be made comfortable by simply pouring the material between the joists of the attic floor over the plaster of the ceilings below.

Storm Sash Urged to Keep Home Liv

Do not get the idea that in order to conserve heat in your house it is necessary only to build the walls right. The windows and doors lose much more heat than the walls. Everybody has noticed how in cold weather the wind blows in around the edges of the window. As the building ages the windows become more loose.

Cooling of the air in your home from this cause can be avoided by putting on approved weather strips and well-fitted storm sash. The efficiency of both storm sash and weather stripping has been clearly shown. The effect of storm sash is more than to save loss of heat across the window glass. Everybody knows that in severe weather pulling down the shades will help to keep the room livable and that is the way the storm sash acts.
